

TEST REPORT

Report No.:	BCTC2408882160S
Applicant:	Radxa Computer (Shenzhen) Co.,Ltd.
Product Name:	Radxa ROCK 5C
Test Model:	Radxa ROCK 5C D16R26
Tested Date:	2024-08-23 to 2024-08-31
Issued Date:	2024-09-12

Shenzhen BCTC Testing Co., Ltd.

No.: BCTC/RF-SA-012 Page 1 of 75 Edition : B.0

TEST REPORT IEC 62368-1

Audio/video, information and communication technology equipment Part 1: Safety requirements

Report Number.....: BCTC2408882160S

Date of issue: 2024-09-12

Total number of pages: 75

Testing Laboratory. Shenzhen BCTC Testing Co., Ltd.

Zhancheng, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong,

China

Applicant's name: Radxa Computer (Shenzhen) Co.,Ltd.

Shenzhen

Test specification:

Standard: IEC 62368-1:2018

EN IEC 62368-1:2020+A11:2020

Test procedure....: Test report

Non-standard test method: N/A

Test Report Form No.: IEC62368_1C

Test Report Form(s) Originator: UL(US)

Master TRF: Dated 2019-01-17

Test Item description:	Radxa ROCK 5C
Trade Mark:	radxa®
Manufacturer	Same as Applicant
Model/Type reference:	Radxa ROCK 5C D16R26 Radxa ROCK 5C D1R26, Radxa ROCK 5C D2R26, Radxa ROCK 5C D4R26, Radxa ROCK 5C D8R26, Radxa ROCK 5C D32R26, Radxa ROCK 5C D1R27, Radxa ROCK 5C D2R27, Radxa ROCK 5C D4R27, Radxa ROCK 5C D8R27, Radxa ROCK 5C D16R27, Radxa ROCK 5C D32R27
Ratings	Input: 5V3A 15W

resting procedure and testing location.	
Testing Laboratory::	Shenzhen BCTC Testing Co., Ltd.

District, Shenzhen, Guangdong, China

Tested by (name, function, signature)...:

Minny Zhang
(Project Handler)

Approved by (name, function, signature):

Seven Zheng
(Reviewer)

List of Attachments (including a total number of pages in each attachment):

- -- Attachment I: 25 pages for EUROPEAN GROUP DIFFERENCES AND NATIONAL DIFFERENCES.
- -- Attachment II: 2 pages for Photo documentation.

Summary of testing:

Tests performed (name of test and test clause):

- -- IEC 62368-1:2018;
- -- EN IEC 62368-1:2020+A11:2020:

The submitted samples were found to comply with the requirements of above specification.

Testing location:

Shenzhen BCTC Testing Co., Ltd.

1-2/F., Building B, Pengzhou Industrial Park, No.158, Fuyuan 1st Road, Zhancheng, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China

Copy of marking plate:

The artwork below may be only a draft. The use of certification marks on a product must be authorized by the respective NCBs that own these marks.

Radxa ROCK 5C

Model: Radxa ROCK 5C D16R26

Input: 5V --- 3A 15W

Importer: XXXXXX Address: XXXXXX

Manufacturer: Radxa Computer (Shenzhen) Co., Ltd.

Address: 1602, Smart Valley, tiezai Road, Gongle community, Xixiang,

Baoan, Shenzhen

Made in China

Notes:

- 1. The above markings are the minimum requirements required by the safety lab. For the final production samples, the additional markings which do not give rise to misunderstanding may be added.
- 2. The height dimension of CE mark should not less than 5mm, the height dimension of WEEE symbol should not less than 7mm.
- 3. According to the EU directives which have been aligned with EU NLF (new legislative framework), both of manufacturer and importer's name and address shall be affixed on the product or, where that is not possible, on its packaging or in a document accompanying the product before the product is placed on the EU market.
- 4. The marking plates of the other models in this report are identical with above except model name.

TEST ITEM PARTICULARS:	
Product group:	☐ end product ☐ built-in component
Classification of use by:	☑ Ordinary person ☐ Children likely present☐ Instructed person☐ Skilled person
Supply connection:	☐ AC mains ☐ DC mains ☐ not mains connected: ☐ ES1 ☐ ES2 ☐ ES3
Supply tolerance:	☐ +10%/-10% ☐ +20%/-15% ☐ + %/ - % ☑ None
Supply connection – type:	□ pluggable equipment type A - □ non-detachable supply cord □ appliance coupler □ direct plug-in □ pluggable equipment type B - □ non-detachable supply cord □ appliance coupler □ permanent connection □ mating connector ☑ other: not directly connected to the mains
Considered current rating of protective device	☐ Others: Location: ☐ building ☐ equipment ☒ N/A
Equipment mobility:	☐ movable ☐ hand-held ☐ transportable ☐ direct plug-in ☐ stationary ☐ for building-in ☐ wall/ceiling-mounted ☐ SRME/rack-mounted ☐ other:
Overvoltage category (OVC):	□ OVC I □ OVC II □ OVC III □ OVC IV □ other: N/A
Class of equipment:	☐ Class I ☐ Class II ☐ Class III ☐ Not classified ☐
Special installation location:	N/A ☐ restricted access area☐ outdoor location ☐
Pollution degree (PD)	□ PD 1 □ PD 3
Manufacturer's specified T _{ma}	50°C ☐ Outdoor: minimum °C
IP protection class	□ IP
Power systems	☐ TN ☐ TT ☐ IT - V L.L ☑ not AC mains
Altitude during operation (m)	⊠ 2000 m or less ☐ m
Altitude of test laboratory (m)	⊠ 2000 m or less ☐ m
Mass of equipment (kg)	Approx. 0.047kg

Possible test case verdicts:
- test case does not apply to the test object: N/A
- test object does meet the requirement: P (Pass)
- test object does not meet the requirement: F (Fail)
Testing:
Date of receipt of test item: 2024-08-23
Date (s) of performance of tests: 2024-08-23 to 2024-08-31
GENERAL REMARKS:
"(See Enclosure #)" refers to additional information appended to the report.
"(See appended table)" refers to a table appended to the report.
Throughout this report a ☐ comma / ☒ point is used as the decimal separator.
When differences exist; they shall be identified in the General product information section.
Name and address of factory (ies) : /
GENERAL PRODUCT INFORMATION:
Product Description

- 1. The apparatus is a Class III Radxa ROCK 5C D16R26 used for Audio/video, information and communica tion technology equipment. by external DC power supply which was classified as ES1/PS2.
- 2. Manufacturer specified maximum declared ambient: 50°C.
- 3. When installed in final system, suitable enclosure should be provided and all requirement of relevant standard should be fulfilled.

Model Differences -

- 1. All models are identical to each other except for the model name and different capacity size.
- 2. All the tests were conducted on model Radxa ROCK 5C D16R26, unless otherwise specified.

Additional application considerations – (Considerations used to test a component or sub-assembly)

	IEC 62368-1		
Clause	Requirement + Test	Result - Remark	Verdict

4	GENERAL REQUIREMENTS		Р
4.1.1	Acceptance of materials, components and subassemblies	See appended table 4.1.2	Р
4.1.2	Use of components	Components which are certified to IEC and/or national standards are used correctly within their ratings. Components not covered by IEC standards are tested under the conditions present in the equipment. See also Annex G	Р
4.1.3	Equipment design and construction		Р
4.1.4	Specified ambient temperature for outdoor use (°C)	Not outdoor equipment	N/A
4.1.5	Constructions and components not specifically covered	No this constructions and components.	N/A
4.1.8	Liquids and liquid filled components (LFC)	No such component used.	N/A
4.1.15	Markings and instructions	(See Annex F)	Р
4.4.3	Safeguard robustness		Р
4.4.3.1	General		Р
4.4.3.2	Steady force tests		N/A
4.4.3.3	Drop tests	No such consideration for built-in type equipment.	N/A
4.4.3.4	Impact tests	No such consideration for built-in type equipment.	N/A
4.4.3.5	Internal accessible safeguard tests		N/A
4.4.3.6	Glass impact tests	\ (N/A
4.4.3.7	Glass fixation tests		N/A
	Glass impact test (1J)	/ / / / / /	N/A
	Push/pull test (10 N)	. / / / / /	N/A
4.4.3.8	Thermoplastic material tests	(See Annex T.8)	N/A
4.4.3.9	Air comprising a safeguard		N/A
4.4.3.10	Accessibility, glass, safeguard effectiveness	The state of the s	Р
4.4.4	Displacement of a safeguard by an insulating liquid		N/A
4.4.5	Safety interlocks		N/A
4.5	Explosion		P
4.5.1	General	(See Clause B.2,B.3)	P
4.5.2	No explosion during normal/abnormal operating condition	(See Clause B.4)	Р
	No harm by explosion during single fault conditions		N/A
4.6	Fixing of conductors		N/A

		Report No BCTC	24000021003
	IEC 62368-1		
Clause	Requirement + Test	Result - Remark	Verdict
	Fix conductors not to defeat a safeguard		N/A
	Compliance is checked by test:		N/A
4.7	Equipment for direct insertion into mains socket	t-outlets	N/A
4.7.2	Mains plug part complies with relevant standard:		N/A
4.7.3	Torque (Nm)		N/A
4.8	Equipment containing coin/button cell batteries		N/A
4.8.1	General	No such battery used.	N/A
4.8.2	Instructional safeguard:		N/A
4.8.3	Battery compartment door/cover construction		N/A
	Open torque test		N/A
4.8.4.2	Stress relief test		N/A
4.8.4.3	Battery replacement test		N/A
4.8.4.4	Drop test		N/A
4.8.4.5	Impact test		N/A
4.8.4.6	Crush test		N/A
4.8.5	Compliance		N/A
	30N force test with test probe		N/A
	20N force test with test hook		N/A
4.9	Likelihood of fire or shock due to entry of condu	ictive object	N/A
4.10	Component requirements		N/A
4.10.1	Disconnect Device		N/A
4.10.2	Switches and relays		N/A

L	ocation	Operating and fault condition	Dissipate power (W)	Arcing PIS? / No	Yes
Al	l circuits	*		Yes (declaratio	n)

Supplementary information:

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, or (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.

* A Resistive PIS is considered to exist in primary circuits and secondary circuits.

2	Modification to Clause 10	
10.6	Safeguards against acoustic energy sources	Р
	Replace 10.6 of IEC 62368-1 with the following:	
10.6.1.1	Introduction	Р
	Safeguard requirements for protection against long-term exposure to excessive sound pressure levels from personal music players closely coupled to the ear are specified below. Requirements for earphones and headphones intended for use with personal music players are also covered. A personal music player is a portable equipment intended for use by an ordinary person, that:	
	 is designed to allow the user to listen to audio or audiovisual content / material; and uses a listening device, such as headphones or earphones that can be worn in or on or around the ears; and has a player that can be body worn (of a size suitable to be carried in a clothing pocket) and is intended for the user to walk around with while in continuous use (for example, on a street, in a subway, at an airport, etc.). 	
	EXAMPLES Portable CD players, MP3 audio players, mobile phones with MP3 type features, PDAs or similar equipment.	
	Personal music players shall comply with the requirements of either 10.6.2 or 10.6.3.	
	NOTE 1 Protection against acoustic energy sources from telecom applications is referenced to ITU-T P.360.	
	NOTE 2 It is the intention of the Committee to allow the alternative methods for now, but to only use the dose measurement method as given in 10.6.5 in future. Therefore, manufacturers are encouraged to	
	implement 10.6.5 as soon as possible. Listening devices sold separately shall comply with the requirements of 10.6.6.	
	These requirements are valid for music or video mode only. The requirements do not apply to:	

No.: BCTC/RF-SA-012 Page 50 of 75 Edition : B.0

		Report No. : Berez 1000	
	- professional equipment;		
	NOTE 3 Professional equipment is equipment sold through special sales channels. All products sold through normal electronics stores are considered not to be		
	professional equipment.		
	 hearing aid equipment and other devices for assistive listening; 		
	the following type of analogue personal music players:		
	 long distance radio receiver (for example, a multiband radio receiver or world band radio receiver, an AM radio receiver), and cassette player/recorder; 		
	NOTE 4 This exemption has been allowed because this technology is falling out of use and it is expected that		
	within a few years it will no longer exist. This exemption will not be extended to other technologies.		
	 a player while connected to an external amplifier that does not allow the user to walk around while in use. 		
	For equipment that is clearly designed or intended primarily for use by children, the limits of the relevant toy standards may apply.		
	The relevant requirements are given in		
	EN 71-1:2011, 4.20 and the related tests methods	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	÷
10.6.1.2	and measurement distances apply. Non-ionizing radiation from radio frequencies		
10.6.1.2	in the range 0 to 300 GHz		P
	The amount of non-ionizing radiation is regulated		
	by European Council Recommendation 1999/519/EC of 12 July 1999 on the limitation of		
	exposure of the general public to electromagnetic		
	fields (0 Hz to 300 GHz).		
	For intentional radiators, ICNIRP guidelines		
	should be taken into account for Limiting Exposure		
	to Time-Varying Electric, Magnetic, and Electromagnetic Fields (up to 300 GHz). For hand-		
	held and body mounted devices, attention is		
	drawn to EN 50360 and EN 50566.		
10.6.2	Classification of devices without the capacity to	estimate sound dose	N/A
l			

10.6.2.1	General		N/A
	This standard is transitioning from short-term		
	based (30 s) requirements to long-term based (40		
	hour) requirements. These clauses remain in effect only for devices that do not comply with		
	sound dose estimation as stipulated in EN 50332-		
	3.		
	For classifying the acoustic output $LAeq, T$,		
	measurements are based on the A-weighted		
	equivalent sound pressure level over a 30 s		
	period.		
	For music where the average sound pressure		
	(long term $LAeq, T$) measured over the duration of		
	the song is lower than the average produced by		
	the programme simulation noise, measurements		
	may be done over the duration of the complete		
	song. In this case, <i>T</i> becomes the duration of the song.		
	song.		
	NOTE Classical music, acoustic music and		
	broadcast typically has an average sound		
	pressure (long term <i>L</i> Aeq, <i>T</i>) which is much lower		
	than the average programme simulation noise.		
	Therefore, if the player is capable to analyse the content and compare it with the programme		
	simulation noise, the warning does not need to be		
	given as long as the average sound pressure of		
	the song does not exceed the required limit.		
	For example, if the player is set with the		
	programme simulation noise to 85 dB, but the		
	average music level of the song is only 65 dB, there is no need to give a warning or ask an		
	acknowledgement as long as the average sound	\ \	
	level of the song is not above the basic limit of 85		
	dB.		
10.6.2.2	RS1 limits (to be superseded, see 10.6.3.2)		N/A
	RS1 is a class 1 acoustic energy source that does		
	not exceed the following:		
	for equipment provided as a package (player)		
	with its listening device), and with a proprietary		
	connector between the player and its listening		
	device, or where the combination of player and		
	listening device is known by other means such as		
	setting or automatic detection, the $LAeq$, T acoustic output shall be ≤ 85 dB when playing the		
	fixed "programme simulation noise" described in		
	EN 50332-1.

10.6.2.3	RS2 limits (to be superseded, see 10.6.3.3)		N/A
	per 10.6.3.2.		
	- The RS1 limits will be updated for all devices as		
	simulation noise" described in EN 50332-1.		
	≤ 27 mV (analogue interface) or -25 dBFS (digital interface) when playing the fixed "programme		
	use, the unweighted r.m.s. output voltage shall be		
	allows connection to a listening device for general		
	connector (for example, a 3,5 phone jack) that		

		Report No BCTC2408	3021003
10.6.3.3	listening device is known by other means such as setting or automatic detection, the <i>L</i> Aeq, <i>T</i> acoustic output shall be ≤ 80 dB when playing the fixed "programme simulation noise" described in EN 50332-1. — for equipment provided with a standardized connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output voltage shall be ≤ 15 mV (analogue interface) or -30 dBFS (digital interface) when playing the fixed "programme simulation noise" described in EN 50332-1. RS2 limits (new) RS2 is a class 2 acoustic energy source that does not exceed the following: — for equipment provided as a package (player with its listening device), and with a proprietary connector between the player and its listening device, or where the combination of player and listening device is known by other means such as setting or automatic detection, the weekly sound exposure level, as described in EN 50332-3, shall be ≤ 80 dB when playing the fixed "programme simulation noise" described in EN 50332-1. — for equipment provided with a standardized connector (for example, a 3,5 phone jack) that allows connection to a listening device for general use, the unweighted r.m.s. output level, integrated over one week, as described in EN50332-3, shall be ≤ 15 mV (analogue interface) or -30 dBFS (digital interface) when playing the fixed "programme simulation noise" described in EN		N/A
10.6.4	50332-1.	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	
	Requirements for maximum sound exposure		Р
10.6.4.1	Measurement methods All volume controls shall be turned to maximum during tests. Measurements shall be made in accordance with EN 50332-1 or EN 50332-2 as applicable.		L
10.6.4.2	Protection of persons		Р
	Except as given below, protection requirements for parts accessible to ordinary persons, instructed persons and skilled persons are given in 4.3.		
	NOTE 1 Volume control is not considered a		

No.: BCTC/RF-SA-012 Page 54 of 75 Edition : B.0

safeguard.

Between RS2 and an **ordinary person**, the **basic safeguard** may be replaced by an **instructional safeguard** in accordance with Clause F.5, except that the **instructional safeguard** shall be placed on the equipment, or on the packaging, or in the instruction manual.

Alternatively, the **instructional safeguard** may be given through the equipment display during use.

The elements of the **instructional safeguard** shall be as follows:

- element 1a: the symbol , IEC 60417-6044 (2011-01)
- element 2: "High sound pressure" or equivalent wording
- element 3: "Hearing damage risk" or equivalent wording
- element 4: "Do not listen at high volume levels for long periods." or equivalent wording

An **equipment safeguard** shall prevent exposure of an **ordinary person** to an RS2 source without intentional physical action from the **ordinary person** and shall automatically return to an output level not exceeding what is specified for an RS1 source when the power is switched off.

The equipment shall provide a means to actively inform the user of the increased sound level when the equipment is operated with an output exceeding RS1. Any means used shall be acknowledged by the user before activating a mode of operation which allows for an output exceeding RS1. The acknowledgement does not need to be repeated more than once every 20 h of cumulative listening time.

NOTE 2 Examples of means include visual or audible signals. Action from the user is always needed.

NOTE 3 The 20 h listening time is the accumulative listening time, independent of how often and how long the personal music player has been switched off.

A skilled person shall not be unintentionally

10.6.5.1	General requirements Personal music players shall give the warnings as provided below when tested according to EN 50332-3, using the limits from this clause. The manufacturer may offer optional settings to allow the users to modify when and how they wish to receive the notifications and warnings to promote a better user experience without defeating the safeguards. This allows the users to be informed in a method that best meets their physical capabilities and device usage needs. If such optional settings are offered, an administrator (for example, parental restrictions, business/educational administrators, etc.) shall be able to lock any optional settings into a specific configuration.		N/A N/A

	business/educational administrators, etc.) shall be able to lock any optional settings into a specific		
	able to lock any optional settings into a specific		
	configuration.		1
	The personal music player shall be supplied with		
	easy to understand explanation to the user of the		
	dose management system, the risks involved, and		
	how to use the system safely. The user shall be		
	made aware that other sources may significantly		
	contribute to their sound exposure, for example		
	work, transportation, concerts, clubs, cinema, car		
	races, etc.		
0.6.5.2	Dose-based warning and requirements		N/A
	When a dose of 100 % <i>CSD</i> is reached, and at		
	least at every 100 % further increase of CSD, the		
	device shall warn the user and require an	\ .	
	acknowledgement. In case the user does not	À.	
	acknowledge, the output level shall automatically		
	decrease to compliance with class RS1.		
	The warning shall at least clearly indicate that		
	listening above 100 % CSD leads to the risk of		
0650	hearing damage or loss.		
0.6.5.3	Exposure-based requirements		N/A
	With only dose-based requirements, cause and		
	effect could be far separated in time, defying the		
	purpose of educating users about safe listening		
	practice. In addition to dose-based requirements,		
	a PMP shall therefore also put a limit to the short-		
	term sound level a user can listen at.		
o.: BCTC/RF	-SA-012 Page 56 of 75	Editio	n: B.0

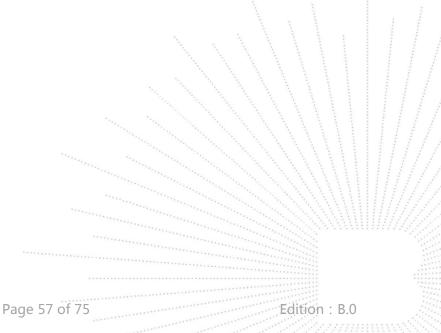

The exposure-based limiter (EL) shall automatically reduce the sound level not to exceed 100 dB(A) or 150 mV integrated over the past 180 s, based on methodology defined in EN 50332-3.

The EL settling time (time from starting level reduction to reaching target output) shall be 10 s or faster.

Test of EL functionality is conducted according to EN 50332-3, using the limits from this clause. For equipment provided as a package (player with its listening device), the level integrated over 180 s shall be 100 dB or lower. For equipment provided with a standardized connector, the unweighted level integrated over 180 s shall be no more than 150 mV for an analogue interface and no more than -10 dBFS for a digital interface.

NOTE In case the source is known not to be music (or test signal), the EL may be disabled.

No.: BCTC/RF-SA-012

10.6.6	Requirements for listening devices (headphone	s, earphones, etc.)	N/A
10.6.6.1	With 94 dB LAeq acoustic pressure output of the listening device, and with the volume and sound settings in the listening device (for example, built-in volume level control, additional sound features like equalization, etc.) set to the combination of positions that maximize the measured acoustic output, the input voltage of the listening device when playing the fixed "programme simulation noise" as described in EN 50332-1 shall be ≥ 75 mV.		N/A
	NOTE The values of 94 dB and 75 mV correspond		
10.6.6.2	with 85 dB and 27 mV or 100 dB and 150 mV. Corded listening devices with digital input		N/A
	With any playing device playing the fixed "programme simulation noise" described in EN 50332-1, and with the volume and sound settings in the listening device (for example, built-in volume level control, additional sound features like equalization, etc.) set to the combination of positions that maximize the measured acoustic output, the L Aeq, T acoustic output of the listening device shall be \leq 100 dB with an input signal of -10 dBFS.		
10.6.6.3	Cordless listening devices		N/A
10.6.6.4	In cordless mode, — with any playing and transmitting device playing the fixed programme simulation noise described in EN 50332-1; and — respecting the cordless transmission standards, where an air interface standard exists that specifies the equivalent acoustic level; and — with volume and sound settings in the receiving device (for example, built-in volume level control, additional sound features like equalization, etc.) set to the combination of positions that maximize the measured acoustic output for the above mentioned programme simulation noise, the LAeq, T acoustic output of the listening device shall be ≤ 100 dB with an input signal of -10 dBFS. Measurement method		NXX
10.6.6.4	Measurement method Measurements shall be made in accordance with EN 50332-2 as applicable.		N/A

			•
8	Modification to 10.5.1		
10.5.1	Add the following after the first paragraph:		N/A
	For RS 1 compliance is checked by measurement under the following conditions:		
	In addition to the normal operating conditions, all controls adjustable from the outside by hand, by any object such as a tool or a coin, and those internal adjustments or pre-sets which are not locked in a reliable manner, are adjusted so as to give maximum radiation whilst maintaining an intelligible picture for 1 h, at the end of which the measurement is made.		
	NOTE Z1 Soldered joints and paint lockings are examples of adequate locking.		
	The dose-rate is determined by means of a radiation monitor with an effective area of 10 cm ² , at any point 10 cm from the outer surface of the apparatus.		
	Moreover, the measurement shall be made under fault conditions causing an increase of the high voltage, provided an intelligible picture is maintained for 1 h, at the end of which the measurement is made.		
	For RS1, the dose-rate shall not exceed 1 µSv/h taking account of the background level.		
	NOTE Z2 These values appear in Directive 96/29/Euratom of 13 May 1996.	\	
9	Modification to G.7.1		
G.7.1	Add the following note: NOTE Z1 The harmonized code designations corresponding to the IEC cord types are given in Annex ZD.		N/A

4.1.15	Denmark, Finland, Norway and Sweden	
	To the end of the subclause the following is added:	
	Class I pluggable equipment type A	
	intended for connection to other equipment or a network shall, if safety relies on connection to reliable earthing or if surge suppressors are connected between the network terminals	
	and accessible parts, have a marking stating	
	that the equipment shall be connected to an	
	earthed mains socket-outlet.	
	The marking text in the applicable countries shall be as follows:	
	In Denmark : "Apparatets stikprop skal	
	tilsluttes en stikkontakt med jord som giver forbindelse til stikproppens jord."	
	In Finland : "Laite on liitettävä	
	suojakoskettimilla varustettuun pistorasiaan"	
	In Norway : "Apparatet må tilkoples jordet	
	stikkontakt"	
	In Sweden : "Apparaten skall anslutas till jordat	
	uttag"	

No.: BCTC/RF-SA-012

4.7.3	United Kingdom		N/A
	To the end of the subclause the following is added:		
	The face of the face of the second state of th		
	The torque test is performed using a socket-outlet		
	complying with BS 1363, and the plug part shall be assessed to the relevant clauses of BS 1363. Also		
	see Annex G.4.2 of this annex		
5.2.2.2	Denmark		N/A
	After the 2nd paragraph add the following:		
	A warning (marking safeguard) for high touch		
	current is required if the touch current exceeds the		
	limits of 3,5 mA a.c. or 10 mA d.c.		
5.4.11.1	Finland and Sweden		N/A
and			
Annex G	To the end of the subclause the following is added:		
	For separation of the telecommunication network		
	from earth the following is applicable:		
	If this insulation is solid, including insulation		
	forming part of a component, it shall at least		
	consist of either		
	two layers of thin sheet material, each of which		
	shall pass the electric strength test below, or		
	one layer having a distance through insulation		
	of at least 0,4 mm, which shall pass the electric		
	strength test below.		
	If this insulation forms part of a semiconductor		
	component (e.g. an optocoupler), there is no		
	distance through insulation requirement for the	\	
	insulation consisting of an insulating compound	1	
	completely filling the casing, so that clearances		
	and creepage distances do not exist, if the		
	component passes the electric strength test in		
	accordance with the compliance clause below and		
	in addition		
	• passes the tests and inspection criteria of 5.4.8	Same and the second second	
	with an electric strength test of 1,5 kV multiplied	The same of the sa	
	by 1,6 (the electric strength test of 5.4.9 shall be		
	performed using 1,5 kV),		
	· · · · · · · · · · · · · · · · · · ·		
	and		A 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1

	is subject to routine testing for electric strength		

		Report No. : Berez 100	0021003
	during manufacturing, using a test voltage of 1,5 kV.		
	It is permitted to bridge this insulation with a capacitor complying with EN 60384-14:2005, subclass Y2.		
	A capacitor classified Y3 according to EN 60384- 14:2005, may bridge this insulation under the following conditions:		
	 the insulation requirements are satisfied by having a capacitor classified Y3 as defined by EN 60384-14, which in addition to the Y3 testing, is tested with an impulse test of 2,5 kV defined in 5.4.11; 		
	 the additional testing shall be performed on all the test specimens as described in EN 60384- 14; 		
	the impulse test of 2,5 kV is to be performed		
	before the endurance test in EN 60384-14, in the		
	sequence of tests as described in EN 60384-14.		
5.5.2.1	Norway		N/A
	After the 3rd paragraph the following is added:		
	Due to the IT power system used, capacitors are required to be rated for the applicable line-to-line voltage (230 V).		
5.5.6	Finland, Norway and Sweden		N/A
	To the end of the subclause the following is added:	\ ,	1
	Resistors used as basic safeguard or bridging basic insulation in class I pluggable equipment type A shall comply with G.10.1 and the test of G.10.2.		
5.6.1	Denmark		N/A
	No.		
	Add to the end of the subclause		
	Due to many existing installations where the		
	socket-outlets can be protected with fuses		
	with higher rating than the rating of the socket- outlets the protection for pluggable		
	equipment type A shall be an integral part of the		
	equipment.		
	Justification:		
	In Denmark an existing 13 A socket outlet can be		
			1

No.: BCTC/RF-SA-012 Page 65 of 75 Edition : B.0

	protected by a 20 A fuse.		
5.6.4.2.1	Ireland and United Kingdom		N/A
0.01-1.21	, and the second		13/73
	After the indent for pluggable equipment type A,		
	the following is added:		
	- the protective current rating is taken to be 13		
	A, this being the largest rating of fuse used in the		
	mains plug.		
5.6.4.2.1	France		N/A
	After the indent for pluggable equipment type A ,		
	the following is added:		
	- in certain cases, the protective current rating		
	of the circuit supplied from the mains is taken as		
	20 A instead of 16 A.		
5.6.5.1	To the second paragraph the following is added:		N/A
	The range of conductor sizes of flexible cords to		
	be accepted by terminals for equipment with a		
	rated current over 10 A and up to and including 13		
	A is:		
	1,25 mm ² to 1,5 mm ² in cross-sectional area.		
5.6.8	Norway		N/A
5.0.0	, and the same of		IN/A
	To the end of the subclause the following is added:		
	Equipment connected with an earthed mains plug		
	is classified as class I equipment . See the		
	Norway marking requirement in 4.1.15. The		
	symbol IEC 60417-6092, as specified in F.3.6.2, is		
	accepted.		
5.7.6	Denmark		N/A
	To the end of the subclause the following is added:		
	The installation instruction shall be affixed to the	\ \	
	equipment if the protective conductor current	\ \ \ \	
	exceeds the limits of 3,5 mA a.c. or 10 mA d.c.		

No.: BCTC/RF-SA-012 Page 66 of 75 Edition : B.0

5.7.6.2	Denmark		N/A
	To the end of the subclause the following is		
	added:		
	The warning (marking safeguard) for high touch		
	current is required if the touch current or the		
	protective current exceed the limits of 3,5 mA.		
5.7.7.1	Norway and Sweden		N/A
	To the end of the subclause the following is		
	To the end of the subclause the following is added:		
	The screen of the television distribution system is		
	normally not earthed at the entrance of the		
	building and there is normally no equipotential		
	bonding system within the building.		
	Therefore the protective earthing of the building		
	installation needs to be isolated from the screen		
	of a cable distribution system.		
	It is however accepted to provide the insulation		
	external to the equipment by an adapter or an		
	interconnection cable with galvanic isolator, which		
	may be provided by a retailer, for example.		
	The user manual shall then have the following or		
	similar information in Norwegian and Swedish		
	language respectively, depending on in what		
	country the equipment is intended to be used in:		
	"Apparatus connected to the protective earthing of		
	the building installation through the mains		
	connection or through other apparatus with a		
	connection to protective earthing –		
	and to a television distribution system using	\	
	coaxial cable, may in some circumstances create a fire hazard. Connection to a television	\ .	
	distribution system therefore has to be provided		
	through a device providing electrical isolation		
	below a certain frequency range (galvanic		
	isolator, see EN 60728-11)"		
	NOTE In Norway, due to regulation for CATV-		
	installations, and in Sweden, a galvanic isolator		
	shall provide electrical insulation below 5 MHz.		
	The insulation shall withstand a dielectric strength		
	of 1,5 kV r.m.s., 50 Hz or 60 Hz, for 1 min.		
	· · · · · · · · · · · · · · · · · · ·

STATEMENT

- 1. The equipment lists are traceable to the national reference standards.
- 2. The test report can not be partially copied unless prior written approval is issued from our lab.
- 3. The test report is invalid without the "special seal for inspection and testing".
- 4. The test report is invalid without the signature of the approver.
- 5. The test process and test result is only related to the Unit Under Test.
- 6. Sample information is provided by the client and the laboratory is not responsible for its authenticity.
- 7. The quality system of our laboratory is in accordance with ISO/IEC17025.
- 8. If there is any objection to this test report, the client should inform issuing laboratory within 15 days from the date of receiving test report.
