June 2015

Revision 002

Document Number: 332066-002

You may not use or facilitate the use of this document in connection with any infringement or other legal analysis concerning Intel products described herein. You agree to grant Intel a non-exclusive, royalty-free license to any patent claim thereafter drafted which includes subject matter disclosed herein.

No license (express or implied, by estoppel or otherwise) to any intellectual property rights is granted by this document.

The products described may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest Intel product specifications and roadmaps.

Tests document performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit http://www.intel.com/performance.

Copies of documents which have an order number and are referenced in this document may be obtained by calling 1-800-548-4725 or visit www.intel.com/design/literature.htm.

Intel® Virtualization Technology requires a computer system with an enabled Intel® processor, updated BIOS, and virtual machine monitor (VMM). Functionality, performance or other benefits will vary depending on hardware and software configurations. Software applications may not be compatible with all operating systems. Check with your system manufacturer. Learn more at http://www.intel.com/go/virtualization.

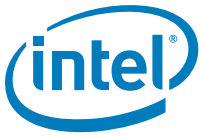
Revision History

Document Number	Revision Number	Description	Revision Date
332066	001	• Initial release	March 2015
332066	002	• Added Section 7.15 • Modified the title for Section 7.14 • Updated Section 7.14.9 • Updated Section 10.3.4	June 2015



1 Register Access Methods

Note: Throughout this document Intel® Atom™ Z8000 Processor Series is referred as Processor or SoC.

There are six different common register access methods:

- Fixed IO Register Access
- Fixed Memory Mapped Register Access
- IO Referenced Register Access
- Memory Referenced Register Access
- PCI Configuration Register Access (Indirect - via Memory or IO registers)
- Message Bus Register Access (Indirect - via PCI Configuration Registers)

1.1 Fixed IO Register Access

Fixed IO registers are accessed by specifying their 16-bit address in a PORT IN and/or PORT OUT transaction from the CPU core. This allows direct manipulation of the registers. Fixed IO registers are unmovable register in IO space.

Table 1. Fixed IO Register Access Method Example (P80 Register)

Type: I/O Register (Size: 32 bits)	**P80:** 80h

1.2 Fixed Memory Mapped Register Access

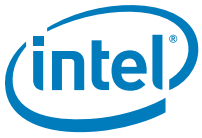
Fixed Memory Mapped IO (MMIO) registers are accessed by specifying their 32/36-bit address in a memory transaction from the CPU core. This allows direct manipulation of the registers. Fixed MMIO registers are unmovable registers in memory space.

Table 2. Fixed Memory Mapped Register Access Method Example (IDX Register)

Type: Memory Mapped I/O Register (Size: 32 bits)	**IDX:** FEC00000h

1.3 IO Referenced Register Access

IO referenced registers use programmable base address registers (BARs) to select a range of IO addresses that it will use to decode PORT IN and/or PORT OUT transactions from the CPU to directly access a register. Thus, the IO BARs act as pointers to blocks of actual IO registers. To access an IO referenced register for a specific IO base address, start with that base address and add the register's offset. Example pseudo code for an IO referenced register read is shown below:



```
Register_Snapshot = IOREAD([IO_BAR]+Register_Offset)
```

Base address registers are often located in the PCI configuration space and are programmable by the BIOS/OS. Other base address register types may include fixed memory registers, fixed IO registers or message bus registers.

Table 3. Referenced IO Register Access Method Example (HSTS Register)

Type: I/O Register (Size: 8bits)	**HSTS:** [SMB_IOBAR] + 0h **SMB_IOBAR Type:** PCI Configuration Register (Size: 32 bits) **SMB_IOBAR Reference:** [B:0, D:31, F:3] + 20h

1.4 Memory Referenced Register Access

The SoC uses programmable base address registers (BARs) to set a range of physical address (memory) locations that it will use to decode memory reads and writes from the CPU to directly access a register. These BARs act as pointers to blocks of actual memory mapped IO (MMIO) registers. To access a memory referenced register for a specific base address, start with that base address and add the register's offset. Example pseudo code for a read is shown below:

```
Register_Snapshot = MEMREAD([Mem_BAR]+Register_Offset)
```

Base address registers are often located in the PCI configuration space and are programmable by the BIOS/OS. Other common base address register types include fixed memory registers and IO registers that point to MMIO register blocks.

Table 4. Memory Mapped Register Access Method Example (SMB_MBAR Register)

Type: Memory Mapped I/O Register (Size: 8bits)	**HSTS:** [SMB_MBAR] + 0h **SMB_MBAR Type:** PCI Configuration Register (Size: 32 bits) **SMB_MBAR Reference:** [B:0, D:31, F:3] + 10h

1.5 PCI Configuration Register Access

Access to PCI configuration space registers is performed through one of two different configuration access methods (CAMs):

- IO indexed - PCI CAM
- Memory mapped - PCI Enhanced CAM (ECAM)

Each PCI function has a standard PCI header consisting of 256 bytes for the IO access scheme (CAM), or 4096 bytes for the enhanced memory access method (ECAM). Invalid read accesses return binary strings of 1s.

Table 5. PCI Register Access Method Example (VID Register)

Type: PCI Configuration Register (Size: 16bits)	**VID:** [B:0, D:31, F:3] + 0h

1.5.1 PCI Configuration Access - CAM: IO Indexed Scheme

Accesses to configuration space using the IO method relies on two 32-bit IO registers:

- **CONFIG_ADDRESS** - IO Port CF8h
- **CONFIG_DATA** - IO Port CFCh

These two registers are both 32-bit registers in IO space. Using this indirect access mode, software uses CONFIG_ADDRESS (CF8h) as an index register, indicating which configuration space register to access, and CONFIG_DATA (CFCh) acts as a window to the register pointed to in CONFIG_ADDRESS. Accesses to CONFIG_ADDRESS (CF8h) are internally captured. Upon a read or write access to CONFIG_DATA (CFCh), configuration cycles will be generated to the PCI function specified by the address captured in CONFIG_ADDRESS. The format of the address is shown below.

Table 6. PCI CONFIG_ADDRESS Register (IO PORT CF8h) Mapping

Field	CONFIG_ADDRESS Bits
Enable PCI Config. Space Mapping	31
Reserved	30:24
Bus Number	23:16
Device Number	15:11
Function Number	10:08
Register/Offset Number	07:02

Note: Bit 31 of CONFIG_ADDRESS must be set for a configuration cycle to be generated.

Pseudo code for a PCI register read is shown below:

- MyCfgAddr[23:16] = bus; MyCfgAddr[15:11] = device; MyCfgAddr[10:8] = funct;
- MyCfgAddr[7:2] = dWordMask(offset); MyCfgAddr[31] = 1;
- IOWRITE(0xCF8, MyCfgAddr)
- Register_Snapshot = IOREAD(0xCFC)

1.5.2 PCI Configuration Access - ECAM: Memory Mapped Scheme

A flat, 256 MiB memory space may also be allocated to perform configuration transactions. This is enabled through the BUNIT.BECREG message bus register (Port: 3h, Register: 27h) found in the SoC. BUNIT.BECREG allows remapping this 256 MiB region anywhere in physical memory space. Memory accesses within the programmed MMIO range result in configuration cycles to the appropriate PCI devices specified by the memory address as shown below.

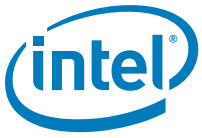


Table 7. PCI Configuration Memory Bar Mapping

ECAM Memory Address Field	ECAM Memory Address Bits
Use from BAR: BUNIT.BECREG[31:28]	31:28
Bus Number	27:20
Device Number	19:15
Function Number	14:12
Register Number	11:02

NOTE: ECAM accesses are only possible when BUNIT.BECREG.ECENABLE (bit 0) is set.
NOTE: Pseudo code for an enhanced PCI configuration register read is shown below:

1. MyCfgAddr[27:20] = bus; MyCfgAddr[19:15] = device; MyCfgAddr[14:12] = funct;
2. MyCfgAddr[11:2] = dw_offset; MyCfgAddr[31:28] = BECREG[31:28];
3. Register_Snapshot = MEMREAD(MyCfgAddr)

1.6 Message Bus Register Access

Accesses to the message bus space is through the SoC's PCI configuration registers. This unit relies on three 32-bit PCI configuration registers to generate messages:

- Message Bus Control Register (MCR) - PCI[B:0,D:0,F:0] + D0h
- Message Data Register (MDR) - PCI[B:0,D:0,F:0] + D4h
- Message Control Register eXtension (MCRX) - PCI[B:0,D:0,F:0] + D8h

This indirect access mode is similar to PCI CAM. Software uses the MCR/MCRX as an index register, indicating which message bus space register to access (MCRX only when required), and MDR as the data register. Writes to the MCR trigger message bus transactions.

Writes to MCRX and MDR will be captured. Writes to MCR will generate an internal 'message bus' transaction with the opcode and target (port, offset, bytes) specified in the MCR and the captured MCRX. When a write opcode is specified in MCR, the data that was captured by MDR is used for the write. When a data read opcode is specified in MCR, the data will be available in the MDR register after the MCR write completes (non-posted). The format of MCR and MCRX are shown below.

Table 8. MCR Description

Field	MBPR Bits
OpCode (typically 10h for read, 11h for write)	31:24
Port	23:16
Offset/Register	15:08
Byte Enable	07:04

Table 9. MCRX Description

Field	MBPER Bits
Offset/Register Extension. This is used for messages sent to end points that require more than 8 bits for the offset/register. These bits are a direct extension of MCR[15:8].	31:08

Most message bus registers are located in the SoC. The default opcode messages for those registers are as follows:

- Message 'Read Register' Opcode: 06h
- Message 'Write Register' Opcode: 07h

Registers with different opcodes will be specified as applicable. Pseudo code of a message bus register read is shown below (where ReadOp==0x06):

- MyMCR[31:24] = ReadOp; MyMCR[23:16] = port; MyMCR[15:8] = offset;
- MyMCR[7:4] = 0xf
- PCIWRITE(0, 0, 0, 0xD0, MyMCR)
- Register_Snapshot = PCIREAD(0, 0, 0, 0xD4)

1.7 Register Field Access Types

Table 10. Register Access Types and Definitions (Sheet 1 of 2)

Access Type	Meaning	Description
RO	Read Only	In some cases, if a register is read only, writes to this register location have no effect. However, in other cases, two separate registers are located at the same location where a read accesses one of the registers and a write accesses the other register. Refer the I/O and memory map tables for details.
WO	Write Only	In some cases, if a register is write only, reads to this register location have no effect. However, in other cases, two separate registers are located at the same location where a read accesses one of the registers and a write accesses the other register. Refer the I/O and memory map tables for details.
R/W	Read/Write	A register with this attribute can be read and written.
R/WC	Read/Write Clear	A register bit with this attribute can be read and written. However, a write of 1 clears (sets to 0) the corresponding bit and a write of 0 has no effect.

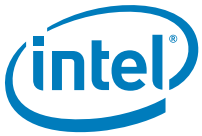

Table 10. Register Access Types and Definitions (Sheet 2 of 2)

Access Type	Meaning	Description
R/WO	Read/Write-Once	A register bit with this attribute can be written only once after power up. After the first write, the bit becomes read only.
R/WLO	Read/Write, Lock-Once	A register bit with this attribute can be written to the non-locked value multiple times, but to the locked value only once. After the locked value has been written, the bit becomes read only.
Default	Default	When the processor is reset, it sets its registers to predetermined default states. The default state represents the minimum functionality feature set required to successfully bring up the system. Hence, it does not represent the optimal system configuration. It is the responsibility of the system initialization software to determine configuration, operating parameters, and optional system features that are applicable, and to program the processor registers accordingly.

§

2 Mapping Address Space Registers

The Processor core can only directly access *memory space* through memory reads and writes and *I/O space* through the IN and OUT I/O port instructions. *PCI configuration space* is indirectly accessed through I/O or memory space, and the *Message Bus space* is accessed through PCI configuration space. Refer Chapter 1, "Register Access Methods"for details.

This chapter describes how the memory, I/O, PCI and Message Bus spaces are mapped to interfaces in the SoC.

Note: Refer Chapter 6, "SoC Storage" for registers specified in the chapter.

2.1 Physical Address Space Mappings

There are 64 GB (36-bits) of physical address space that can be used as:

- Memory Mapped I/O (MMIO - I/O fabric)
- Physical Memory (DRAM)

The Processor core can access the full physical address space, while downstream devices can only access SoC DRAM, and each Processor core's local APIC. Peer to peer transactions are not supported.

Most devices map their registers and memory to the physical address space. This chapter summarizes the possible mappings.

2.1.1 SoC Memory Map

The SoC maps the physical address space as follows:

- Processor core to DRAM
- Processor core to I/O fabric (MMIO)
- Processor core to extended PCI registers (ECAM accesses)
- I/O fabric to Processor cores (local APIC interrupts)

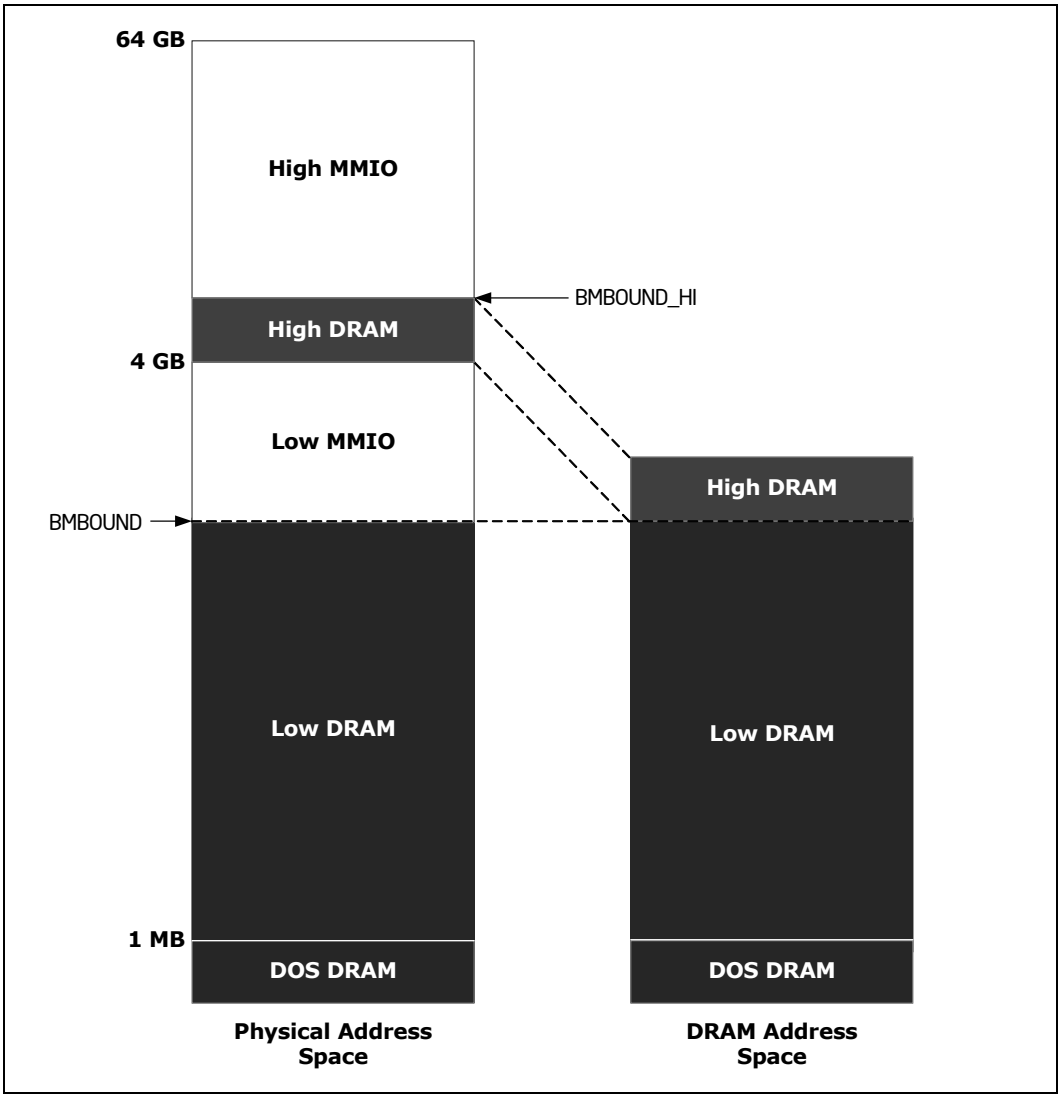
Although 64 GB (36-bits) of physical address space is accessible, some MMIO must exist for devices and software with 32-bit limits. Further, all DRAM should remain accessible for devices and software with access to memory above 4 GB. These goals are accomplished by moving a section DRAM to start at the fixed 4 GB boundary, leaving a hole below 4 GB for MMIO. This creates the following distinct memory regions:

- DOS DRAM + Low DRAM

- Low MMIO
- High DRAM
- High MMIO

There are two registers used to create these regions, BMBOUND and BMBOUND_HI. Their use is shown in Figure 11.

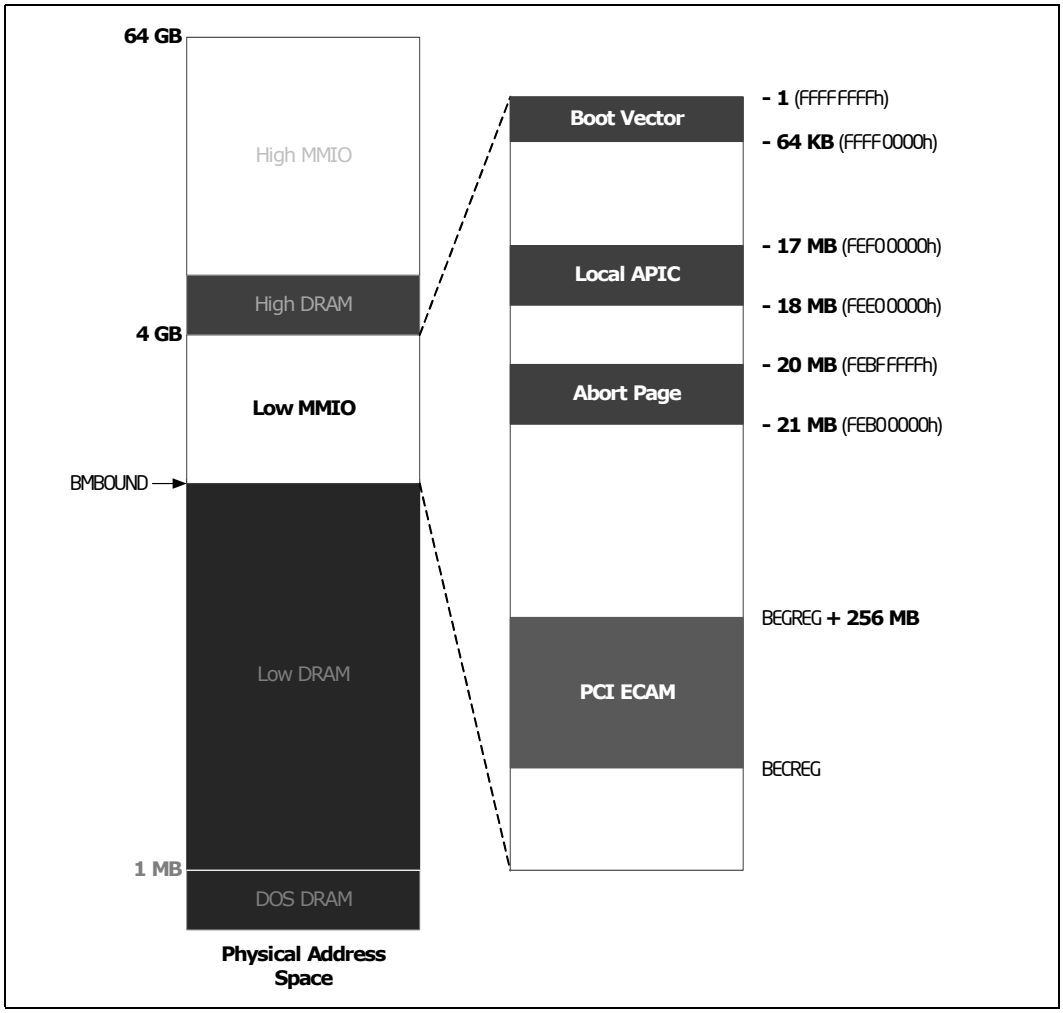
Figure 11. Physical Address Space—DRAM and MMIO



2.1.1.1 Low MMIO

The low MMIO mappings are shown in Figure 12.

Figure 12. Physical Address Space—Low MMIO



By default, Processor core reads targeting the **Boot Vector** range (FFFFFFFFh-FFFF0000h) are sent to the boot Flash connected to the Platform Controller Unit, and write accesses target DRAM. This allows the boot strap Processor core to fetch boot code from the boot Flash, and then shadow that code to DRAM.

Upstream writes from the I/O fabric to the **Local APIC** range (FEE00000h-FEF00000h) are sent to the appropriate Processor core APIC.

Write accesses from a Processor core to the **Abort Page** range (FEB00000h-FEBFFFFFh) will be dropped, and reads will always return all 1s in binary.

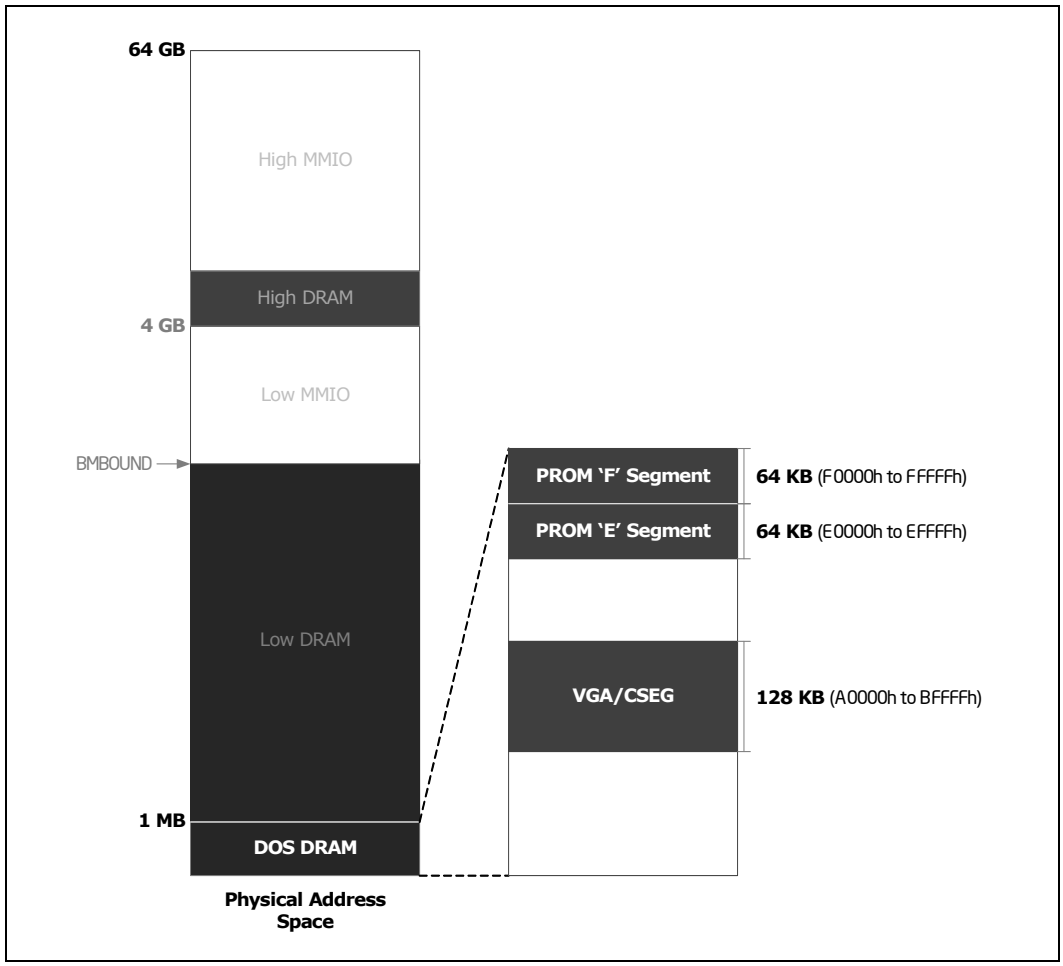
Accesses in the 256MB **PCI ECAM** range starting at BECREG generate enhanced PCI configuration register accesses when enabled (BECREG.ECENABLE). Unlike traditional memory writes, writes to this range are non-posted when enabled.

All other downstream accesses in the Low MMIO range are sent to the I/O Fabric for further decode based on PCI resource allocations. The I/O Fabric's subtractive agent (for unclaimed accesses) is the Platform Controller Hub.

2.1.1.2 DOS DRAM

The DOS DRAM is the memory space below 1MB. In general, accesses from a processor targeting DOS DRAM target system DRAM. Exceptions are shown in the below figure.

Figure 13. Physical Address Space—DOS DRAM



Processor writes to the 64KB (each) **PROM 'E'** and **'F'** segments (E0000h-EFFFFh and F0000h-FFFFFh) always target DRAM. The BMISC register is used to direct Processor core reads in these two segments to DRAM or the I/O fabric (MMIO).

Processor core accesses to the 128KB **CSEG** range (A0000h-BFFFFh) can target DRAM or the I/O fabric (MMIO). The target is selected with the BMISC.ABSEGINDRAM register.

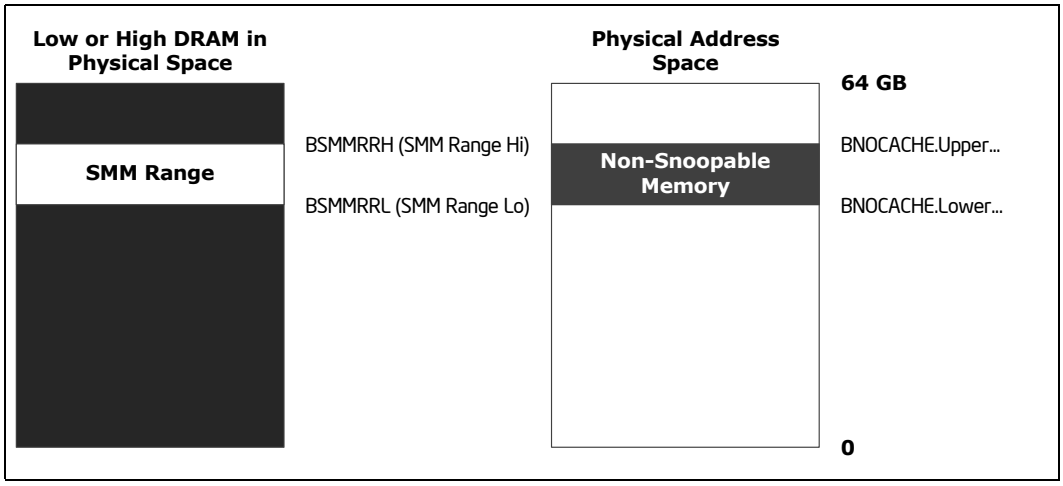
2.1.1.3 Additional Mappings

There are two additional mappings available in the SoC:

- SMM range
- Non-snoop range

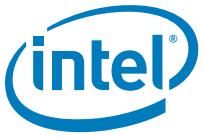
Figure 14 shows these mappings.

Figure 14. Physical Address Space—SMM and Non-Snoop Mappings



SMI handlers running on a Processor core execute out of SMM memory. To protect this memory from non-Processor core access, the **SMM Range** (BSMMRRL-BSMMRRH) may be programmed anywhere in low or high DRAM space (1MB aligned). This range will only allow accesses from the Processor cores.

To prevent snoops of the Processor cores when DMA devices access a specific memory region, the **Non-Snoopable Memory range** (BNOCACHE.Lower-BNOCACHE.Upper) can be programmed anywhere in physical address space. This range is enabled by means of the BNOCACHECTL register's enable bit (BNOCACHECTL.Enable).



2.1.2 I/O Fabric (MMIO) Map

Memory accesses targeting MMIO are routed by the I/O fabric to programmed PCI ranges, or routed to the PCU by default (subtractive agent). Programmed PCI ranges can be moved within low or high MMIO, and most can be disabled.

Note: Not all devices can be mapped to high MMIO.

Fixed MMIO is claimed by the Platform Controller Unit (PCU). The default regions are listed below. Movable ranges are not shown. Refer the register maps of all PCU devices for details.

Table 15. Fixed Memory Ranges in the Platform Controller Unit (PCU)

Device	Start Address	End Address	Comments
Low BIOS (Flash Boot)	000E0000h	000FFFFFh	Starts 128KB below 1MB; Firmware/ BIOS
I/O APIC	FEC00000h	FEC00040h	Starts 20MB below 4GB
HPET	FED00000h	FED003FFh	Starts 19MB below 4GB
TPM (LPC)	FFD40000h	FFD40FFFh	Starts 16KB above HPET range
High BIOS/Boot Vector	FFFF0000h	FFFFFFFFh	Starts 64KB below 4GB; Firmware/ BIOS

The following PCI devices may claim memory resources in MMIO space:

- Graphics/Display (High MMIO capable)
- SD/MMC
- SIO
- Platform Controller Unit (PCU) (Multiple BARs)
- xHCI USB

Refer each device's interface chapter for details.

Warning: Variable memory ranges should not be set to conflict with other memory ranges. There will be unpredictable results if the configuration software allows conflicts to occur. Hardware does not check for conflicts.

2.2 I/O Address Space

There are 64KB + 3 bytes of I/O space (0h-10002h) for accessing I/O registers. Most I/O registers exists for legacy functions in the PCU or for PCI devices, while some are claimed by the SoC for graphics and for the PCI configuration space access registers.

2.2.1 I/O Fabric I/O Map

2.2.1.1 PCU Fixed I/O Address Ranges

Below table shows the fixed I/O space ranges seen by a processor.

Table 16. Fixed I/O Ranges in the Platform Controller Unit (PCU)

Device	I/O Address	Comments
8259 Master	20h-21h, 24h-25h, 28h-29h, 2Ch-2Dh, 30h-31h, 34h-35h, 38h-39-, 3Ch-3Dh	
8254s	40h-43h, 50h-53h	
PS2 Control	60h, 64h	
NMI Controller	61h, 63h, 65h, 67h	
RTC	70h-77h	
Port 80h	80h-83h	
INIT Register	92h	
8259 Slave	A0h-A1h, A4h-A5h, A8h-A9h, ACh-ADh, B0h-B1h, B4h-B5h, B8h-B9h, BCh-BDh, 4D0h-4D1h	
PCU UART	3F8h-3FFh	
Reset Control	CF9h	Overlaps PCI I/O registers
Active Power Management	B2h-B3h	

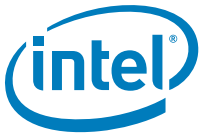
2.2.1.2 Variable I/O Address Ranges

Table 17 shows the variable I/O decode ranges. They are set using base address registers (BARs) or other similar means. Plug-and-play (PnP) software (PCI/ACPI) can use their configuration mechanisms to set and adjust these values.

Warning: The variable I/O ranges should not be set to conflict with other I/O ranges. There will be unpredictable results if the configuration software allows conflicts to occur. Hardware does not check for conflicts.

Table 17. Movable I/O Ranges Decoded by PCI Devices on the I/O Fabric

Device	Size (Bytes)	Target
ACPI Power Management (PCU)	128	ACPI_BASE_ADDR (PM1BLK): PCI[B:0,D:31,F:0] + 40h
GPIO (PCU)	256	GBA: PCI[B:0,D:31,F:0] + 48h
RCBA (PCU)	1024	RCRB_BA: PCI[B:0,D:31,F:0] + F0h



2.3 PCI Configuration Space

All PCI devices/functions are shown in Table 18.

Table 18. PCI Devices and Functions

Bus	Device	Function	Device ID	Device Description	Function Description
0	0	0	2280h	SoC	
0	2	0	22B0h	Graphics and Display	
0	3	0	22B8h	ISP Camera	
0	11	0	22DCh	P-Unit	Power Management
0	16	0	2294h	Storage Control Cluster (SCC)	MMC Port
0	17	0	2295h		SDIO Port
0	18	0	2296h		SD Port
0	20	0	22B5h	xHCI USB	
0	21	0	22A8h	Low Power Engine Audio	Host Bridge + three I^2S Ports (0-2)
0	24	0	22C0h	Serial I/O (SIO)	DMA
		1	22C1h		I^2C Port 1
		2	22C2h		I^2C Port 2
		3	22C3h		I^2C Port 3
		4	22C4h		I^2C Port 4
		5	22C5h		I^2C Port 5
		6	22C6h		I^2C Port 6
		7	22C7h		I^2C Port 7
0	26	0	2298h	Trusted Execution Engine	
0	28	0	22C8h	PCIe	PCIe Port 1
		1	22CAh		PCIe Port 2
		2	22CCh		PCIe Port 3
		3	22CEh		PCIe Port 4
0	30	0	2286h	Serial I/O (SIO)	DMA
		3	228Ah		HSUART Port 1
		4	228Ch		HSUART Port 2
0	31	0	229Ch	Platform Controller Unit LPC	LPC: Bridge to Intel Legacy Block

FD–100h	4	"SCPE—Offset FDh" on page 77	00008310h

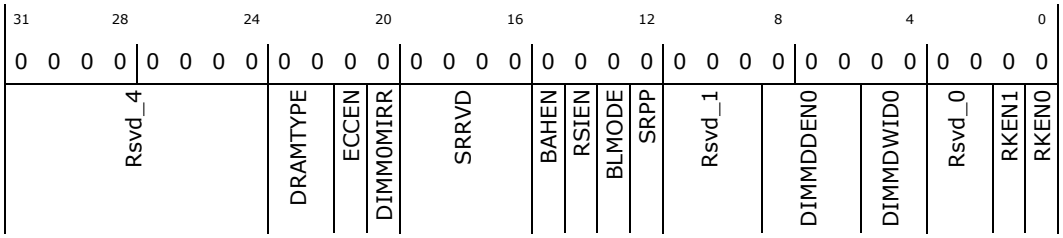
3.1.1 DRP—Offset 0h

DRAM Rank Population

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**Rsvd_4:** Reserved
23:22	0x0 RW/P	**DRAMTYPE:** DRAM Type 0 - DDR3 1 - LPDDR2
21	0x0 RW/P	**ECCEN:** ECC Enable. This bit determines if Dunit treats the PMI BE_ECC bits as ECC bits or Byte Enable. 0 - ECC Disabled 1 - ECC Enable
20	0x0 RW/P	**DIMM0MIRR:** Address mapping to DIMM0 is mirrored. BIOS writes value defined in SPD Byte 63. Used as indication to Punit to flip MRS opcode to 2nd rank on DIMM0. This bit has no functional impact on Dunit. 0 - Standard 1 - Mirrored
19:16	0x0 RW/P	**SRRVD:** Static Read Return Valid Delay
15	0x0 RW/P	**BAHEN:** Bank Address Hashing Select. Refer Address Mapping section for full description. 0 Bank Address Hashing Disabled 1 Bank Address Hashing Enabled Note: The hashing select should be set the same for both the Dunit and Bunit.
14	0x0 RW/P	**RSIEN:** Address Map Select. Refer Address Mapping section for full description. 0 Map 0 1 Map 1 Note: The address map select should be set the same for both the Dunit and Bunit.
13	0x0 RW	**BLMODE:** Burst Length Mode. Selects the DDR3 Burst Length mode: 0h - BL8 Fixed. 1h - BL8/BC4 On-the-Fly

Bit Range	Default & Access	Field Name (ID): Description
12	0x0 RW/P	**SRPP:** Single Rank Per Package. 0 Two ranks in package 1 One rank in package.
11:9	0x0 RO	**Rsvd_1:** Reserved
8:6	0x0 RW/P	**DIMMDDEN0:** DIMM 0 Device Density. This sets the density of the DRAM devices populated in DIMM 0 (Rank 0 and Rank 1). 000 1Gbit 001 2Gbit 010 4Gbit 011 8Gbit 100 16Gbit
5:4	0x0 RW/P	**DIMMDWID0:** DIMM 0 Device Width. Indicates the width of the DRAM devices populated in DIMM 0 (Rank 0 and Rank 1). 00 x8 01 x16 10 x32 11 Reserved
3:2	0x0 RO	**Rsvd_0:** Reserved
1	0x0 RW/P	**RKEN1:** DIMM 0, Rank 1 Enabled. Should be set to 1 when DIMM0 is populated and has 2 ranks to enable the use of this rank. Otherwise, must be set to 0.
0	0x0 RW/P	**RKEN0:** DIMM 0, Rank 0 Enabled. Should be set to 1 when DIMM0 is populated to enable the use of this rank. Otherwise, must be set to 0.

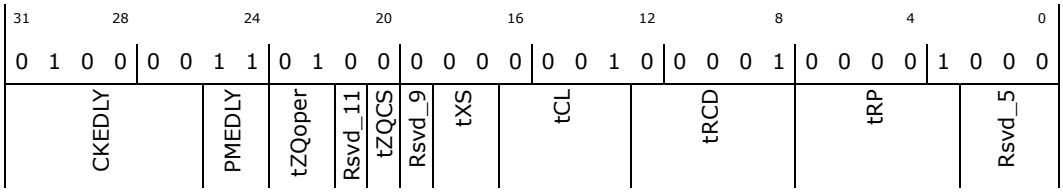
3.1.2 DTR0A (DTR0)—Offset 1h

DRAM Timing Register 0

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 43402108h



Bit Range	Default & Access	Field Name (ID): Description
31:26	0x10 RW	**CKEDLY:** Additional delay between CK/CKB start and SRX command. This delay is needed for clock to stabilize to meet JEDEC requirements. Delay is CKEDLY multiples of 256 DRAM Clocks. 0ns to 9,600ns (DDR3-800) 0ns to 7,200ns (DDR3-1066)
25:24	0x3 RW	**PMEDLY:** The delay, in DRAM clocks, between SR Entry command and Power-Mode message to DDRIO. 0h - 6 DRAM Clocks. 1h - 8 DRAM Clocks. 2h - 10 DRAM Clocks. 3h - 12 DRAM Clocks.
23:22	0x1 RW	**tZQoper:** The delay, in DRAM clocks, between ZQC-Long command to any command. Note, ZQCL command during DRAM Init flow requires longer latency which is controlled be BIOS. 0h - 256 DRAM Clocks. 1h - 384 DRAM Clocks.

Bit Range	Default & Access	Field Name (ID): Description
21	0x0 RO	**Rsvd_11:** Reserved
20	0x0 RW	**tZQCS:** The delay, in DRAM clocks, between a ZQC-Short command to any command. 0h - 64 DRAM Clocks. 1h - 96 DRAM Clocks.
19	0x0 RO	**Rsvd_9:** Reserved
18:17	0x0 RW	**tXS:** The delay, in DRAM clocks, between SRX command to command not requiring locked DLL. The Dunit can send a ZQCL command after tXS. JEDEC defines MAX(5CK, tRFC(min)+10ns) so both values take safety margin. 0h - 256 DRAM Clocks. 1h - 384 DRAM Clocks.
16:13	0x1 RW	**tCL:** CAS Latency. Specifies the delay, in DRAM clocks, between the issue of a RD command and the return of valid data on the DQ bus. 0h - 5 DRAM Clocks (DDR3- 800) 1h - 6 DRAM Clocks (DDR3- 800, 1066) 2h - 7 DRAM Clocks (DDR3- 1066, 1333) 3h - 8 DRAM Clocks (DDR3- 1066, 1333, 1600) 4h - 9 DRAM Clocks (DDR3- 1333, 1600) 5h - 10 DRAM Clocks (DDR3- 1333, 1600) 6h - 11 DRAM Clocks (DDR3- 1600) 7h - 12 DRAM Clocks 8h - 13 DRAM Clocks Others - Reserved
12:8	0x1 RW	**tRCD:** Activate (RAS) to CAS Delay. Specifies the delay, in DRAM clocks, between an ACT command and a RD/WR command to the same bank. 0h - 5 DRAM Clocks (DDR3- 800) 1h - 6 DRAM Clocks (DDR3- 800, 1066) 2h - 7 DRAM Clocks (DDR3- 1066, 1333) 3h - 8 DRAM Clocks (DDR3- 1066, 1333, 1600) 4h - 9 DRAM Clocks (DDR3- 1333, 1600) 5h - 10 DRAM Clocks (DDR3- 1333, 1600) 6h - 11 DRAM Clocks (DDR3- 1600) 7h - 12 DRAM Clocks 8h - 13 DRAM Clocks 9h - 14 DRAM Clocks Ah - 15 DRAM Clocks Bh - 16 DRAM Clocks Ch - 17 DRAM Clocks Dh - 18 DRAM Clocks Eh - 19 DRAM Clocks Fh - 20 DRAM Clocks 10h - 21 DRAM Clocks 11h - 22 DRAM Clocks Others - Reserved
7:3	0x1 RW	**tRP:** Precharge to Activate Delay. Specifies the delay, in DRAM clocks, between a PRE command and an ACT command to the same bank. 0h - 5 DRAM Clocks (DDR3- 800) 1h - 6 DRAM Clocks (DDR3- 800, 1066) 2h - 7 DRAM Clocks (DDR3- 1066, 1333) 3h - 8 DRAM Clocks (DDR3- 1066, 1333, 1600) 4h - 9 DRAM Clocks (DDR3- 1333, 1600) 5h - 10 DRAM Clocks (DDR3- 1333, 1600) 6h - 11 DRAM Clocks (DDR3- 1600) 7h - 12 DRAM Clocks 8h - 13 DRAM Clocks 9h - 14 DRAM Clocks Ah - 15 DRAM Clocks Bh - 16 DRAM Clocks Ch - 17 DRAM Clocks Dh - 18 DRAM Clocks Eh - 19 DRAM Clocks Fh - 20 DRAM Clocks 10h - 21 DRAM Clocks 11h - 22 DRAM Clocks Others - Reserved

3:0	0x8 RW	**tWRDR:** Write to Read DQ delay, different ranks, same DIMM 0h - Reserved 1h - 4 DRAM Clocks. 2h - 5 DRAM Clocks. 3h - 6 DRAM Clocks. 4h - 7 DRAM Clocks. 5h - 8 DRAM Clocks. 6h - 9 DRAM Clocks. 7h - 10 DRAM Clocks.

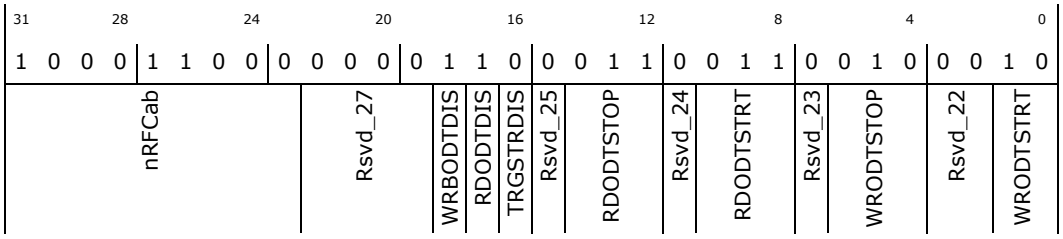
3.1.6 DTR4A (DTR4)—Offset 5h

DRAM Timing Register 4

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 8C063322h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x118 RW	**nRFCab:** The number of DRAM clocks used to define tRFC for DDR3, tRFCab for LPDDR2/3
22:19	0x0 RO	**Rsvd_27:** Reserved
18	0x1 RW	**WRBODTDIS:** Disable Write ODT on non-targeted DIMM. When writing to DIMM A, ODT is asserted to the target rank of DIMM A and also to the low rank of DIMM B. This defeature bit is used to disable ODT assertion to the opposite DIMM during write.
17	0x1 RW	**RDODTDIS:** Disable Read ODT. When reading from DIMM A, ODT is asserted to the low rank of DIMM B. This defeature bit is used to disable ODT assertion during reads.
16	0x0 RW	**TRGSTRDIS:** Write target rank is not stretched. When set, stretched ODT as defined above is not applied to the write target rank and ODT command is asserted for 6 DRAM clocks. Should not be used when ODT is pulled-in.
15	0x0 RO	**Rsvd_25:** Reserved

Bit Range	Default & Access	Field Name (ID): Description
14:12	0x3 RW	**RDODTSTOP:** Read command to ODT de-assert delay Value should be set to: RDODTSTRT+6+(WRODTSTOP-WRODTSTRT) 0h - 6 DRAM Clocks. 1h - 7 DRAM Clocks. 2h - 8 DRAM Clocks. 3h - 9 DRAM Clocks. 4h - 10 DRAM Clocks. 5h - 11 DRAM Clocks. 6h - 12 DRAM Clocks. 7h - 13 DRAM Clocks. Other - Reserved.
11	0x0 RO	**Rsvd_24:** Reserved
10:8	0x3 RW	**RDODTSTRT:** Read command to ODT assert delay. Value should be set to tCMD+tCL-tWCL-ODT_PULLIN, where ODT_PULLIN must have the same value as in WRODTSTRT. 0h - 0 DRAM Clocks. 1h - 1 DRAM Clocks. 2h - 2 DRAM Clocks. 3h - 3 DRAM Clocks. 4h - 4 DRAM Clocks. 5h - 5 DRAM Clocks. Other - Reserved.
7	0x0 RO	**Rsvd_23:** Reserved
6:4	0x2 RW	**WRODTSTOP:** Write command to ODT de-assert delay. WRODTSTOP 1N 2N 3N 0h WR+6 N/A N/A 1h WR+7 WR+6 N/A 2h WR+8 WR+7 WR+6 3h WR+9 WR+8 WR+7 4h WR+10 WR+9 WR+8 Other Reserved Reserved Reserved
3:2	0x0 RO	**Rsvd_22:** Reserved
1:0	0x2 RW	**WRODTSTRT:** WR command to ODT assert delay. JEDEC requires ODT to be asserted on the same clock with the WR command. Dunit allows to pull-in by 1 clock in 2N mode and by 1-2 clocks in 3N mode. For most DIMM configurations, this register should be programmed to same value as tCMD. A value of tCMD - ODT_PULLIN can be used according to the table below which shows the ODT command assertion with respect to the WR command assertion. WRODTSTRT 1N 2N 3N 0h WR WR-1 WR-2 1h N/A WR WR-1 2h N/A N/A WR 3h Reserved Reserved Reserved

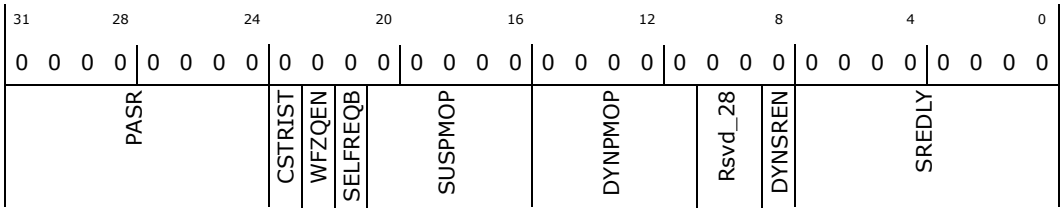
3.1.7 DPMC0—Offset 6h

DRAM Power Management Control 0

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RW	**PASR:** This is the Segment Mask used for the MRW to MR17 during SUSPENDP (Partial Array Self Refresh support. This is only used for LPDDR2/3.
23	0x0 RW	**CSTRIST:** Tristate Chip-Select 0 - Never tristate. 1 - From SRE to SRX+tXS. Note, DDRIO may tristate during SR so this adds on the boundaries.
22	0x0 RW	**WFZQEN:** Enable ZQ Calibration (long) in WAKEF
21	0x0 RW	**SELFREQB:** Select Frequency Parameter Set B
20:16	0x0 RW	**SUSPMOP:** SPID Power Mode Opcode. The PM Message ID the Dunit will send to DDRIO on ispid_pm_pm bus after SR Entry command to DRAM as result of SUSPEND from P-unit. This message defines the DDRIO power-mode during SR period. Value can be changed on-the-fly to allow different power modes (for example, deeper PM for S3 than for C6). Power saving and Entry/Exit latencies are described in the MODMEM HAS.
15:11	0x0 RW	**DYNPMOP:** SPID Power Mode Opcode. The PM Message ID the Dunit will send to DDRIO on ispid_pm_pm bus after SR Entry command to DRAM as result of Dynamic Self-refresh. This message defines the DDRIO power-mode during SR period. Value can be changed on-the-fly to allow different power modes (for example, deeper PM for S3 than for C6). Power saving and Entry/Exit latencies are described in the MODMEM HAS.
10:9	0x0 RO	**Rsvd_28:** Reserved
8	0x0 RW	**DYNSREN:** Dynamic Self-Refresh Enable. Setting this bit to 1, enables automatic SR command to DRAM and PM message to DDRIO when the PMI bus is idle, all pending requests have been served and the and PMI status is less than 2, SREDLY has timed-out, and all JEDEC requirements are satisfied. This register may be changed by BIOS/FW on-the-fly.
7:0	0x0 RW	**SREDLY:** Self-Refresh Entry delay. The delay, in core-clocks, between PMI idle (no pending requests and PMI status is less than 2) and SR Entry when Dunit is in Dynamic SR mode.

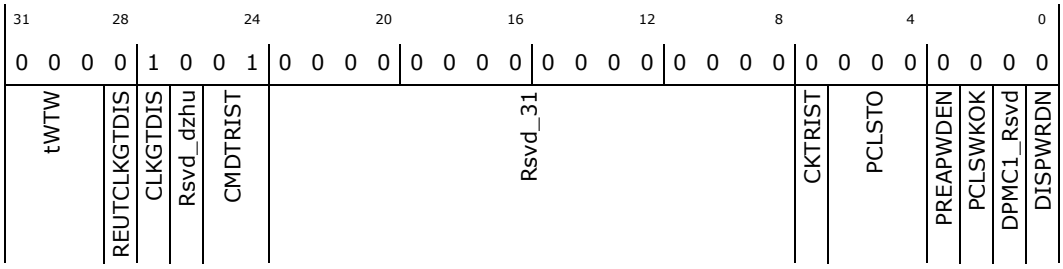
3.1.8 DPMC1—Offset 7h

DRAM Power Management Control 1

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 09000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RW	**tWTW:** Minimum idle time between non back-to-back memory writes (BIB breaker)
28	0x0 RW	**REUTCLKGTDIS:** REUT Clock Gate Disable 0h REUT clock is gated when DCO.PMICTL is set to 0. 1h REUT clock is upgated, overriding the DCO.PMICTL config bit. Note: The DCO.REUTLOCK bit overrides this bit.
27	0x1 RW	**CLKGTDIS:** Clock Gating Disabled. Setting this bit to 0 allows a large number of internal Dunit clocks to be gated when there is no activity in order to save power. When set to 1, internal clock-gating is disabled. 0 - Enable. 1 - Disable.
26	0x0 RO	**Rsvd_dzhu:** Reserved
25:24	0x1 RW	**CMDTRIST:** Tristate Command and Address Bus to DRAM 0h - CMD/ADDR are never tristated. 1h - CMD/ADDR are tristated only when all CKE are low. 2h - CMD/ADDR are tristated when no valid command. 3h - CMD/ADDR are tristated when no valid command but may never be tristated for less than 2 DRAM clocks. This mode is only valid when tCMD is set to 0h (1N mode).
23:8	0x0 RO	**Rsvd_31:** Reserved
7	0x0 RW	**CKTRIST:** Tristate CK 0 - Never tristate. 1 - PDE Note, DDRIO may tristate during PD so this adds on the boundaries.
6:4	0x0 RW	**PCLSTO:** Page Close Timeout Period. Specifies the time frame, in ns, from last access to a DRAM page until that page may be scheduled for closing (by sending a PRE command). 0h - Disable page close timer (init/training). 1h - Immediate page close. 2h - 30-60 ns to page close. 3h - 60-120 ns to page close. 4h - 120-240 ns to page close. 5h - 240-480 ns to page close. 6h - 480-960 ns to page close. 7h - 1-2 s to page close.
3	0x0 RW	**PREAPWDEN:** Send Precharge All Command to a Rank before PD-Enter. Setting this bit to 1 will allow sending a PREA command before PDE command. 0 - Disable. 1 - Enable.
2	0x0 RW	**PCLSWKOK:** Wake Allowed for Page Close Timeout. Setting this bit to 1 indicates the Dunit can send DRAM devices a PD-Exit command in order to close single bank if the page timer expired. Note this bit applies only to cases where at least one other bank in the same rank is open but not timed-out. If all banks in the rank timed-out, a PD-Exit command will be sent regardless of this bit. Must be set to 0 during init/training mode. 0 - Disable. 1 - Enable.
1	0x0 RO	**DPMC1_Rsvd:** Reserved

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**DISPWRDN:** Disable Power Down. Setting this bit to 1 will block CKE high-)low transitions. May be used by BIOS during init flow and should be set to 0 for functional mode. 0 - The Dunit dynamically controls the CKE pins to place the DRAM device in power down mode. 1 - The Dunit constantly drives the CKE pins high.

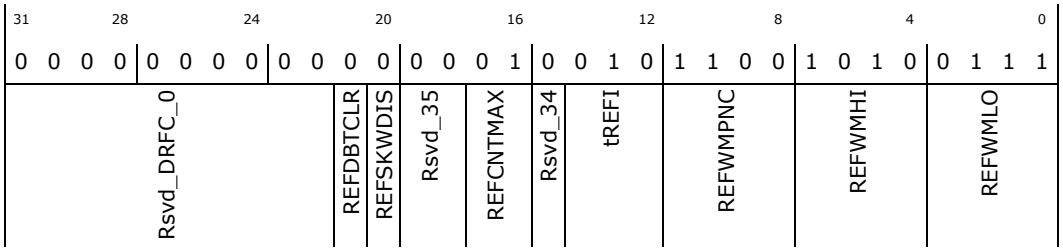
3.1.9 DRFC—Offset 8h

DRAM Refresh Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00012CA7h



Bit Range	Default & Access	Field Name (ID): Description
31:22	0x0 RO	**Rsvd_DRFC_0:** Reserved
21	0x0 RW	**REFDBTCLR:** Clear Refresh Debit before SR Entry When this bit is set, if enough REF commands are pulled-in, Dunit will not send additional REF commands before SR Entry. 0h - Disabled. 1h - Enabled.
20	0x0 RW	**REFSKWDIS:** Refresh counters may be increased in 2 policies - skewed or simultaneously. 0h - counters are updated per rank every tREFI. 1h - all counters are updated every tREFI.
19:18	0x0 RO	**Rsvd_35:** Reserved
17:16	0x1 RW	**REFCNTMAX:** Refresh Max tREFI Interval. The maximum interval between ant two REF commands per rank. JEDEC allows a maximum of 9 x tREFI intervals. 0h - 6 x tREFI. 1h - 7 x tREFI. 2h - 8 x tREFI. 3h - 9 x tREFI. Should not be changed after initial setting.
15	0x0 RO	**Rsvd_34:** Reserved
14:12	0x2 RW	**tREFI:** Refresh Period. Specifies the average time between sending REF commands to DRAM. The Dunit will guarantee that the average time is met, but maintains a certain degree of flexibility in the exact REF scheduling in order to increase overall performance. 0h - Refresh disabled 1h - Reserved for pre-silicon simulation. 2h - 3.9 s (Extended Temperature Range, 85-95 C) 3h - 7.8 s (Normal Temperature Range, 0-85 C)

Bit Range	Default & Access	Field Name (ID): Description
11:8	0xc RW	**REFWMPNC:** Refresh Panic Watermark. When the refresh debit counter, per rank, is greater than this value, the Dunit will send a REF command even if there are some pending requests and regardless of the PMI status level. Refer DDR3 spec for Refresh Postponing/Pulling-In flexibility. May be changed to functional value after init sequence. Value should be greater than, or equal, to REFWMHI. 0-5h - Reserved 6h - Allow REF command every tREFI. 7h - Postpone 2 REF commands. 8h - Postpone 3 REF commands. 9h - Postpone 4 REF commands. Ah - Postpone 5 REF commands. Bh - Postpone 6 REF commands. Ch - Postpone 7 REF commands. Dh - Postpone 8 REF commands. E-Fh - Reserved.
7:4	0xa RW	**REFWMHI:** Refresh High Watermark. When the refresh debit counter, per rank, is greater than this value, the Dunit will send a REF command even if there are some pending requests to the rank but not if the PMI status is equal to 3. Refer DDR3 spec for Refresh Postponing/Pulling-In flexibility. May be changed to functional value after init sequence. Value should be greater than, or equal, to REFWMLO. 0-5h - Reserved 6h - Allow REF command every tREFI. 7h - Postpone 2 REF commands. 8h - Postpone 3 REF commands. 9h - Postpone 4 REF commands. Ah - Postpone 5 REF commands. Bh - Postpone 6 REF commands. Ch - Postpone 7 REF commands. Dh - Postpone 8 REF commands. E-Fh - Reserved.
3:0	0x7 RW	**REFWMLO:** Opportunistic Refresh Watermark. When the refresh debit counter, per rank, is greater than this value, the Dunit will send a REF command only if there are no pending requests to the rank and the PMI status is less than 3. Refer DDR3 spec for Refresh Postponing/Pulling-In flexibility. May be changed to functional value after init sequence. 0-3h - Reserved 4h - Allow pulling-in 2 REF commands. 5h - Allow pulling-in 1 REF commands. 6h - Allow REF command every tREFI. 7h - Postpone 2 REF commands. 8h - Postpone 3 REF commands. 9h - Postpone 4 REF commands. Ah - Postpone 5 REF commands. Bh - Postpone 6 REF commands. Ch - Postpone 7 REF commands. Dh - Postpone 8 REF commands. E-Fh - Reserved.

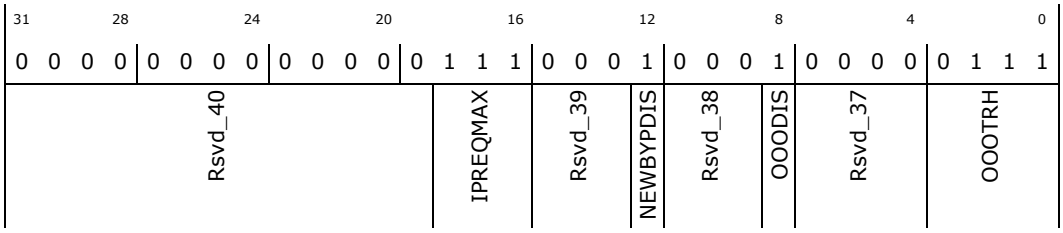
3.1.10 DSCH—Offset 9h

DRAM Scheduler Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00071107h



Bit Range	Default & Access	Field Name (ID): Description
31:19	0x0 RO	**Rsvd_40:** Reserved
18:16	0x7 RW	**IPREQMAX:** Maximal number of In-Process Requests stored in the Dunit. Number of pending requests = IPREQMAX+1; Value may be changed after init/training when PMI is idle.
15:13	0x0 RO	**Rsvd_39:** Reserved
12	0x1 RW	**NEWBYPDIS:** Disable New Request Bypass. Setting this bit to 0 will allow a new request to bypass the normal Dunit internal arbiter when there are no pending commands. 0h - Enable New Request Bypass. 1h - Disable New Request Bypass.
11:9	0x0 RO	**Rsvd_38:** Reserved
8	0x1 RW	**OOODIS:** Disable Out-of-Order . 0h - OOO enabled. 1h - OOO disabled. Should be disabled during init/training and can be enabled for functional mode.
7:4	0x0 RO	**Rsvd_37:** Reserved
3:0	0x7 RW	**OOOTRH:** Out-of-Order Aging Threshold. Number of PMI requests that can bypass any pending request before OOO will be disabled. This mechanism prevents starvation of pending commands.

Bit Range	Default & Access	Field Name (ID): Description
19:0	0x0 RW	**BAMADATA:** Bank Address used to select the DDR3 MR, Value to be written to the DDR3 MR; or Mode Register Address for LPDDR, Value to be written to the LPDDR MR

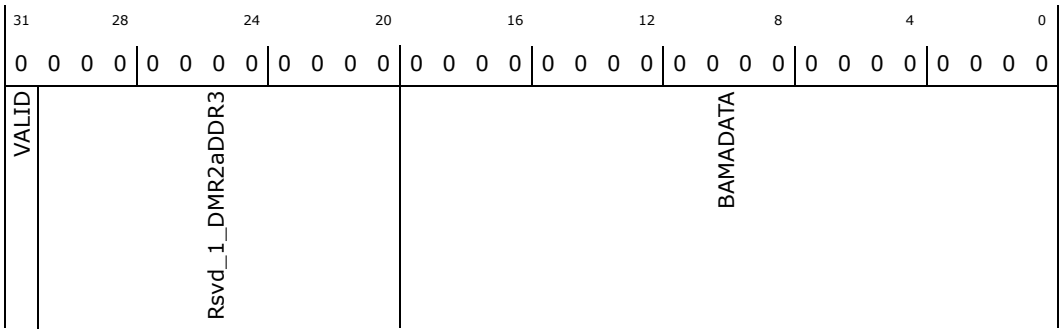
3.1.25 DMR2aDDR3—Offset 18h

DRAM Mode Register Value 2a DDR3

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**VALID:** Entry is Valid
30:20	0x0 RO	**Rsvd_1_DMR2aDDR3:** Reserved
19:0	0x0 RW	**BAMADATA:** Bank Address used to select the DDR3 MR, Value to be written to the DDR3 MR; or Mode Register Address for LPDDR, Value to be written to the LPDDR MR

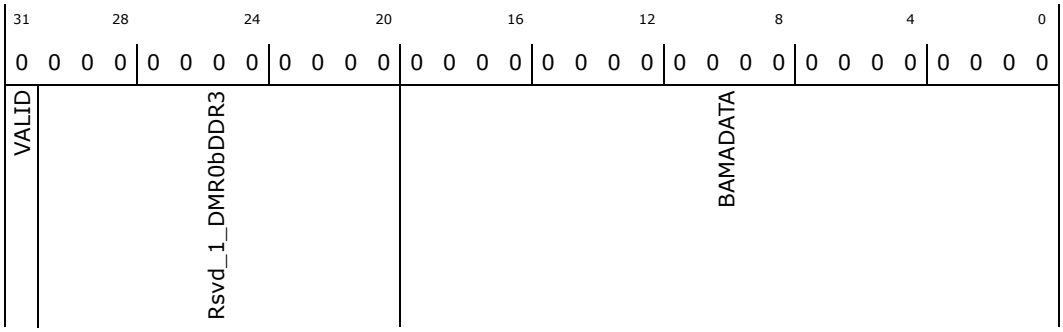
3.1.26 DMR0bDDR3—Offset 1Ah

DRAM Mode Register Value 0b DDR3

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**VALID:** Entry is Valid
30:20	0x0 RO	**Rsvd_1_DMR0bDDR3:** Reserved
19:0	0x0 RW	**BAMADATA:** Bank Address used to select the DDR3 MR, Value to be written to the DDR3 MR; or Mode Register Address for LPDDR, Value to be written to the LPDDR MR

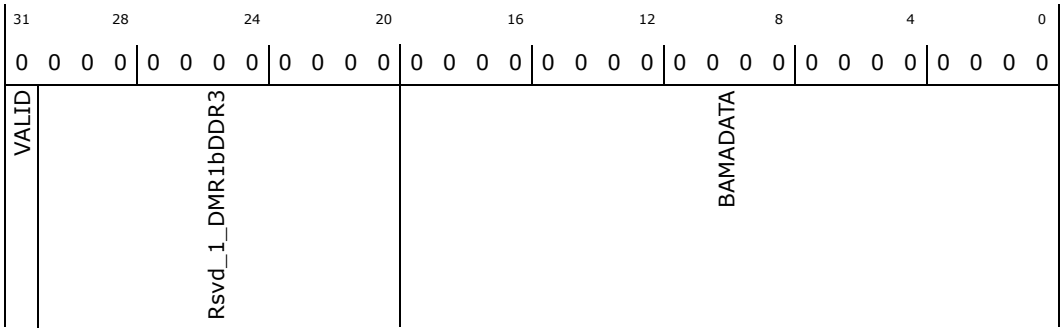
3.1.27 DMR1bDDR3—Offset 1Bh

DRAM Mode Register Value 1b DDR3

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**VALID:** Entry is Valid
30:20	0x0 RO	**Rsvd_1_DMR1bDDR3:** Reserved

Bit Range	Default & Access	Field Name (ID): Description
19:0	0x0 RW	**BAMADATA:** Bank Address used to select the DDR3 MR, Value to be written to the DDR3 MR; or Mode Register Address for LPDDR, Value to be written to the LPDDR MR

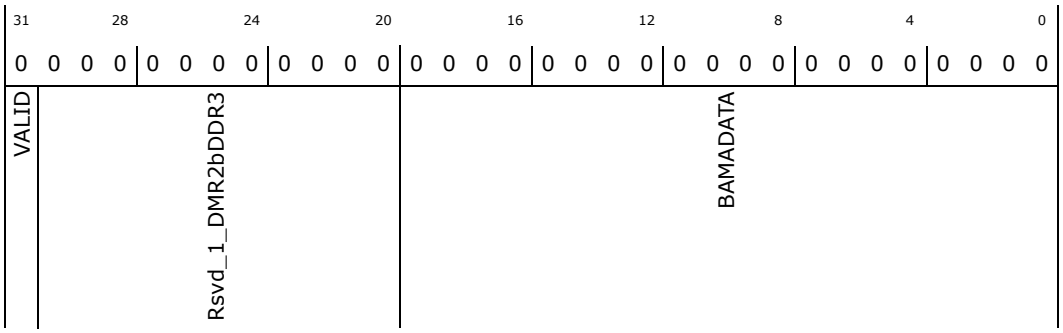
3.1.28 DMR2bDDR3—Offset 1Ch

DRAM Mode Register Value 2b DDR3

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**VALID:** Entry is Valid
30:20	0x0 RO	**Rsvd_1_DMR2bDDR3:** Reserved
19:0	0x0 RW	**BAMADATA:** Bank Address used to select the DDR3 MR, Value to be written to the DDR3 MR; or Mode Register Address for LPDDR, Value to be written to the LPDDR MR

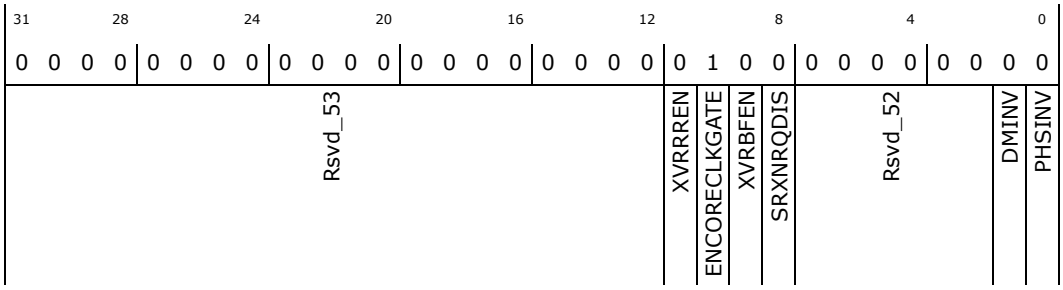
3.1.29 DCBR—Offset 1Fh

DRAM CB Register

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000400h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**Rsvd_53:** Reserved
11	0x0 RW	**XVRRREN:** Enable the Crossover Buffer to act as increased Read Return Buffer depth
10	0x1 RW	**ENCORECLKGATE:** Enable Dunit Core Clock Gate During SR
9	0x0 RW	**XVRBFEN:** Enable the Crossover Buffer to act as increased IPReq Queue depth
8	0x0 RW	**SRXNRQDIS:** 0h - Load PMI requests to Dunit in SR Exit tXSDLL and ZQCoper period. 1h - Load PMI requests only after tXSDLL and ZQCoper are complete.
7:2	0x0 RO	**Rsvd_52:** Reserved
1	0x0 RW	**DMINV:** Inverse Data Mask When this bit is set to 1, the Data Mask will be inversed.
0	0x0 RW	**PHSINV:** Core/SPID CDC phase control invert. Backup inverter for internal phase indicator in Dunit.

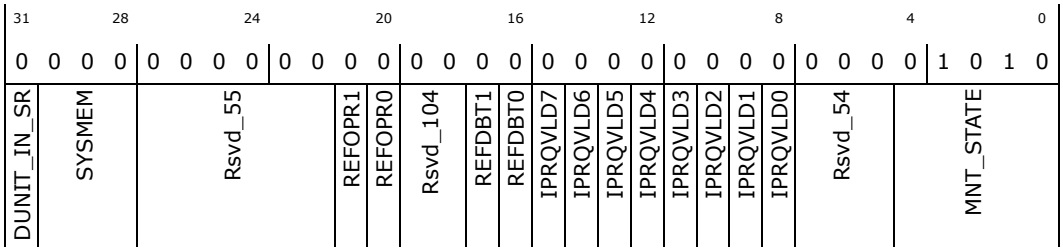
3.1.30 DSTAT—Offset 20h

Dunit Status

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000000Ah



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**DUNIT_IN_SR:** Dunit is in self-refresh
30:28	0x0 RO	**SYSMEM:** Reflects the Dunit Memory Depth Configuration
27:22	0x0 RO	**Rsvd_55:** Reserved
21	0x0 RO	**REFOPR1:** Rank 1 Refresh Dept is greater than DRFC.REFWMLO
20	0x0 RO	**REFOPR0:** Rank 0 Refresh Dept is greater than DRFC.REFWMLO
19:18	0x0 RO	**Rsvd_104:** Reserved
17	0x0 RO	**REFDBT1:** Rank 1 has a Refresh Dept
16	0x0 RO	**REFDBT0:** Rank 0 has a Refresh Dept
15	0x0 RO	**IPRQVLD7:** IPREQ Entry 7 contains a valid request.
14	0x0 RO	**IPRQVLD6:** IPREQ Entry 6 contains a valid request.
13	0x0 RO	**IPRQVLD5:** IPREQ Entry 5 contains a valid request.
12	0x0 RO	**IPRQVLD4:** IPREQ Entry 4 contains a valid request.
11	0x0 RO	**IPRQVLD3:** IPREQ Entry 3 contains a valid request.
10	0x0 RO	**IPRQVLD2:** IPREQ Entry 2 contains a valid request.
9	0x0 RO	**IPRQVLD1:** IPREQ Entry 1 contains a valid request.
8	0x0 RO	**IPRQVLD0:** IPREQ Entry 0 contains a valid request.
7:5	0x0 RO	**Rsvd_54:** Reserved
4:0	0xa RO	**MNT_STATE:** Dunit Maintenance Internal State

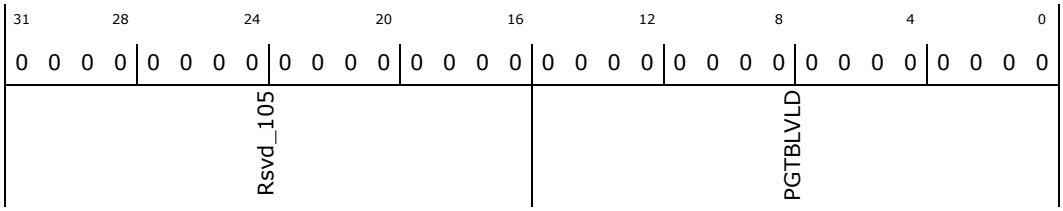
3.1.31 PGTBL—Offset 21h

DRAM Page Table Status

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**Rsvd_105:** Reserved
15:0	0x0 RO	**PGTBLVLD:** Reflects the open page table entries (2 Ranks x 8 Banks)

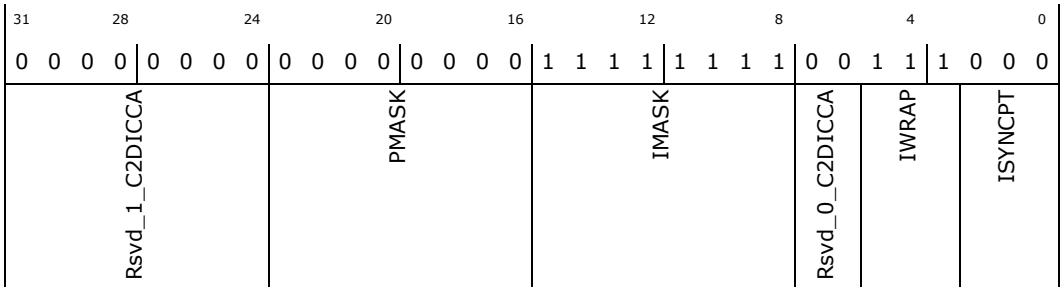
3.1.32 C2DICCA—Offset 30h

CZ to DDR Freq A Initiator Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**Rsvd_1_C2DICCA:** Reserved
23:16	0x0 RW/P	**PMASK:** Initiator Phase Shift Enable Mask for Crossover.
15:8	0xff RW/P	**IMASK:** Initiator Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_C2DICCA:** Reserved
5:3	0x7 RW/P	**IWRAP:** Wrap Position for Initiator Clock Crossover Counter.
2:0	0x0 RW/P	**ISYNCPT:** Crossover Counter Starting Point from Initiator Clock Sync Pulse.

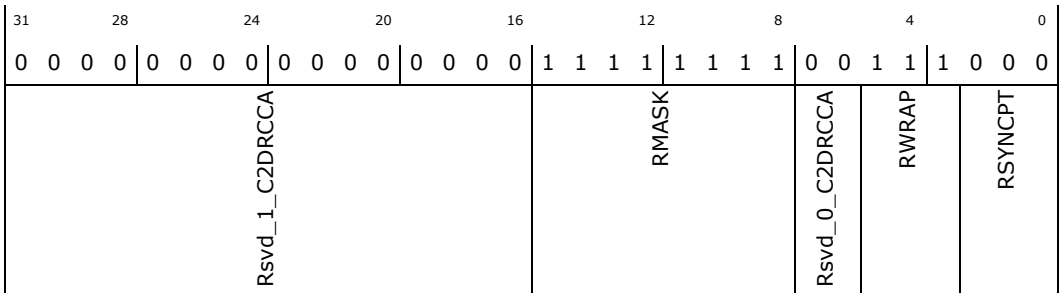
3.1.33 C2DRCCA—Offset 31h

CZ to DDR Freq A Receiver Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**Rsvd_1_C2DRCCA:** Reserved
15:8	0xff RW/P	**RMASK:** Receiver Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_C2DRCCA:** Reserved
5:3	0x7 RW/P	**RWRAP:** Wrap Position for Receiver Clock Crossover Counter.
2:0	0x0 RW/P	**RSYNCPT:** Crossover Counter Starting Point from Receiver Clock Sync Pulse.

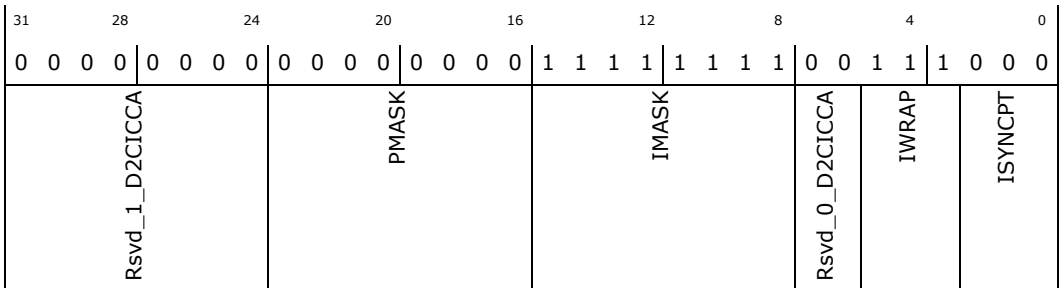
3.1.34 D2CICCA—Offset 32h

DDR to CZ Freq A Initiator Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**Rsvd_1_D2CICCA:** Reserved
23:16	0x0 RW/P	**PMASK:** Initiator Phase Shift Enable Mask for Crossover.
15:8	0xff RW/P	**IMASK:** Initiator Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_D2CICCA:** Reserved
5:3	0x7 RW/P	**IWRAP:** Wrap Position for Initiator Clock Crossover Counter.
2:0	0x0 RW/P	**ISYNCPT:** Crossover Counter Starting Point from Initiator Clock Sync Pulse.

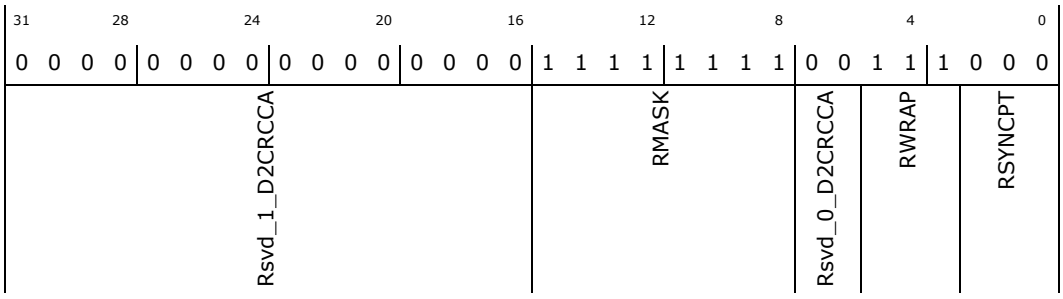
3.1.35 D2CRCCA—Offset 33h

DDR to CZ Freq A Receiver Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**Rsvd_1_D2CRCCA:** Reserved
15:8	0xff RW/P	**RMASK:** Receiver Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_D2CRCCA:** Reserved
5:3	0x7 RW/P	**RWRAP:** Wrap Position for Receiver Clock Crossover Counter.
2:0	0x0 RW/P	**RSYNCPT:** Crossover Counter Starting Point from Receiver Clock Sync Pulse.

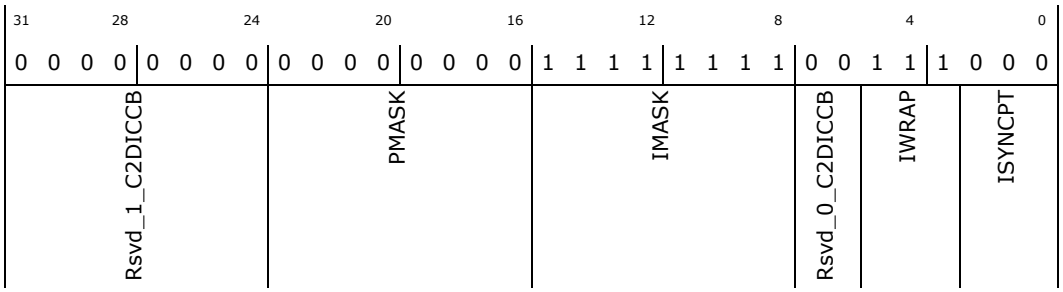
3.1.36 C2DICCB—Offset 38h

CZ to DDR Freq B Initiator Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**Rsvd_1_C2DICCB:** Reserved
23:16	0x0 RW/P	**PMASK:** Initiator Phase Shift Enable Mask for Crossover.
15:8	0xff RW/P	**IMASK:** Initiator Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_C2DICCB:** Reserved
5:3	0x7 RW/P	**IWRAP:** Wrap Position for Initiator Clock Crossover Counter.
2:0	0x0 RW/P	**ISYNCPT:** Crossover Counter Starting Point from Initiator Clock Sync Pulse.

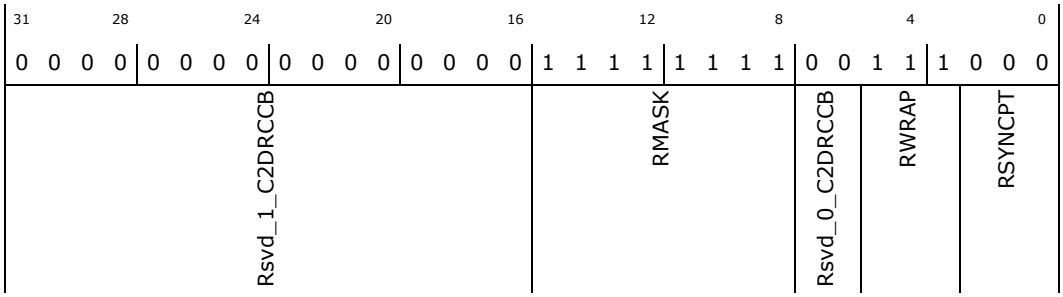
3.1.37 C2DRCCB—Offset 39h

CZ to DDR Freq B Receiver Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**Rsvd_1_C2DRCCB:** Reserved
15:8	0xff RW/P	**RMASK:** Receiver Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_C2DRCCB:** Reserved
5:3	0x7 RW/P	**RWRAP:** Wrap Position for Receiver Clock Crossover Counter.
2:0	0x0 RW/P	**RSYNCPT:** Crossover Counter Starting Point from Receiver Clock Sync Pulse.

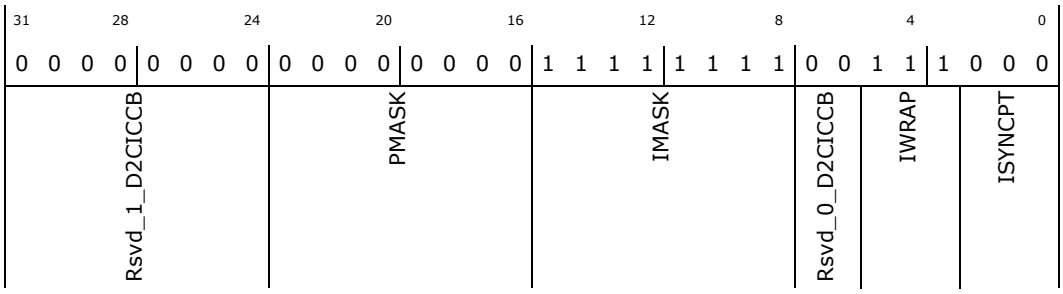
3.1.38 D2CICCB—Offset 3Ah

DDR to CZ Freq B Initiator Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**Rsvd_1_D2CICCB:** Reserved
23:16	0x0 RW/P	**PMASK:** Initiator Phase Shift Enable Mask for Crossover.

Bit Range	Default & Access	Field Name (ID): Description
15:8	0xff RW/P	**IMASK:** Initiator Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_D2CICCB:** Reserved
5:3	0x7 RW/P	**IWRAP:** Wrap Position for Initiator Clock Crossover Counter.
2:0	0x0 RW/P	**ISYNCPT:** Crossover Counter Starting Point from Initiator Clock Sync Pulse.

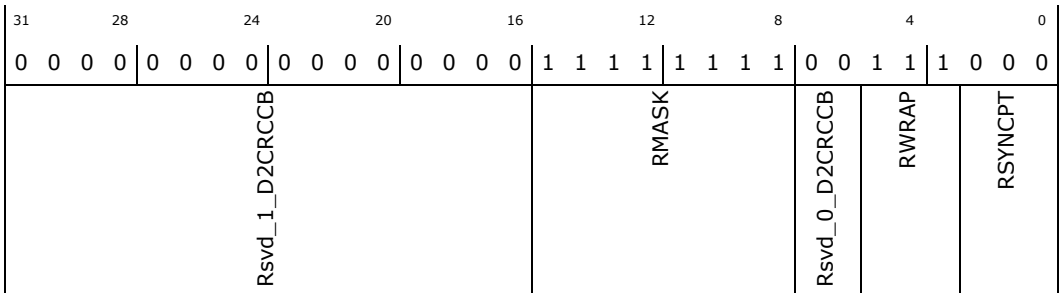
3.1.39 D2CRCCB—Offset 3Bh

DDR to CZ Freq B Receiver Crossover Control

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 0000FF38h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**Rsvd_1_D2CRCCB:** Reserved
15:8	0xff RW/P	**RMASK:** Receiver Flop Enable Mask for Crossover.
7:6	0x0 RO	**Rsvd_0_D2CRCCB:** Reserved
5:3	0x7 RW/P	**RWRAP:** Wrap Position for Receiver Clock Crossover Counter.
2:0	0x0 RW/P	**RSYNCPT:** Crossover Counter Starting Point from Receiver Clock Sync Pulse.

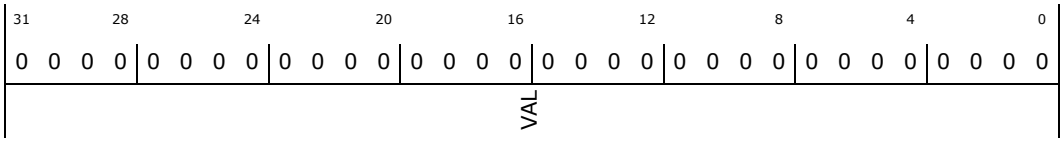
3.1.40 SSKPD0—Offset 4Ah

Sticky Scratchpad 0

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW/P	**VAL:** General Purpose Scratchpad. May be used for BIOS for data storage. Value is preserved in warm-reset.

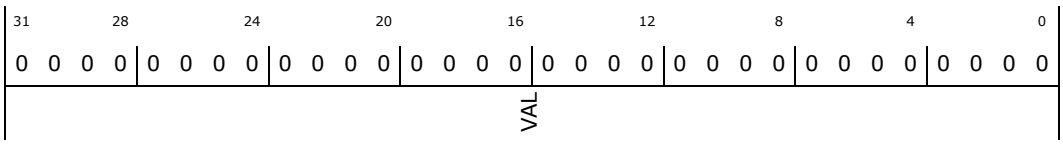
3.1.41 SSKPD1—Offset 4Bh

Sticky Scratchpad 1

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW/P	**VAL:** General Purpose Scratchpad. May be used for BIOS for data storage. Value is preserved in warm-reset.

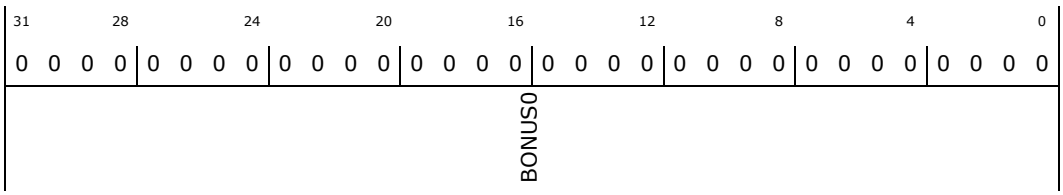
3.1.42 BONUS0—Offset 50h

Bonus Register 0

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**BONUS0:** Bonus Register 0 (This register is reserved for ECO).

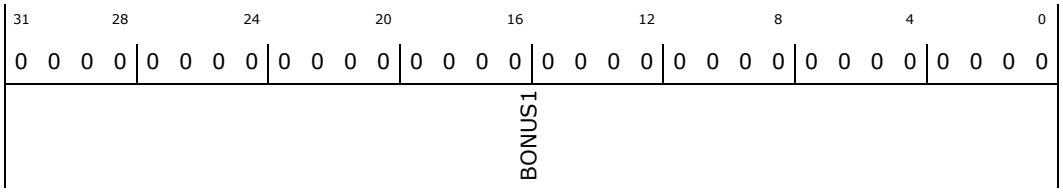
3.1.43 BONUS1—Offset 51h

Bonus Register 1

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**BONUS1:** Bonus Register 1 (This register is reserved for ECO).

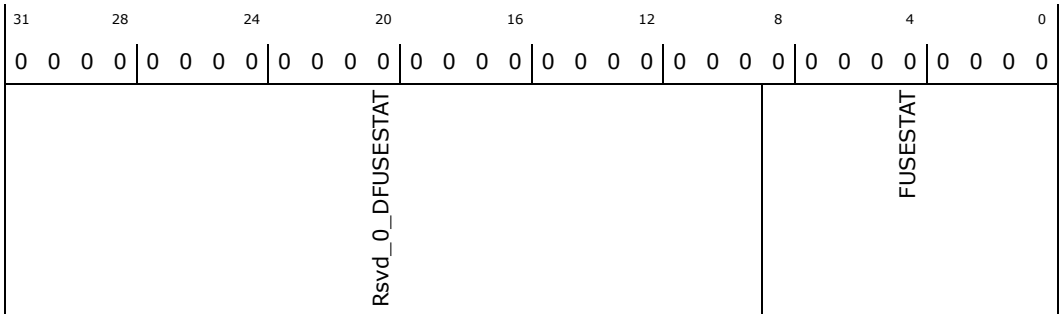
3.1.44 DFUSESTAT—Offset 70h

Dunit fuse status register

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:9	0x0 RO	**Rsvd_0_DFUSESTAT:** Reserved
8:0	0x0 RO	**FUSESTAT:** Dunit fuse bits are captured into this register and is available for read [0] fus_dun_ecc_dis. [3:1] fus_dun_max_supporte_memory[2:0]. [4] fus_dun_ddr3_dis. [5] fus_dun_lpddr_dis. [6] fud_dun_ch0_dis. [7] fus_dun_ch1_dis. [8] fus_dun_32bit_dram_ifc.

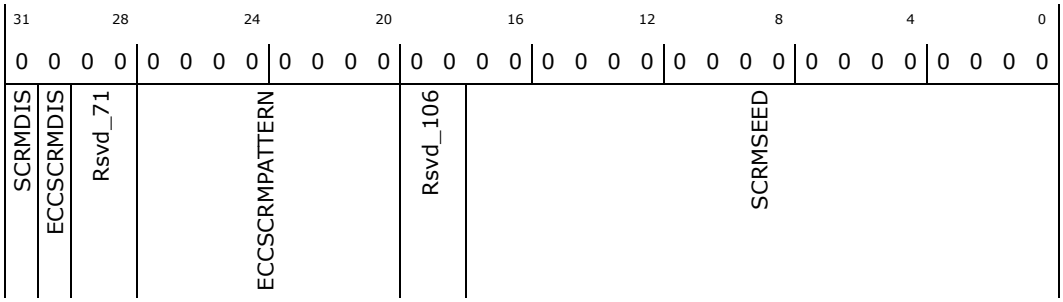
3.1.45 DSCRMSEED—Offset 80h

Dynamic data scrambler seed register

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SCRMDIS:** Disable scrambler.
30	0x0 RW	**ECCSCRMDIS:** Disable scrambler for ECC.
29:28	0x0 RO	**Rsvd_71:** Reserved
27:20	0x0 RW	**ECCSCRMPATTERN:** Holds 8 bit ecc scrambler pattern value used to XOR with LFSR array output.
19:18	0x0 RO	**Rsvd_106:** Reserved
17:0	0x0 RW	**SCRMSEED:** Holds 18 bit scrambler seed value used to feed into LFSR array matrix.

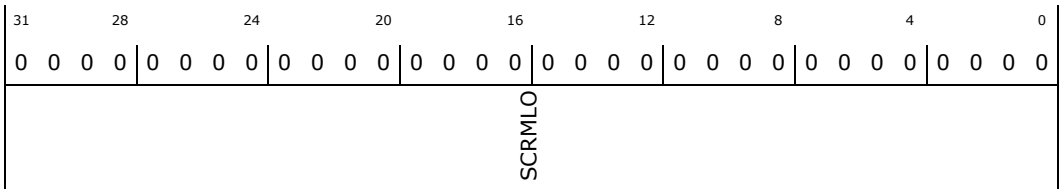
3.1.46 DSCRMLO—Offset 81h

Dynamic data scrambler pattern low register.

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SCRMLO:** Holds 31:0 bits of scrambler parrem value used to XOR with LFSR array output.

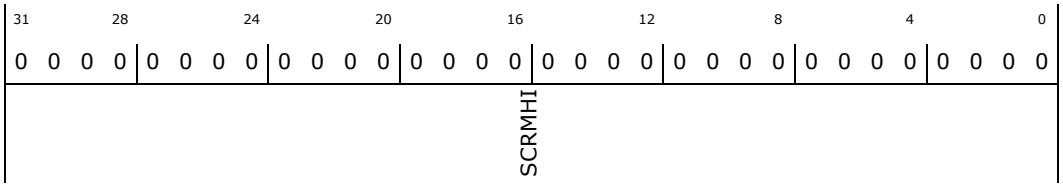
3.1.47 DSCRMHI—Offset 82h

Dynamic data scrambler pattern high register.

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SCRMHI:** Holds 63:32 bits of scrambler parrem value used to XOR with LFSR array output.

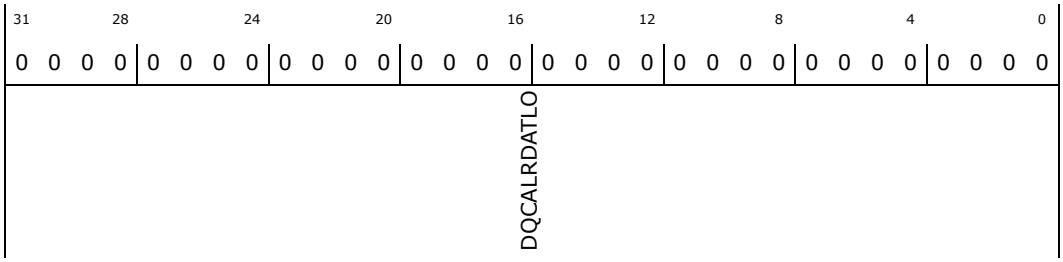
3.1.48 DQCALRDATLO—Offset 83h

DQ Calibration Read Return Low

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**DQCALRDATLO:** DQ Calibration Read Return Low

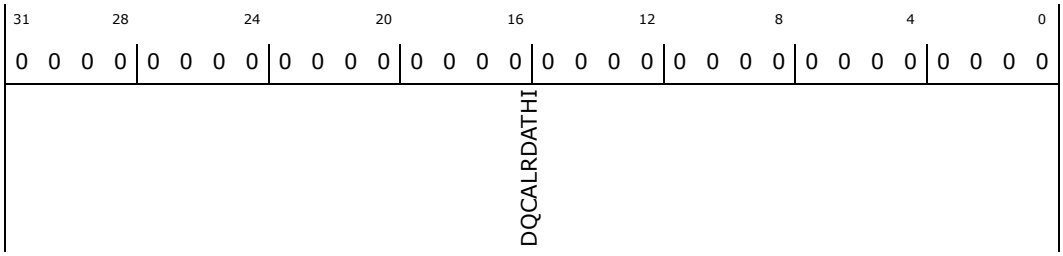
3.1.49 DQCALRDATHI—Offset 84h

DQ Calibration Read Return High

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**DQCALRDATHI:** DQ Calibration Read Return High

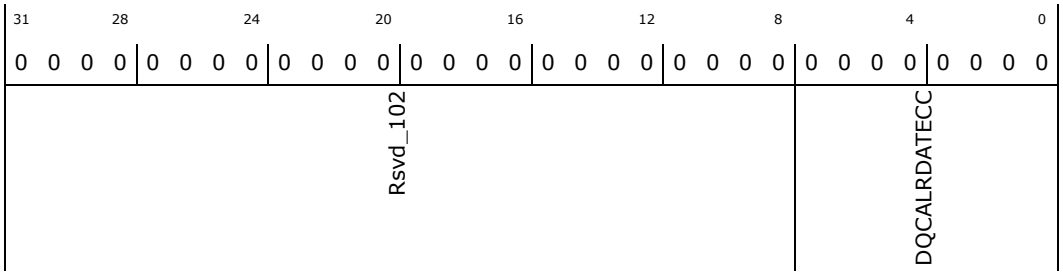
3.1.50 DQCALRDATECC—Offset 85h

DQ Calibration Read Return ECC

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**Rsvd_103 (Rsvd_102):** Reserved
7:0	0x0 RO	**DQCALRDATECC:** DQ Calibration Read Return ECC

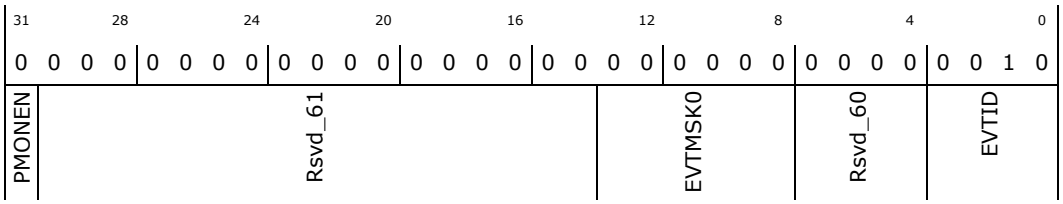
3.1.51 PMSEL0—Offset E0h

Performance Monitor Event Select 0

Access Method

Type: ??? Register
(Size: 32 bits)

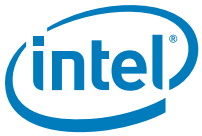
Default: 00000002h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PMONEN:** Dunit Perfmon Enable. 0 Dunit perfmon is disabled. 1 Dunit perfmon is enabled.
30:14	0x0 RO	**Rsvd_61:** Reserved
13:8	0x0 RW	**EVTMSK0:** Event Mask
7:4	0x0 RO	**Rsvd_60:** Reserved
3:0	0x2 RW	**EVTID:** Event ID

3.1.52 PMSEL1—Offset E1h

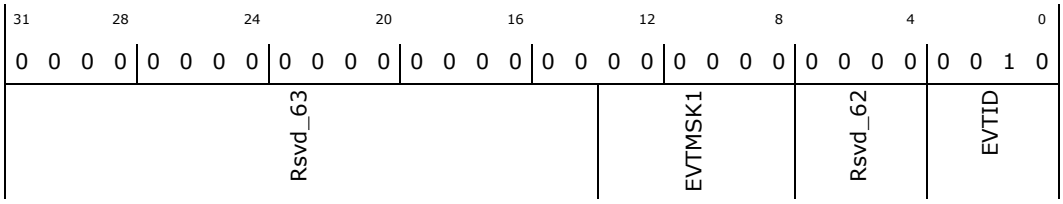
Performance Monitor Event Select 1



Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000002h



Bit Range	Default & Access	Field Name (ID): Description
31:14	0x0 RO	**Rsvd_63:** Reserved
13:8	0x0 RW	**EVTMSK1:** Event Mask
7:4	0x0 RO	**Rsvd_62:** Reserved
3:0	0x2 RW	**EVTID:** Event ID

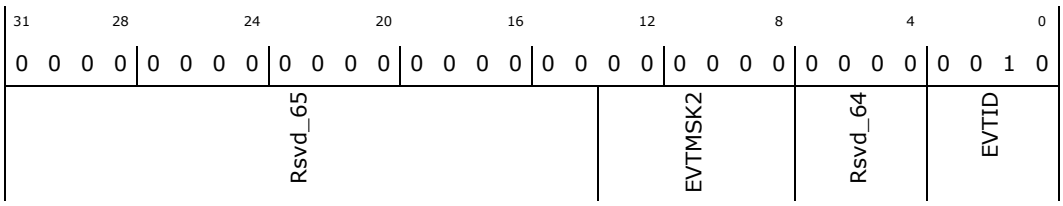
3.1.53 PMSEL2—Offset E2h

Performance Monitor Event Select 2

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000002h



Bit Range	Default & Access	Field Name (ID): Description
31:14	0x0 RO	**Rsvd_65:** Reserved
13:8	0x0 RW	**EVTMSK2:** Event Mask
7:4	0x0 RO	**Rsvd_64:** Reserved
3:0	0x2 RW	**EVTID:** Event ID

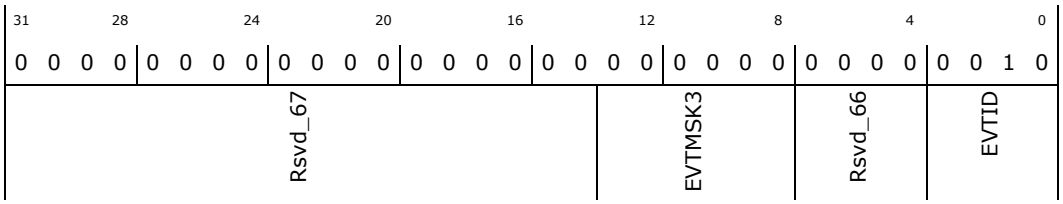
3.1.54 PMSEL3—Offset E3h

Performance Monitor Event Select 3

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000002h



Bit Range	Default & Access	Field Name (ID): Description
31:14	0x0 RO	**Rsvd_67:** Reserved
13:8	0x0 RW	**EVTMSK3:** Event Mask
7:4	0x0 RO	**Rsvd_66:** Reserved
3:0	0x2 RW	**EVTID:** Event ID

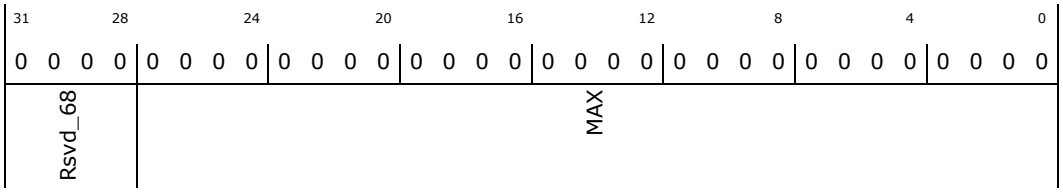
3.1.55 PMAUXMAX—Offset E8h

Performance Monitor Address Limit High

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**Rsvd_68:** Reserved

Bit Range	Default & Access	Field Name (ID): Description
27:0	0x0 RW	**MAX:** Maximal address or maximal latency count. When PMSEL0.EVTID == Ch, this register should be initialized to 0h and at the end of the test bits [11:0] will contain the max latency. When PMSEL0/1/2.EVTID == 5h, this register should be initialized to the highest address the Perfmon test will cover. Bits [27:0] of this register correspond to the physical address bits [35:8].

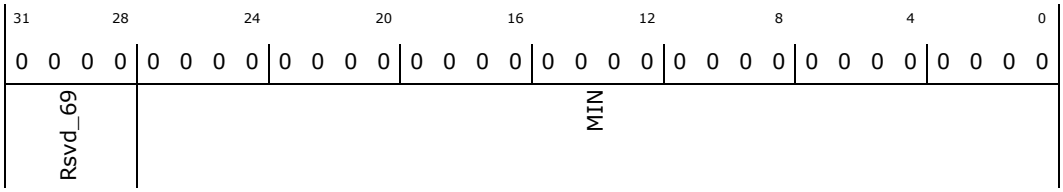
3.1.56 PMAUXMIN—Offset E9h

Performance Monitor Address Limit Low

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**Rsvd_69:** Reserved
27:0	0x0 RW	**MIN:** Minimal address or minimal latency count. When PMSEL0.EVTID == Ch, this register should be initialized to FFFh and at the end of the test bits [11:0] will contain the min latency. When PMSEL0/1/2.EVTID == 5h, this register should be initialized to the lowest address the Perfmon test will cover. Bits [27:0] of this register correspond to the physical address bits [35:8].

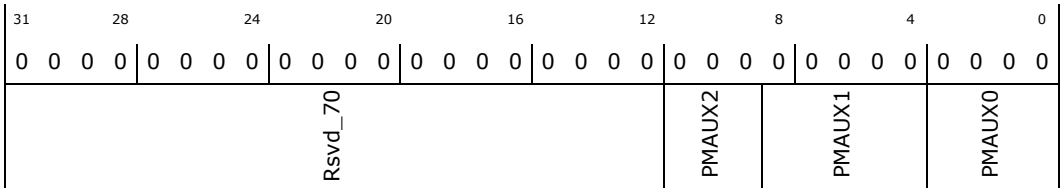
3.1.57 PMAUX—Offset EAh

Performance Monitor Aux

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**Rsvd_70:** Reserved
11:9	0x0 RW	**PMAUX2:** Additional mask and configuration. Refer Perfmon Guide.
8:4	0x0 RW	**PMAUX1:** Additional mask and configuration. Refer Perfmon Guide.
3:0	0x0 RW	**PMAUX0:** Additional mask and configuration. Refer Perfmon Guide.

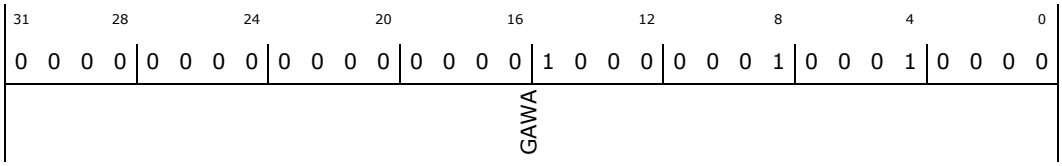
3.1.58 SWACA—Offset F0h

SAI Write Access Control - Group A

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00008110h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x8110 RW	**GAWA:** Group A Write Access

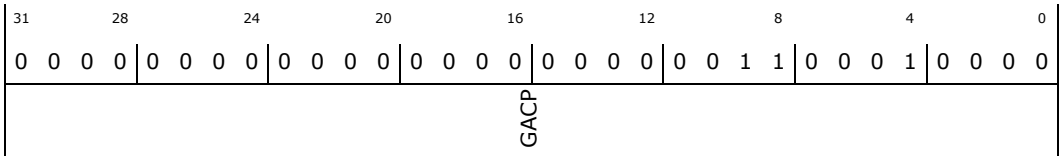
3.1.59 SCPA—Offset F1h

SAI Control Policy - Group A

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000310h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x310 RW	**GACP:** Group A Control Policy

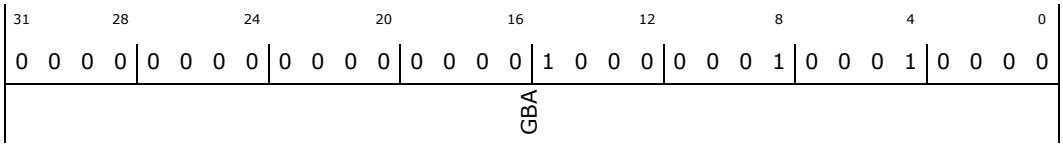
3.1.60 SACB—Offset F4h

SAI Access Control - Group B

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00008110h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x8110 RW	**GBA:** Group B Access

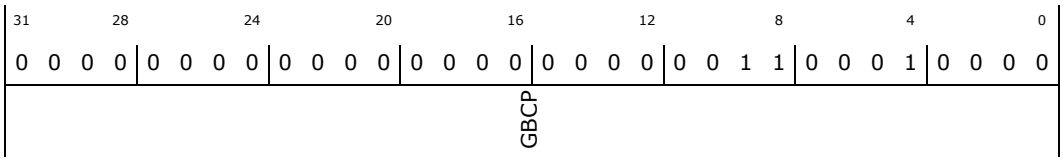
3.1.61 SCPB—Offset F5h

SAI Control Policy - Group B

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000310h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x310 RW	**GBCP:** Group B Control Policy

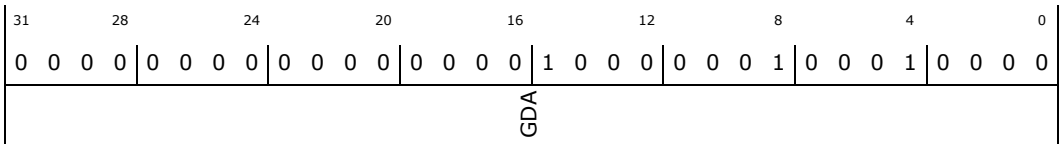
3.1.62 SACD—Offset F8h

SAI Access Control - Group D

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00008110h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x8110 RW	**GDA:** Group D Access

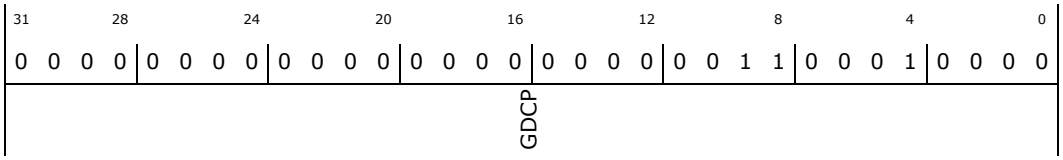
3.1.63 SCPD—Offset F9h

SAI Control Policy - Group D

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00000310h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x310 RW	**GDCP:** Group D Control Policy

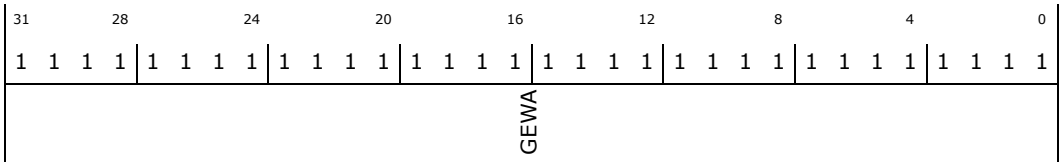
3.1.64 SWACE—Offset FCh

SAI Write Access Control - Group E

Access Method

Type: ??? Register
(Size: 32 bits)

Default: FFFFFFFFh



Bit Range	Default & Access	Field Name (ID): Description
31:0	0xffffffff RW	**GEWA:** Group E Write Access

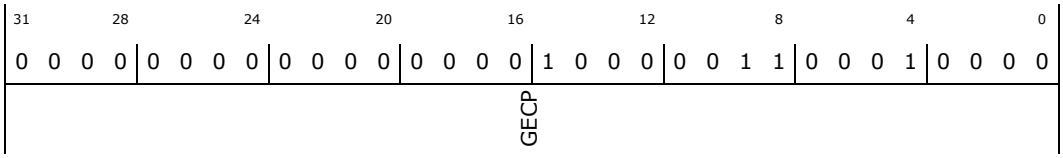
3.1.65 SCPE—Offset FDh

SAI Control Policy - Group E

Access Method

Type: ??? Register
(Size: 32 bits)

Default: 00008310h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x8310 RW	**GECP:** Group E Control Policy

4 Graphics Video Display

4.1 Graphics, Video and Display PCI Configuration Registers

Table 21. Summary of Graphics, Video and Display PCI Configuration Registers—0/2/0

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
0–3h	4	"DID—Offset 0h" on page 79	22B08086h
4–7h	4	"PCICMD_STS—Offset 4h" on page 79	00100000h
8–Bh	4	"RID_CC—Offset 8h" on page 80	00000000h
C–Fh	4	"HDR—Offset Ch" on page 81	00000000h
10–13h	4	"GTTMMADR_LSB—Offset 10h" on page 82	00000004h
14–17h	4	"GTTMMADR_MSB—Offset 14h" on page 83	00000000h
18–1Bh	4	"GMADR_LSB—Offset 18h" on page 84	0000000Ch
1C–1Fh	4	"GMADR_MSB—Offset 1Ch" on page 85	00000000h
20–23h	4	"IOBAR—Offset 20h" on page 85	00000001h
2C–2Fh	4	"SSID_SID—Offset 2Ch" on page 86	00000000h
34–37h	4	"CAPPOINT—Offset 34h" on page 87	000000D0h
3C–3Fh	4	"INTRLINE—Offset 3Ch" on page 87	00000100h
50–53h	4	"GGC—Offset 50h" on page 88	00000028h
5C–5Fh	4	"BDSM—Offset 5Ch" on page 89	00000000h
60–63h	4	"MSAC—Offset 60h" on page 90	00010000h
70–73h	4	"BGSM—Offset 70h" on page 92	00000000h

E4–E7h	4	"ASLE—Offset E4h" on page 101	00000000h
FC–FFh	4	"ASLS—Offset FCh" on page 102	00000000h

4.1.1 DID—Offset 0h

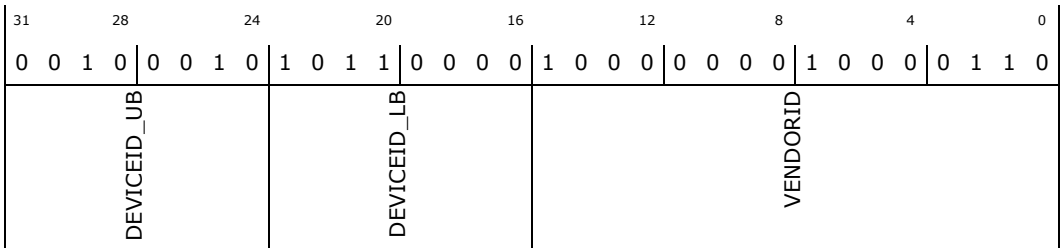
D2: PCI Device ID and Vendor ID Register

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 0h

Default: 22B08086h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x22 RW	**DEVICEID_UB:** DID_MSB: Identifier assigned to the dev2 PCI.Punit will update this bitfield before handing control to BIOS.
23:16	0xb0 RO	**DEVICEID_LB:** DID_LSB: Identifier assigned to the dev2 PCI.This bitfield is updated from metal straps.SoC allocated values :0xB0,0xB1,0xB2,0xB3.
15:0	0x8086 RO	**VENDORID:** VID: PCI standard identification for Intel

4.1.2 PCICMD_STS—Offset 4h

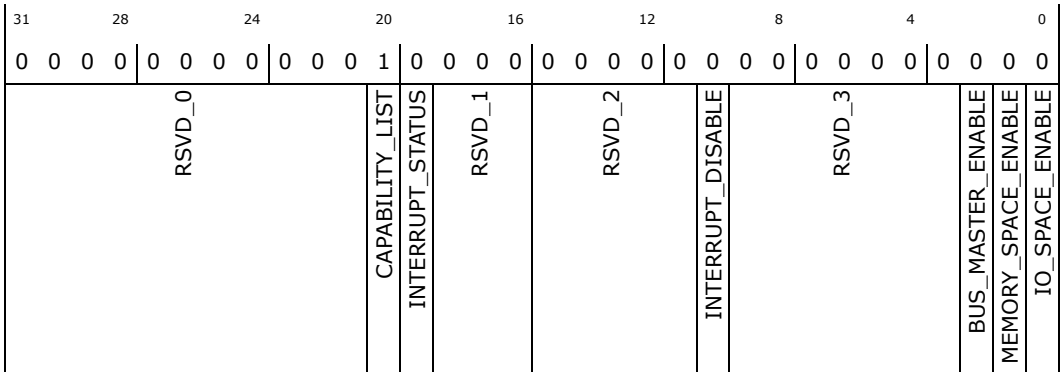
04h: PCI Command Register. 06h: PCI Status Register

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 4h

Default: 00100000h



Bit Range	Default & Access	Field Name (ID): Description
31:21	0x0 RO	**RESERVED (RSVD_0):** Reserved
20	0x1 RO	**CAPABILITY_LIST:** CAP: Indicates that the CAPPOINT register at 34h provides an offset into PCI Configuration Space containing a pointer to the location of the first item in the list
19	0x0 RO	**INTERRUPT_STATUS:** IS: Reflects the state of the interrupt in the graphics device. 1 : Determined by IIR and IER memory interface registers. Indicates a device 2 (Display/Media/Render) interrupt request.0 : No interrupt pending.Only when the Interrupt Disable bit in the command register is a 0 and this Interrupt Status bit is a 1, will the assert_IntX message be sent.
18:16	0x0 RO	**RESERVED (RSVD_1):** Reserved
15:11	0x0 RO	**RESERVED (RSVD_2):** Reserved
10	0x0 RW	**INTERRUPT_DISABLE:** ID: 0 : Legacy interrupt message is enabled.1 : Disables legacy interrupt message generation on IOSF Sideband. Note : The interrupt status is not blocked from being reflected in PCISTS.IS.Note: MSI interrupt generation : (PCISTS.IS and PCICMD.BME and MSI_CAPID.MSIE) changes from 0 to 1.Note: Message bus interrupt assert is sent : (PCISTS.IS and ~PCICMD.ID and ~MSI_CAPID.MSIE) changes from 0 to 1.Note: Message bus interrupt de-assert is sent : (PCISTS.IS and ~PCICMD.ID and ~MSI_CAPID.MSIE) changes from 1 to 0.
9:3	0x0 RO	**RESERVED (RSVD_3):** Reserved
2	0x0 RW	**BUS_MASTER_ENABLE:** BME: (BME and MAE are observed. But context save/restore can occur.)0 : Blocks the sending of MSI interrupts.1 : Permits the sending of MSI interrupts
1	0x0 RW	**MEMORY_SPACE_ENABLE:** MSE:0 : Memory space disabled. MEMRD or MEMWR commands will be disabled.1 : Memory space is enabled. A MemRd or MemWr compare hit (with GTTMMADR, GMADR) will be claimed. Care should be taken in setting up GTTMMADR and GMADR that more than 1 match is not made as this will result in unpredictable behavior. Three compares will occur :a. Address[35:20] is compared with GTTMMADR[35:20]. b. Address[35:31,30,29,28,or 27] is compared with GMADR[35:31,30,29,28,or 27],respectively. (Whether the comparison is 35:31, 35:30, 35:29, 35:28 or 35:27 depends on the value of MSAC[20:16].).
0	0x0 RW	**IO_SPACE_ENABLE:** IOSE: 0 : I/O space is disabled. IORD and IOWr cycles will not be claimed.1 : I/O space is enabled. Gfx_IOBAR is checked. If an IORD/IOWR matches (GFX_IOBAR), the cycle will beclaimed. Care should be taken in setting up GFX_IOBAR that more than 1match is not made as this will result in unpredictable behavior. Gfx_IOBAR : Address[15:3] is compared to GFX_IOBAR[15:3].

4.1.3 RID_CC—Offset 8h

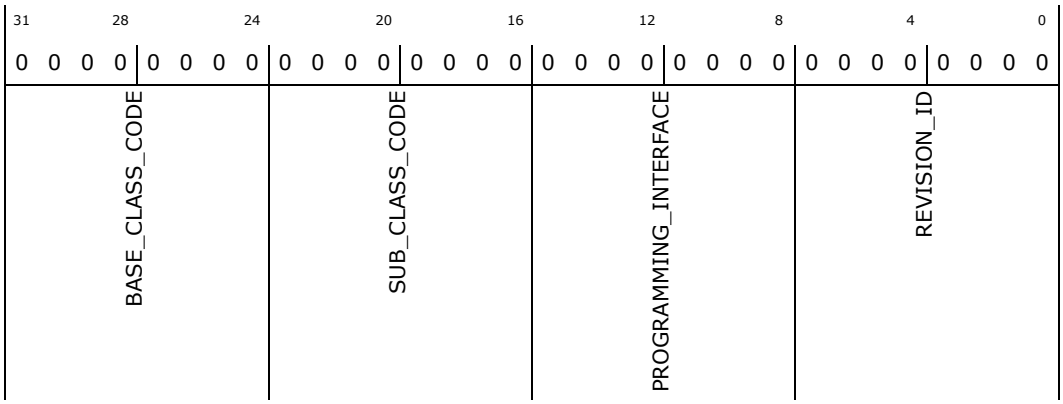
Revision Identification and Class code register. SOXi Context Save/Restore: Yes.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**BASE_CLASS_CODE:** BCC: This is an 8-bit value that indicates the base class code. When MGGC0[VAMEN] is 0 this code has the value 03h, indicating a Display Controller. When MGGC0[VAMEN] is 1 this code has the value 04h, indicating a Multimedia Device.
23:16	0x0 RO	**SUB_CLASS_CODE:** When MGGC0[VAMEN] is 1, this value is 80h, indicating other multimedia device. When MGGC0[VAMEN] is 0 this value will be determined based on GGC register, GMS and IVD fields. When GGC[1] = 1 or GGC[7:3] = 5'b00000 this value is 80h.
15:8	0x0 RO	**PROGRAMMING_INTERFACE:** PI: When MGGC0[VAMEN] is 0 this value is 00h, indicating a Display Controller.When MGGC0[VAMEN] is 1 this value is 00h, indicating a NOP.
7:0	0x0 RW	**REVISION_ID:** RID: The value in this field reflects the value of strapRID[7:0] (which is an input pin of GVD).For VV: The reset value will be the same as MID bits 23:16 (reference the MID register for MID register details).This register is read-able by any agent.Under SAI protection, the PMC and Punit (ie. 'Trusted_FW') can write this register and change the default value.No other agent has the ability to update this register. The PMC implementation will consider SRID and CRID before updating this register. Any PMC updates will be prior to Device 2 configuration.Note : The MID register will always reflect the stepping information. Even if PMC updates this register, the MID is available as a SRID reference.

4.1.4 HDR—Offset Ch

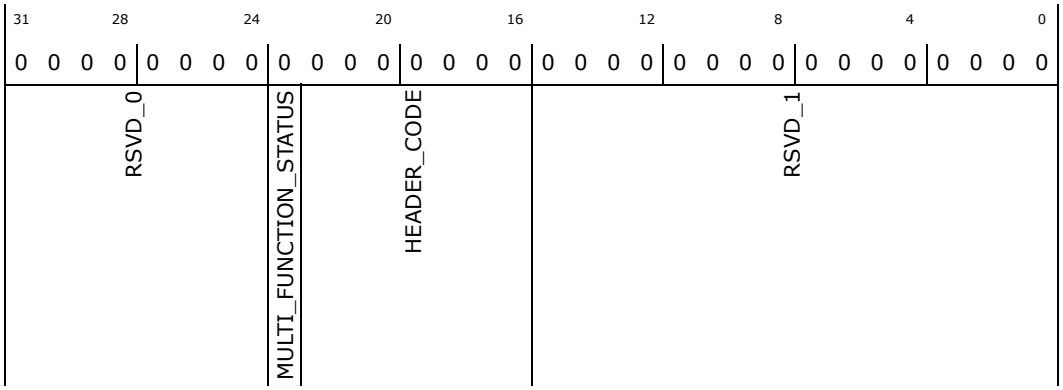
Header Type

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED (RSVD_0):** Reserved
23	0x0 RO	**MULTI_FUNCTION_STATUS:** MFUNC: Integrated graphics is a single function
22:16	0x0 RO	**HEADER_CODE:** HDR: Indicates a type 0 configuration space header format
15:0	0x0 RO	**RESERVED (RSVD_1):** Reserved

4.1.5 GTTMMADR_LSB—Offset 10h

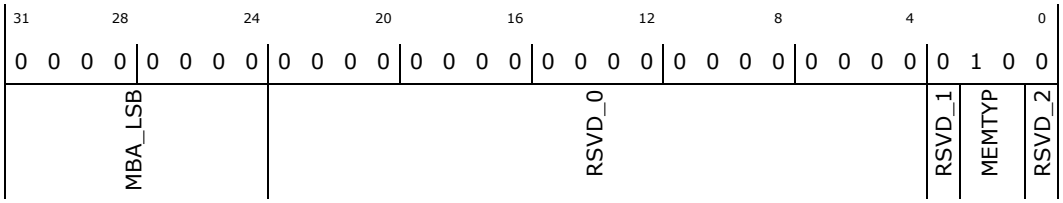
Gfx Memory Mapped Address Range. This is the base address for all memory mapped registers and GTT table.This register requests allocation for the combined Graphics Translation Table Modification Range and Memory Mapped Range. For the Global GTT, this range is defined asa memory BAR in graphics device config space. It is an alias into which software is required to write Page Table Entry values (PTEs). Software may read PTE values from the global Graphics Translation Table (GTT). PTEs cannot be written directly into the global GTT memory area. Prior to this feature it had a max size of 4M with 2M MMADR + 0,1M, 2M GTT.Now GTTMMADR will have a max size of 16M.GTTMMADR = 2M MMADR + 6M rsvd+ 0, 2M, 4M, 8M GTT.GTTMMADR will be 16M aligned.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 10h

Default: 00000004h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RW	**MBA_LSB:** Memory Base Address (MBA): Set by the OS, these bits correspond to address signals [35:24].16MB combined for MMIO and Global GTT table aperture (2MB for MMIO, 6MB reserved and 8 MB for GTT).
23:4	0x0 RO	**Reserved (RSVD_0):** RSVD:Hardwired to 0 to indicate at least 4MB address range.
3	0x0 RO	**Reserved (RSVD_1):** Prefetchable Memory (PREFMEM): Hardwired to 0to prevent prefetching.
2:1	0x2 RO	**MEMTYP:** Memory Type (MEMTYP):00: To indicate 32 bit base address01: Reserved10: To indicate 64 bit base address11: Reserved
0	0x0 RO	**Reserved (RSVD_2):** Memory/IO Space (MIOS): Hardwired to 0 to indicate memory space.

4.1.6 GTTMMADR_MSB—Offset 14h

Gfx Memory Mapped Address Range. This is the base address for all memory mapped registers and GTT table.This register requests allocation for the combined Graphics Translation Table Modification Range and Memory Mapped Range. For the Global GTT, this range is defined asa memory BAR in graphics device config space. It is an alias into which software is required to write Page Table Entry values (PTEs). Software may read PTE values from the global Graphics Translation Table (GTT). PTEs cannot be written directly into the global GTT memory area.Prior to this feature it had a max size of 4M with 2M MMADR + 0,1M, 2M GTT.Now GTTMMADR will have a max size of 16M.GTTMMADR = 2M MMADR + 6M rsvd+ 0, 2M, 4M, 8M GTT.GTTMMADR will be 16M aligned.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 14h

Default: 00000000h

Bit Range	Default & Access	Field Name (ID): Description
31:4	0x0 RW	**MBA_MSB28:** This field must be set to 0 since addressing above 64GB is not supported.In SoC - Made them spare RW bits. MEMTYP=2'b10 indicating 64-bit addressing and PCI compliance test was failing in X0/A0 when this bitfield was left as Reserved.

Bit Range	Default & Access	Field Name (ID): Description
3:0	0x0 RW	**MBA_MSB:** Memory Base Address (MBA): Set by the OS, these bits correspond to address signals [35:24].16MB combined for MMIO and Global GTT table aperture (2MB for MMIO, 6MB reserved and 8 MB for GTT).

4.1.7 GMADR_LSB—Offset 18h

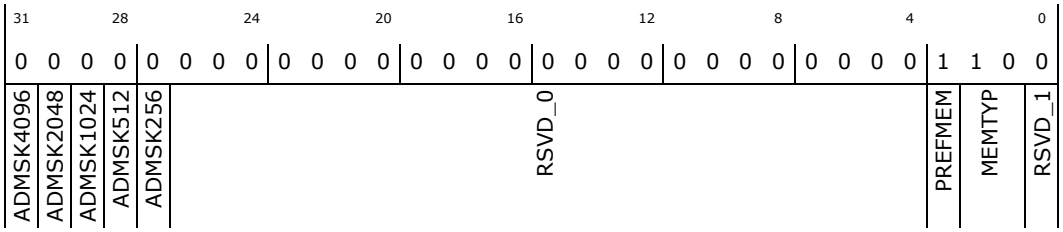
Gfx Aperture location.GMADR is a Prefetchable range in order to apply USWC attribute (from the processor point of view)to that range. The USWC attribute is used by the processor for write combining.Accesses to this range will be translated to DRAM Physical memory addresses. Fence registers may be used to sub-divide this range and allow tiled surfaces (determined by fence registers).The supported sizes are determined by the MSAC register.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 18h

Default: 0000000Ch



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW/L	**ADMSK4096:** 4096MB Address Mask (ADMSK4096): Locked with MSAC.APSZ[4]. Refer MSAC (Dev2, Func 0, offset 62h) for details.
30	0x0 RW/L	**ADMSK2048:** 2048MB Address Mask (ADMSK2048): Locked with MSAC.APSZ[3]. Refer MSAC (Dev2, Func 0, offset 62h) for details.
29	0x0 RW/L	**ADMSK1024:** 1024MB Address Mask (ADMSK1024): Locked with MSAC.APSZ[2]. Refer MSAC (Dev2, Func 0, offset 62h) for details.
28	0x0 RW/L	**ADMSK512:** 512MB Address Mask (ADMSK512): Locked with MSAC.APSZ[1]. Refer MSAC (Dev2, Func 0, offset 62h) for details.
27	0x0 RW/L	**ADMSK256:** 256MB Address Mask (ADMSK256): Locked with MSAC.APSZ[0].Refer MSAC (Dev2, Func 0, offset 62h) for details.
26:4	0x0 RO	**Reserved (RSVD_0):** Address Mask (ADM): Hardwired to 0s to indicate at least 128MB address range.
3	0x1 RO	**PREFMEM:** Prefetchable Memory (PREFMEM): Hardwired to 1 to enable prefetching.
2:1	0x2 RO	**MEMTYP:** Memory Type (MEMTYP):00: To indicate 32 bit base address01: Reserved10: To indicate 64 bit base address11: Reserved
0	0x0 RO	**Reserved (RSVD_1):** Memory/IO Space (MIOS): Hardwired to 0 to indicate memory space.

4.1.8 GMADR_MSB—Offset 1Ch

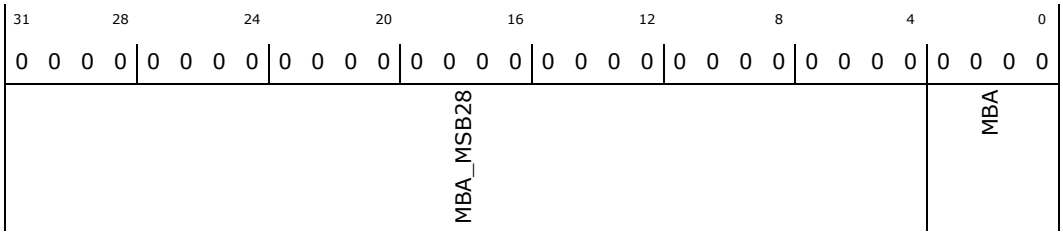
Gfx Aperture location.GMADR is a Prefetchable range in order to apply USWC attribute (from the processor point of view)to that range. The USWC attribute is used by the processor for write combining.Accesses to this range will be translated to DRAM Physical memory addresses. Fence registers may be used to sub-divide this range and allow tiled surfaces (determined by fence registers).The supported sizes are determined by the MSAC register.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 1Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:4	0x0 RW	**MBA_MSB28:** This filed must be set to 0 since addressing above 64GB is not supported.In SoC - Made them spare RW bits. MEMTYP=2'b10 indicating 64-bit addressing and PCI compliance test was failing in X0/A0 when this bitfield was left as Reserved.
3:0	0x0 RW	**MBA:** Memory Base Address (MBA)Set by the OS, these bits correspond to address signals [35:32]

4.1.9 IOBAR—Offset 20h

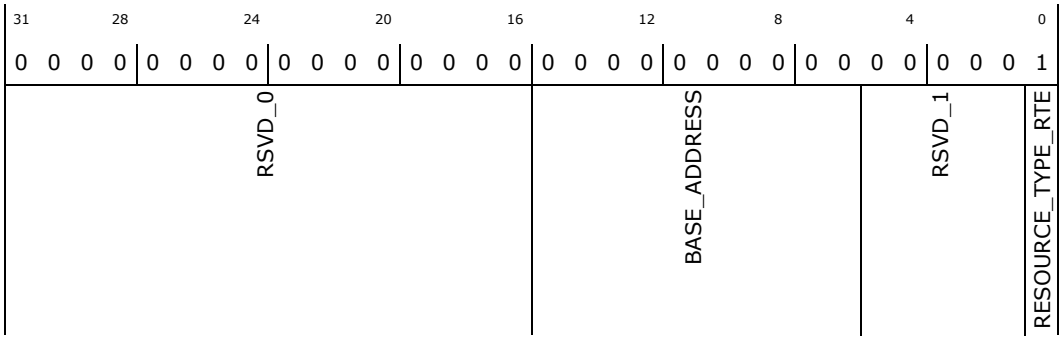
I/O Base Address. This is used only by SBIOS. This register is the base address for the MMIO_INDEX and MMIO_DATA registers.This register provides the Base offset of the I/O registers within Device #2. Access to the 8Bs of IO space is allowed in PM state D0 when IO Enable (PCICMD bit 0) set. Access is disallowed :* in PM states D1-D3 or* if IO Enable is clear or* if Device #2 is turned off or* if Internal graphics is disabled thru the fuse or fuse override mechanisms. If accesses to this IO bar is allowed then the GMCH claims all 8, 16 or 32 bit IO cycles from the CPU that falls within the 8B claimed.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 20h

Default: 00000001h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED (RSVD_0):** Reserved
15:6	0x0 RW	**BASE_ADDRESS:** BA:Set by the OS, these bits correspond to address signals [15:6].IOBAR is to be used for both GTLC register programming and GTT table programming. This is an indirect access method.
5:1	0x0 RO	**RESERVED (RSVD_1):** Reserved
0	0x1 RO	**RESOURCE_TYPE_RTE:** Indicates a request for I/O space

4.1.10 SSID_SID—Offset 2Ch

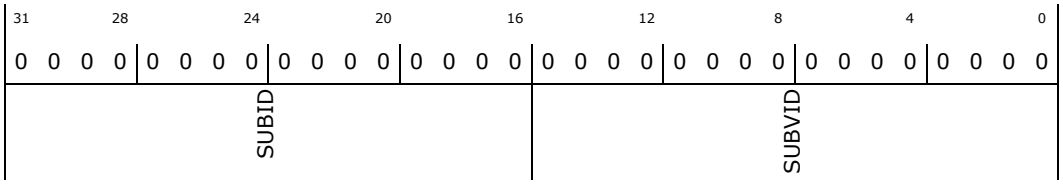
This register is used to uniquely identify the subsystem where the PCI device resides.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 2Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW/O	**SUBID:** This value is used to identify the vendor of the subsystem.This register is programmed by BIOS during boot-up.Once written, this register becomes Read_Only.This register is cleared by a Reset.
15:0	0x0 RW/O	**SUBVID:** This value is used to identify the vendor of the subsystem.This register is programmed by BIOS during boot-up.Once written, this register becomes Read_Only.This register is cleared by a Reset.

4.1.11 CAPPOINT—Offset 34h

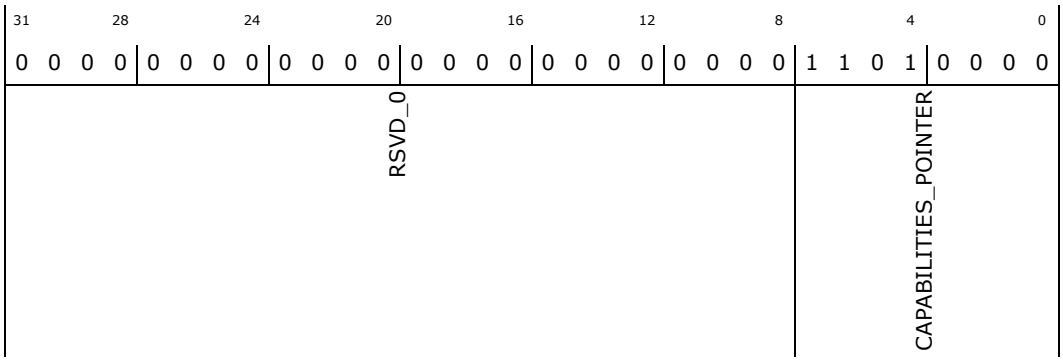
This register points to a linked list of capabilities implemented by this device.For VV, the capability linked list is expected to be : (Head-34, PMCAP-D0, MSI-90, VID-B0, ..End)Old : (Head-34, PMCAP-D0, MSI-90, AFLC-A4, VID-B0, .. End)

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 34h

Default: 000000D0h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED (RSVD_0):** Reserved
7:0	0xd0 RW/O	**CAPABILITIES_POINTER:** The first item in the capabilities list is at address D0h (PMCS).This register is programmed by BIOS during boot-up.Once written, this register becomes Read_Only. This register can only be cleared by a Reset.

4.1.12 INTRLINE—Offset 3Ch

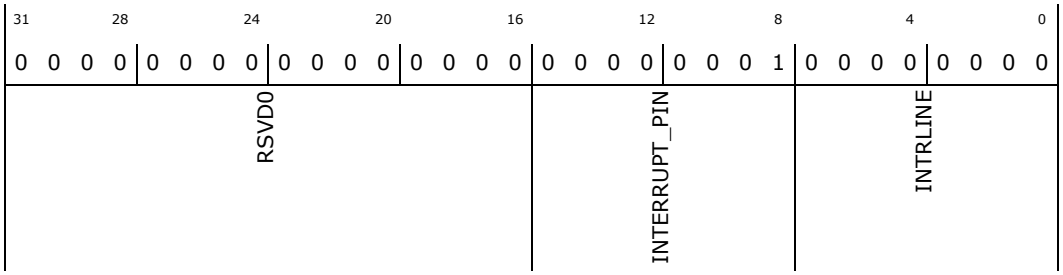
3C - Interrupt. This register is programmed by SBIOS. It is not used by the graphics/ display driver. This8-bit register is used to communicate interrupt line routing information. It is read/write and must be implemented by the device. POST software will write the routing information into this register as it initializes and configures the system.The value in this register tells which input of the system interrupt controller(s) the device's interrupt pin is connected to.The device itself does not use this value, rather it is used by device drivers and operating systems to determine priority and vector information. 3D - Interrupt. This register is programmed by SBIOS. It is not used by the graphics/display driver

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 3Ch

Default: 00000100h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RSVD0:** Reserved
15:8	0x1 RO	**INTERRUPT_PIN:** IPIN: Value indicates which interrupt pin this device uses. The PCI spec requires that it use INTA#.01h: INTA
7:0	0x0 RW	**INTRLINE:** ILIN: BIOS written value to communicate interrupt line routing information to the device driver.Used to communicate interrupt line routing information.POST software writes the routing information into this register as it initializes and configures the system.The value in this register indicates to which input of the system interrupt controller the device's interrupt pin is connected.

4.1.13 GGC—Offset 50h

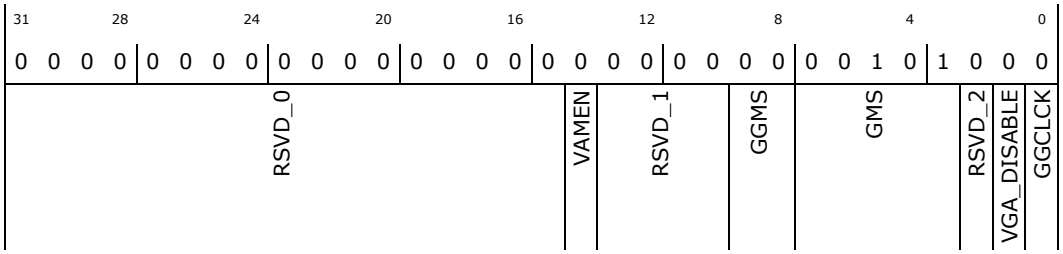
GMCH Graphics Control Register.

Access Method

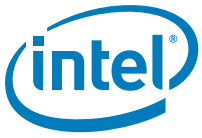
Type: ??? Register
(Size: 32 bits)

Offset: 50h

Default: 00000028h



Bit Range	Default & Access	Field Name (ID): Description
31:15	0x0 RO	**RESERVED (RSVD_0):** Reserved
14	0x0 RW/L	**VAMEN:** Enables the use of the iGFX engines for Versatile Acceleration.1 - iGFX engines are in Versatile Acceleration Mode. Device 2 Class Code is 048000h.0 - iGFX engines are in iGFX Mode. Device 2 Class Code is 030000h.



Bit Range	Default & Access	Field Name (ID): Description
13:10	0x0 RO	**RESERVED (RSVD_1):** Reserved
9:8	0x0 RW/L	**GGMS:** GTT Graphics Memory Size (GGMS):This field is used to select the amount of Main Memory that is pre-allocated to support the Internal Graphics Translation Table. The BIOS ensures that memory is pre-allocated only when Internal graphics is enabled.GSM is assumed to be a contiguous physical DRAM space with DSM, and BIOS needs to allocate a contiguous memory chunk. Hardware will derive the base of GSM from DSM only using the GSM size programmed in the register.Hardware functionality in case of programming this value to Reserved is not guaranteed.0h:No Preallocated Memory1h: 2MB of Preallocated Memory2h: 4MB of Preallocated Memory3h: 8MB of Preallocated Memory
7:3	0x5 RW/L	**GMS:** Graphics Mode Select(GMS):This field is used to select the amount of Main Memory that is pre-allocated to support the Internal Graphics device in Native (linear) modes.The BIOS ensures that memory is pre-allocated only when Internal graphics is enabled.Hardware does not clear or set any of these bits automatically based on IGD being disabled/enabled. BIOS Requirement: BIOS must not set this field to 0h if IVD (bit 1 of this register) is 0. BIOS Requirement : Display screen resolution and WOPCM size requirements must be considered as part of programming this registers. Otherwise, invalidation combinations can result. For example, WOPCM size of 8MB with a GMS size of 8MB.That combination is invalid as there is not memory left for the frame buffer.0h = 0MB1h = 32MB2h = 64MB3h = 96MB4h = 128MB5h = 160MB6h = 192MB7h = 224MB8h = 256MB9h = 288MBAh = 320MBBh = 352MBCh = 384MBDh = 416MBEh = 448MBFh = 480MB10h = 512MB11h = 8MB12h = 12MB13h = 16MB14h = 20MB15h = 24MB16h = 28MB17h = 36MB18h = 40MB19h = 44MB1Ah = 48MB1Bh = 52MB1Ch = 56MB1Dh = 60MB1Eh = Reserved1Fh = Reserved.....20h:1024MB (Not supported for SoC).....30h:1536MB (Not supported for SoC).....40h:2048MB (Not supported for SoC).....80h:4096MB (Not supported for SoC)81h - FF:ReservedOther = Reserved When GMS != '0 (and VD=0).If there is a match and MSE = 1 and MEMRD or MEMWR, the access will route as a Rmdwvgamemen_cr cycle on the RMbus.If the RMbus returns a hit the GVD will select the command. If there is a match and IOSE = 1 and the SCLcommand is either an IORD or IOWR, the GVD will initiate a register cycle on the RMbus.
2	0x0 RO	**RESERVED (RSVD_2):** Reserved
0	0x0 RW/L	**GGCLCK:** When set to 1b, this will lock all the bits in this register.

4.1.14 BDSM—Offset 5Ch

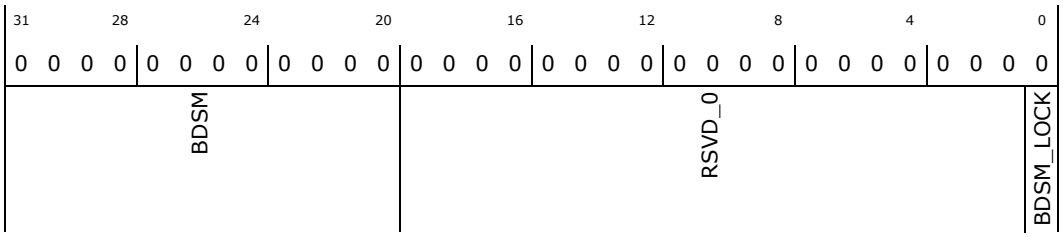
This register contains the base address of Graphics Data Stolen DRAM memory.Note : IVB located this register in device 0, 0xB0. Mirrored into device 2, 0x5C.Graphics Stolen Memory is within DRAM space. The base of stolen memory will always be below 4G.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 5Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RW/L	**BDSM:** BDSM: BASE_OF_Data_STOLEN_MEMORY.This register contains bits 31 to 20 of the base address of Data stolen DRAM memory. For certain GTLC generated accesses, this base register will be added to GTLC provided offset address, forming the full physical address for the PFI fabric. The display engine also uses the register.Signal : gvd_dsp_cfg_BSM_zcznfwh[31:20].
19:1	0x0 RO	**RESERVED (RSVD_0):** Reserved
0	0x0 RW/L	**BDSM_LOCK:** This bit will lock all writable settings in this register, including itself.

4.1.15 MSAC—Offset 60h

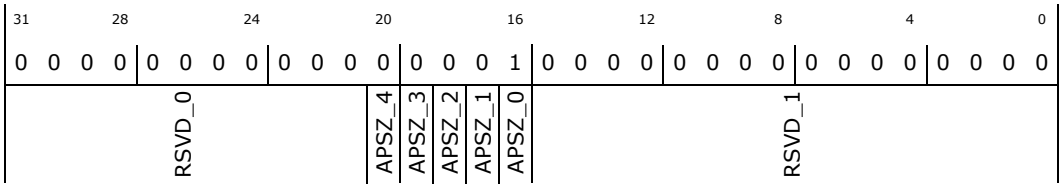
This register determines the size of the graphics memory aperture. Only the system BIOS will write this register based on pre- boot address allocation efforts.Graphics may read this register to determine the correct aperture size. System BIOS needs to save this value on bootso that it can reset it correctly during S3 resume. The size of the aperture must not be modified by software after its location is written into GMADR (offset 18h).

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 60h

Default: 00010000h



Bit Range	Default & Access	Field Name (ID): Description
31:21	0x0 RO	**RESERVED (RSVD_0):** Reserved

15:0	0x0 RO	**RESERVED (RSVD_1):** Reserved

4.1.16 BGSM—Offset 70h

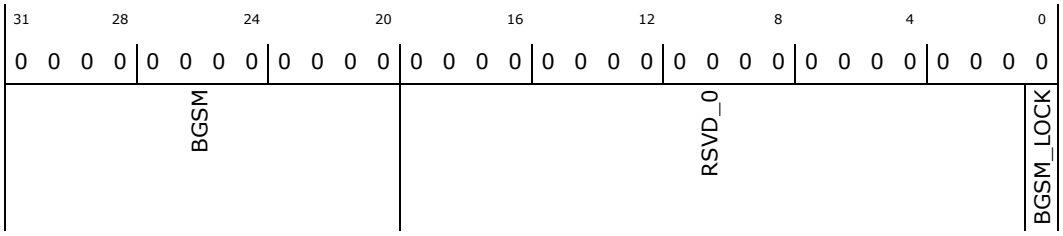
Base of GTT table in Gfx Stolen Memory Note : IVB located this register in device 0, 0xB4. Mirrored into Device 2.The GTT table is located within Graphics Stolen Memory in DRAM space. The base of stolen memory will always be below 4G.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 70h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RW/L	**BGSM:** BGSM: Gfx Base of GTT Stolen Memory. This register contains bits 31 to 20 of the base address of GTT Table in stolen DRAM memory.BIOS determines base of GTT stolen memory by subtracting the GTT graphics stolen memory size (PCI offset 50 bits 9:8) from the Graphics Base of Data stolen(PCI offset 5C bits 31:20). Signal: gvd_dsp_Cspgtbladdr_dczfwoh[31:20].
19:1	0x0 RO	**RESERVED (RSVD_0):** Reserved
0	0x0 RW/L	**BGSM_LOCK:** This bit will lock all writeable settings in this register including itself

4.1.17 MSI_CAPID_MC—Offset 90h

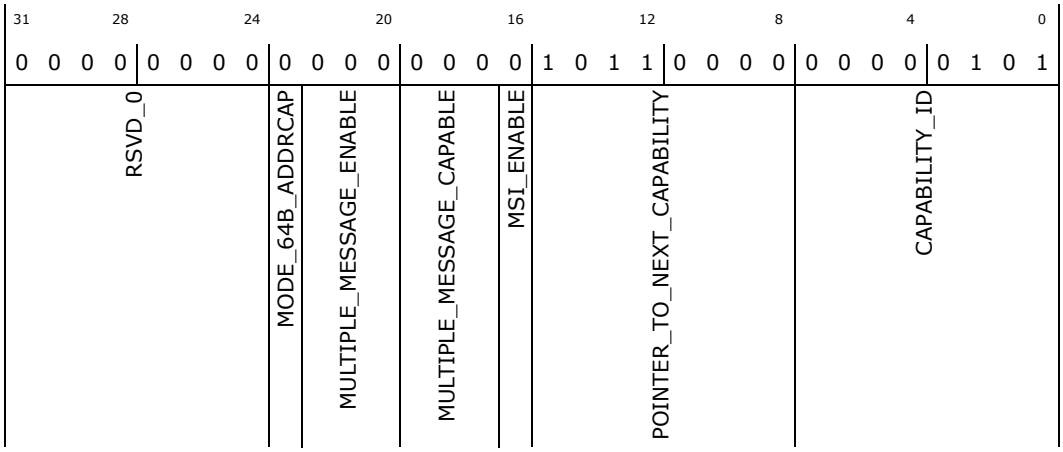
90-91h: Message Signaled Interrupts Capability ID92-93h: Message Signaled Control Register

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 90h

Default: 0000B005h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED (RSVD_0):** Reserved
23	0x0 RO	**MODE_64B_ADDRCAP:** C64: 32-bit capable only
22:20	0x0 RW	**MULTIPLE_MESSAGE_ENABLE:** MME: This field is RW for software compatibility, but only a single message is ever generated.System software programs this field to indicate the actual number of messages allocated to this device. This number will be equal to or less than the number actually requested.The encoding is the same as for the MMC field below.
19:17	0x0 RO	**MULTIPLE_MESSAGE_CAPABLE:** MMC: This device is only single message capable.System Software reads this field to determine the number of messages being requested by this device.Value: Number of requests000: 1001-111: Reserved
16	0x0 RW	**MSI_ENABLE:** MSIE: If set, MSI is enabled and traditional interrupts are not used to generate interrupts. PCICMDSTS.BME must be set for an MSI to be generated.0 : MSI interrupts are disabled.1 : MSI interrupts are enabled. Permits sending an MSI interrupt.
15:8	0xb0 RW/O	**POINTER_TO_NEXT_CAPABILITY:** Points to the next item in the list(B0=VCID support).This register should be programmed by BIOS during boot-up. Once written, this register becomes Read_Only. This register can only be cleared by a Reset.
7:0	0x5 RO	**CAPABILITY_ID:** CAPID: Indicates an MSI capability

4.1.18 MA—Offset 94h

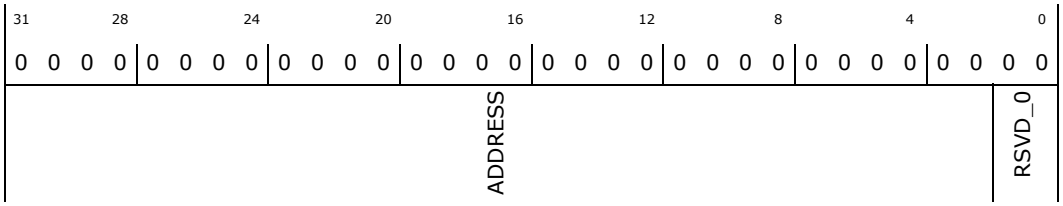
Message Address

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 94h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:2	0x0 RW	**ADDRESS:** MA: Lower 32-bits of the system specified message address, always DW aligned. When GVD issues an MSI interrupt as a MEMWR on the SCL, the memory address corresponds to the value of this field.
1:0	0x0 RO	**RESERVED (RSVD_0):** Reserved

4.1.19 MD—Offset 98h

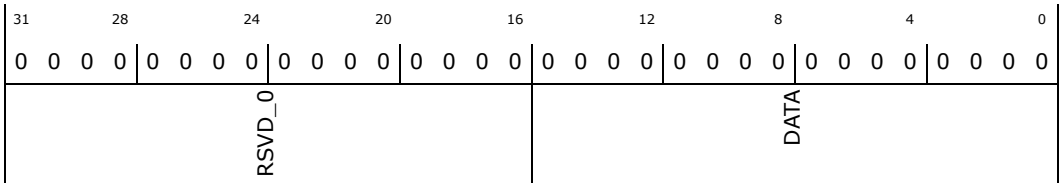
Message Data

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: 98h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED (RSVD_0):** Reserved
15:0	0x0 RW	**DATA:** MD: This 16-bit field is programmed by system software. This forms the lower word of data for the MSI write transaction.

4.1.20 Advanced Features Length and Capabilities (AFLC)—Offset A4h

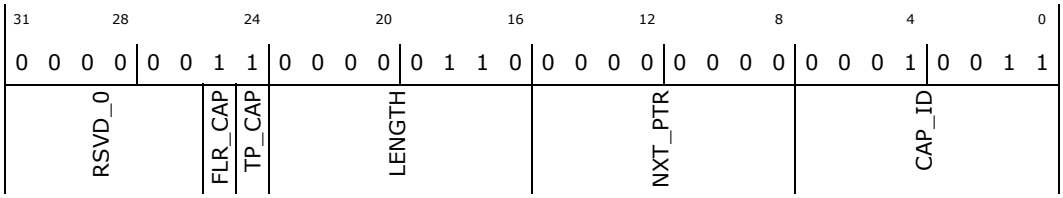
FLR capability advertisement

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: A4h

Default: 03060013h



Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED (RSVD_0):** Reserved
25	0x1 RO	**FLR_CAP:** Function Level Reset Capability (FLR_CAP):0: Function Level Reset is not supported1: Function Level Reset is supported
24	0x1 RO	**TP_CAP:** Transactions Pending Capability (TP_CAP):0: Transactions Pending bit is not supported1: Transactions Pending bit is supported
23:16	0x6 RO	**LENGTH:** Advanced Features Structure Length(LENGTH): The Advanced Features capability structure is 6bytes long.
15:8	0x0 RW/O	**NXT_PTR:** Next Pointer (NXT_PTR): Removed FLR capability per HSD 259253. Nulled the next pointer.Points to the next item in the list (B0=Vendor Capabilities ID)This register should be programmed by BIOS during boot-up. Once written,this register becomes Read_Only. This register can only be cleared by a Reset.Write once so capabilities list can be changed if needed.
7:0	0x13 RO	**CAP_ID:** Capability Identifier (CAP_ID): A value of 13h identifies that this PCI Function is capable of Advanced Features.

4.1.21 AFCTLSTS—Offset A8h

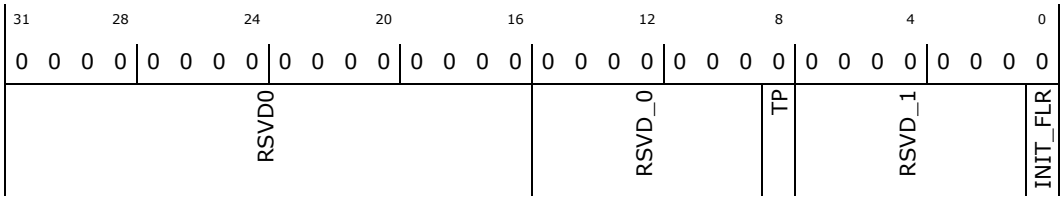
FLR control refer the July 27th 2006 Engineering Change Notice for Conventional PCI Advanced Capabilities.Advanced Feature Status

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RSVD0:** Reserved
15:9	0x0 RO	**Reserved (RSVD_0):** Reserved (RSVD)

Bit Range	Default & Access	Field Name (ID): Description
8	0x0 RO	**TP:** Transaction Pending (TP):1: The Function has issued one or more non-posted transactions which have not been completed, including non-posted transactions that a target has terminated with Retry.0: All non-posted transactions have been completed.
7:1	0x0 RO	**Reserved (RSVD_1):** Reserved (RSVD)
0	0x0 RW/S	**INIT_FLR:** Initiate Function Level Reset (INIT_FLR):A write of 1b initiates Function Level Reset (FLR).FLR requirements are defined in the PCI Express Base Specification.Registers and state information that do not apply to conventional PCIare exempt from the FLR requirements given there.Once written 1, FLR will be initiated. During FLR, a read will return1's since device 2 reads abort. Once FLR completes, hardware will clear the bit to 0.

4.1.22 VCID—Offset B0h

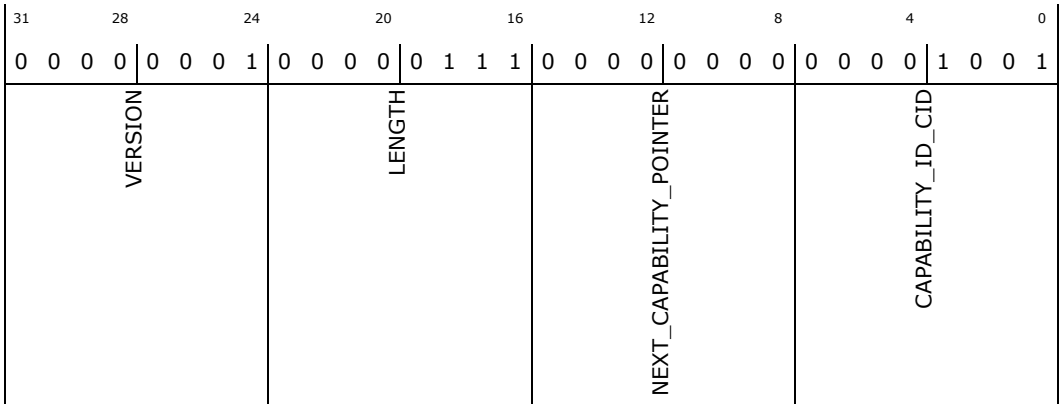
Vendor Capability ID

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: B0h

Default: 01070009h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x1 RO	**VERSION:** VS: Identifies this as the first revision of the CAPID register definition.
23:16	0x7 RO	**LENGTH:** LEN: This field has the value 07h to indicate structure length (8 bytes)
15:8	0x0 RW/O	**NEXT_CAPABILITY_POINTER:** 00 indicates capability list ends here.This register should be programmed by BIOS during boot-up. Once written, this register becomes Read_Only. This register can only be cleared by a Reset.Write-once allowing the capability list to be changed.
7:0	0x9 RO	**CAPABILITY_ID_CID:** Identifies this as a vendor dependent capability pointers.

4.1.23 VC—Offset B4h

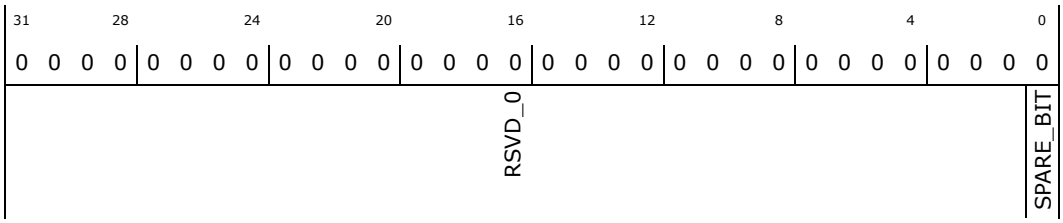
Vendor Capabilities. Any SKU related fuses would be added here.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: B4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**Reserved (RSVD_0):** Reserved
0	0x0 RO	**Spare_bit (SPARE_BIT):** Placeholder for sku related fusing.

4.1.24 FD—Offset C4h

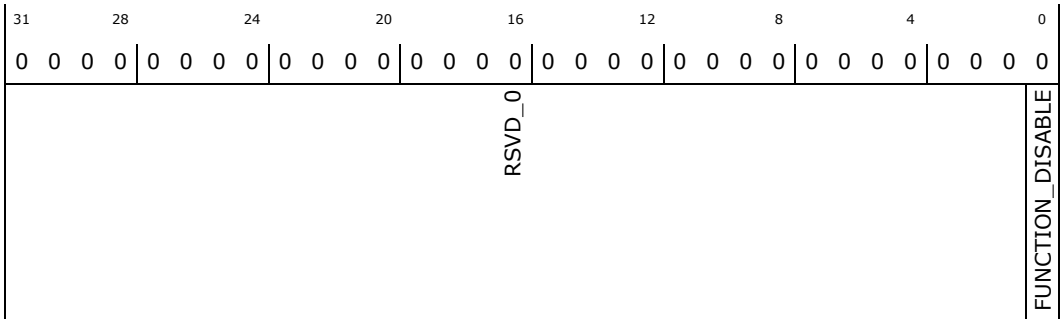
Functional Disable. This register is used by SBIOS, not by driver.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: C4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED (RSVD_0):** Reserved

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**FUNCTION_DISABLE:** FD:0 : Default - normal operation.1 : When set, the function is disabled (configuration space is disabled). All new requests on the IOSF Primary bus, including any new configuration cycle requests are not claimed on IOSF Primary.This bit as no effect register accessibility via IOSF SB. Once programmed to '1', the only way to re-enable device 2 is via an IOSF SB write of '0' to this register.SoC : Wire is sent to PSF for decode purposes gvd_psf_dev2disable_nczfwoh.

4.1.25 PMCAPID—Offset D0h

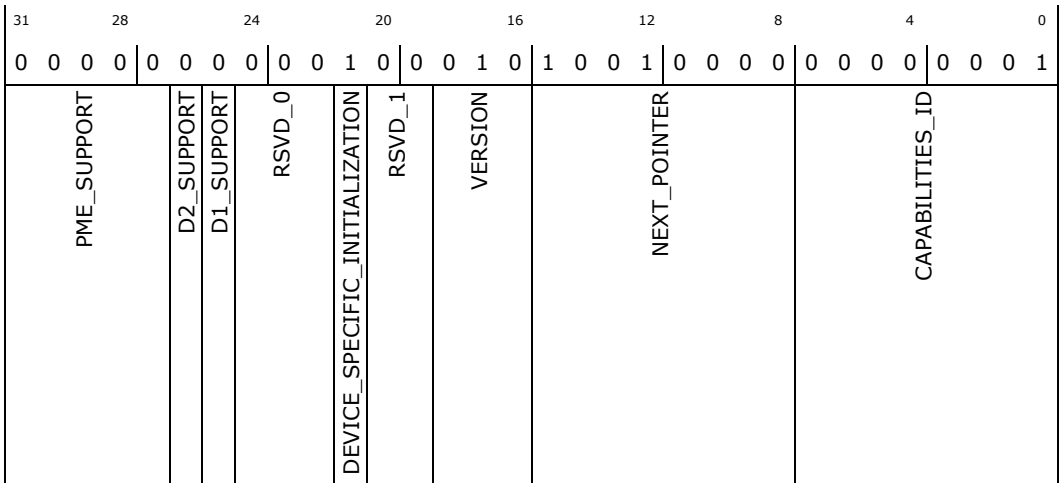
PCI Address: D0-D1h Description : Power Management Capabilities IDPCI Address: D2-D3h Description : Power Management Capabilities

Access Method

Type: ??? Register (Size: 32 bits)

Offset: D0h

Default: 00229001h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**PME_SUPPORT:** PMES The graphics controller does not generate PME.
26	0x0 RO	**D2_SUPPORT:** D2S: D2 power management state is not supported.
25	0x0 RO	**D1_SUPPORT:** D1S: D1 power management state is not supported.
24:22	0x0 RO	**RESERVED (RSVD_0):** Reserved
21	0x1 RO	**DEVICE_SPECIFIC_INITIALIZATION:** Hardwired to 1 to indicate that special initialization of the graphics controller is required before generic class device driver is to use it.

Bit Range	Default & Access	Field Name (ID): Description
20:19	0x0 RO	**RESERVED (RSVD_1):** Reserved
18:16	0x2 RO	**VERSION:** Version compliance with revision 1.1 of PCI Power management spec.
15:8	0x90 RW/O	**NEXT_POINTER:** Indicates the next item in the capabilities list(90=MSI)This register should be programmed by BIOS during boot-up. Once written, this register becomes Read_Only. This register can only be cleared by a Reset.Write once allowing changing of the capabilities list.
7:0	0x1 RO	**CAPABILITIES_ID:** CAPID: SIG defines this ID is 01h for power management.

4.1.26 PMCS—Offset D4h

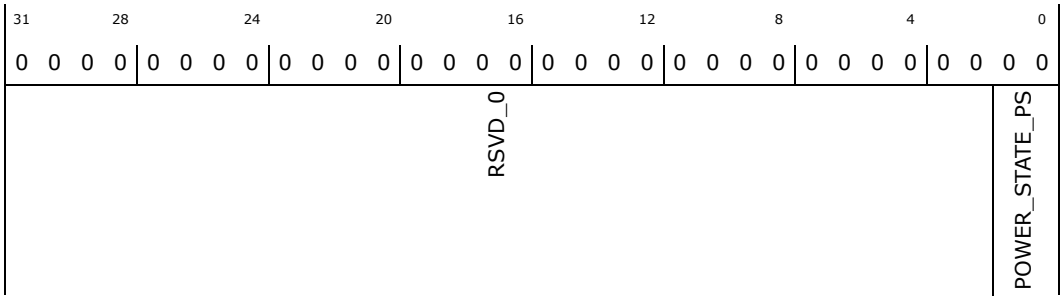
Power Management Control/Status. Driver does not use this register. SBIOS does not use this register

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: D4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:2	0x0 RO	**RESERVED (RSVD_0):** Reserved
1:0	0x0 RW	**POWER_STATE_PS:** This field indicates the current power state of the IGD and can be used to set the IGD into a new power state.If software attempts to write an unsupported state to this field, write operation must complete normally on the bus,but the data is discarded and no state change occurs. On a transition from D3 to D0 the graphics controller is optionally reset to initial values. Behavior of the graphics controller in supported states is detailed in the power management section of the Bspec.Bits[1:0] Power state00: D0 Default01: D1 Not Supported10: D2 Not Supported11: D3Signal : gvd_dsp_power_state_d3_nczfwoh output to 2D.

4.1.27 SWSMISCI—Offset E0h

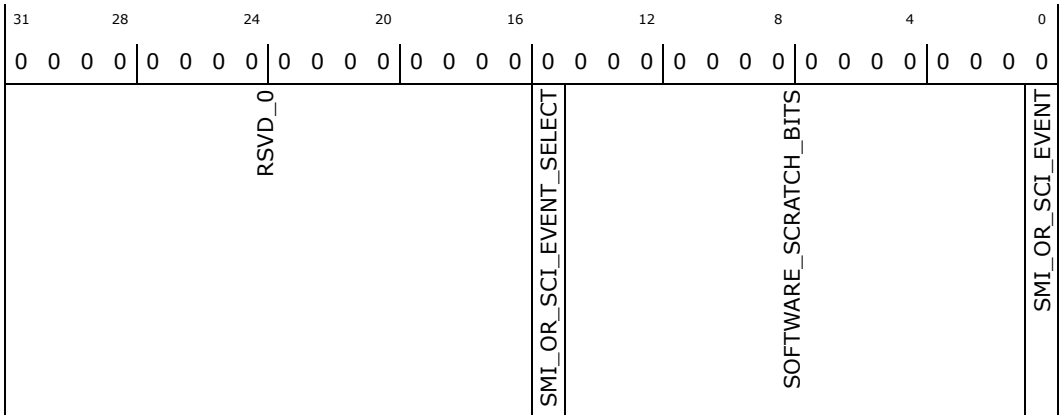
Software SMI or SCI. Note : ILK/SNB/IVB had SCI and SMI separated (E0 and E8). As long as there is the potential that DVO port legacy drivers exist which expect this register at this address, this must be reserved for this register.The SCI mechanism for driver / BIOS communication. SMI is a system wide lock interrupt (halts all the cores) as opposed to SCI. Vista and Win7 recommend to use the SCI. The SMI is slowly being phased out.This register serves 2 purposes: 1) Support selection of SMI or SCI event source (SMISCISEL - bit15) 2) Event trigger (bit 0). To generate a SW SCI event, software (System BIOS/Graphics driver) should program bit 15 (SMISCISEL) to 1.This is typically programmed once (assuming SM Is are never triggered). On a '0' to '1' subsequent transition in bit 0 of this register (caused by a software write operation), GMCH sends a single SCI message. The SCI will set the DMISCI bit in its TCO1_STS register and TCOSCI_STS bit in its GPE0 register upon receiving this message from DMI.Once written as 1, software must write a '0' to this bit to clear it, and all other write transitions (1-0, 0-0, 1-1) or if bit 15 is '0' will not cause GMCH to send SCI message to DMI link.To generate a SW SMI event, software should program bit 15:0 and trigger SMI.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: E0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED (RSVD_0):** Reserved
15	0x0 RW	**SMI_OR_SCI_EVENT_SELECT:** MCS: SMI or SCI event select. 0 = SMI,1 = SCI
14:1	0x0 RW	**SOFTWARE_SCRATCH_BITS:** Used by driver to communicate information to SBIOS

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**SMI_OR_SCI_EVENT:** MCE:MCS=1, setting this bit causes an SCI.MCS=0, setting this bit causes an SMI. A 1 to 0, 0 to 0 or 1 to 1 transition of this bit does not trigger any events. The graphics driver writes to this register as a means to interrupt the SBIOS.

4.1.28 ASLE—Offset E4h

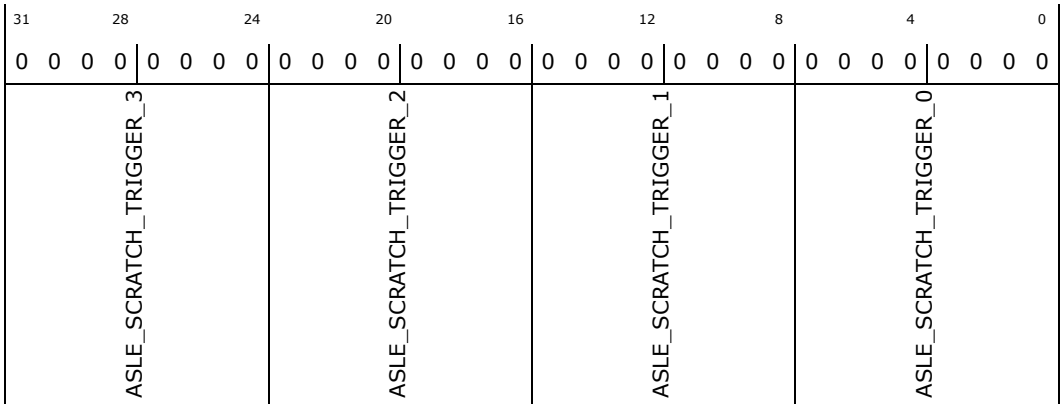
System Display Event Register. SBIOS writes this reg to generate interrupt to graphics/ display driver. Note : This was renamed to GSE (General System Event) on Ironlake/ SNB/IVB.

Access Method

Type: ??? Register
(Size: 32 bits)

Offset: E4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RW	**ASLE_SCRATCH_TRIGGER_3:** AST3: The writing of this by field (byte) - even if just writing back the original contents- will trigger a display controller interrupt (when the memory interface register bitsIER[0] = 1 and IMR[0] = 0). If written as part of a 16-bit or 32-bit write, only one interrupt is generated in common.
23:16	0x0 RW	**ASLE_SCRATCH_TRIGGER_2:** AST2: The writing of this by field (byte) - even if just writing back the original contents- will trigger a display controller interrupt (when the memory interface register bits IER[0] = 1 and IMR[0] = 0). If written as part of a 16-bit or 32-bit write, only one interrupt is generated in common.
15:8	0x0 RW	**ASLE_SCRATCH_TRIGGER_1:** AST1: The writing of this by field (byte) - even if just writing back the original contents- will trigger a display controller interrupt (when the memory interface register bits IER[0] = 1 and IMR[0] = 0). If written as part of a 16-bit or 32-bit write, only one interrupt is generated in common.

Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**ASLE_SCRATCH_TRIGGER_0:** AST0: The writing of this by field (byte) - even if just writing back the original contents - will trigger a display controller interrupt (when the memory interface register bitsIER[0] = 1 and IMR[0] = 0). If written as part of a 16-bit or 32-bit write, only one interrupt is generated in common.

4.1.29 ASLS—Offset FCh

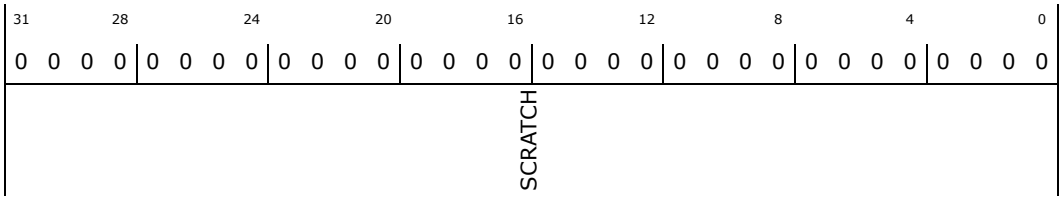
ASL Storage. This register is kept for use as scratch space.This software scratch register only needs to be read/write accessible. The exact bit register usage must be worked out in common between System BIOS and driver software, but storage for switching/indicating up to 6 devices is possible with this amount. For each device, the ASL control method with require two bits for _DOD (BIOS detectable yes or no), one bit for _DGS (enable/disable requested), and two bits for _DCS (enabled now/disabled now, connected or not).

Access Method

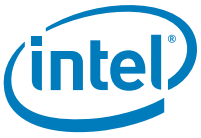
Type: ??? Register
(Size: 32 bits)

Offset: FCh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SCRATCH:** This register provides a means for the BIOS to communicate with the driver.This definition of this scratch register is worked out in common between System BIOS and driver software. Storage for up to 6 devices is possible.For each device, the ASL control method requires two bits for _DOD (BIOS detectable yes or no), one bit for _DGS (enable/disable requested), and two bits for DCS (enabled now/disabled now, connected or not).



4.2 DEFAULT Address Map

Table 22. Summary of Memory Mapped I/O Registers—

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value

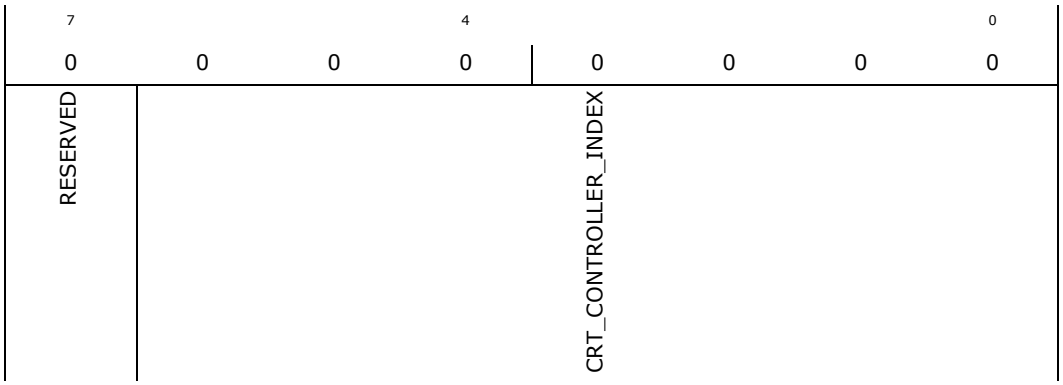
4.2.1 CRX (CRX_MDA)—Offset 3B4h

CRT Controller Index Register

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3B4h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7	0x0 RO	**RESERVED:** Read as 0.
6:0	0x0 RW	**CRT_CONTROLLER_INDEX:** These 7 bits are used to select any one of the CRT controller registers to be accessed via the data port at I/O location 3B5h or 3D5h, depending upon whether the graphics system is configured for MDA or CGA emulation. The data port memory address offsets are 3B5h/3D5h.

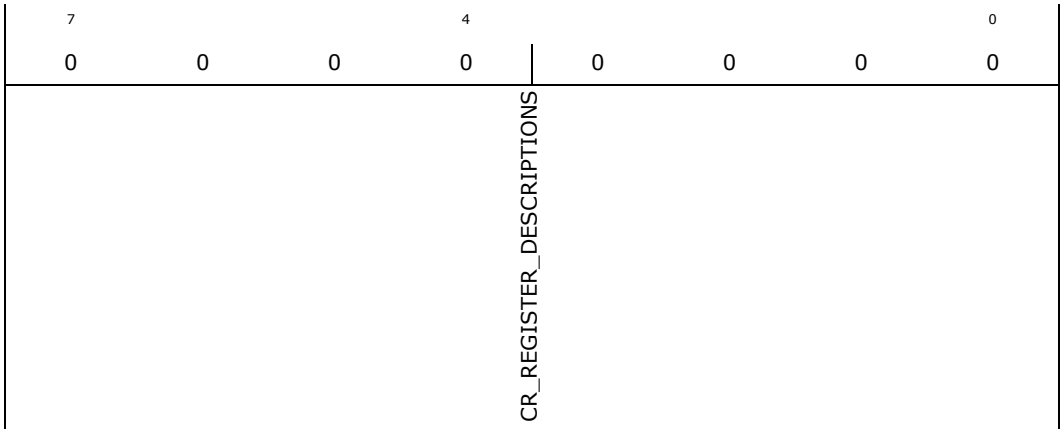
4.2.2 CR (CR_MDA)—Offset 3B5h

CR index registers

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3B5h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**CR_REGISTER_DESCRIPTIONS:** CR indexed register descriptions

4.2.3 ARX—Offset 3C0h

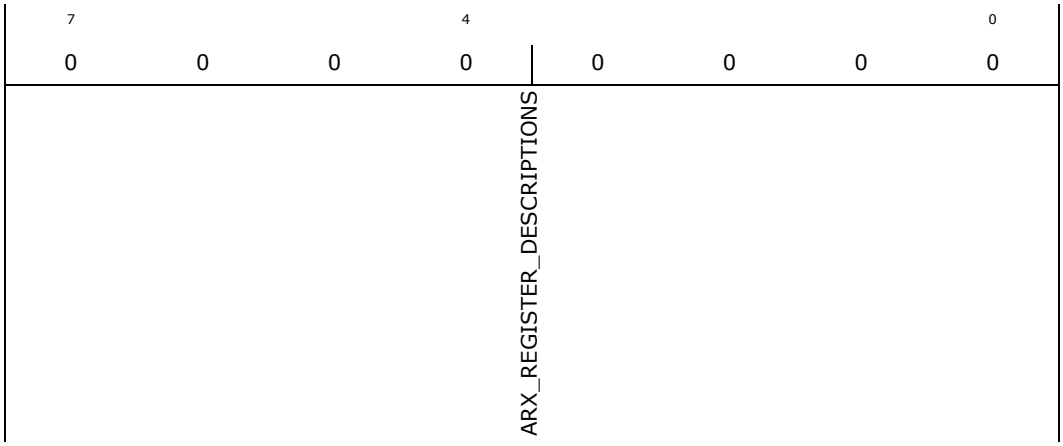
Attribute Controller Index Register. Includes the 22 registers that share this offset (with different indexes). -enum ARX_e

Access Method

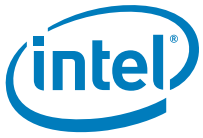
Type: Memory Mapped I/O Register (Size: 8 bits)

Offset: 3C0h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**ARX_REGISTER_DESCRIPTIONS:** ARX indexed register descriptions



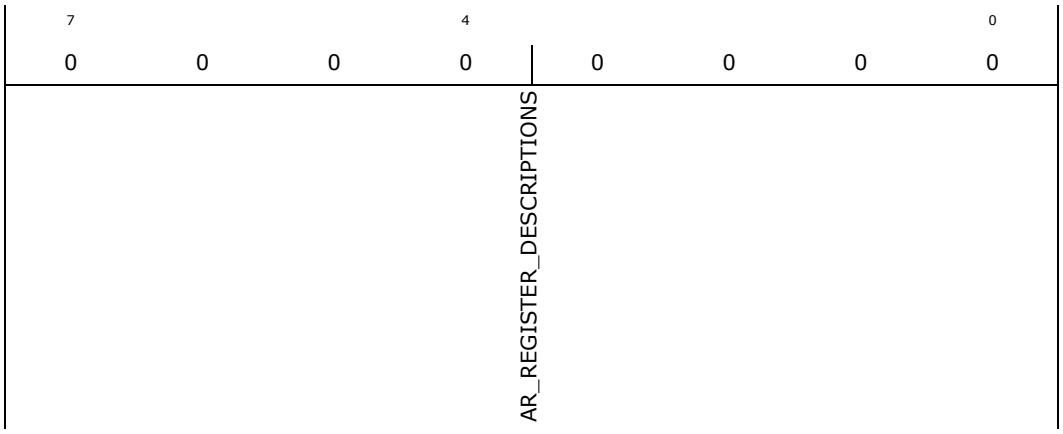
4.2.4 AR—Offset 3C1h

AR index registers. Includes the 21 registers that share this offset (with different indexes.) -enum AR_e- in this document will lead to register definitions

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3C1h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**AR_REGISTER_DESCRIPTIONS:** AR indexed register descriptions

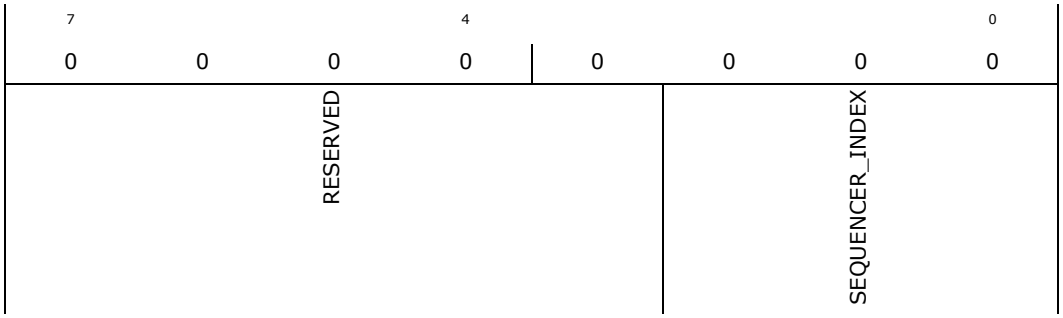
4.2.5 SRX—Offset 3C4h

Sequencer Index

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3C4h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:3	0x0 RO	**RESERVED:** Read as 0s.
2:0	0x0 RW	**SEQUENCER_INDEX:** This field contains a 3-bit Sequencer Index value used to access sequencer data registers at indices 0 through 7.

4.2.6 SR—Offset 3C5h

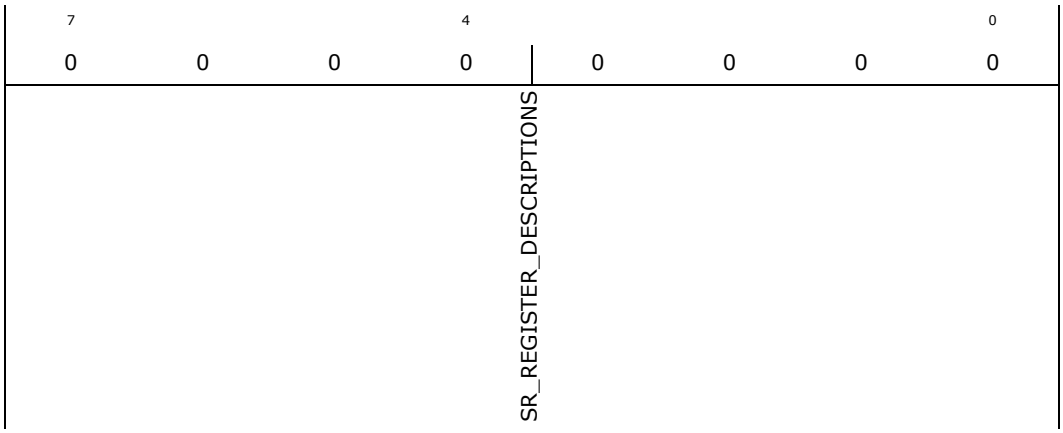
SR index registers

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits)

Offset: 3C5h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**SR_REGISTER_DESCRIPTIONS:** SR indexed register descriptions

4.2.7 DACMASK—Offset 3C6h

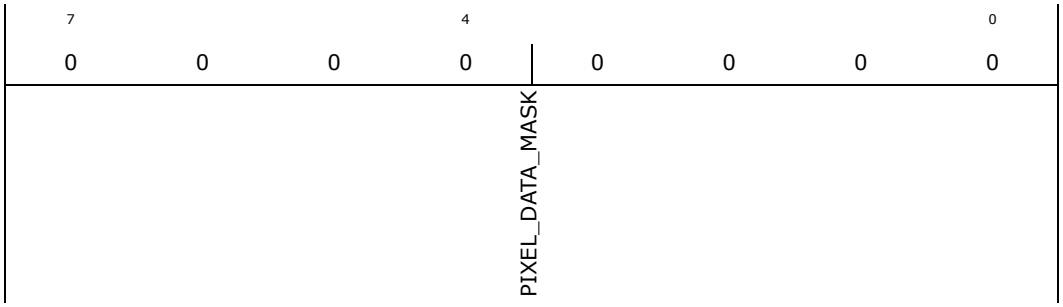
Pixel Data Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits)

Offset: 3C6h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**PIXEL_DATA_MASK:** In indexed-color mode, the 8 bits of this register are logically ANDed with the 8 bits of pixel data received from the frame buffer for each pixel. The result of this ANDing process becomes the actual index used to select color data positions within the palette. This has the effect of limiting the choice of color data positions that may be specified by the incoming 8-bit data. 0 = Corresponding bit in the resulting 8-bit index being forced to 0. 1 = Allows the corresponding bit in the resulting index to reflect the actual value of the corresponding bit in the incoming 8-bit pixel data.

4.2.8 DACWX—Offset 3C8h

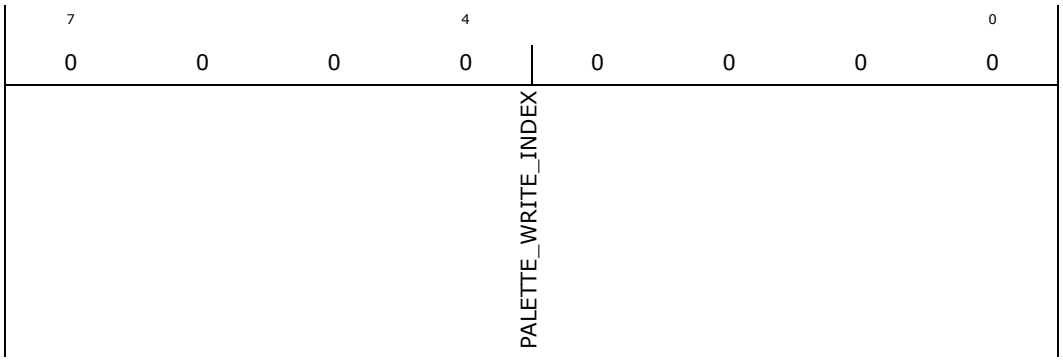
Palette Write Index Register

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits)

Offset: 3C8h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 WO	**PALETTE_WRITE_INDEX:** The 8-bit index value programmed into this register chooses which of 256 standard color data positions within the palette are to be made accessible for being written via the Palette Data Register (DACDATA). The index value held in this register is automatically incremented when all three bytes of the color data position selected by the current index have been written. This register allows access to the palette even when running on display modes.

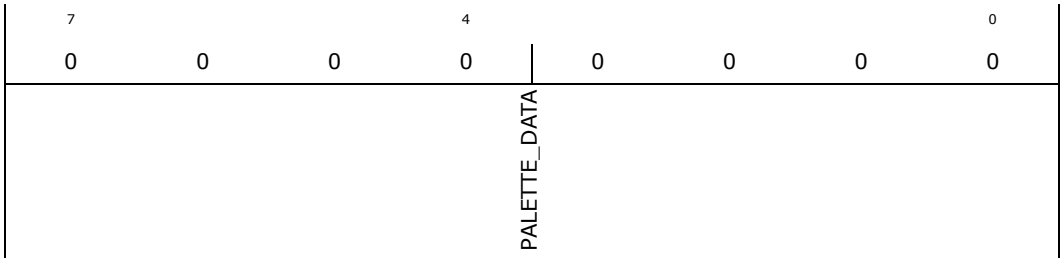
4.2.9 DACDATA—Offset 3C9h

Palette Data Register

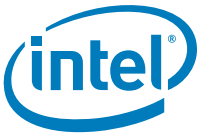
Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3C9h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**PALETTE_DATA:** This byte-wide data port provides read or write access to the three bytes of data of each color data position selected using the Palette Read Index Register (DACRX) or the Palette Write Index Register (DACWX). The three bytes in each color data position are read or written in three successive read or write operations. The first byte read or written specifies the intensity of the red component of the color specified in the selected color data position. The second byte is for the green component, and the third byte is for the blue component. When writing data to a color data position, all three bytes must be written before the hardware will actually update the three bytes of the selected color data position. When reading or writing to a color data position, ensure that neither the Palette Read Index Register (DACRX) or the Palette Write Index Register (DACWX) are written to before all three bytes are read or written. A write to either of these two registers causes the circuitry that automatically cycles through providing access to the bytes for red, green and blue components to be reset such that the byte for the red component is the one that will be accessed by the next read or write operation via this register. This register allows access to the palette even when running display modes. Writes to the palette can cause sparkle if not done during inactive video periods. This sparkle is caused by an attempt to write and read the same address on the same cycle. Anti-sparkle circuits will substitute the previous pixel value for the read output.



4.2.10 FCR (FCR_Read)—Offset 3CAh

Feature Control

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3CAh

Default: 00h

7			4				0
0	0	0	0	0	0	0	0
RESERVED				VSYNC_CONTROL	RESERVED_1		

Bit Range	Default & Access	Field Name (ID): Description
7:4	0x0 RO	**RESERVED:** Read as 0.
3	0x0 RW	**VSYNC_CONTROL:** This bit is provided for compatibility only and has no other function. Reads and writes to this bit have no effect other than to change the value of this bit. The previous definition of this bit selected the output on the VSYNC pin. 0 = Was used to set VSYNC out put on the VSYNC pin (default). 1 = Was used to set the log i cal 'OR' of VSYNC and Display Enable output on the VSYNC pin. This capability was not typically very useful..
2:0	0x0 RO	**RESERVED_1:** Read as 0.

4.2.11 MSR (MSR_READ)—Offset 3CCh

Miscellaneous Output

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3CCh

Default: 00h

7			4				0
0	0	0	0	0	0	0	0
CRT_VSYNC_POLARITY	CRT_HSYNC_POLA_RITY	PAGE_SELECT	RESERVED	CLOCK_SELECT		A0000_BFFFFH_MEMORY_ACCESS_ENABLE	I_O_ADDRESS_SELECT

Bit Range	Default & Access	Field Name (ID): Description
5	0x0 RW	**PAGE_SELECT:** In Odd/Even Memory Map Mode 1 (GR6), this bit selects the upper or lower 64 KB page in dis play memory for CPU access: 0 = Upper page (default) 1 = Lower page.
4	0x0 RO	**RESERVED:** Read as 0.
0	0x0 RW	**I_O_ADDRESS_SELECT:** This bit selects 3Bxh or 3Dxh as the I/O address for the CRT Controller registers, the Feature Control Register (FCR), and Input Status Register 1 (ST01). Presently ignored (whole range is claimed), but will ignore 3Bx for color configuration or 3Dx for monochrome. Note that it is typical in AGP chipsets to shadow this bit and properly steer I/O cycles to the proper bus for operation where a MDA exists on another bus such as ISA. 0 = Select 3Bxh I/O address (MDA emulation) (default). 1 = Select 3Dxh I/O address (CGA emulation).

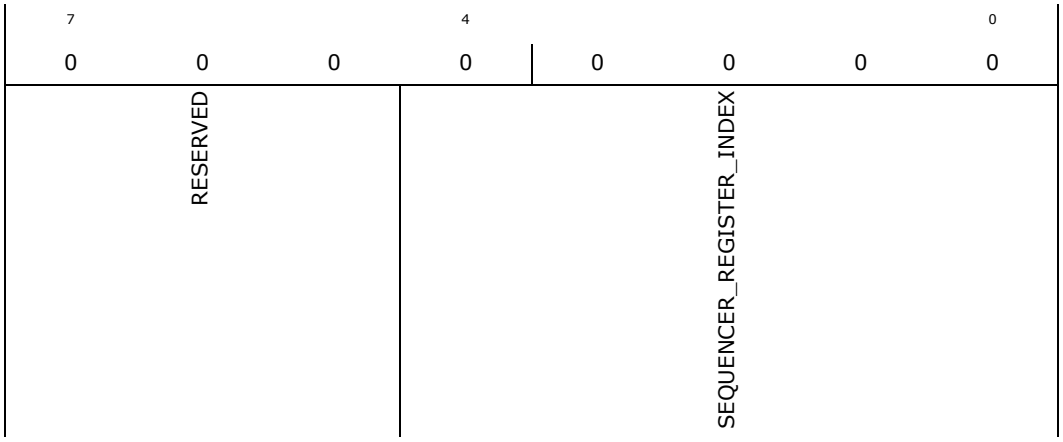
4.2.12 GRX—Offset 3CEh

GRX Graphics Controller Index Register

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3CEh

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:5	0x0 RO	**RESERVED:** Read as 0.
4:0	0x0 RW	**SEQUENCER_REGISTER_INDEX:** This field selects any one of the graphics controller registers (GR00-GR11]) to be accessed via the data port at I/O (or memory offset) location 3CFh.

4.2.13 GR—Offset 3CFh

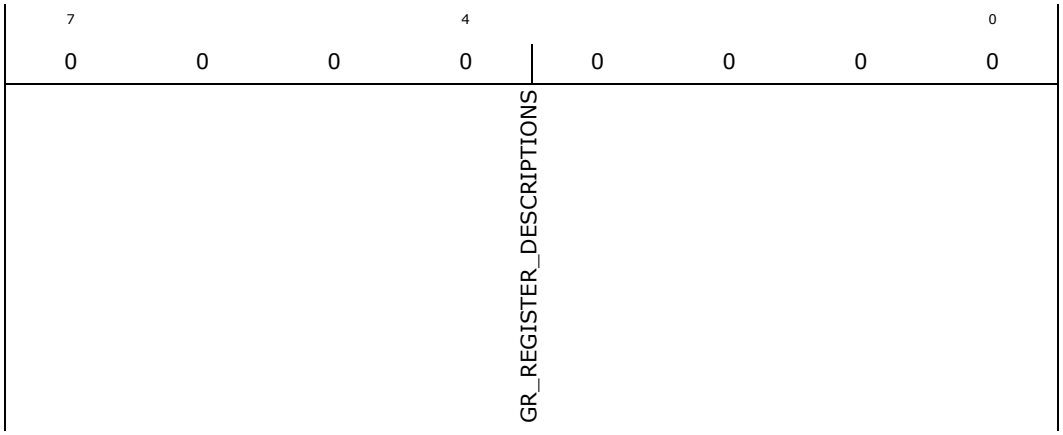
GR index registers

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits)

Offset: 3CFh

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**GR_REGISTER_DESCRIPTIONS:** GR indexed register descriptions

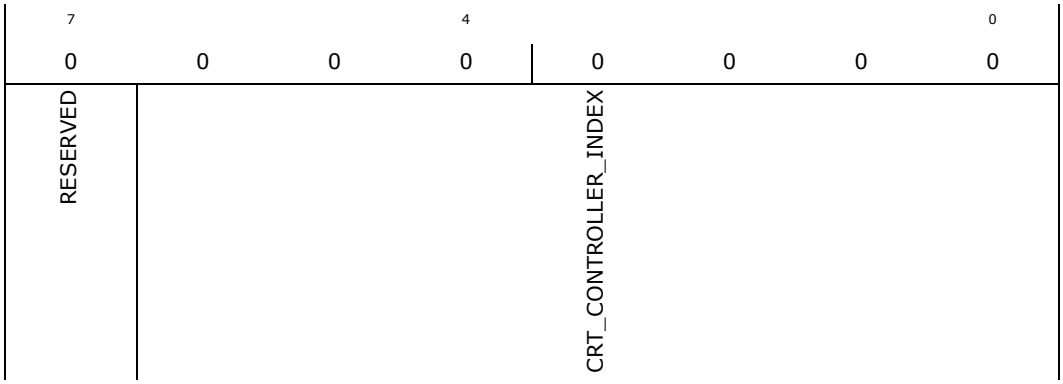
4.2.14 CRX (CRX_CGA)—Offset 3D4h

CRT Controller Index Register

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3D4h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7	0x0 RO	**RESERVED:** Read as 0.
6:0	0x0 RW	**CRT_CONTROLLER_INDEX:** These 7 bits are used to select any one of the CRT controller registers to be accessed via the data port at I/O location 3B5h or 3D5h, depending upon whether the graphics system is configured for MDA or CGA emulation. The data port memory address offsets are 3B5h/3D5h.

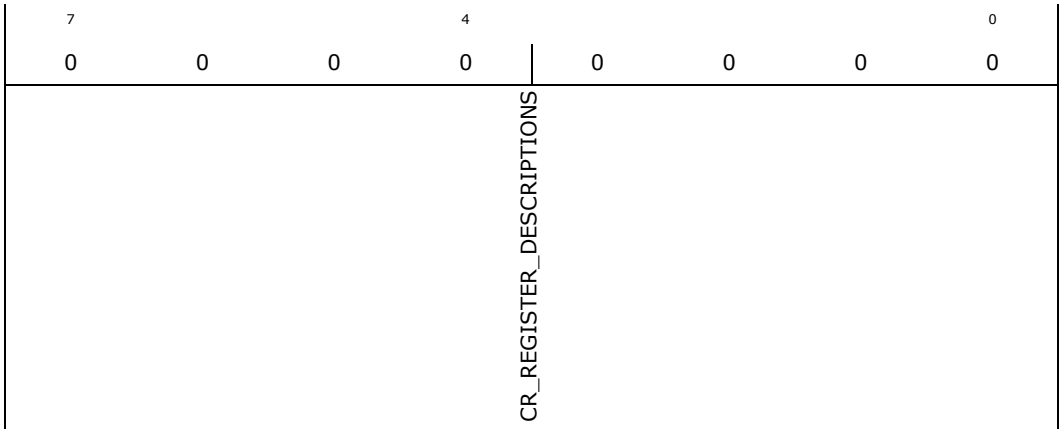
4.2.15 CR (CR_CGA)—Offset 3D5h

CR index registers

Access Method

Type: Memory Mapped I/O Register (Size: 8 bits) **Offset:** 3D5h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RW	**CR_REGISTER_DESCRIPTIONS:** CR indexed register descriptions

4.2.16 GPIOCTL_0—Offset 5010h

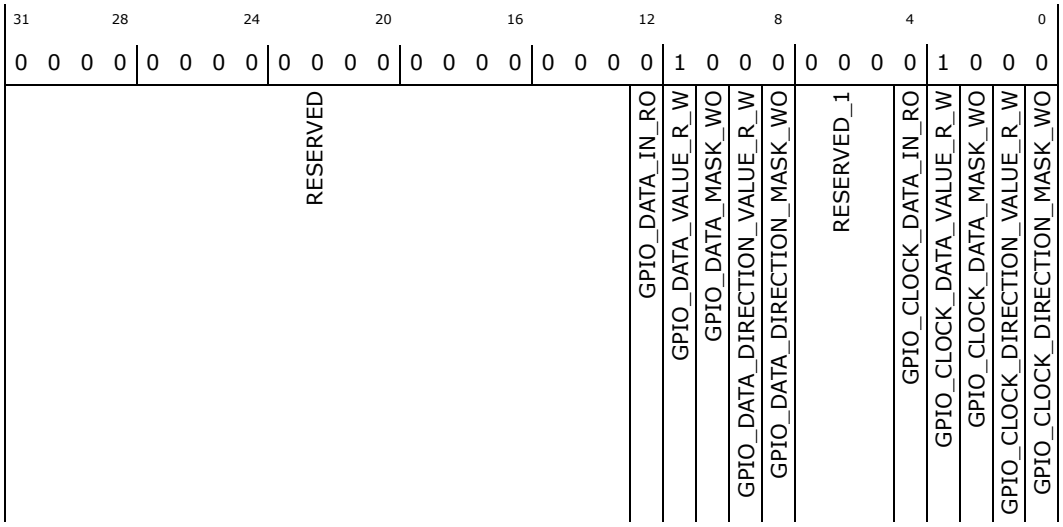
GPIO Control Registers GPIO I2C register (gmbus_register.v reg_gpio0, reg_gpio1, reg_gpio2. reg_gpio3, reg_gpio4)

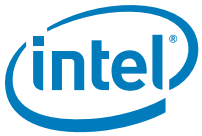
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 5010h

Default: 00000808h





Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** Reserved.
12	0x0 RO	**GPIO_DATA_IN_RO:** This is the value that is sampled on the GPIO_Data pin as an input. This input is synchronized to the Core Clock domain. Because the default setting is this buffer is an input, this bit is undefined at reset. AccessType: Read Only
11	0x1 RW	**GPIO_DATA_VALUE_R_W:** This is the value that should be place on the GPIO Data pin as an output. This value is only written into the register if GPIO DATA MASK is also asserted. The value will appear on the pin if this data value is actually written to this register and the GPIO Data DIRECTION VALUE contains a value that will configure the pin as an output. Default = 1. The GPIO default clock data value is programmed to 1 in hardware. The hardware drives a default of 1 since the I2C interface defaults to a 1 . (this mimics the I2C external pull-ups on the bus)
10	0x0 WO	**GPIO_DATA_MASK_WO:** This is a mask bit to determine whether the GPIO DATA VALUE bit should be written into the register. This value is not stored and when read returns 0. 0 = Do NOT write GPIO Data Value bit (default). 1 = Write GPIO Data Value bit. AccessType: Write Only
9	0x0 RW	**GPIO_DATA_DIRECTION_VALUE_R_W:** This is the value that should be used to define the output enable of the GPIO Data pin. This value is only written into the register if GPIO Data DIRECTION MASK is also asserted. The value that will appear on the pin is defined by what is in the register for the GPIO DATA VALUE bit. 0 = Pin is configured as an input (default) 1 = Pin is configured as an output.
8	0x0 WO	**GPIO_DATA_DIRECTION_MASK_WO:** This is a mask bit to determine whether the GPIO DIRECTION VALUE bit should be written into the register. This value is not stored and when read always returns 0. 0 = Do NOT write GPIO Data Direction Value bit (default). 1 = Write GPIO Data Direction Value bit. AccessType: Write Only
7:5	0x0 RO	**RESERVED_1:** must be written with zeros.
4	0x0 RO	**GPIO_CLOCK_DATA_IN_RO:** This is the value that is sampled on the GPIO Clock pin as an input. This input is synchronized to the Core Clock domain. Because the default setting is this buffer is an input, this bit is undefined at reset. AccessType: Read Only
3	0x1 RW	**GPIO_CLOCK_DATA_VALUE_R_W:** This is the value that should be place on the GPIO Clk pin as an output. This value is only written into the register if GPIO Clock DATA MASK is also asserted. The value will appear on the pin if this data value is actually written to this register and the GPIO Clock DIRECTION VALUE contains a value that will configure the pin as an output. Default = 1. The GPIO default clock data value is programmed to 1 in hardware. The hardware drives a default of 1 since the I2C interface defaults to a 1 . (this mimics the I2C external pull-ups on the bus)

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 WO	**GPIO_CLOCK_DATA_MASK_WO:** This is a mask bit to determine whether the GPIO Clock DATA VALUE bit should be written into the register. This value is not stored and when read always returns 0. 0 = Do NOT write GPIO Clock Data Value bit (default). 1 = Write GPIO Clock Data Value bit. AccessType: Write Only
1	0x0 RW	**GPIO_CLOCK_DIRECTION_VALUE_R_W:** This is the value that should be used to define the output enable of the GPIO Clock pin. This value is only written into the register if GPIO Clock DIRECTION MASK is also asserted. The value that will appear on the pin is defined by what is in the register for the GPIO Clock DATA VALUE bit. 0 = Pin is configured as an input and the output driver is set to tri-state (default) 1 = Pin is configured as an output.
0	0x0 WO	**GPIO_CLOCK_DIRECTION_MASK_WO:** This is a mask bit to determine whether the GPIO Clock DIRECTION VALUE bit should be written into the register. This value is not stored and when read returns 0. 0 = Do NOT update the GPIO Clock Direction Value bit on a write (default). 1 = Update the GPIO Clock Direction Value bit. on a write operation to this register. AccessType: Write Only

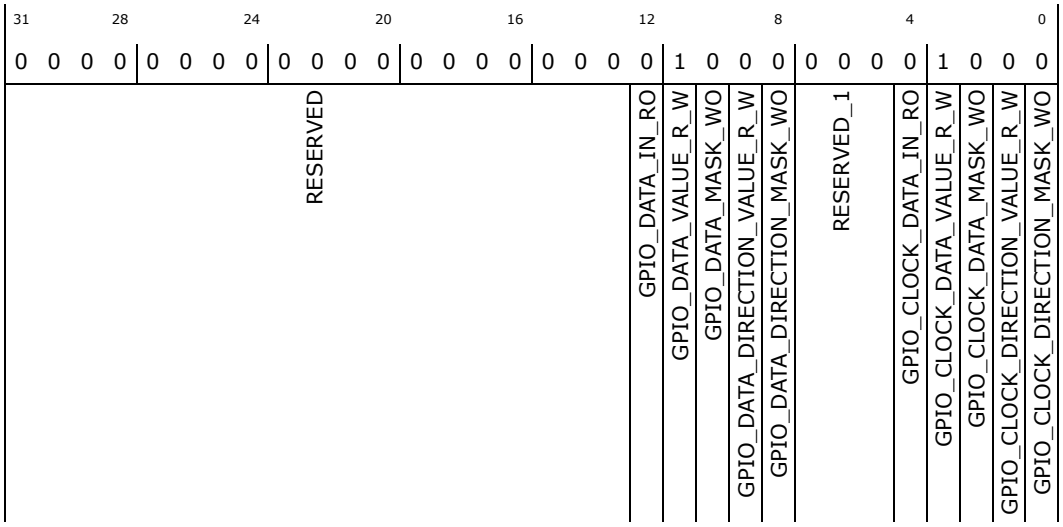
4.2.17 GPIOCTL_1—Offset 5014h

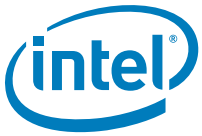
GPIO Control Registers GPIO I2C register (gmbus_register.v reg_gpio0, reg_gpio1, reg_gpio2. reg_gpio3, reg_gpio4)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 5014h

Default: 00000808h





Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** Reserved.
12	0x0 RO	**GPIO_DATA_IN_RO:** This is the value that is sampled on the GPIO_Data pin as an input. This input is synchronized to the Core Clock domain. Because the default setting is this buffer is an input, this bit is undefined at reset. AccessType: Read Only
11	0x1 RW	**GPIO_DATA_VALUE_R_W:** This is the value that should be place on the GPIO Data pin as an output. This value is only written into the register if GPIO DATA MASK is also asserted. The value will appear on the pin if this data value is actually written to this register and the GPIO Data DIRECTION VALUE contains a value that will configure the pin as an output. Default = 1. The GPIO default clock data value is programmed to 1 in hardware. The hardware drives a default of 1 since the I2C interface defaults to a 1 . (this mimics the I2C external pull-ups on the bus)

This value is not stored and when read returns 0. 0 = Do NOT update the GPIO Clock Direction Value bit on a write (default). 1 = Update the GPIO Clock Direction Value bit. on a write operation to this register. AccessType: Write Only

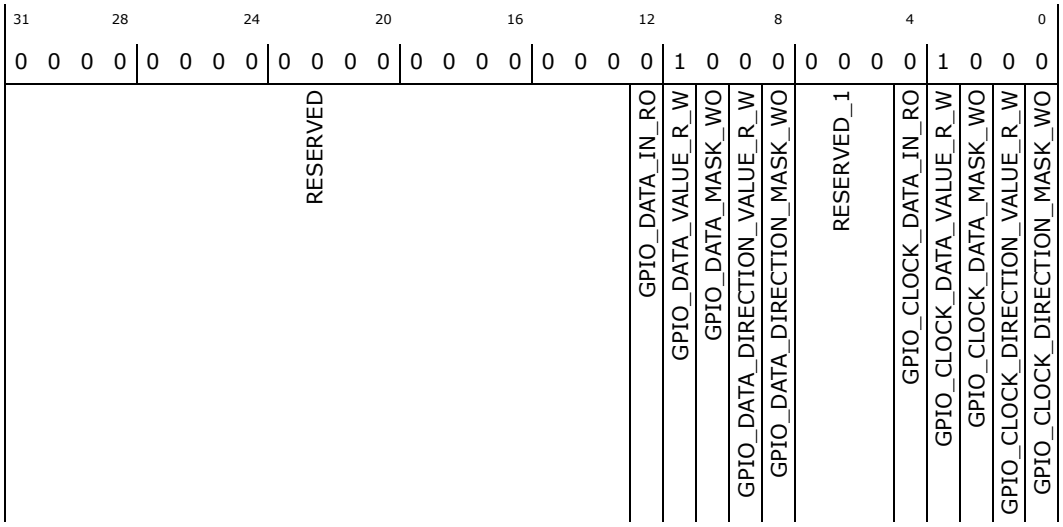
4.2.20 GPIOCTL_4—Offset 5020h

GPIO Control Registers GPIO I2C register (gmbus_register.v reg_gpio0, reg_gpio1, reg_gpio2. reg_gpio3, reg_gpio4)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 5020h

Default: 00000808h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** Reserved.
12	0x0 RO	**GPIO_DATA_IN_RO:** This is the value that is sampled on the GPIO_Data pin as an input. This input is synchronized to the Core Clock domain. Because the default setting is this buffer is an input, this bit is undefined at reset. AccessType: Read Only
11	0x1 RW	**GPIO_DATA_VALUE_R_W:** This is the value that should be place on the GPIO Data pin as an output. This value is only written into the register if GPIO DATA MASK is also asserted. The value will appear on the pin if this data value is actually written to this register and the GPIO Data DIRECTION VALUE contains a value that will configure the pin as an output. Default = 1. The GPIO default clock data value is programmed to 1 in hardware. The hardware drives a default of 1 since the I2C interface defaults to a 1 . (this mimics the I2C external pull-ups on the bus)
10	0x0 WO	**GPIO_DATA_MASK_WO:** This is a mask bit to determine whether the GPIO DATA VALUE bit should be written into the register. This value is not stored and when read returns 0. 0 = Do NOT write GPIO Data Value bit (default). 1 = Write GPIO Data Value bit. AccessType: Write Only
9	0x0 RW	**GPIO_DATA_DIRECTION_VALUE_R_W:** This is the value that should be used to define the output enable of the GPIO Data pin. This value is only written into the register if GPIO Data DIRECTION MASK is also asserted. The value that will appear on the pin is defined by what is in the register for the GPIO DATA VALUE bit. 0 = Pin is configured as an input (default) 1 = Pin is configured as an output.
8	0x0 WO	**GPIO_DATA_DIRECTION_MASK_WO:** This is a mask bit to determine whether the GPIO DIRECTION VALUE bit should be written into the register. This value is not stored and when read always returns 0. 0 = Do NOT write GPIO Data Direction Value bit (default). 1 = Write GPIO Data Direction Value bit. AccessType: Write Only
7:5	0x0 RO	**RESERVED_1:** must be written with zeros.
4	0x0 RO	**GPIO_CLOCK_DATA_IN_RO:** This is the value that is sampled on the GPIO Clock pin as an input. This input is synchronized to the Core Clock domain. Because the default setting is this buffer is an input, this bit is undefined at reset. AccessType: Read Only
3	0x1 RW	**GPIO_CLOCK_DATA_VALUE_R_W:** This is the value that should be place on the GPIO Clk pin as an output. This value is only written into the register if GPIO Clock DATA MASK is also asserted. The value will appear on the pin if this data value is actually written to this register and the GPIO Clock DIRECTION VALUE contains a value that will configure the pin as an output. Default = 1. The GPIO default clock data value is programmed to 1 in hardware. The hardware drives a default of 1 since the I2C interface defaults to a 1 . (this mimics the I2C external pull-ups on the bus)

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 WO	**GPIO_CLOCK_DATA_MASK_WO:** This is a mask bit to determine whether the GPIO Clock DATA VALUE bit should be written into the register. This value is not stored and when read always returns 0. 0 = Do NOT write GPIO Clock Data Value bit (default). 1 = Write GPIO Clock Data Value bit. AccessType: Write Only
1	0x0 RW	**GPIO_CLOCK_DIRECTION_VALUE_R_W:** This is the value that should be used to define the output enable of the GPIO Clock pin. This value is only written into the register if GPIO Clock DIRECTION MASK is also asserted. The value that will appear on the pin is defined by what is in the register for the GPIO Clock DATA VALUE bit. 0 = Pin is configured as an input and the output driver is set to tri-state (default) 1 = Pin is configured as an output.
0	0x0 WO	**GPIO_CLOCK_DIRECTION_MASK_WO:** This is a mask bit to determine whether the GPIO Clock DIRECTION VALUE bit should be written into the register. This value is not stored and when read returns 0. 0 = Do NOT update the GPIO Clock Direction Value bit on a write (default). 1 = Update the GPIO Clock Direction Value bit. on a write operation to this register. AccessType: Write Only

4.2.21 GMBUS0—Offset 5100h

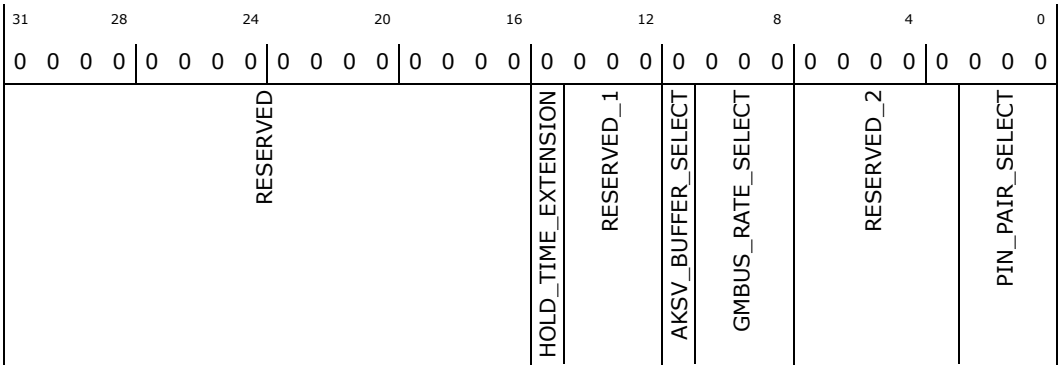
GMBUS Clock/Port Select gmbus clock and port select (gmbus_register.v reg_gmbus0)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 5100h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15	0x0 RW	**HOLD_TIME_EXTENSION:** This bit selects the hold time on the data line driven from the GMCH. 0 = Hold time of 0ns 1 = Hold time of 300 ns
14:12	0x0 RO	**RESERVED_1:** Reserved.
11	0x0 RW	**AKSV_BUFFER_SELECT:** This bit selects whether the data to be written over GMBUS comes from the Aksv buffer for HDCP authentication, or from the GMBUS data buffer. Please note that when writing data from the Aksv buffer, all GMBUS protocol must be followed, including indicating the number of bytes to be transferred during the DATA phase of a GMBUS cycle. 0 (Default) Use the GMBUS data buffer (GMBUS3) for data transmission 1 Use the Aksv data buffer (GMBUS6 and GMBUS7) for data transmission. [DevBW, DevCL] Reserved:
10:8	0x0 RW	**GMBUS_RATE_SELECT:** These two bits select the rate that the GMBUS will run at. It also defines the AC timing parameters used. It should only be changed when between transfers when the GMBUS is idle. 1xx = Reserved. 000 = 100 KHz 001 = 50 KHz 010 = 400 KHz 011 = 1 MHz for SDVO
7:3	0x0 RO	**RESERVED_2:** Reserved.
2:0	0x0 RW	**PIN_PAIR_SELECT:** This field selects an GMBUS pin pair for use in the GMBUS communication. Use the table above to determine which pin pairs are available for a particular device and the intended function of that pin pair. Note that it is not a straight forward mapping of port numbers to pair select numbers. 000 = None (disabled) 001 = MIPI I2C use 010 = Dedicated Analog Monitor DDC Pins (DDC1DATA, DDC1CLK) 011 = HDMI D 100 = DP/HDMI port C Use [DevCTG] 101 = sDVO/HDMI Use 110 = Reserved 111 = D connector control signals

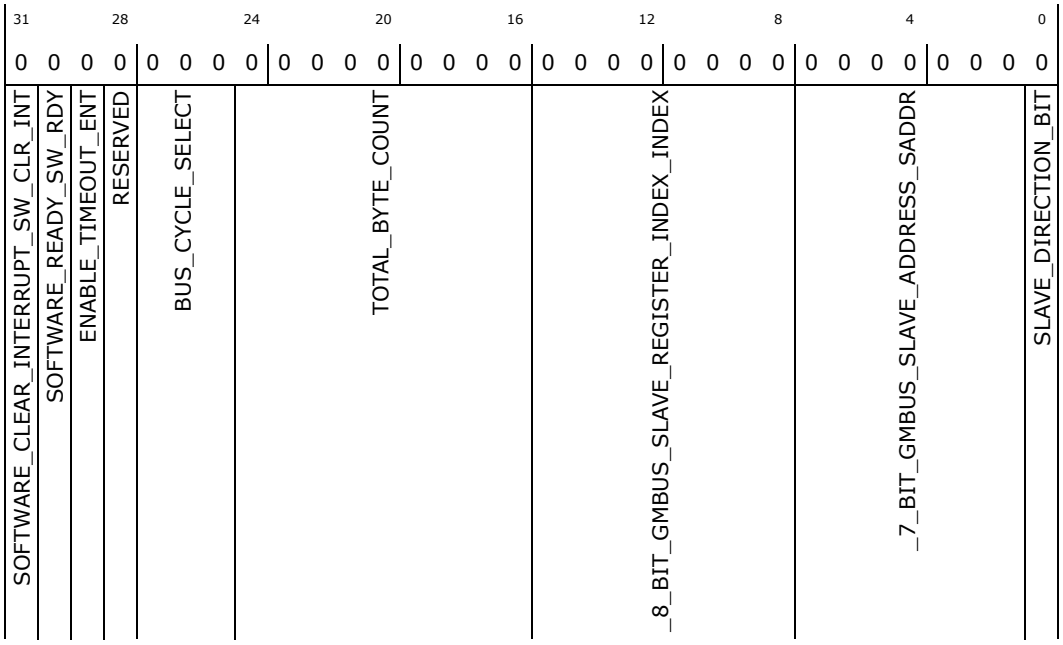
4.2.22 GMBUS1—Offset 5104h

GMBUS Command and Status gmbus command and status (gmbus_register.v reg_gmbus1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 5104h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SOFTWARE_CLEAR_INTERRUPT_SW_CLR_INT:** This bit must be clear for normal operation. Setting the bit , then clearing it acts as local reset to the GMBUS controller. This bit is commonly used by software to clear a BUS_ERROR when a slave device delivers a NACK. 0 = If this bit is written as a zero when its current state is a one, will clear the HW_RDY bit and allows register writes to be accepted to the GMBUS registers (Write Protect Off). This bit is cleared to zero when an event causes the HW_RDY bit transition to occur. 1 = Asserted by software after servicing the GMBUS interrupt. Setting this bit causes the INT status bit to be cleared. Setting (1) this bit also asserts the HW_RDY bit (until this bit is written with a 0). When this bit is set, no writes to GMBUS registers will cause the contents to change with the exception of this bit which can be written.
30	0x0 RW	**SOFTWARE_READY_SW_RDY:** Data handshake bit used in conjunction with HW_RDY bit. 0 = De-asserted via the assertion event for HW_RDY bit 1 = When asserted by software, results in de-assertion of HW_RDY bit
29	0x0 RW	**ENABLE_TIMEOUT_ENT:** Enables timeout for slave response. When this bit is enabled and the slave device response has exceeded the timeout period, the GMBUS Slave Stall Timeout Error interrupt bit is set. 0 = disable timeout counter 1 = enable timeout counter
28	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
27:25	0x0 RW	**BUS_CYCLE_SELECT:** 000 = No GMBUS cycle is generated. 001 = GMBUS cycle is generated without an INDEX, with no STOP, and ends with a WAIT 010 = Reserved 011 = GMBUS cycle is generated with an INDEX, with no STOP, and ends with a WAIT 100 = Generates a STOP if currently in a WAIT or after the completion of the current byte if active. 101 = GMBUS cycle is generated without an INDEX and with a STOP 110 = Reserved 111 = GMBUS cycle is generated with an INDEX and with a STOP GMBUS cycle will always consist of a START followed by Slave Address, followed by an optional read or write data phase. A read cycle with an index will consist of a START followed by a Slave Address a WRITE indication and the INDEX and then a RESTART with a Slave Address and an optional read data phase. The GMBUS cycle will terminate either with a STOP or by entering a wait state. The WAIT state is exited by generating a STOP or by starting another GMBUS cycle. This can only cause a STOP to be generated if a GMBUS cycle is generated, the GMBUS is currently in a data phase, or it is in a WAIT phase: Note that the three bits can be decoded as follows: 27 = STOP generated 26 = INDEX used 25 = cycle ends in a WAIT
24:16	0x0 RW	**TOTAL_BYTE_COUNT:** (9-bits). This determines the total number of bytes to be transferred during the DATA phase of a GMBUS cycle. The DATA phase can be prematurely terminated by generating a STOP while in the DATA phase (see Bus Cycle Select). Do not change the value of this field during GMBUS cycles transactions.
15:8	0x0 RW	**_8_BIT_GMBUS_SLAVE_REGISTER_INDEX_INDEX:** This field specifies the 8-bits of index to be used for the generated bus write transaction or the index used for the WRITE portion of the WRITE/READ pair. It only has an effect if the enable Index bit is set. Do not change this field during a GMBUS transaction.
7:1	0x0 RW	**_7_BIT_GMBUS_SLAVE_ADDRESS_SADDR:** When a GMBUS cycle is to be generated using the Bus Cycle Select field, this field specifies the value of the slave address that is to be sent out. For use with 10-bit slave address devices, set this value to 11110XXb (where the last two bits (xx) are the two MSBs of the 10-bit address) and the slave direction bit to a write. This is followed by the first data byte being the 8 LSBs of the 10-bit slave address. Special Slave Addresses 0000 000R = General Call Address 0000 000W = Start byte 0000 001x = CBUS Address 0000 010x = Reserved 0000 011x = Reserved 0000 1xxx = Reserved 1111 1xxx = Reserved 1111 0xxx = 10-Bit addressing

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**SLAVE_DIRECTION_BIT:** When a GMBUS cycle is to be generated based on the Bus Cycle Select, this bit determines if the operation will be a read or a write. A read operation with the index enabled will perform a write with just the index followed by a re-start and a read. 1 = Indicates that a Read from the slave device operation is to be performed. 0 = Indicates that a Write to slave device operation is to be performed.

4.2.23 GMBUS2—Offset 5108h

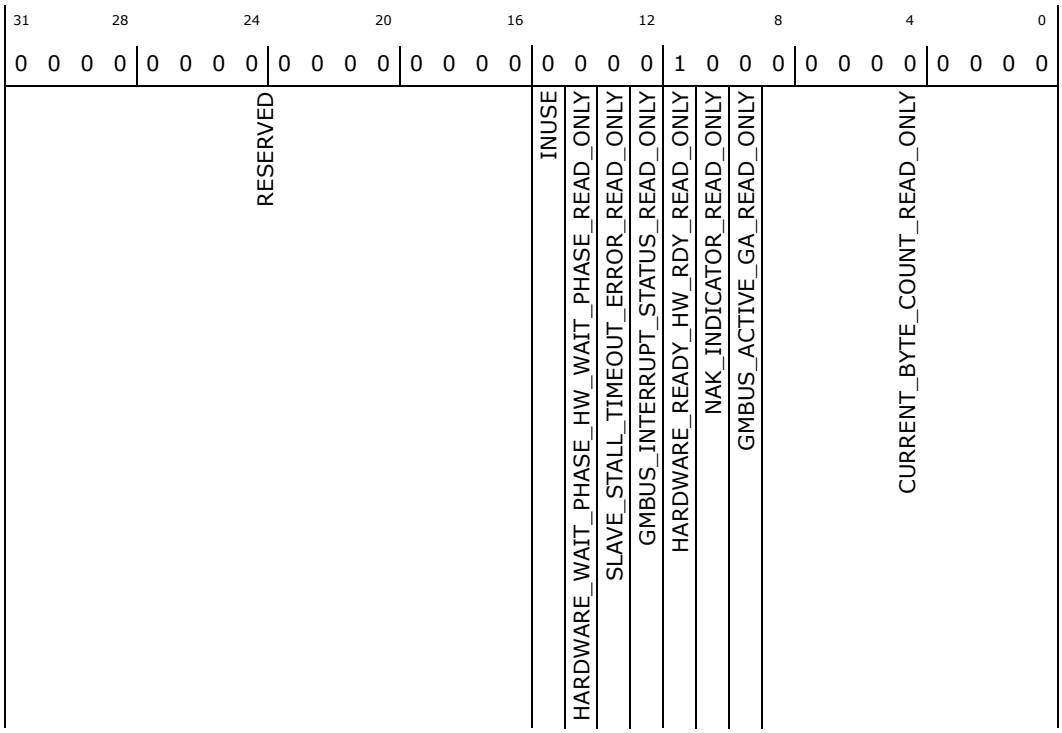
GMBUS Status Register gmbus status (gmbus_register.v reg_gmbus2)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 5108h

Default: 00000800h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15	0x0 RW/1C	**INUSE:** 0 = read operation that contains a zero in this bit position indicates that the GMBUS engine is now acquired and the subsequent reads of this register will now have this bit set. Writing a 0 to this bit has no effect. 1 = read operation that contains a one for this bit indicates that the GMBUS is currently allocated to someone else and In use . Once set, a write of a 1 to this bit indicates that the software has relinquished the GMBUS resource and will reset the value of this bit to a 0. Software wishing to arbitrate for the GMBUS resource can poll this bit until it reads a zero and will then own usage of the GMBUS controller. This bit has no effect on the hardware, and is only used as semaphore among various independent software threads that don t know how to synchronize their use of this resource that may need to use the GMBUS logic. Writing a one to this bit is software s indication that the software use of this resource is now terminated and it is available for other clients. AccessType: One to clear
14	0x0 RO	**HARDWARE_WAIT_PHASE_HW_WAIT_PHASE_READ_ONLY:** 0 = The GMBUS engine is not in a wait phase. 1 = Set when GMBUS engine is in wait phase. Wait phase is entered at the end of the current transaction when that transaction is selected not to terminate with a STOP. Once in a WAIT_PHASE, the software can now choose to generate a STOP cycle or a repeated start (RESTART) cycle followed by another GMBUS transaction on the GMBUS. AccessType: Read Only
13	0x0 RO	**SLAVE_STALL_TIMEOUT_ERROR_READ_ONLY:** This bit indicates that a slave stall timeout has occurred. It is tied to the Enable Timeout (ENT) bit. 0 = No slave timeout has occurred. 1 = A slave acknowledge timeout has occurred AccessType: Read Only
12	0x0 RO	**GMBUS_INTERRUPT_STATUS_READ_ONLY:** This bit indicates that an event that causes a GMBUS interrupt has occurred. 0 = The conditions that could cause a GMBUS interrupt have not occurred or this bit has been cleared by software assertion of the SW_CLR_INT bit. 1 = GMBUS interrupt event occurred. This interrupt must have been one of the types enabled in the GMBUS4 register. Reserved AccessType: Read Only

Bit Range	Default & Access	Field Name (ID): Description
11	0x1 RO	**HARDWARE_READY_HW_RDY_READ_ONLY:** This provides a method of detecting when the current software client routine can proceed with the next step in a sequence of GMBUS operations. This data handshake bit is used in conjunction with the SW_RDY bit. When this bit is changed to asserted by the GMBUS controller, it results in the de-assertion of the SW_RDY bit. 0 = Condition required for assertion has not occurred or when this bit was a one and: SW_RDY bit has been asserted. During a GMBUS read transaction, after the each read of the data register. During a GMBUS write transaction, after each write of the data register. SW_CLR_INT bit has been cleared. 1 = This bit is asserted under the following conditions: After a reset or when the transaction is aborted by the setting of the SW_CLR_INT bit. When an active GMBUS cycle has terminated with a STOP. When during a GMBUS write transaction, the data register needs and can accept another four bytes of data. During a GMBUS read transaction, this bit is asserted when the data register has four bytes of new data or the read transaction DATA phase is complete and the data register contains the last few bytes of the read data. This bit resumes to normal operation when the SW_CLR_INT bit is written to a 0. AccessType: Read Only
10	0x0 RO	**NAK_INDICATOR_READ_ONLY:** Was previously called Slave Acknowledge Timeout Error SATOER. 0 = No bus error has been detected or SW_CLR_INT has been written as a zero since the last bus error. 1 = Set by hardware if any expected device acknowledge is not received from the slave within the timeout. AccessType: Read Only
9	0x0 RO	**GMBUS_ACTIVE_GA_READ_ONLY:** This is a status bit that indicates whether the GMBUS controller is in an IDLE state or not. 0 = The GMBUS controller is currently IDLE. 1 = This indicates that the bus is in START, ADDRESS, INDEX, DATA, WAIT, or STOP Phase. Set when GMBUS hardware is not IDLE. AccessType: Read Only
8:0	0x0 RO	**CURRENT_BYTE_COUNT_READ_ONLY:** Can be used to determine the number of bytes currently transmitted/received by the GMBUS controller hardware. Set to zero at the start of a GMBUS transaction data transfer and incremented after the completion of each byte of the data phase. Note that because reads have internal storage, the byte count on a read operation may be ahead of the data that has been accepted from the data register. AccessType: Read Only

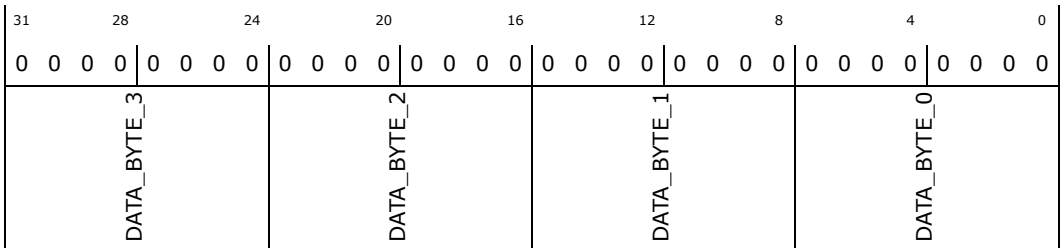
4.2.24 GMBUS3—Offset 510Ch

GMBUS Data Buffer gmbus data buffer (gmbus_register.v reg_gmbus3)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 510Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RW	**DATA_BYTE_3:** Reserved.
23:16	0x0 RW	**DATA_BYTE_2:** Reserved.
15:8	0x0 RW	**DATA_BYTE_1:** Reserved.
7:0	0x0 RW	**DATA_BYTE_0:** Reserved.

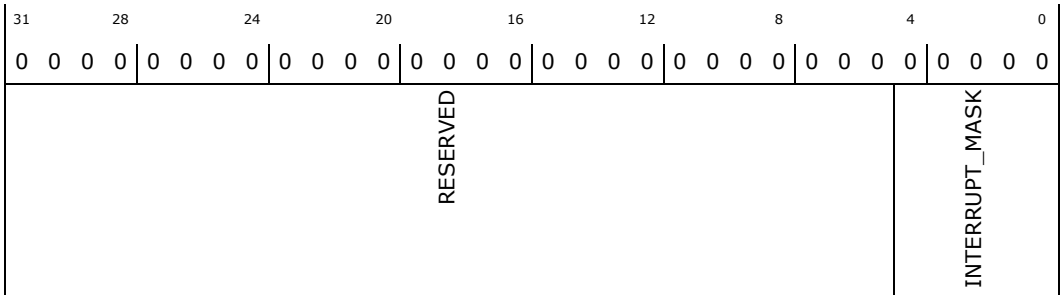
4.2.25 GMBUS4—Offset 5110h

GMBUS Interrupt Mask gmbus interrupt mask (gmbus_register.v reg_gmbus4)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 5110h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
4:0	0x0 RW	**INTERRUPT_MASK:** This field specifies which GMBUS interrupts events may contribute to the setting of gmbus interrupt status bit in second level interrupt status register PIPEASTAT. Bit 4: GMBUS Slave stall timeout Bit 3: GMBUS NAK Bit 2: GMBUS Idle Bit 1: Hardware wait (GMBUS cycle without a stop has completed) Bit 0: Hardware ready (Data has been transferred) 0 = Disable this type of GMBUS interrupt 1 = Enable this type of GMBUS interrupt

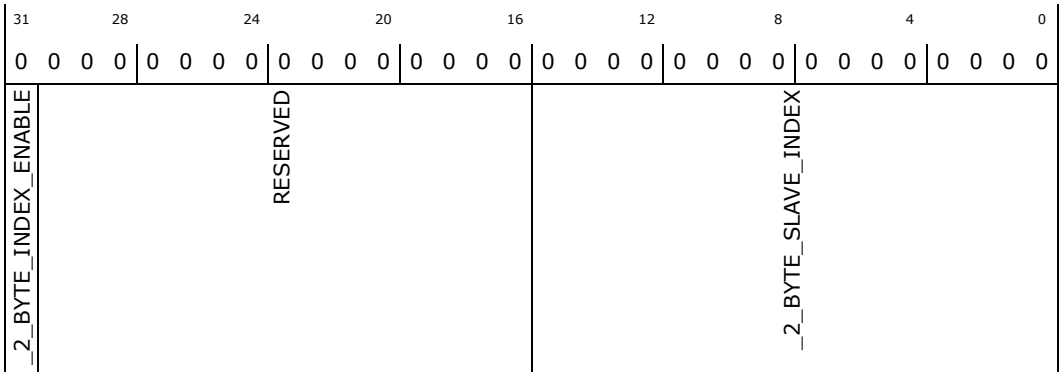
4.2.26 GMBUS5—Offset 5120h

2 Byte Index Register gmbus index (gmbus_register.v reg_gmbus5)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 5120h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**_2_BYTE_INDEX_ENABLE:** When this bit is asserted (1), then bits 15:00 are used as the index. Bits 15:8 are used in the first byte which is the most significant index bits. The slave index in the GMBUS1(15:8) are ignored. Bits 7:0 are used in the second byte which is the least significant index bits.
30:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**_2_BYTE_SLAVE_INDEX:** This is the 2 byte index used in all GMBUS accesses when bit 31 is asserted (1).

4.2.27 GMBUS6—Offset 5130h

GMBUS Aksv Buffer Low gmbus data buffer (gmbus_register.v reg_gmbus6

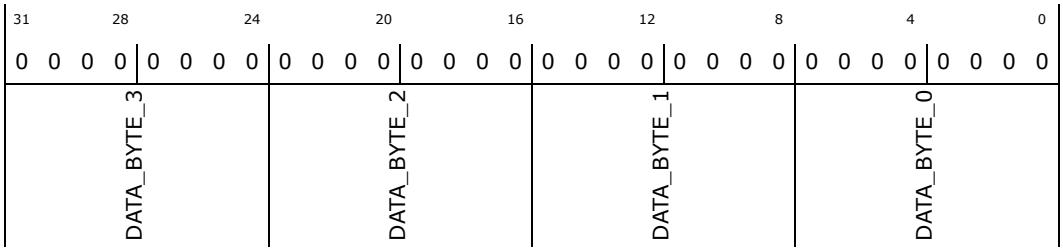
)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 5130h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 WO	**DATA_BYTE_3:** Reserved.
23:16	0x0 WO	**DATA_BYTE_2:** Reserved.
15:8	0x0 WO	**DATA_BYTE_1:** Reserved.
7:0	0x0 WO	**DATA_BYTE_0:** Reserved.

4.2.28 GMBUS7—Offset 5134h

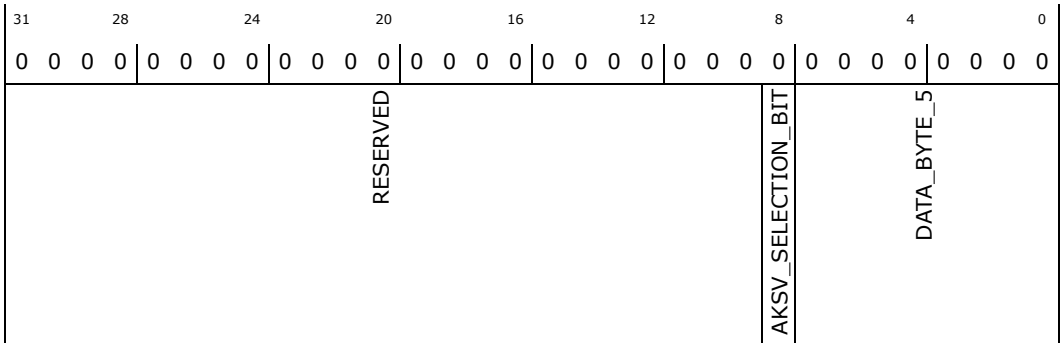
GMBUS Aksv Buffer High gmbus data buffer (gmbus_register.v reg_gmbus7)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 5134h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:9	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
8	0x0 WO	**AKSV_SELECTION_BIT:** 0 = The fuse value of the Aksv is used. 1 = The register value of the Aksv is used. Aksv Selection Bit: 0 = The register value of the Aksv is used. 1 = The fuse value of the Aksv is used. Reserved
7:0	0x0 WO	**DATA_BYTE_5:** Reserved.

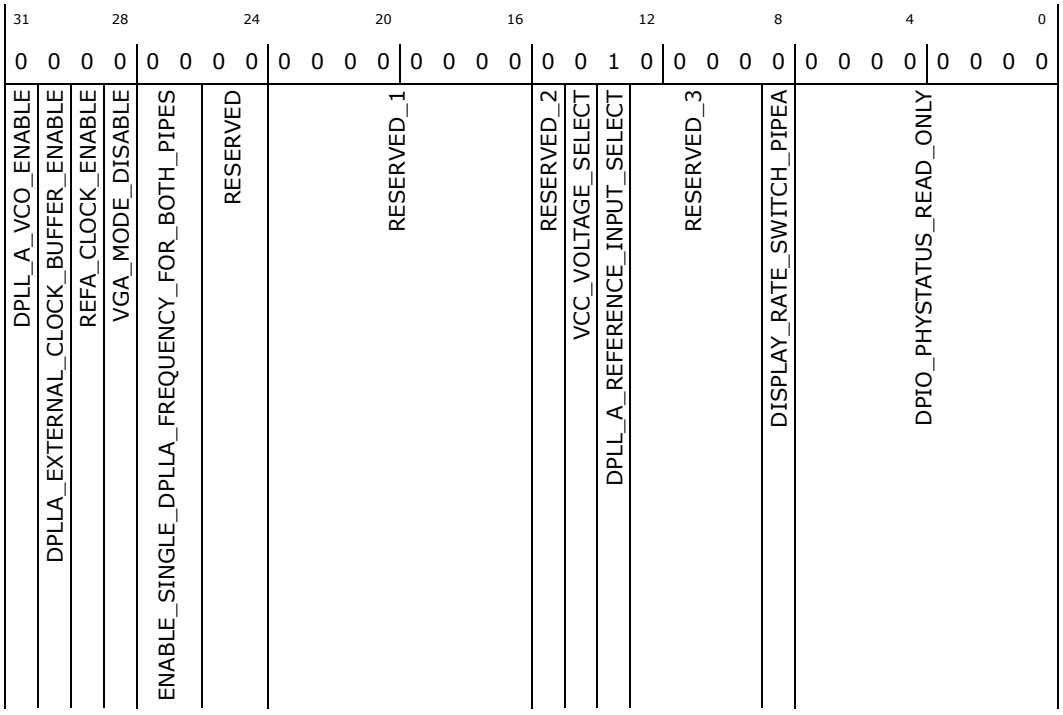
4.2.29 DPLLA_CTRL—Offset 6014h

DPLL A Control Register DPLL A Control (cpdmmreg.v reg03_lt)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6014h

Default: 00002000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DPLL_A_VCO_ENABLE:** Disabling the PLLA will cause the display dot clock to stop. 0 = DPLLA is disabled in its lowest power state (default) 1 = DPLLA is enabled and operational (42usec until lock without calibration and 110usec for calibration)
30	0x0 RW	**DPLLA_EXTERNAL_CLOCK_BUFFER_ENABLE:** 0 = Disable DPLLA clock from being driven out 1 = Enable DPLLA clock to be drive out Reserved DPLLA Serial DVO High Speed IO clock Enable 0 = High Speed IO Clock Disabled (default) 1 = High Speed IO Clock Enabled (must be set in Serial DVO and HDMI modes)
29	0x0 RW	**REFA_CLOCK_ENABLE:** Indicate the reference clock of PLL A is enable 0 Disable (default) 1 Enable
27:26	0x0 RW	**ENABLE_SINGLE_DPLLA_FREQUENCY_FOR_BOTH_PIPES:** When two pipes are enabled for eDP and both pipes can run with the same DP frequency either 162MHz or 270MHz. Setting this mode can allow using only DPLLA to feed both pipes. DPLLB should be shutdown to save power. This control is double buffered. 00 = Disabled 01 = Enabled 10 = Reserved 11 = Reserved Reserved DPLLA Mode Select : Configure the DPLLA for various supported Display Modes 00 = Reserved 01 = DPLLA in DAC/Serial DVO/UDI/Integrated TV mode 10 = DPLLA in LVDS mode (Mobile devices ONLY) otherwise RESERVED 11 = DP
25:24	0x0 RO	**RESERVED:** FPA0/FPA1 P2 Clock Divide: 00 = Divide by 10. This is used when Dot Clock =(270MHz in sDVO, HDMI, or DAC modes 01 = Divide by 5. This is used when Dot Clock)270MHz 10 = Reserved 11 = Reserved For DPLLA in LVDS mode, BITS(27:26)=10 00 = Divide by 14. This is used in Single-Channel LVDS 01 = Divide by 7. This is used in Dual-Channel LVDS 10 = Reserved 11 = Reserved
15	0x0 RO	**RESERVED_2:** Write as zero PLLA Lock (RO) 1 - PLLA Lock 0 PLLA unlock

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RW	**VCC_VOLTAGE_SELECT:** This control selects the VCC voltage in DPLL 0 = 1.0 V (default) 1 = voltage for LDO circuit Reserved
13	0x1 RW	**DPLL_A_REFERENCE_INPUT_SELECT:** This control selects the integrated core refclk or external OSC refclk as the input clock source to DPLL A. 0 = SSC 1 = non SSC Reserved PLL Reference Input Select: The PLL reference should be selected based on the display device that is being driven. The standard reference clock is used for CRT modes using the analog display port or LCD panels for both the sDVO connected transmitter or the integrated LVDS. TV Clock in should be selected when driving an sDVO connected TV encoder.
12:9	0x0 RO	**RESERVED_3:** Parallel to Serial Load Pulse phase selection: Programmable select bits to choose the relative phase of the high speed (10X) DPLL clock used for generating the parallel to serial load pulse for digital display port on PCIe. The relative phase is the number of flop delays (phase 0 represents 1 flop delay) of the 1X parallel data synchronization signal in the 10X clock domain. The earliest selectable clock phase is 4. A phase selection of 10 or greater simply extends the flop delay count to sample delayed data. 0100 = use clock phase-4 0101 = use clock phase-5 0110 = use clock phase-6 (Default value) 0111 = use clock phase-7 1000 = use clock phase-8 1001 = use clock phase-9 1010 = use clock phase-10 1011 = use clock phase-11 1100 = use clock phase-12 1101 = use clock phase-13 Phases 0 through 3 are not available for Load Pulse selection. [DevCL] The following programming is recommended for Crestline based on PV timing analysis: 1101 use clock phase-13 [DevBLC, DevCTG] Reserved. Programming for load pulse is in PXP AFE config space.
8	0x0 RW	**DISPLAY_RATE_SWITCH_PIPEA:** Switching this bit (transition 0 to 1 or 1 to 0) causes the DSP HW to disable and than enable the DPLL during vblank (2 row) in order to switch the frequency at the DPLL (new dividers stored at the DPIO which is double buffered) (This bit is only available when bits 17:16 of the PIPEACONF register are 00) [DevBW, DevCL, DevBLC] Reserved

Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 RO	**DPIO_PHYSTATUS_READ_ONLY:** This field contains the two 4-bit ModPhy lane status. One for PortB and one for PortC Bit 7:4 = Port C PhyStatus[3:0] Bit 3:0 = Port B PhyStatus[3:0] 00000001b - Divide by one 00000010b - Divide by two 00000100b - Divide by three 00001000b - Divide by four 00010000b - Divide by five 00100000b - Divide by six 01000000b - Divide by seven 10000000b - Divide by Eight All other values are illegal and should not be used AccessType: Read Only

4.2.30 DPLLB_CTRL—Offset 6018h

DPLL B Control Registers DPLL B Control (cpdmmreg.v reg04_lt)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6018h

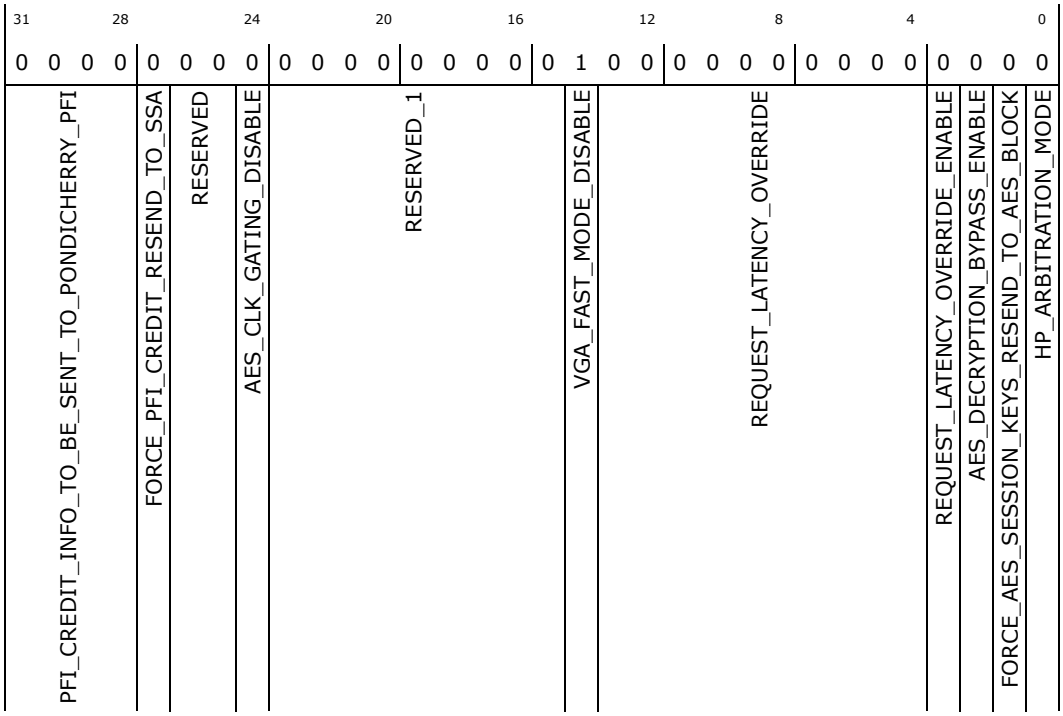
4.2.48 GCI_CONTROL—Offset 650Ch

GCI Control Register.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 650Ch

Default: 00004000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RW	**PFI_CREDIT_INFO_TO_BE_SENT_TO_PONDICHERRY_PFI:** Others = reserved 0111 = 15 credits 0110 = 14 credits 0101 = 13 credits 0100 = 12 credits 0011 = 11 credits 0010 = 10 credits 0001 = 9 credits 0000 = 8 credits available to PND (default) Based on the czclk/cdclk ratio, display driver has to determine the appropriate PFI credits to be used
27	0x0 RW	**FORCE PFI CREDIT RESEND TO SSA (FORCE_PFI_CREDIT_RESEND_TO_SSA):** 0 = Disable PFI credit to resend to SSA. Hardware is responsible to clear this bit after the PFI credit initialization request is sent. 1 = Enable PFI credit to resend to SSA. When driver sets this bit, Display PFI request engine will resend the new PFI credit bit [31:28] to SSA. Hardware is responsible to clear this bit after the PFI credit initialization request is sent.
26:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**AES_CLK_GATING_DISABLE:** 0 = Enable clock gating for AES clock (default) 1 = Disable clock gating for AES clock

Bit Range	Default & Access	Field Name (ID): Description
23:15	0x0 RO	**RESERVED_1:** Reserved.
13:4	0x0 RW	**REQUEST_LATENCY_OVERRIDE:** If bit 3 of this register is set, the 10-btt Request Latency Override value programmed here is used as the latency offset from the global timer for requests that win arbitration. If bit 3 is not set, normal request latency from streamers is used. Programming note: This value should not be larger than the actual required request latency. Otherwise, it will cause underrun. The guideline is to use latency corresponds to low watermark level or even smaller. When this field is used, the actual request latency is defeatured, either zero or a small value is used but still not causing underrun.
3	0x0 RW	**REQUEST_LATENCY_OVERRIDE_ENABLE:** 1 = Request Latency Override values in bit[13:4] is used as the latency offset from global timer 0 = Request Latency Override values is disabled. Normal request latency from streamer is used. (default)
2	0x0 RW	**AES_DECRYPTION_BYPASS_ENABLE:** 0 = AES decryption engine is enabled (Default) 1 = AES decryption engine is bypassed
1	0x0 RW	**FORCE_AES_SESSION_KEYS_RESEND_TO_AES_BLOCK:** 0 = Disable sending AES session keys to AES when going from Panel Self Refresh (PSR) inactive to PSR active mode (Default). Hardware is responsible to clear this bit after this bit is set to resend the session keys. 1 = Enable sending AES session keys to AES engine when going from PSR inactive to PSR active mode. When driver sets this bit, PAVP engine will resend the session keys to AES engine. Hardware is responsible to clear this bit after the session keys are sent.
0	0x0 RW	**HP_ARBITRATION_MODE:** 0 = Select hierarchical arbiter 1 = Select backup round robin arbiter

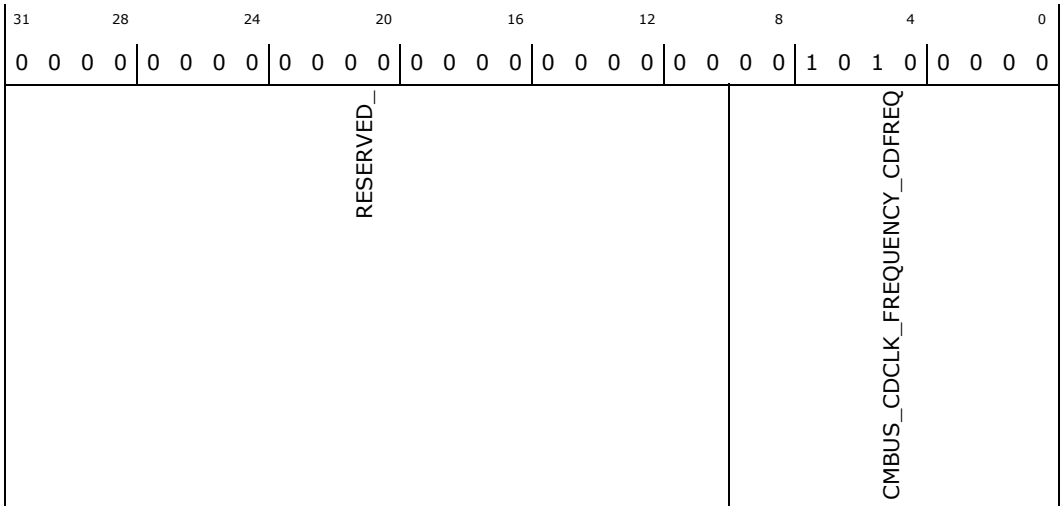
4.2.49 GMBUSFREQ—Offset 6510h

GMBUS frequency binary encoding GMBUS Frequency Binary Encoding Register.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6510h

Default: 000000A0h



Bit Range	Default & Access	Field Name (ID): Description

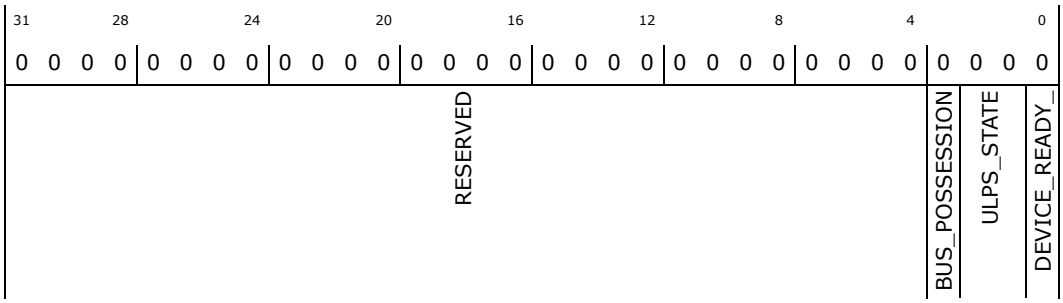
MIPI A Device Ready Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B000h

Default: 00000000h



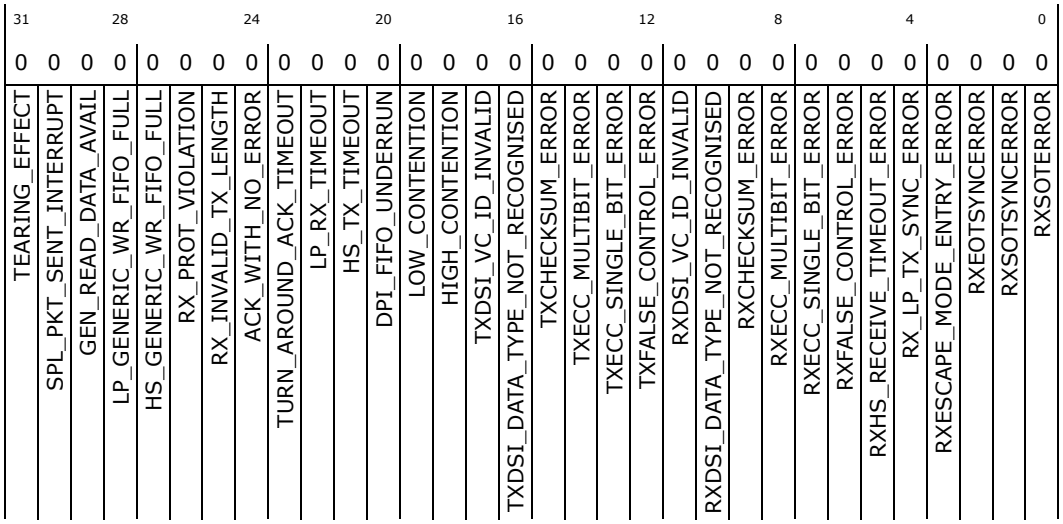
Bit Range	Default & Access	Field Name (ID): Description
31:4	0x0 RO	**RESERVED:** Reserved.
3	0x0 RW	**BUS_POSSESSION:** Reserved.
2:1	0x0 RW	**ULPS_STATE:** Reserved.
0	0x0 RW	**DEVICE_READY_:** Set by the processor to inform that device is ready

4.2.53 MIPIA_INTR_STAT_REG—Offset B004h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B004h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**TEARING_EFFECT:** Set to indicate that tearing effect trigger message is Received
30	0x0 RW	**SPL_PKT_SENT_INTERRUPT:** Set to confirm the transmission of the DPI event specific commands set in the dpi control and dpi data register
29	0x0 RW	**GEN_READ_DATA_AVAIL:** Set to indicate that the requested data for a Generic Read request is available in the buffer i.e., generic read response data is available in the read FIFO
28	0x0 RW	**LP_GENERIC_WR_FIFO_FULL:** Set to indicate that the LP generic write fifo is full
27	0x0 RW	**HS_GENERIC_WR_FIFO_FULL:** Set to indicate that the HS generic write fifo is full
26	0x0 RW	**RX_PROT_VIOLATION:** Set if DSI protocol violation error is reported in the acknowledge packet by the display device
25	0x0 RW	**RX_INVALID_TX_LENGTH:** Set if invalid transmission length error is reported in the acknowledge packet by the display device
24	0x0 RW	**ACK_WITH_NO_ERROR:** Set if acknowledge trigger message is received with out any error
23	0x0 RW	**TURN_AROUND_ACK_TIMEOUT:** Set if a turn around acknowledgement sequence is not received from the display device
22	0x0 RW	**LP_RX_TIMEOUT:** Set if a low power reception count expires this interrupt is generated
21	0x0 RW	**HS_TX_TIMEOUT:** Set if a high speed transmission prevails for more than the expected count value this interrupt is raised
20	0x0 RW	**DPI_FIFO_UNDERRUN:** Set to '1' if there is no data in the dpi fifo to make a in time delivery of the pixel data to the DSI receiver
19	0x0 RW	**LOW_CONTENTION:** Set to '1' if a LP low fault is registered by at the D-PHY contention detector

Bit Range	Default & Access	Field Name (ID): Description
18	0x0 RW	**HIGH_CONTENTION:** Set to '1' if a LP high fault is registered by at the D-PHY contention detector
17	0x0 RW	**TXDSI_VC_ID_INVALID:** Set to '1' if the received virtual channel ID is invalid
16	0x0 RW	**TXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to '1' if the received data type is not recognized
15	0x0 RW	**TXCHECKSUM_ERROR:** Set to '1' if the computed CRC differs from the received CRC value during the reception of packets by Arasan_DSI host.
14	0x0 RW	**TXECC_MULTIBIT_ERROR:** Set to '1' if there is no ECC correction for the packet or there are more than 2 bit errors in the packet received by Arasan_DSI_host
13	0x0 RW	**TXECC_SINGLE_BIT_ERROR:** Set to '1' if ECC syndrome was computed and is corrected for one bit error during the reception of packets by the Arasan_DSI_host
12	0x0 RW	**TXFALSE_CONTROL_ERROR:** Set to '1' if a control error is observed on the lanes by the Arasan_DSI_host
11	0x0 RW	**RXDSI_VC_ID_INVALID:** Set to '1' if the virtual channel ID is invalid by the display device is reported in the Acknowledge packet by the display device
10	0x0 RW	**RXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to '1' if the data type is not recognized by the display device is reported in the Acknowledge packet by the display device
9	0x0 RW	**RXCHECKSUM_ERROR:** Set to '1' if the computed CRC differs from the received CRC value and is reported in the Acknowledge packet by the display device
8	0x0 RW	**RXECC_MULTIBIT_ERROR:** Set to '1' if there is no ECC correction for the packet or there are more than 2 bit errors in the packet is reported in the Acknowledge packet by the display device
7	0x0 RW	**RXECC_SINGLE_BIT_ERROR:** Set to '1' if ECC syndrome was computed and corrected for one bit error is reported in the Acknowledge packet by the display device
6	0x0 RW	**RXFALSE_CONTROL_ERROR:** Set to '1' if a control error is reported in the Acknowledge packet by the display device
5	0x0 RW	**RXHS_RECEIVE_TIMEOUT_ERROR:** Set to '1' if the high speed receive timer value expires and data transfer lasts on the data lane is reported in the Acknowledge packet by the display device
4	0x0 RW	**RX_LP_TX_SYNC_ERROR:** Set to '1' if Low power transmission sync error occurs in the display device and is reported in the Acknowledge packet by the display device
3	0x0 RW	**RXESCAPE_MODE_ENTRY_ERROR:** Set to '1' if Escape Mode Entry command is not understandable by the display device and is reported in the Acknowledge packet by the display device
2	0x0 RW	**RXEOTSYNCERROR:** Reserved.
1	0x0 RW	**RXSOTSYNCERROR:** Set to '1' if a start of transmission synchronisation error is reported in the Acknowledge packet by the display device

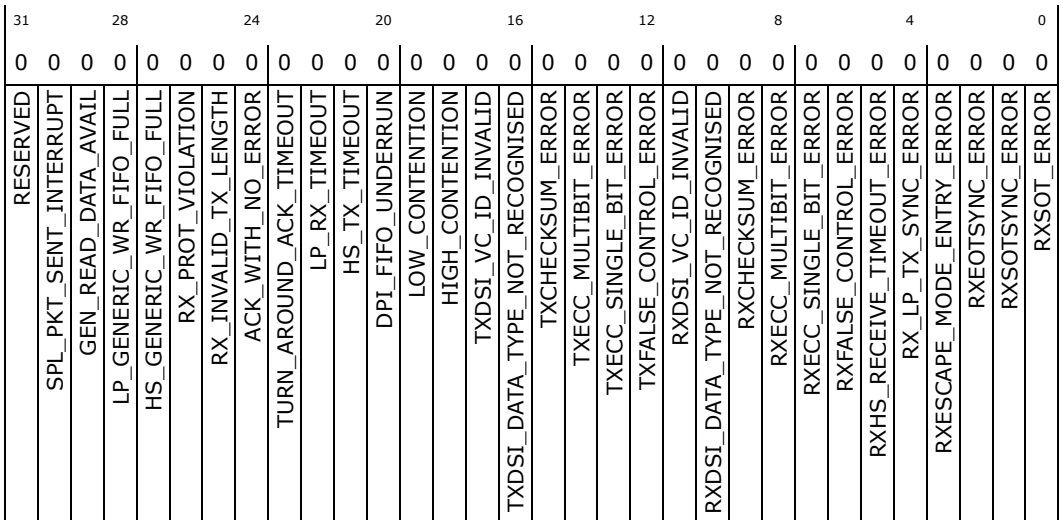
Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**RXSOTERROR:** Set to '1' if a start of transmission error is reported in the Acknowledge packet by the display device

4.2.54 MIPIA_INTR_EN_REG—Offset B008h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B008h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Reserved.
30	0x0 RW	**SPL_PKT_SENT_INTERRUPT:** Set to enable the confirmation of transmission of the DPI event specific commands set in the dpi control and dpi data register
29	0x0 RW	**GEN_READ_DATA_AVAIL:** Set to enable Generic Read available interrupt
28	0x0 RW	**LP_GENERIC_WR_FIFO_FULL:** Set to indicate that the LP generic write fifo is full
27	0x0 RW	**HS_GENERIC_WR_FIFO_FULL:** Set to indicate that the HS generic write fifo is full
26	0x0 RW	**RX_PROT_VIOLATION:** Set to enable protocol violation error
25	0x0 RW	**RX_INVALID_TX_LENGTH:** Set to enable invalid transmission length error
24	0x0 RW	**ACK_WITH_NO_ERROR:** Set to enable acknowledge trigger message reception with out any error

Bit Range	Default & Access	Field Name (ID): Description
23	0x0 RW	**TURN_AROUND_ACK_TIMEOUT:** Set to enable turn around acknowledgement ,sequence timeout
22	0x0 RW	**LP_RX_TIMEOUT:** Set to enable low power reception count timeouts
21	0x0 RW	**HS_TX_TIMEOUT:** Set to enable a high speed transmission timeout
20	0x0 RW	**DPI_FIFO_UNDERRUN:** Set to enable if there is no data in the dpi fifo to make a in time delivery of the pixel data to the DSI receiver
19	0x0 RW	**LOW_CONTENTION:** Set to enable a LP low fault interrupt
18	0x0 RW	**HIGH_CONTENTION:** Set to enable a LP high fault interrupt
17	0x0 RW	**TXDSI_VC_ID_INVALID:** Set to enable the interrupt if the received packets virtual channel ID is invalid
16	0x0 RW	**TXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to enable the interrupt if the received packets data type is not recognized
15	0x0 RW	**TXCHECKSUM_ERROR:** Set to enable the interrupt if the computed CRC differs from the received CRC value for the received packets
14	0x0 RW	**TXECC_MULTIBIT_ERROR:** Set to enable the interrupt if there is no ECC correction for the packet or there are more than 2 bit errors in the packet received by Arasan DSI host
13	0x0 RW	**TXECC_SINGLE_BIT_ERROR:** Set to enable the interrupt if ECC syndrome was computed and is corrected for one bit error during the reception of packets by the Arasan DSIhost
12	0x0 RW	**TXFALSE_CONTROL_ERROR:** Set to enable the interrupt for the control error.,observed on the lanes by the Arasan_DSI_host
11	0x0 RW	**RXDSI_VC_ID_INVALID:** Set to enable the interrupt for invalid virtual channel ID in the acknowledgment packet reports
10	0x0 RW	**RXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to enable the interrupt for the un recognized data type in the acknowledgment packet reports
9	0x0 RW	**RXCHECKSUM_ERROR:** Set to enable the interrupt for the computed CRC differs from the received CRC value in the acknowledgment packet reports
8	0x0 RW	**RXECC_MULTIBIT_ERROR:** Set to enable the interrupt for no ECC correction for the packet or there are more than 2 bit errors reported in the acknowledgment packet
7	0x0 RW	**RXECC_SINGLE_BIT_ERROR:** Set to enable the interrupt for ECC syndrome computation and one bit error correction for the acknowledgment packet
6	0x0 RW	**RXFALSE_CONTROL_ERROR:** Set to enable the interrupt for control error in the acknowledgment packet reports
5	0x0 RW	**RXHS_RECEIVE_TIMEOUT_ERROR:** Set to enable the interrupt for the high speed receive timeout Error in the acknowledgment packet reports
4	0x0 RW	**RX_LP_TX_SYNC_ERROR:** Set to enable the interrupt for Low power transmission sync error in the acknowledgment packet reports

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**RXESCAPE_MODE_ENTRY_ERROR:** Set to enable the interrupt for Escape Mode Entry command error in the acknowledgment packet reports
2	0x0 RW	**RXEOTSYNC_ERROR:** Set to enable the interrupt for End of transmission synchronisation Error in the acknowledgement packet reports
1	0x0 RW	**RXSOTSYNC_ERROR:** Set to enable the interrupt for start of transmission synchronisation error in the acknowledgement packet reports
0	0x0 RW	**RXSOT_ERROR:** Set to enable the interrupt for start of transmission error in the acknowledgment packet reports

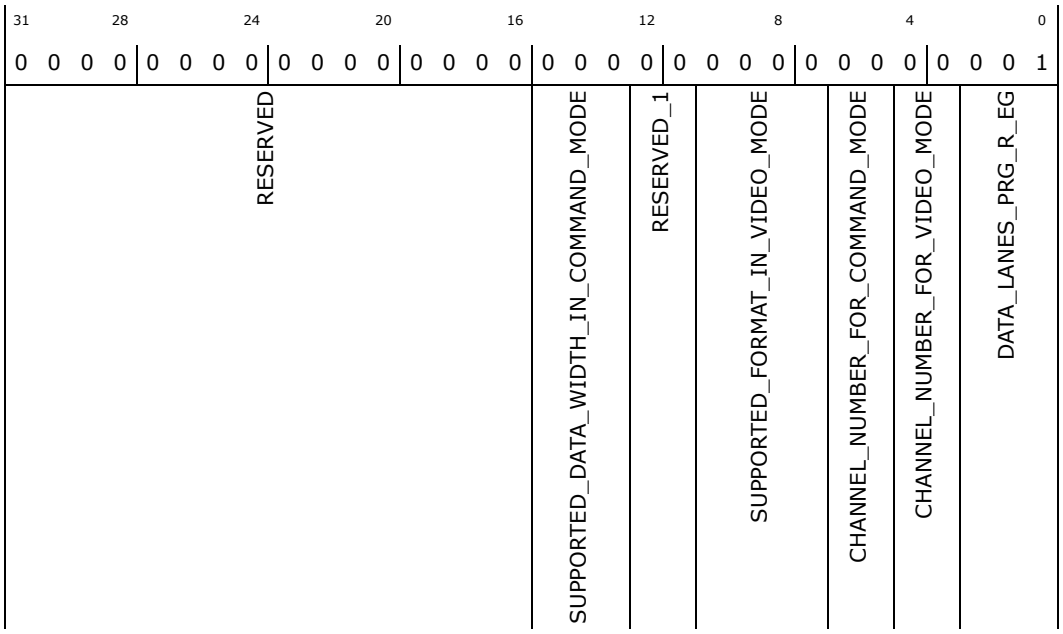
4.2.55 MIPIA_DSI_FUNC_PRG__REG—Offset B00Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B00Ch

Default: 00000001h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15:13	0x0 RW	**SUPPORTED_DATA_WIDTH_IN_COMMAND_MODE:** 000 --) Reserved, 001 --) 16 bit data , 010 --) 9 bit data , 011 --) 8 bit data , 100 --) option 1 : 101 --) option 2 : 110 to 111 --) Reserved
12:11	0x0 RO	**RESERVED_1:** Reserved.
10:7	0x0 RW	**SUPPORTED_FORMAT_IN_VIDEO_MODE:** Supported colour format, 0001 --) RGB565, 0010 --) RGB666, 0011 --) RGB 666 loosely packed format, 0100 --) RGB888
6:5	0x0 RW	**CHANNEL_NUMBER_FOR_COMMAND_MODE:** Virtual channel number for command mode is programmed by the processor
4:3	0x0 RW	**CHANNEL_NUMBER_FOR_VIDEO_MODE:** Virtual channel number for command mode is programmed by the processor
2:0	0x1 RW	**DATA_LANES_PRG_R_EG:** Number of data lanes to be supported is programmed by the processor

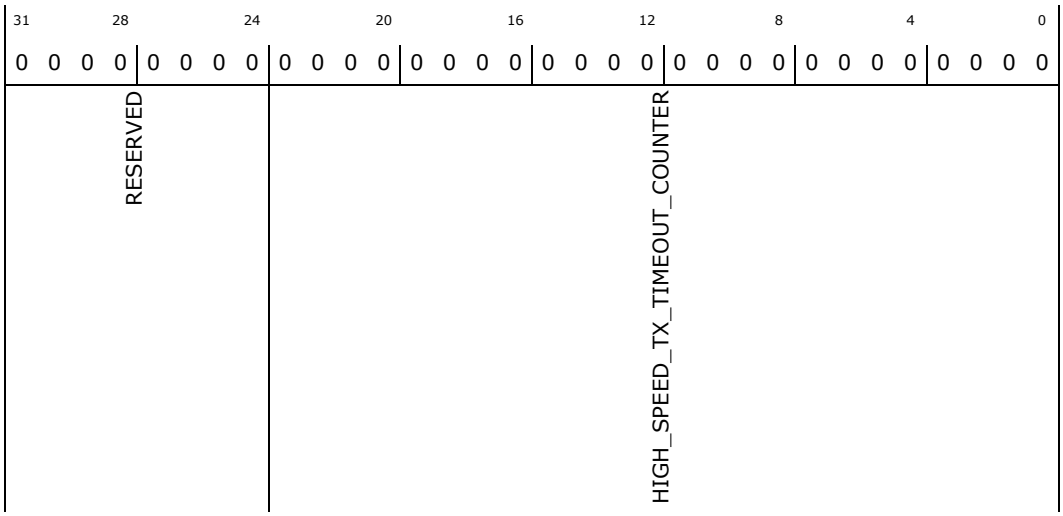
4.2.56 MIPIA_HS_TX_TIMEOUT_REG—Offset B010h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B010h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:0	0x0 RW	**HIGH_SPEED_TX_TIMEOUT_COUNTER:** The maximum duration allowed for the DSI host ,to remain in high speed mode for a transmission. If the counter expires, HS mode is terminated with EOT and the lanes enter stop state

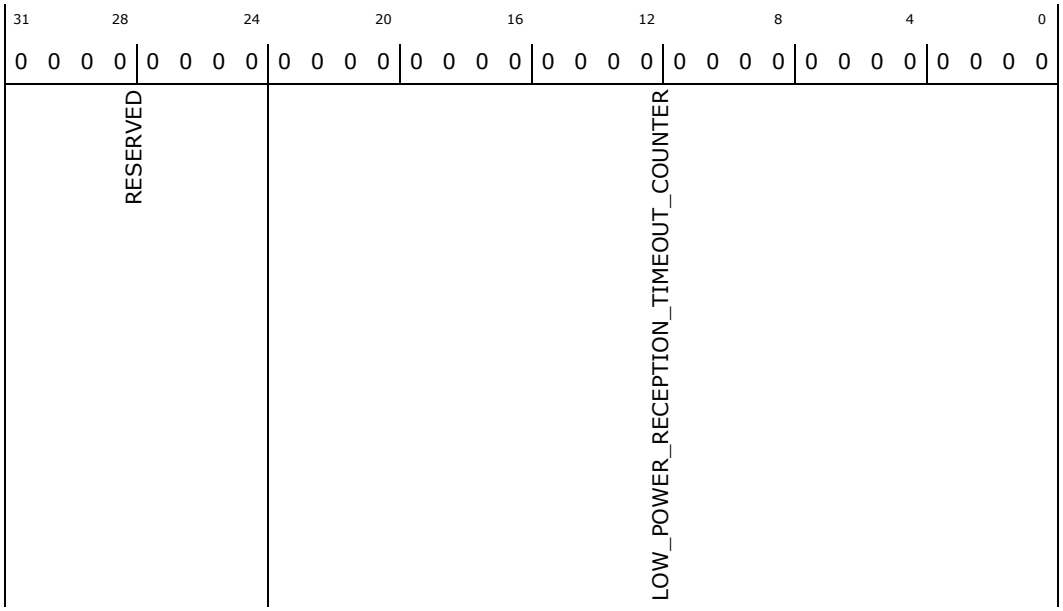
4.2.57 MIPIA_LP_RX_TIMEOUT_REG—Offset B014h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B014h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:0	0x0 RW	**LOW_POWER_RECEPTION_TIMEOUT_COUNTER:** Timeout value to be checked for received short packets .If the timer expires the DSI Host enters stop state

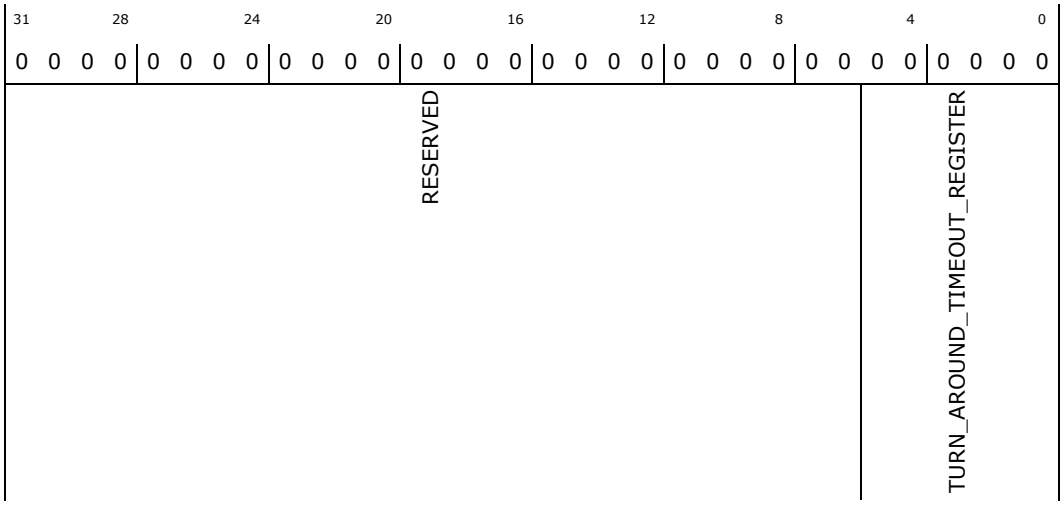
4.2.58 MIPIA_TURN_AROUND_TIMEOUT_REG—Offset B018h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B018h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RO	**RESERVED:** Reserved.
5:0	0x0 RW	**TURN_AROUND_TIMEOUT_REGISTER:** Timeout value to be checked after the DSI host makes a turn around in the direction of transfers. If the timer expires the DSI Host enters stop state

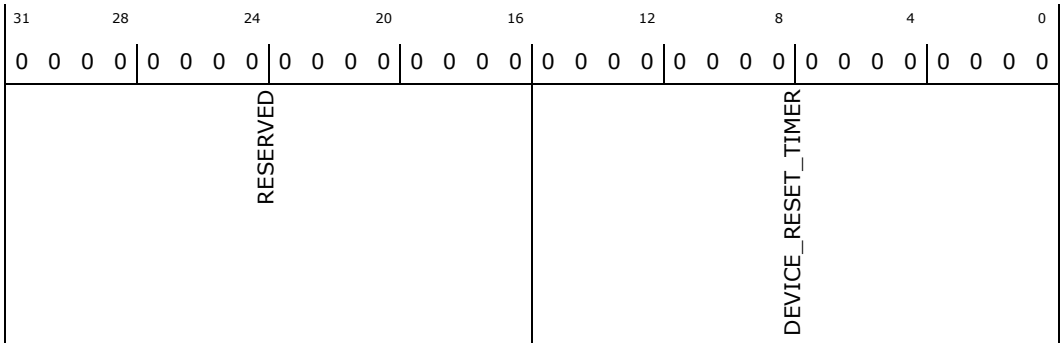
4.2.59 MIPIA_DEVICE_RESET_TIMER—Offset B01Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B01Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**DEVICE_RESET_TIMER:** Timeout value to be checked for device to be reset after issuing reset entry command. If the timer expires the DSI Host enters normal operation

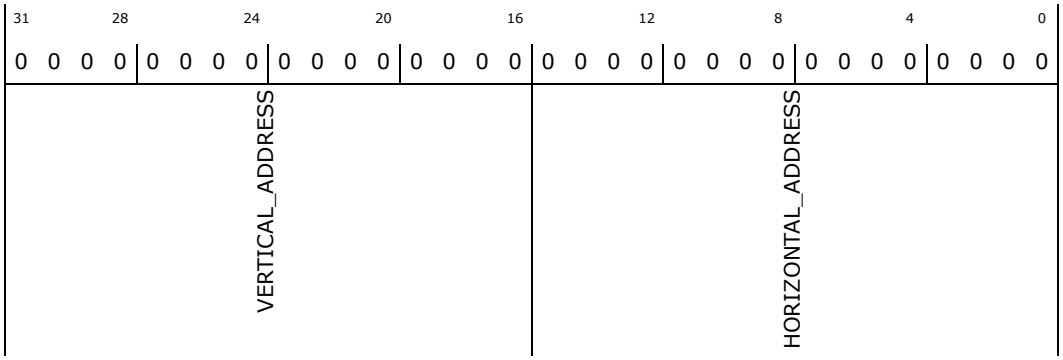
4.2.60 MIPIA_DPI_RESOLUTION_REG—Offset B020h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B020h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**VERTICAL_ADDRESS:** Shows the vertical address count in lines
15:0	0x0 RW	**HORIZONTAL_ADDRESS:** Shows the horizontal address count in pixels

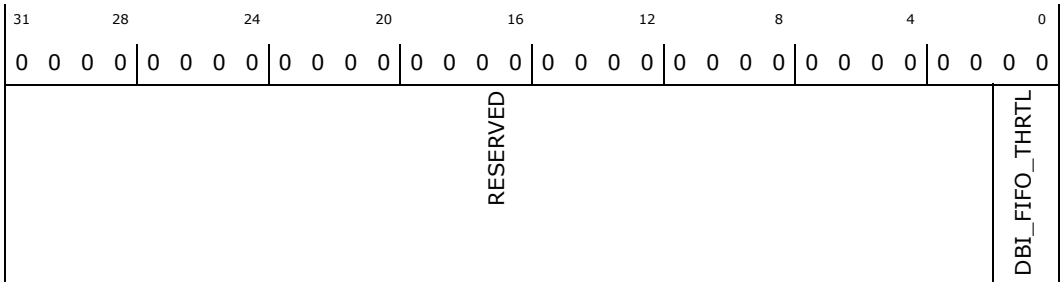
4.2.61 MIPIA_DBI_RESOLUTION_REG—Offset B024h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B024h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:2	0x0 RO	**RESERVED:** Reserved.
1:0	0x0 RW	**DBI_FIFO_THRTL:** DBI FIFO's watermark can be set using the following bits so as to enable dbi_stall de-assertion whenever the below FIFO condition is reached: 00 - (1/2) DBI fifo empty 01 - (1/4) DBI fifo empty 10 - 7 locations are empty 11 - Reserved

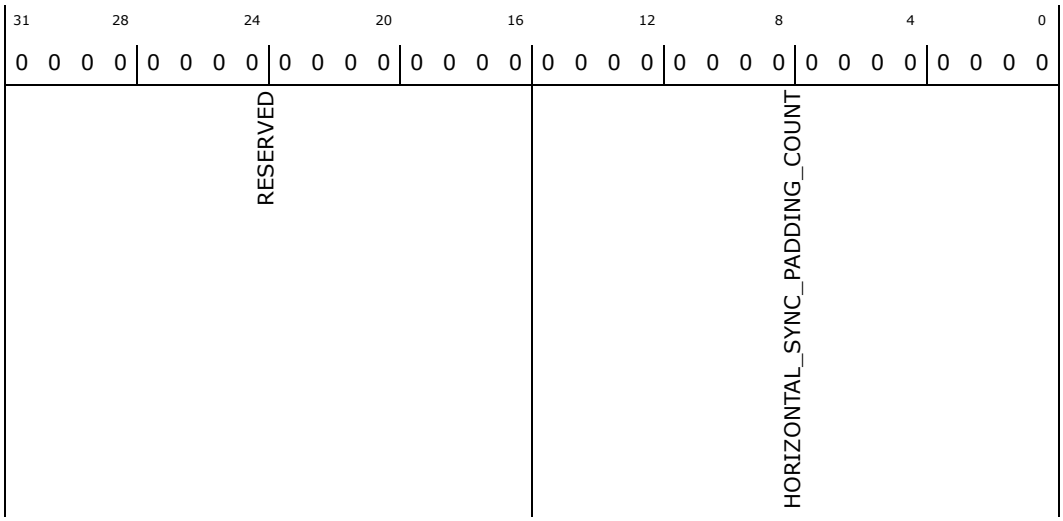
4.2.62 MIPIA_HORIZ_SYNC_PADDING_COUNT—Offset B028h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B028h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_SYNC_PADDING_COUNT:** Shows the horizontal sync padding value in terms of txbyteclkhs

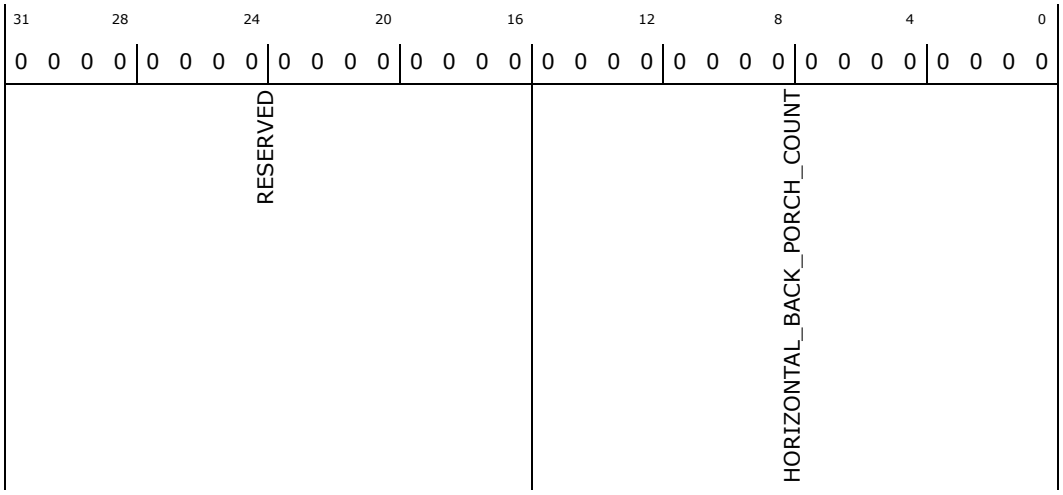
4.2.63 MIPIA_HORIZ_BACK_PORCH_COUNT—Offset B02Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B02Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_BACK_PORCH_COUNT:** Shows the horizontal back porch value in terms of txbyteclkhs

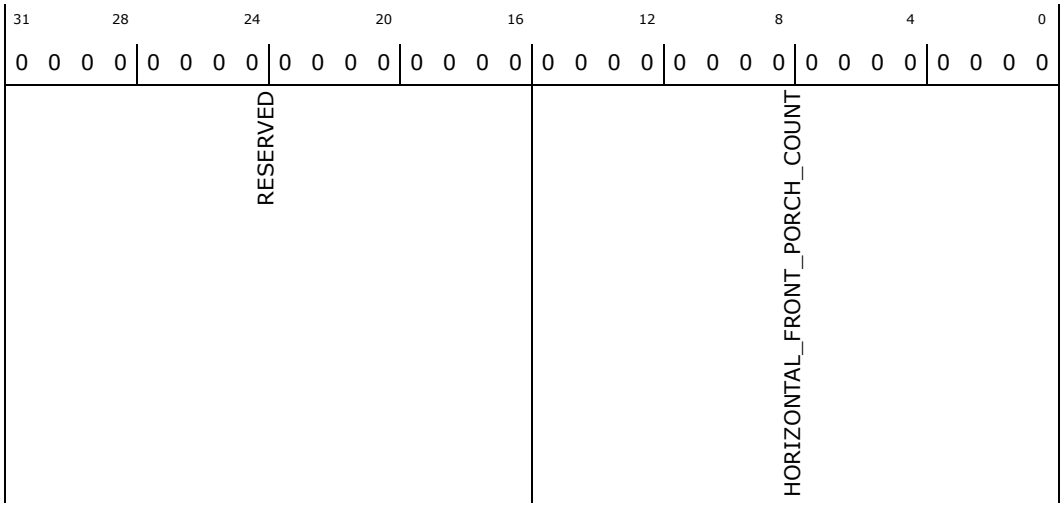
4.2.64 MIPIA_HORIZ_FRONT_PORCH_COUNT—Offset B030h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B030h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_FRONT_PORCH_COUNT:** Shows the horizontal front porch value in terms of txbyteclkhs

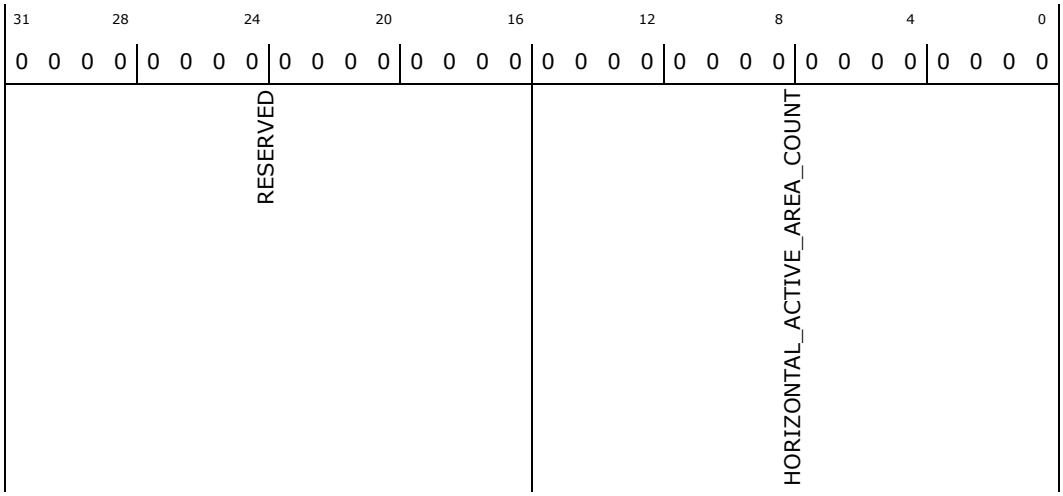
4.2.65 MIPIA_HORIZ_ACTIVE_AREA_COUNT—Offset B034h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B034h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_ACTIVE_AREA_COUNT:** Shows the horizontal active area value in terms of txbyteclkhs

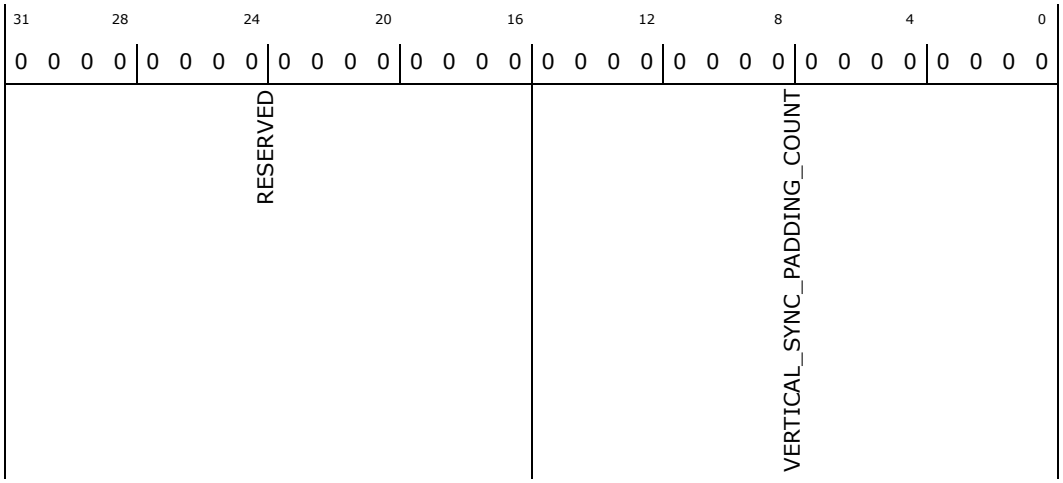
4.2.66 MIPIA_VERT_SYNC_PADDING_COUNT—Offset B038h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B038h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**VERTICAL_SYNC_PADDING_COUNT:** Shows the vertical sync padding value in terms of lines

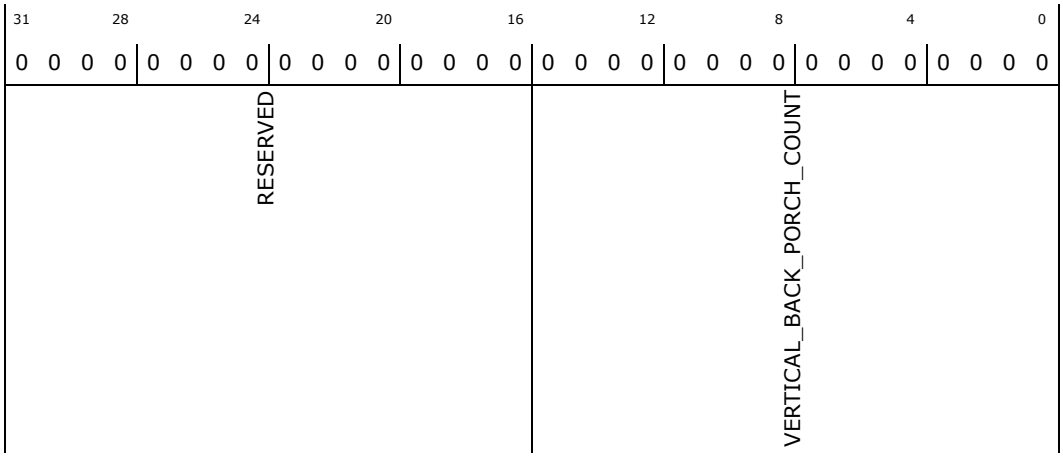
4.2.67 MIPIA_VERT_BACK_PORCH_COUNT—Offset B03Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B03Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**VERTICAL_BACK_PORCH_COUNT:** Shows the vertical back porch value in terms of lines

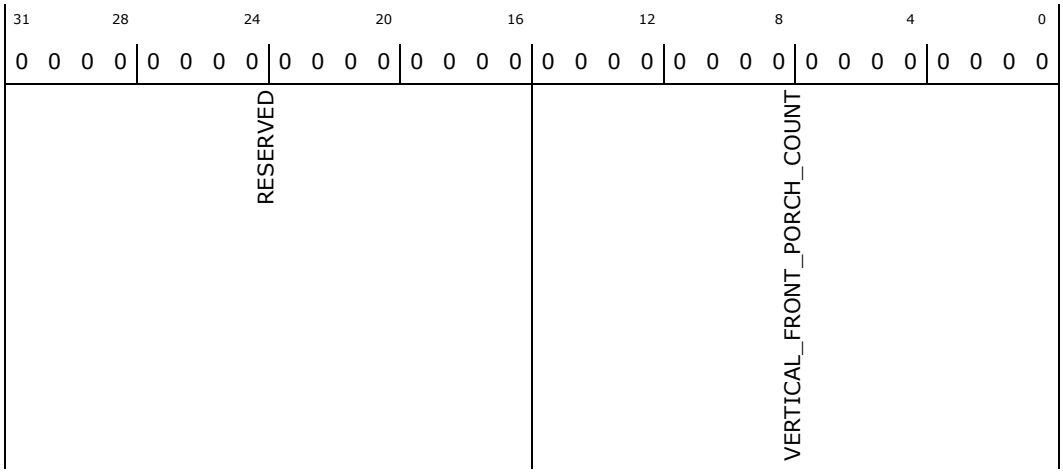
4.2.68 MIPIA_VERT_FRONT_PORCH_COUNT—Offset B040h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B040h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15:0	0x0 RW	**VERTICAL_FRONT_PORCH_COUNT:** Shows the vertical front porch value in terms of lines

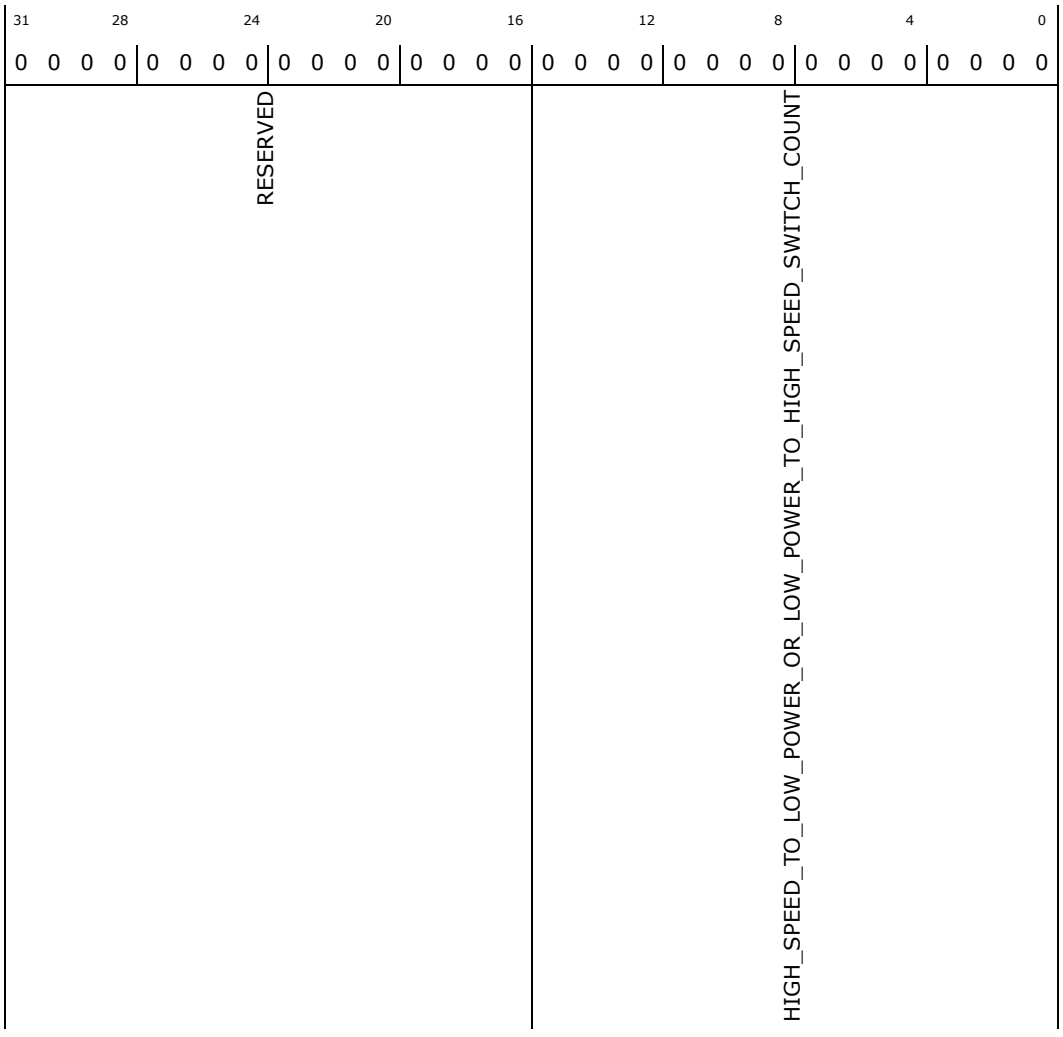
4.2.69 MIPIA_HIGH_LOW_SWITCH_COUNT—Offset B044h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B044h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** High speed to low power or Low power to high speed switching time in terms of txbyteclkhs
15:0	0x0 RW	**HIGH_SPEED_TO_LOW_POWER_OR_LOW_POWER_TO_HIGH_SPEED_SWITCH_COUNT:** High speed to low power or Low power to high speed switching time in terms of txbyteclkhs

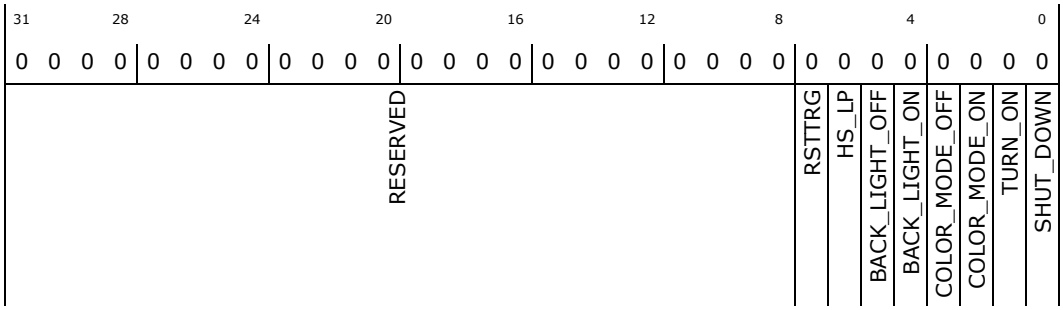
4.2.70 MIPIA_DPI_CTRL_REG—Offset B048h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:**
7	0x0 RW	**RSTTRG:** Reserved.
6	0x0 RW	**HS_LP:** Set to '0' to indicate the special packets are sent through the DSI link using HS transmission and set to '1' to indicate that the special packets are sent through the DSI link using low power mode
5	0x0 RW	**BACK_LIGHT_OFF:** Set to '1' to indicate a backlight OFF short packet has to be packetised for the DPI's virtual channel
4	0x0 RW	**BACK_LIGHT_ON:** Set to '1' to indicate a backlight ON short packet has to be packetised for the DPI's virtual channel
3	0x0 RW	**COLOR_MODE_OFF:** Set to '1' to indicate a color mode OFF short packet has to be packetised for the DPI's virtual channel
2	0x0 RW	**COLOR_MODE_ON:** Set to '1' to indicate a color mode ON short packet has to be packetised for the DPI's virtual channel
1	0x0 RW	**TURN_ON:** Set to '1' to indicate a turn on short packet has to be packetised for the DPI's virtual channel
0	0x0 RW	**SHUT_DOWN:** Set to '1' to indicate a shut down short packet has to be packetised for the DPI's virtual channel

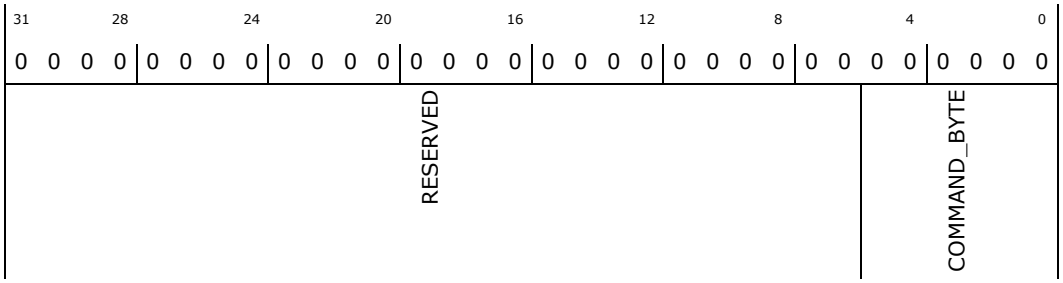
4.2.71 MIPIA_DPI_DATA_REGISTER—Offset B04Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B04Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RO	**RESERVED:** Reserved.
5:0	0x0 RW	**COMMAND_BYTE:** Command Byte to represent the new or not defined command bytes usage for special features representation. [Like backlight ON and OFF]. This register should be programmed before the DPI control register is being programmed for backlight ON/OFF

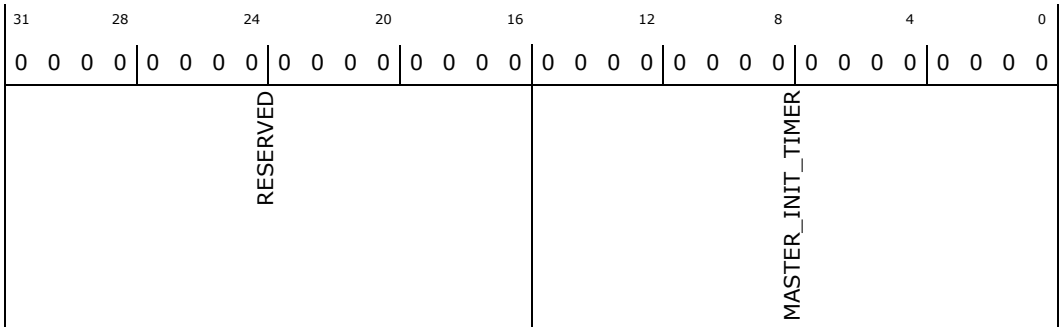
4.2.72 MIPIA_INIT_COUNT_REGISTER—Offset B050h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B050h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15:0	0x0 RW	**MASTER_INIT_TIMER:** Counter value in terms of low power clock to initialise the DSI Host IP [TINT] that drives a stop state on the mipi's D-PHY bus

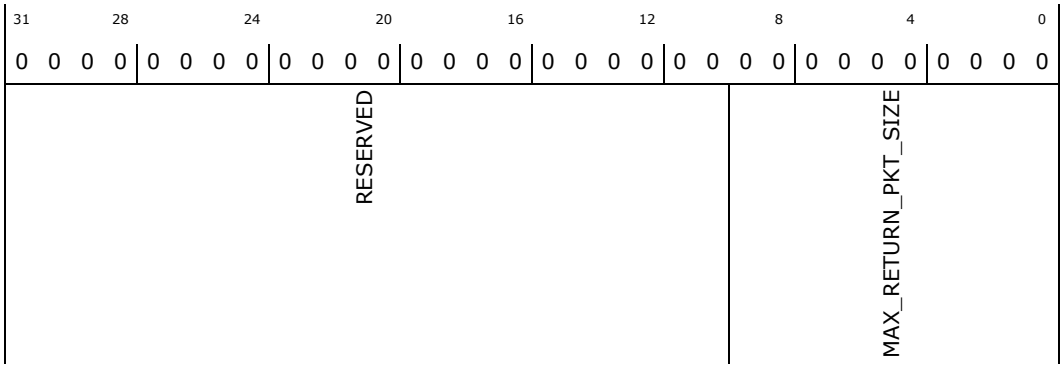
4.2.73 MIPIA_MAX_RETURN_PKT_SIZE_REGISTER—Offset B054h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B054h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:10	0x0 RO	**RESERVED:** Reserved.
9:0	0x0 RW	**MAX_RETURN_PKT_SIZE:** Set the count value in bytes to collect the return data packet for reverse direction data flow in data lane0 in response to a DBI read operation

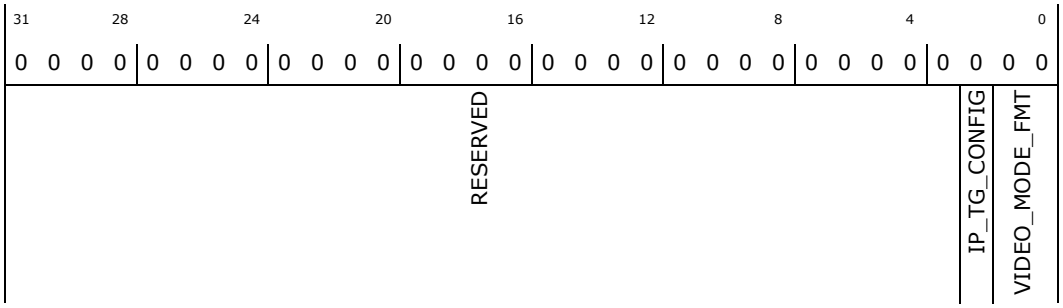
4.2.74 MIPIA_VIDEO_MODE_FORMAT_REGISTER—Offset B058h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B058h

Default: 00000000h



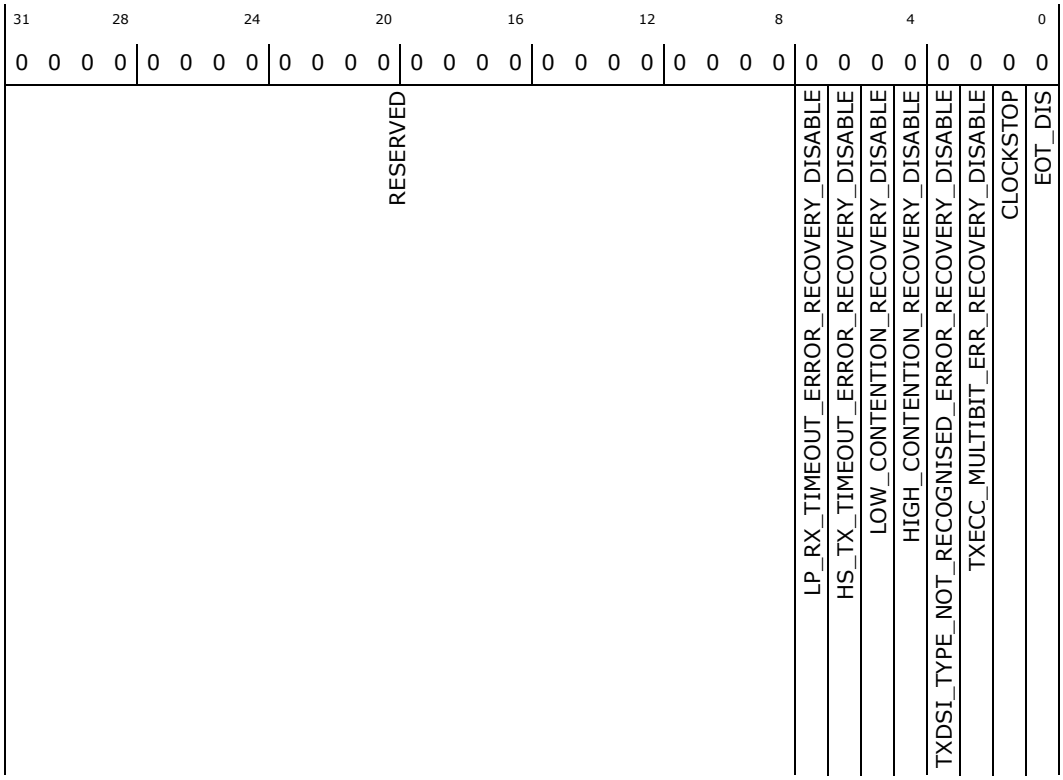
Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Reserved.
2	0x0 RW	**IP_TG_CONFIG:** Set by the processor to inform that the DSI controller should discontinue the DPI transfer after the last line of the VFP after ip_tg_enable deassertion. By default, this bit is set to 0. 0 - After ip_tg_enable deassertion, DSI Tx controller stops the DPI transfer immediately after the current packet is transmitted. 1 - After ip_tg_enable deassertion, DSI Tx controller discontinues the DPI transfer after the last line of the VFP
1:0	0x0 RW	**VIDEO_MODE_FMT:** Sets the Video mode format (packet sequence) to be supported in DSI. In Non Burst Mode, in addition to programming this register the horizontal active area count register value should also be programmed equal to RGB word count value In Burst Mode, in addition to programming this register the horizontal active area count register value should also be programmed greater than the RGB word count value, leaving more time during a scan line for LP mode (saving power) or for multiplexing other transmissions onto the DSI link. 00 Reserved 01 - Non Burst Mode with Sync Pulse 10 - Non Burst Mode with Sync events 11 - Burst Mode

4.2.75 MIPIA_EOT_DISABLE_REGISTER—Offset B05Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B05Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7	0x0 RW	**LP_RX_TIMEOUT_ERROR_RECOVERY_DISABLE:** Set by the processor to enable or disable the LP_Rx_timeout error recovery if the processor clears LP_Rx_timeout error interrupt. 0 - LP_Rx_timeout error recovery action will be taken by the DSI Tx controller if the processor clears the LP_Rx_timeout error interrupt. 1 - If the processor clears the LP_Rx_timeout error interrupt, LP_Rx_timeout error recovery action will not happen in DSI Tx controller. LP Rx timeout error interrupt will act as an informative interrupt
6	0x0 RW	**HS_TX_TIMEOUT_ERROR_RECOVERY_DISABLE:** Set by the processor to enable or disable the HS_Tx_timeout error recovery if the processor clears HS_Tx_timeout interrupt. 0 - HS_Tx_timeout error recovery action will be taken by the DSI Tx controller if the processor clears the HS_Tx_timeout error interrupt. 1 - If the processor clears the HS_Tx_timeout error interrupt, HS_Tx_timeout error recovery action will not happen in DSI Tx controller. HS Tx timeout error interrupt will act as an informative interrupt

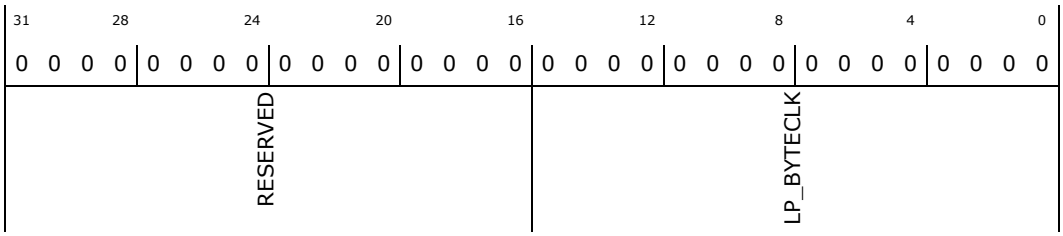
Bit Range	Default & Access	Field Name (ID): Description
5	0x0 RW	**LOW_CONTENTION_RECOVERY_DISABLE:** Set by the processor to enable or disable the contention recovery procedure if the processor clears Low contention interrupt. 0 - Contention recovery will happen if the processor clears Low contention interrupt. 1 - If the processor clears the low contention interrupt, contention recovery procedure will not be initiated by the DSI Tx controller. Low contention interrupt will act as an informative interrupt
4	0x0 RW	**HIGH_CONTENTION_RECOVERY_DISABLE:** Set by the processor to enable or disable the contention recovery procedure if the processor clears High contention interrupt. 0 - Contention recovery will happen if the processor clears High contention interrupt. 1 - If the processor clears the high contention interrupt, contention recovery procedure will not be initiated by the DSI Tx controller. Ignore the High Contention Interrupt in MIPI_INTR_STAT_REG
3	0x0 RW	**TXDSI_TYPE_NOT_RECOGNISED_ERROR_RECOVERY_DISABLE:** Set by the processor to enable or disable the error recovery action to be taken by the DSI Tx controller if TxDSI data type not recognized error interrupt is cleared by the processor. 0 - Error recovery action will be taken if TxDSI data type not recognized error interrupt is cleared by the processor. 1 - If TxDSI data type not recognized error interrupt is cleared by the processor, error recovery action will not be taken by the DSI TX controller. Tx DSI data type not recognized error interrupt will act as an informative interrupt
2	0x0 RW	**TXECC_MULTIBIT_ERR_RECOVERY_DISABLE:** Set by the processor to enable or disable the error recovery action to be taken by the DSI Tx controller if Tx ECC multibit error interrupt is cleared by the processor. 0 - Error recovery action will be taken if Tx ECC multibit error interrupt is cleared by the processor. 1 - If Tx ECC multibit error interrupt is cleared by the processor, error recovery action will not be taken by the DSI TX controller. Tx multibit error interrupt will act as an informative interrupt
1	0x0 RW	**CLOCKSTOP:** Set by the processor to enable or disable clock stopping feature during BLLP timing in a DPI transfer in dual channel mode or during DPI only mode and also when there is no traffic in the DBI interface in DBI only enabled mode. By default this register value is 0. 0 - clock stopping disabled 1 - clock stopping enabled
0	0x0 RW	**EOT_DIS:** Set by the processor to enable or disable EOT short packet transmission. By default this register value is 0. For backward compatibility of earlier DSI systems, EOT short packet transmission can be disabled. 0 - EOT short packet transmission enabled 1 - EOT short packet transmission disabled

4.2.76 MIPIA_LP_BYTECLK_REGISTER—Offset B060h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B060h

Default: 00000000h



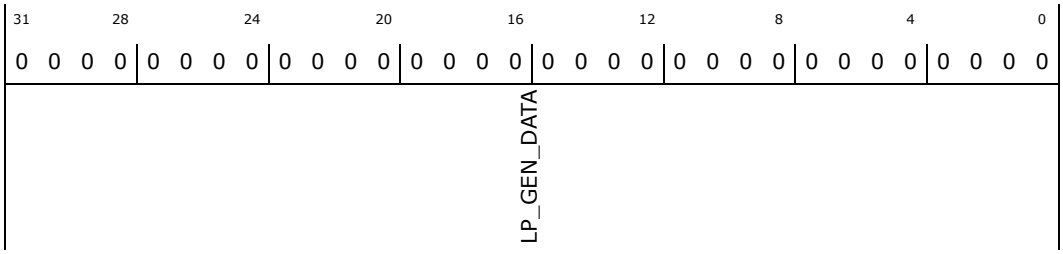
Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**LP_BYTECLK:** Low power clock equivalence in terms of byte clock. The value programmed in this register is equal to the number of byte clocks occupied in one low power clock. This value is based on the byte clock (txbyteclkhs) and low power clock frequency (txclkesc)

4.2.77 MIPIA_LP_GEN_DATA_REGISTER—Offset B064h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B064h

Default: 00000000h



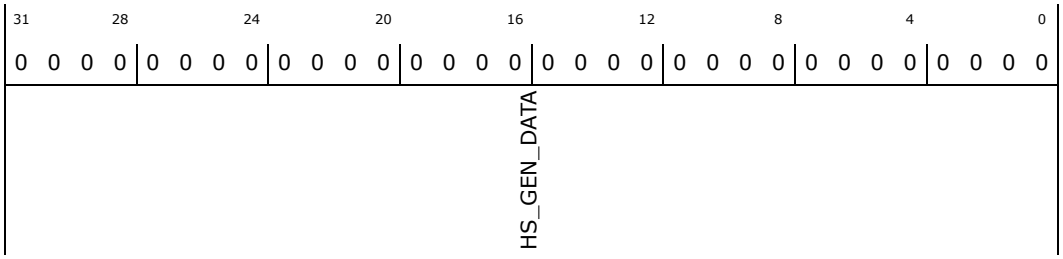
Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**LP_GEN_DATA:** Data port register used for generic data transfers in low power mode

4.2.78 MIPIA_HS_GEN_DATA_REGISTER—Offset B068h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B068h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**HS_GEN_DATA:** Data port register used for generic data transfers in low power mode

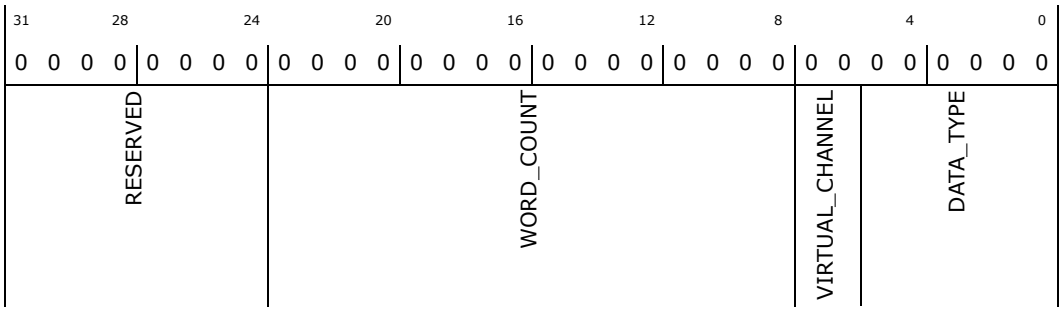
4.2.79 MIPIA_LP_GEN_CTRL_REGISTER—Offset B06Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B06Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:8	0x0 WO	**WORD_COUNT:** Specifies the word count for generic long packet Specifies the accompanied parameters for generic short packets. Note: Invalid parameters must be set to 00h
7:6	0x0 WO	**VIRTUAL_CHANNEL:** Used to specify the virtual channel for which the generic data transmission is intended

Bit Range	Default & Access	Field Name (ID): Description
5:0	0x0 WO	**DATA_TYPE:** Used to specify the generic data types 03h - Generic short write, no parameters 13h - Generic short write, 1 parameter 23h - Generic short write, 2 parameters 04h - Generic read, no parameters 14h - Generic read, 1 parameter 24h - Generic read 2 parameter 29h - Generic long write 05h - Manufacturer DCS short write, no parameter 15h - Manufacturer DCS short write , one parameter 06h - Manufacturer DCS read, no parameter 39h - Manufacturer DCS long write

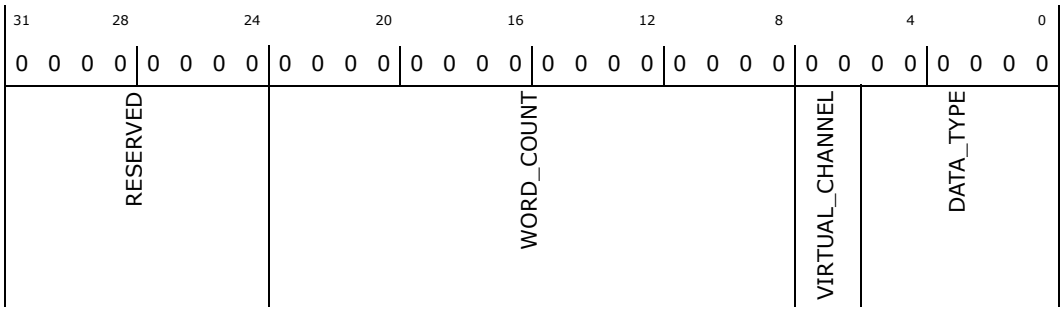
4.2.80 MIPIA_HS_GEN_CTRL_REGISTER—Offset B070h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B070h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:8	0x0 WO	**WORD_COUNT:** Specifies the word count for generic long packet Specifies the accompanied parameters for generic short packets. Note: Invalid parameters must be set to 00h
7:6	0x0 WO	**VIRTUAL_CHANNEL:** Used to specify the virtual channel for which the generic data transmission is intended

Bit Range	Default & Access	Field Name (ID): Description
5:0	0x0 WO	**DATA_TYPE:** Used to specify the generic data types 03h - Generic short write, no parameters 13h - Generic short write, 1 parameter 23h - Generic short write, 2 parameters 04h - Generic read, no parameters 14h - Generic read, 1 parameter 24h - Generic read 2 parameter 29h - Generic long write 05h - Manufacturer DCS short write, no parameter 15h - Manufacturer DCS short write, one parameter 06h - Manufacturer DCS read, no parameter 39h - Manufacturer DCS long write

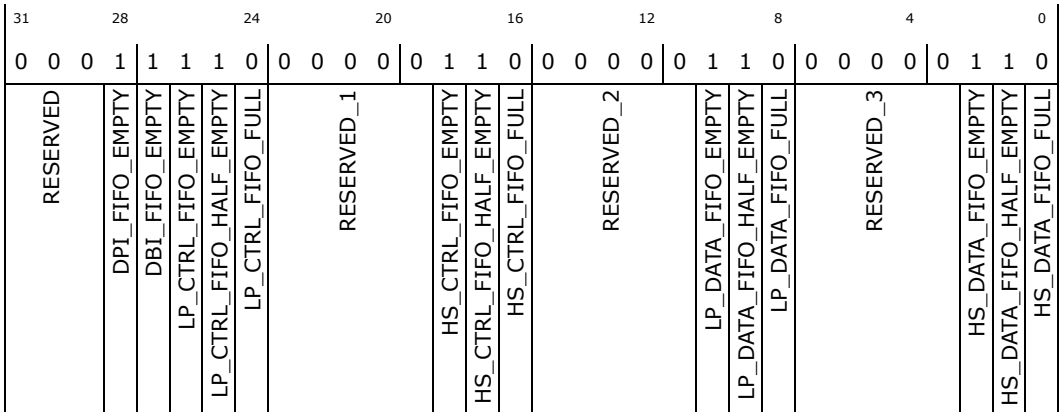
4.2.81 MIPIA_GEN_FIFO_STAT_REGISTER—Offset B074h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B074h

Default: 1E060606h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Reserved.
28	0x1 RO	**DPI_FIFO_EMPTY:** Default 1
27	0x1 RO	**DBI_FIFO_EMPTY:** Default 1
26	0x1 RO	**LP_CTRL_FIFO_EMPTY:** Default 1
25	0x1 RO	**LP_CTRL_FIFO_HALF_EMPTY:** Default 1
24	0x0 RO	**LP_CTRL_FIFO_FULL:** Default 0

Bit Range	Default & Access	Field Name (ID): Description
23:19	0x0 RO	**RESERVED_1:** Reserved.
18	0x1 RO	**HS_CTRL_FIFO_EMPTY:** Default 1
17	0x1 RO	**HS_CTRL_FIFO_HALF_EMPTY:** Default 1
16	0x0 RO	**HS_CTRL_FIFO_FULL:** Default 0
15:11	0x0 RO	**RESERVED_2:** Reserved.
10	0x1 RO	**LP_DATA_FIFO_EMPTY:** Default 1
9	0x1 RO	**LP_DATA_FIFO_HALF_EMPTY:** Default 1
8	0x0 RO	**LP_DATA_FIFO_FULL:** Default 0
7:3	0x0 RO	**RESERVED_3:** Reserved.
2	0x1 RO	**HS_DATA_FIFO_EMPTY:** Default 1
1	0x1 RO	**HS_DATA_FIFO_HALF_EMPTY:** Default 1
0	0x0 RO	**HS_DATA_FIFO_FULL:** Default 0

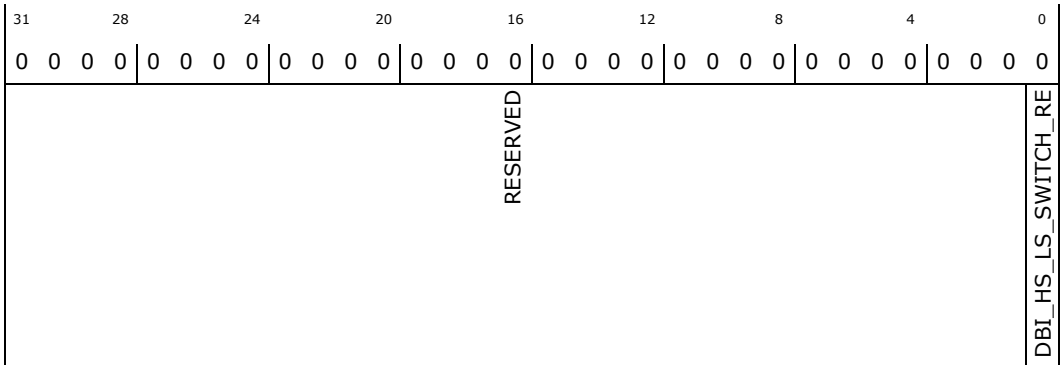
4.2.82 MIPIA_HS_LS_DBI_ENABLE_REG—Offset B078h

Note : dbi_hs_lp_switch_reg has to be written only if DBI FIFO is empty

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B078h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:** Reserved.
0	0x0 RW	**DBI_HS_LS_SWITCH_RE:** Set to 1 if DBI packets have to be transmitted in Low power mode Set to 0 if DBI packets have to be transmitted in High speed mode

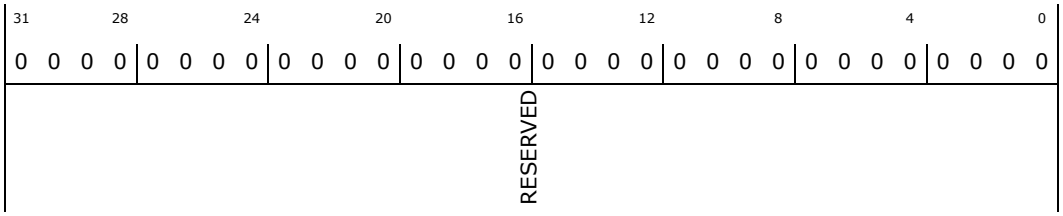
4.2.83 MIPIA_RESERVED—Offset B07Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B07Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RESERVED:** Reserved.

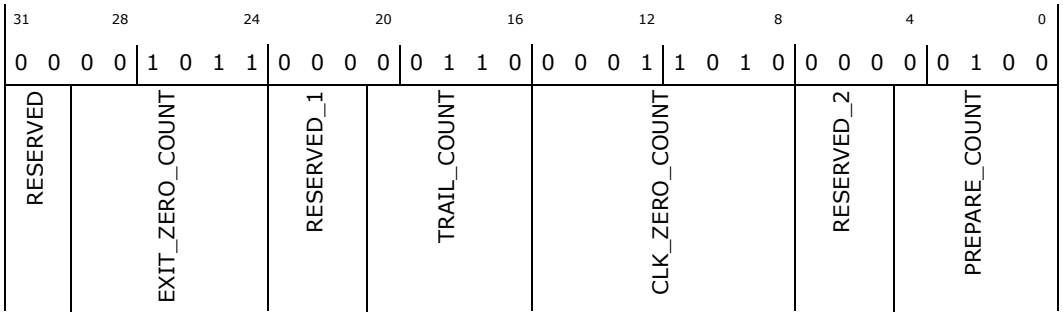
4.2.84 MIPIA_DPHY_PARAM_REG—Offset B080h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B080h

Default: 0B061A04h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** Reserved.
29:24	0xb RW	**EXIT_ZERO_COUNT:** THS_0_TIM_UI_CNT and THS_EXIT_TIM_UI_CNT for dphy are programmed as exit zero count by the processor
23:21	0x0 RO	**RESERVED_1:** Reserved.
20:16	0x6 RW	**TRAIL_COUNT:** TCLK_POST_TIM_UI_CNT and TCLK_TRAIL_TIM_UI_CNT for dphy are programmed as trail count by the processor
15:8	0x1a RW	**CLK_ZERO_COUNT:** TCLK_0_TIM_UI_CNT for dphy is programmed as clk zero count by the processor
7:5	0x0 RO	**RESERVED_2:** Reserved.
4:0	0x4 RW	**PREPARE_COUNT:** TCLK_PREP_TIM_UI_CNT and THS_PREP_TIM_UI_CNT for dphy are programmed as prepare count by the processor

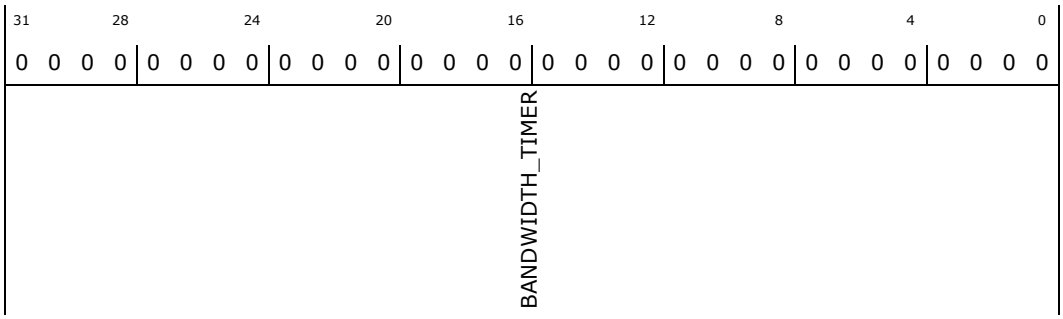
4.2.85 MIPIA_DBI_BW_CTRL_REG—Offset B084h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B084h

Default: 00000000h



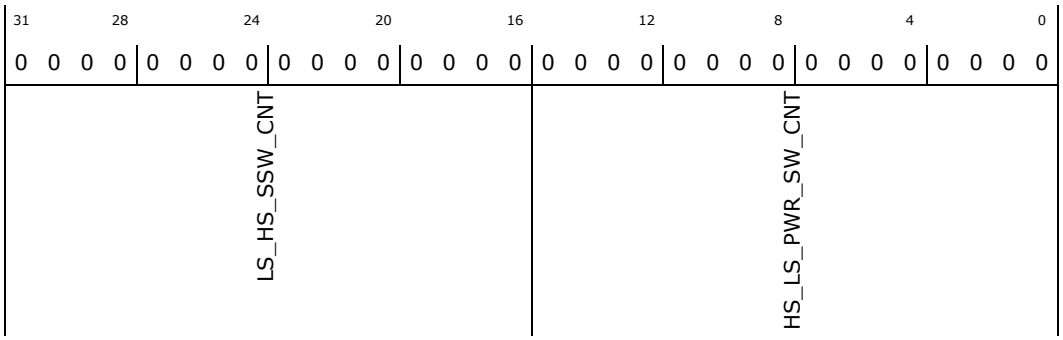
Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**BANDWIDTH_TIMER:** DBI Bandwidth control Register. The bandwidth essential for transmitting 16 long packets containing 252 bytes meant for DCS write memory command is programmed in this register in terms of byte clocks. Based on the DSI transfer rate and the number of lanes configured the time taken to transmit 16 long packets in a DSI stream varies. Note: The value programmed in this timer must be greater than the actual time taken to carryout 16 long packets transmission in DSI stream plus the time taken to transmit two blanking packets

4.2.86 MIPIA_CLK_LANE_SWITCHING_TIME_CNT—Offset B088h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B088h

Default: 00000000h



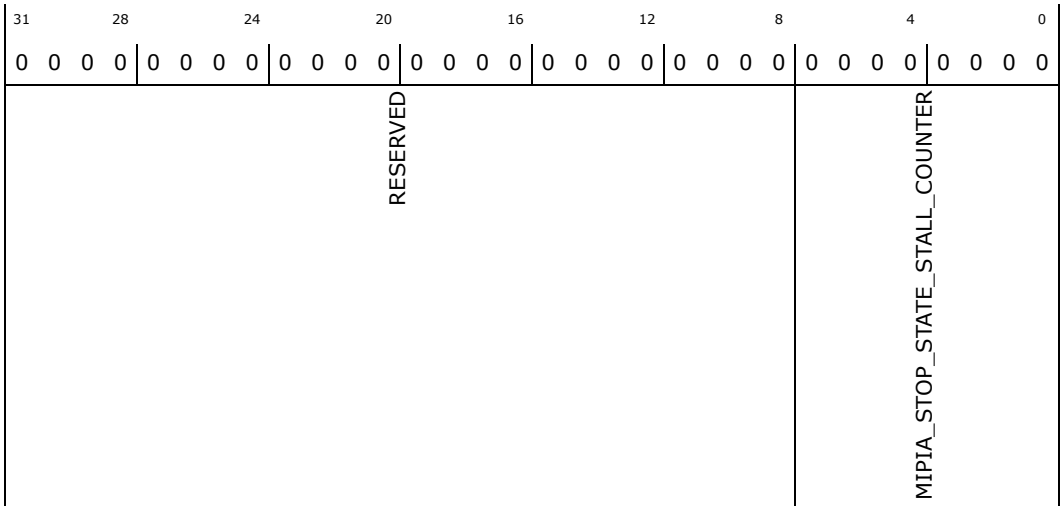
Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**LS_HS_SSW_CNT:** Low power to high speed switching time in terms byte clock (txbyteclkhs). This value is based on the byte clock (txbyteclkhs) and low power clock frequency (txclkesc). Typical value - Number of byte clocks required to switch from low power mode to high speed mode after txrequesths_clk is asserted. Current Value is ah = 10 txbyteclkhs
15:0	0x0 RW	**HS_LS_PWR_SW_CNT:** High speed to low power switching time in terms byte clock (txbyteclkhs). This value is based on the byte clock (txbyteclkhs) and low power clock frequency (txclkesc). Typical value - Number of byte clocks request to switch from high speed mode to low power mode after txrequesths_clk is de-asserted. Current Value is 14h = 20 txbyteclkhs

4.2.87 MIPIA_STOP_STATE_STALL—Offset B08Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B08Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:**
7:0	0x0 RW	**MIPIA_STOP_STATE_STALL_COUNTER:** Delay between (stall the stop state signal) the data transfer is increased based on this counter value. This counter is calculated from txclkesc. Note: If processor programs this register then it needs to reprogram the high_low_ switch counter in B044h and lp_equivalent_byteclk reg in B060h to compensate this delay. High_low_switch_count B044h: High to low switch counter = Actual High to low switch + stop_sta_stall_reg value * Low power clock equivalence value in terms of byte clock LP equivalent byteclk register B060h: LP equivalent byteclk value = txclkesc time/ txbyteclk time * (105 + stop_sta_stall_reg value) / 105 Minimum time of Low Power short packet transfer = 105 txclkesc

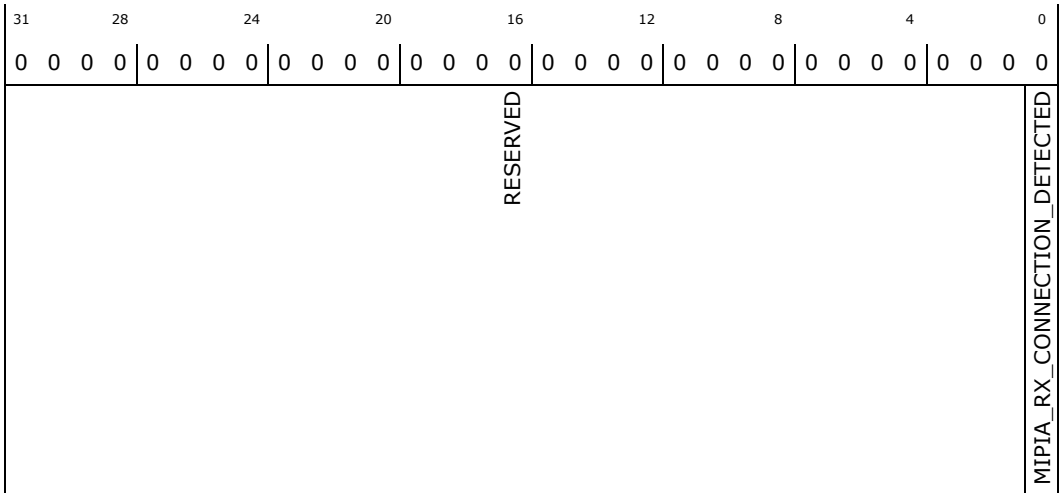
4.2.88 MIPIA_INTR_STAT_REG_1—Offset B090h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B090h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:**
0	0x0 RW	**MIPIA_RX_CONNECTION_DETECTED:** Set to 1'b1 if the contention detected in the display device and is reported in the Acknowledge packet by the display device

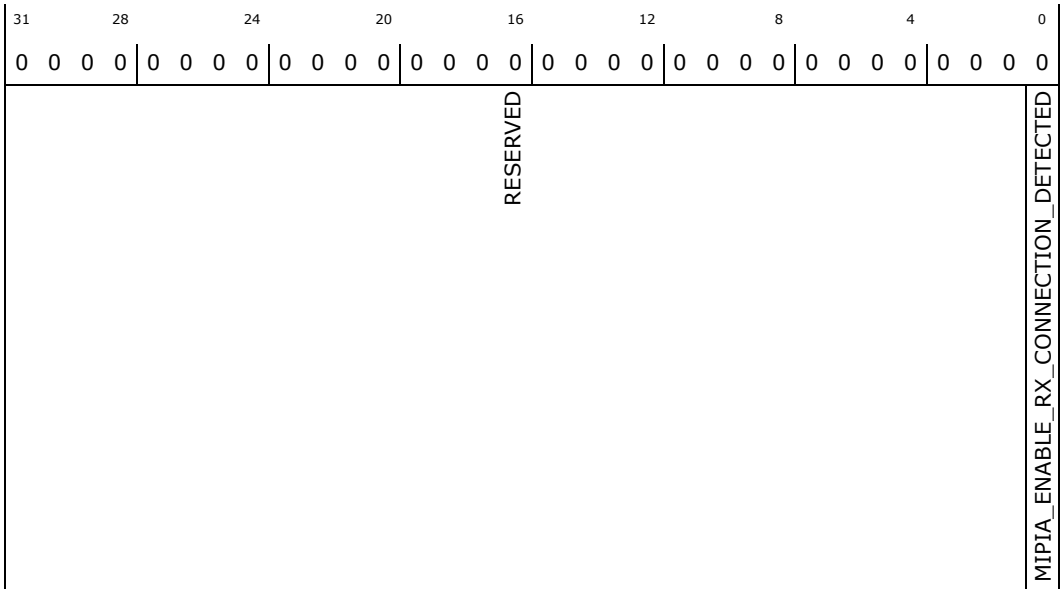
4.2.89 MIPIA_INTR_EN_REG_1—Offset B094h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B094h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:**
0	0x0 RW	**MIPIA_ENABLE_RX_CONNECTION_DETECTED:** Set to enable the interrupt for contention detected error in the acknowledgement packet reports

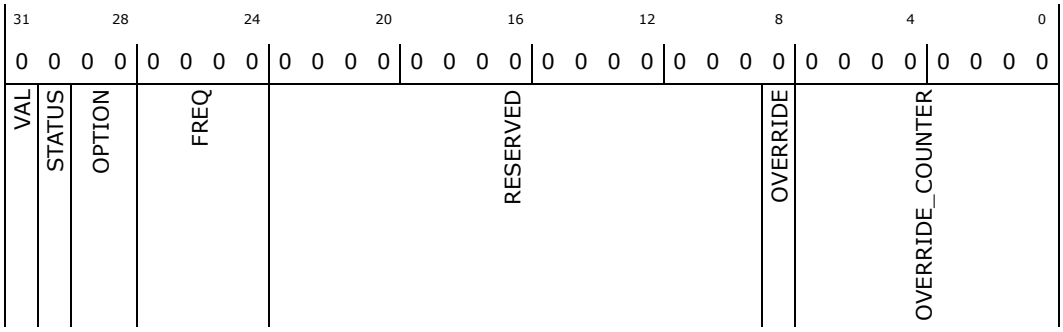
4.2.90 MIPIA_DBI_TYPEC_CTRL—Offset B100h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B100h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**VAL:** 0= disable DBI TYPE-C interface (default) 1= enable DBI TYPE-C interface Driver to make sure that the command and data buffers are cleared before this bit is changed
30	0x0 RW	**STATUS:** command and data buffer empty and link completed sending out all serialized data and IDLE 0 = IDLE 1 = work in progress
29:28	0x0 RW	**OPTION:** TYPE-C option selection 00 option 1 01 option 2 10 option 3 11 no defined functionality
27:24	0x0 RW	**FREQ:** Type-C clock frequency ; A counter based onczclk is used to generate the TYPE-C Clock. So based on the czclk, a frequency close to the specified below will be generated. Not the exact frequency. (TBD we may just support a subset frequencies) 0000 1Mhz (default) 0001 1Mhz 0010 2Mhz 1111 15Mhz
23:9	0x0 RO	**RESERVED:** Reserved.
8	0x0 RW	**OVERRIDE:** Use override counter value to derive the TYPE-C clock frequency
7:0	0x0 RW	**OVERRIDE_COUNTER:** Override counter value to generate the TYPE-C clock

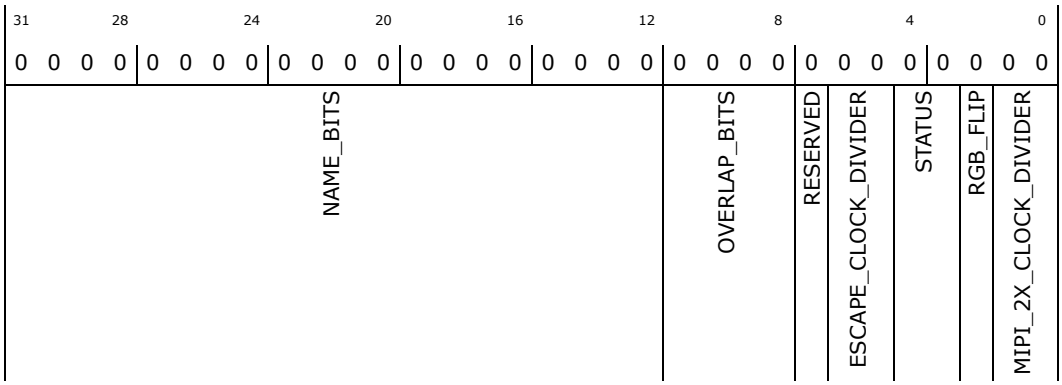
4.2.91 MIPIA_CTRL—Offset B104h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B104h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**NAME_BITS:** Reserved
11:8	0x0 RW	**OVERLAP_BITS:** Number of overlap pixels to support MIPI Video Mode dual Link Z Inversion for FB type panels with Zig Zag Sub pxel layout.
7	0x0 RO	**RESERVED:** Reserved.
6:5	0x0 RW	**ESCAPE_CLOCK_DIVIDER:** Read Only Escape clock divider select for Pipe A and Pipe C Escape clock is shared by both Pipe A and Pipe C so it cant be set different. 00= 1 X (20 Mhz) (default) 01= X (10Mhz) 10= X (5Mhz) Changing this register can only be done when the MIPI device_ready is turned OFF
4:3	0x0 RW	**STATUS:** 2'b00: low priority on read requests to G-unit 2'b11 : high priority
2	0x0 RW	**RGB_FLIP:** 1'b0 : RGB data from disp2d is reverted to BGR 1'b1 : RGB data from disp2d is passed as is to MIPI IP
1:0	0x0 RW	**MIPI_2X_CLOCK_DIVIDER:** Reserved

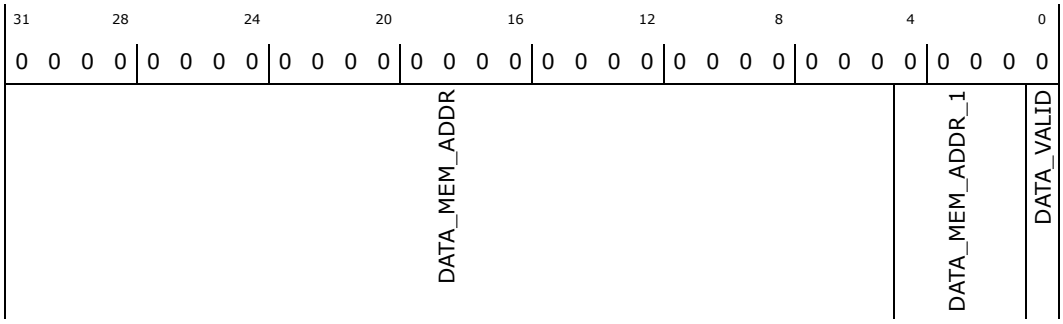
4.2.92 MIPIA_DATA_ADD—Offset B108h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B108h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RW	**DATA_MEM_ADDR:** When there is updated data for the display panel, S/W programs this register with the memory address to read from
4:1	0x0 RW	**DATA_MEM_ADDR_1:** Reserved
0	0x0 RW	**DATA_VALID:** This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

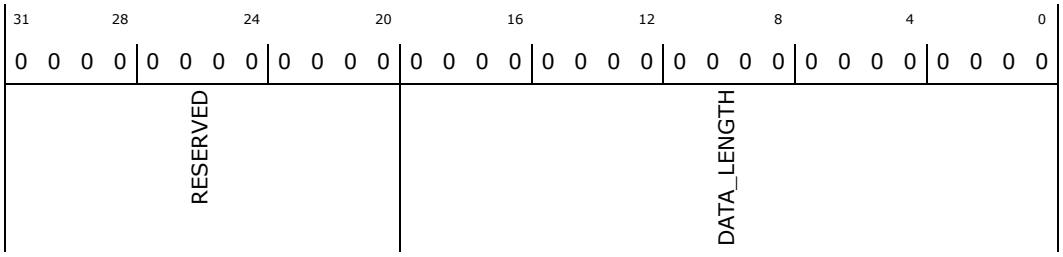
4.2.93 MIPIA_DATA_LEN—Offset B10Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B10Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**DATA_LENGTH:** This field shows the remaining length of data that needs to be read from memory, Initially set by S/W and is decremented by H/W as reads are issued

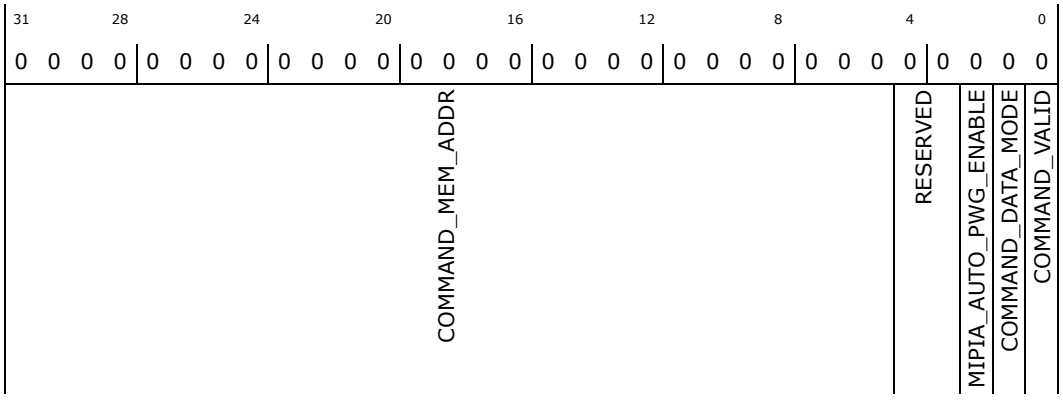
4.2.94 MIPIA_CMD_ADD—Offset B110h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B110h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RW	**COMMAND_MEM_ADDR:** When there are new commands that need to be sent to the display panel, S/W programs this register with the memory address to read the commands from

Bit Range	Default & Access	Field Name (ID): Description
4:3	0x0 RO	**RESERVED:** MBZ
2	0x0 RW	**MIPIA_AUTO_PWG_ENABLE:** Idle state: SW driver writes to this bit to enable auto power gating for MIPIA controller 0: default 1: auto power gate is enabled
1	0x0 RW	**COMMAND_DATA_MODE:** 0: data for memory write command from system buffer that is specified by MIPI data address register 1: data for memory write command from pipe A rendering
0	0x0 RW	**COMMAND_VALID:** This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

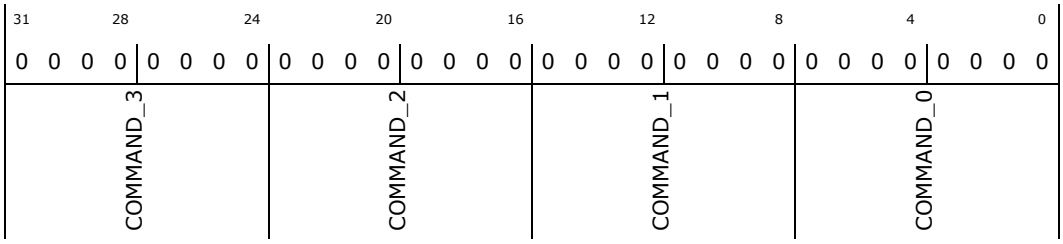
4.2.95 MIPIA_CMD_LEN—Offset B114h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B114h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RW	**COMMAND_3:** This is command 3 length (command + parameters) in bytes
23:16	0x0 RW	**COMMAND_2:** This is command 2 length (command + parameters) in bytes
15:8	0x0 RW	**COMMAND_1:** This is command 1 length (command + parameters) in bytes
7:0	0x0 RW	**COMMAND_0:** This is command 0 length (command + parameters) in bytes

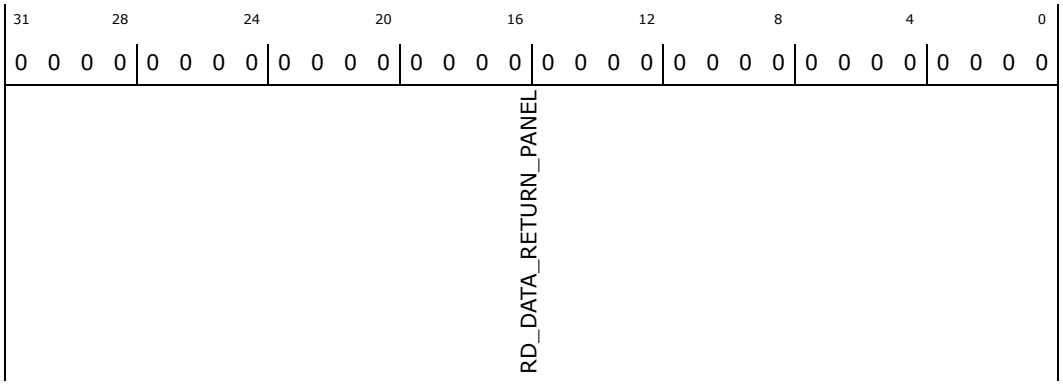
4.2.96 MIPIA_RD_DATA_RETURN0—Offset B118h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B118h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

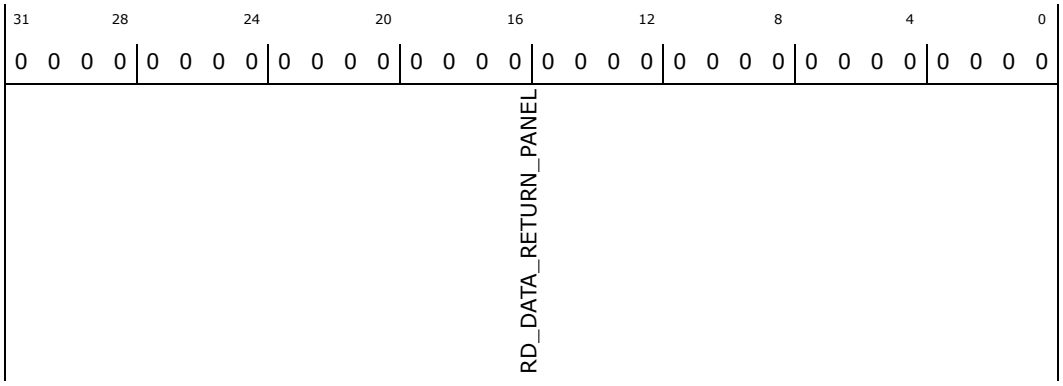
4.2.97 MIPIA_RD_DATA_RETURN1—Offset B11Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B11Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

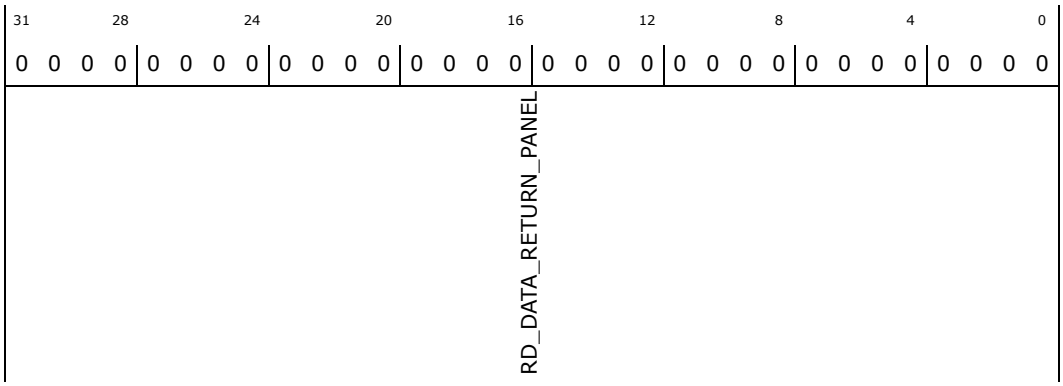
4.2.98 MIPIA_RD_DATA_RETURN2—Offset B120h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B120h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

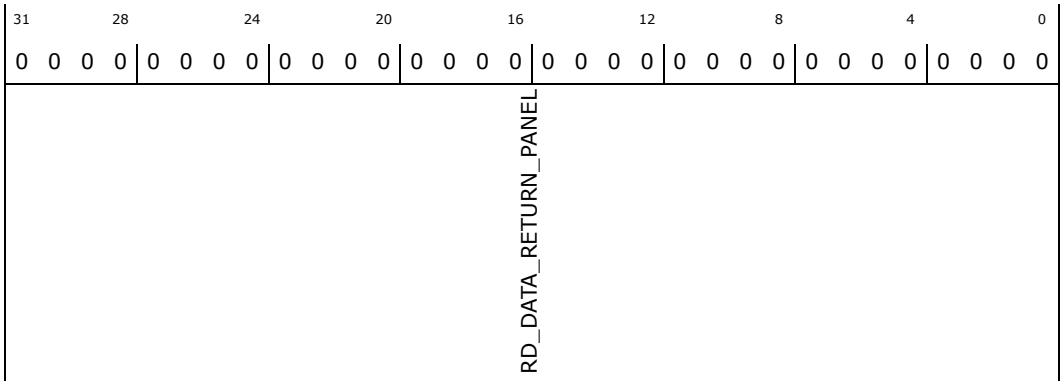
4.2.99 MIPIA_RD_DATA_RETURN3—Offset B124h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B124h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

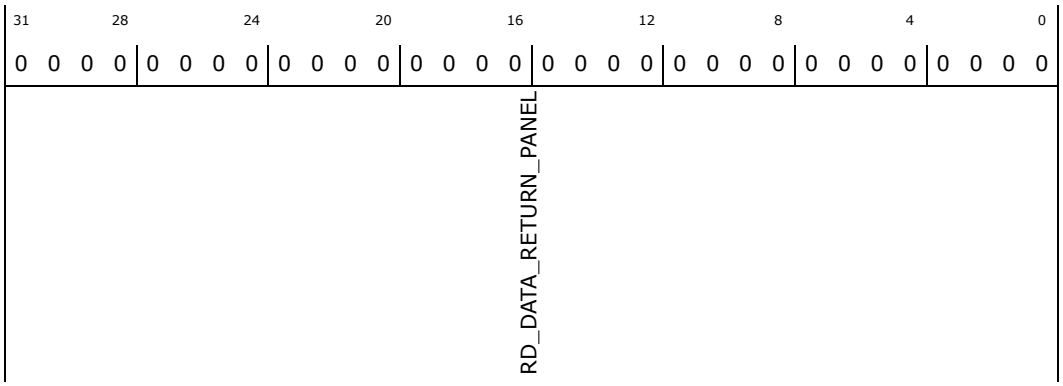
4.2.100 MIPIA_RD_DATA_RETURN4—Offset B128h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B128h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

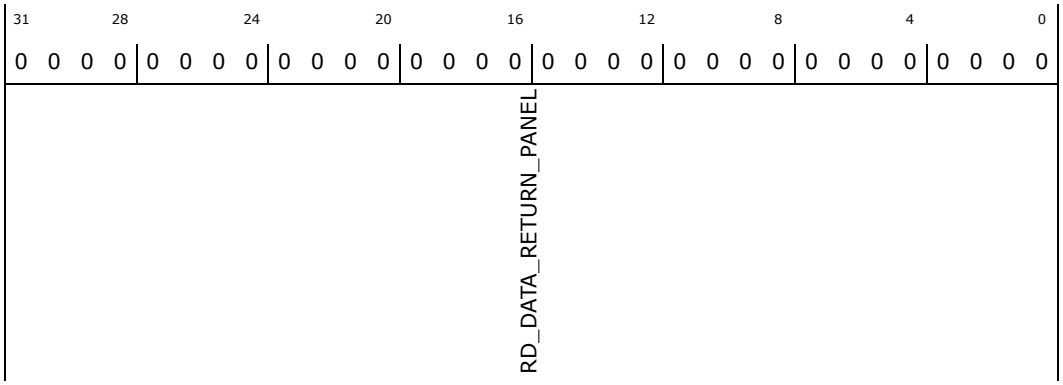
4.2.101 MIPIA_RD_DATA_RETURN5—Offset B12Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B12Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

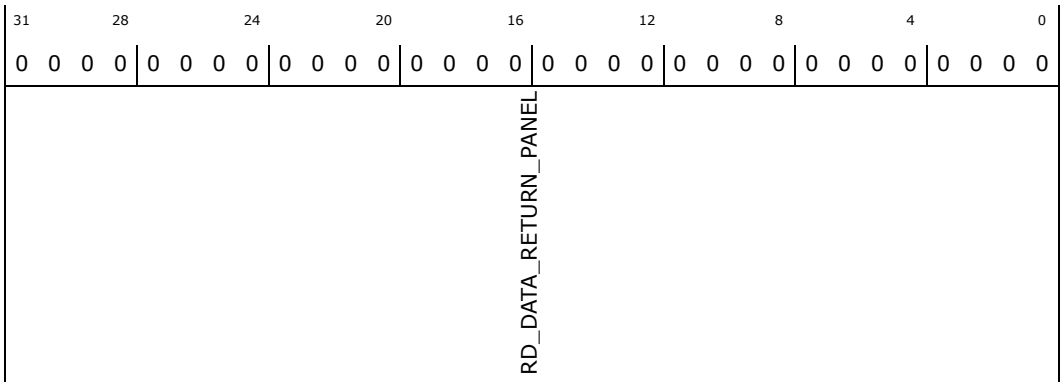
4.2.102 MIPIA_RD_DATA_RETURN6—Offset B130h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B130h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

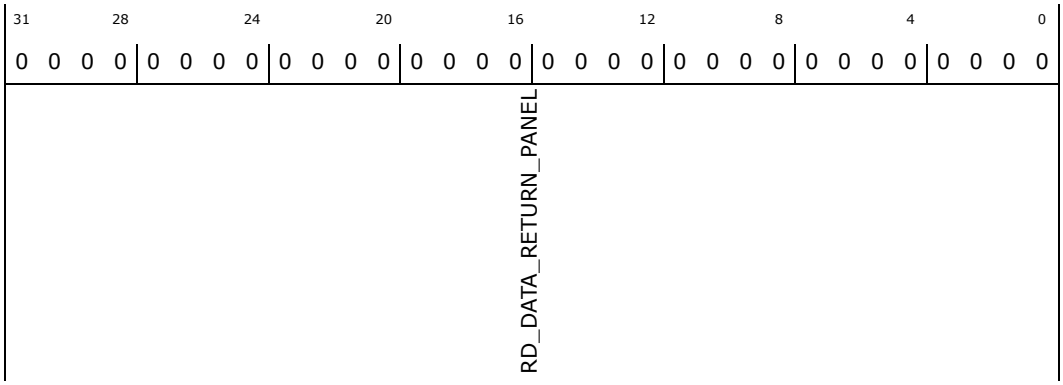
4.2.103 MIPIA_RD_DATA_RETURN7—Offset B134h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B134h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

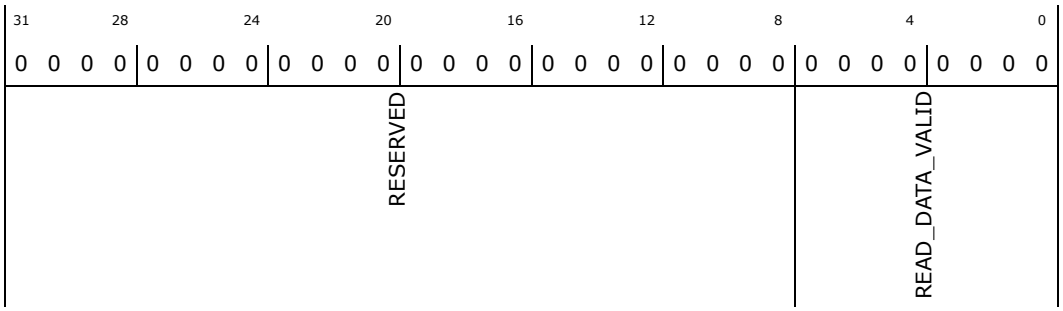
4.2.104 MIPIA_RD_DATA_VALID—Offset B138h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B138h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7:0	0x0 RW	**READ_DATA_VALID:** Each bit corresponds to presence of valid data in the registers above. When data is returned from the panel, H/W will write into these registers in sequence, and set the corresponding valid bit. When S/W issues a write '1 to the registers, this bit is cleared

4.2.105 MIPIC_DEVICE_READY_REG—Offset B800h

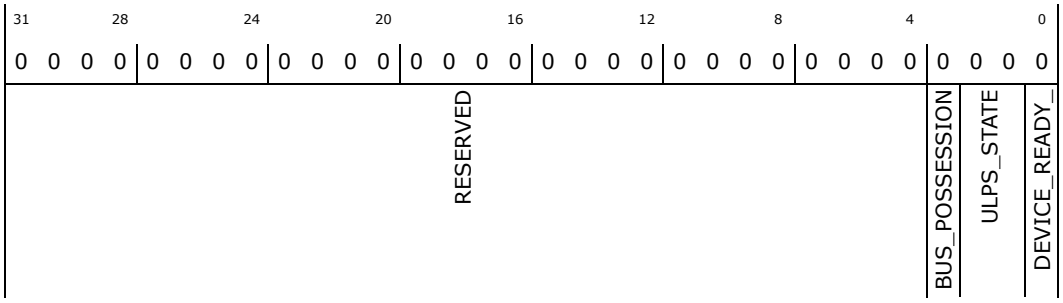
MIPI C Device Ready Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B800h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:4	0x0 RO	**RESERVED:** Reserved.
3	0x0 RW	**BUS_POSSESSION:** Reserved.
2:1	0x0 RW	**ULPS_STATE:** Reserved.
0	0x0 RW	**DEVICE_READY_:** Set by the processor to inform that device is ready

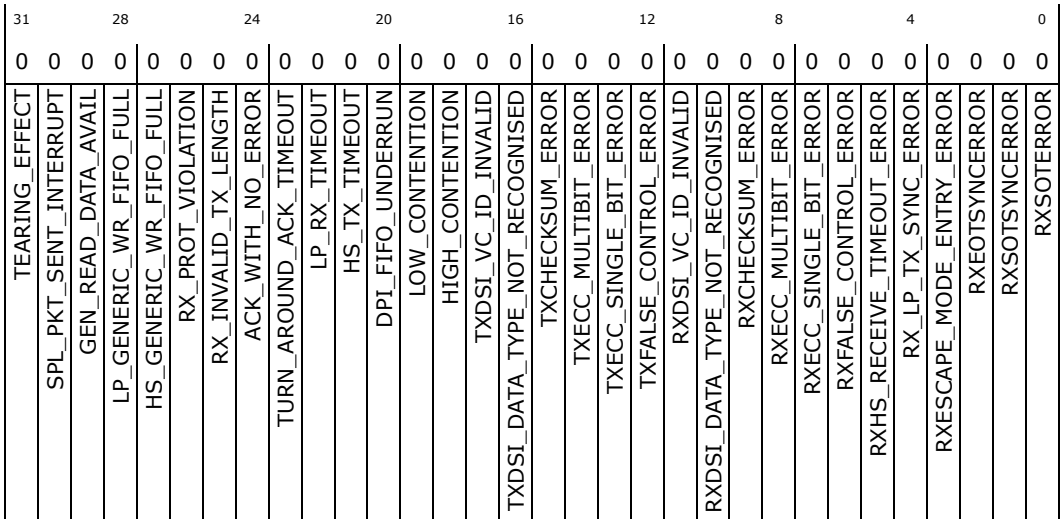
4.2.106 MIPIC_INTR_STAT_REG—Offset B804h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B804h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**TEARING_EFFECT:** Set to indicate that tearing effect trigger message is received
30	0x0 RW	**SPL_PKT_SENT_INTERRUPT:** Set to confirm the transmission of the DPI event specific commands set in the dpi control and dpi data register
29	0x0 RW	**GEN_READ_DATA_AVAIL:** Set to indicate that the requested data for a Generic Read request is available in the buffer i.e., generic read response data is available in the read FIFO
28	0x0 RW	**LP_GENERIC_WR_FIFO_FULL:** Set to indicate that the LP generic write fifo is full
27	0x0 RW	**HS_GENERIC_WR_FIFO_FULL:** Set to indicate that the HS generic write fifo is full
26	0x0 RW	**RX_PROT_VIOLATION:** Set if DSI protocol violation error is reported in the acknowledge packet by the display device
25	0x0 RW	**RX_INVALID_TX_LENGTH:** Set if invalid transmission length error is reported in the acknowledge packet by the display device
24	0x0 RW	**ACK_WITH_NO_ERROR:** Set if acknowledge trigger message is received with out any error
23	0x0 RW	**TURN_AROUND_ACK_TIMEOUT:** Set if a turn around acknowledgement sequence is not received from the display device
22	0x0 RW	**LP_RX_TIMEOUT:** Set if a low power reception count expires this interrupt is generated

Bit Range	Default & Access	Field Name (ID): Description
21	0x0 RW	**HS_TX_TIMEOUT:** Set if a high speed transmission prevails for more than the expected count value this interrupt is raised
20	0x0 RW	**DPI_FIFO_UNDERRUN:** Set to '1' if there is no data in the dpi fifo to make a in time delivery of the pixel data to the DSI receiver
19	0x0 RW	**LOW_CONTENTION:** Set to '1' if a LP low fault is registered by at the D-PHY contention detector
18	0x0 RW	**HIGH_CONTENTION:** Set to '1' if a LP high fault is registered by at the D-PHY contention detector
17	0x0 RW	**TXDSI_VC_ID_INVALID:** Set to '1' if the received virtual channel ID is invalid
16	0x0 RW	**TXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to '1' if the received data type is not recognized
15	0x0 RW	**TXCHECKSUM_ERROR:** Set to '1' if the computed CRC differs from the received CRC value during the reception of packets by Arasan_DSI host.
14	0x0 RW	**TXECC_MULTIBIT_ERROR:** Set to '1' if there is no ECC correction for the packet or there are more than 2 bit errors in the packet received by Arasan_DSI_host
13	0x0 RW	**TXECC_SINGLE_BIT_ERROR:** Set to '1' if ECC syndrome was computed and is corrected for one bit error during the reception of packets by the Arasan_DSI_host
12	0x0 RW	**TXFALSE_CONTROL_ERROR:** Set to '1' if a control error is observed on the lanes by the Arasan_DSI_host
11	0x0 RW	**RXDSI_VC_ID_INVALID:** Set to '1' if the virtual channel ID is invalid by the display device is reported in the Acknowledge packet by the display device
10	0x0 RW	**RXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to '1' if the data type is not recognized by the display device is reported in the Acknowledge packet by the display device
9	0x0 RW	**RXCHECKSUM_ERROR:** Set to '1' if the computed CRC differs from the received CRC value and is reported in the Acknowledge packet by the display device
8	0x0 RW	**RXECC_MULTIBIT_ERROR:** Set to '1' if there is no ECC correction for the packet or there are more than 2 bit errors in the packet is reported in the Acknowledge packet by the display device
7	0x0 RW	**RXECC_SINGLE_BIT_ERROR:** Set to '1' if ECC syndrome was computed and corrected for one bit error is reported in the Acknowledge packet by the display device
6	0x0 RW	**RXFALSE_CONTROL_ERROR:** Set to '1' if a control error is reported in the Acknowledge packet by the display device
5	0x0 RW	**RXHS_RECEIVE_TIMEOUT_ERROR:** Set to '1' if the high speed receive timer value expires and data transfer lasts on the data lane is reported in the Acknowledge packet by the display device
4	0x0 RW	**RX_LP_TX_SYNC_ERROR:** Set to '1' if Low power transmission sync error occurs in the display device and is reported in the Acknowledge packet by the display device

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**RXESCAPE_MODE_ENTRY_ERROR:** Set to '1' if Escape Mode Entry command is not understandable by the display device and is reported in the Acknowledge packet by the display device
2	0x0 RW	**RXEOTSYNCERROR:** Reserved.
1	0x0 RW	**RXSOTSYNCERROR:** Set to '1' if a start of transmission synchronisation error is reported in the Acknowledge packet by the display device
0	0x0 RW	**RXSOTERROR:** Set to '1' if a start of transmission error is reported in the Acknowledge packet by the display device

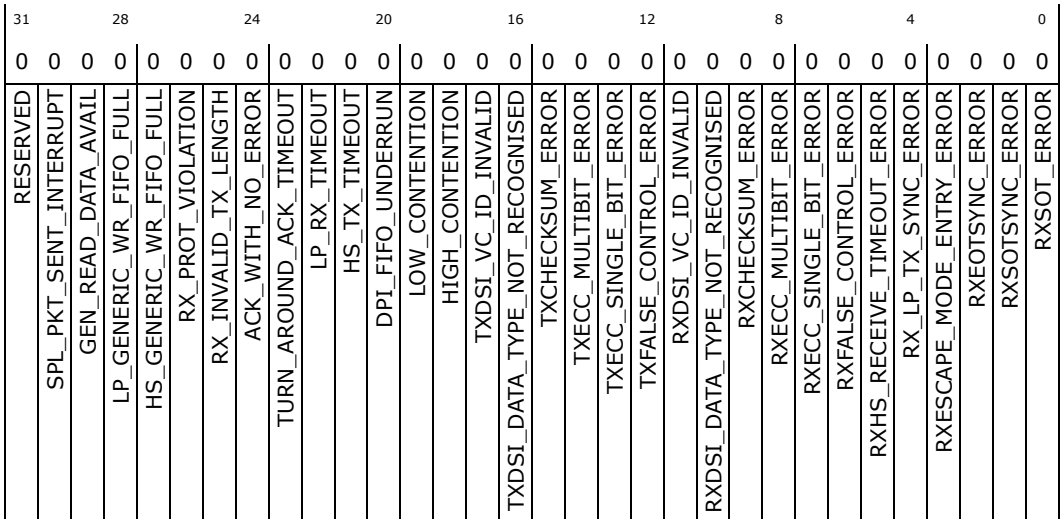
4.2.107 MIPIC_INTR_EN_REG—Offset B808h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B808h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Reserved.
30	0x0 RW	**SPL_PKT_SENT_INTERRUPT:** Set to enable the confirmation of transmission of the DPI event specific commands set in the dpi control and dpi data register
29	0x0 RW	**GEN_READ_DATA_AVAIL:** Set to enable Generic Read available interrupt
28	0x0 RW	**LP_GENERIC_WR_FIFO_FULL:** Set to indicate that the LP generic write fifo is full

Bit Range	Default & Access	Field Name (ID): Description
27	0x0 RW	**HS_GENERIC_WR_FIFO_FULL:** Set to indicate that the HS generic write fifo is full
26	0x0 RW	**RX_PROT_VIOLATION:** Set to enable protocol violation error
25	0x0 RW	**RX_INVALID_TX_LENGTH:** Set to enable invalid transmission length error
24	0x0 RW	**ACK_WITH_NO_ERROR:** Set to enable acknowledge trigger message reception with out any error
23	0x0 RW	**TURN_AROUND_ACK_TIMEOUT:** Set to enable turn around acknowledgement ,sequence timeout
22	0x0 RW	**LP_RX_TIMEOUT:** Set to enable low power reception count timeouts
21	0x0 RW	**HS_TX_TIMEOUT:** Set to enable a high speed transmission timeout
20	0x0 RW	**DPI_FIFO_UNDERRUN:** Set to enable if there is no data in the dpi fifo to make a in time delivery of the pixel data to the DSI receiver
19	0x0 RW	**LOW_CONTENTION:** Set to enable a LP low fault interrupt
18	0x0 RW	**HIGH_CONTENTION:** Set to enable a LP high fault interrupt
17	0x0 RW	**TXDSI_VC_ID_INVALID:** Set to enable the interrupt if the received packets virtual channel ID is invalid
16	0x0 RW	**TXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to enable the interrupt if the received packets data type is not recognized
15	0x0 RW	**TXCHECKSUM_ERROR:** Set to enable the interrupt if the computed CRC differs from the received CRC value for the received packets
14	0x0 RW	**TXECC_MULTIBIT_ERROR:** Set to enable the interrupt if there is no ECC correction for the packet or there are more than 2 bit errors in the packet received by Arasan DSI host
13	0x0 RW	**TXECC_SINGLE_BIT_ERROR:** Set to enable the interrupt if ECC syndrome was computed and is corrected for one bit error during the reception of packets by the Arasan DSIhost
12	0x0 RW	**TXFALSE_CONTROL_ERROR:** Set to enable the interrupt for the control error.,observed on the lanes by the Arasan_DSI_host
11	0x0 RW	**RXDSI_VC_ID_INVALID:** Set to enable the interrupt for invalid virtual channel ID in the acknowledgment packet reports
10	0x0 RW	**RXDSI_DATA_TYPE_NOT_RECOGNISED:** Set to enable the interrupt for the un recognized data type in the acknowledgment packet reports
9	0x0 RW	**RXCHECKSUM_ERROR:** Set to enable the interrupt for the computed CRC differs from the received CRC value in the acknowledgment packet reports
8	0x0 RW	**RXECC_MULTIBIT_ERROR:** Set to enable the interrupt for no ECC correction for the packet or there are more than 2 bit errors reported in the acknowledgment packet

Bit Range	Default & Access	Field Name (ID): Description
7	0x0 RW	**RXECC_SINGLE_BIT_ERROR:** Set to enable the interrupt for ECC syndrome computation and one bit error correction for the acknowledgment packet
6	0x0 RW	**RXFALSE_CONTROL_ERROR:** Set to enable the interrupt for control error in the acknowledgment packet reports
5	0x0 RW	**RXHS_RECEIVE_TIMEOUT_ERROR:** Set to enable the interrupt for the high speed receive timeout Error in the acknowledgment packet reports
4	0x0 RW	**RX_LP_TX_SYNC_ERROR:** Set to enable the interrupt for Low power transmission sync error in the acknowledgment packet reports
3	0x0 RW	**RXESCAPE_MODE_ENTRY_ERROR:** Set to enable the interrupt for Escape Mode Entry command error in the acknowledgment packet reports
2	0x0 RW	**RXEOTSYNC_ERROR:** Set to enable the interrupt for End of transmission synchronisation Error in the acknowledgement packet reports
1	0x0 RW	**RXSOTSYNC_ERROR:** Set to enable the interrupt for start of transmission synchronisation error in the acknowledgement packet reports
0	0x0 RW	**RXSOT_ERROR:** Set to enable the interrupt for start of transmission error in the acknowledgment packet reports

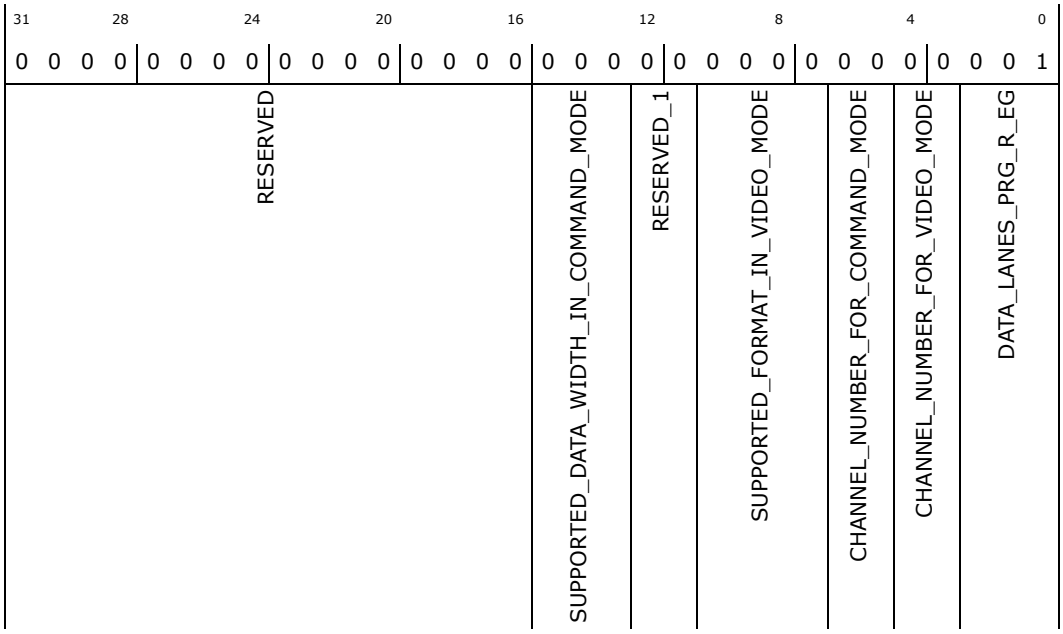
4.2.108 MIPIC_DSI_FUNC_PRG__REG—Offset B80Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B80Ch

Default: 00000001h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:13	0x0 RW	**SUPPORTED_DATA_WIDTH_IN_COMMAND_MODE:** 000 --) Reserved, 001 --) 16 bit data , 010 --) 9 bit data , 011 --) 8 bit data , 100 --) option 1 : 101 --) option 2 : 110 to 111 --) Reserved
12:11	0x0 RO	**RESERVED_1:** Reserved.
10:7	0x0 RW	**SUPPORTED_FORMAT_IN_VIDEO_MODE:** Supported colour format, 0001 --) RGB565, 0010 --) RGB666, 0011 --) RGB 666 loosely packed format, 0100 --) RGB888
6:5	0x0 RW	**CHANNEL_NUMBER_FOR_COMMAND_MODE:** Virtual channel number for command mode is programmed by the processor
4:3	0x0 RW	**CHANNEL_NUMBER_FOR_VIDEO_MODE:** Virtual channel number for command mode is programmed by the processor
2:0	0x1 RW	**DATA_LANES_PRG_R_EG:** Number of data lanes to be supported is programmed by the processor

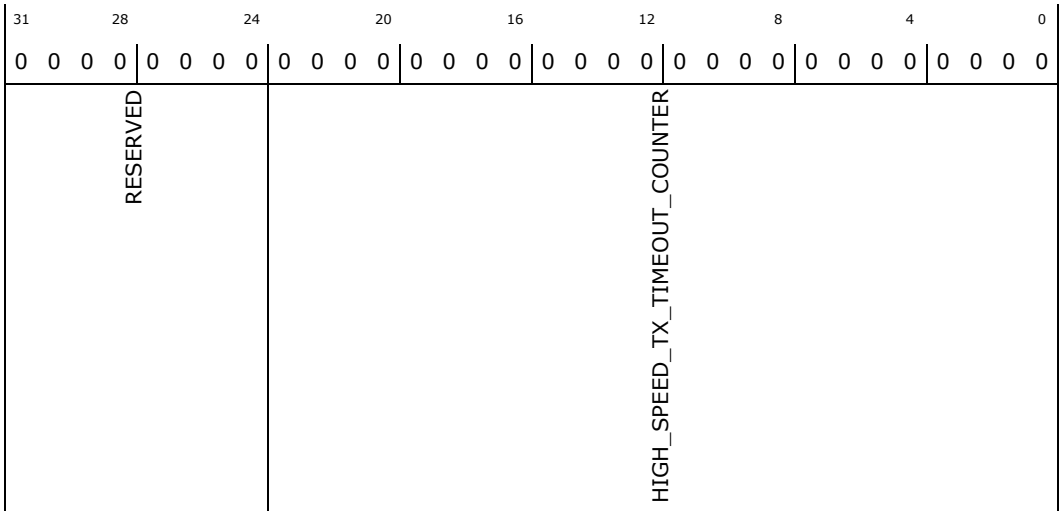
4.2.109 MIPIC_HS_TX_TIMEOUT_REG—Offset B810h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B810h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:0	0x0 RW	**HIGH_SPEED_TX_TIMEOUT_COUNTER:** The maximum duration allowed for the DSI host ,to remain in high speed mode for a transmission. If the counter expires, HS mode is terminated with EOT and the lanes enter stop state

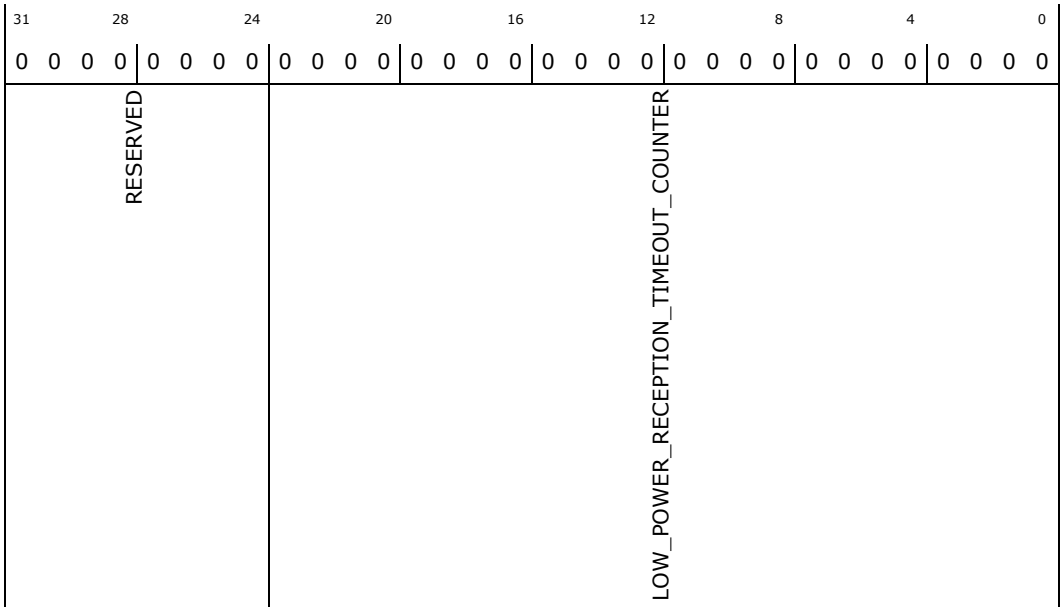
4.2.110 MIPIC_LP_RX_TIMEOUT_REG—Offset B814h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B814h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:0	0x0 RW	**LOW_POWER_RECEPTION_TIMEOUT_COUNTER:** Timeout value to be checked for received short packets .If the timer expires the DSI Host enters stop state

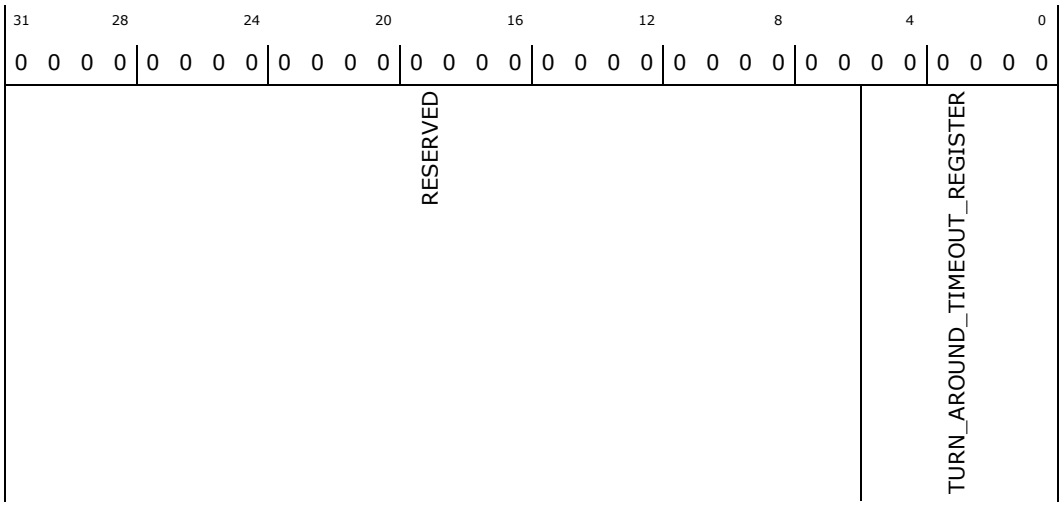
4.2.111 MIPIC_TURN_AROUND_TIMEOUT_REG—Offset B818h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B818h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RO	**RESERVED:** Reserved.
5:0	0x0 RW	**TURN_AROUND_TIMEOUT_REGISTER:** Timeout value to be checked after the DSI host makes a turn around in the direction of transfers. If the timer expires the DSI Host enters stop state

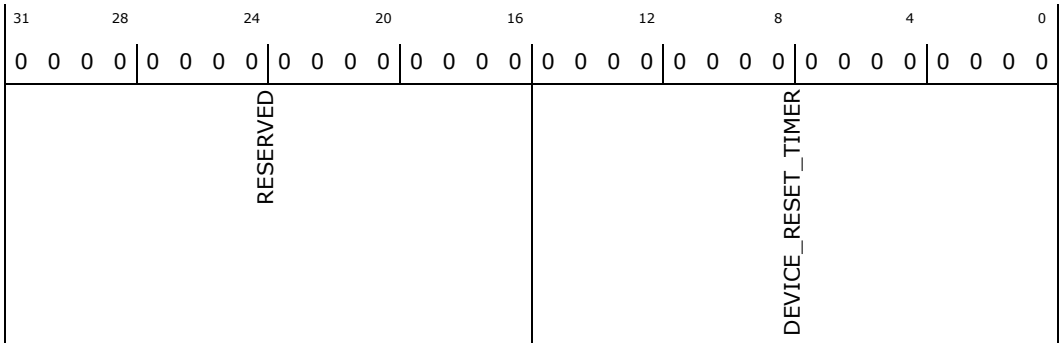
4.2.112 MIPIC_DEVICE_RESET_TIMER—Offset B81Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B81Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**DEVICE_RESET_TIMER:** Timeout value to be checked for device to be reset after issuing reset entry command. If the timer expires the DSI Host enters normal operation

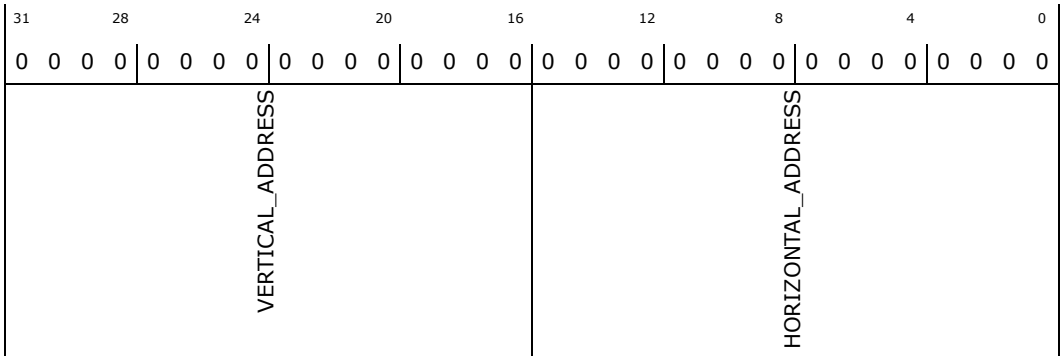
4.2.113 MIPIC_DPI_RESOLUTION_REG—Offset B820h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B820h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**VERTICAL_ADDRESS:** Shows the vertical address count in lines
15:0	0x0 RW	**HORIZONTAL_ADDRESS:** Shows the horizontal address count in pixels

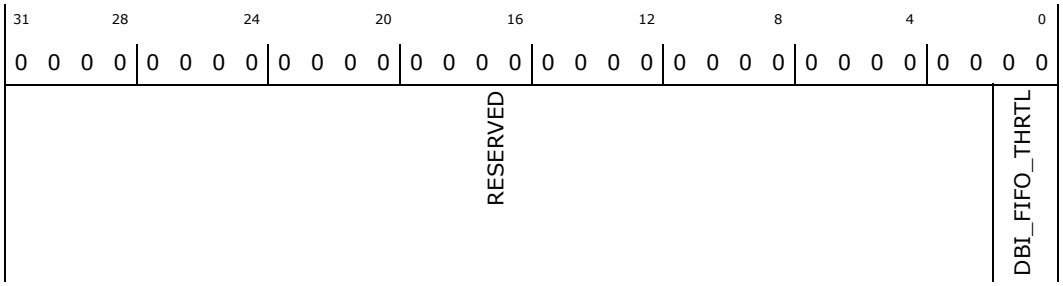
4.2.114 MIPIC_DBI_RESOLUTION_REG—Offset B824h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B824h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:2	0x0 RO	**RESERVED:** Reserved.
1:0	0x0 RW	**DBI_FIFO_THRTL:** DBI FIFO's watermark can be set using the following bits so as to enable dbi_stall de-assertion whenever the below FIFO condition is reached: 00 - (1/2) DBI fifo empty 01 - (1/4) DBI fifo empty 10 - 7 locations are empty 11 - Reserved

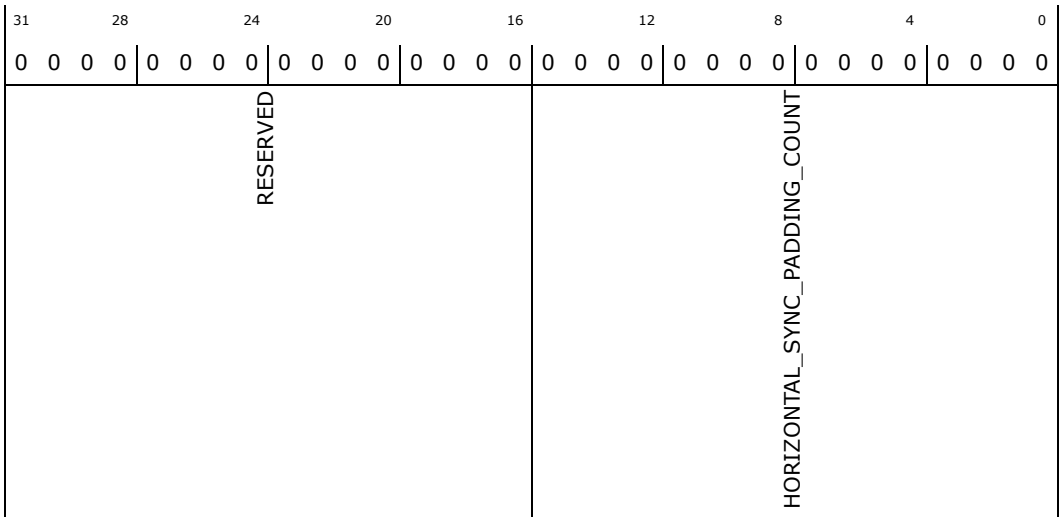
4.2.115 MIPIC_HORIZ_SYNC_PADDING_COUNT—Offset B828h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B828h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_SYNC_PADDING_COUNT:** Shows the horizontal sync padding value in terms of txbyteclkhs

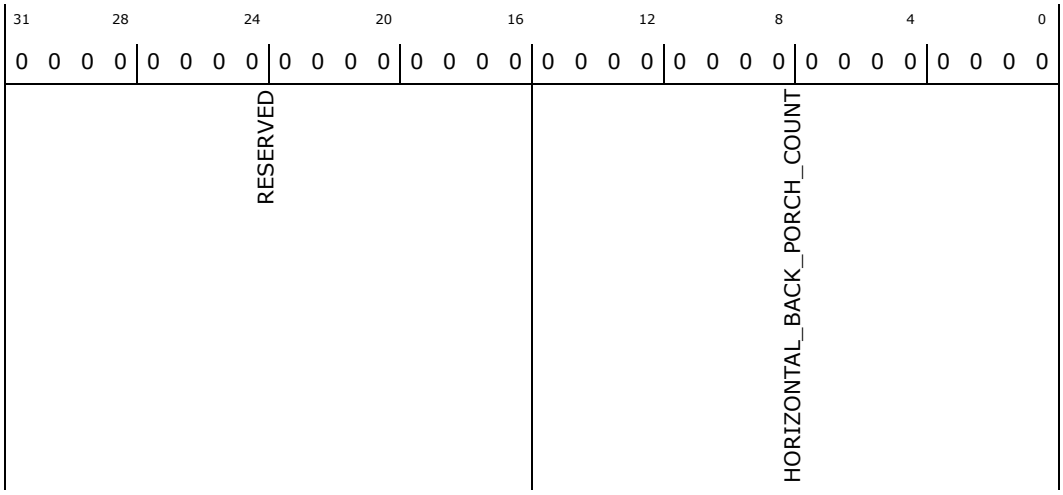
4.2.116 MIPIC_HORIZ_BACK_PORCH_COUNT—Offset B82Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B82Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_BACK_PORCH_COUNT:** Shows the horizontal back porch value in terms of txbyteclkhs

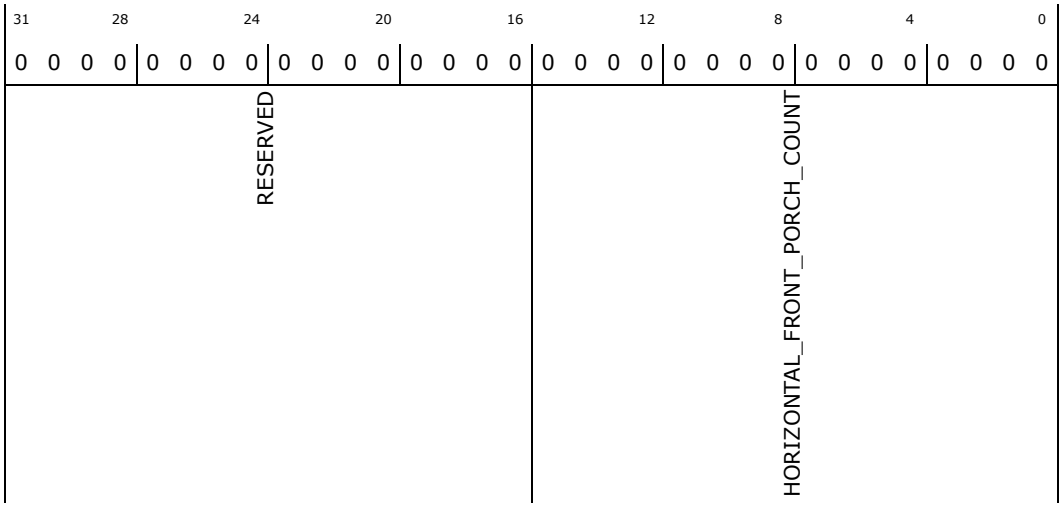
4.2.117 MIPIC_HORIZ_FRONT_PORCH_COUNT—Offset B830h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B830h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_FRONT_PORCH_COUNT:** Shows the horizontal front porch value in terms of txbyteclkhs

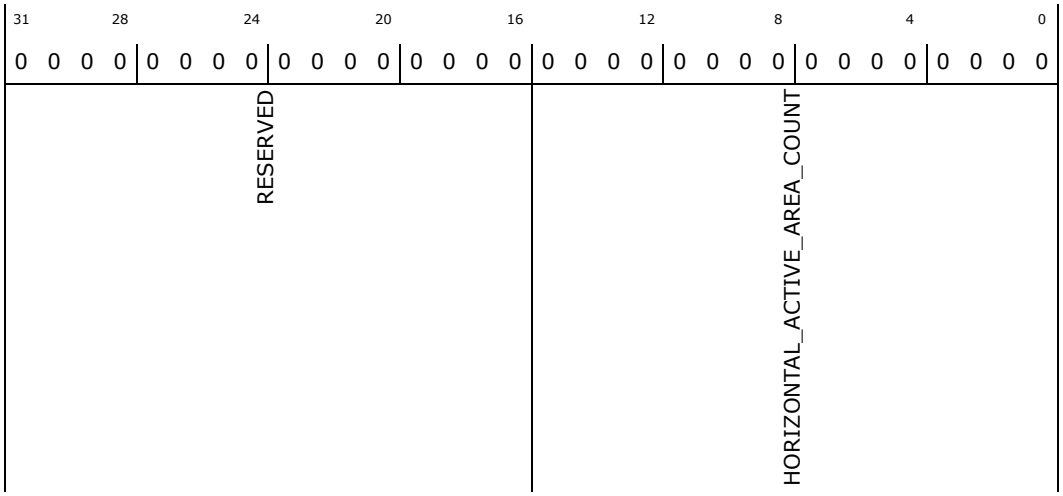
4.2.118 MIPIC_HORIZ_ACTIVE_AREA_COUNT—Offset B834h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B834h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**HORIZONTAL_ACTIVE_AREA_COUNT:** Shows the horizontal active area value in terms of txbyteclkhs

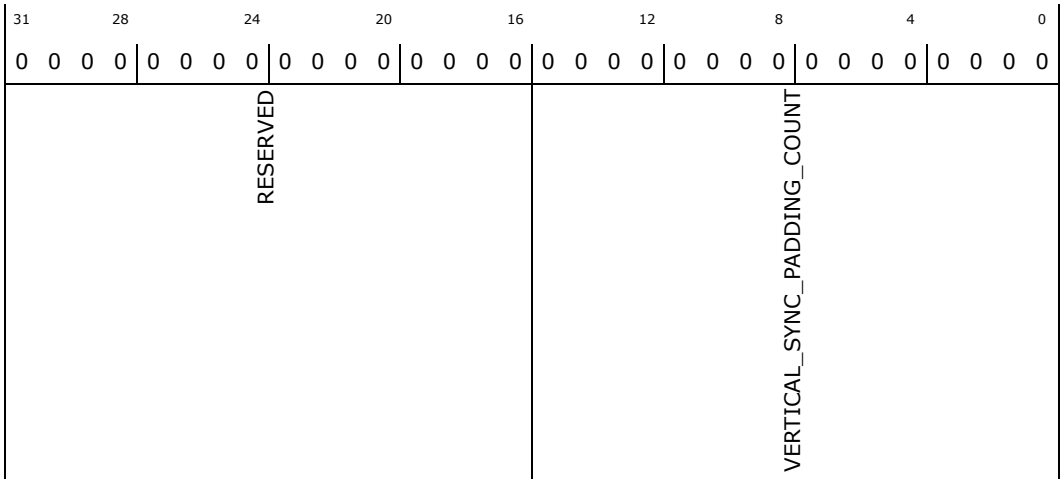
4.2.119 MIPIC_VERT_SYNC_PADDING_COUNT—Offset B838h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B838h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**VERTICAL_SYNC_PADDING_COUNT:** Shows the vertical sync padding value in terms of lines

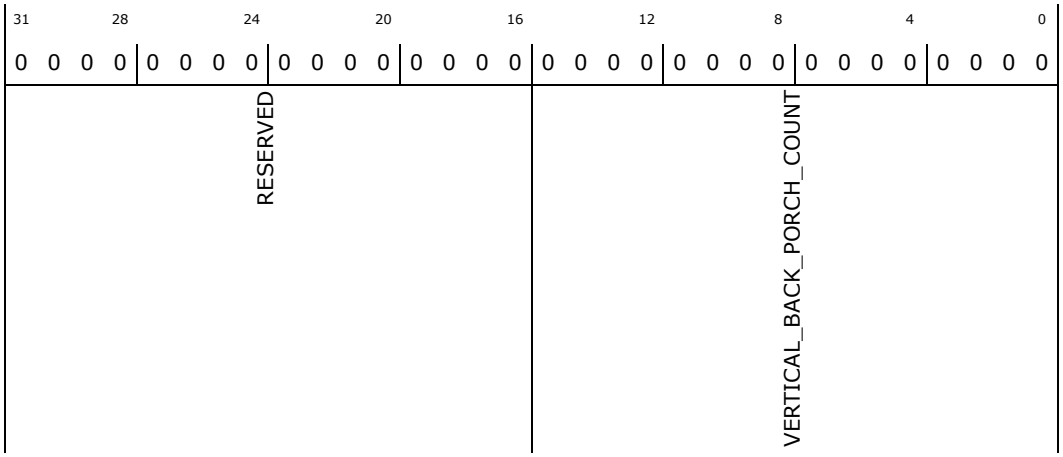
4.2.120 MIPIC_VERT_BACK_PORCH_COUNT—Offset B83Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B83Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**VERTICAL_BACK_PORCH_COUNT:** Shows the vertical back porch value in terms of lines

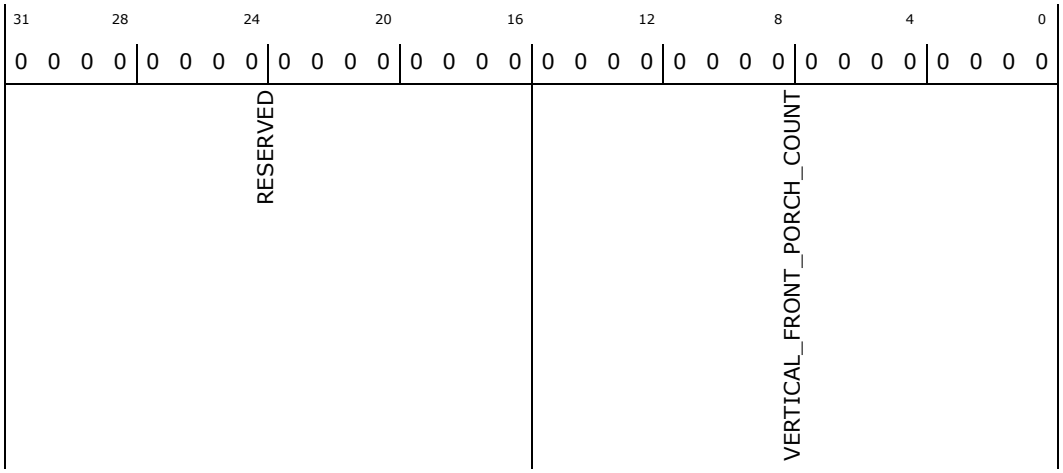
4.2.121 MIPIC_VERT_FRONT_PORCH_COUNT—Offset B840h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B840h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15:0	0x0 RW	**VERTICAL_FRONT_PORCH_COUNT:** Shows the vertical front porch value in terms of lines

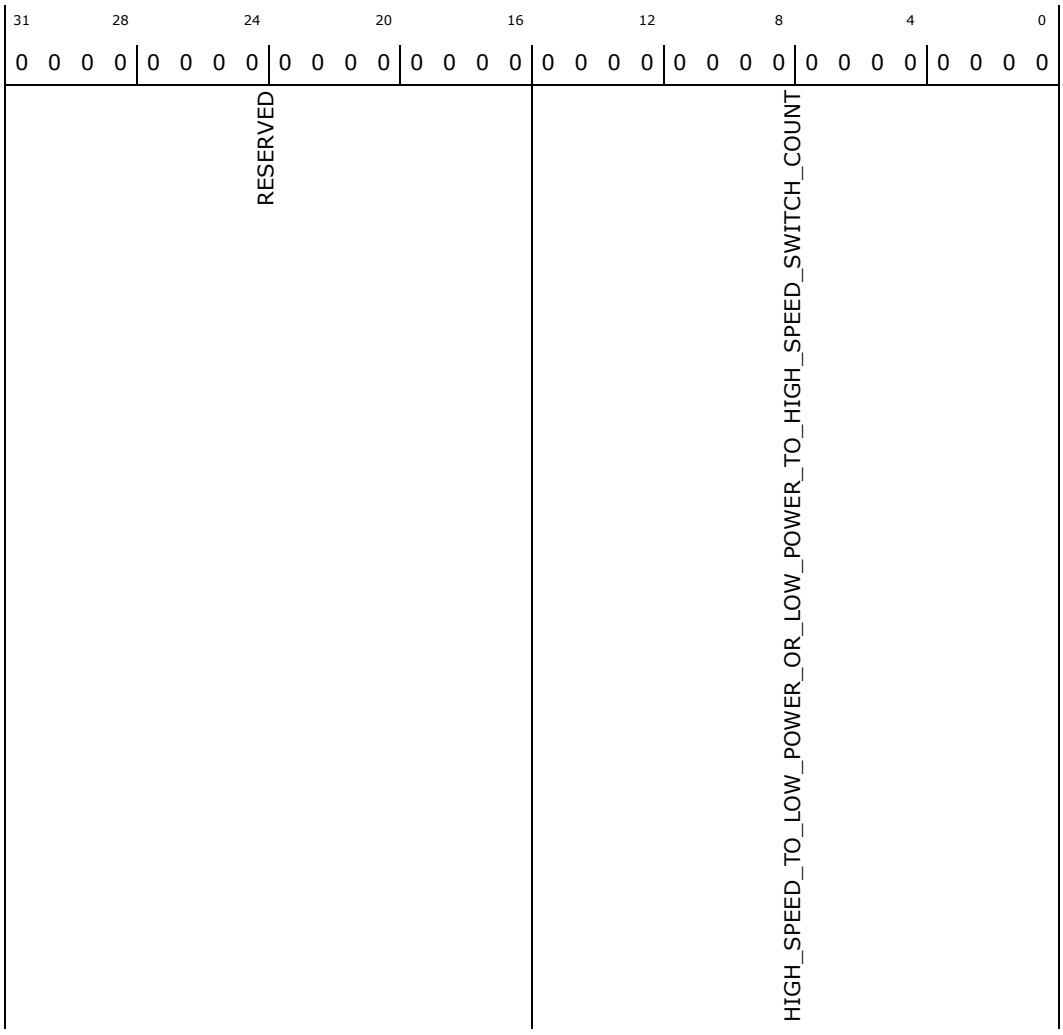
4.2.122 MIPIC_HIGH_LOW_SWITCH_COUNT—Offset B844h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B844h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** High speed to low power or Low power to high speed switching time in terms of txbyteclkhs
15:0	0x0 RW	**HIGH_SPEED_TO_LOW_POWER_OR_LOW_POWER_TO_HIGH_SPEED_SWITCH_COUNT:** High speed to low power or Low power to high speed switching time in terms of txbyteclkhs

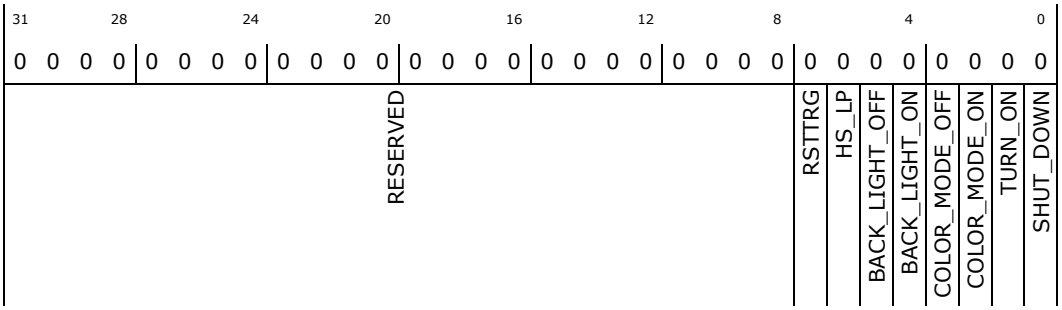
4.2.123 MIPIC_DPI_CTRL_REG—Offset B848h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B848h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:**
7	0x0 RW	**RSTTRG:** Reserved.
6	0x0 RW	**HS_LP:** Set to '0' to indicate the special packets are sent through the DSI link using HS transmission and set to '1' to indicate that the special packets are sent through the DSI link using low power mode
5	0x0 RW	**BACK_LIGHT_OFF:** Set to '1' to indicate a backlight OFF short packet has to be packetised for the DPI's virtual channel
4	0x0 RW	**BACK_LIGHT_ON:** Set to '1' to indicate a backlight ON short packet has to be packetised for the DPI's virtual channel
3	0x0 RW	**COLOR_MODE_OFF:** Set to '1' to indicate a color mode OFF short packet has to be packetised for the DPI's virtual channel
2	0x0 RW	**COLOR_MODE_ON:** Set to '1' to indicate a color mode ON short packet has to be packetised for the DPI's virtual channel
1	0x0 RW	**TURN_ON:** Set to '1' to indicate a turn on short packet has to be packetised for the DPI's virtual channel
0	0x0 RW	**SHUT_DOWN:** Set to '1' to indicate a shut down short packet has to be packetised for the DPI's virtual channel

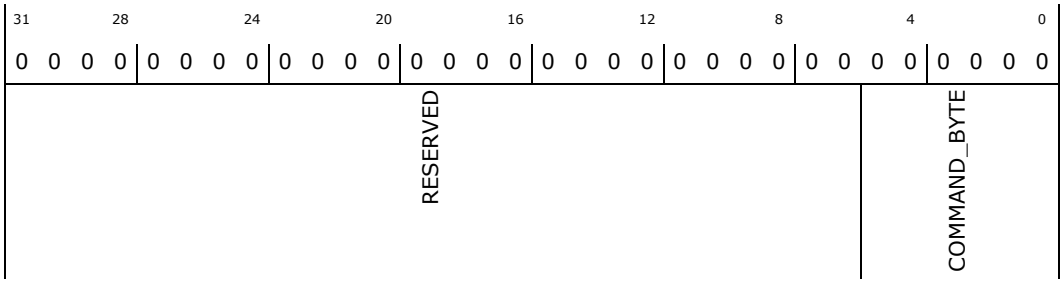
4.2.124 MIPIC_DPI_DATA_REGISTER—Offset B84Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B84Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RO	**RESERVED:** Reserved.
5:0	0x0 RW	**COMMAND_BYTE:** Command Byte to represent the new or not defined command bytes usage for special features representation. [Like backlight ON and OFF]. This register should be programmed before the DPI control register is being programmed for backlight ON/OFF

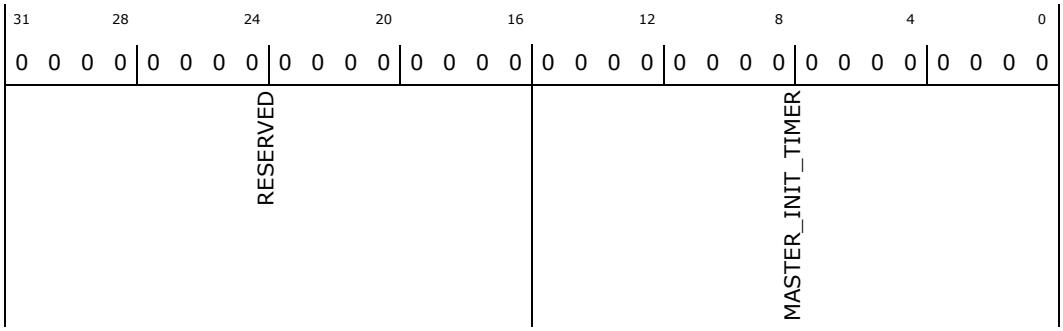
4.2.125 MIPIC_INIT_COUNT_REGISTER—Offset B850h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B850h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
15:0	0x0 RW	**MASTER_INIT_TIMER:** Counter value in terms of low power clock to initialise the DSI Host IP [TINT] that drives a stop state on the mipi's D-PHY bus

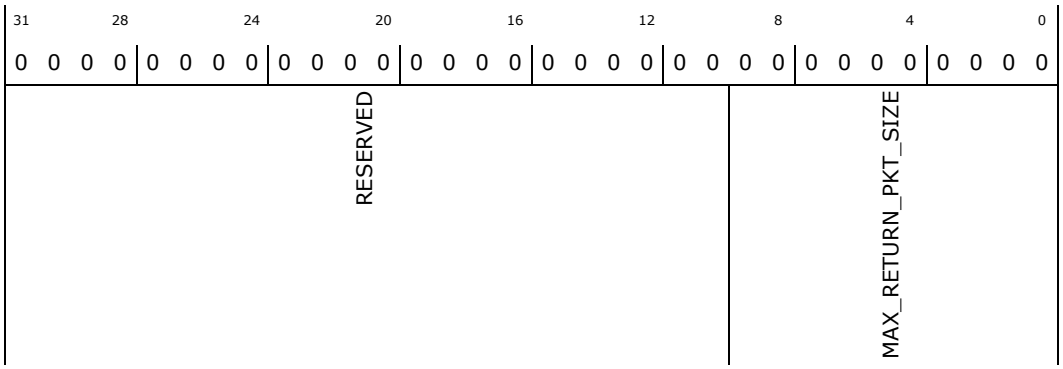
4.2.126 MIPIC_MAX_RETURN_PKT_SIZE_REGISTER—Offset B854h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B854h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:10	0x0 RO	**RESERVED:** Reserved.
9:0	0x0 RW	**MAX_RETURN_PKT_SIZE:** Set the count value in bytes to collect the return data packet for reverse direction data flow in data lane0 in response to a DBI read operation

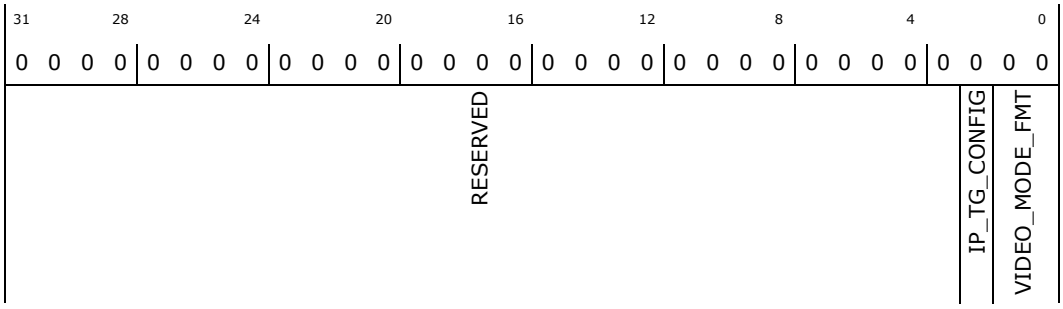
4.2.127 MIPIC_VIDEO_MODE_FORMAT_REGISTER—Offset B858h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B858h

Default: 00000000h



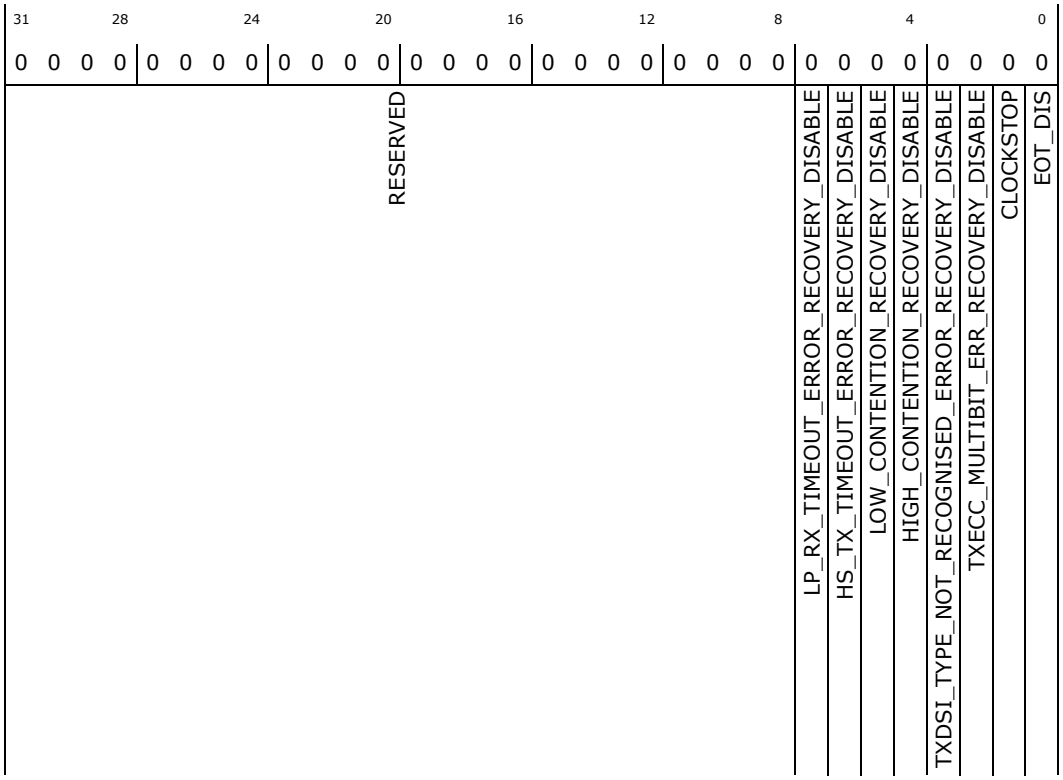
Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Reserved.
2	0x0 RW	**IP_TG_CONFIG:** Set by the processor to inform that the DSI controller should discontinue the DPI transfer after the last line of the VFP after ip_tg_enable deassertion. By default, this bit is set to 0. 0 - After ip_tg_enable deassertion, DSI Tx controller stops the DPI transfer immediately after the current packet is transmitted. 1 - After ip_tg_enable deassertion, DSI Tx controller discontinues the DPI transfer after the last line of the VFP
1:0	0x0 RW	**VIDEO_MODE_FMT:** Sets the Video mode format (packet sequence) to be supported in DSI. In Non Burst Mode, in addition to programming this register the horizontal active area count register value should also be programmed equal to RGB word count value In Burst Mode, in addition to programming this register the horizontal active area count register value should also be programmed greater than the RGB word count value, leaving more time during a scan line for LP mode (saving power) or for multiplexing other transmissions onto the DSI link. 00 Reserved 01 - Non Burst Mode with Sync Pulse 10 - Non Burst Mode with Sync events 11 - Burst Mode

4.2.128 MIPIC_EOT_DISABLE_REGISTER—Offset B85Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B85Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7	0x0 RW	**LP_RX_TIMEOUT_ERROR_RECOVERY_DISABLE:** Set by the processor to enable or disable the LP_Rx_timeout error recovery if the processor clears LP_Rx_timeout error interrupt. 0 - LP_Rx_timeout error recovery action will be taken by the DSI Tx controller if the processor clears the LP_Rx_timeout error interrupt. 1 - If the processor clears the LP_Rx_timeout error interrupt, LP_Rx_timeout error recovery action will not happen in DSI Tx controller. LP Rx timeout error interrupt will act as an informative interrupt
6	0x0 RW	**HS_TX_TIMEOUT_ERROR_RECOVERY_DISABLE:** Set by the processor to enable or disable the HS_Tx_timeout error recovery if the processor clears HS_Tx_timeout interrupt. 0 - HS_Tx_timeout error recovery action will be taken by the DSI Tx controller if the processor clears the HS_Tx_timeout error interrupt. 1 - If the processor clears the HS_Tx_timeout error interrupt, HS_Tx_timeout error recovery action will not happen in DSI Tx controller. HS Tx timeout error interrupt will act as an informative interrupt

Bit Range	Default & Access	Field Name (ID): Description
5	0x0 RW	**LOW_CONTENTION_RECOVERY_DISABLE:** Set by the processor to enable or disable the contention recovery procedure if the processor clears Low contention interrupt. 0 - Contention recovery will happen if the processor clears Low contention interrupt. 1 - If the processor clears the low contention interrupt, contention recovery procedure will not be initiated by the DSI Tx controller. Low contention interrupt will act as an informative interrupt
4	0x0 RW	**HIGH_CONTENTION_RECOVERY_DISABLE:** Set by the processor to enable or disable the contention recovery procedure if the processor clears High contention interrupt. 0 - Contention recovery will happen if the processor clears High contention interrupt. 1 - If the processor clears the high contention interrupt, contention recovery procedure will not be initiated by the DSI Tx controller. Ignore the High Contention Interrupt in MIPI_INTR_STAT_REG
3	0x0 RW	**TXDSI_TYPE_NOT_RECOGNISED_ERROR_RECOVERY_DISABLE:** Set by the processor to enable or disable the error recovery action to be taken by the DSI Tx controller if TxDSI data type not recognized error interrupt is cleared by the processor. 0 - Error recovery action will be taken if TxDSI data type not recognized error interrupt is cleared by the processor. 1 - If TxDSI data type not recognized error interrupt is cleared by the processor, error recovery action will not be taken by the DSI TX controller. Tx DSI data type not recognized error interrupt will act as an informative interrupt
2	0x0 RW	**TXECC_MULTIBIT_ERR_RECOVERY_DISABLE:** Set by the processor to enable or disable the error recovery action to be taken by the DSI Tx controller if Tx ECC multibit error interrupt is cleared by the processor. 0 - Error recovery action will be taken if Tx ECC multibit error interrupt is cleared by the processor. 1 - If Tx ECC multibit error interrupt is cleared by the processor, error recovery action will not be taken by the DSI TX controller. Tx multibit error interrupt will act as an informative interrupt
1	0x0 RW	**CLOCKSTOP:** Set by the processor to enable or disable clock stopping feature during BLLP timing in a DPI transfer in dual channel mode or during DPI only mode and also when there is no traffic in the DBI interface in DBI only enabled mode. By default this register value is 0. 0 - clock stopping disabled 1 - clock stopping enabled
0	0x0 RW	**EOT_DIS:** Set by the processor to enable or disable EOT short packet transmission. By default this register value is 0. For backward compatibility of earlier DSI systems, EOT short packet transmission can be disabled. 0 - EOT short packet transmission enabled 1 - EOT short packet transmission disabled

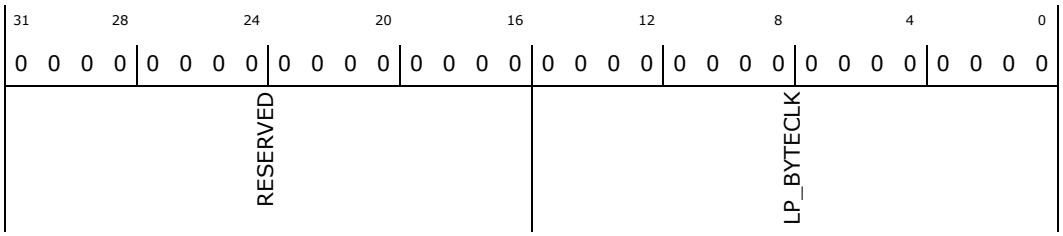
4.2.129 MIPIC_LP_BYTECLK_REGISTER—Offset B860h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B860h

Default: 00000000h



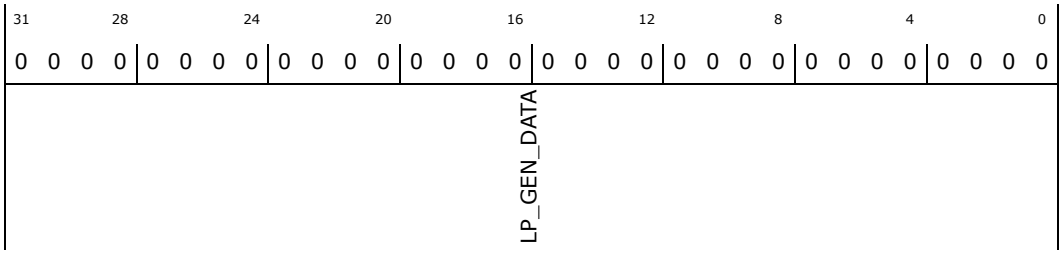
Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15:0	0x0 RW	**LP_BYTECLK:** Low power clock equivalence in terms of byte clock. The value programmed in this register is equal to the number of byte clocks occupied in one low power clock. This value is based on the byte clock (txbyteclkhs) and low power clock frequency (txclkesc)

4.2.130 MIPIC_LP_GEN_DATA_REGISTER—Offset B864h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B864h

Default: 00000000h



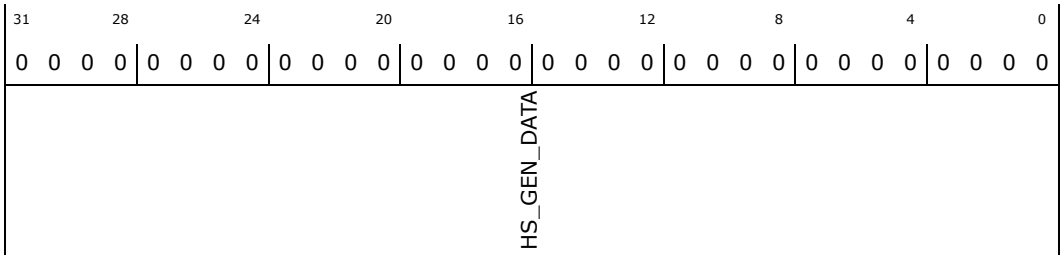
Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**LP_GEN_DATA:** Data port register used for generic data transfers in low power mode

4.2.131 MIPIC_HS_GEN_DATA_REGISTER—Offset B868h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B868h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**HS_GEN_DATA:** Data port register used for generic data transfers in low power mode

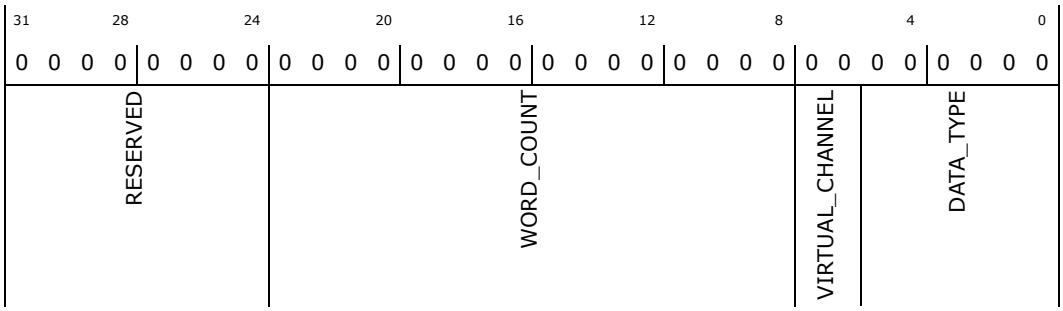
4.2.132 MIPIC_LP_GEN_CTRL_REGISTER—Offset B86Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B86Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:8	0x0 WO	**WORD_COUNT:** Specifies the word count for generic long packet Specifies the accompanied parameters for generic short packets. Note: Invalid parameters must be set to 00h
7:6	0x0 WO	**VIRTUAL_CHANNEL:** Used to specify the virtual channel for which the generic data transmission is intended

Bit Range	Default & Access	Field Name (ID): Description
5:0	0x0 WO	**DATA_TYPE:** Used to specify the generic data types 03h - Generic short write, no parameters 13h - Generic short write, 1 parameter 23h - Generic short write, 2 parameters 04h - Generic read, no parameters 14h - Generic read, 1 parameter 24h - Generic read 2 parameter 29h - Generic long write 05h - Manufacturer DCS short write, no parameter 15h - Manufacturer DCS short write, one parameter 06h - Manufacturer DCS read, no parameter 39h - Manufacturer DCS long write

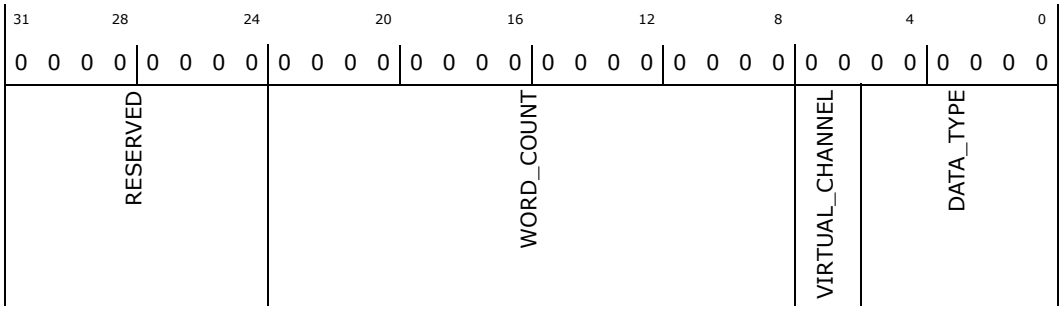
4.2.133 MIPIC_HS_GEN_CTRL_REGISTER—Offset B870h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B870h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:8	0x0 WO	**WORD_COUNT:** Specifies the word count for generic long packet Specifies the accompanied parameters for generic short packets. Note: Invalid parameters must be set to 00h
7:6	0x0 WO	**VIRTUAL_CHANNEL:** Used to specify the virtual channel for which the generic data transmission is intended

Bit Range	Default & Access	Field Name (ID): Description
5:0	0x0 WO	**DATA_TYPE:** Used to specify the generic data types 03h - Generic short write, no parameters 13h - Generic short write, 1 parameter 23h - Generic short write, 2 parameters 04h - Generic read, no parameters 14h - Generic read, 1 parameter 24h - Generic read 2 parameter 29h - Generic long write 05h - Manufacturer DCS short write, no parameter 15h - Manufacturer DCS short write, one parameter 06h - Manufacturer DCS read, no parameter 39h - Manufacturer DCS long write

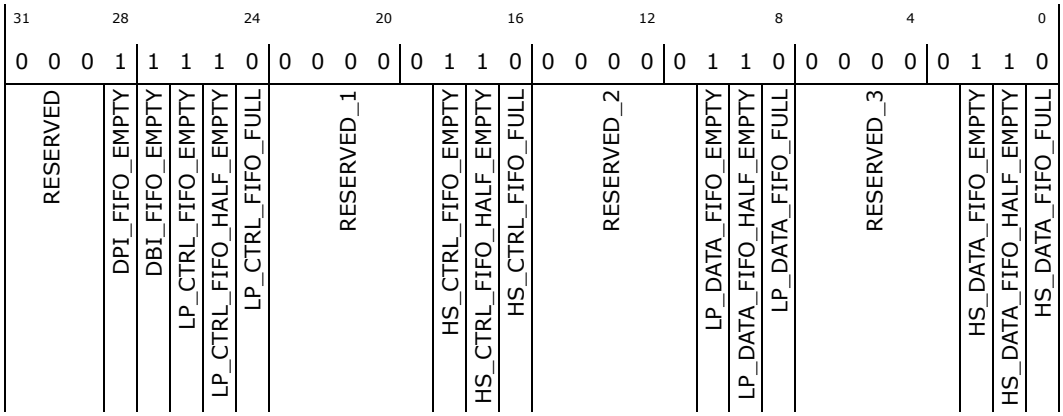
4.2.134 MIPIC_GEN_FIFO_STAT_REGISTER—Offset B874h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B874h

Default: 1E060606h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Reserved.
28	0x1 RO	**DPI_FIFO_EMPTY:** Default 1
27	0x1 RO	**DBI_FIFO_EMPTY:** Default 1
26	0x1 RO	**LP_CTRL_FIFO_EMPTY:** Default 1
25	0x1 RO	**LP_CTRL_FIFO_HALF_EMPTY:** Default 1
24	0x0 RO	**LP_CTRL_FIFO_FULL:** Default 0

Bit Range	Default & Access	Field Name (ID): Description
23:19	0x0 RO	**RESERVED_1:** Reserved.
18	0x1 RO	**HS_CTRL_FIFO_EMPTY:** Default 1
17	0x1 RO	**HS_CTRL_FIFO_HALF_EMPTY:** Default 1
16	0x0 RO	**HS_CTRL_FIFO_FULL:** Default 0
15:11	0x0 RO	**RESERVED_2:** Reserved.
10	0x1 RO	**LP_DATA_FIFO_EMPTY:** Default 1
9	0x1 RO	**LP_DATA_FIFO_HALF_EMPTY:** Default 1
8	0x0 RO	**LP_DATA_FIFO_FULL:** Default 0
7:3	0x0 RO	**RESERVED_3:** Reserved.
2	0x1 RO	**HS_DATA_FIFO_EMPTY:** Default 1
1	0x1 RO	**HS_DATA_FIFO_HALF_EMPTY:** Default 1
0	0x0 RO	**HS_DATA_FIFO_FULL:** Default 0

4.2.135 MIPIC_HS_LS_DBI_ENABLE_REG—Offset B878h

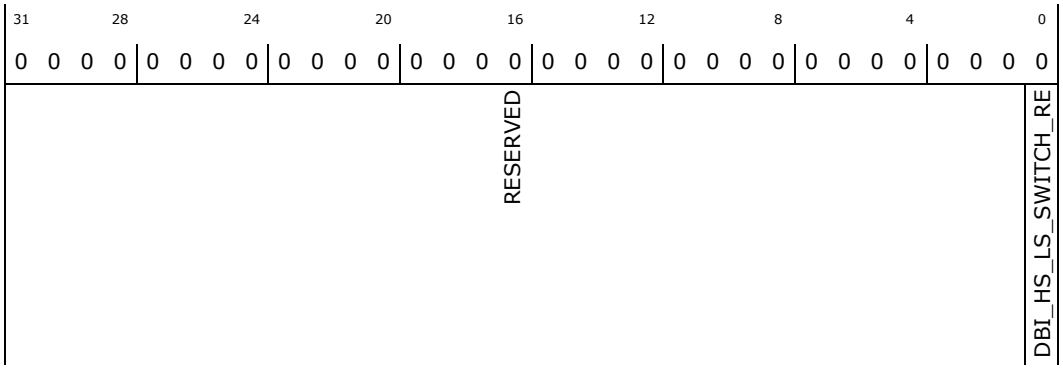
Note : dbi_hs_lp_switch_reg has to be written only if DBI FIFO is empty

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B878h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:** Reserved.
0	0x0 RW	**DBI_HS_LS_SWITCH_RE:** Set to 1 if DBI packets have to be transmitted in Low power mode Set to 0 if DBI packets have to be transmitted in High speed mode

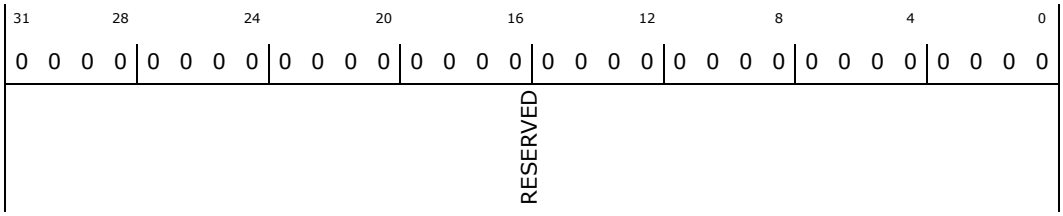
4.2.136 MIPIC_RESERVED—Offset B87Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B87Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RESERVED:** Reserved.

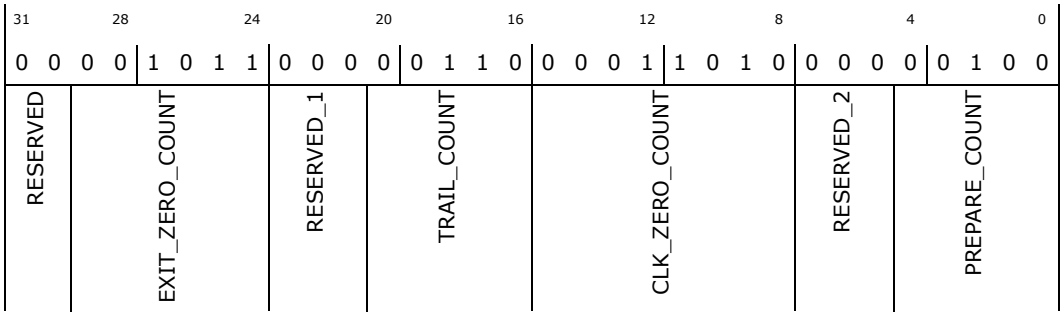
4.2.137 MIPIC_DPHY_PARAM_REG—Offset B880h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B880h

Default: 0B061A04h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** Reserved.
29:24	0xb RW	**EXIT_ZERO_COUNT:** THS_0_TIM_UI_CNT and THS_EXIT_TIM_UI_CNT for dphy are programmed as exit zero count by the processor
23:21	0x0 RO	**RESERVED_1:** Reserved.
20:16	0x6 RW	**TRAIL_COUNT:** TCLK_POST_TIM_UI_CNT and TCLK_TRAIL_TIM_UI_CNT for dphy are programmed as trail count by the processor
15:8	0x1a RW	**CLK_ZERO_COUNT:** TCLK_0_TIM_UI_CNT for dphy is programmed as clk zero count by the processor
7:5	0x0 RO	**RESERVED_2:** Reserved.
4:0	0x4 RW	**PREPARE_COUNT:** TCLK_PREP_TIM_UI_CNT and THS_PREP_TIM_UI_CNT for dphy are programmed as prepare count by the processor

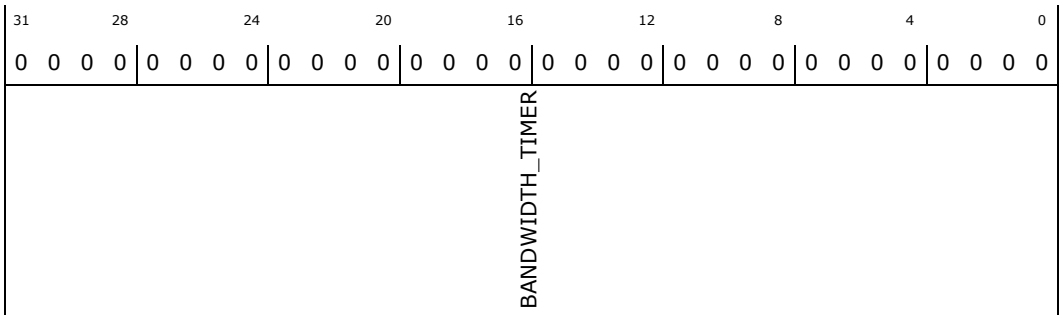
4.2.138 MIPIC_DBI_BW_CTRL_REG—Offset B884h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B884h

Default: 00000000h



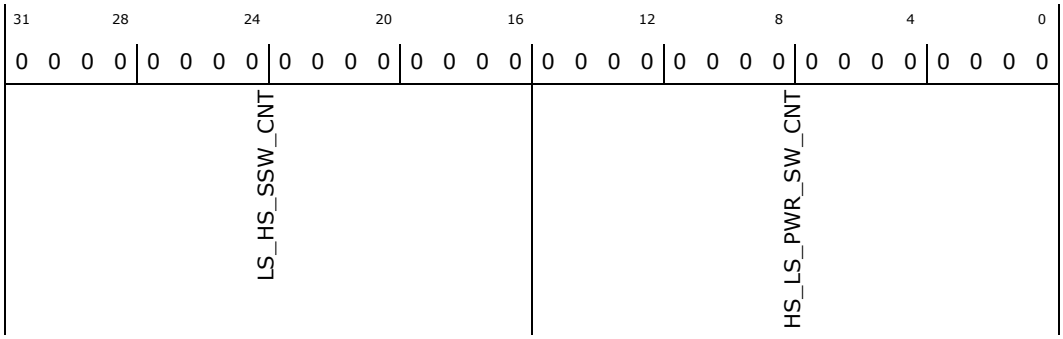
Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**BANDWIDTH_TIMER:** DBI Bandwidth control Register. The bandwidth essential for transmitting 16 long packets containing 252 bytes meant for DCS write memory command is programmed in this register in terms of byte clocks. Based on the DSI transfer rate and the number of lanes configured the time taken to transmit 16 long packets in a DSI stream varies. Note: The value programmed in this timer must be greater than the actual time taken to carry out 16 long packets transmission in DSI stream plus the time taken to transmit two blanking packets

4.2.139 MIPIC_CLK_LANE_SWITCHING_TIME_CNT—Offset B888h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B888h

Default: 00000000h



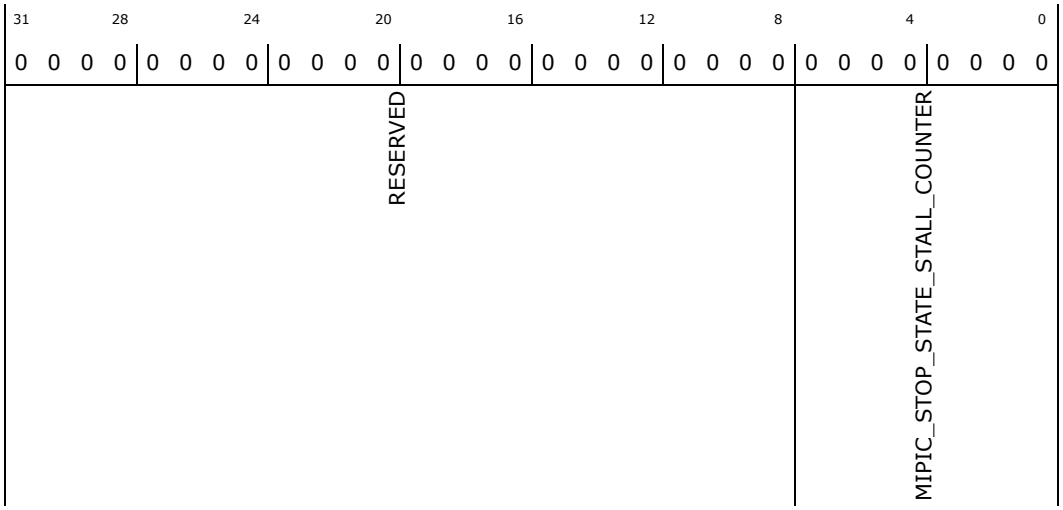
Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**LS_HS_SSW_CNT:** Low power to high speed switching time in terms byte clock (txbyteclkhs). This value is based on the byte clock (txbyteclkhs) and low power clock frequency (txclkesc). Typical value - Number of byte clocks required to switch from low power mode to high speed mode after txrequesths_clk is asserted. Current Value is ah = 10 txbyteclkhs
15:0	0x0 RW	**HS_LS_PWR_SW_CNT:** High speed to low power switching time in terms byte clock (txbyteclkhs). This value is based on the byte clock (txbyteclkhs) and low power clock frequency (txclkesc). Typical value - Number of byte clocks request to switch from high speed mode to low power mode after txrequesths_clk is de-asserted. Current Value is 14h = 20 txbyteclkhs

4.2.140 MIPIC_STOP_STATE_STALL—Offset B88Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** B88Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:**
7:0	0x0 RW	**MIPIC_STOP_STATE_STALL_COUNTER:** Delay between (stall the stop state signal) the data transfer is increased based on this counter value. This counter is calculated from txclkesc. Note: If processor programs this register then it needs to reprogram the high_low_ switch counter in B844h and lp_equivalent_byteclk reg in B860h to compensate this delay. High_low_switch_count B844h: High to low switch counter = Actual High to low switch + stop_sta_stall_reg value * Low power clock equivalence value in terms of byte clock LP equivalent byteclk register B860h: LP equivalent byteclk value = txclkesc time/ txbyteclk time * (105 + stop_sta_stall_reg value) / 105 Minimum time of Low Power short packet transfer = 105 txclkesc

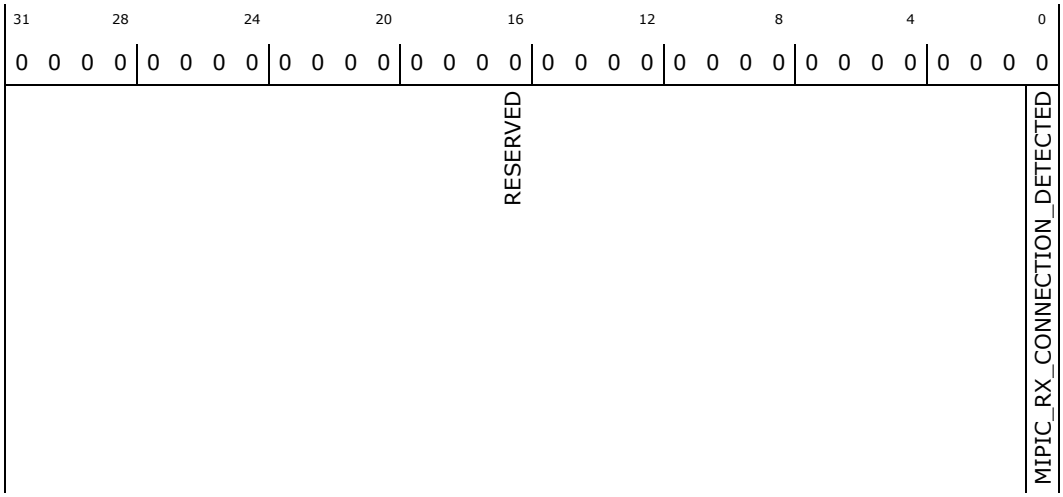
4.2.141 MIPIC_INTR_STAT_REG_1—Offset B890h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B890h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:**
0	0x0 RW	**MIPIC_RX_CONNECTION_DETECTED:** Set to 1'b1 if the contention detected in the display device and is reported in the Acknowledge packet by the display device

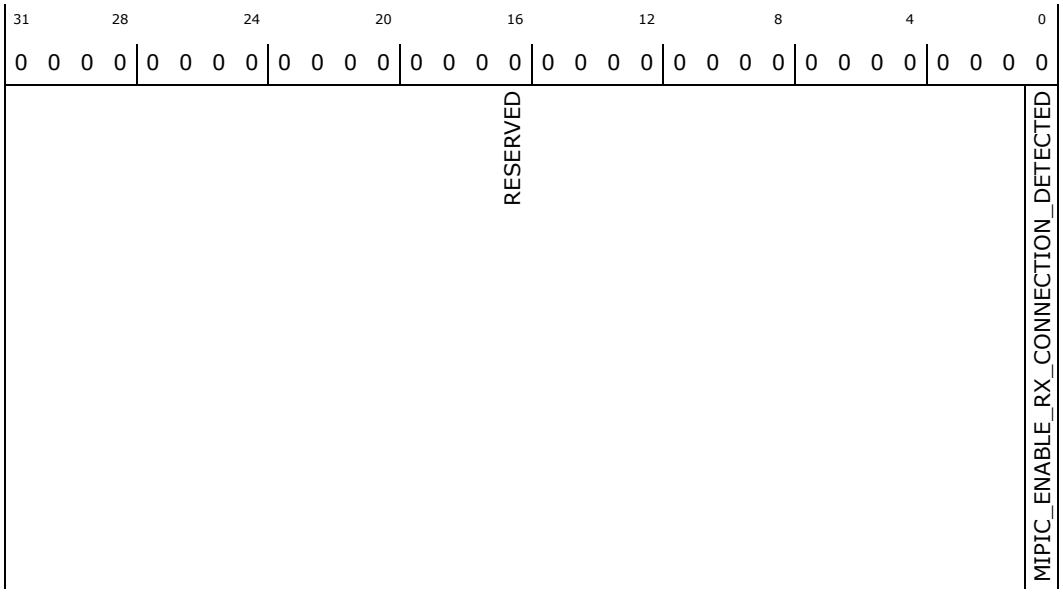
4.2.142 MIPIC_INTR_EN_REG_1—Offset B894h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B894h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:**
0	0x0 RW	**MIPIC_ENABLE_RX_CONNECTION_DETECTED:** Set to enable the interrupt for contention detected error in the acknowledgement packet reports

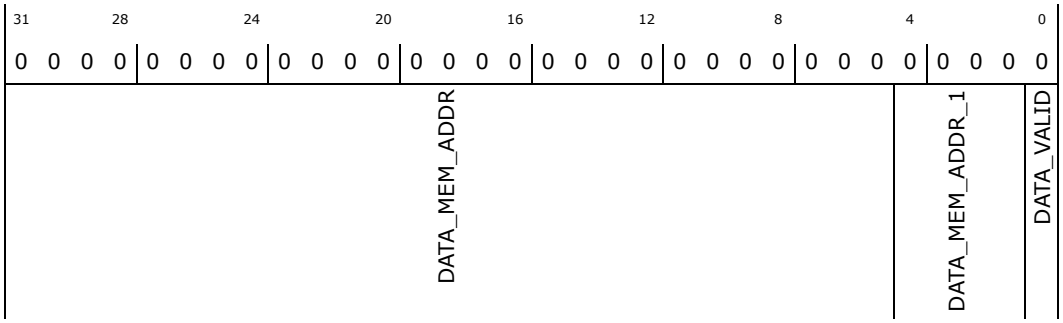
4.2.143 MIPIC_DATA_ADD—Offset B908h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B908h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RW	**DATA_MEM_ADDR:** When there is updated data for the display panel, S/W programs this register with the memory address to read from
4:1	0x0 RW	**DATA_MEM_ADDR_1:** Reserved
0	0x0 RW	**DATA_VALID:** This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

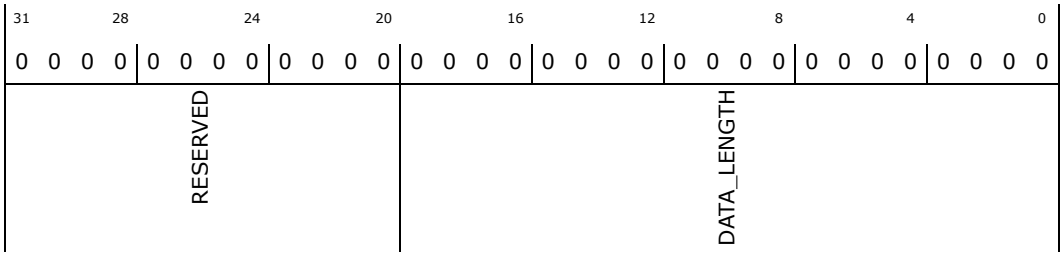
4.2.144 MIPIC_DATA_LEN—Offset B90Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B90Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**DATA_LENGTH:** This field shows the remaining length of data that needs to be read from memory, Initially set by S/W and is decremented by H/W as reads are issued

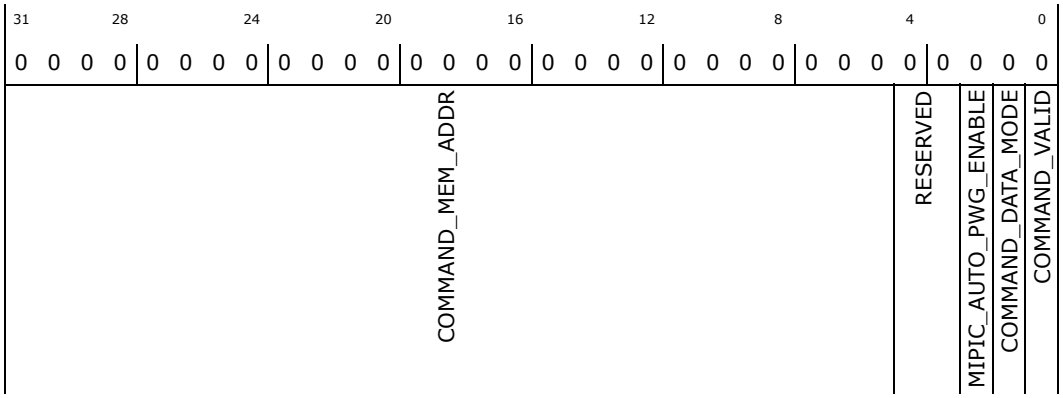
4.2.145 MIPIC_CMD_ADD—Offset B910h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B910h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RW	**COMMAND_MEM_ADDR:** When there are new commands that need to be sent to the display panel, S/W programs this register with the memory address to read the commands from
4:3	0x0 RO	**RESERVED:** MBZ
2	0x0 RW	**MIPIC_AUTO_PWG_ENABLE:** Idle state: SW driver writes to this bit to enable auto power gating for MIPIC controller 0: default 1: auto power gate is enabled
1	0x0 RW	**COMMAND_DATA_MODE:** 0: data for memory write command from system buffer that is specified by MIPI data address register 1: data for memory write command from pipe A rendering
0	0x0 RW	**COMMAND_VALID:** This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

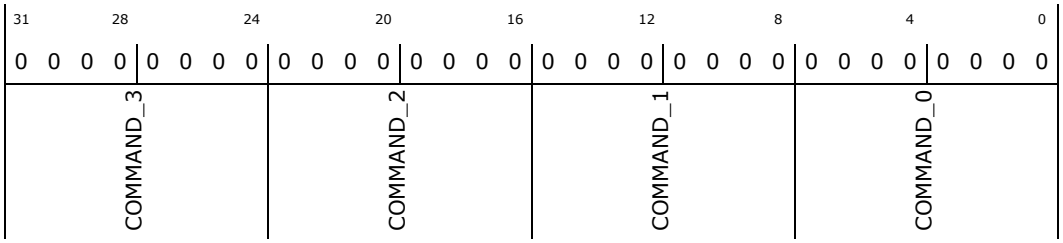
4.2.146 MIPIC_CMD_LEN—Offset B914h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B914h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RW	**COMMAND_3:** This is command 3 length (command + parameters) in bytes
23:16	0x0 RW	**COMMAND_2:** This is command 2 length (command + parameters) in bytes
15:8	0x0 RW	**COMMAND_1:** This is command 1 length (command + parameters) in bytes
7:0	0x0 RW	**COMMAND_0:** This is command 0 length (command + parameters) in bytes

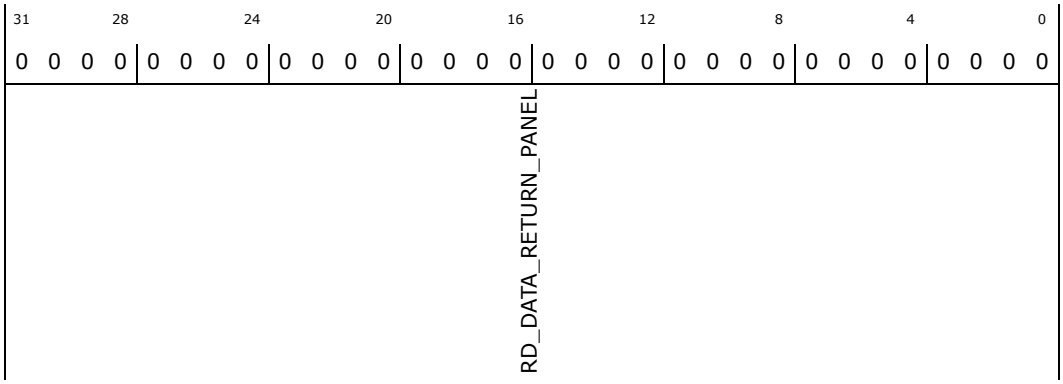
4.2.147 MIPIC_RD_DATA_RETURN0—Offset B918h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B918h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

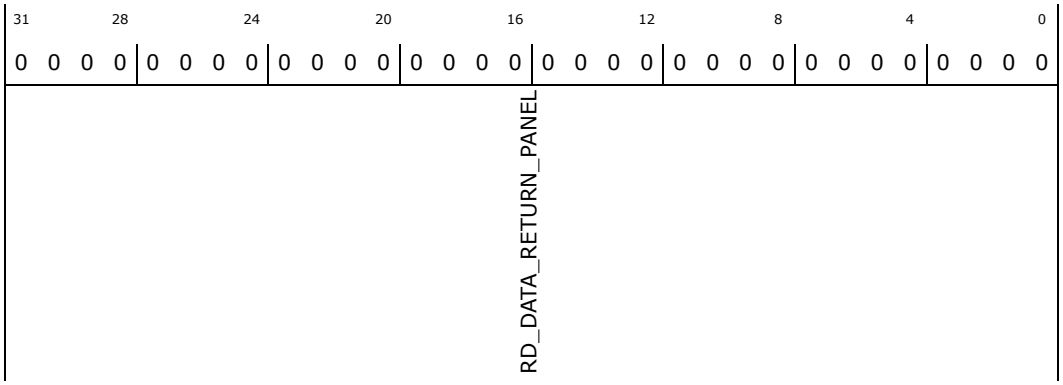
4.2.148 MIPIC_RD_DATA_RETURN1—Offset B91Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B91Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

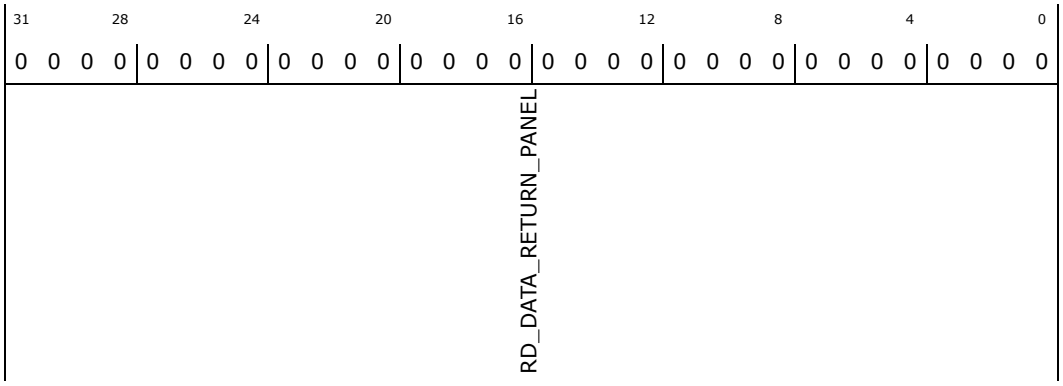
4.2.149 MIPIC_RD_DATA_RETURN2—Offset B920h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B920h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

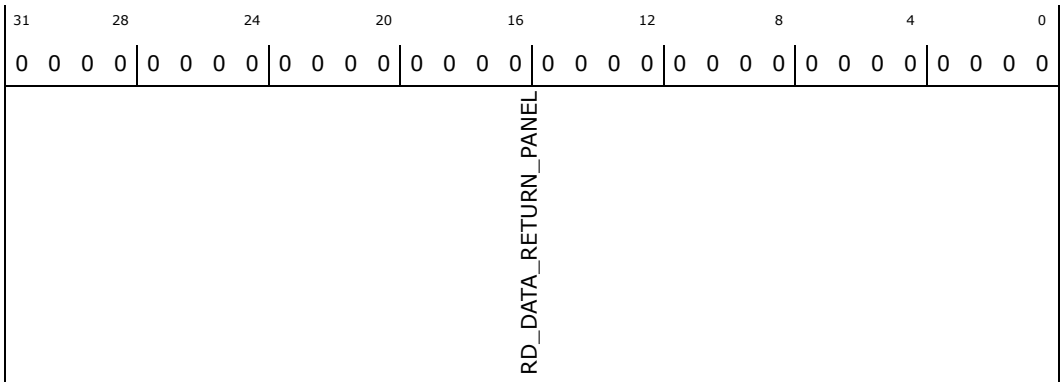
4.2.150 MIPIC_RD_DATA_RETURN3—Offset B924h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B924h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

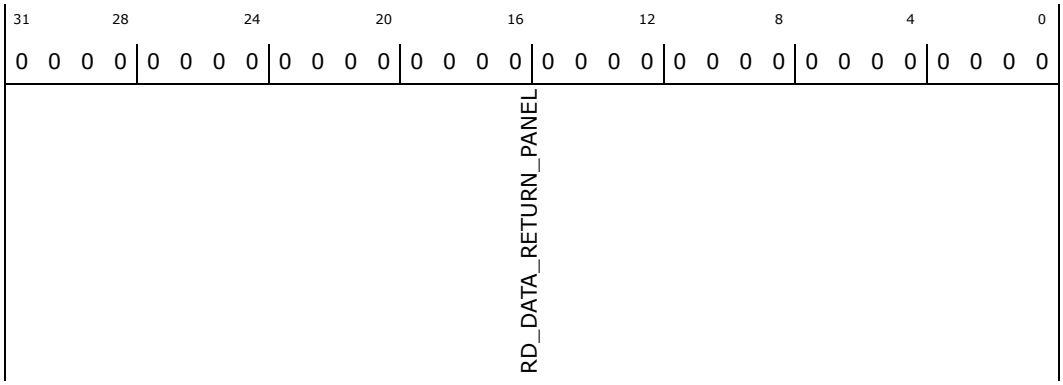
4.2.151 MIPIC_RD_DATA_RETURN4—Offset B928h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B928h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

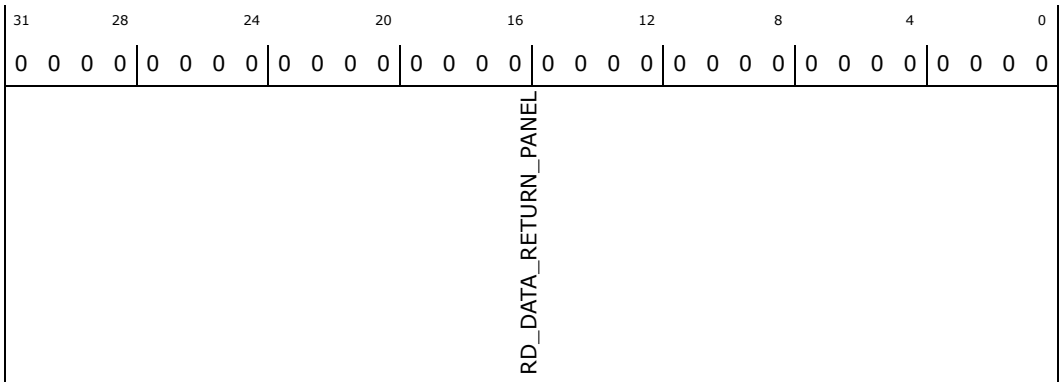
4.2.152 MIPIC_RD_DATA_RETURN5—Offset B92Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B92Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

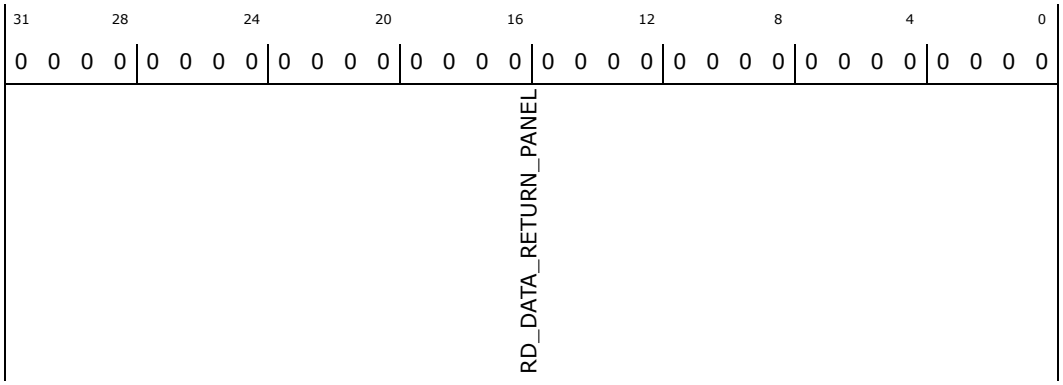
4.2.153 MIPIC_RD_DATA_RETURN6—Offset B930h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B930h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

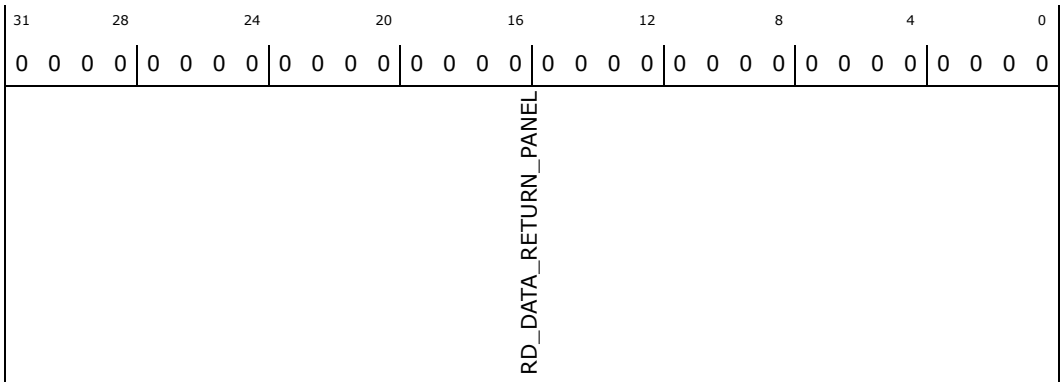
4.2.154 MIPIC_RD_DATA_RETURN7—Offset B934h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B934h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RD_DATA_RETURN_PANEL:** This is the configuration data returned from the panel

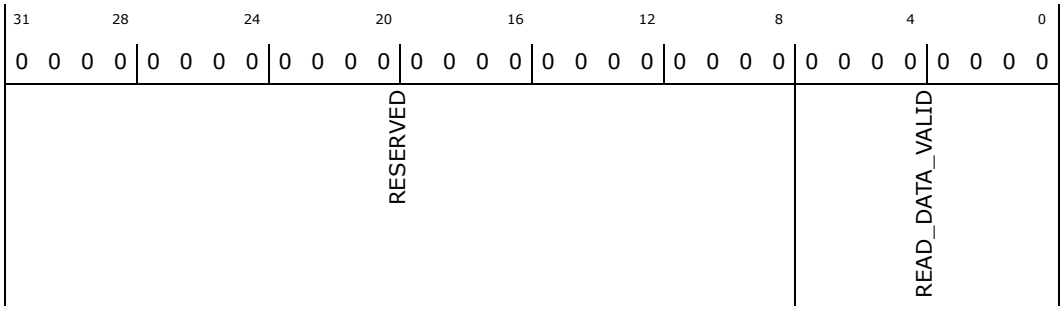
4.2.155 MIPIC_RD_DATA_VALID—Offset B938h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: B938h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7:0	0x0 RW	**READ_DATA_VALID:** Each bit corresponds to presence of valid data in the registers above. When data is returned from the panel, H/W will write into these registers in sequence, and set the corresponding valid bit. When S/W issues a write '1 to the registers, this bit is cleared

4.2.156 DPALETTE_C—Offset C000h

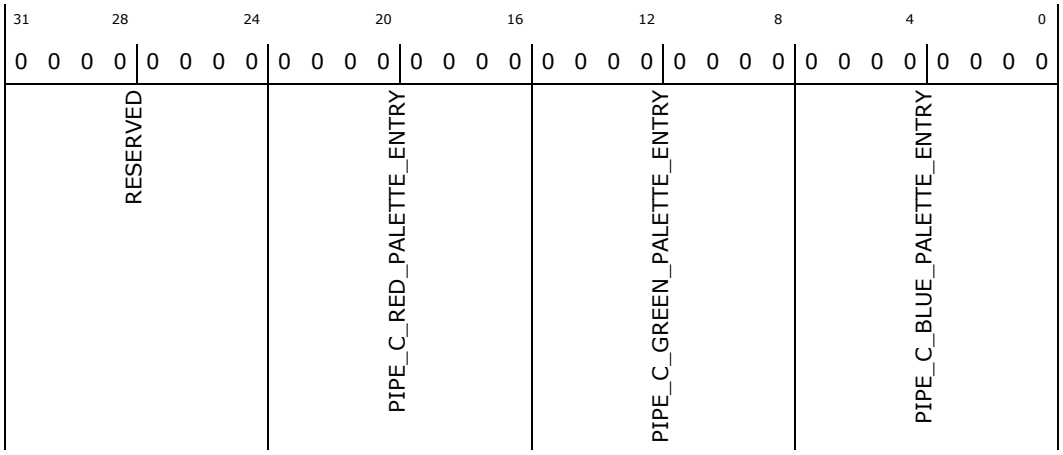
Pipe C Display Palette

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: C000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** (read only).
23:16	0x0 RW	**PIPE_C_RED_PALETTE_ENTRY:** Reserved.
15:8	0x0 RW	**PIPE_C_GREEN_PALETTE_ENTRY:** Reserved.
7:0	0x0 RW	**PIPE_C_BLUE_PALETTE_ENTRY:** Reserved.

4.2.157 HTOTAL_A—Offset 60000h

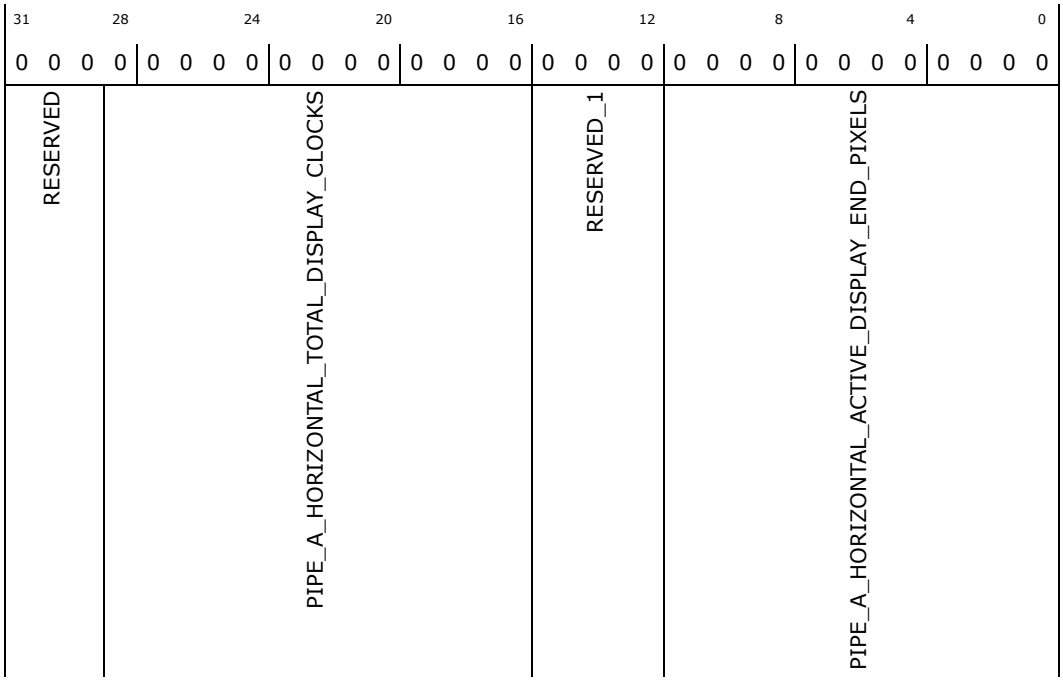
Pipe A Horizontal Total Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_A_HORIZONTAL_TOTAL_DISPLAY_CLOCKS:** This 13-bit field provides Horizontal Total up to 8192 pixels encompassing the Horizontal Active Display period, front/back border and retrace period. Any pending event (HSYNC, ACTIVE, HBLANK) is reset at HTOTAL and the programmed sequence begins again. This field is programmed to the number of clocks desired minus one. This number of clocks needs to be a multiple of two when driving data out the digital port out the LVDS port in two channel mode. This value should always be equal or greater to the sum of the horizontal active and the horizontal blank, and border region sizes.
15:12	0x0 RO	**RESERVED_1:** Write as zero.
11:0	0x0 RW	**PIPE_A_HORIZONTAL_ACTIVE_DISPLAY_END_PIXELS:** This 12-bit field provides Horizontal Active Display resolutions up to 4096 pixels. Note that the first horizontal active display pixel is considered pixel number 0. The value programmed should be the (active pixels/line 1). The number of active pixels will be limited to multiples of two pixels when driving the integrated LVDS port in two channel mode.

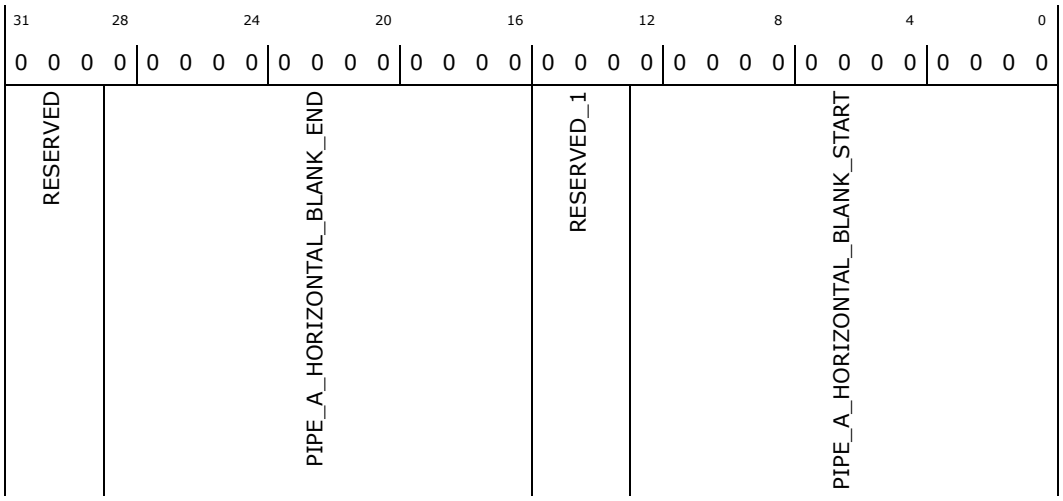
4.2.158 HBLANK_A—Offset 60004h

Pipe A Horizontal Blank Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60004h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Read Only.
28:16	0x0 RW	**PIPE_A_HORIZONTAL_BLANK_END:** This 13-bit field specifies the position of Horizontal Blank End expressed in terms of the absolute pixel number relative to the horizontal active display start. The value programmed should be the HBLANK End pixel position, where the first active pixel is considered position 0; the second active pixel is considered position 1, etc. Horizontal blank ending at the same point as the horizontal total indicates that there is no left hand border area. HBLANK size has a minimum value of 32 clocks. The number of clocks within blank needs to be a multiple of two when driving data out LVDS in two channel mode. The value loaded in the register would be equal to RightBorder+Active+HBlank-1. If this pipe is connected to the TVout port or Panel Fitter 2 the border must be zero. In that case this register is programmed to the same value as the HTOTAL register.
15:13	0x0 RO	**RESERVED_1:** Read Only.

Bit Range	Default & Access	Field Name (ID): Description
12:0	0x0 RW	**PIPE_A_HORIZONTAL_BLANK_START:** This 13-bit field specifies the Horizontal Blank Start position expressed in terms of the absolute pixel number relative to the horizontal active display start. The value programmed should be the HBLANK Start pixel position, where the first active pixel is considered position 0; the second active pixel is considered position 1, etc. The number of clocks for both left and right borders need to be a multiple of two when driving data out the LVDS port in two channel mode. Horizontal blank should only start after the end of the horizontal active region. The value loaded in the register would be equal to RightBorder+Active-1. If this pipe is connected to the TVout port or Panel Fitter 2 the border must be zero. In that case this register is programmed to the same value as the HACTIVE register.

4.2.159 HSYNC_A—Offset 60008h

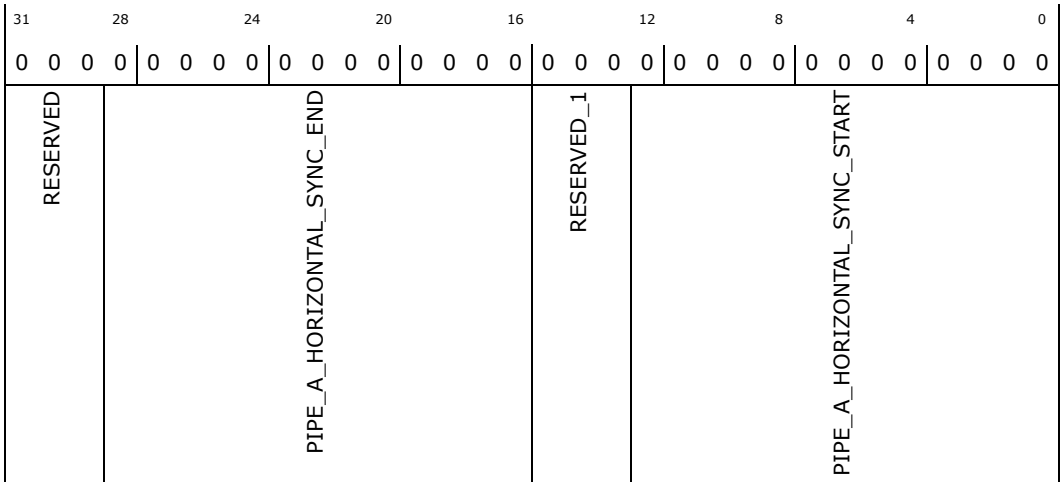
Pipe A Horizontal Sync Register

Access Method

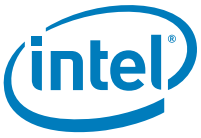
Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60008h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.



Bit Range	Default & Access	Field Name (ID): Description
28:16	0x0 RW	**PIPE_A_HORIZONTAL_SYNC_END:** This 13-bit field specifies the horizontal Sync End position expressed in terms of the absolute pixel number relative to the horizontal active display start. The value programmed should be the HSYNC End pixel position, where the first active pixel is considered position 0; the second active pixel is considered position 1, etc. The number of clocks in the sync period needs to be a multiple of two when driving data out the LVDS port in two channel mode. This value should be greater than the horizontal sync start position and would be loaded with the Active+RightBorder+FrontPorch+Sync-1.
15:13	0x0 RO	**RESERVED_1:** Read Only.
12:0	0x0 RW	**PIPE_A_HORIZONTAL_SYNC_START:** This 13-bit field specifies the horizontal Sync Start position expressed in terms of the absolute pixel number relative to the horizontal active display start. The value programmed should be the HSYNC Start pixel position, where the first active pixel is considered position 0; the second active pixel is considered position 1, etc. Note that when HSYNC Start is programmed equal to HBLANK Start, both HSYNC and HBLANK will be asserted on the same pixel clock. It should never be programmed to less than HBLANK start. The number of cycles from the beginning of the line needs to be a multiple of two when driving data out the LVDS port in two channel mode. This register should not be less than the horizontal active end. This register should be loaded with the Active+RightBorder+FrontPorch-1.

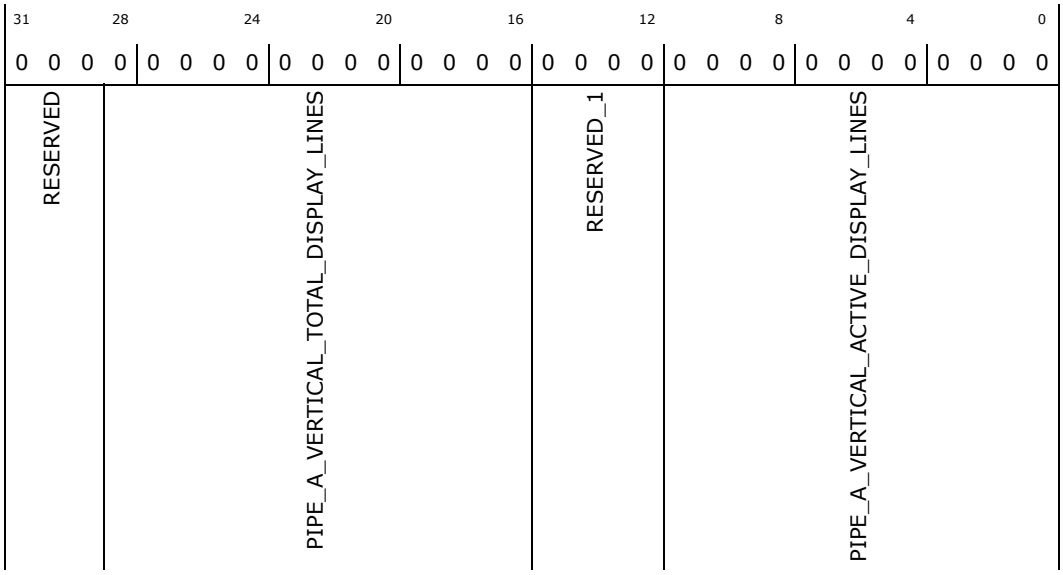
4.2.160 VTOTAL_A—Offset 6000Ch

Pipe A Vertical Total Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6000Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Read Only.
28:16	0x0 RW	**PIPE_A_VERTICAL_TOTAL_DISPLAY_LINES:** This 13 bit field provides Vertical Total up to 8192 lines encompassing the Vertical Active Display Lines, top/bottom border and retrace period. The value programmed should be the number of lines required minus one. Vertical total needs to be large enough to be greater than the sum of the vertical active, vertical border, and the vertical blank regions. The vertical counter is incremented on the leading edge of the horizontal sync. For interlaced display modes, this indicates the total number of lines in both fields. In interlaced modes, hardware automatically divides this number by 2 to get the number of lines in each field.
15:12	0x0 RO	**RESERVED_1:** Read Only.
11:0	0x0 RW	**PIPE_A_VERTICAL_ACTIVE_DISPLAY_LINES:** This 12-bit field provides vertical active display resolutions up to 4096 lines. It should be programmed with the desired number of lines minus one. When using the internal panel fitting logic, the minimum vertical active area must be three lines. For interlaced display modes, this indicates the total number of lines in both fields. In interlaced modes, hardware automatically divides this number by 2 to get the number of lines in each field.

4.2.161 VBLANK_A—Offset 60010h

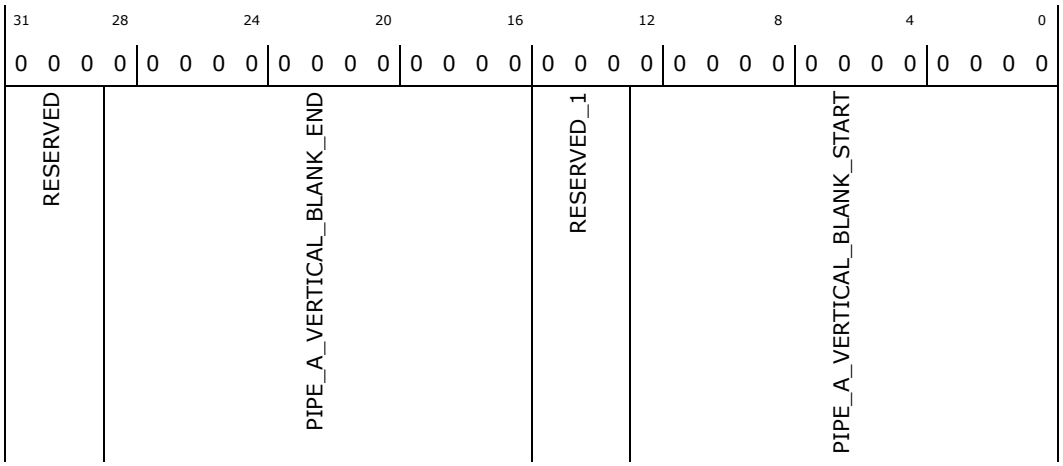
Pipe A Vertical Blank Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60010h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Read Only.
28:16	0x0 RW	**PIPE_A_VERTICAL_BLANK_END:** This 13-bit field specifies the Vertical Blank End position expressed in terms of the absolute Line number relative to the vertical active display start. The value programmed should be the VBLANK End line position, where the first active line is considered line 0, the second active line is considered line 1, etc. The end of vertical blank should be after the start of vertical blank and before or equal to the vertical total. This register should be loaded with the Vactive+BottomBorder+VBlank-1. For interlaced display modes, hardware automatically divides this number by 2 to get the vertical blank end in each field. It does not count the two half lines that get added when operating in modes with half lines. If this pipe is connected to the TVout port or Panel Fitter 2 the border must be zero. In that case this register is programmed to the same value as the VTOTAL register.
15:13	0x0 RO	**RESERVED_1:** Read Only.
12:0	0x0 RW	**PIPE_A_VERTICAL_BLANK_START:** This 13-bit field specifies the Vertical Blank Start expressed in terms of the absolute line number relative to the vertical active display start. The value programmed should be the VBLANK Start line position, where the first active line is considered line 0, the second active line is considered line 1, etc. Minimum vertical blank size is required to be at least three lines. Blank should start after the end of active. This register is loaded with the Vactive+BottomBorder-1. For interlaced display modes, hardware automatically divides this number by 2 to get the vertical blank start in each field. It does not count the two half lines that get added when operating in modes with half lines. If this pipe is connected to the TVout port or Panel Fitter 2 the border must be zero. In that case this register is programmed to the same value as the VACTIVE register.

4.2.162 VSYNC_A—Offset 60014h

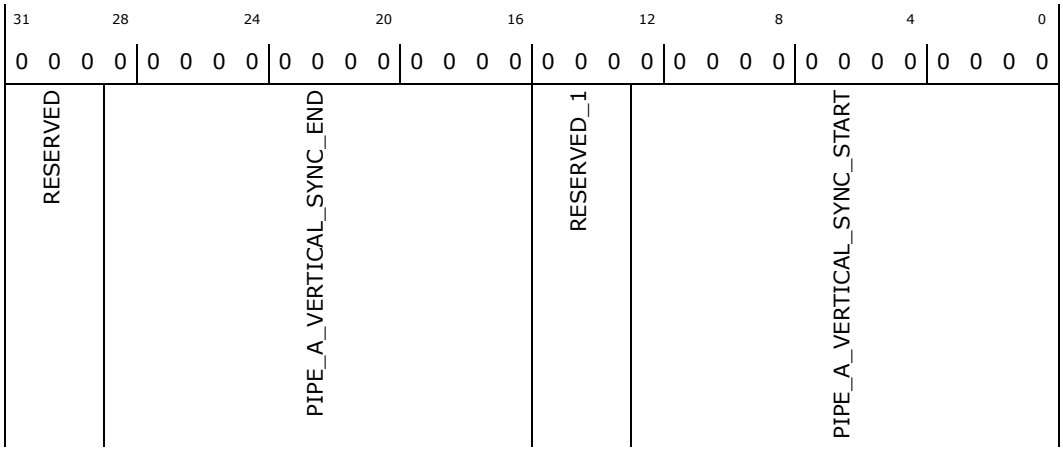
Pipe A Vertical Sync Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60014h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Read Only.
28:16	0x0 RW	**PIPE_A_VERTICAL_SYNC_END:** This 13-bit field specifies the Vertical Sync End position expressed in terms of the absolute Line number relative to the vertical active display start. The value programmed should be the VSYNC End line position, where the first active line is considered line 0, the second active line is considered line 1, etc. This register should be loaded with Vactive+BottomBorder+FrontPorch+Sync-1. For interlaced display modes, hardware automatically divides this number by 2 to get the vertical sync end in each field. It does not count the two half lines that get added when operating in modes with half lines.
15:13	0x0 RO	**RESERVED_1:** Read Only.
12:0	0x0 RW	**PIPE_A_VERTICAL_SYNC_START:** This 13-bit field specifies the Vertical Sync Start position expressed in terms of the absolute line number relative to the vertical active display start. The value programmed should be the VSYNC Start line position, where the first active line is considered line 0, the second active line is considered line 1, etc. This register would be loaded with Vactive+BottomBorder+FrontPorch-1. For interlaced display modes, hardware automatically divides this number by 2 to get the vertical sync start in each field. It does not count the two half lines that get added when operating in modes with half lines.

4.2.163 PIPESRCA—Offset 6001Ch

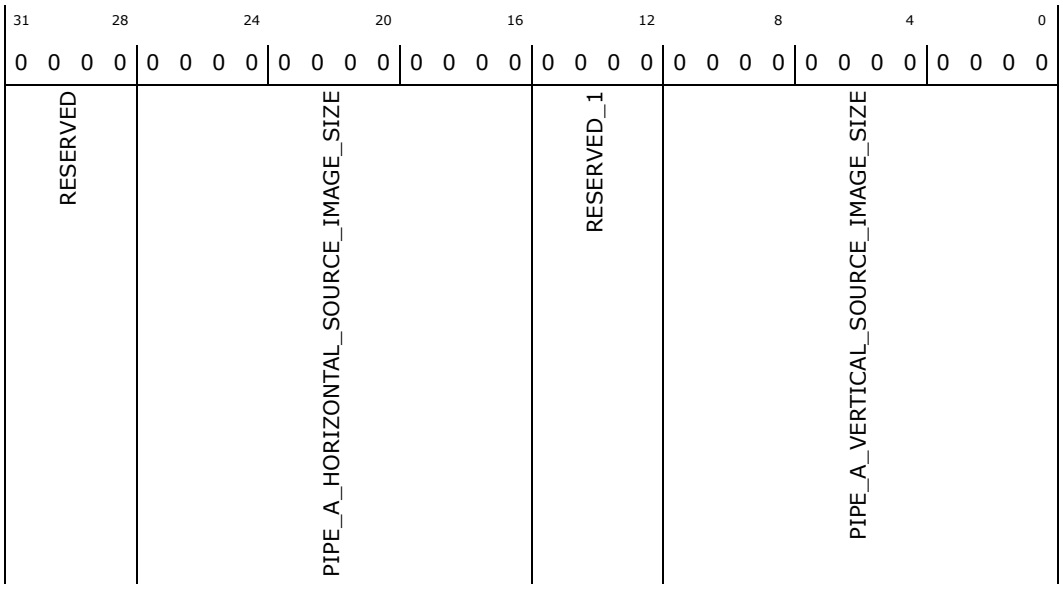
Pipe A Source Image Size

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6001Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PIPE_A_HORIZONTAL_SOURCE_IMAGE_SIZE:** This 12-bit field specifies Horizontal source image size up to 4096. This determines the size of the image created by the display planes sent to the blender. The value programmed should be the source image size minus one. The actual source size must be two times the programmed value in the pixel multiply mode. It must represent a size that is a multiple of two (even numbers) when driving the LVDS port in two channel mode. This implies that for this mode, the value programmed will always be an odd number. Except in the case of panel fitting internal or in an external device, this register field would be programmed to a value identical to the horizontal active. This is the only register of the timing registers that is allowed to be programmed while the pipe is enabled.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PIPE_A_VERTICAL_SOURCE_IMAGE_SIZE:** This 12-bit field specifies the vertical source image size up to 4096 lines. This determines the size of the image created by the display planes sent to the blender. The value programmed should be the source image size minus one. Note that the actual number of lines needs to be at least twice the planes programmed value when in the pixel multiply mode. Except in the case of panel fitting internal or in an external device, this register field would be programmed to a value identical to the vertical active. For interlaced display modes, hardware automatically divides this number by 2 to get the vertical source image size in each field.

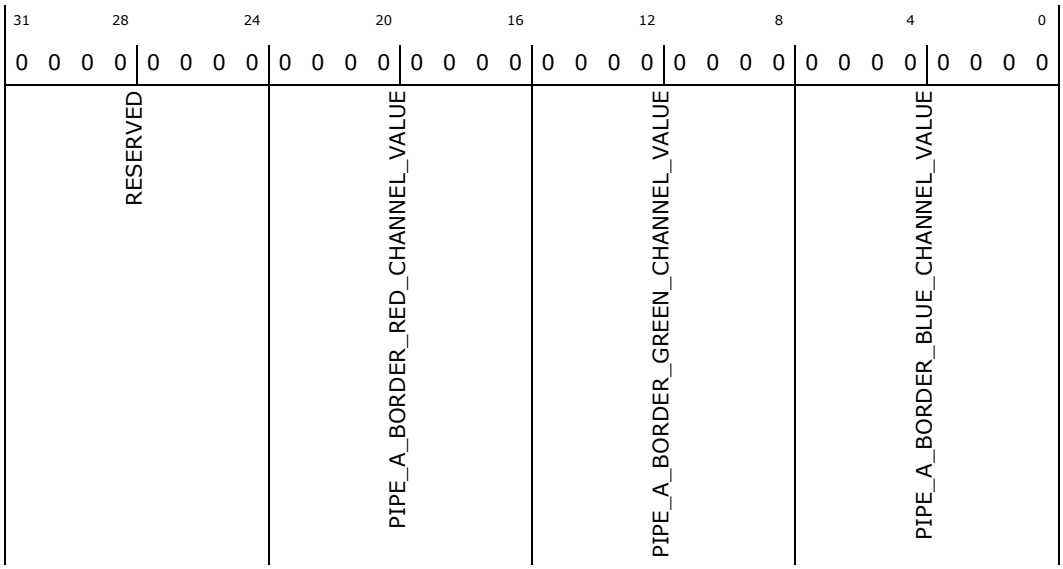
4.2.164 BCLRPAT_A—Offset 60020h

Pipe A Border Color Pattern Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60020h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**PIPE_A_BORDER_RED_CHANNEL_VALUE:** Reserved.
15:8	0x0 RW	**PIPE_A_BORDER_GREEN_CHANNEL_VALUE:** Reserved.
7:0	0x0 RW	**PIPE_A_BORDER_BLUE_CHANNEL_VALUE:** Reserved.

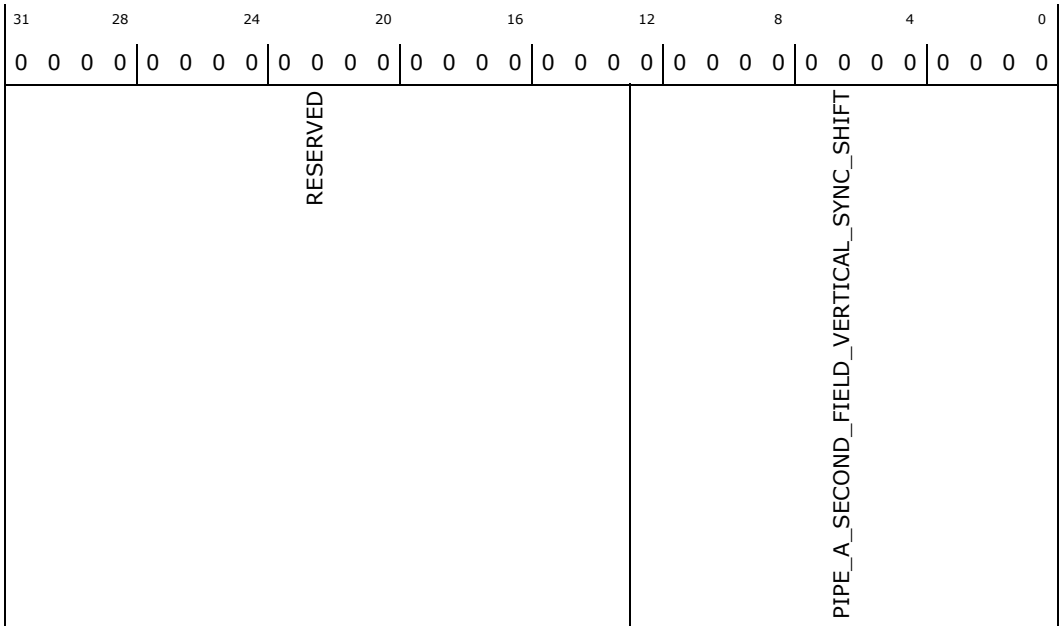
4.2.165 VSYNCSHIFT_A—Offset 60028h

Vertical Sync Shift Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60028h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** Write as zero.
12:0	0x0 RW	**PIPE_A_SECOND_FIELD_VERTICAL_SYNC_SHIFT:** This value specifies the vertical sync alignment for the start of the interlaced second field expressed in terms of the absolute pixel number relative to the horizontal active display start. This value will only be used if the PIPEACONF is programmed to an interlaced mode using vsync shift. Otherwise a legacy value of floor[htotal / 2] will be used. Typically, the interlaced second field vertical sync should start one pixel after the point halfway between successive horizontal syncs, so the value of this register should be programmed to: (horizontal sync start - floor[horizontal total / 2]) (use the actual horizontal sync start and horizontal total values and not the minus one values programmed into registers). This vertical sync shift only occurs during the interlaced second field. In all other cases the vertical sync start position is aligned with horizontal sync start.

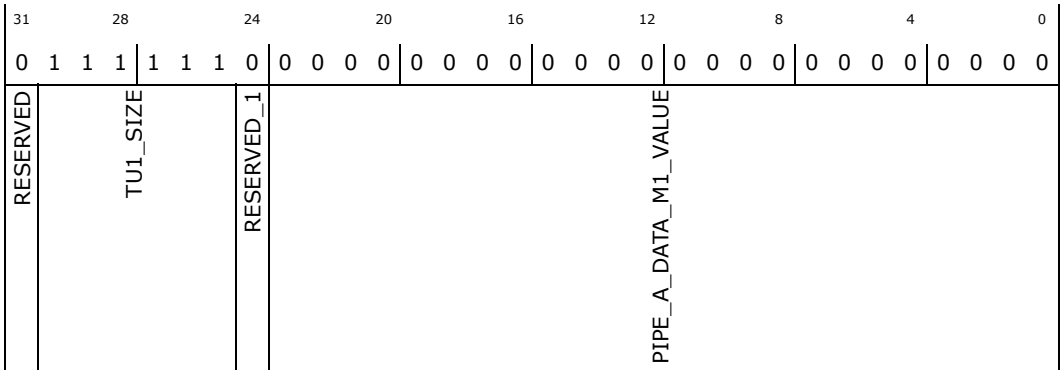
4.2.166 TRANSADATAM1—Offset 60030h

Pipe A Data M value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60030h

Default: 7E000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ
30:25	0x3f RW	**TU1_SIZE:** Project: All This field is the size of the transfer unit for DP, minus one.
24	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_DATA_M1_VALUE:** Project: All This field is the M1 value for internal use of the DDA.

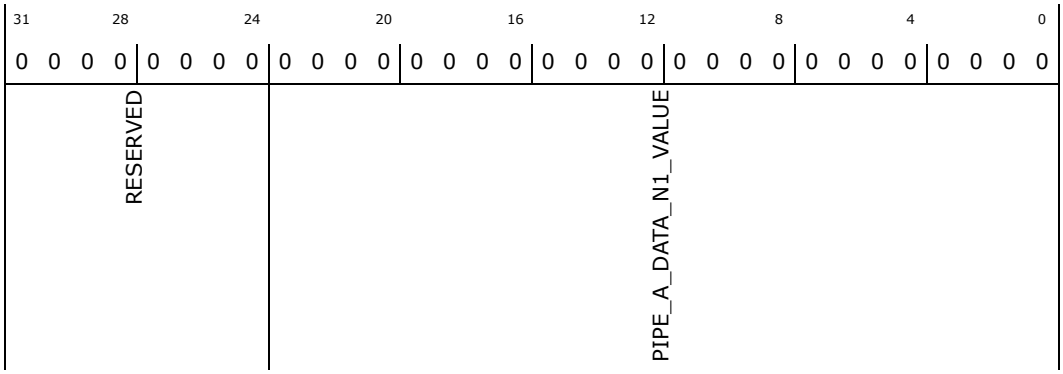
4.2.167 TRANSADATAN1—Offset 60034h

Pipe A Data N value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60034h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ

Bit Range	Default & Access	Field Name (ID): Description
23:0	0x0 RW	**PIPE_A_DATA_N1_VALUE:** Project: All This field is the N1 value for internal use of the DDA.

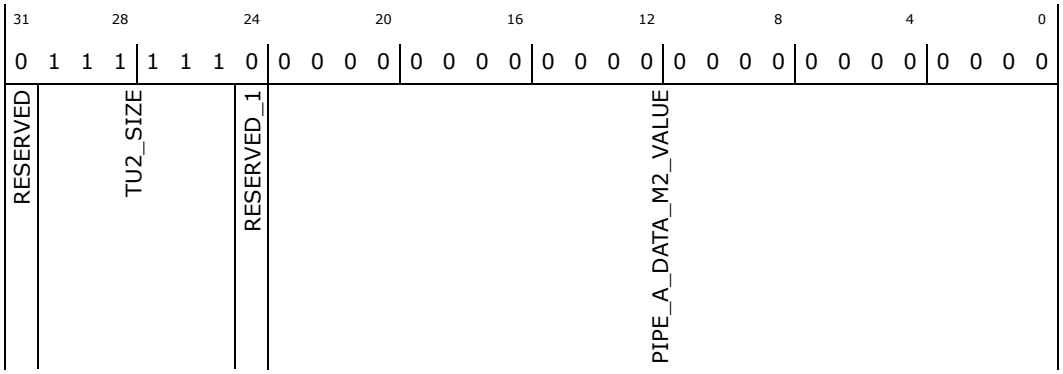
4.2.168 TRANSADATAM2—Offset 60038h

Pipe A Data M value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60038h

Default: 7E000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ
30:25	0x3f RW	**TU2_SIZE:** Project: All Default Value: ;111111b 64 This field is the size of the transfer unit for DP, minus one.
24	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_DATA_M2_VALUE:** Project: All This field is the M2 value for internal use of the DDA.

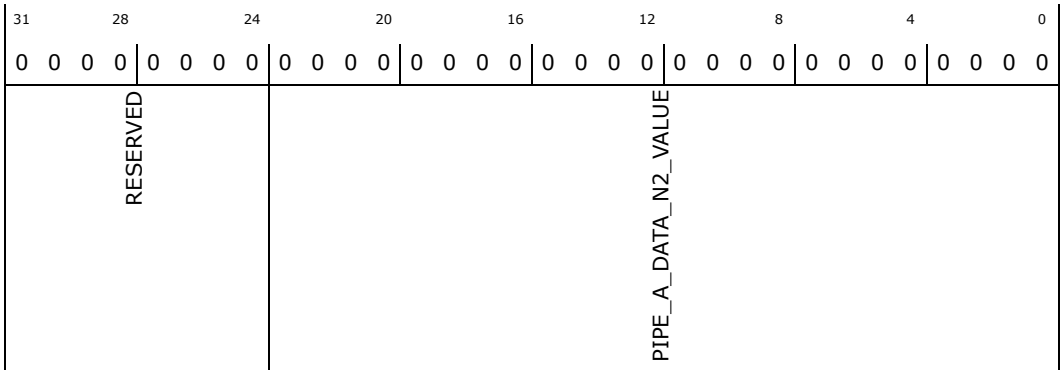
4.2.169 TRANSADATAN2—Offset 6003Ch

Pipe A Data N value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6003Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_DATA_N2_VALUE:** Project: All This field is the N2 value for internal use of the DDA.

4.2.170 TRANSADPLINKM1—Offset 60040h

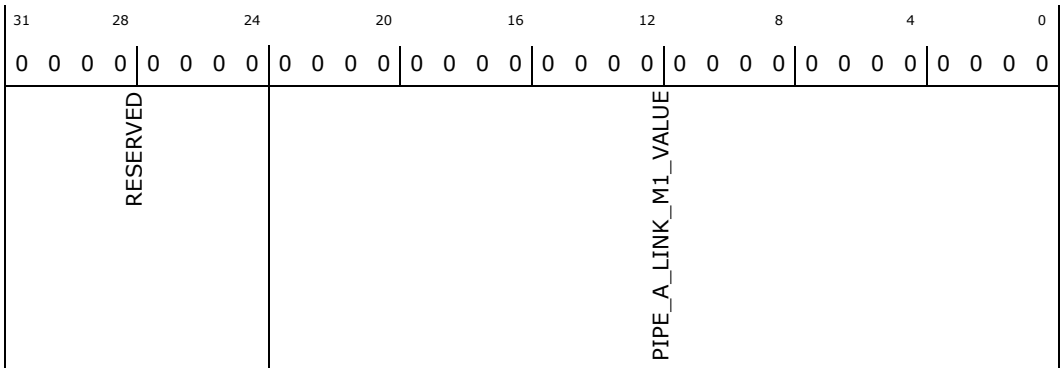
Pipe A Link M value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60040h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_LINK_M1_VALUE:** Project: All This field is the M1 value for external transmission in the Main Stream Attributes.

4.2.171 TRANSADPLINKN1—Offset 60044h

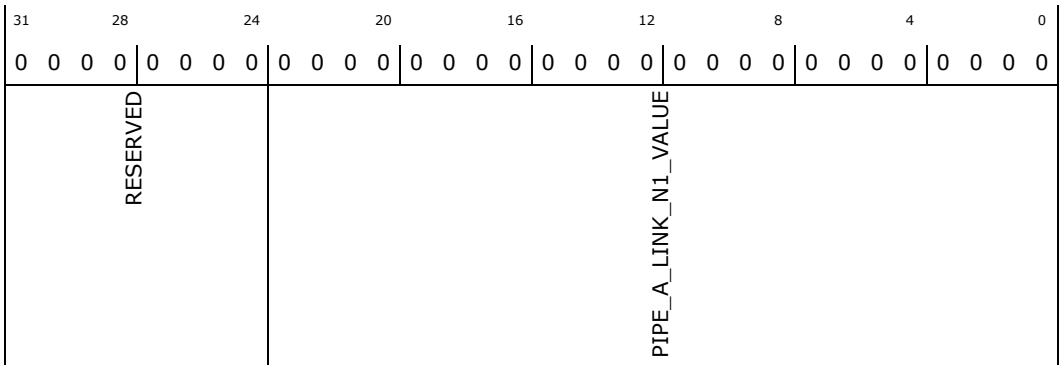
Pipe A Link N value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60044h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_LINK_N1_VALUE:** Project: All This field is the N1 value for external transmission in the Main Stream Attributes and VB-ID.

4.2.172 TRANSADPLINKM2—Offset 60048h

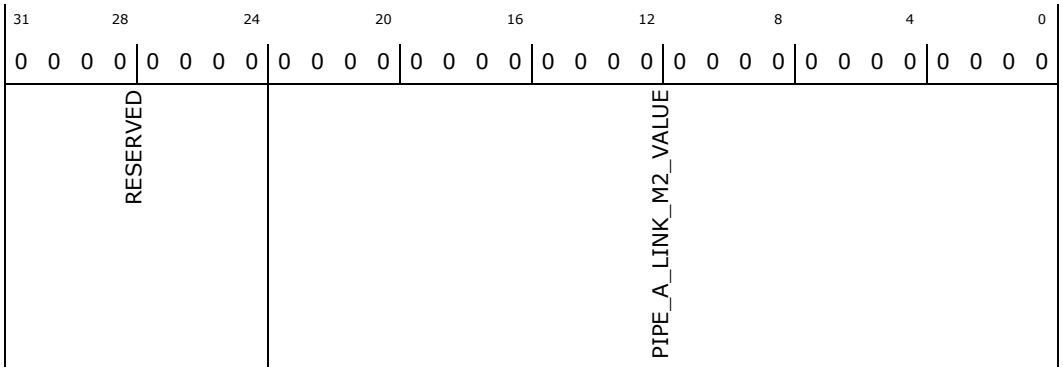
Pipe A Link M value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_LINK_M2_VALUE:** Project: All This field is the M2 value for external transmission in the Main Stream Attributes.

4.2.173 TRANSADPLINKN2—Offset 6004Ch

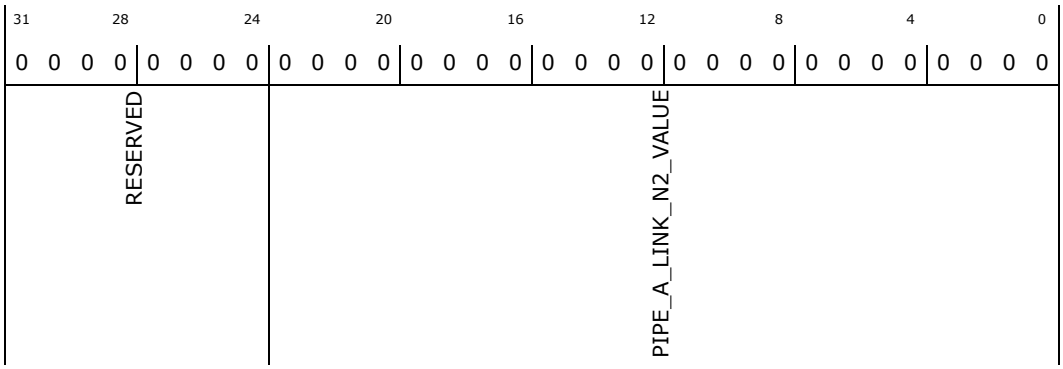
Pipe A Link N value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6004Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_A_LINK_N2_VALUE:** Project: All This field is the N2 value for external transmission in the Main Stream Attributes and VB-ID.

4.2.174 CRCCTRLREDA—Offset 60050h

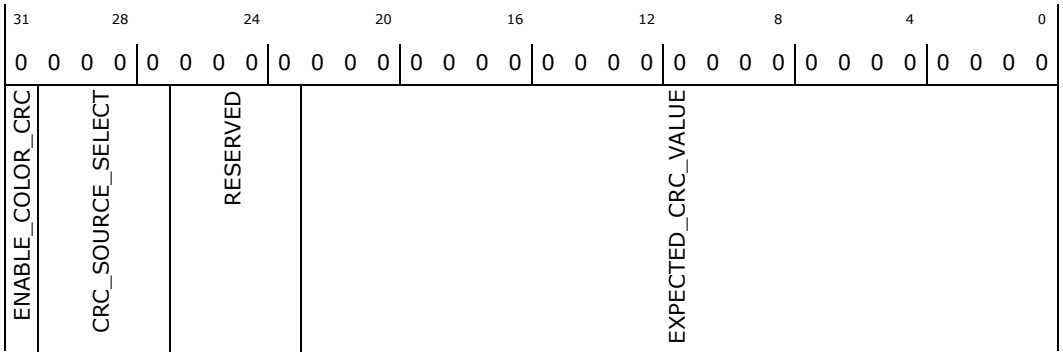
Pipe A CRC Color Channel Control Register (Red)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60050h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_COLOR_CRC:** Enables the CRC calculations. After being enabled for the first time, you need to wait for two VBLANK events for a valid CRC result. After that, a CRC will be generated each frame. 0 = CRC Calculations are disabled 1 = CRC Calculations are enabled
30:27	0x0 RW	**CRC_SOURCE_SELECT:** These bits select the source of the data to put into the CRC logic. 0000: Pipe A (Not available when DisplayPort or TV is enabled on this pipe) 0001: sDVOB/HDMIB (30 bit format. Only select when HDMIB is set to pipeA) 0010: sDVOC/HDMIC (30 bit format. Only select when HDMIC is set to pipeA) 0011: DisplayPort D (40 bit format) [DevCTG] 0100: TV Encoder outputs (30 bit format) 0101: TV filter outputs (30 bit format) 0110: DisplayPort B (40 bit format) 0111: DisplayPort C (40 bit format) 1000: Audio DP (Audio for DisplayPort (pcdclk). Only select when Audio is on DisplayPort on Pipe A) 1001: Audio HDMI (Audio for HDMI (dotclock) Only select when Audio is on HDMI on Pipe A) Others: Reserved
26:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. Status indications are in the PIPEASTAT register.

4.2.175 CRCCTRLGREENA—Offset 60054h

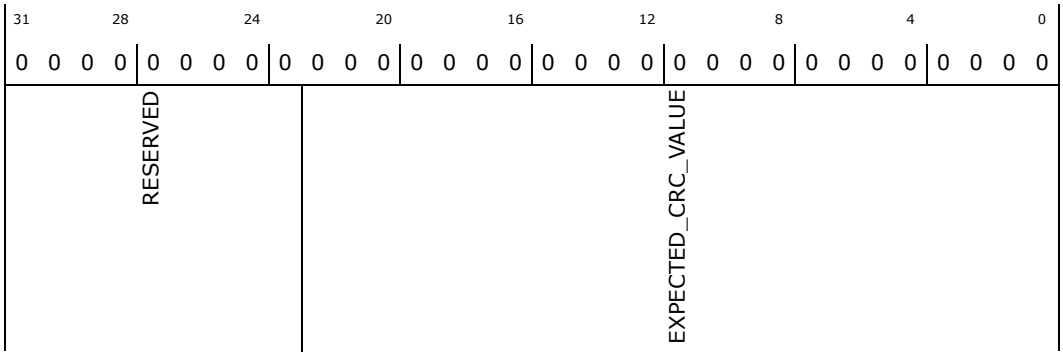
Pipe A CRC Color Channel Control Register (, Residual)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60054h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. Status indications are in the PIPEASTAT register.

4.2.176 CRCCTRLBLUEA—Offset 60058h

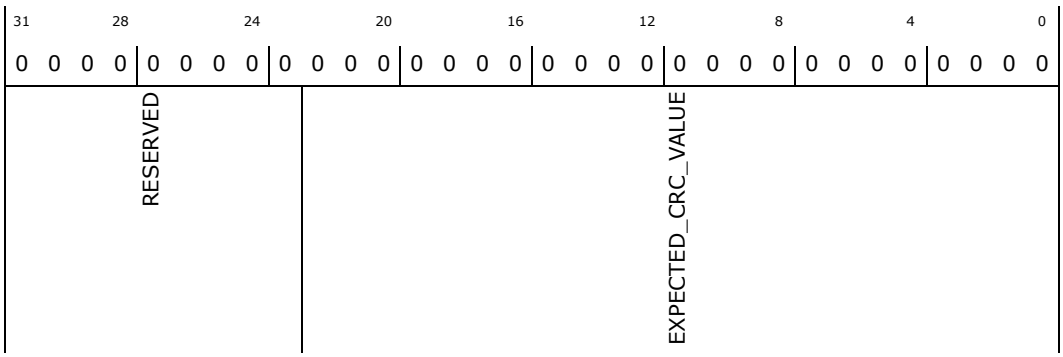
Pipe A CRC Color Channel Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60058h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. Status indications are in the PIPEASTAT register.

4.2.177 CRCCTRLALPHAA—Offset 6005Ch

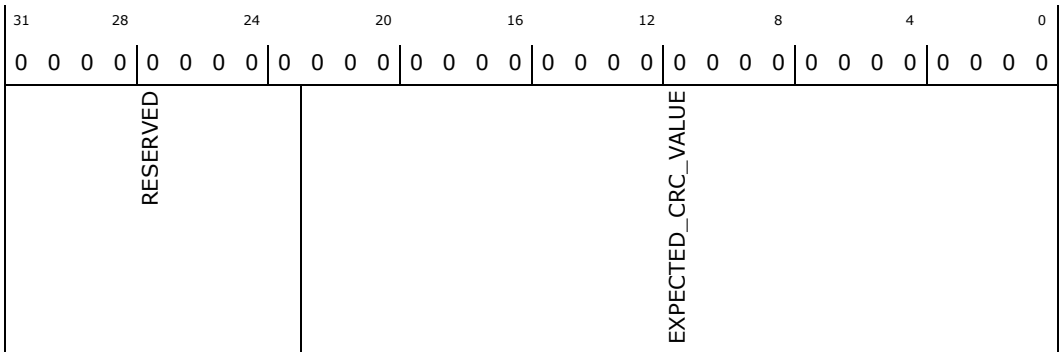
Pipe A CRC Color Channel Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6005Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. Status indications are in the PIPEASTAT register.

4.2.178 CRCRESREDA—Offset 60060h

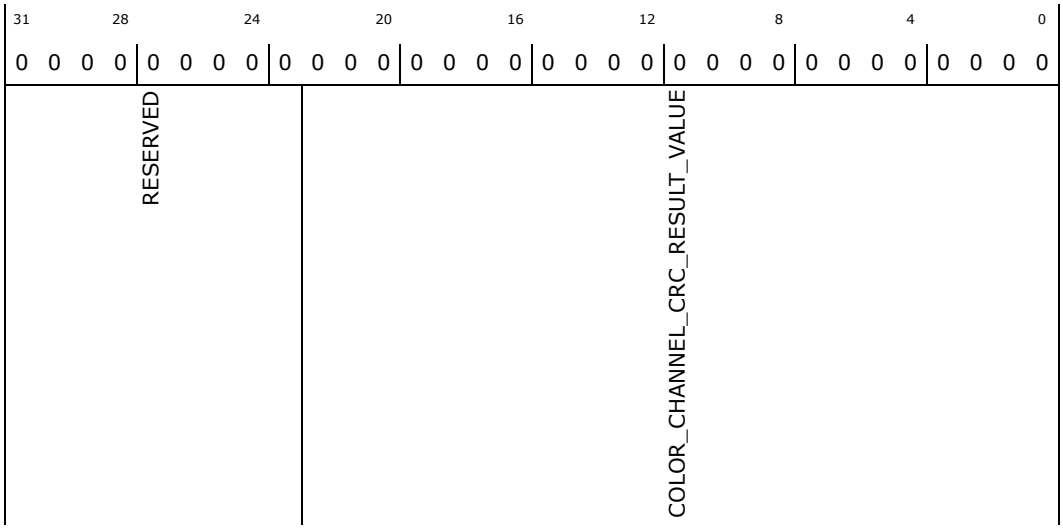
Pipe A A CRC Color Channel Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60060h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the particular Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation.

4.2.179 CRCRESGREENA—Offset 60064h

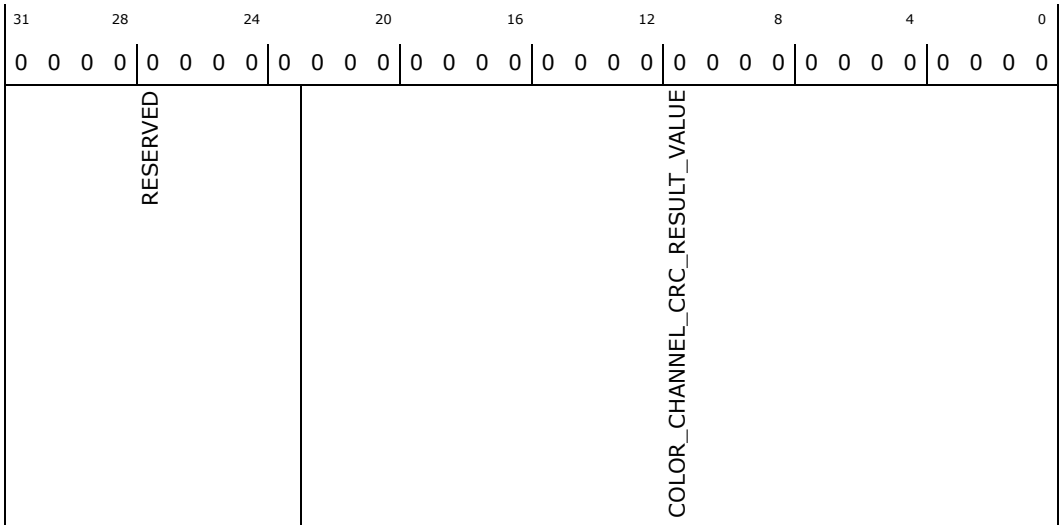
Pipe A A CRC Color Channel Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60064h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the particular Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation.

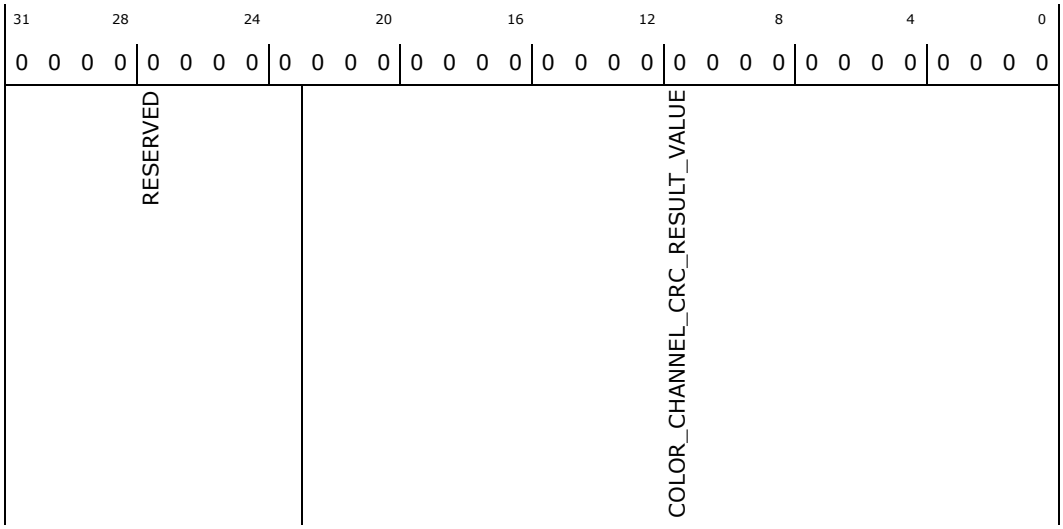
4.2.180 CRCRESBLUEA—Offset 60068h

Pipe A A CRC Color Channel Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60068h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the particular Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation.

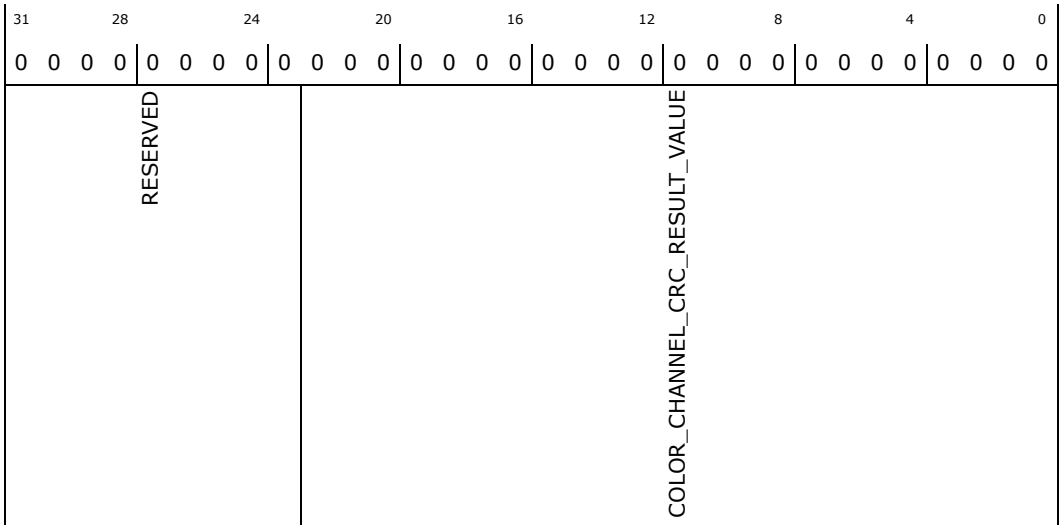
4.2.181 CRCRESALPHAA—Offset 6006Ch

Pipe A A CRC Color Channel Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6006Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the particular Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation.

4.2.182 CRCCTRLRESIDUE2A—Offset 60070h

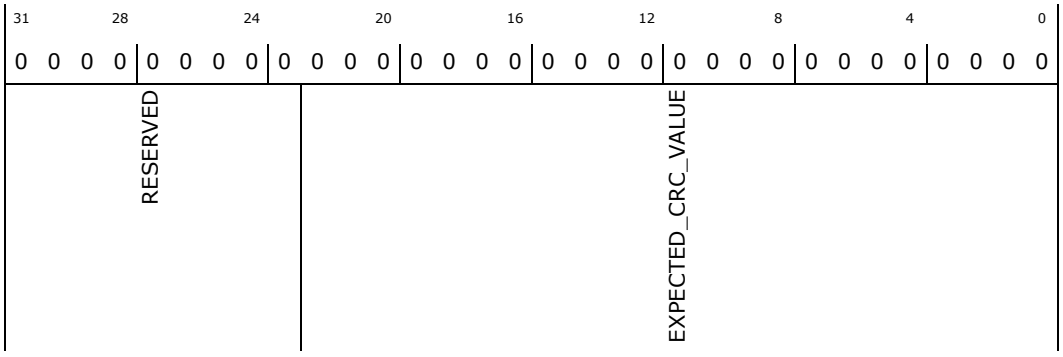
Pipe A CRC Color Channel Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60070h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. Status indications are in the PIPEASTAT register.

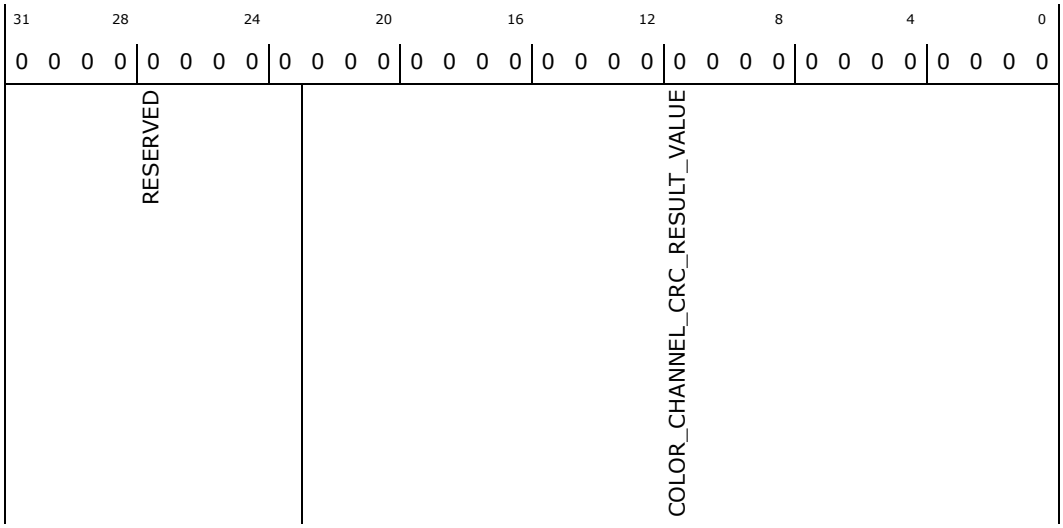
4.2.183 CRCRESRESIDUE2A—Offset 60080h

Pipe A CRC Color Channel Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60080h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the particular Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation.

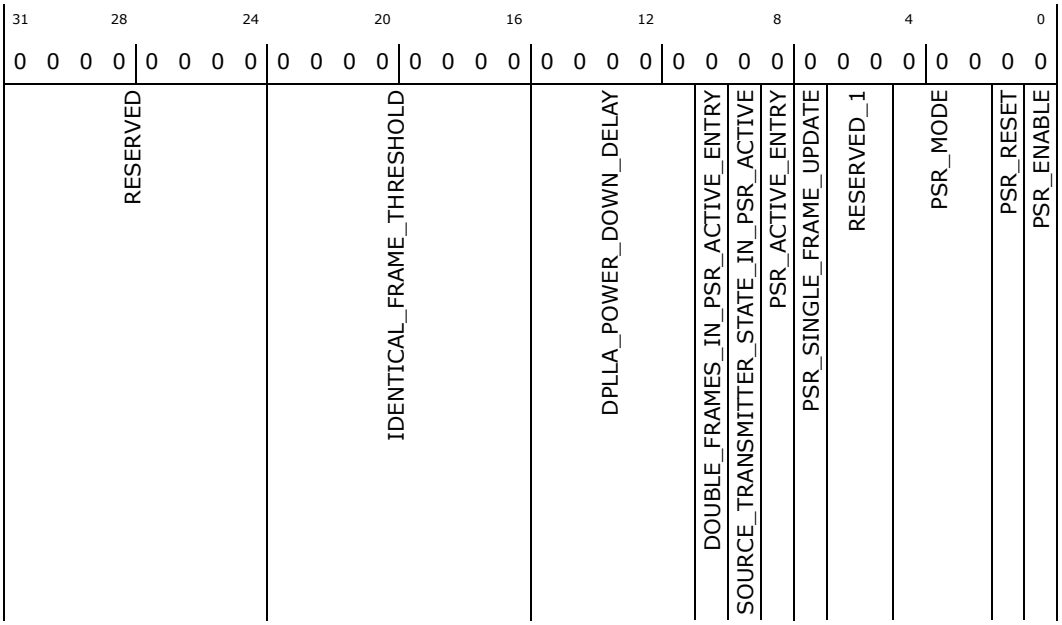
4.2.184 PSRCTLA—Offset 60090h

Pipe A Panel Self Refresh Control

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60090h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**IDENTICAL_FRAME_THRESHOLD:** : Number of identical frames that display controller needs to exceed in order to transition to PSR active state in HW timer mode
15:11	0x0 RW	**DPLLA_POWER_DOWN_DELAY:** programmable delay from main link powerdown to DPLLA powerdown. The delay is in number of cdclk clocks.
10	0x0 RW	**DOUBLE_FRAMES_IN_PSR_ACTIVE_ENTRY:** . If asserted, HW will send two frames with same SDP active setting when entry PSR active state. This bit is set if the vertical blanking time is less than 330us.
9	0x0 RW	**SOURCE_TRANSMITTER_STATE_IN_PSR_ACTIVE:** . If asserted, HW will keep transmitter active during PSR active state and sends only idle symbols. If deasserted, HW will turn off transmitter during PSR active state. Display driver will keep this bit consistent with Source transmitter state in PSR active bit in DPCD register of the sink.
8	0x0 RW	**PSR_ACTIVE_ENTRY:** This bit is only valid in PSR_mode is SW timer mode. If it is asserted, HW will transition into PSR_active state. If it is deasserted, HW will transition to PSR_inactive state. SW should not set or clear this bit more than once within one vblank period.
7	0x0 RW	**PSR_SINGLE_FRAME_UPDATE:** In PSR persistent mode, SW set this bit before writing registers for a flip. It will be self-clear when it gets to the PSR active state.

Bit Range	Default & Access	Field Name (ID): Description
6:5	0x0 RO	**RESERVED_1:** Reserved.
4:2	0x0 RW	**PSR_MODE:** b011-111: reserved. b010: PSR with HW timer. HW timer decides PSR active entry point. PSR active state exits upon MMIO write registers that may change the frame buffer. b001: PSR with SW timer. In this mode, SW will keep track of idle frames and buffer modification in the driver and explicitly specify the entry and exit PSR active state point. b000: PSR manual (debug) mode. All of PSR state transitions and SDP content is managed by SW driver. SW is responsible to change SDP content for every frame with appropriate values to keep PSR panel in synchronized states.
1	0x0 RW	**PSR_RESET:** If assert all PSR functions are reset back to PSR inactive state. When it needs to resynchronize source and sync, SW writes 0x2 to DPCD register 600h and to this bit to get system back to PSR active states. This bit is self clear.
0	0x0 RW	**PSR_ENABLE:** Panel Self-refresh is enabled. When it is asserted PSR is enabled and operate in one of the mode that specified by PSR mode.

4.2.185 PSRSTATA—Offset 60094h

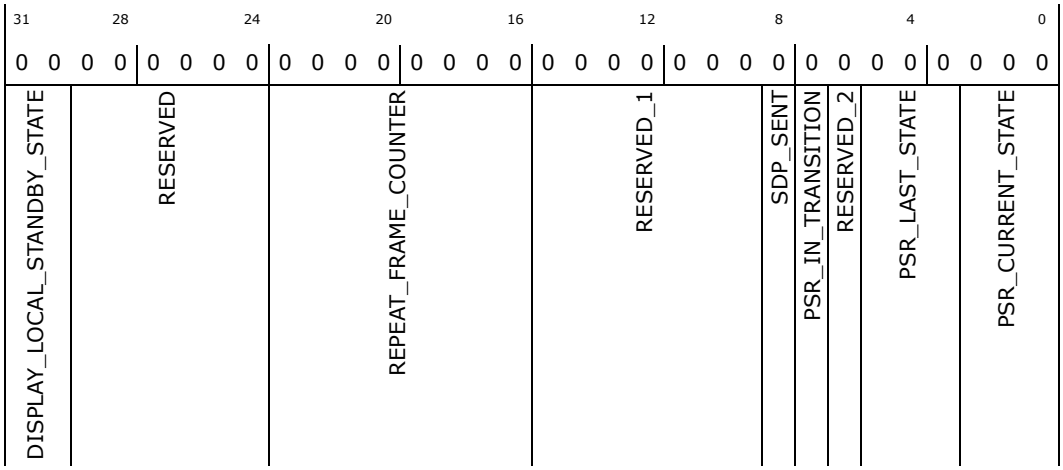
Pipe A PSR status register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60094h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**DISPLAY_LOCAL_STANDBY_STATE:** :00: D0 idle state, fetch frame buffer from system memory 02: D0i2 PSR is active, display controller is trunk gated 03: D0i3 PSR is active, display controller is power gated
29:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RO	**REPEAT_FRAME_COUNTER:** : Number of identical frames has been sent by display controller. Value is not roll over at 255.
15:9	0x0 RO	**RESERVED_1:** Reserved.
8	0x0 RO	**SDP_SENT:** it indicates if SDP packet has been sent in current frame.
7	0x0 RO	**PSR_IN_TRANSITION:** There is a period that source already committed to PSR active but sink did not. SW should not change the source state at this time but wait until this status bit is clear. The wait time should in the range of 120-250us in the worst case.
6	0x0 RO	**RESERVED_2:** Reserved.
5:3	0x0 RO	**PSR_LAST_STATE:** indicate last source state that PSR state machine were in (debug) 000: PSR_disabled 001: PSR_inactive 010: PSR_transition_to_active 011: PSR_active no RFB update 100: PSR_active single frame update 101: PSR_exit
2:0	0x0 RO	**PSR_CURRENT_STATE:** indicate current source state that PSR state machine are in 000: PSR_disabled 001: PSR_inactive 010: PSR_transition_to_active 011: PSR_active no RFB update 100: PSR_active single frame update 101: PSR_exit

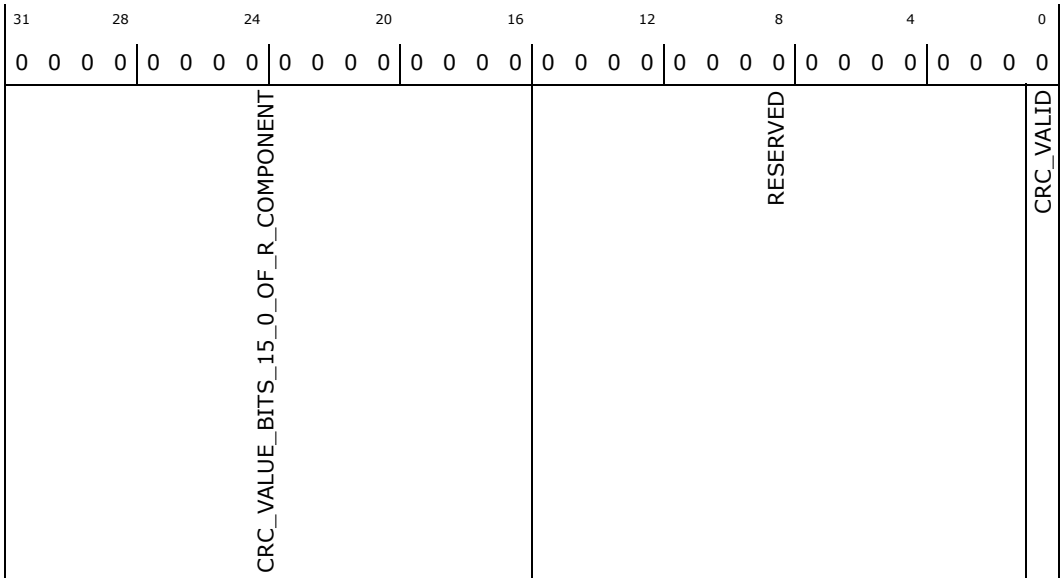
4.2.186 PSRCRC1A—Offset 60098h

Pipe A PSR CRC1 register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60098h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**CRC_VALUE_BITS_15_0_OF_R_COMPONENT:** Reserved.
15:1	0x0 RO	**RESERVED:** .
0	0x0 RO	**CRC_VALID:** CRC calculation complete and valid for previous frame.

4.2.187 PSRCRC2A—Offset 6009Ch

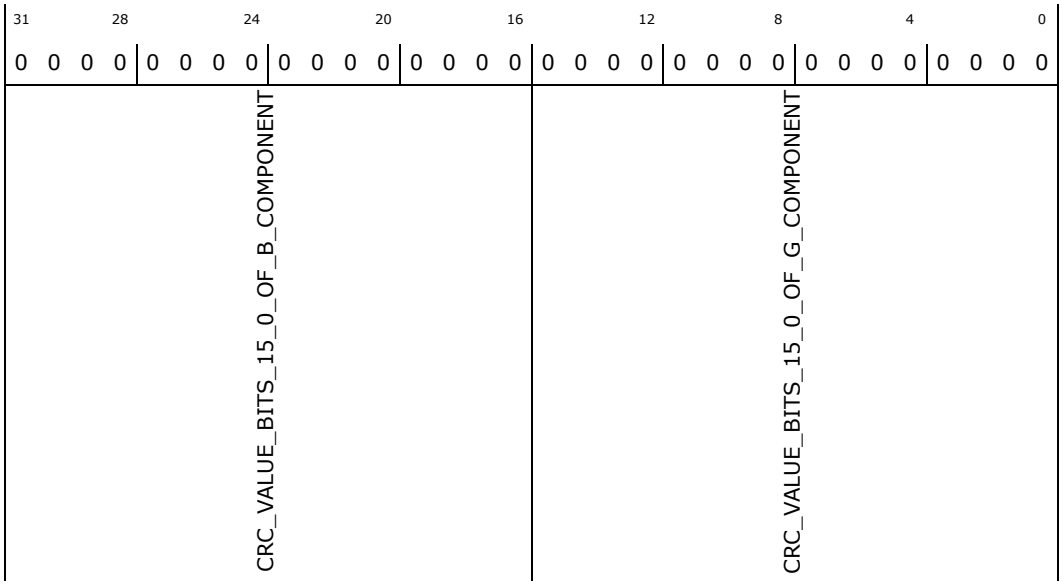
Pipe A PSR CRC2 register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6009Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**CRC_VALUE_BITS_15_0_OF_B_COMPONENT:** Reserved.
15:0	0x0 RO	**CRC_VALUE_BITS_15_0_OF_G_COMPONENT:** Reserved.

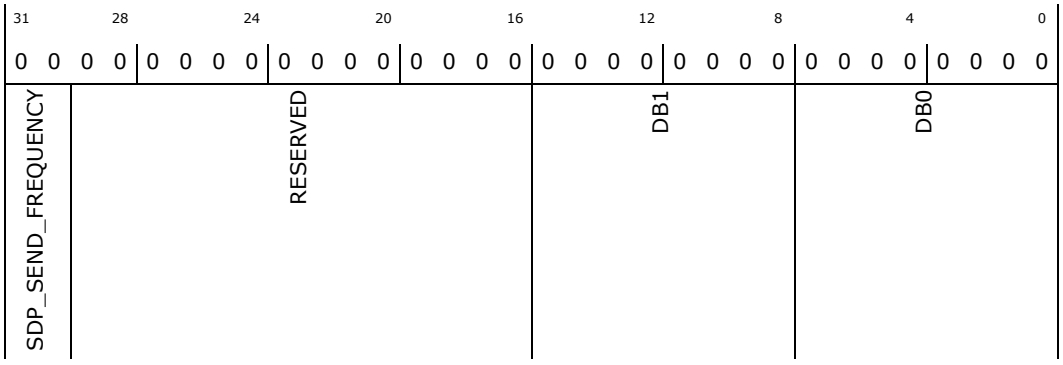
4.2.188 VSCSDPA—Offset 600A0h

Pipe A VSC SDP register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 600A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RW	**SDP_SEND_FREQUENCY:** 00: off, not sending 01: send one every frame 10: send once 11: reserved When PSR is enabling this field is ignored. One SDP is sent in every frame until source is in PSR active state
29:16	0x0 RO	**RESERVED:** Reserved.
15:8	0x0 RW	**DB1:** : Programmed by display driver in manual mode, auto-generate by display controller in all other modes
7:0	0x0 RW	**DB0:** : Bits 7:4: Stereo Interface Method Specific ParameterBits 3:0: Stereo Interface Method Code. This field is programmed by display driver for stereo display configuration

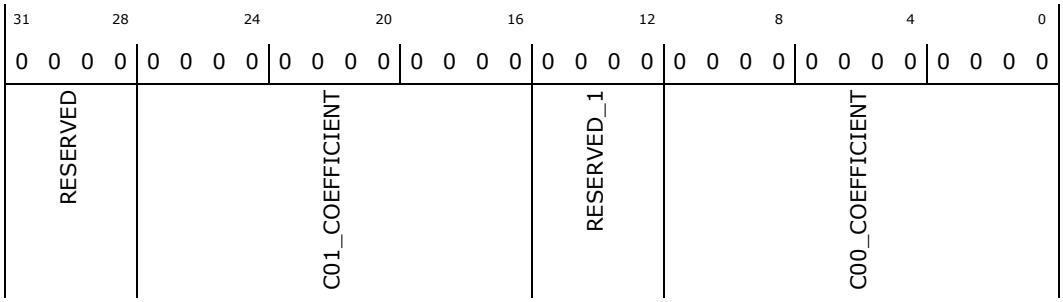
4.2.189 PIPEAWIDEGAMUTCOLORCORRECTIONC01_C00COEFFICIENTS—Offset 600B0h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 600B0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Reserved.

18	0x0 RO	**RESERVED_1:** Project: All Format:
17:16	0x0 RW	**VIDEO_DIP_TRANSMISSION_FREQUENCY:** Project: All Default Value: ;00b These bits dictate the frequency of Video DIP transmission for the DIP buffer index designated in bits 20:19. When writing Video DIP data, this value is also latched when the first DW of the Video DIP is written. When read, this value reflects the Video DIP transmission frequency for the Video DIP buffer designated in bits 20:19. This field shall be ignored for Gamut Metadata Packet transmission. Value Name Description Project 00b Send Once Send Once All 01b Every VSync Send Every VSync (Default for AVI) All 10b Every Other Vsync Send at least every other VSync All 11b Reserved Reserved All
15:12	0x0 RO	**RESERVED_2:** Project: All Format: MBZ

Bit Range	Default & Access	Field Name (ID): Description
11:8	0x9 RO	**VIDEO_DIP_BUFFER_SIZE:** Project: All AccessType: Read Only Default Value: ;1001b This reflects the buffer size in dwords available for the type of Video DIP being indexed by bits 20:19 of this register, including the header. It is hardwired to the maximum size of a Video DIP, 36 bytes. Please note that this count includes ECC bytes, which are not writable by software. These bits are immediately valid after write of the DIP index.
7:4	0x0 RO	**RESERVED_3:** Project: All Format: MBZ
3:0	0x0 RO	**VIDEO_DIP_RAM_ACCESS_ADDRESS:** Project: All AccessType: Read Only Selects the DWORD address for access to the Video DIP buffers. This value is automatically incremented after each read or write of the Video DIP Data Register. The value wraps back to zero when it autoincrements past the max address value of 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.

4.2.200 VIDEO_DIP_DATA_A—Offset 60208h

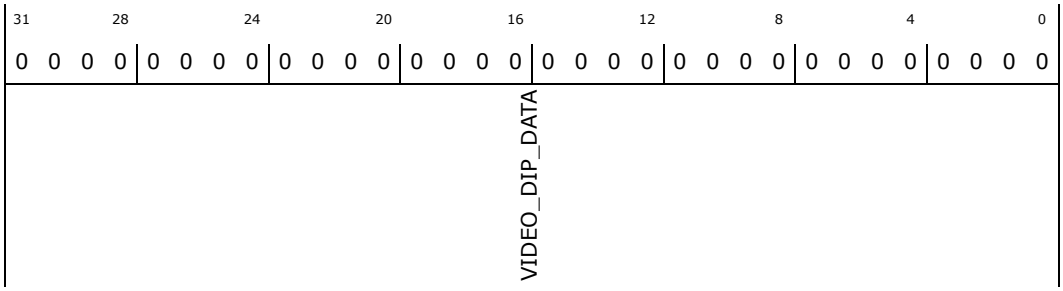
Video Data Island Packet Data for Pipe A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60208h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**VIDEO_DIP_DATA:** Project: All When read, this returns the current value at the location specified in the Video DIP buffer index select and Video DIP RAM access address fields. The index used to address the RAM is incremented after each read or write of this register. DIP data can be read at any time. Data should be loaded into the RAM before enabling the transmission through the DIP type enable bit. Accesses to this register are on a per-DWORD basis.

4.2.201 VIDEO_DIP_GDCP_PAYLOAD_A—Offset 60210h

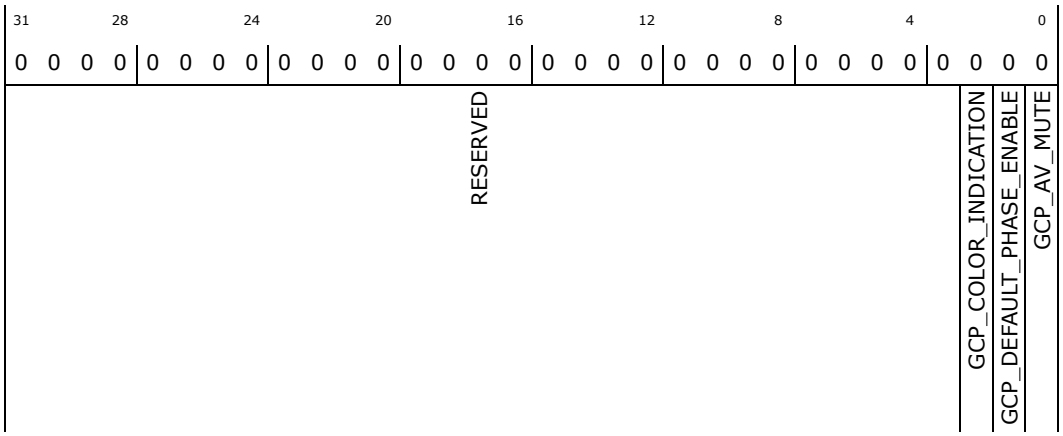
Video Data Island Payload for Pipe A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60210h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Project: All Format: MBZ
2	0x0 RW	**GCP_COLOR_INDICATION:** Project: All Default Value: ;0b This bit must be set when in deep color mode. It may optionally be set for 24-bit mode. It must be set if the sink attached to Pipe A can receive GCP data. Value Name Description Project 0b Dont Indicate Dont indicate color depth. CD and PP bits in GCP set to zero All 1b Indicate Indicate color depth using CD bits in GCP. It will be set depending on programmed pixel depth in port control register All
1	0x0 RW	**GCP_DEFAULT_PHASE_ENABLE:** Project: All Default Value: ;0b Indicates the video timings meet alignment requirements such that the following conditions are met: Htotal is an even number Hactive is an even number Hsync is an even number Front and back porches for Hsync are even numbers Vsync always starts on an even-numbered pixel within a line in interlaced modes (starting counting with 0) Value Name Description Project 0b Clear Default phase bit in GCP is cleared All 1b Require Met Default phase bit in GCP is set. All requirements must be met before setting this bit All

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**GCP_AV_MUTE:** Project: All Default Value: ;0b Set AV mute bit in GCP Value Name Description Project 0b Clear AV mute bit in GCP is cleared. When this bit transitions to 0, the AV mute clear flag is sent in the next GCP packet All 1b Set AV mute bit in GCP is set. When this bit transitions to 1, the AV mute set flag is sent in the next GCP packet All

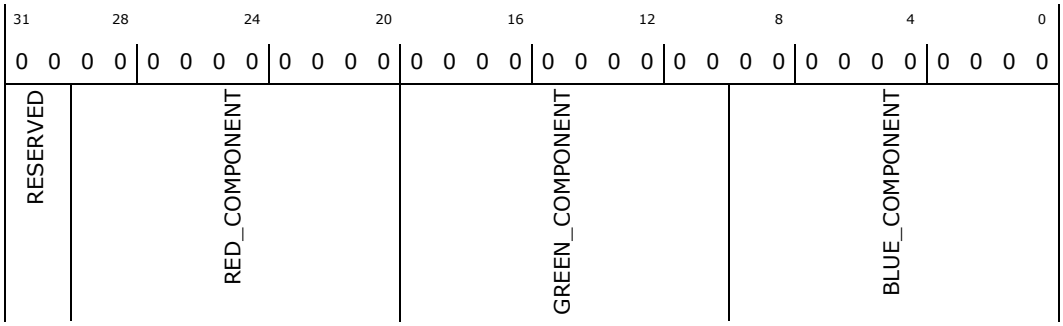
4.2.202 CANVAS_A—Offset 60A04h

Pipe A Canvas Color Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60A04h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** Reserved.
29:20	0x0 RO	**RED_COMPONENT:** Red Component
19:10	0x0 RO	**GREEN_COMPONENT:** GREEN Component
9:0	0x0 RO	**BLUE_COMPONENT:** BLUE Component

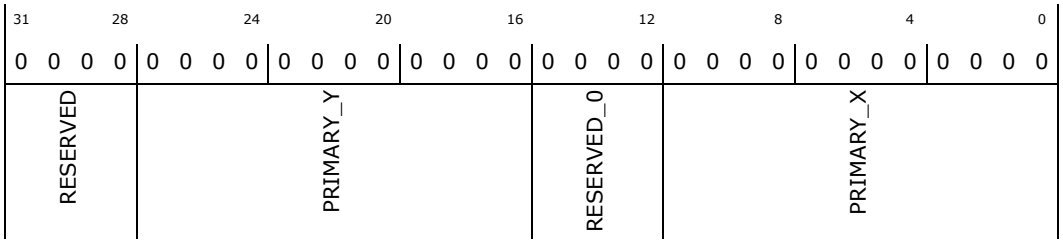
4.2.203 PRIMPOS_A—Offset 60A08h

These registers specify the screen position and size of the primary. This register is double buffered. The load register is transferred into the active register on the asserting edge of Vertical Blank for the pipe that the display is assigned. When using the primary as a secondary display, this should be set to the entire display rectangle.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60A08h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as Zero.
27:16	0x0 RW	**Primary_Y (PRIMARY_Y):** These 12 bits specify the vertical position in lines of the primary (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the un-rotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_0:** Write as Zero
11:0	0x0 RW	**PRIMARY_X:** These 12 bits specify the horizontal position in lines of the primary (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the end of the active video area in the un-rotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

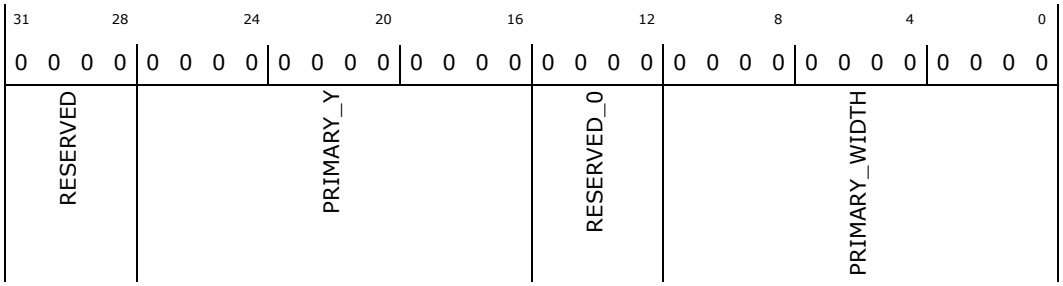
4.2.204 PRIMSIZE_A—Offset 60A0Ch

This register specifies the height and width of the primary in pixels and lines. The rectangle defined by the size and position should never exceed the boundaries of the display rectangle that the primary is assigned to.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 60A0Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as Zero.
27:16	0x0 RW	**Primary_Height (PRIMARY_Y):** This register field is used to specify the height of the primary in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_0:** Write as Zero
11:0	0x0 RW	**PRIMARY_WIDTH:** This register field is used to specify the width of the primary in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined primary rectangle must always be completely contained within the displayable area of the screen image.

4.2.205 PRIMA_CONSTANT—Offset 60A10h

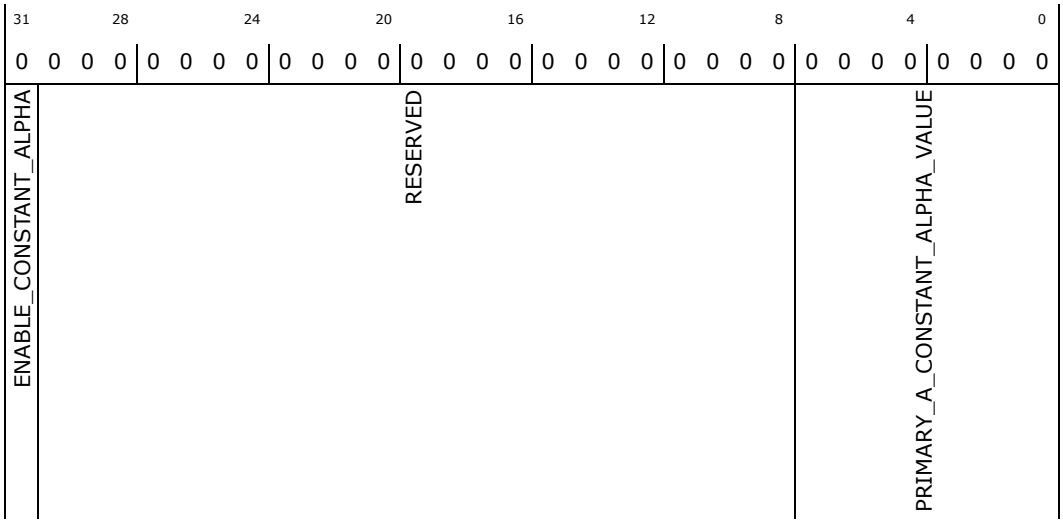
Primary A constant Alpha

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 60A10h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**Enable_CONSTANT_ALPHA (ENABLE_CONSTANT_ALPHA):** Primary A constant alpha provides a way to apply an alpha value to all primary pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. 0-Primary A Constant Alpha is disabled. 1-Primary A Constant Alpha Enabled
30:8	0x0 RO	**RESERVED:** RESERVED: MBZ
7:0	0x0 RW	**PRIMARY_A_CONSTATN_ALPHA_VALUE (PRIMARY_A_CONSTANT_ALPHA_VALUE):** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of primary with other surfaces.

4.2.206 HTOTAL_B—Offset 61000h

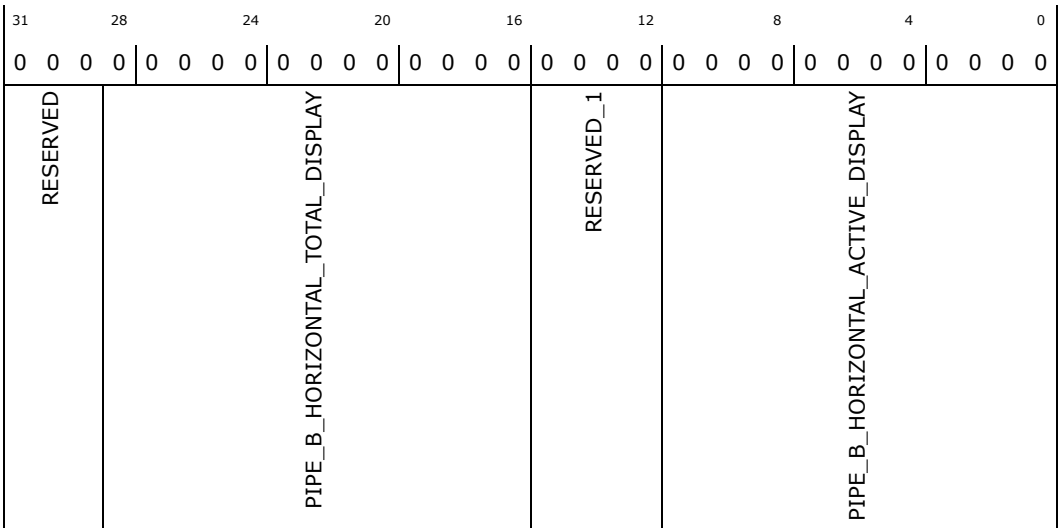
Pipe B Horizontal Total Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_B_HORIZONTAL_TOTAL_DISPLAY:** Refer pipe A description.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Write as zero.
11:0	0x0 RW	**PIPE_B_HORIZONTAL_ACTIVE_DISPLAY:** Refer pipe A description

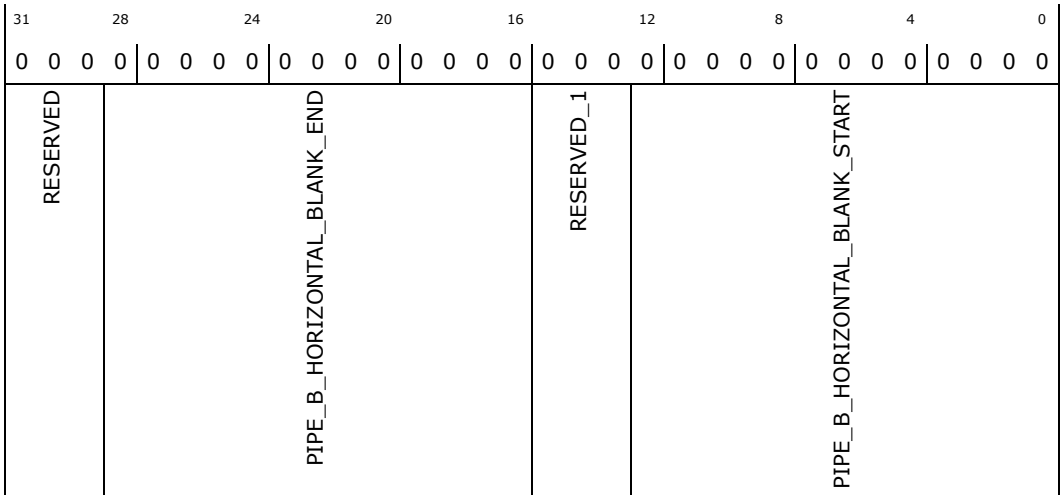
4.2.207 HBLANK_B—Offset 61004h

Pipe B Horizontal Blank Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61004h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** . Write as zero.
28:16	0x0 RW	**PIPE_B_HORIZONTAL_BLANK_END:** Refer pipe A description
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_B_HORIZONTAL_BLANK_START:** Refer pipe A description.

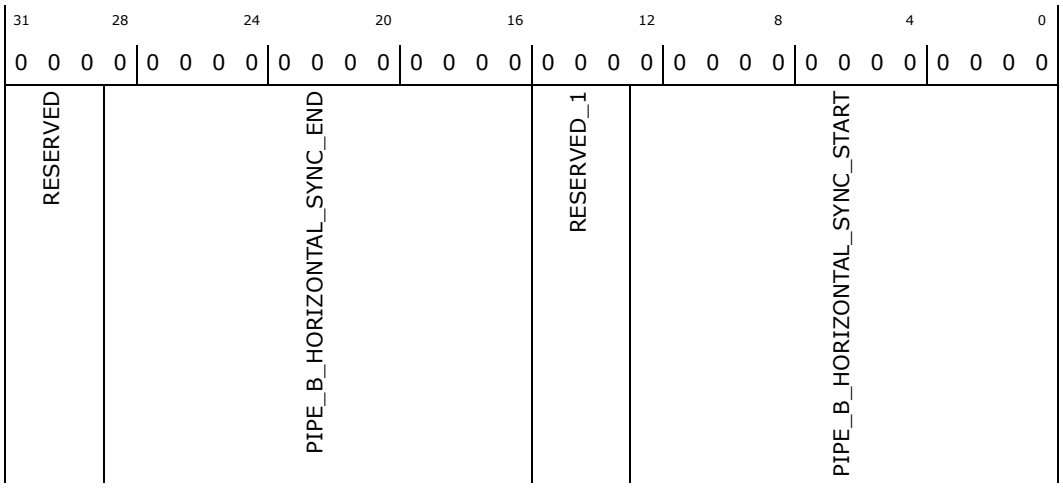
4.2.208 HSYNC_B—Offset 61008h

Pipe B Horizontal Sync Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61008h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_B_HORIZONTAL_SYNC_END:** Refer pipe A description.
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_B_HORIZONTAL_SYNC_START:** Refer pipe A description

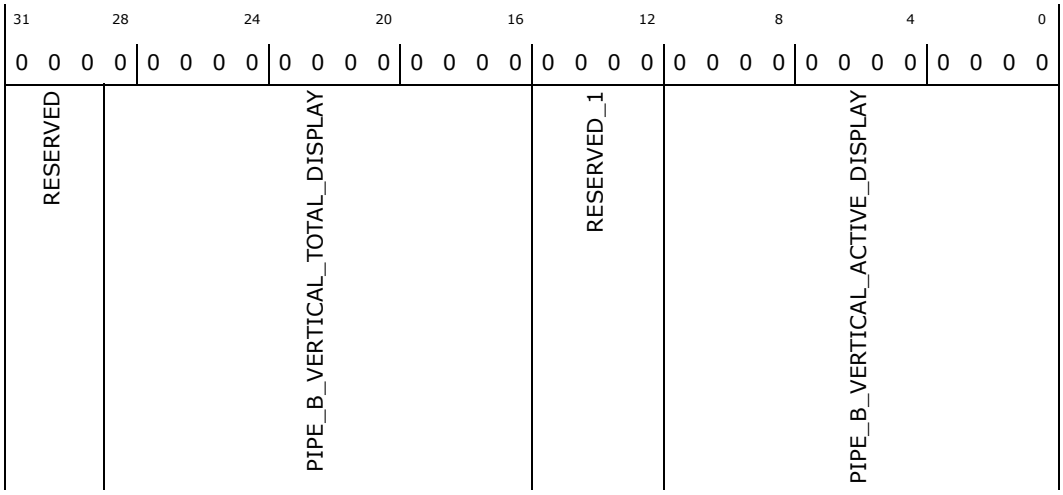
4.2.209 VTOTAL_B—Offset 6100Ch

Pipe B Vertical Total Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6100Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_B_VERTICAL_TOTAL_DISPLAY:** Refer pipe A description.
15:12	0x0 RO	**RESERVED_1:** Write as zero.
11:0	0x0 RW	**PIPE_B_VERTICAL_ACTIVE_DISPLAY:** Refer pipe A description.

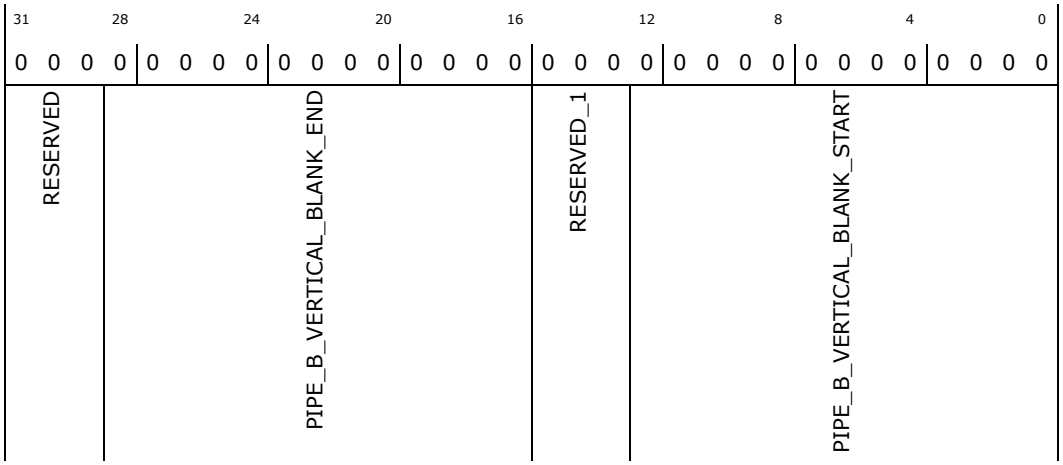
4.2.210 VBLANK_B—Offset 61010h

Pipe B Vertical Blank Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61010h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_B_VERTICAL_BLANK_END:** Refer pipe A description.
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_B_VERTICAL_BLANK_START:** Refer pipe A description.

4.2.211 VSYNC_B—Offset 61014h

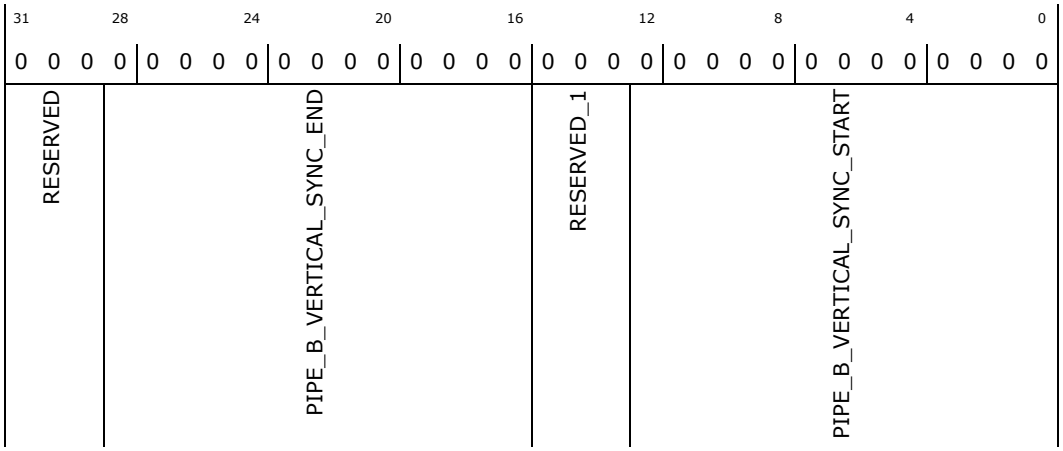
Pipe B Vertical Sync Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61014h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_B_VERTICAL_SYNC_END:** Refer pipe A description.
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_B_VERTICAL_SYNC_START:** Refer pipe A description.

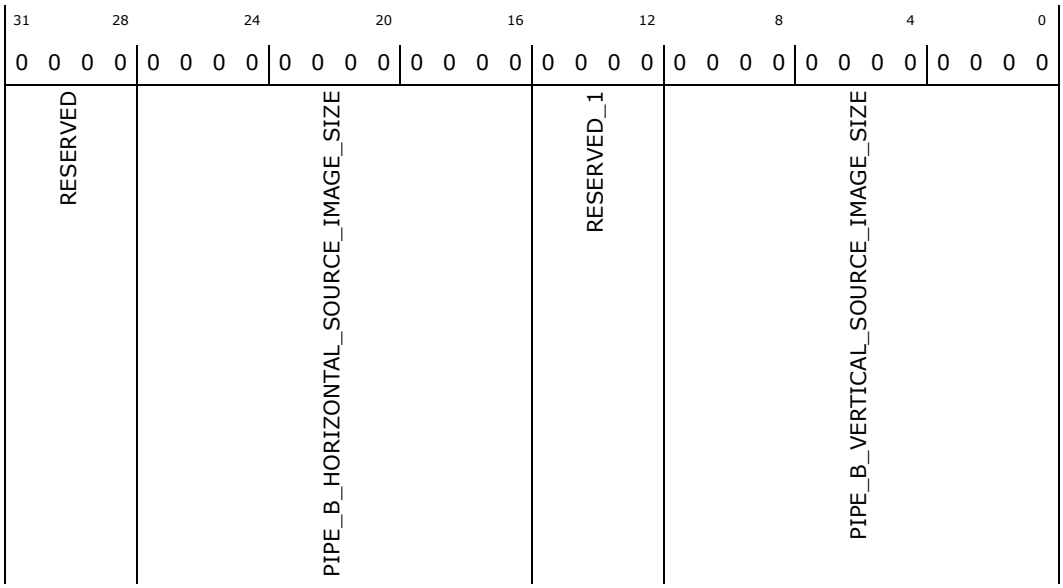
4.2.212 PIPEBSRC—Offset 6101Ch

Pipe B Source Image Size

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6101Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PIPE_B_HORIZONTAL_SOURCE_IMAGE_SIZE:** Refer pipe A description.
15:12	0x0 RO	**RESERVED_1:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
11:0	0x0 RW	**PIPE_B_VERTICAL_SOURCE_IMAGE_SIZE:** Refer pipe A description.

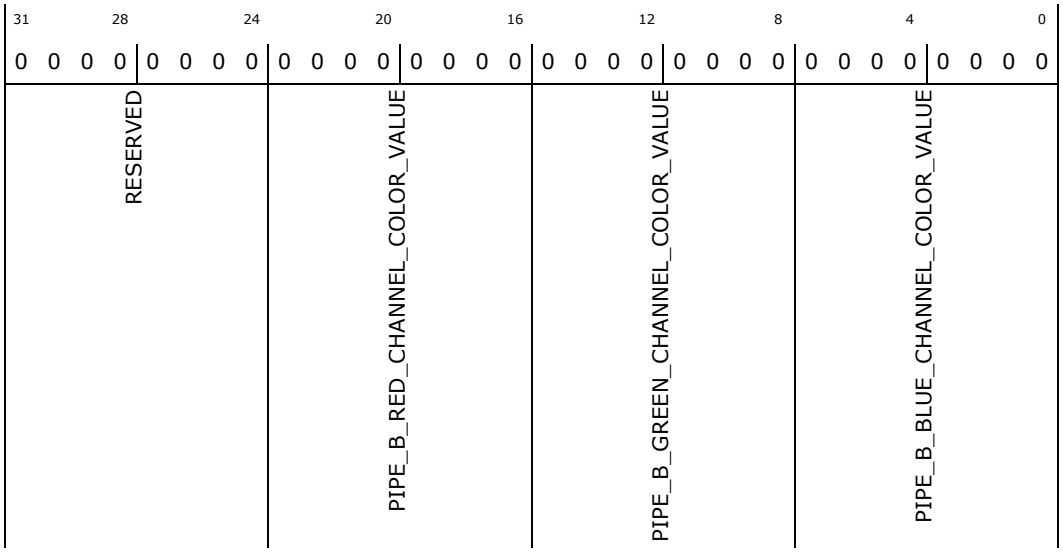
4.2.213 BCLRPAT_B—Offset 61020h

Pipe B Border Color Pattern Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61020h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**PIPE_B_RED_CHANNEL_COLOR_VALUE:** Reserved.
15:8	0x0 RW	**PIPE_B_GREEN_CHANNEL_COLOR_VALUE:** Reserved.
7:0	0x0 RW	**PIPE_B_BLUE_CHANNEL_COLOR_VALUE:** Reserved.

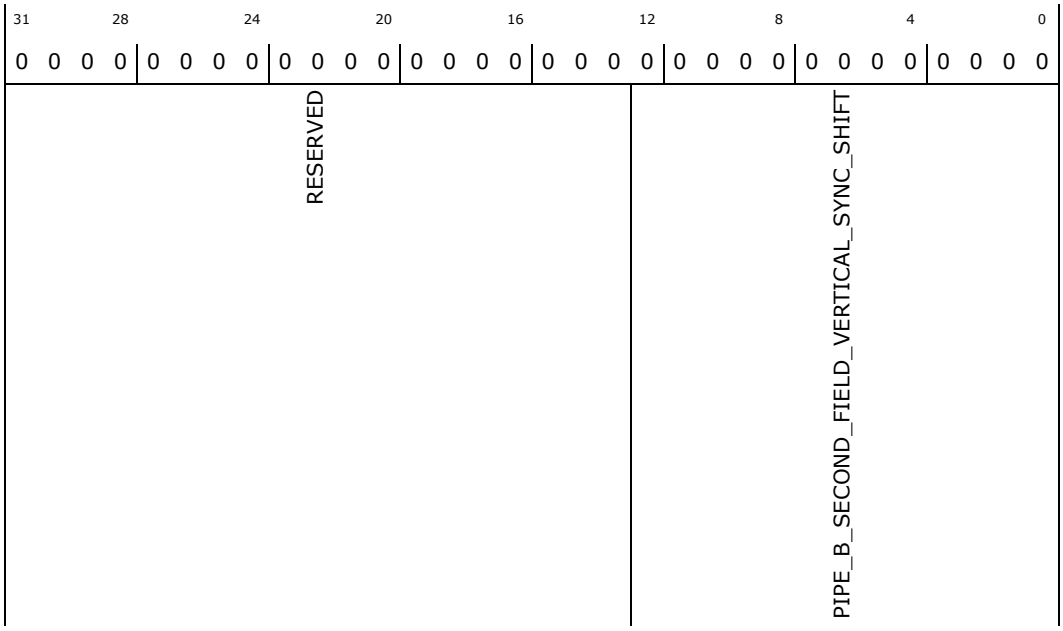
4.2.214 VSYNCSHIFT_B—Offset 61028h

Vertical Sync Shift Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61028h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** Write as zero.
12:0	0x0 RW	**PIPE_B_SECOND_FIELD_VERTICAL_SYNC_SHIFT:** This value specifies the vertical sync alignment for the start of the interlaced second field expressed in terms of the absolute pixel number relative to the horizontal active display start. This value will only be used if the PIPEBCONF is programmed to an interlaced mode using vsync shift. Otherwise a legacy value of floor[htotal / 2] will be used. Typically, the interlaced second field vertical sync should start one pixel after the point halfway between successive horizontal syncs, so the value of this register should be programmed to: (horizontal sync start - floor[horizontal total / 2]) (use the actual horizontal sync start and horizontal total values and not the minus one values programmed into registers). This vertical sync shift only occurs during the interlaced second field. In all other cases the vertical sync start position is aligned with horizontal sync start.

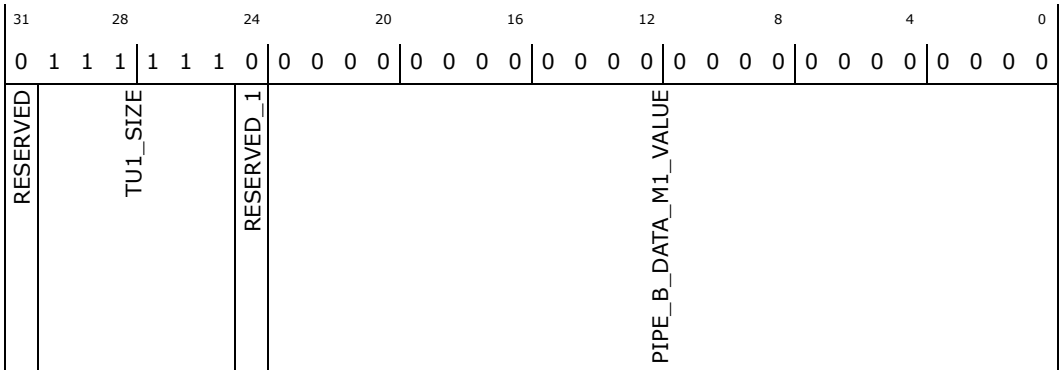
4.2.215 TRANSBDATAM1—Offset 61030h

Pipe B Data M value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61030h

Default: 7E000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ
30:25	0x3f RW	**TU1_SIZE:** Project: All Default Value: ;111111b 64 Refer Pipe A description.
24	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_DATA_M1_VALUE:** Project: All Refer Pipe A description.

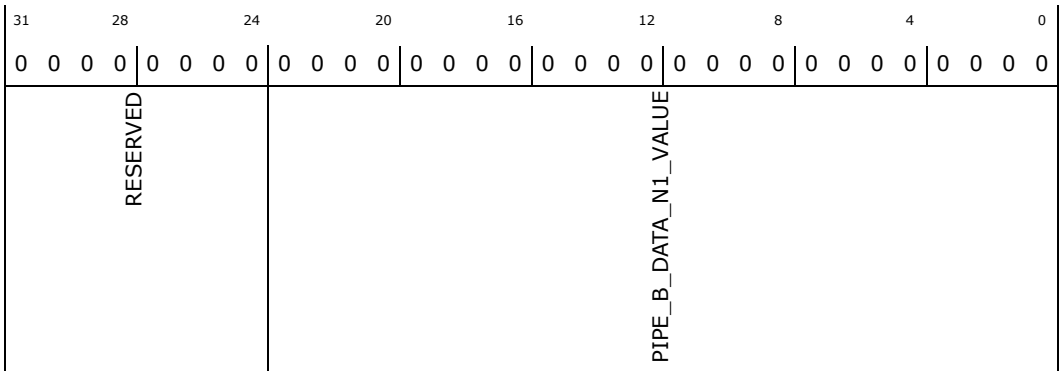
4.2.216 TRANSBDATAN1—Offset 61034h

Pipe B Data N value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61034h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_DATA_N1_VALUE:** Project: All Refer Pipe A description.

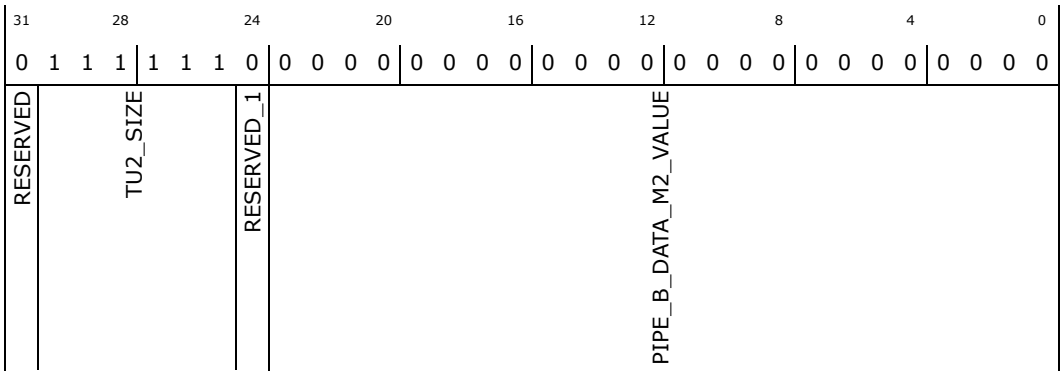
4.2.217 TRANSBDATAM2—Offset 61038h

Pipe B Data M value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61038h

Default: 7E000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ
30:25	0x3f RW	**TU2_SIZE:** Project: All Default Value: ;111111b 64 Refer Pipe A description.
24	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_DATA_M2_VALUE:** Project: All Refer Pipe A description.

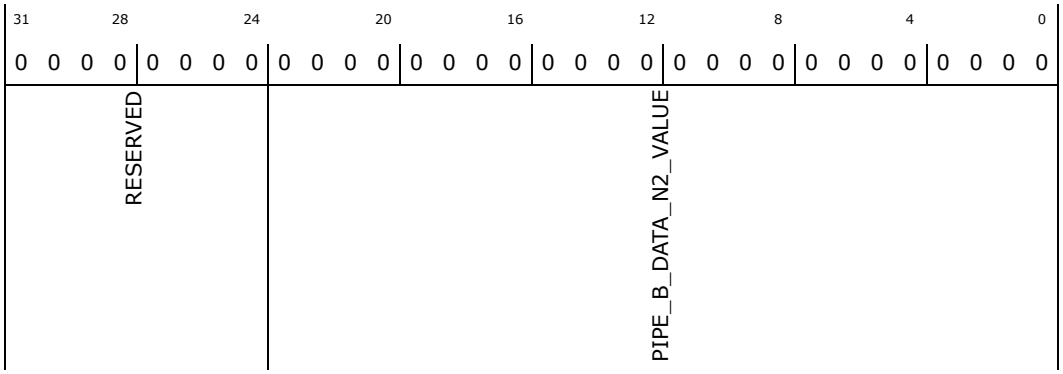
4.2.218 TRANSBDATAN2—Offset 6103Ch

Pipe B Data N value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6103Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_DATA_N2_VALUE:** Project: All Refer Pipe A description.

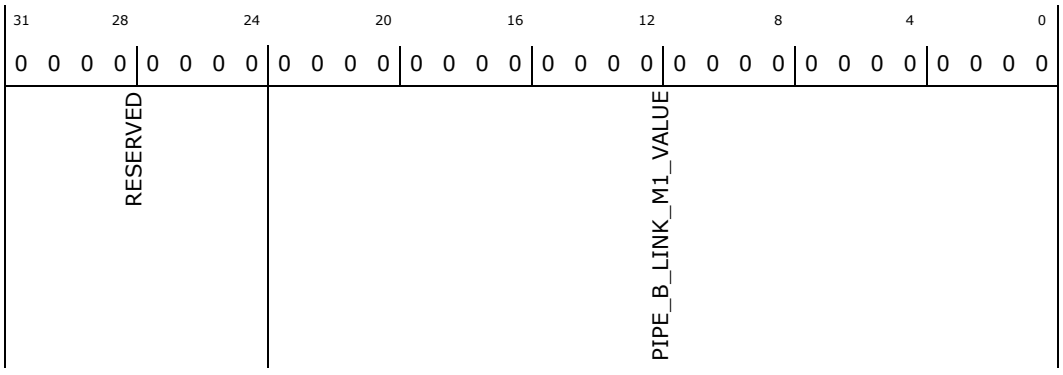
4.2.219 TRANSBDPLINKM1—Offset 61040h

Pipe B Link M value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61040h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_LINK_M1_VALUE:** Project: All Refer Pipe A description.

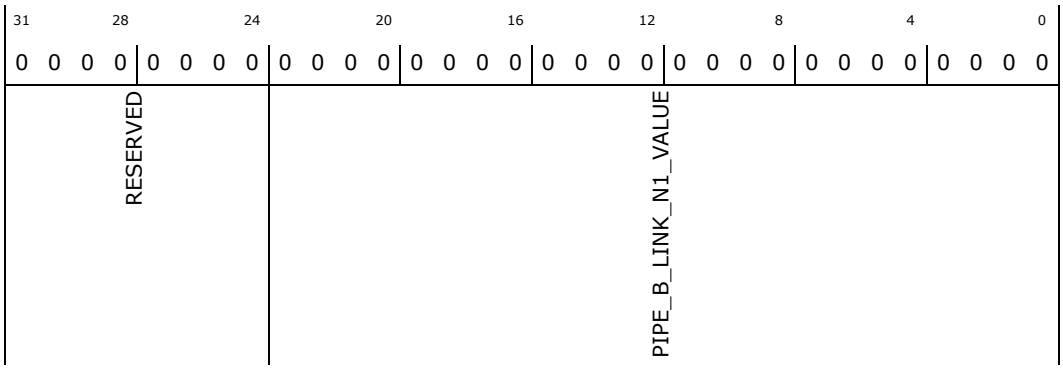
4.2.220 TRANSBDPLINKN1—Offset 61044h

Pipe B Link N value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61044h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_LINK_N1_VALUE:** Project: All Refer Pipe A description.

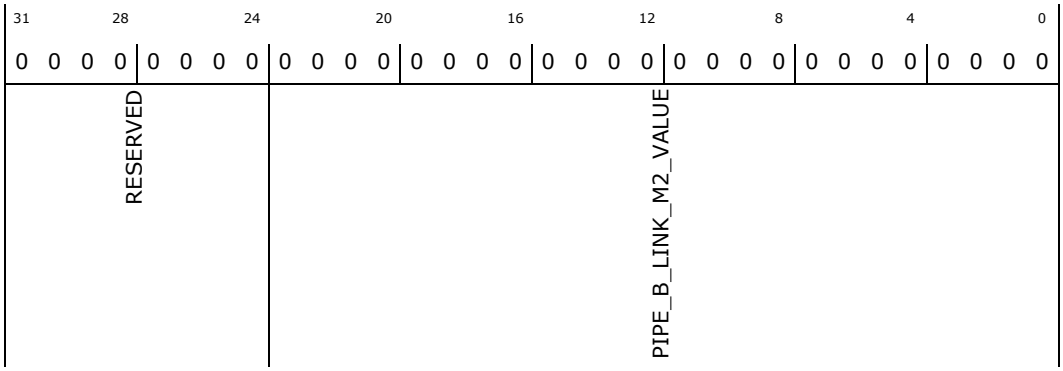
4.2.221 TRANSBDPLINKM2—Offset 61048h

Pipe B Link M value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_LINK_M2_VALUE:** Project: All Refer Pipe A description.

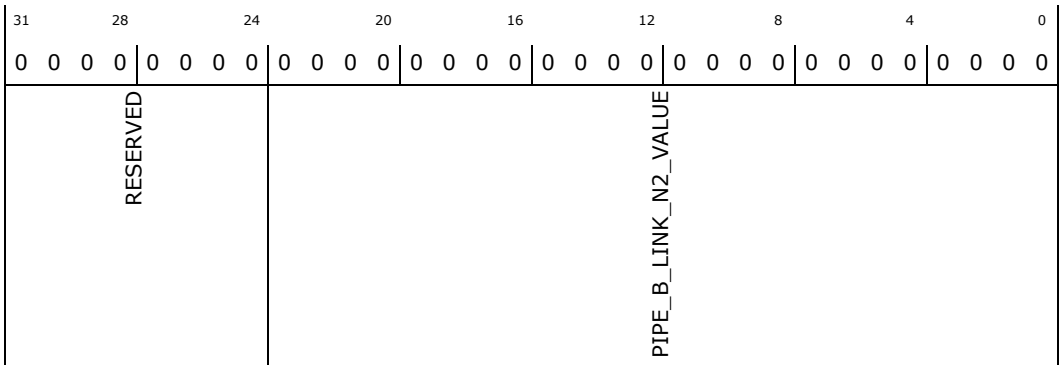
4.2.222 TRANSBDPLINKN2—Offset 6104Ch

Pipe B Link N value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6104Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_B_LINK_N2_VALUE:** Project: All Refer Pipe A description.

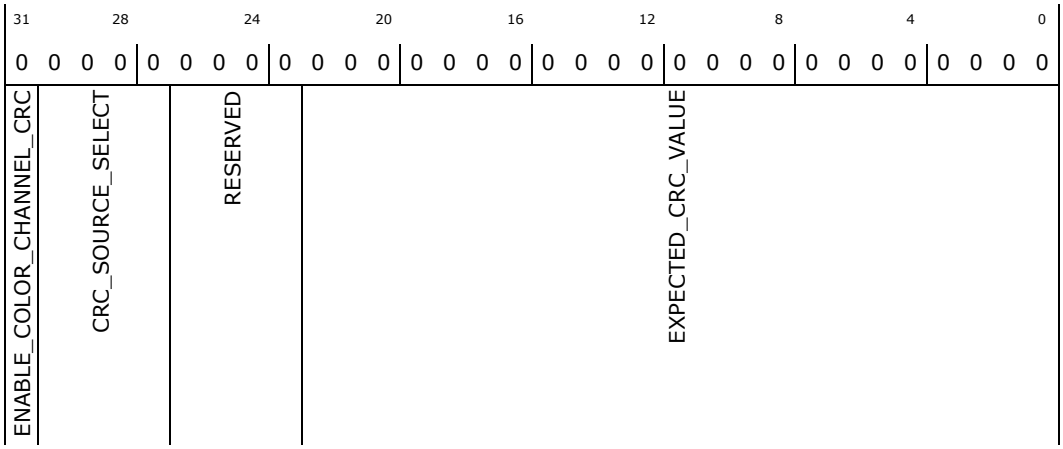
4.2.223 CRCCTRLREDB—Offset 61050h

Pipe B CRC Color Control Register (Red)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61050h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_COLOR_CHANNEL_CRC:** After being enabled for the first time, you need to wait for two VBLANK events for a valid CRC result. After that, a CRC will be generated each frame. 0 = CRC Calculations are disabled 1 = CRC Calculations are enabled
30:27	0x0 RW	**CRC_SOURCE_SELECT:** These bits select the source of the data to put into the CRC logic. 0000: Pipe B (Not available when DisplayPort or TV is enabled on this pipe) 0001: sDVOB/HDMIB (30 bit format. Only select when HDMIB is set to pipe B) 0010: sDVOC/HDMIC (30 bit format. Only select when HDMIC is set to pipe B) 0011: DisplayPort D (40 bit format) 0100: TV Encoder outputs (30 bit format) 0101: TV filter outputs (30 bit format) 0110: DisplayPort B (40 bit format) 0111: DisplayPort C (40 bit format) 1000: Audio DP (Audio for DisplayPort (pcdclk). Only select when Audio is on DisplayPort on Pipe B) 1001: Audio HDMI (Audio for HDMI (dotclock) Only select when Audio is on HDMI on Pipe B) Others: Reserved
26:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

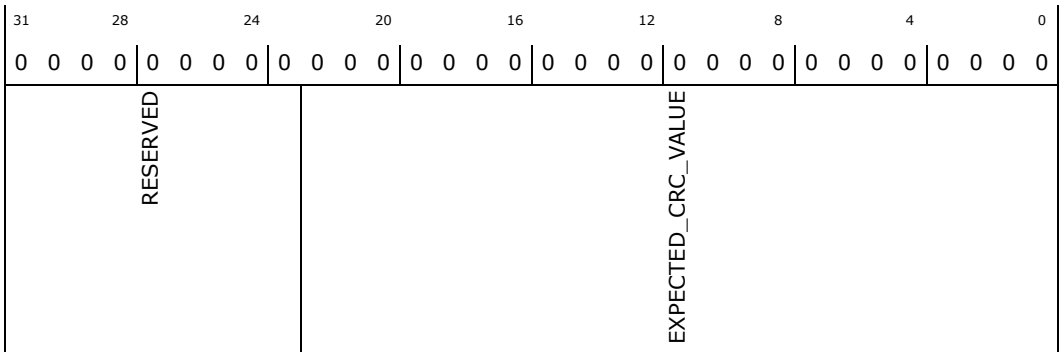
4.2.224 CRCCTRLGREENB—Offset 61054h

Pipe B CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61054h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

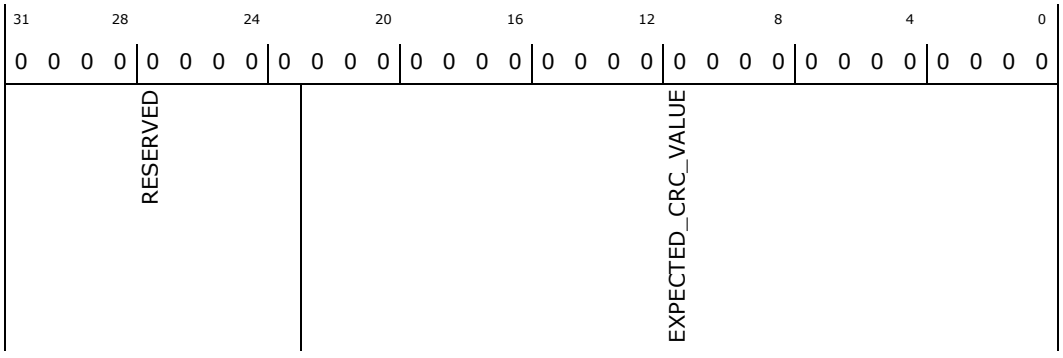
4.2.225 CRCCTRLBLUEB—Offset 61058h

Pipe B CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61058h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

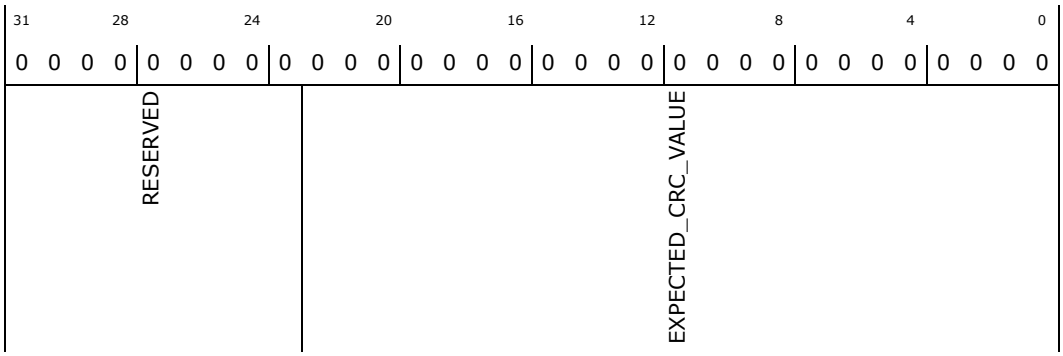
4.2.226 CRCCTRLALPHAB—Offset 6105Ch

Pipe B CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6105Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

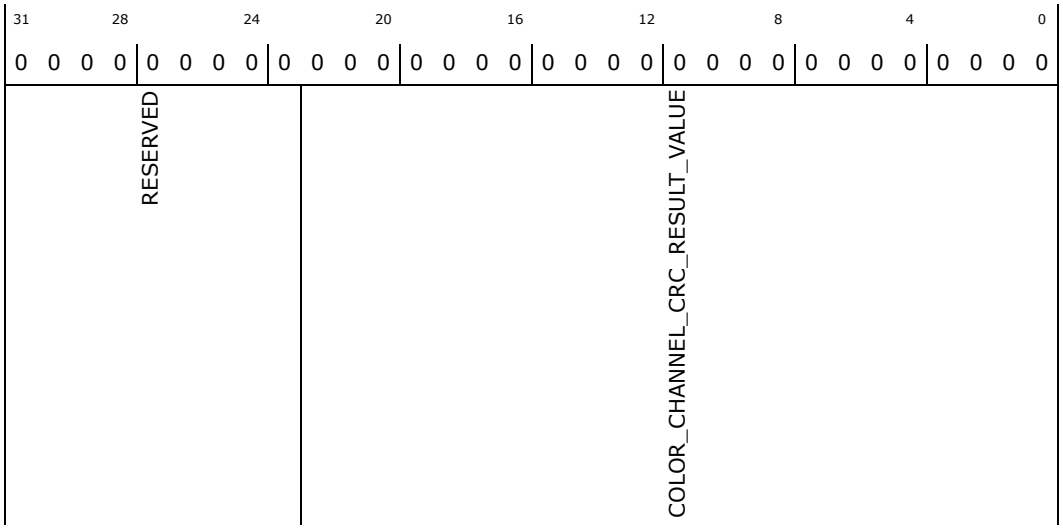
4.2.227 CRCRESREDB—Offset 61060h

Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61060h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.2.228 CRCRESGREENB—Offset 61064h

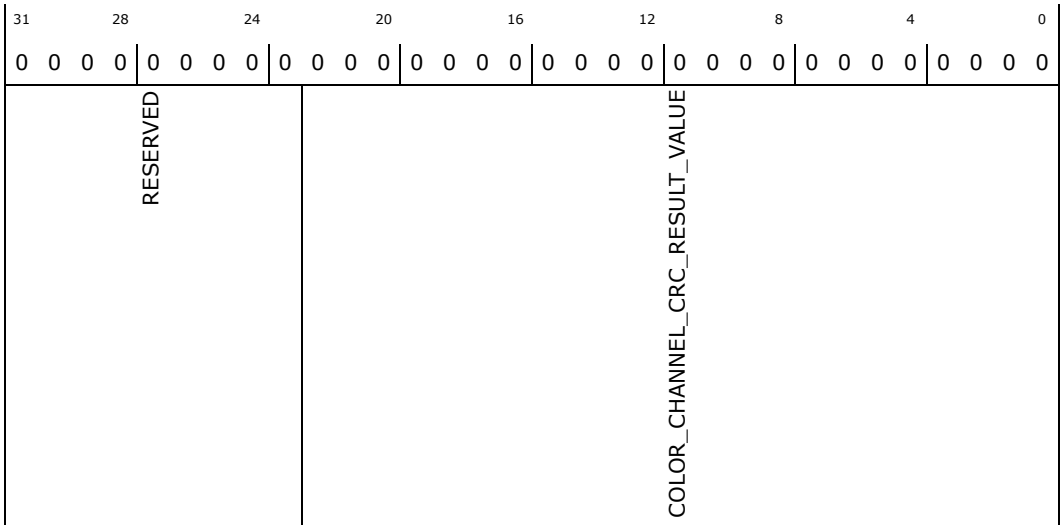
Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61064h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

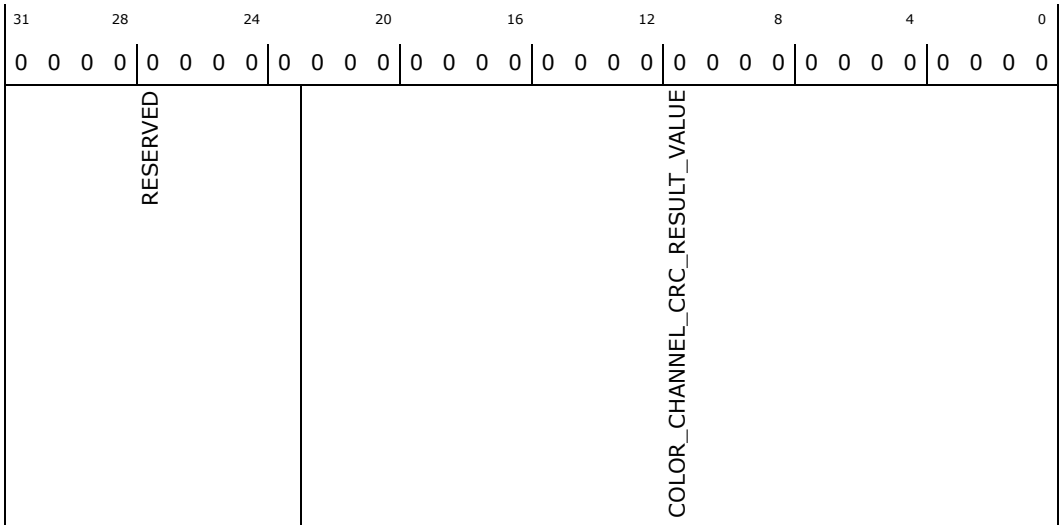
4.2.229 CRCRESBLUEB—Offset 61068h

Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61068h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.2.230 CRCRESALPHAB—Offset 6106Ch

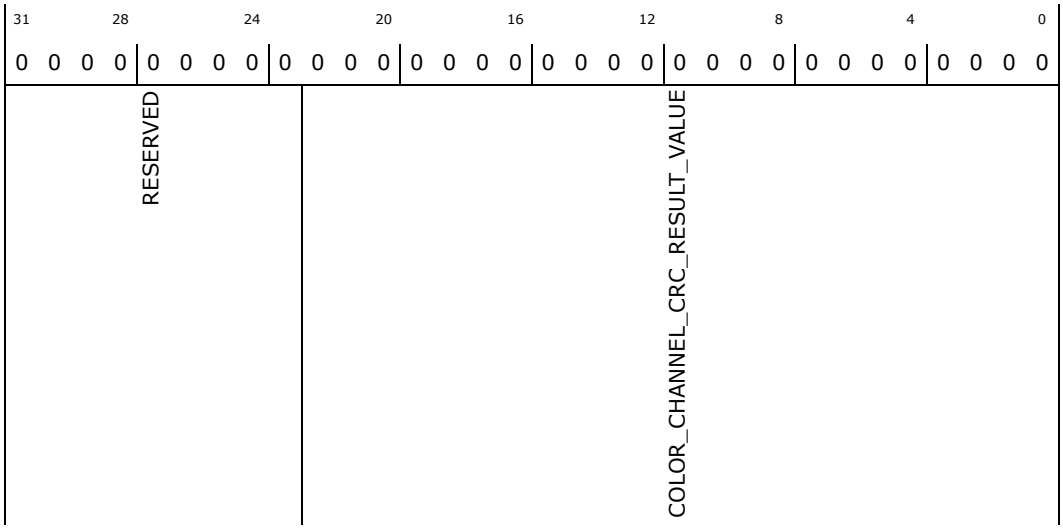
Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6106Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.2.231 CRCCTRLRESIDUE2B—Offset 61070h

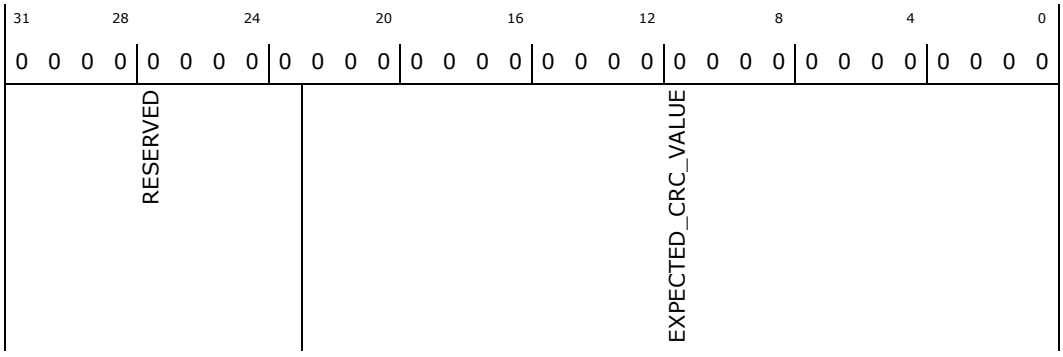
Pipe B CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61070h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

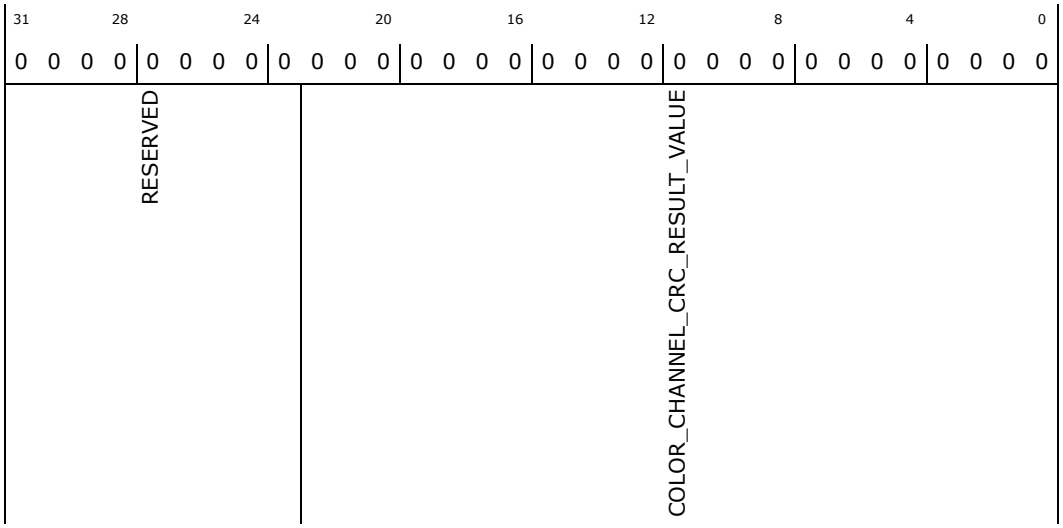
4.2.232 CRCRESRESIDUAL2B—Offset 61080h

Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61080h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

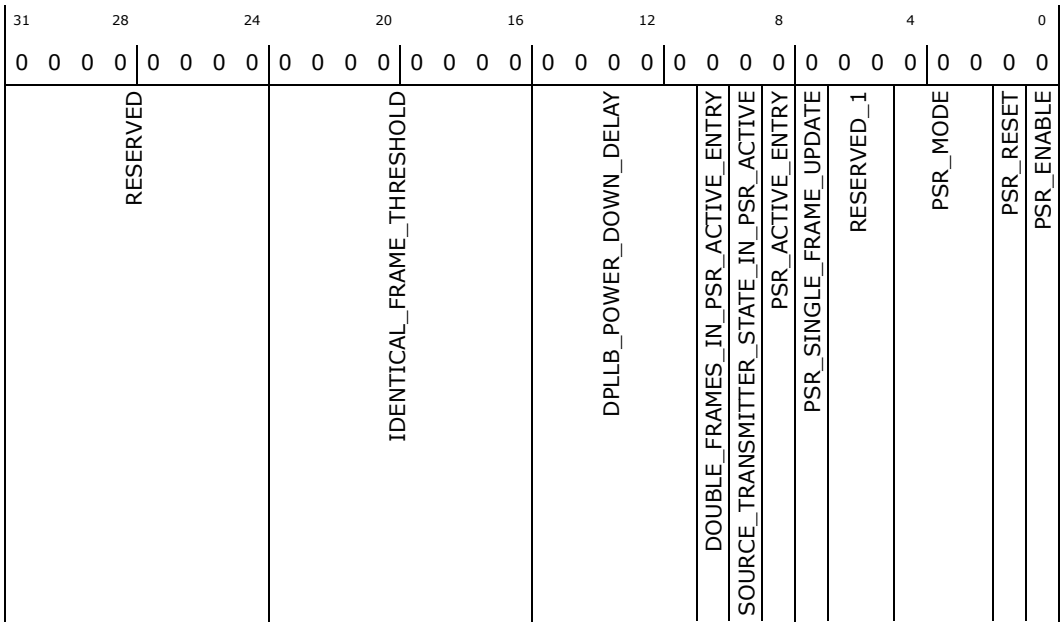
4.2.233 PSRCTLB—Offset 61090h

Pipe B Panel Self Refresh Control

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61090h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**IDENTICAL_FRAME_THRESHOLD:** : Number of identical frames that display controller needs to exceed in order to transition to PSR active state in HW timer mode
15:11	0x0 RW	**DPLLB_POWER_DOWN_DELAY:** programmable delay from main link powerdown to DPLLB powerdown. The delay is in number of cdclk clocks.
10	0x0 RW	**DOUBLE_FRAMES_IN_PSR_ACTIVE_ENTRY:** . If asserted, HW will send two frames with same SDP active setting when entry PSR active state. This bit is set if the vertical blanking time is less than 330us.
9	0x0 RW	**SOURCE_TRANSMITTER_STATE_IN_PSR_ACTIVE:** . If asserted, HW will keep transmitter active during PSR active state and sends only idle symbols. If deasserted, HW will turn off transmitter during PSR active state. Display driver will keep this bit consistent with Source transmitter state in PSR active bit in DPCD register of the sink.
8	0x0 RW	**PSR_ACTIVE_ENTRY:** This bit is only valid in PSR_mode is SW timer mode. If it is asserted, HW will transition into PSR_active state. If it is deasserted, HW will transition to PSR_inactive state. SW should not set or clear this bit more than once within one vblank period.
7	0x0 RW	**PSR_SINGLE_FRAME_UPDATE:** In PSR persistent mode, SW set this bit before writing registers for a flip. It will be self-clear when it gets to the PSR active state.

Bit Range	Default & Access	Field Name (ID): Description
6:5	0x0 RO	**RESERVED_1:** Reserved.
4:2	0x0 RW	**PSR_MODE:** b011-111: reserved. b010: PSR with HW timer. HW timer decides PSR active entry point. PSR active state exits upon MMIO write registers that may change the frame buffer. b001: PSR with SW timer. In this mode, SW will keep track of idle frames and buffer modification in the driver and explicitly specify the entry and exit PSR active state point. b000: PSR manual (debug) mode. All of PSR state transitions and SDP content is managed by SW driver. SW is responsible to change SDP content for every frame with appropriate values to keep PSR panel in synchronized states.
1	0x0 RW	**PSR_RESET:** If assert all PSR functions are reset back to PSR inactive state. When it needs to resynchronize source and sync, SW writes 0x2 to DPCD register 600h and to this bit to get system back to PSR active states. This bit is self clear.
0	0x0 RW	**PSR_ENABLE:** Panel Self-refresh is enabled. When it is asserted PSR is enabled and operate in one of the mode that specified by PSR mode.

4.2.234 PSRSTATB—Offset 61094h

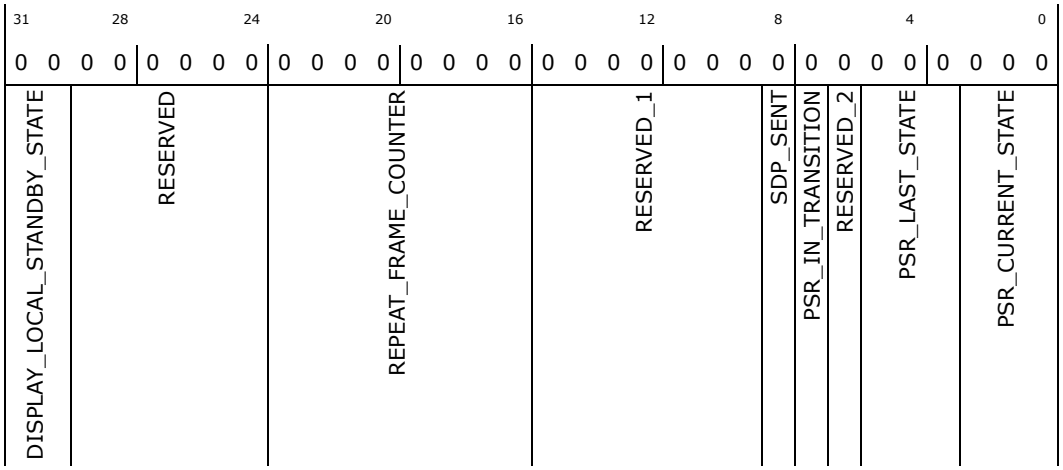
Pipe B PSR status register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61094h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**DISPLAY_LOCAL_STANDBY_STATE:** :00: D0 idle state, fetch frame buffer from system memory 02: D0i2 PSR is active, display controller is trunk gated 03: D0i3 PSR is active, display controller is power gated
29:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RO	**REPEAT_FRAME_COUNTER:** : Number of identical frames has been sent by display controller. Value is not roll over at 255.
15:9	0x0 RO	**RESERVED_1:** Reserved.
8	0x0 RO	**SDP_SENT:** it indicates if SDP packet has been sent in current frame.
7	0x0 RO	**PSR_IN_TRANSITION:** There is a period that source already committed to PSR active but sink did not. SW should not change the source state at this time but wait until this status bit is clear. The wait time should in the range of 120-250us in the worst case.
6	0x0 RO	**RESERVED_2:** Reserved.
5:3	0x0 RO	**PSR_LAST_STATE:** indicate last source state that PSR state machine were in (debug) 000: PSR_disabled 001: PSR_inactive 010: PSR_transition_to_active 011: PSR_active no RFB update 100: PSR_active single frame update 101: PSR_exit
2:0	0x0 RO	**PSR_CURRENT_STATE:** indicate current source state that PSR state machine are in 000: PSR_disabled 001: PSR_inactive 010: PSR_transition_to_active 011: PSR_active no RFB update 100: PSR_active single frame update 101: PSR_exit

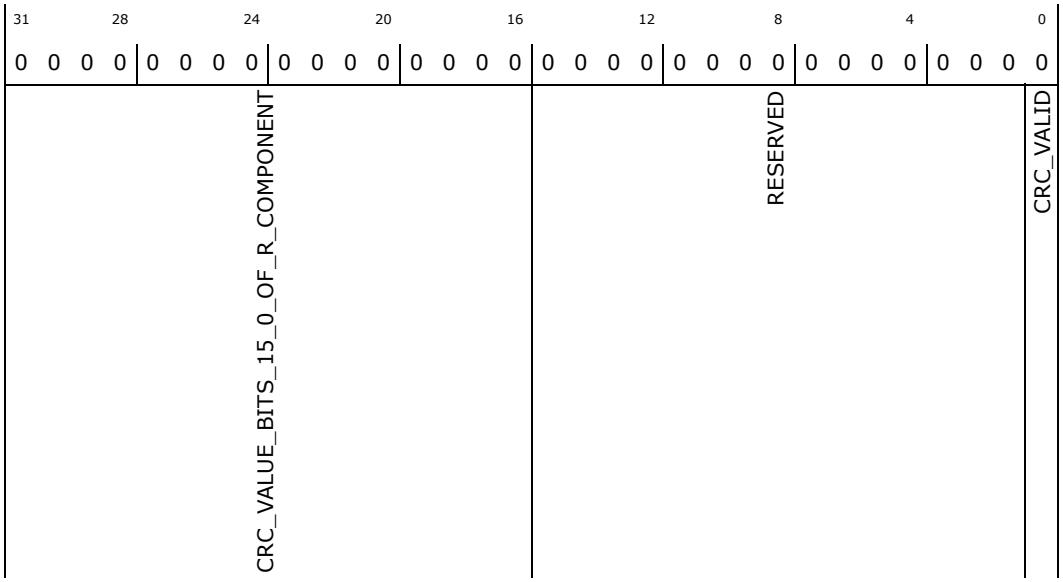
4.2.235 PSRCRC1B—Offset 61098h

Pipe B PSR CRC1 register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61098h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**CRC_VALUE_BITS_15_0_OF_R_COMPONENT:** Reserved.
15:1	0x0 RO	**RESERVED:** .
0	0x0 RO	**CRC_VALID:** CRC calculation complete and valid for previous frame.

4.2.236 PSRCRC2B—Offset 6109Ch

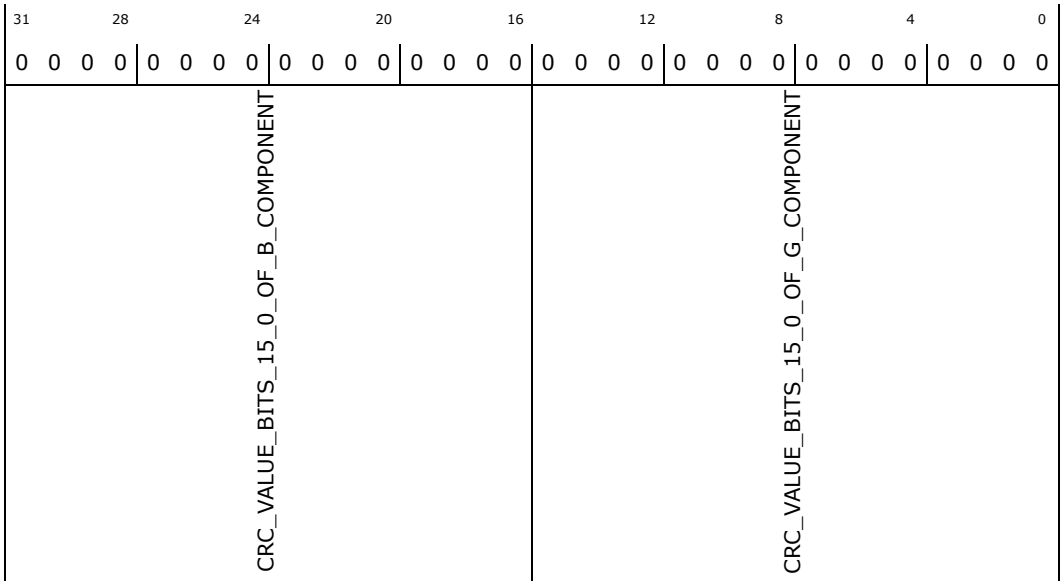
Pipe B PSR CRC2 register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6109Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**CRC_VALUE_BITS_15_0_OF_B_COMPONENT:** Reserved.

4.2.244 ADPA—Offset 61100h

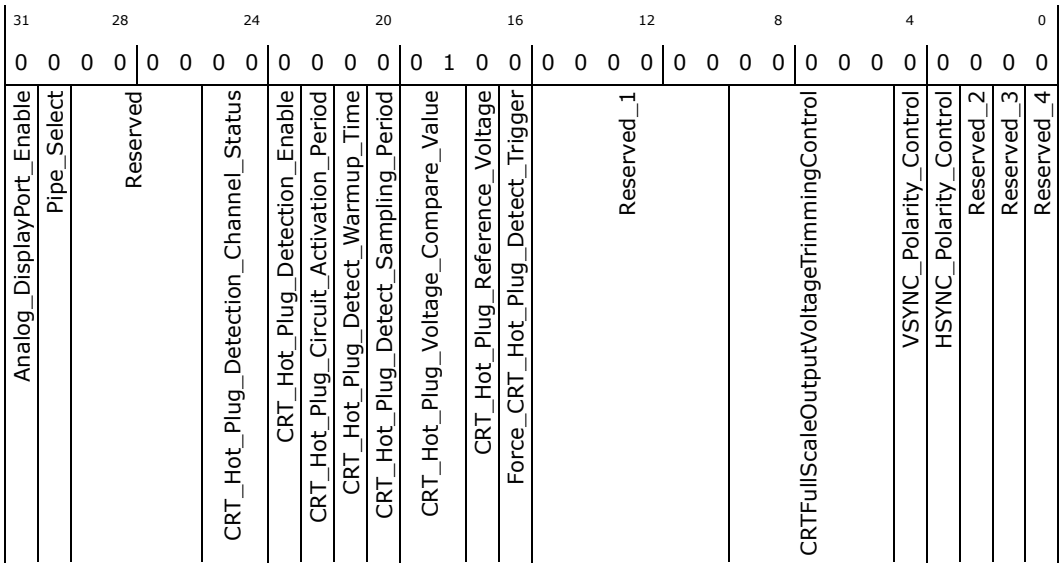
Analog Display Port Register CRT port control (dprrega.v adp_Q)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61100h

Default: 00040000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**Analog_DisplayPort_Enable:** Project: All Default Value: 0b This bit enables or disables the analog port CRT DAC and syncs outputs. Value Name Description Project 0b Disable Disable the analog port DAC and disable output of syncs All 1b Enable Enable the analog port DAC and enable output of syncs All
30	0x0 RW	**Pipe_Select:** Project: All Default Value: 0b Determines which pipe output will feed this DAC port. Value Name Description Project 0b Pipe A Pipe A All 1b Pipe B Pipe B All
29:26	0x0 RO	**Reserved:** Project: All Format:

Bit Range	Default & Access	Field Name (ID): Description
25:24	0x0 RO	**CRT_Hot_Plug_Detection_Channel_Status:** Project: All AccessType: Read Only Default Value: 00b These bits are set when a CRT hot plug or unplug event has been detected and indicate which color channels were attached. Write a one to these bits to clear the status. The rising or falling edges of these bits are ORed together to go to the main ISR CRT hot plug register bit. Value Name Description Project 00b None No channels attached All 01b Blue Blue channel only is attached All 10b Green Green channel only is attached All 11b Both Both blue and green channel attached All
23	0x0 RW	**CRT_Hot_Plug_Detection_Enable:** Project: All Default Value: 0b Hot plug detection is used to set status bits or an interrupt on the connection or disconnection of a CRT to the analog display port. Value Name Description Project 0b Disable CRT hot plug detection is disabled All 1b Enable CRT hot plug detection is enabled All
22	0x0 RW	**CRT_Hot_Plug_Circuit_Activation_Period:** Project: All Default Value: 0b This bit sets the activation period for the CRT hot plug circuit. Value Name Description Project 0b 64 cdclk 64 cdclk periods All 1b 128 cdclk 128 cdclk periods All
21	0x0 RW	**CRT_Hot_Plug_Detect_Warmup_Time:** Project: All Default Value: 0b This bit sets the warmup time for the CRT hot plug circuit. Value Name Description Project 0b 2M pcdclks 2M pcdclks warmup (approximately 5ms) All 1b 4M pcdclks 4M pcdclks warmup (approximately 10ms) All
20	0x0 RW	**CRT_Hot_Plug_Detect_Sampling_Period:** Project: All Default Value: 0b This bit determines the length of time between sampling periods when the transcoder is disabled. Value Name Description Project 0b 1G pcdclks 1G pcdclks (approximately 2 seconds) All 1b 2G pcdclks 2G pcdclks (approximately 4 seconds) All
19:18	0x1 RW	**CRT_Hot_Plug_Voltage_Compare_Value:** Project: All Default Value: 01b A0 Compare value for Vref to determine whether the analog port is connected to a CRT. Value Name Description Project 00b 80 80 All 01b A0 A0 (Default) All 10b C0 C0 All 11b E0 E0 (bit 17 must be = 1) All
17	0x0 RW	**CRT_Hot_Plug_Reference_Voltage:** Project: All Default Value: 0b Value Name Description Project 0b 325mv 325mv All 1b 475mv 475mv (bits 19:18 must be = 11) All

Bit Range	Default & Access	Field Name (ID): Description
16	0x0 RW	**Force_CRT_Hot_Plug_Detect_Trigger:** Project: All Default Value: 0b Triggers a CRT hotplug/unplug detection cycle independent of the hot plug detection enable bit. This bit is automatically cleared after the detection is completed. The result of this trigger is reflected in the CRT Hot Plug Detection Status. Software must reset status after a force CRT detect trigger. Value Name Description Project 0b No Trigger No Trigger All 1b Force Trigger Force Trigger All
15:10	0x0 RO	**Reserved_1:** Project: All Format:
9:5	0x0 RW	**CRTFullScaleOutputVoltageTrimmingControl:** Project: All Default Value: 0b This controls CRT output voltage trimming to ensure the output voltage is withing VESA spec.
4	0x0 RW	**VSYNC_Polarity_Control:** Project: All Default Value: 0b The output VSYNC polarity is controlled by this bit. This is used to implement display modes that require inverted polarity syncs and to set the disabled state of the VSYNC signal. Value Name Description Project 0b Low Active Low All 1b High Active High All
3	0x0 RW	**HSYNC_Polarity_Control:** Project: All Default Value: 0b The output HSYNC polarity is controlled by this bit. This is used to implement display modes that require inverted polarity syncs and to set the disabled state of the HSYNC signal. Value Name Description Project 0b Low Active Low All 1b High Active High All
2	0x0 RO	**Reserved_2:** Project: All Forma
1	0x0 RW	**Reserved_3:** Project: All Forma Monochrome Enable: If the CRT display is a monochrom type, SW driver shall set this bit to enable the CRT circuit to drive only the green channel to CRT and gate off the red and blue channels. 0 = Monochrome disabled (default) 1 = Monochrome enabled
0	0x0 RO	**Reserved_4:** Project: All Forma Monochrome Enable: If the CRT display is a monochrom type, SW driver shall set this bit to enable the CRT circuit to drive only the green channel to CRT and gate off the red and blue channels. 0 = Monochrome disabled (default) 1 = Monochrome enabled 0 = 1.35V is used for analog supply voltage (default) 1 = 1.25V is used for analog supply voltage

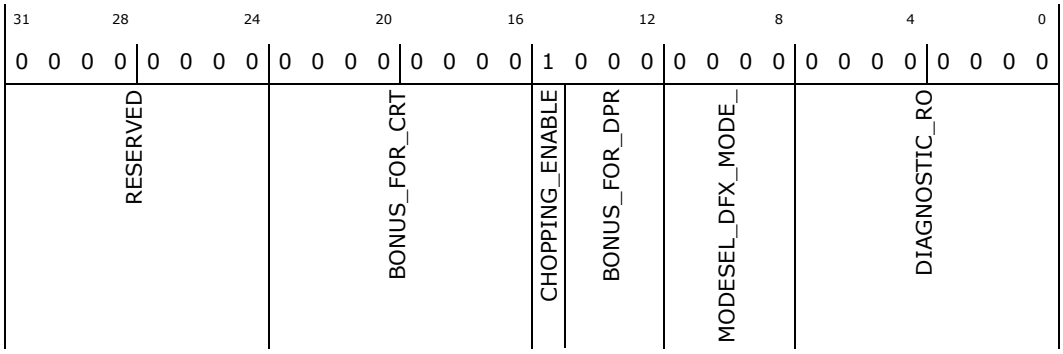
4.2.245 CRTIO_DFX—Offset 61104h

CRT port control (dprrega.v crt_dfx)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61104h

Default: 00008000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** read as zero
23:16	0x0 RW	**BONUS_FOR_CRT:** Reserved.

7:0	0x0 RO	**DIAGNOSTIC_RO:** Observe signals at CRTIO AccessType: Read Only

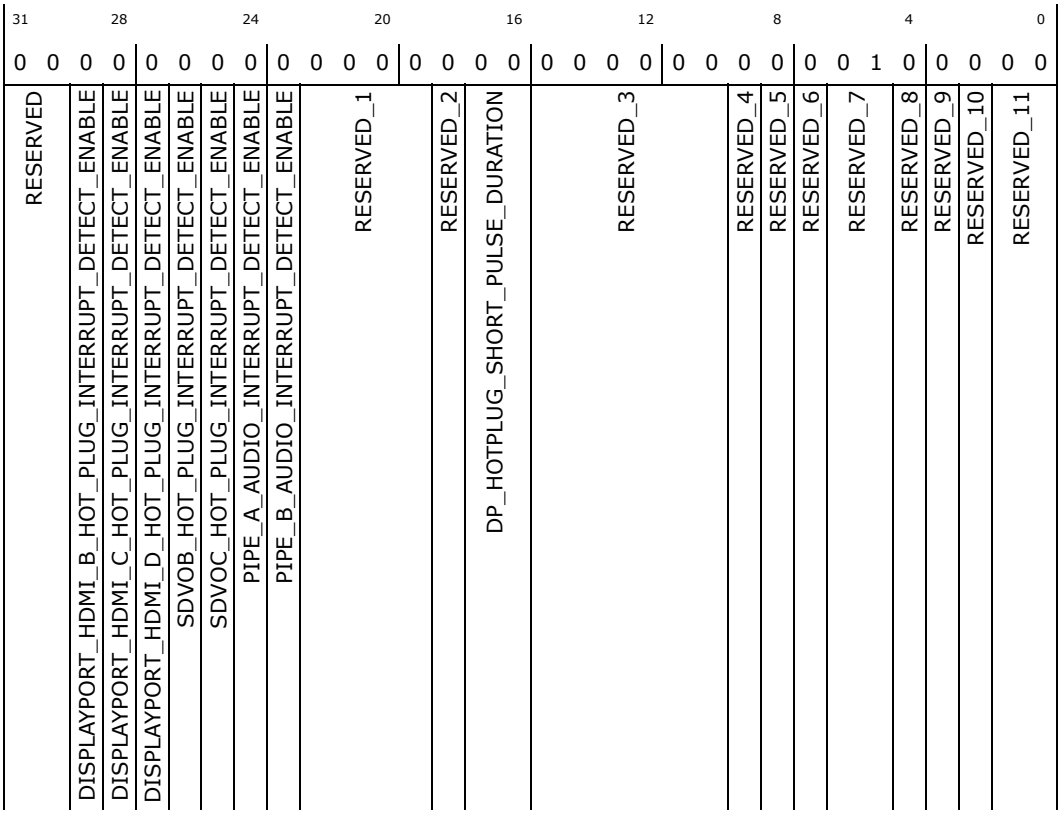
4.2.246 PORT_HOTPLUG_EN—Offset 61110h

DPD enable control (dprrega.v ql_hotplugen_Q)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61110h

Default: 00000020h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** mbz
29	0x0 RW	**DISPLAYPORT_HDMI_B_HOT_PLUG_INTERRUPT_DETECT_ENABLE:** This will enable the consideration of the hot plug interrupt status bit for DisplayPort B in the Port Hotplug Status register, offset 61114h. Please note that software must set this bit at boot in order to detect the HPD input buffer live state. Since setting this bit may generate an interrupt, it must not be cleared and reset as part of interrupt processing. 0 = DisplayPort or HDMIB Hot Plug Detect Disabled (Default) 1 = DisplayPort or HDMIB Hot Plug Detect Enabled
28	0x0 RW	**DISPLAYPORT_HDMI_C_HOT_PLUG_INTERRUPT_DETECT_ENABLE:** This will enable the consideration of the hot plug interrupt status bit for DisplayPort C in the Port Hotplug Status register, offset 61114h. Please note that software must set this bit at boot in order to detect the HPD input buffer live state. Since setting this bit may generate an interrupt, it must not be cleared and reset as part of interrupt processing. 0 = DisplayPort or HDMIC Hot Plug Detect Disabled (Default) 1 = DisplayPort or HDMIC Hot Plug Detect Enabled

Bit Range	Default & Access	Field Name (ID): Description
27	0x0 RW	**DISPLAYPORT_HDMI_D_HOT_PLUG_INTERRUPT_DETECT_ENABLE:** [DevCTG] This will enable the consideration of the hot plug interrupt status bit for DisplayPort D in the Port Hotplug Status register, offset 61114h. Please note that software must set this bit at boot in order to detect the HPD input buffer live state. Since setting this bit may generate an interrupt, it must not be cleared and reset as part of interrupt processing. 0 = DisplayPort or HDMID Hot Plug Detect Disabled (Default) 1 = DisplayPort or HDMID Hot Plug Detect Enabled
26	0x0 RW	**SDVOB_HOT_PLUG_INTERRUPT_DETECT_ENABLE:** [DevCTG] This will enable the consideration of the hot plug interrupt status bit in the Port Hotplug Status register, offset 61114h. This bit enables detection on the SDVOB interrupt input pin pair. 0 = SDVOB Hot Plug Detect Disabled (Default) 1 = SDVOB Hot Plug Detect Enabled
25	0x0 RW	**SDVOC_HOT_PLUG_INTERRUPT_DETECT_ENABLE:** [DevCTG] This will enable the consideration of the hot plug interrupt status bit in the Port Hotplug Status register, offset 61114h. This bit enables detection on the SDVOC interrupt input pin pair. 0 = SDVOC Hot Plug Detect Disabled (Default) 1 = SDVOC Hot Plug Detect Enabled
24	0x0 RW	**PIPE_A_AUDIO_INTERRUPT_DETECT_ENABLE:** This bit enables consideration of the pipe A audio interrupt status bit in the Port Hotplug Status Register, offset 61114h. It relates to the HDMI port that has audio enabled and can only be used in combination with TMDS encoding. This bit is only to be used for integrated HDMI. 0 = Audio interrupt detect disabled (Default) 1 = Audio interrupt detect enabled
23	0x0 RW	**PIPE_B_AUDIO_INTERRUPT_DETECT_ENABLE:** This bit enables consideration of the pipe B audio interrupt status bit in the Port Hotplug Status Register, offset 61114h. It relates to the HDMI port that has audio enabled and can only be used in combination with TMDS encoding. This bit is only to be used for integrated HDMI. 0 = Audio interrupt detect disabled (Default) 1 = Audio interrupt detect enabled
22:19	0x0 RW	**RESERVED_1:** mbz
18	0x0 RW	**RESERVED_2:** MBZ TV Hot Plug Detect Interrupt Enable: [DevCL, DevCTG] This will enable the consideration of the TV hot plug interrupt status bit. 0 = TV Hot Plug Detect Disabled (bit 10 of the port hotplug status register no longer detects interrupts, Default) 1 = TV Hot Plug Detect Enabled
17:16	0x0 RW	**DP_HOTPLUG_SHORT_PULSE_DURATION:** These bits define the duration of the pulse defined as a short pulse for DisplayPort ports. 00 = 2mS (Default) 01 = 4.5mS 10 = 6mS 11 = 100mS
15:10	0x0 RO	**RESERVED_3:** mbz

Bit Range	Default & Access	Field Name (ID): Description
9	0x0 RW	**RESERVED_4:** MBZ. This bit is the same as bit 23 in 61100h CRT Hot plug Interrupt Enable: Hotplug detection is used to cause an interrupt or status bit based on the connection or disconnection of a CRT to the analog video connection. 0 = No hot plug interrupt is enabled (Default) 1 = Hot plug detection is enabled
8	0x0 RW	**RESERVED_5:** MBZ. This bit is the same as bit 22 in 61100h CRT Hot plug Circuit Activation Period: This bit sets the activation period for the CRT hot plug circuit detection. Setting this bit to 1 is required for the correct operation of CRT DAC detection. 0 = 32 cdclk periods (Default) 1 = 64 cdclk periods
7	0x0 RW	**RESERVED_6:** MBZ. This bit is the same as bit 21 in 61100h CRT DAC on time Value: Powerup time for 0 = CRT DAC requires 2M cdclks for warmup (Default) 1 = CRT DAC requires 4M cdclks for warmup
6:5	0x1 RW	**RESERVED_7:** MBZ. This bit is the same as bit 19:18 in 61100h CRT Hot plug Voltage Compare Value: Compare value for CRT hotplug detect Vref to determine whether the analog port is connected to a CRT. The voltage is forced at the beginning of the active region of the screen every 2 seconds. 00 = A0, 01 = B0, (Default) 10 = C0 11 = D0
4	0x0 RW	**RESERVED_8:** MBZ. This bit is the same as bit 20 in 61100h CRT Hot Plug Detect Delay: This bit determines the length of time between polling periods when the DAC/pipe are disabled 0 = 1G cdclks (default) 1 = 2G cdclks
3	0x0 RW	**RESERVED_9:** MBZ Force CRT detect trigger: Triggers a CRT hotplug/unplug detection cycle independent of the interrupt enable bit. Bits 5:8 of this register must be correctly programmed when forcing a trigger. This bit is automatically cleared after the detection is completed. The result of this trigger is reflected in bits 9:8 of the port hotplug interrupt status register. The CRT interrupt status bit #11 in the hot plug status register (61114) will get set the first time Force CRC detect trigger is used after reset. Software must reset status after a force CRT detect trigger. 0 = No trigger (Default) 1 = Trigger
2	0x0 RW	**RESERVED_10:** MBZ. This bit is the same as bit 17 in 61100h [DevCTG-B] CRT DAC hot plug detection reference voltage selection: 0 = 325mv, bits[6:5] should be set to 01 (Default) 1 = 475mv, bits[6:5] should be set to 11
1:0	0x0 RW	**RESERVED_11:** mbz

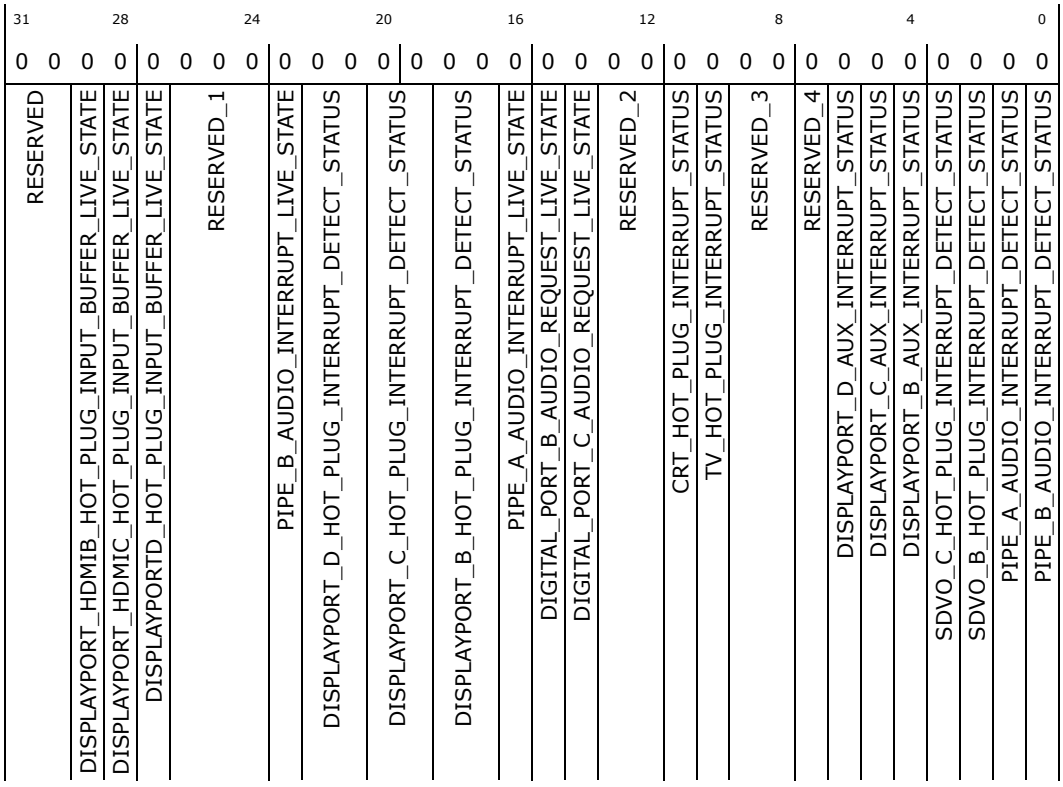
4.2.247 PORT_HOTPLUG_STAT—Offset 61114h

CRT port control (dprrega.v porthotst_aR)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61114h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** mbz
29	0x0 RO	**DISPLAYPORT_HDMIB_HOT_PLUG_INPUT_BUFFER_LIVE_STATE:** This bit is read-only. It reflects the real-time state of the of the hot plug input (HPD pin) on DisplayPort or HDMI B when bit 29 of the hotplug enable register, offset 61110h is set. This pin signal is active high. This does not feed into the first line interrupt status register. This bit should be read to confirm cable connection prior to attempting EDID read. 1 = HPD detected active 0 = HPD detected inactive AccessType: Read Only
28	0x0 RO	**DISPLAYPORT_HDMIC_HOT_PLUG_INPUT_BUFFER_LIVE_STATE:** This bit is read-only. It reflects the real-time state of the of the hot plug input (HPD pin) on DisplayPortC when bit of this register is set. This pin signal is active high. This does not feed into the first line interrupt status register. This bit should be read to confirm cable connection prior to attempting EDID read. 1 = HPD detected high 0 = HPD detected low AccessType: Read Only

Bit Range	Default & Access	Field Name (ID): Description
27	0x0 RO	**DISPLAYPORTD_HOT_PLUG_INPUT_BUFFER_LIVE_STATE:** [DevCTG] This bit is read-only. It reflects the real-time state of the of the hot plug input (HPD pin) on DisplayPortD when bit of this register is set. This pin signal is active high. This does not feed into the first line interrupt status register. Please note that port D is intended for LFP use and therefore HPD may not be present. Bit 2 of the DPD control register must therefore be read to determine whether DPD is used in the system. 1 = HPD detected high 0 = HPD detected low AccessType: Read Only
26:24	0x0 RO	**RESERVED_1:** mbz
23	0x0 RO	**PIPE_B_AUDIO_INTERRUPT_LIVE_STATE:** This read-only bit is used only in ports that use TMDS encoding. It reflects the state of the pipe B audio interrupt request for HDCP when bit 1 of this register is set. This pin signal is active high. It does not feed into the first line interrupt status register. 1 = HDCP invocation requested from audio 0 = HDCP disable requested from audio AccessType: Read Only
22:21	0x0 RW/1C	**DISPLAYPORT_D_HOT_PLUG_INTERRUPT_DETECT_STATUS:** [DevCTG] This reflects hot plug interrupt status on DisplayPort D. Graphics software must write a one to these bits to clear the status. This bit is used for either monitor hotplug/unplug or for notification of a sink event. This bit feeds into the first line interrupt status register when bit 27 of the hotplug enable status register is set. 00 = DisplayPort D Hot Plug event not detected 1x = DisplayPort D long pulse Hot Plug event detected X1 = DisplayPort D short pulse Hot Plug event detected AccessType: One to Clear
20:19	0x0 RW/1C	**DISPLAYPORT_C_HOT_PLUG_INTERRUPT_DETECT_STATUS:** This reflects hot plug interrupt status on DisplayPort or HDMI C. Graphics software must write a one to these bits to clear the status. This bit is used for either monitor hotplug/unplug or for notification of a sink event. This bit feeds into the first line interrupt status register when bit 28 of the hotplug enable status register is set. Please note that these bits should be considered in conjunction with bit 28, the hot plug input buffer live state, when determining further action: if bit 28 = 0, the bits should be cleared and the port must be disabled. 00 = DisplayPort/HDMI C Hot Plug event not detected 1x = DisplayPort/HDMI C long pulse Hot Plug event detected X1 = DisplayPort C short pulse Hot Plug event detected AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
18:17	0x0 RW/1C	**DISPLAYPORT_B_HOT_PLUG_INTERRUPT_DETECT_STATUS:** This reflects hot plug interrupt status on DisplayPort B. Graphics software must write a one to these bits to clear the status. This bit is used for either monitor hotplug/unplug or for notification of a sink event. This bit feeds into the first line interrupt status register when bit 29 of the hotplug enable status register is set. Please note that these bits should be considered in conjunction with bit 29, the hot plug input buffer live state, when determining further action: if bit 29 = 0, the bits should be cleared and the port must be disabled. 00 = DisplayPort/HDMI B Hot Plug event not detected 1x = DisplayPort/HDMI B long pulse Hot Plug event detected X1 = DisplayPort B short pulse Hot Plug event detected AccessType: One to Clear
16	0x0 RO	**PIPE_A_AUDIO_INTERRUPT_LIVE_STATE:** This read-only bit is used only in ports that use TMDS encoding. It reflects the state of the pipe A audio interrupt request for HDCP when bit 1 of this register is set. This pin signal is active high. It does not feed into the first line interrupt status register. 1 = HDCP invocation requested from audio 0 = HDCP disable requested from audio AccessType: Read Only
15	0x0 RO	**DIGITAL_PORT_B_AUDIO_REQUEST_LIVE_STATE:** This read-only bit is only used on ports using audio. It reflects the state of audio HDCP request when bit 17 of this register is set if audio is enabled on this port. This pin signal is active high. This does not feed into the first line interrupt status register. 1 = HDCP invocation requested from audio 0 = HDCP disable requested from audio AccessType: Read Only
14	0x0 RO	**DIGITAL_PORT_C_AUDIO_REQUEST_LIVE_STATE:** This read-only bit is only used on ports using audio. It reflects the state of audio HDCP request when bit 19 of this register is set if audio is enabled on this port. This pin signal is active high. This does not feed into the first line interrupt status register. 1 = HDCP invocation requested from audio 0 = HDCP disable requested from audio AccessType: Read Only
13:12	0x0 RO	**RESERVED_2:** mbz
11	0x0 RW/1C	**CRT_HOT_PLUG_INTERRUPT_STATUS:** This bit is set when a CRT hot plug or unplug event has been detected. A hot plug or unplug event is defined as the change in connection state of the CRT as determined by the hardware CRT detect sequence which is enabled through bit #9 (CRT hot plug interrupt enable) or bit #3 (Force CRT detect trigger) in the Port_HotPlug_En register 0x61110. After reset, the CRT is considered unconnected even if physically connected until the first detect sequence occurs. Physically plugging or unplugging the CRT device will also be detected as a change of connection state. Writing a 1 to this bit clears it. 0 =CRT Interrupt has not occurred 1 = CRT Interrupt has occurred AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
10	0x0 RW/1C	**TV_HOT_PLUG_INTERRUPT_STATUS:** [DevCTG, DevBW, DevCL, DevBLC] This bit is set when a TV hot plug or unplug event has been detected. Reflects the state of bit 31 of the TV DAC state register, offset 68004-68007h. Software must write a one to these bits to clear the status. 0 =TV Interrupt has not occurred 1 = TV Interrupt has occurred AccessType: One to Clear
9:8	0x0 RO	**RESERVED_3:** MBZ. These info are recorded in 61100h ADPA register[25:24] CRT Hot Plug Detection Status (read only): These bits are set when a CRT hot plug or unplug event has been detected. 00 = No channels attached (default) 01 = Blue channel only is attached 10 = Green channel only is attached 11 = Both blue and green channel attached AccessType: One to Clear
7	0x0 RO	**RESERVED_4:** mbz
6	0x0 RW/1C	**DISPLAYPORT_D_AUX_INTERRUPT_STATUS:** [DevCTG] This bit is set when a transaction on AUX channel D has completed or timed out. This bit feeds into the first line interrupt status register when bit 29 of the AUX channel D control register is set. Writing a 1 to this bit clears it. 0 = AUX channel D Interrupt has not occurred 1 = AUX channel D Interrupt has occurred AccessType: One to Clear
5	0x0 RW/1C	**DISPLAYPORT_C_AUX_INTERRUPT_STATUS:** This bit is set when a transaction on AUX channel C has completed or timed out. This bit feeds into the first line interrupt status register when bit 29 of the AUX channel C control register is set. Writing a 1 to this bit clears it. 0 = AUX channel C Interrupt has not occurred 1 = AUX channel C Interrupt has occurred AccessType: One to Clear
4	0x0 RW/1C	**DISPLAYPORT_B_AUX_INTERRUPT_STATUS:** This bit is set when a transaction on AUX channel B has completed or timed out. This bit feeds into the first line interrupt status register when bit 29 of the AUX channel B control register is set. Writing a 1 to this bit clears it. 0 = AUX channel B Interrupt has not occurred 1 = AUX channel B Interrupt has occurred AccessType: One to Clear
3	0x0 RW/1C	**SDVO_C_HOT_PLUG_INTERRUPT_DETECT_STATUS:** This reflects hot plug interrupt status on SDVO port C. Graphics software must write a one to these bits to clear the status. This bit is used for either monitor hotplug/ unplug or for notification of an HDCP state change request from the audio driver over SDVO only. This bit feeds into the first line interrupt status register when bit 25 of the hotplug enable status register is set. 0 = SDVO Hot Plug event not detected 1 = SDVO Hot Plug event detected AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 RW/1C	**SDVO_B_HOT_PLUG_INTERRUPT_DETECT_STATUS:** This reflects hot plug interrupt status on SDVO port B. Graphics software must write a one to these bits to clear the status. This bit is used for either monitor hotplug/ unplug or for notification of an HDCP state change request from the audio driver over SDVO only. This bit feeds into the first line interrupt status register when bit 26 of the hotplug enable status register is set. 0 = SDVO Hot Plug event not detected 1 = SDVO Hot Plug event detected AccessType: One to Clear
1	0x0 RW/1C	**PIPE_A_AUDIO_INTERRUPT_DETECT_STATUS:** This reflects a request for integrated HDCP state change set by audio driver and propagated through the audio hardware. The graphics software must write a one to this bit to clear the status. Upon clearing this bit, the audio ready bit is cleared in the audio registers. The graphics software then must reset audio ready bit 14 in the audio control register, offset 620B4h to 1 when the HDCP interrupt has been serviced. This bit feeds into the first line interrupt status register when bit 24 of the hotplug enable status register is set 0 = Audio interrupt event not detected 1 = Audio interrupt event detected AccessType: One to Clear
0	0x0 RW/1C	**PIPE_B_AUDIO_INTERRUPT_DETECT_STATUS:** This reflects a request for integrated HDCP state change set by audio driver and propagated through the audio hardware. The graphics software must write a one to this bit to clear the status. Upon clearing this bit, the audio ready bit is cleared in the audio registers. The graphics software then must reset audio ready bit 14 in the audio control register, offset 620B4h to 1 when the HDCP interrupt has been serviced. This bit feeds into the first line interrupt status register when bit 23 of the hotplug enable status register is set 0 = Audio interrupt event not detected 1 = Audio interrupt event detected AccessType: One to Clear

4.2.250 SDVOHDMIB—Offset 61140h

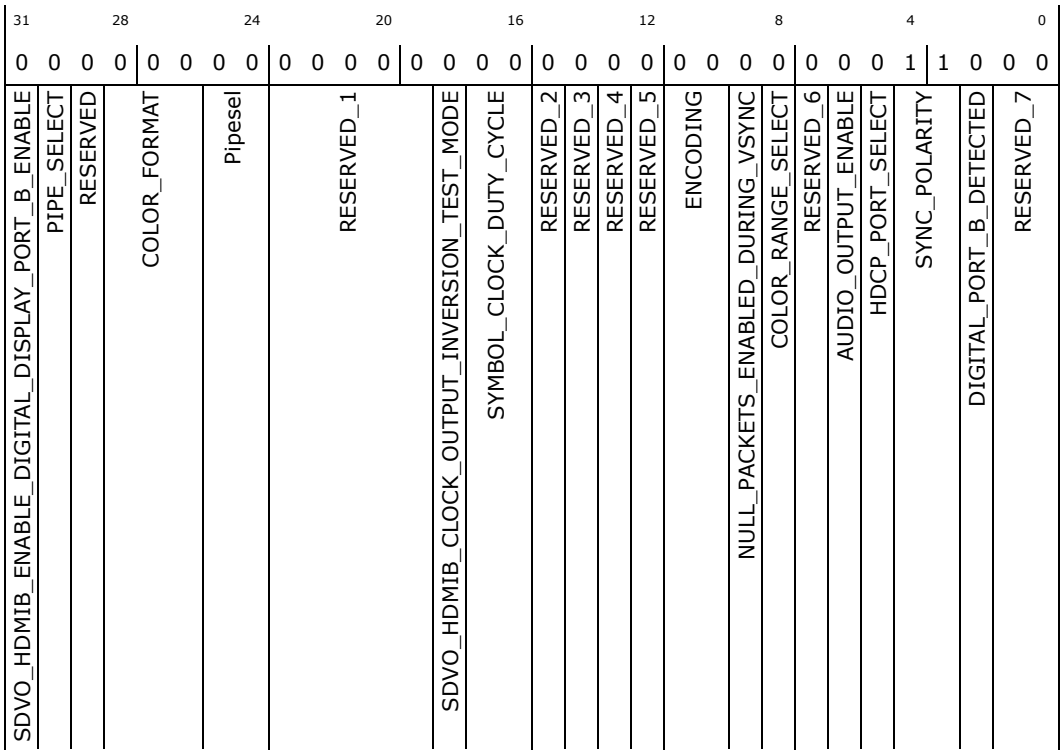
Digital Display Port B Control Register HDMIB port control (dprrega.v sdvo_bQ)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61140h

Default: 00000018h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SDVO_HDMIB_ENABLE_DIGITAL_DISPLAY_PORT_B_ENABLE:** Disabling this port will put it in its lowest power state. Port enable takes place on the Vblank after being written. Both this bit and bit 6 of this register must be enabled to send audio over this port. This port must not be enabled simultaneously with DisplayPort B. [DevIBX] When disabling the port, software must temporarily enable the port with transcoder select (bit #30) cleared to 0 after disabling the port. This is workaround for hardware issue where the transcoder select set to 1 will prevent DisplayPortB from being enabled on transcoder A. [DevIBX] Software must write this bit twice when enabling the port (setting to 1) as a workaround for hardware issue that may result in first write getting masked. [DevIBX] Toggle this bit off then on at the end of mode set sequence when enabling HDMI 12-bit per color with pixel repeat 1 = Enable. This bit enables the Digital Display Port B interface for HDMI or SDVO modes. 0 = Disable and tristates the Digital Display Port B interface for HDMI or SDVO modes.
30	0x0 RW	**PIPE_SELECT:** This bit determines from which display pipe the source data will originate. This only applies to devices with dual display pipes. Pipe selection takes place on the Vblank after being written 0 = Pipe A 1 = Pipe B
29	0x0 RW	**RESERVED:** : [DevCTG, DevBW, DevCL, DevBLC] Stall Select: This bit selects stall for external scaling functionality only on SDVO. Programming notes: It is only valid to have a single stall indication to a particular pipe. In cases where two ports are being driven from a single pipe, one of the ports must set this bit to 0. Only sDVOB or sDVOC can select the stall function, as only a single stall input is available between the two interfaces. Set the stall input to unused before programming the external device creating the stall. 0 = Stall input signal is unused on this port 1 = Stall input signal is used to stall the pipe attached to this port
28:26	0x0 RW	**COLOR_FORMAT:** This field selects the number of bits per color sent to a receiver device connected to this port. Color format takes place on the Vblank after being written. Color format change must be done as a part of mode set since different color depths require different pixel clock settings. Selecting a pixel color depth higher or lower than the pixel color depth of the frame buffer results in dithering the output stream. 000 = 8 bits per color (Default, x3 mode) 001 = RESERVED for 10 bits per color 010 = RESERVED for 6 bits per color 011 = RESERVED 1xx = RESERVED
25:24	0x0 RW	**PipeSel (Pipesel):** Reserved.
23:19	0x0 RO	**RESERVED_1:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
18	0x0 RW	**SDVO_HDMIB_CLOCK_OUTPUT_INVERSION_TEST_MODE:** Please note that this applies to all modes and is instantly updated. 1 = sDVO/HDMIB Clock output is inverted 0 = sDVO/HDMIB Clock output is NOT inverted (DEFAULT)
17:16	0x0 RW	**SYMBOL_CLOCK_DUTY_CYCLE:** These bits control the output clock duty cycle to enable EMI mitigation on the external UDI link. 10/90 cycle has been measured to have ~13dB EMI improvement over a 50/50 duty cycle. 00 = (Default) 50/50 duty cycle: Clock output is 0000011111 01 = 10/90 duty cycle: Clock output is 0111111111 followed by 0000000001 10 = 20/80 duty cycle: Clock output is 0011111111 followed by 0000000011 11 = Reserved
15	0x0 RW	**RESERVED_2:** Port Lane Reversal: This bit reverses the order of the 4 lanes within the port. Port lane reversal takes place on the Vblank after being written. It is an OEM configurable feature. 0 = (Default) Not reversed 1 = Reversed
14	0x0 RO	**RESERVED_3:** Reserved.
13	0x0 RW	**RESERVED_4:** Clock Output Disable: This bit disables the clock output on the digital output port. For 8b/10b modes the clock output should be disabled. 0 = (Default) Clock output enabled 1 = Clock output disabled
12	0x0 RW	**RESERVED_5:** Scrambling enable: This bit enables scrambling for UDI-related modes using ANSI 8b/10b or TMDS encoding. It is not used with SDVO encoding. Software must set this bit appropriately when enabling the port. Scrambling is reset at the beginning of horizontal sync. 0 = Scrambling disabled (Default) 1 = Scrambling enabled
11:10	0x0 RW	**ENCODING:** These bits select among encoding types. It is set as part of the display detection process. Control codes for ANSI 8b/10b and TMDS encoding must be programmed using these bits. Please note that ANSI 8b/10b and TMDS encoding can only be enabled on one port at a time, as only one HPD pin is available for use between ports B and C. 00 = Reserved 01 = Reserved 10 = TMDS encoding (external link and HDMI only) Refer the HDMI specification for control codes. In this mode, the external HPD pin is used to generate hotplug. In fixed frequency mode, start of fill and end of fill values for TMDS must be programmed using register 6114C. 11 = Reserved
9	0x0 RW	**NULL_PACKETS_ENABLED_DURING_VSYNC:** This bit enables a null packet (32 bytes of a value of 0) to be sent when Vsync=1 on this port, required for HDMI operation. It also enables preambles and guardbands prior to the null packets, in accordance with the HDMI specification. It is only valid for modes that use TMDS encoding. 0 = Disable null infoframe packets when Vsync=1 on this port. (Default) 1 = Enable null infoframe packets when Vsync=1 on this port.

Bit Range	Default & Access	Field Name (ID): Description
8	0x0 RW	**COLOR_RANGE_SELECT:** This bit is used to select the color range of RBG outputs in HDMI mode. It is only valid when using TMDS encoding and 8 bit per color mode. 0 = Apply full 0-255 color range to the output (Default) 1 = Apply 16-235 color range to the output
6	0x0 RW	**AUDIO_OUTPUT_ENABLE:** This bit directs audio to this port. When enabled and audio data is available, the audio data will be combined with the video data and sent over this port. The audio unit uses the status of this bit to indicate presence of the HDMI output to the audio driver. 0 = (Default) No audio output on this port 1 = Enable audio on this port
5	0x0 RW	**HDCP_PORT_SELECT:** This bit directs HDCP to this port. When enabled, the information sent on this port will be encrypted using HDCP. Please note that this bit does not enable encryption on its own, but must be used in conjunction with HDCP registers. 0 = (Default) No HDCP encryption on this port 1 = Enable HDCP on this port
4:3	0x3 RW	**SYNC_POLARITY:** Please note that sync polarity does not apply to ANSI coding. Indicates the polarity of Hsync and Vsync. Inverted polarity is transmitted as SYNC-BLANK-SYNC and standard polarity is transmitted as BLANK-SYNC-BLANK. For example, if Vsync is not inverted and Hsync is inverted, an Hsync period transmitted during Vsync would be transmitted as BLANK+VS+HS BLANK+VS BLANK+VS+HS. 00 = VS and HS are active low (inverted) 01 = VS is active low (inverted), HS is active high 10 = VS is active high, HS is active low (inverted) 11 = (Default) VS and HS are active high
2	0x0 RO	**DIGITAL_PORT_B_DETECTED:** Read-only bit indicating whether a digital port B was detected during initialization. It signifies the level of the GMBUS port 4 (sDVO B/C) data line at boot. This bit is valid regardless of whether the port is enabled. 0 = Digital Port B not detected during initialization 1 = Digital Port B detected during initialization AccessType: Read Only

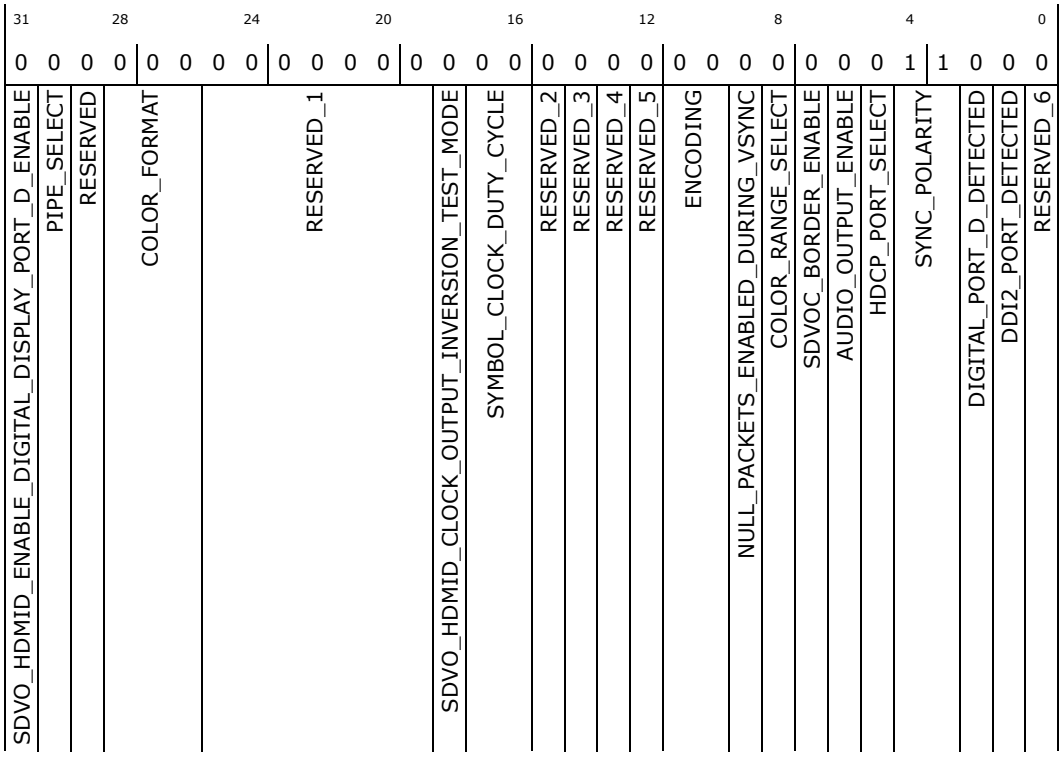
4.2.255 HDMID—Offset 6116Ch

Digital Display Port D Register HDMID port control (dprrega.v sdvo_cQ)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6116Ch

Default: 00000018h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SDVO_HDMID_ENABLE_DIGITAL_DISPLAY_PORT_D_ENABLE:** Disabling this port will put it in its lowest power state. Port enable takes place on the Vblank after being written. Both this bit and bit 6 of this register must be enabled to send audio over this port in HDMI. This port must not be enabled simultaneously with DisplayPort D. [DevIBX] When disabling the port, software must temporarily enable the port with transcoder select (bit #30) cleared to 0 after disabling the port. This is workaround for hardware issue where the transcoder select set to 1 will prevent DPC from being enabled on transcoder A. [DevIBX] Software must write this bit twice when enabling the port (setting to 1) as a workaround for hardware issue that may result in first write getting masked. [DevIBX] Toggle this bit off then on at the end of mode set sequence when enabling HDMI 12-bit per color with pixel repeat. 1 = Enable. This bit enables the Digital Display Port D interface for HDMI or DVI modes. 0 = Disable and tristates the Digital Display Port D interface for HDMI or DVI modes.
30	0x0 RW	**PIPE_SELECT:** This bit determines from which display pipe the source data will originate. This only applies to devices with dual display pipes. Pipe selection takes place on the Vblank after being written 0 = Pipe A 1 = Pipe B

Bit Range	Default & Access	Field Name (ID): Description
29	0x0 RO	**RESERVED:** : stall Select: This bit selects stall for external scaling functionality only on SDVO. Programming notes: It is only valid to have a single stall indication to a particular pipe. In cases where two ports are being driven from a single pipe, one of the ports must set this bit to 0. Only sDVOB or sDVOC can select the stall function, as only a single stall input is available between the two interfaces. Set the stall input to unused before programming the external device creating the stall. 0 = Stall input signal is unused on this port 1 = Stall input signal is used to stall the pipe attached to this port
28:26	0x0 RW	**COLOR_FORMAT:** This field selects the number of bits per color sent to a receiver device connected to this port. Color format takes place on the Vblank after being written. Color format change must be done as a part of mode set since different color depths require different pixel clock settings. Selecting a pixel color depth higher or lower than the pixel color depth of the frame buffer results in dithering the output stream. 000 = 8 bits per color (Default) 001 = RESERVED for 10 bits per color 010 = RESERVED for 6 bits per color 011 = RESERVED 1xx = RESERVED
25:19	0x0 RO	**RESERVED_1:** Reserved.
18	0x0 RW	**SDVO_HDMID_CLOCK_OUTPUT_INVERSION_TEST_MODE:** Please note that this applies to all modes and is instantly updated. 1 = sDVO/HDMID Clock output is inverted 0 = sDVO/HDMID Clock output is NOT inverted (DEFAULT)
17:16	0x0 RW	**SYMBOL_CLOCK_DUTY_CYCLE:** These bits control the output clock duty cycle to enable EMI mitigation on the external HDMI link. 10/90 cycle has been measured to have ~13dB EMI improvement over a 50/50 duty cycle. 00 = (Default) 50/50 duty cycle: Clock output is 0000011111 01 = 10/90 duty cycle: Clock output is 0111111111 followed by 0000000001 (HDMI only) 10 = 20/80 duty cycle: Clock output is 0011111111 followed by 0000000011 (HDMI only) 11 = Reserved
15	0x0 RO	**RESERVED_2:** Port Lane Reversal: This bit reverses the order of the 4 lanes within the port. Port lane reversal takes place on the Vblank after being written. It is an OEM configurable feature. 0 = (Default) Not reversed 1 = Reversed
14	0x0 RO	**RESERVED_3:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
13	0x0 RO	**RESERVED_4:** Clock Output Disable: This bit disables the clock output on the digital output port. For 8b/10b modes the clock output should be disabled. 0 = (Default) Clock output enabled 1 = Clock output disabled ([DevCL] only)
12	0x0 RO	**RESERVED_5:** Scrambling enable: This bit enables scrambling for UDI-related modes using ANSI 8b/10b or TMDS encoding. It is not used with SDVO encoding. Software must set this bit appropriately when enabling the port. Scrambling is reset at the beginning of horizontal sync. 0 Scrambling disabled (Default) 1 = Scrambling enabled ([DevCL] only)
11:10	0x0 RW	**ENCODING:** These bits select among encoding types. It is set as part of the display detection process. Control codes for ANSI 8b/10b and TMDS encoding must be programmed using these bits. Please note that ANSI 8b/10b and TMDS encoding can only be enabled on one port at a time, as only one HPD pin is available for use between ports B and C. 00 = Reserved 01 = Reserved 10 = TMDS encoding (external link and HDMI only) Refer the HDMI specification for control codes. In this mode, the external HPD pin is used to generate hotplug. In fixed frequency mode, start of fill and end of fill values for TMDS must be programmed using register 6114C. 11 = Reserved
9	0x0 RW	**NULL_PACKETS_ENABLED_DURING_VSYNC:** This bit enables a null packet (32 bytes of a value of 0) to be sent when Vsync=1 on this port, required for HDMI operation. It also enables preambles and guardbands prior to the null packets, in accordance with the HDMI specification. It is only valid for modes that use TMDS encoding. 0 = Disable null infoframe packets when Vsync=1 on this port. (Default) 1 = Enable null infoframe packets when Vsync=1 on this port.
8	0x0 RW	**COLOR_RANGE_SELECT:** This bit is used to select the color range of RBG outputs in HDMI mode. It is only valid when using TMDS encoding and 8 bit per color mode. 0 = Apply full 0-255 color range to the output (Default) 1 = Apply 16-235 color range to the output ([DevCL and DevCTG] only)
6	0x0 RW	**AUDIO_OUTPUT_ENABLE:** This bit directs audio to this port. When enabled and audio data is available, the audio data will be combined with the video data and sent over this port. The audio unit uses the status of this bit to indicate presence of the HDMI output to the audio driver. 0 = (Default) No audio output on this port 1 = Enable audio on this port
5	0x0 RW	**HDCP_PORT_SELECT:** This bit directs HDCP to this port. When enabled, the information sent on this port will be encrypted using HDCP. Please note that this bit does not enable encryption on its own, but must be used in conjunction with HDCP registers. 0 = (Default) No HDCP encryption on this port 1 = Enable HDCP on this port

Bit Range	Default & Access	Field Name (ID): Description
4:3	0x3 RW	**SYNC_POLARITY:** Please note that sync polarity does not apply to ANSI coding. Indicates the polarity of Hsync and Vsync. Inverted polarity is transmitted as SYNC-BLANK-SYNC and standard polarity is transmitted as BLANK-SYNC-BLANK. For example, if Vsync is not inverted and Hsync is inverted, an Hsync period transmitted during Vsync would be transmitted as BLANK+VS+HS BLANK+VS BLANK+VS+HS. 00 = VS and HS are active low (inverted) 01 = VS is active low (inverted), HS is active high 10 = VS is active high, HS is active low (inverted) 11 = (Default) VS and HS are active high
2	0x0 RO	**DIGITAL_PORT_D_DETECTED:** Read-only bit indicating whether a digital port D was detected during initialization. It signifies the level of the GMBUS port 3 (port C) data line at boot. This bit is valid regardless of whether the port is enabled. 0 = Digital Port C not detected during initialization 1 = Digital Port C detected during initialization (default) AccessType: Read Only
1	0x0 RO	**DDI2_PORT_DETECTED:** Read-only bit indicating whether the DDI2 port was detected during initialization. It signifies the level of the GMBUS port 1 data line at boot. This bit is valid regardless of whether the port is enabled. 0 = DDI2 Port not detected during initialization 1 = DDI2 Port detected during initialization (default) AccessType: Read Only
0	0x0 RO	**RESERVED_6:** MBZ

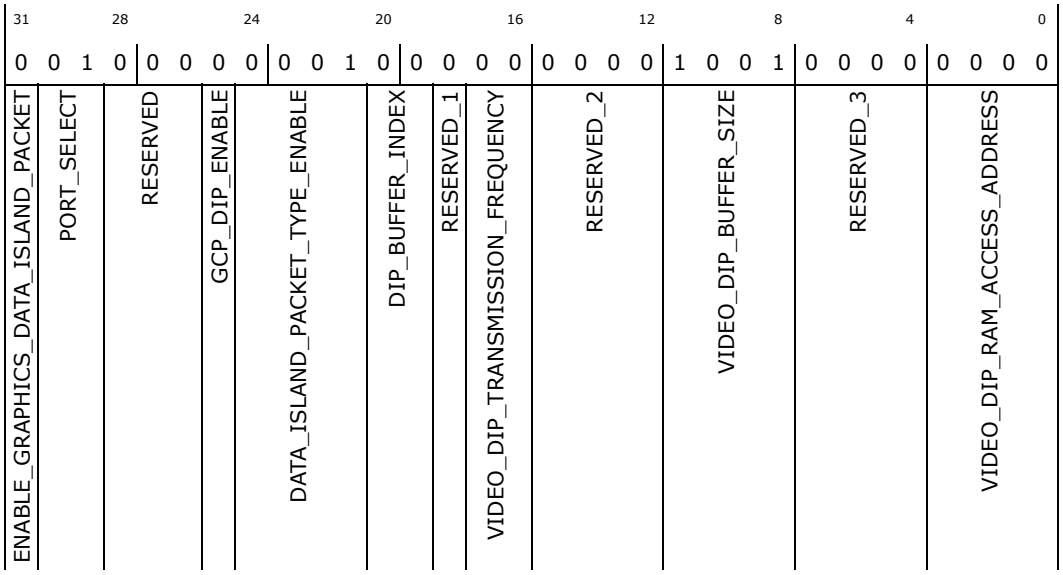
4.2.256 VIDEO_DIP_CTL_B—Offset 61170h

Video DIP Control for Pipe B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61170h

Default: 20200900h



Bit Range	Default & Access	Field Name (ID): Description

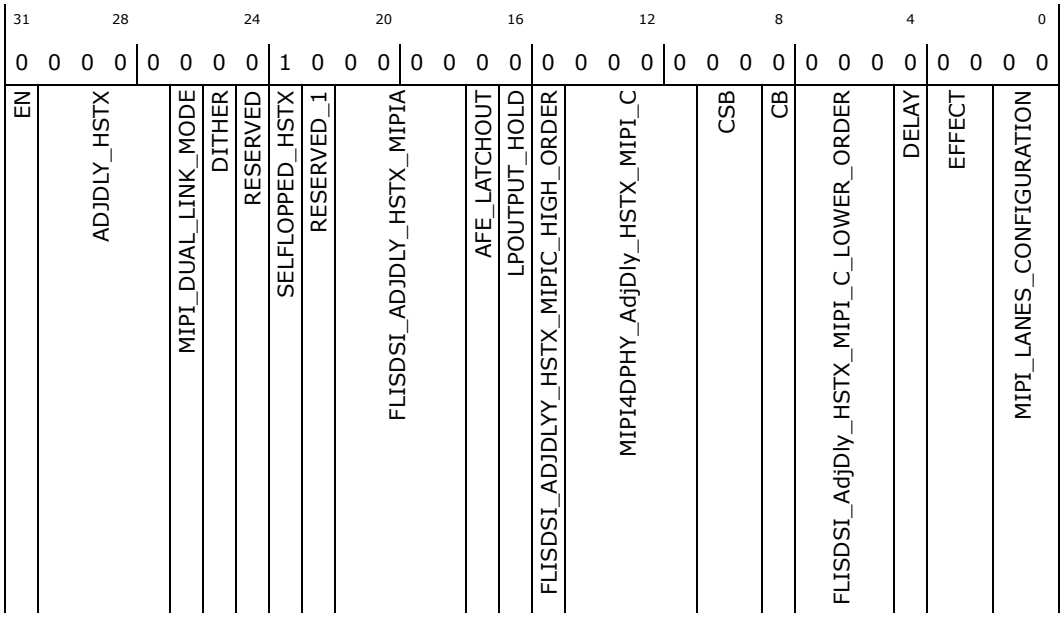
4.2.259 MIPIA_PORT_CTRL—Offset 61190h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61190h

Default: 00800000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**EN:** When this bit is disabled the MIPI DPI (video mode) is inactive and in it's low power state. When it is enable it starts to generate timing for this MIPI port 0 = The port is disabled and all MIPI DPI interface are disable (timing generator is off) 1 = The port is enabled
30:27	0x0 RW	**ADJDLY_HSTX:** These four bits act as an encoded count of the number of buffer delays to insert on the ckdsi2x clock going to the six flops that are storing the HS TX data and clock signals. Default is 4'b0000 which is the equivalent of 1 buffer delay. Will need to set these bits to a value determined by clock timing team before using the MIPI DSI HS TX feature
26	0x0 RW	**MIPI_DUAL_LINK_MODE_APPLICABLE_ONLY_IF_MIPI_DUAL_LINK_MODE_IS_ENABLED_THROUGH_MIPI_LANES_CONFIGURATION_BITS (MIPI_DUAL_LINK_MODE):** 0 = Front-Back mode (default) 1 = Pixel alternative mode
25	0x0 RW	**DITHER:** This bit enables or disables (bypassing) 8-6-bit color dithering function. The usage of this bit would be on for 18-bpp panels and off for 24-bpp panels. 0 = disabled 1 = enabled
24	0x0 RO	**RESERVED:** Reserved.
23	0x1 RW	**SELFLOPPED_HSTX:** This bit will be used to mux between the flopped (new) and unflopped (original) versions of the TX HS clock and data. Default 0 = pass through original unflopped version, if set to 1 = pass through the new flopped version of these signals. We probably need to enable validation to always set these to 1 during startup so we're fully testing this logic as it is the intended way we will run A0

Bit Range	Default & Access	Field Name (ID): Description
22	0x0 RO	**RESERVED_1:** Reserved.
21:18	0x0 RW	**FLISDSI_ADJDLY_HSTX_MIPIA:** These four bits act as an encoded count of the number of buffer delays to insert on the ckdsi2x clock going to the six flops that are storing the HS TX data and clock signals. Default is 4'b0000 which is the equivalent of 1 buffer delay. Will need to set these bits to a value determined by clock timing team before using the MIPI DSI HS TX feature
17	0x0 RW	**AFE_LATCHOUT:** This bit reflect the value of the output latch of CLK A lane in DSI AFE b1 = current value of output latch is 1 (D-PHY is in LP11 state) b0 = current value of output latch is 0 (D-PHY is in LP00 state) The software driver can read this bit to see if the hold value (LP11 or LP00) to initialize from a sleep state (s0i1 or S0i3) correctly
16	0x0 RW	**LPOUTPUT_HOLD:** 0= disable transparent latche inside DSI AFE. Output are driven by latch value. 1= enable transparent latch inside DSI AFE so data are driven by DSI DPHY
15	0x0 RW	**FLISDSI_ADJDLYY_HSTX_MIPIC_HIGH_ORDER:** The fourth bit of four bits act as an encoded count of the number of buffer delays to insert on the ckdsi2x clock going to the six flops that are storing the HS TX data and clock signals. Default is 1'b0 which is the equivalent of 1 buffer delay. Will need to set these bits to a value determined by clock timing team before using the MIPI DSI HS TX feature
14:11	0x0 RW	**MIPI4DPHY_AdjDly_HSTX_MIPI_C:** These four bits act as an encoded count of the number of buffer delays to insert on the ckdsi2x clock going to the six flops that are storing the HS TX data and clock signals.[Br] Default is 4'b0000 which is the equivalent of 1 buffer delay. Will need to set these bits to a value determined by clock timing team before using the MIPI DSI HS TX feature
10:9	0x0 RW	**CSB:** Clock input for bandgap voltage sample and hold circuit. Final setting will be based silicon characterization. 00b = 20mhz clock 01b = 10mhz clock 10b = 40mhz clock 11b = reserved
8	0x0 RW	**CB:** Bandgap chicken bit 0 = using SoC band gap circuit 1 = back to LNC circuit
7:5	0x0 RW	**FLISDSI_AdjDly_HSTX_MIPI_C_LOWER_ORDER:** The lower 3-bit of four bits act as an encoded count of the number of buffer delays to insert on the ckdsi2x clock going to the six flops that are storing the HS TX data and clock signals. Default is 3'b000 which is the equivalent of 1 buffer delay. Will need to set these bits to a value determined by clock timing team before using the MIPI DSI HS TX feature
4	0x0 RW	**DELAY:** When set, the TE counter will be count down until

Bit Range	Default & Access	Field Name (ID): Description
3:2	0x0 RW	**EFFECT:** 00: No tearing effect required - memory write start as soon as write data is available 01: TE trigger by MIPI DPHY and DSI protocol 10: TE trigger by GPIO pin 11: Reserved
1:0	0x0 RW	**MIPI_LANES_CONFIGURATION:** 00: All 4 MIPI A lanes are assigned to pipe A. All 4 MIPI C lanes are assigned to pipe B. 01: MIPI dual-link mode with data from pipe A 10: MIPI dual-link mode with data from pipe B 11: Reserved Programming note: when MIPI dual-link mode is enabled, the port enable bits in both MIPI A control register and MIPI C control register shall be enabled.

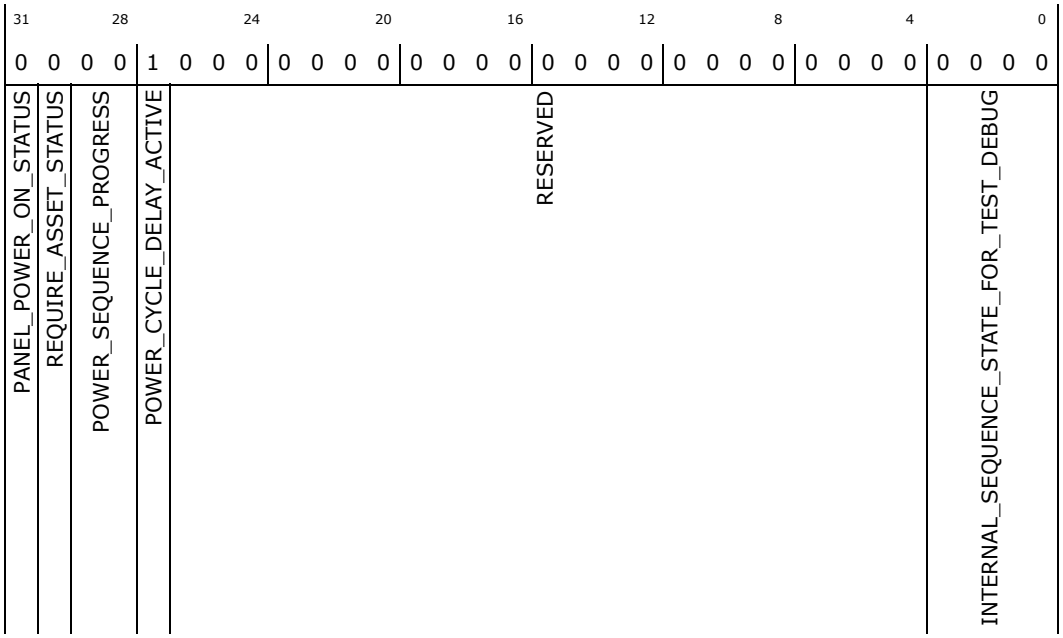
4.2.266 PIPEA_PP_STATUS—Offset 61200h

PipeA Panel Power Status Register PP Status (dplrreg.v panel_pwr_sr)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61200h

Default: 08000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**PANEL_POWER_ON_STATUS:** 0 = Indicates that the panel power down sequencing has completed. A power cycle delay may be currently active. It is safe and allowed to program pipe timing and DPLL registers. If this bit is not a zero, it activates the register write protect and writes to those registers will be ignored unless the write protect key value is set in the panel sequencing control register. 1 = In conjunction with bits Power Sequence Progress field and Power Cycle Delay Active, this bit set to a one indicates that the panel is currently powered up or is currently in the power down sequence and it is unsafe to change the pipe timing and DPLL registers for the pipe that is assigned to the embedded panel output. If the embedded panel port is selected as the target for the panel control, Software is responsible for enabling the LCD display by writing a 1 to the port enable bit only after all pipe timing, DPLL registers are properly programmed, and the PLL has locked to the reference signal. This bit is cleared (set to 0) only after the panel power down sequencing is completed.
30	0x0 RO	**REQUIRE_ASSET_STATUS:** This bit indicates the status of programming of the display PLL and the selected display port. This a power on cycle will not be allowed unless this status indicates that the required assets are programmed and ready for use. 0 = All required assets are not properly programmed. 1 = All required assets are ready for the driving of a panel. The following conditions determine that the assets are ready: 1) Display Pipe PLL Enabled and frequency locked (bit-31 of DPLL Control Register for the pipe attached to the embedded panel port). 2) Display Pipe Enabled (bit-31 of PIPECONF Pipe Configuration Register. For the pipe attached to the embedded panel port) 3) Embedded Panel Port is Programmed Enabled

Bit Range	Default & Access	Field Name (ID): Description
29:28	0x0 RO	**POWER_SEQUENCE_PROGRESS:** 00 = Indicates that the panel is not in a power sequence 01 = Indicates that the panel is in a power up sequence (may include power cycle delay) 10 = Indicates that the panel is in a power down sequence 11 = Reserved
27	0x1 RO	**POWER_CYCLE_DELAY_ACTIVE:** Power cycle delays occur after a panel power down sequence or after a hardware reset. On reset, a power cycle delay will occur using the default value for the timing. 0 = A power cycle delay is not currently active 1 = A power cycle delay (T4) is currently active
26:4	0x0 RO	**RESERVED:** Reserved.
3:0	0x0 RO	**INTERNAL_SEQUENCE_STATE_FOR_TEST_DEBUG:** 0000 = Power Off Idle (S0.0) 0001 = Power Off, Wait for cycle delay (S0.1) 0010 = Power Off (S0.2) 0011 = Power Off (S0.3) 0100 = Reserved 0101 = Reserved 0110 = Reserved 0111 = Reserved 1000 = Power On Idle (S1.0) 1001 = Power On, (S1.1) 1010 = Power On, (S1.2) 1011 = Power On, Wait for cycle delay (S1.3) 1100 = Reserved 1101 = Reserved 1110 = Reserved 1111 = Reset

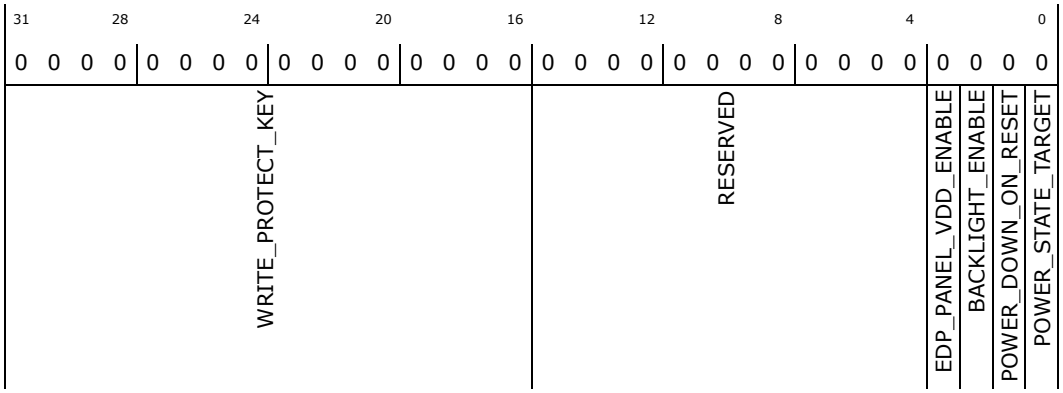
4.2.267 PIPEA_PP_CONTROL—Offset 61204h

PipeA Panel Power Control Register PP Control (dplrreg.v pnl_pwr_cntl)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61204h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**WRITE_PROTECT_KEY:** ABCD Write protect off When this field is programmed to anything except the write protect off setting and the panel is either powered up or in the process of a power up sequence, a set of registers involved in generation of panel timing or control become write protected. Any write cycles to those write protected registers, while they will complete as normal, will not change the value of the register when write protected. When this register field contains the write protect off key value, write protect will be unconditionally disabled. In situations where the embedded panel port is unused, the port should remain powered down and the write protect will be inactive. This field in normal operation should be left to all zeros and never programmed with the key value. It exists only to allow testing and workarounds. List of Write protected registers: (LVDS and Panel sequencing Registers): LVDS Digital Display Port Control Address: 61180h 61183h Pipe A Panel power on sequencing delays - Address: 61208-6120Bh Pipe A Panel power off sequencing delays Address: 6120Ch 6120Fh Pipe A Panel power cycle delay and Reference Divisor Address: 61210h 61213 (DPLL registers): DPLL Control Registers FPA0 DPLL Divisor Register FPA1 DPLL Divisor Register 1 FPB0 DPLL Divisor Register FPB1 DPLL Divisor Register 1 (Display Pipe timing registers except source size) HTOTAL Horizontal Total Register HBLANK Horizontal Blank Register HSYNC_ Horizontal Sync Register VTOTAL_ Vertical Total Register VBLANK_ Vertical Blank Register VSYNC_ Vertical Sync Register
15:4	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**EDP_PANEL_VDD_ENABLE:** : Enabling this bit enables the panel vdd if the embedded panel is DisplayPort, as indicated in bits 31:30 of the panel power on sequencing. Software must enable this bit for eDP link training. After eDP link training is done, software must disable it and let the normal panel power sequencing to take control. 0 = eDP panel Vdd disabled 1 = eDP panel Vdd enabled [DevCLN] Reserved
2	0x0 RW	**BACKLIGHT_ENABLE:** Enabling this bit enables the panel backlight if the embedded panel is DisplayPort, as indicated in bits 31:30 of the panel power on sequencing. Software must enable this bit after training the link, and disable it when disabling the panel power state target. 0 = Backlight disabled 1 = Backlight enabled [DevCL] Reserved
1	0x0 RW	**POWER_DOWN_ON_RESET:** Enabling this bit causes the panel to power down when a reset warning comes to the GMCH from the ICH. When system reset is initiated, the embedded panel port automatically begins the panel power down sequence. If the panel is not on during a reset event, this bit is ignored. 0 = Do not run panel power down sequence when reset is detected 1 = Run panel power down sequence when system is reset
0	0x0 RW	**POWER_STATE_TARGET:** Writing this bit can occur any time, it will only be used at the completion of any current power cycle. 0 = The panel power state target is off, if the panel is either on or in a power on sequence, a power off sequence is started as soon as the panel reaches the power on state. This may include a power cycle delay. If the panel is currently off, there is no change of the power state or sequencing done. 1= The panel power state target is on, if the panel is in either the off state or a power off sequence, if all pre-conditions are met, a power on sequence is started as soon as the panel reaches the power off state. This may include a power cycle delay. If the panel is currently off, there is no change of the power state or sequencing done. While the panel is on or in a power on sequence, the register write lock will be enabled.

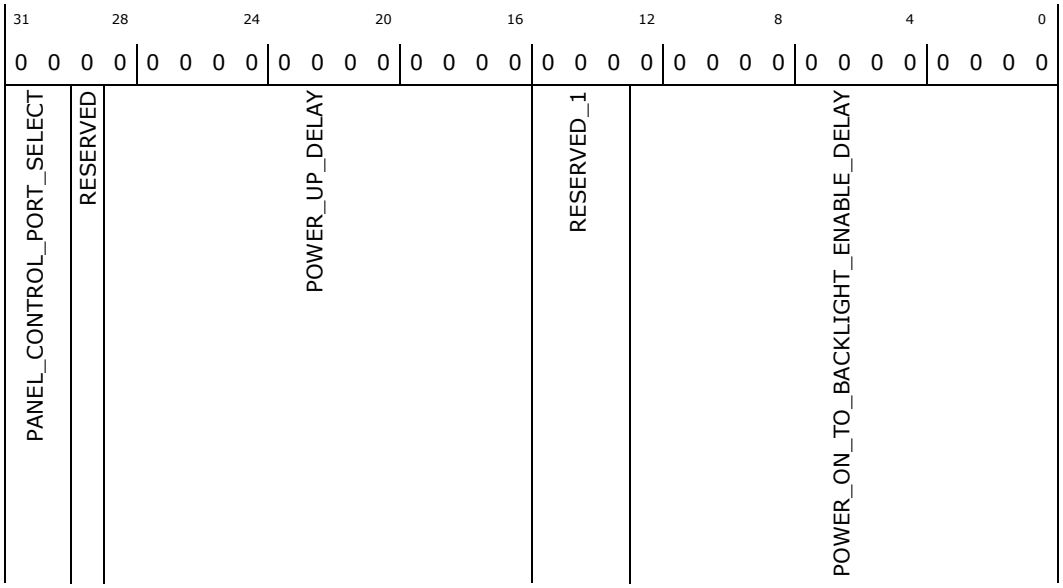
4.2.268 PIPEA_PP_ON_DELAYS—Offset 61208h

PipeA Panel Power on Sequencing Delays PP On Delay values (dplrreg.v DPLRppon_sd)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61208h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RW	**PANEL_CONTROL_PORT_SELECT:** These bits define to which port the embedded panel is connected. This is used for automatic control of the panel power. If the selected port is disabled or if the port is not on pipe-B, then, the power sequence will not allow a panel power up. 00 = Reserved 01 = Panel is connected to the embedded DisplayPort B 10 = Panel is connected to the embedded DisplayPort C 11 = Reserved The selection of non-existent ports are not allowed. This programming will disable panel power sequencing logic.
29	0x0 RO	**RESERVED:** Reserved.
28:16	0x0 RW	**POWER_UP_DELAY:** Programmable value of panel power sequencing delay during panel power up. This provides the time delay for the T1+T2 time sequence. The time unit used is the 100us timer.
15:13	0x0 RO	**RESERVED_1:** Reserved.
12:0	0x0 RW	**POWER_ON_TO_BACKLIGHT_ENABLE_DELAY:** Programmable value of panel power sequencing delay during panel power up. This provides the time delay for the T5 (T3 for DisplayPort) time sequence. The time unit used is the 100us timer.

4.2.269 PIPEA_PP_OFF_DELAYS—Offset 6120Ch

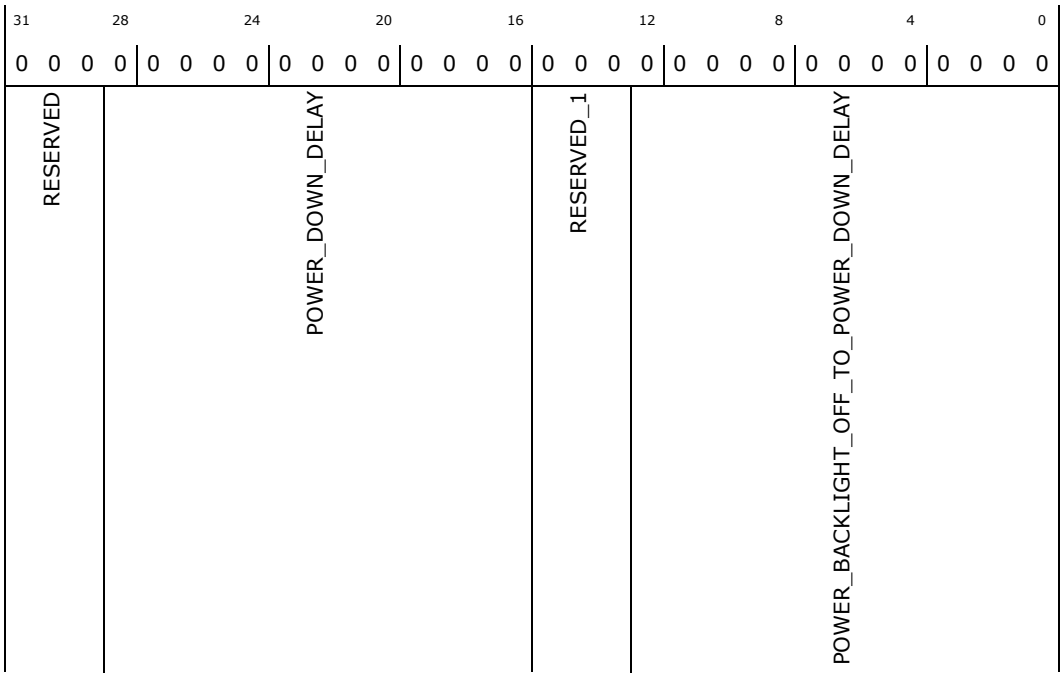
PipeA Panel Power off Sequencing Delays PP Delay Off values (dplrreg.v DPLRppoff_sd)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6120Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Reserved.
28:16	0x0 RW	**POWER_DOWN_DELAY:** Programmable value of panel power sequencing delay during power up. This provides the time delay for the T3 (T5 for DisplayPort) time sequence. The time unit used is the 100us timer.
15:13	0x0 RO	**RESERVED_1:** Reserved.
12:0	0x0 RW	**POWER_BACKLIGHT_OFF_TO_POWER_DOWN_DELAY:** Programmable value of panel power sequencing delay during power down. This provides the time delay for the Tx (T4 for DisplayPort) time sequence. The time unit used is the 100us timer.

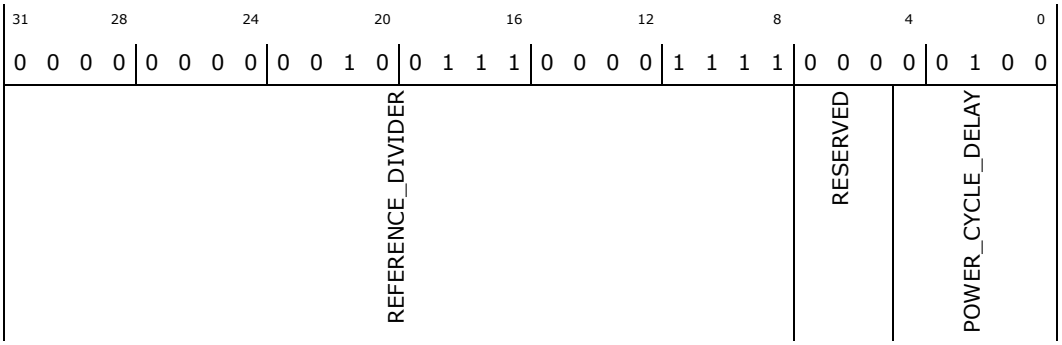
4.2.270 PIPEA_PP_DIVISOR—Offset 61210h

PipeA Panel Power Cycle Delay and Reference Divisor PP Divisor (dplrreg.v DPLRrefdiv_pp_cd)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61210h

Default: 00270F04h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x270f RW	**REFERENCE_DIVIDER:** This field provides the value of the divider used for the creation of the panel timer reference clock. The output of the divider is used as the fastest of the three time bases (100us) for all other timers. The other time bases are divided from this frequency. The value of zero should not be used. When it is desired to divide by N, the actual value to be programmed is (N/2)-1. The value should be (100*RefinMHz/2)-1. The default value assumes the default value for the display core clock that is for [DevCL and DevCTG] a 200MHz reference value. The following are examples for other memory speeds. Display Core Frequency Value of Field 233MHz 2D81h 200MHz 270Fh 133MHz 19F9h
7:5	0x0 RO	**RESERVED:** Reserved.
4:0	0x4 RW	**POWER_CYCLE_DELAY:** Programmable value of time panel must remain in a powered down state after powering down. For devices coming out of reset, the default values will define how much time must pass before a power on sequence can be started. This field uses the .1 S time base unit from the divider. If the panel power on sequence is attempted during this delay, the power on sequence will commence once the power cycle delay is complete. Writing a value of 0 selects no delay or is used to abort the delay if it is active. During the initial power up reset, a D3 cold power cycle, or a user instigated system reset, the timer will be set to the default value and the count down will begin after the de-assertion of reset. Writing this field to a zero while the count is active will abort this portion of the sequence. This corresponds to the T4 of the SPWG specification. Note: Even if the panel is not enabled, the T4 count happens after reset. This register needs to be programmed to a +1 value. For instance for meeting the SPWG specification of 400mS, program 5 to achieve at least 400mS delay prior to powerup.

4.2.271 PFIT_CONTROL—Offset 61230h

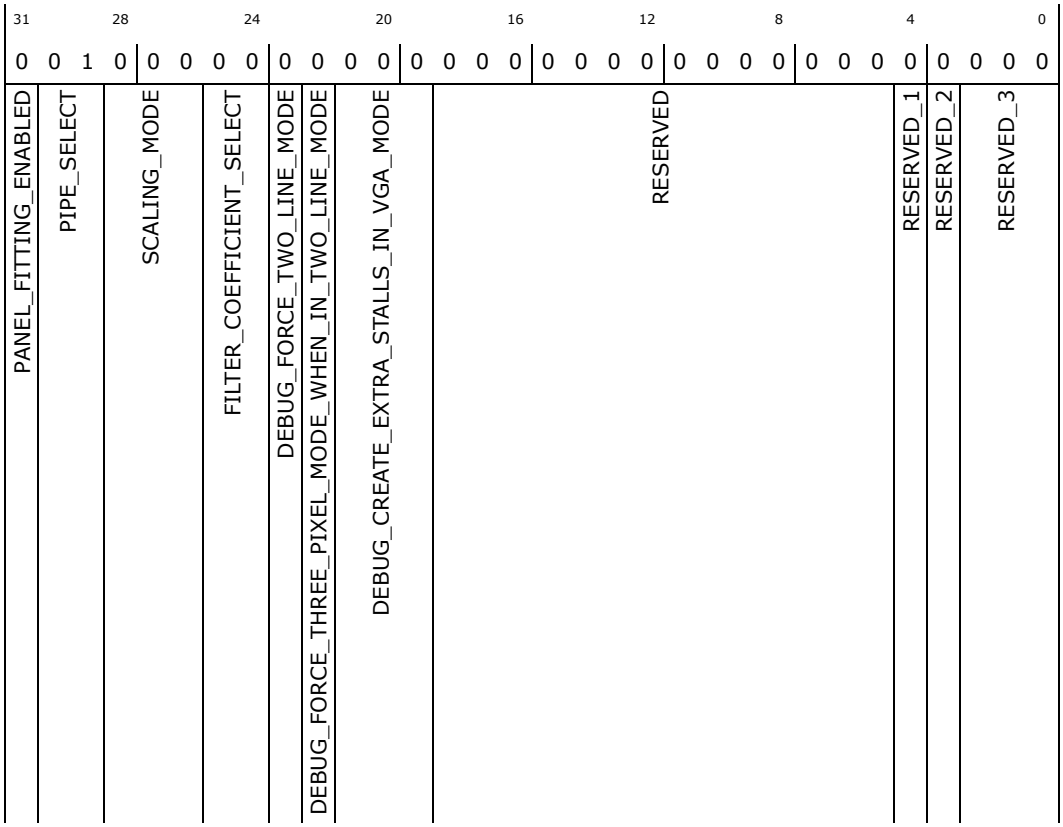
Panel Fitting Controls

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61230h

Default: 20000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PANEL_FITTING_ENABLED:** Disables the panel fitting function by forcing pixels to bypass. Panel fitting should be enabled or disabled before the pipe is enabled. 0 = Bypass the panel fitting (1:1 ratio) 1 = Enable panel fitting (Ratios include 1:1)
30:29	0x1 RW	**PIPE_SELECT:** Indicates the pipe attached to the panel fitter 00 = Panel fitter is attached to Display Pipe A. 01 = Panel fitter is attached to Display Pipe B. This is the default after reset. 10 = Reserved for pipe C 11 = Reserved for pipe D

Bit Range	Default & Access	Field Name (ID): Description
28:26	0x0 RW	**SCALING_MODE:** 000 = Auto-scale (source and destination should have the same aspect ratios) 001 = Programmed scaling: Values in register 61234h will be used for horizontal and vertical scaling factors 010 = Pillarbox (example: 4:3 to 16:9 auto conversion) use only when destination has wider aspect ratio than source 011 = Letterbox (example: 16:9 to 4:3 auto conversion) use only when destination has taller aspect ratio than source 1xx = Reserved
25:24	0x0 RW	**FILTER_COEFFICIENT_SELECT:** Selects the set of predefined filter coefficients to use for panel fitting 00 = Fuzzy filtering 01 = Crisp edge enhancing filtering 10 = Median between fuzzy and crisp filtering 11 = Reserved
23	0x0 RW	**DEBUG_FORCE_TWO_LINE_MODE:** Reserved.

18:5	0x0 RO	**RESERVED:** Reserved.
4	0x0 RO	**RESERVED_1:** (was Force One Line Mode) write as zero
3	0x0 RO	**RESERVED_2:** (was Dither Enable which moved to register 61180h)
2:0	0x0 RO	**RESERVED_3:** Reserved.

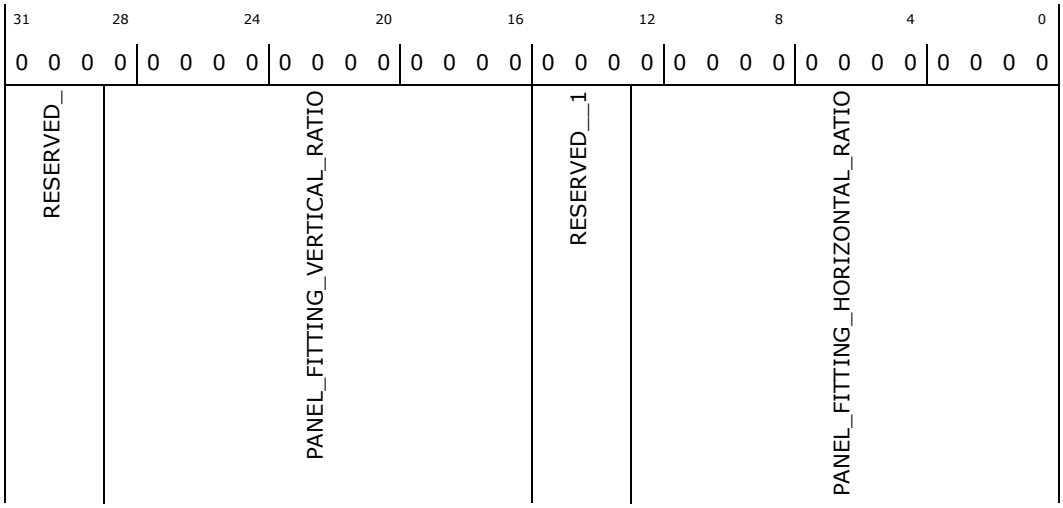
4.2.272 PFIT_PGM_RATIOS—Offset 61234h

Programmed Panel Fitting Ratios

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61234h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED_:** Reads as zeros
28:16	0x0 RW	**PANEL_FITTING_VERTICAL_RATIO:** Vertical scaling ratio for panel fitting.
15:13	0x0 RO	**RESERVED__1:** Reads as zeros
12:0	0x0 RW	**PANEL_FITTING_HORIZONTAL_RATIO:** Horizontal scaling ratio for panel fitting.

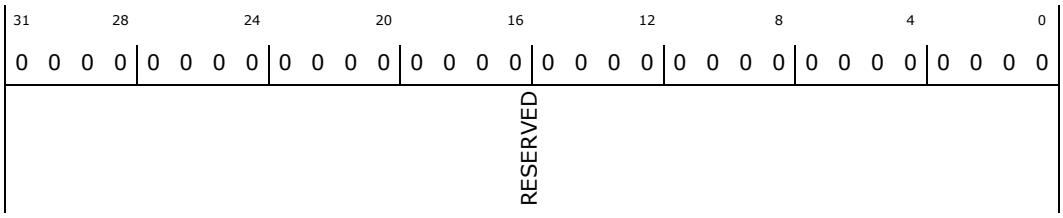
4.2.273 RESERVEDUSEDTOBEAUTOSCALINGRATIOSREADBACK—Offset 61238h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61238h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RESERVED:** Reserved.

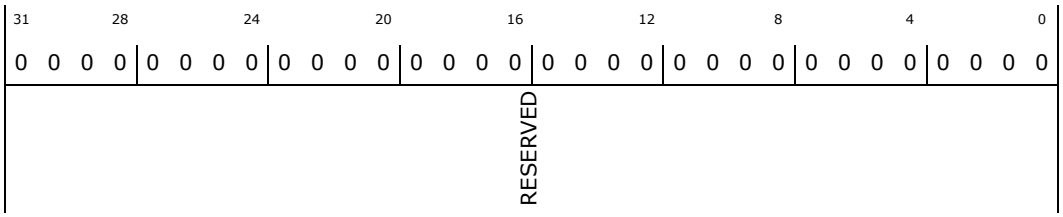
4.2.274 RESERVEDUSEDTOBESCALINGINITIALPHASE—Offset 6123Ch

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6123Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**RESERVED:** Reserved.

4.2.275 PIPEA_BLC_PWM_CLT2—Offset 61250h

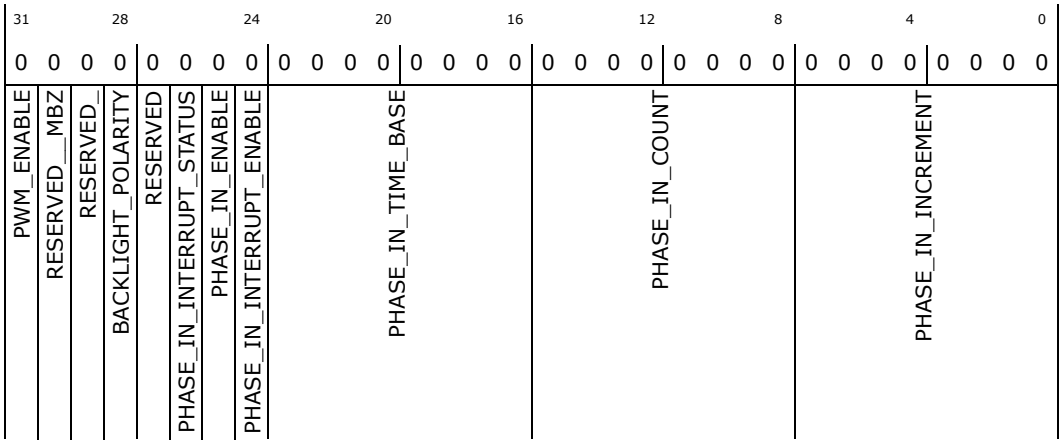
PipeA Backlight PWM Control Register 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61250h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PWM_ENABLE:** This bit enables the PWM counter logic 0 = PWM disabled (drives 0 always) 1 = PWM enabled

Bit Range	Default & Access	Field Name (ID): Description
30	0x0 RO	**RESERVED__MBZ:** Reserved.
29	0x0 RO	**RESERVED_:** Reserved.
28	0x0 RW	**BACKLIGHT_POLARITY:** This field controls the polarity of the PWM signal. 0 = Active High 1 = Active Low
27	0x0 RO	**RESERVED:** MBZ
26	0x0 RW/1C	**PHASE_IN_INTERRUPT_STATUS:** This bit will be set by hardware when a Phase-In interrupt has occurred. Software will clear this bit by writing a 1 , which will reset the interrupt generation. [DevCL-A,B] Reserved AccessType: One to Clear
25	0x0 RW	**PHASE_IN_ENABLE:** Setting this bit enables a PWM phase in based on the programming of the Phase In registers below. This bit clears itself when the phase in is completed.
24	0x0 RW	**PHASE_IN_INTERRUPT_ENABLE:** Setting this bit enables an interrupt to be generated when the PWM phase in is completed.
23:16	0x0 RW	**PHASE_IN_TIME_BASE:** This field determines the number of VBLANK events that pass before one increment occurs. 0 = invalid 1 = 1 vblank 2 = 2 vblanks etc.
15:8	0x0 RW	**PHASE_IN_COUNT:** This field determines the number of increment events in this phase in. Writes to this register should only occur when hardware-phase-ins are disabled. Reads to this register can occur any time, where the value in this field indicates the number of increment events remaining to fully apply a phase-in request as hardware automatically decrements this value. A value of 0 is invalid. In order to write the same value to this field for the second time, one must write a dummy value to this field, for example, 0 , before writing the real value for the second time.
7:0	0x0 RW	**PHASE_IN_INCREMENT:** This field indicates the amount to adjust the PWM duty cycle register on each increment event. This is a two s complement number.

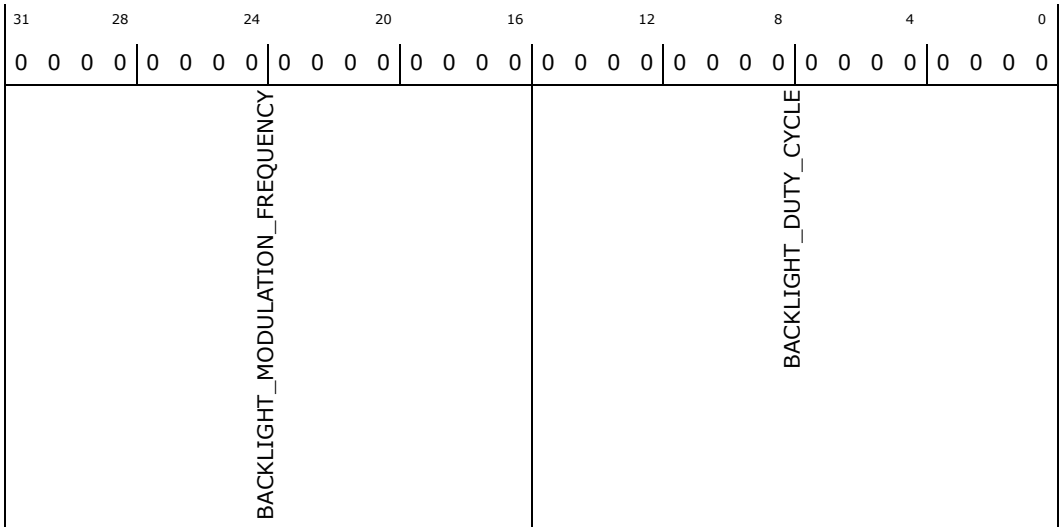
4.2.276 PIPEA_BLC_PWM_CTL—Offset 61254h

PipeA Backlight PWM Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61254h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**BACKLIGHT_MODULATION_FREQUENCY:** This field determines the number of time base events in total for a complete cycle of modulated backlight control. This field is normally set once during initialization based on the frequency of the clock that is being used and the desired PWM frequency. This value represents the period of the PWM stream in display core clocks ([DevCTG] 100MHz HRAW clocks) multiplied by 128 or 25MHz S0IX clocks multiplied by 16.
15:0	0x0 RW	**BACKLIGHT_DUTY_CYCLE:** This field determines the number of time base events for the active portion of the PWM backlight control. This should never be larger than the frequency field. A value of zero will turn the backlight off. A value equal to the backlight modulation frequency field will be full on. This field gets updated when it is desired to change the intensity of the backlight, it will take affect at the end of the current PWM cycle. This value represents the active time of the PWM stream in display core clock ([DevCTG] HRAW clock) periods multiplied by 128 or 25MHz S0IX clocks multiplied by 16.

4.2.277 PIPEA_BLM_HIST_CTL—Offset 61260h

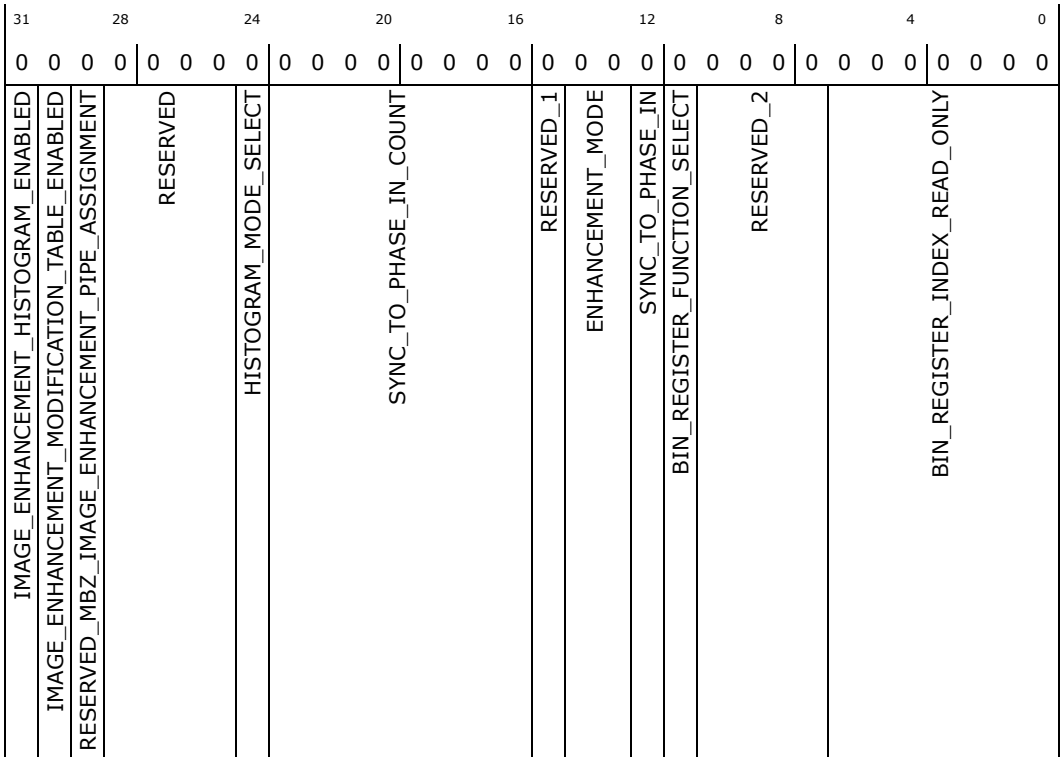
PipeA Image Enhancement Histogram Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61260h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**IMAGE_ENHANCEMENT_HISTOGRAM_ENABLED:** This bit enables the Image Enhancement histogram logic to collect data. 0 = Image histogram is disabled 1 = The Image histogram is enabled. When this bit is changed from a zero to a one, histogram calculations will begin after the next VBLANK of the assigned pipe.
30	0x0 RW	**IMAGE_ENHANCEMENT_MODIFICATION_TABLE_ENABLED:** This bit enables the Image Enhancement modification table. 0 = disabled 1 = enabled. When this bit is changed from a zero to a one, modifications begin after the next VBLANK of the assigned pipe.
29	0x0 RO	**RESERVED_MBZ_IMAGE_ENHANCEMENT_PIPE_ASSIGNMENT:** Each pipe has its own IE function
28:25	0x0 RO	**RESERVED:** Always write as 0 s.
24	0x0 RW	**HISTOGRAM_MODE_SELECT:** 0: YUV Luma Mode 1: HSV Intensity Mode - Reserved on [DevCL]
23:16	0x0 RW	**SYNC_TO_PHASE_IN_COUNT:** This field indicates the phase in count number on which the Image Enhancement table will be loaded if the Sync to Phase in is enabled.
15	0x0 RO	**RESERVED_1:** Always write as 0.

Bit Range	Default & Access	Field Name (ID): Description
14:13	0x0 RW	**ENHANCEMENT_MODE:** 00: Direct look up mode 01: Additive mode 10: Multiplicative mode - Reserved on [DevCL] 11: Reserved
12	0x0 RW	**SYNC_TO_PHASE_IN:** Setting this bit enables the double buffered registers to be loaded on the phase in count value specified instead of the next vblank.
11	0x0 RW	**BIN_REGISTER_FUNCTION_SELECT:** This field indicates what data is being written to or read from the bin data register. 0 = Bin Threshold Count. A read from the bin data register returns that bin s threshold value from the most recent vblank load event (guardband threshold trip). Valid range for the Bin Index is 0 to 31. 1 = Bin Image Enhancement Value. Valid range for the Bin Index is 0 to 32
10:7	0x0 RO	**RESERVED_2:** Always write as 0's.
6:0	0x0 RW	**BIN_REGISTER_INDEX_READ_ONLY:** This field indicates the bin number whose data can be accessed through the bin data register. This value is automatically incremented by a read or a write to the bin data register if the busy bit is not set.

4.2.278 PIPEA_IMAGE_ENHANCEMENT_BIN_DATA_REGISTER—Offset 61264h

PIPEA_IMAGE_ENHANCEMENT_BIN_DATA_REGISTER index registers

Access Method

3	0x0 RW	**EDP_PANEL_VDD_ENABLE:** : Enabling this bit enables the panel vdd if the embedded panel is DisplayPort, as indicated in bits 31:30 of the panel power on sequencing. Software must enable this bit for eDP link training. After eDP link training is done, software must disable it and let the normal panel power sequencing to take control. 0 = eDP panel Vdd disabled 1 = eDP panel Vdd enabled [DevCLN] Reserved
2	0x0 RW	**BACKLIGHT_ENABLE:** Enabling this bit enables the panel backlight if the embedded panel is DisplayPort, as indicated in bits 31:30 of the panel power on sequencing. Software must enable this bit after training the link, and disable it when disabling the panel power state target. 0 = Backlight disabled 1 = Backlight enabled [DevCL] Reserved
1	0x0 RW	**POWER_DOWN_ON_RESET:** Enabling this bit causes the panel to power down when a reset warning comes to the GMCH from the ICH. When system reset is initiated, the embedded panel port automatically begins the panel power down sequence. If the panel is not on during a reset event, this bit is ignored. 0 = Do not run panel power down sequence when reset is detected 1 = Run panel power down sequence when system is reset
0	0x0 RW	**POWER_STATE_TARGET:** Writing this bit can occur any time, it will only be used at the completion of any current power cycle. 0 = The panel power state target is off, if the panel is either on or in a power on sequence, a power off sequence is started as soon as the panel reaches the power on state. This may include a power cycle delay. If the panel is currently off, there is no change of the power state or sequencing done. 1= The panel power state target is on, if the panel is in either the off state or a power off sequence, if all pre-conditions are met, a power on sequence is started as soon as the panel reaches the power off state. This may include a power cycle delay. If the panel is currently off, there is no change of the power state or sequencing done. While the panel is on or in a power on sequence, the register write lock will be enabled.

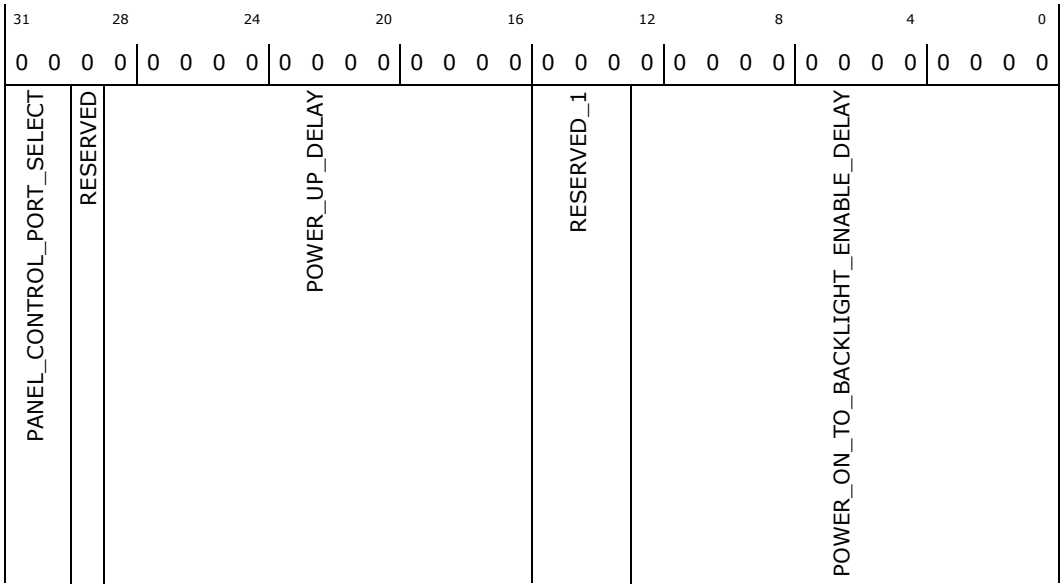
4.2.282 PIPEB_PP_ON_DELAYS—Offset 61308h

PipeB Panel Power on Sequencing Delays PP On Delay values (dplrreg.vDPLRppon_sd)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61308h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RW	**PANEL_CONTROL_PORT_SELECT:** These bits define to which port the embedded panel is connected. This is used for automatic control of the panel power. If the selected port is disabled or if the port is not on pipe-B, then, the power sequence will not allow a panel power up. 00 = Reserved 01 = Panel is connected to the embedded DisplayPort B 10 = Panel is connected to the embedded DisplayPort C 11 = Reserved The selection of non-existent ports are not allowed. This programming will disable panel power sequencing logic.
29	0x0 RO	**RESERVED:** Reserved.
28:16	0x0 RW	**POWER_UP_DELAY:** Programmable value of panel power sequencing delay during panel power up. This provides the time delay for the T1+T2 time sequence. The time unit used is the 100us timer.
15:13	0x0 RO	**RESERVED_1:** Reserved.
12:0	0x0 RW	**POWER_ON_TO_BACKLIGHT_ENABLE_DELAY:** Programmable value of panel power sequencing delay during panel power up. This provides the time delay for the T5 (T3 for DisplayPort) time sequence. The time unit used is the 100us timer.

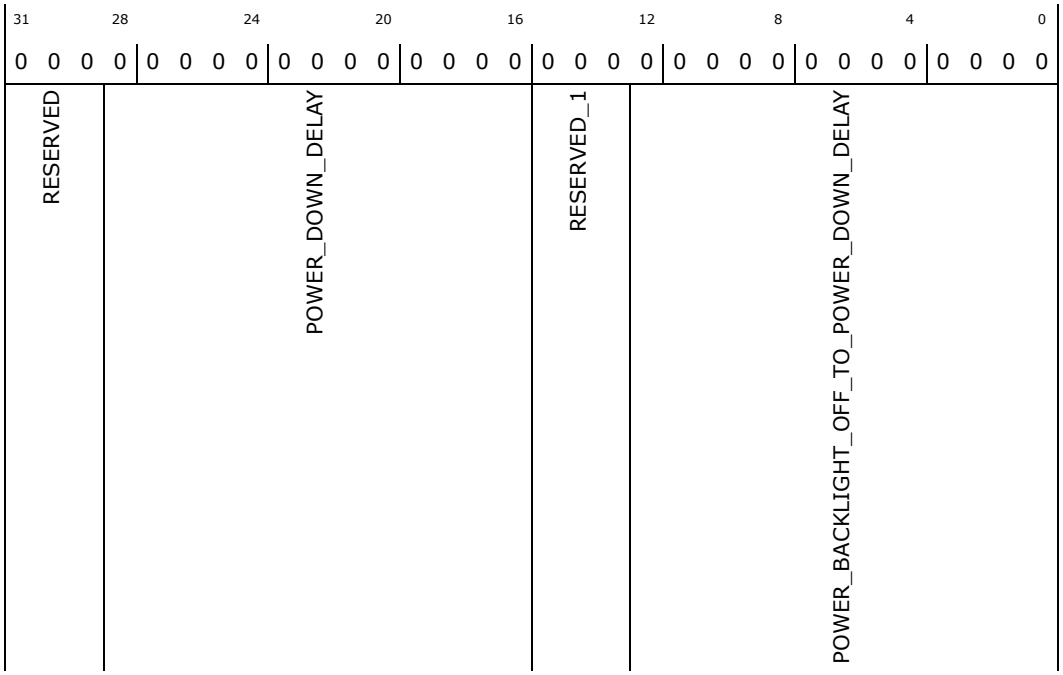
4.2.283 PIPEB_PP_OFF_DELAYS—Offset 6130Ch

PipeB Panel Power off Sequencing Delays PP Delay Off values (dplrreg.v DPLRppoff_sd)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6130Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Reserved.
28:16	0x0 RW	**POWER_DOWN_DELAY:** Programmable value of panel power sequencing delay during power up. This provides the time delay for the T3 (T5 for DisplayPort) time sequence. The time unit used is the 100us timer.
15:13	0x0 RO	**RESERVED_1:** Reserved.
12:0	0x0 RW	**POWER_BACKLIGHT_OFF_TO_POWER_DOWN_DELAY:** Programmable value of panel power sequencing delay during power down. This provides the time delay for the Tx (T4 for DisplayPort) time sequence. The time unit used is the 100us timer.

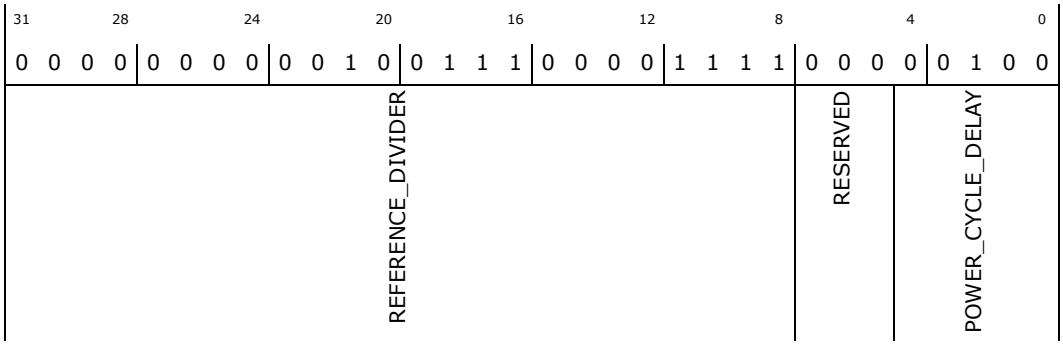
4.2.284 PIPEB_PP_DIVISOR—Offset 61310h

PipeB Panel Power Cycle Delay and Reference Divisor PP Divisor (dplrreg.v DPLRrefdiv_pp_cd)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61310h

Default: 00270F04h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x270f RW	**REFERENCE_DIVIDER:** This field provides the value of the divider used for the creation of the panel timer reference clock. The output of the divider is used as the fastest of the three time bases (100us) for all other timers. The other time bases are divided from this frequency. The value of zero should not be used. When it is desired to divide by N, the actual value to be programmed is (N/2)-1. The value should be (100*RefinMHz/2)-1. The default value assumes the default value for the display core clock that is for [DevCL and DevCTG] a 200MHz reference value. The following are examples for other memory speeds. Display Core Frequency Value of Field 233MHz 2D81h 200MHz 270Fh 133MHz 19F9h
7:5	0x0 RO	**RESERVED:** Reserved.
4:0	0x4 RW	**POWER_CYCLE_DELAY:** Programmable value of time panel must remain in a powered down state after powering down. For devices coming out of reset, the default values will define how much time must pass before a power on sequence can be started. This field uses the .1 S time base unit from the divider. If the panel power on sequence is attempted during this delay, the power on sequence will commence once the power cycle delay is complete. Writing a value of 0 selects no delay or is used to abort the delay if it is active. During the initial power up reset, a D3 cold power cycle, or a user instigated system reset, the timer will be set to the default value and the count down will begin after the de-assertion of reset. Writing this field to a zero while the count is active will abort this portion of the sequence. This corresponds to the T4 of the SPWG specification. Note: Even if the panel is not enabled, the T4 count happens after reset. This register needs to be programmed to a +1 value. For instance for meeting the SPWG specification of 400mS, program 5 to achieve at least 400mS delay prior to powerup.

4.2.285 PIPEB_BLC_PWM_CLT2—Offset 61350h

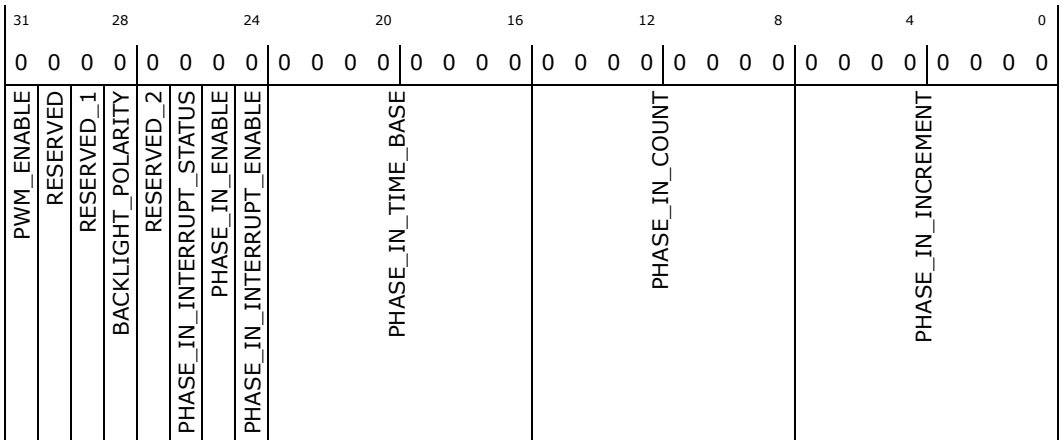
PipeB Backlight PWM Control Register 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61350h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PWM_ENABLE:** This bit enables the PWM counter logic 0 = PWM disabled (drives 0 always) 1 = PWM enabled
30	0x0 RO	**RESERVED:** MBZ
29	0x0 RO	**RESERVED_1:** Reserved.
28	0x0 RW	**BACKLIGHT_POLARITY:** This field controls the polarity of the PWM signal. 0 = Active High 1 = Active Low
27	0x0 RO	**RESERVED_2:** MBZ
26	0x0 RW/1C	**PHASE_IN_INTERRUPT_STATUS:** This bit will be set by hardware when a Phase-In interrupt has occurred. Software will clear this bit by writing a 1 , which will reset the interrupt generation. [DevCL-A,B] Reserved AccessType: One to Clear
25	0x0 RW	**PHASE_IN_ENABLE:** Setting this bit enables a PWM phase in based on the programming of the Phase In registers below. This bit clears itself when the phase in is completed.
24	0x0 RW	**PHASE_IN_INTERRUPT_ENABLE:** Setting this bit enables an interrupt to be generated when the PWM phase in is completed.
23:16	0x0 RW	**PHASE_IN_TIME_BASE:** This field determines the number of VBLANK events that pass before one increment occurs. 0 = invalid 1 = 1 vblank 2 = 2 vblanks etc.

Bit Range	Default & Access	Field Name (ID): Description
15:8	0x0 RW	**PHASE_IN_COUNT:** This field determines the number of increment events in this phase in. Writes to this register should only occur when hardware-phase-ins are disabled. Reads to this register can occur any time, where the value in this field indicates the number of increment events remaining to fully apply a phase-in request as hardware automatically decrements this value. A value of 0 is invalid. In order to write the same value to this field for the second time, one must write a dummy value to this field, for example, 0 , before writing the real value for the second time.
7:0	0x0 RW	**PHASE_IN_INCREMENT:** This field indicates the amount to adjust the PWM duty cycle register on each increment event. This is a two s complement number.

4.2.286 PIPEB_BLC_PWM_CTL—Offset 61354h

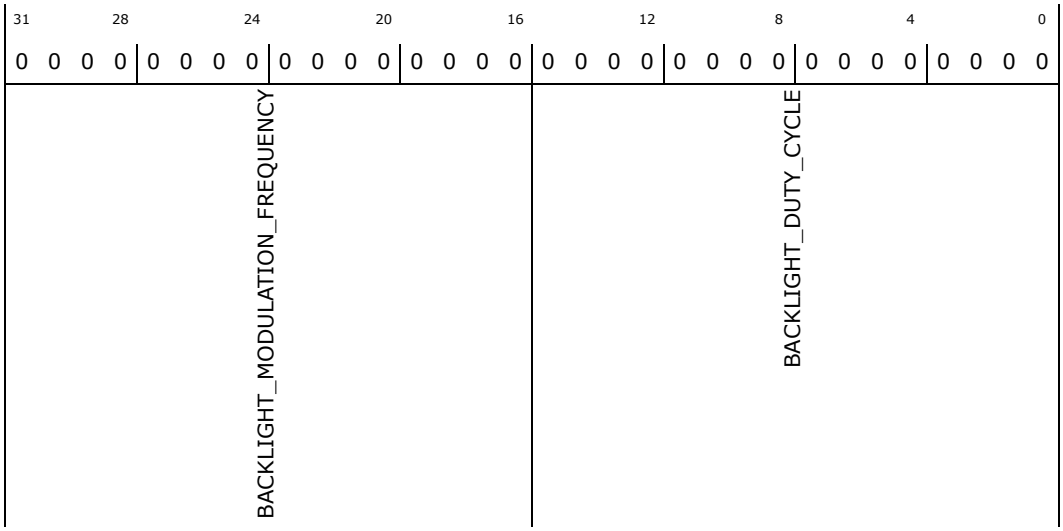
PipeB Backlight PWM Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61354h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RW	**BACKLIGHT_MODULATION_FREQUENCY:** This field determines the number of time base events in total for a complete cycle of modulated backlight control. This field is normally set once during initialization based on the frequency of the clock that is being used and the desired PWM frequency. This value represents the period of the PWM stream in display core clocks ([DevCTG] HRAW clocks) multiplied by 128 or 25MHz S0IX clocks multiplied by 16.

Bit Range	Default & Access	Field Name (ID): Description
15:0	0x0 RW	**BACKLIGHT_DUTY_CYCLE:** This field determines the number of time base events for the active portion of the PWM backlight control. This should never be larger than the frequency field. A value of zero will turn the backlight off. A value equal to the backlight modulation frequency field will be full on. This field gets updated when it is desired to change the intensity of the backlight, it will take affect at the end of the current PWM cycle. This value represents the active time of the PWM stream in display core clock ([DevCTG] HRAW clock) periods multiplied by 128 or 25MHz S0IX clocks multiplied by 16.

4.2.287 PIPEB_BLM_HIST_CTL—Offset 61360h

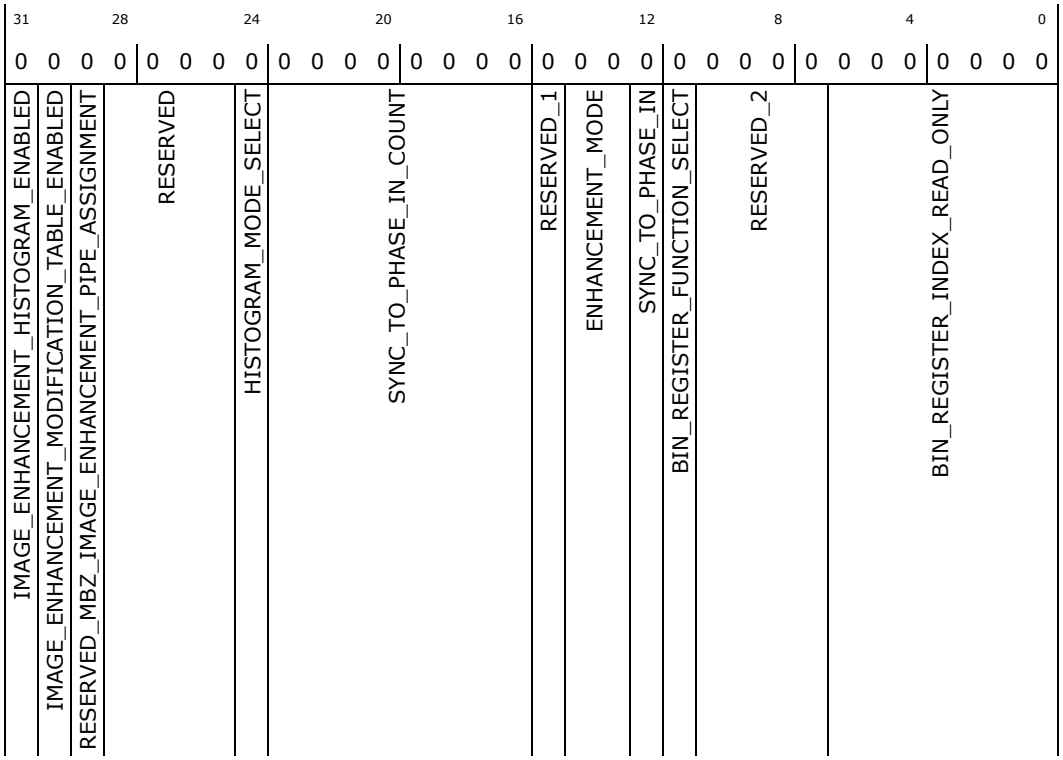
PipeB Image Enhancement Histogram Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61360h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**IMAGE_ENHANCEMENT_HISTOGRAM_ENABLED:** This bit enables the Image Enhancement histogram logic to collect data. 0 = Image histogram is disabled 1 = The Image histogram is enabled. When this bit is changed from a zero to a one, histogram calculations will begin after the next VBLANK of the assigned pipe.
30	0x0 RW	**IMAGE_ENHANCEMENT_MODIFICATION_TABLE_ENABLED:** This bit enables the Image Enhancement modification table. 0 = disabled 1 = enabled. When this bit is changed from a zero to a one, modifications begin after the next VBLANK of the assigned pipe.
29	0x0 RO	**RESERVED_MBZ_IMAGE_ENHANCEMENT_PIPE_ASSIGNMENT:** Each pipe has its own dedicated IE function.
28:25	0x0 RO	**RESERVED:** Always write as 0 s.
24	0x0 RW	**HISTOGRAM_MODE_SELECT:** 0: YUV Luma Mode 1: HSV Intensity Mode - Reserved on [DevCL]
23:16	0x0 RW	**SYNC_TO_PHASE_IN_COUNT:** This field indicates the phase in count number on which the Image Enhancement table will be loaded if the Sync to Phase in is enabled.
15	0x0 RO	**RESERVED_1:** Always write as 0.
14:13	0x0 RW	**ENHANCEMENT_MODE:** 00: Direct look up mode 01: Additive mode 10: Multiplicative mode - Reserved on [DevCL] 11: Reserved
12	0x0 RW	**SYNC_TO_PHASE_IN:** Setting this bit enables the double buffered registers to be loaded on the phase in count value specified instead of the next vblank.
11	0x0 RW	**BIN_REGISTER_FUNCTION_SELECT:** This field indicates what data is being written to or read from the bin data register. 0 = Bin Threshold Count. A read from the bin data register returns that bin s threshold value from the most recent vblank load event (guardband threshold trip). Valid range for the Bin Index is 0 to 31. 1 = Bin Image Enhancement Value. Valid range for the Bin Index is 0 to 32
10:7	0x0 RO	**RESERVED_2:** Always write as 0's.
6:0	0x0 RO	**BIN_REGISTER_INDEX_READ_ONLY:** This field indicates the bin number whose data can be accessed through the bin data register. This value is automatically incremented by a read or a write to the bin data register if the busy bit is not set. AccessType: Read Only

4.2.288 PIPEB_IMAGE_ENHANCEMENT_BIN_DATA_REGISTER—Offset 61364h

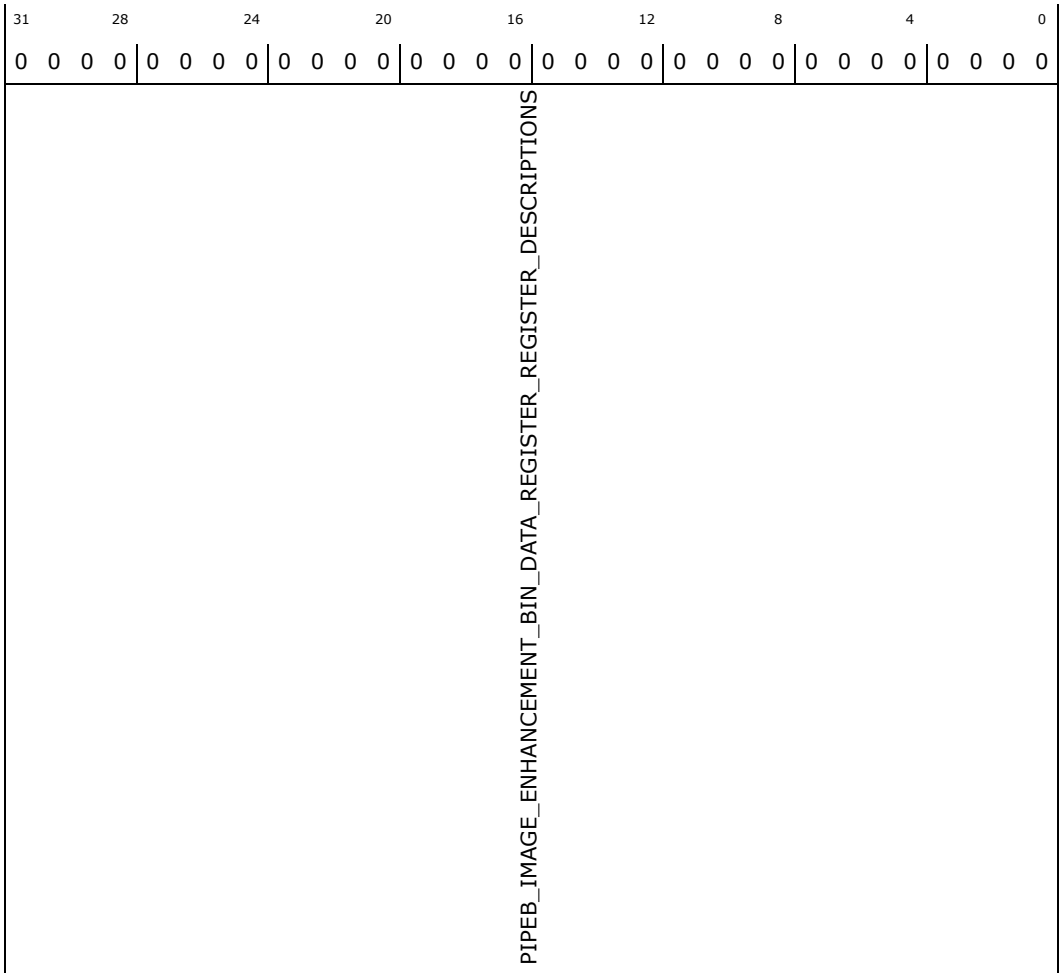
PIPEB_IMAGE_ENHANCEMENT_BIN_DATA_REGISTER index registers

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61364h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description

When it is desired to divide by N, the actual value to be programmed is (N/2)-1. The value should be (100*RefinMHz/2)-1. The default value assumes the default value for the display core clock that is for [DevCL and DevCTG] a 200MHz reference value. The following are examples for other memory speeds. Display Core Frequency Value of Field 233MHz 2D81h 200MHz 270Fh 133MHz 19F9h
7:5	0x0 RO	**RESERVED:** Reserved.
4:0	0x4 RW	**POWER_CYCLE_DELAY:** Programmable value of time panel must remain in a powered down state after powering down. For devices coming out of reset, the default values will define how much time must pass before a power on sequence can be started. This field uses the .1 S time base unit from the divider. If the panel power on sequence is attempted during this delay, the power on sequence will commence once the power cycle delay is complete. Writing a value of 0 selects no delay or is used to abort the delay if it is active. During the initial power up reset, a D3 cold power cycle, or a user instigated system reset, the timer will be set to the default value and the count down will begin after the de-assertion of reset. Writing this field to a zero while the count is active will abort this portion of the sequence. This corresponds to the T4 of the SPWG specification. Note: Even if the panel is not enabled, the T4 count happens after reset. This register needs to be programmed to a +1 value. For instance for meeting the SPWG specification of 400mS, program 5 to achieve at least 400mS delay prior to powerup.

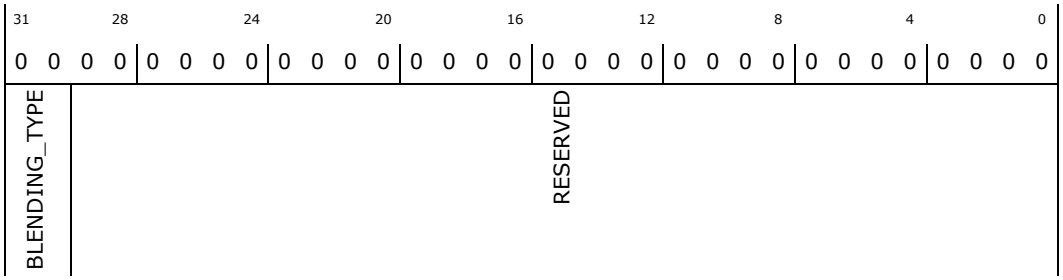
4.2.297 BLEND_B—Offset 61A00h

Register for Blending for Pipe.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61A00h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 Rw	**Blending_Type (BLENDING_TYPE):** 00=SoC A0 Legacy Behavior. 01=Android Requirement. 10=Microsoft Requirement. 11=Reserved.
29:0	0x0 RO	**Reserved (RESERVED):**

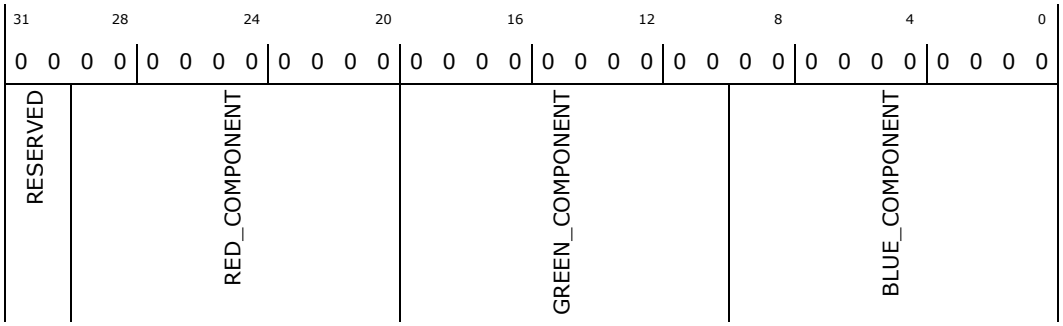
4.2.298 CANVAS_B—Offset 61A04h

Pipe B Canvas Color Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61A04h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** Reserved.
29:20	0x0 RO	**RED_COMPONENT:** Red Component

Bit Range	Default & Access	Field Name (ID): Description
19:10	0x0 RO	**GREEN_COMPONENT:** GREEN Component
9:0	0x0 RO	**BLUE_COMPONENT:** BLUE Component

4.2.299 PRIMPOS_B—Offset 61A08h

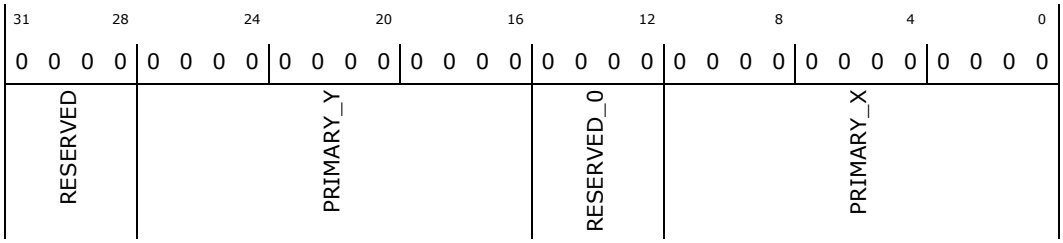
These registers specify the screen position and size of the primary. This register is double buffered. The load register is transferred into the active register on the asserting edge of Vertical Blank for the pipe that the display is assigned. When using the primary as a secondary display, this should be set to the entire display rectangle.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 61A08h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as Zero.
27:16	0x0 RW	**Primary_Y (PRIMARY_Y):** These 12 bits specify the vertical position in lines of the primary (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the un-rotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_0:** Write as Zero
11:0	0x0 RW	**PRIMARY_X:** These 12 bits specify the horizontal position in lines of the primary (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the end of the active video area in the un-rotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

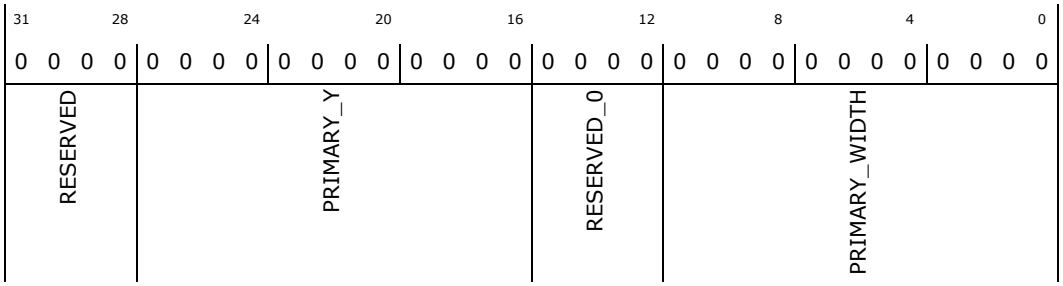
4.2.300 PRIMSIZE_B—Offset 61A0Ch

This register specifies the height and width of the primary in pixels and lines. The rectangle defined by the size and position should never exceed the boundaries of the display rectangle that the primary is assigned to.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61A0Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as Zero.
27:16	0x0 RW	**Primary_Height (PRIMARY_Y):** This register field is used to specify the height of the primary in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_0:** Write as Zero
11:0	0x0 RW	**PRIMARY_WIDTH:** This register field is used to specify the width of the primary in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined primary rectangle must always be completely contained within the displayable area of the screen image.

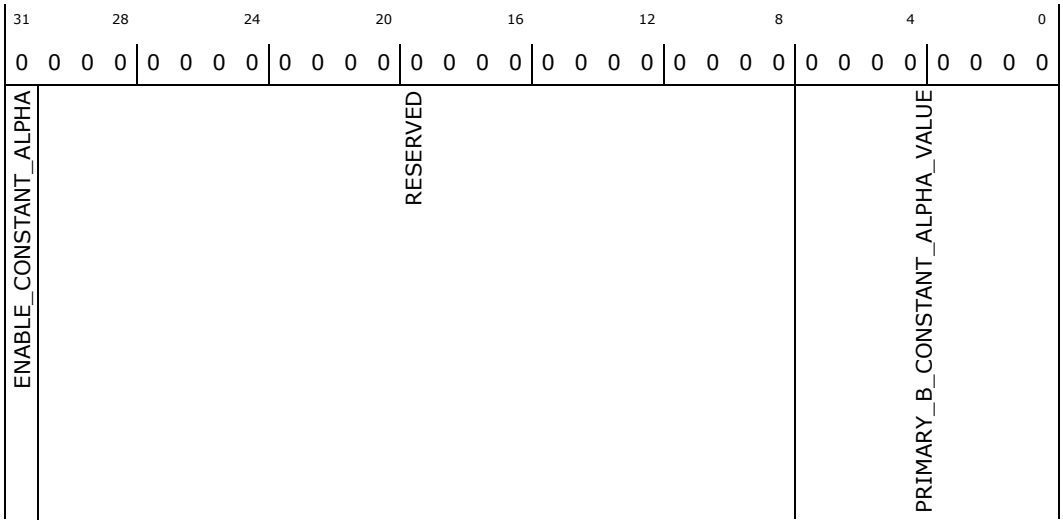
4.2.301 PRIMB_CONSTANT—Offset 61A10h

Primary B constant Alpha

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 61A10h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**Enable_CONSTANT_ALPHA (ENABLE_CONSTANT_ALPHA):** Primary B constant alpha provides a way to apply an alpha value to all primary pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. 0-Primary B Constant Alpha is disabled. 1-Primary B Constant Alpha Enabled
30:8	0x0 RO	**RESERVED:** RESERVED: MBZ
7:0	0x0 RW	**PRIMARY_B_CONSTATN_ALPHA_VALUE (PRIMARY_B_CONSTANT_ALPHA_VALUE):** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of primary with other surfaces.

4.2.302 AUD_CONFIG_A—Offset 62000h

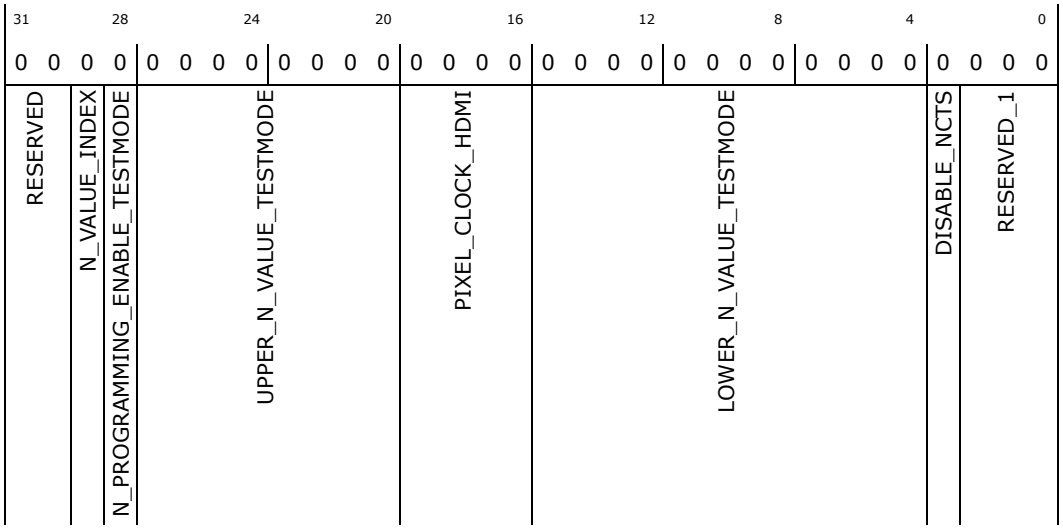
Audio Configuration Pipe A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 62000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** Project: All Format:
29	0x0 RW	**N_VALUE_INDEX:** Project: All Default Value: ;0b Value Name Description Project 0b HDMI N value read on bits 27:20 and 15:4 reflects HDMI N value. Bits 27:20 and 15:4 are is programmable to any N value - default h7FA6. All 1b DP N value read on bits 27:20 and 15:4 reflects DP N value. Set this bit to 1 before programming N value register. When this is set to 1, 27:20 and 15:4 will reflect the current N value default h8000. All
28	0x0 RW	**N_PROGRAMMING_ENABLE_TESTMODE:** Project: All Security: Test This bit enables programming of N values for non-CEA modes. Please note that the Pipe to which audio is attached must be disabled when changing this field.
27:20	0x0 RW	**UPPER_N_VALUE_TESTMODE:** Project: All Security: Test These are bits [19:12] of programmable N values for non-CEA modes. Bit 25 of this register must also be written in order to enable programming. Please note that the Pipe to which audio is attached must be disabled when changing this field. This register can also be used to program N value for DP for a specific Port. Default value on this register when bit 29 is set to 1 is h7FA6

Bit Range	Default & Access	Field Name (ID): Description
19:16	0x0 RW	**PIXEL_CLOCK_HDMI:** Project: All Default Value: ;0b This is the target frequency of the CEA/HDMI video mdoe to which the audio stream is added. This value is used for generating N_CTS packets. This refers to only HDMI Pixel clock and does not refer to DP Link clock. DP Link clock does not require this programming. Note: The Pipe on which audio is attached must be disabled when changing this field. Value Name Description Project 0000b 25.2 / 1.001 MHz 25.2 / 1.001 MHz All 0001b 25.2 MHz 25.2 MHz Program this value for pixel clocks not listed in this field All 0010b 27 MHz 27 MHz All 0011b 27 * 1.001 MHz 27 * 1.001 MHz All 0100b 54 MHz 54 MHz All 0101b 54 * 1.001 MHz 54 * 1.001 MHz All 0110b 74.25 / 1.001 MHz 74.25 / 1.001 MHz All 0111b 74.25 MHz 74.25 MHz All 1000b 148.5 / 1.001 MHz 148.5 / 1.001 MHz All 1001b 148.5 MHz 148.5 MHz All Others Reserved Reserved All
15:4	0x0 RW	**LOWER_N_VALUE_TESTMODE:** Project: All Security: Test These are bits [11:0] of programmable N values for non-CEA modes. Bit 25 of this register must also be written in order to enable programming. Please note that the Pipe to which audio is attached must be disabled when changing this field. This register can also be used to program N value for DP for a specific Port. Default value on this register when bit 29 is set to 1 is h7FA6
3	0x0 RW	**DISABLE_NCTS:** Project: All Set this bit to disable N and CTS or M generation for CTM modes. This is to enable prediction of CRC in CTM modes.
2:0	0x0 RO	**RESERVED_1:** Project: All Format:

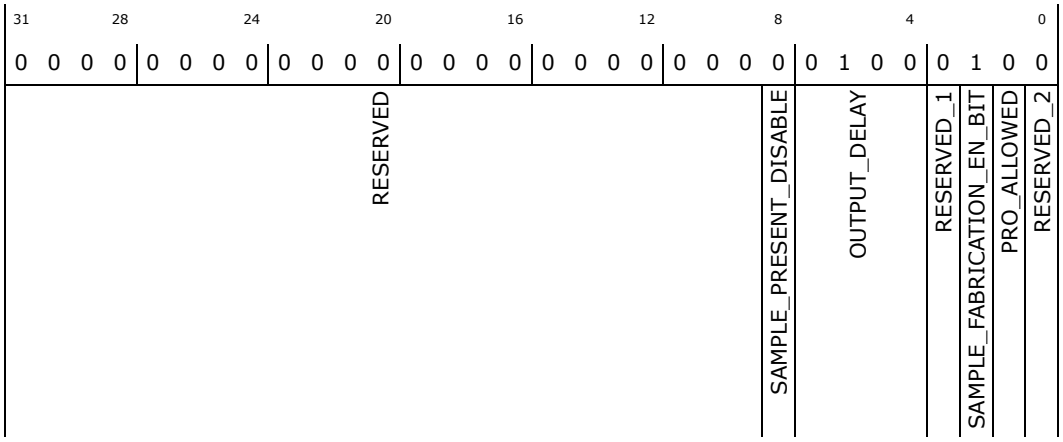
4.2.303 AUD_MISC_CTRL_A—Offset 62010h

Audio MISC Control for Pipe A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 62010h

Default: 00000044h



Bit Range	Default & Access	Field Name (ID): Description
31:9	0x0 RO	**RESERVED:** Project: All Format: MBZ
8	0x0 RW	**SAMPLE_PRESENT_DISABLE:** Project: All Security: Debug This bit is used to Disable sample present for HDMI or DP (Chicken Bit)
7:4	0x4 RW	**OUTPUT_DELAY:** Project: All Default Value: ;0100b The number of samples between when the sample is received from the HD Audio link and when it appears as an analog signal at the pin.
3	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
2	0x1 RW	**SAMPLE_FABRICATION_EN_BIT:** Project: All Access: R/W Default Value: ;1b This bit indicates whether internal fabrication of audio samples is enabled during a link underrun. Value Name Description Project 0b Disable Audio fabrication disabled All 1b Enable Audio fabrication enabled All
1	0x0 RW	**PRO_ALLOWED:** Project: All Access: R/W Default Value: ;0b By default, the audio device is configured to consumer mode and does not allow the mode to be changed to professional mode by an HD Audio verb. When Pro is allowed by setting this configuration bit, the HD Audio codec allows a verb to set the device into professional mode. Note: Setting this configuration bit does not change the default Pro bit value to be 1. Pro must be set to 1 through the normal process, using a verb. Value Name Description Project 0b Consumer Consumer use only All 1b Professional Professional use allowed All
0	0x0 RO	**RESERVED_2:** All Format: MBZ

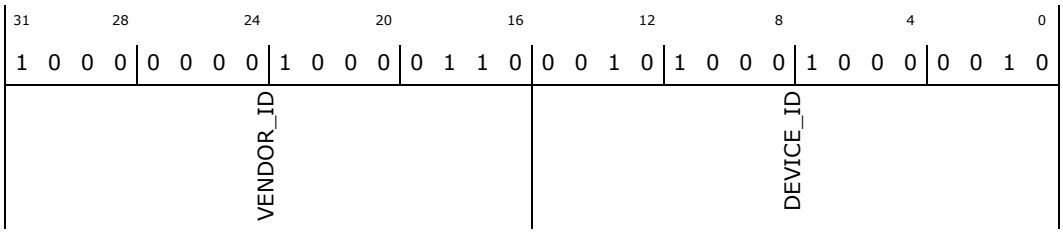
4.2.304 AUD_VID_DID—Offset 62020h

Audio Vendor ID / Device ID

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 62020h

Default: 80862882h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x8086 RO	**VENDOR_ID:** Project: All Format: U16 Used to identify the codec within the PnP system. This field is hardwired within the device. Value = 0x8086
15:0	0x2882 RO	**DEVICE_ID:** Project: All Format: U16 Constant used to identify the codec within the PnP system. This field is set by the device hardware. Value = 0x2882

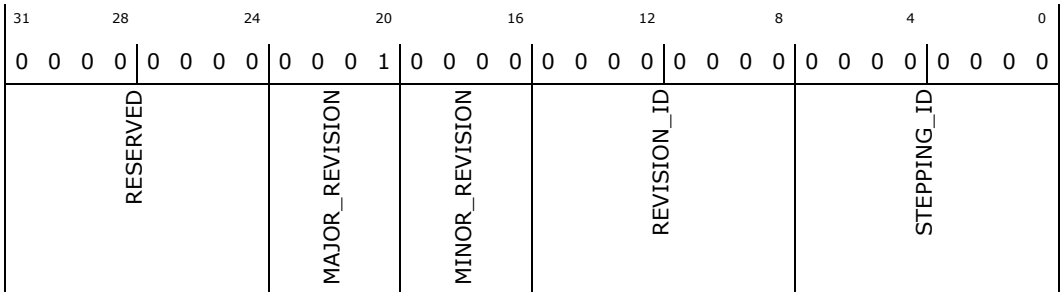
4.2.305 AUD_RID—Offset 62024h

Audio Revision ID

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 62024h

Default: 00100000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format:

Bit Range	Default & Access	Field Name (ID): Description
23:20	0x1 RO	**MAJOR_REVISION:** Project: All Default Value: ;0001b The major revision number (left of the decimal) of the HD Audio Spec to which the codec is fully compliant. This field is hardwired within the device. Value = 0x1
19:16	0x0 RO	**MINOR_REVISION:** Project: All The minor revision number (rights of the decimal) or dot number of the HD Audio Spec to which the codec is fully compliant. This field is hardwired within the device. Value = 0x0
15:8	0x0 RO	**REVISION_ID:** Project: All The vendors revision number for this given Device ID. This field is hardwired within the device. Value = 0x0
7:0	0x0 RO	**STEPPING_ID:** Project: All An optional vendor stepping number within the given Revision ID. This field is hardwired within the device. Value = 0x0

4.2.306 AUD_CTS_ENABLE_A—Offset 62028h

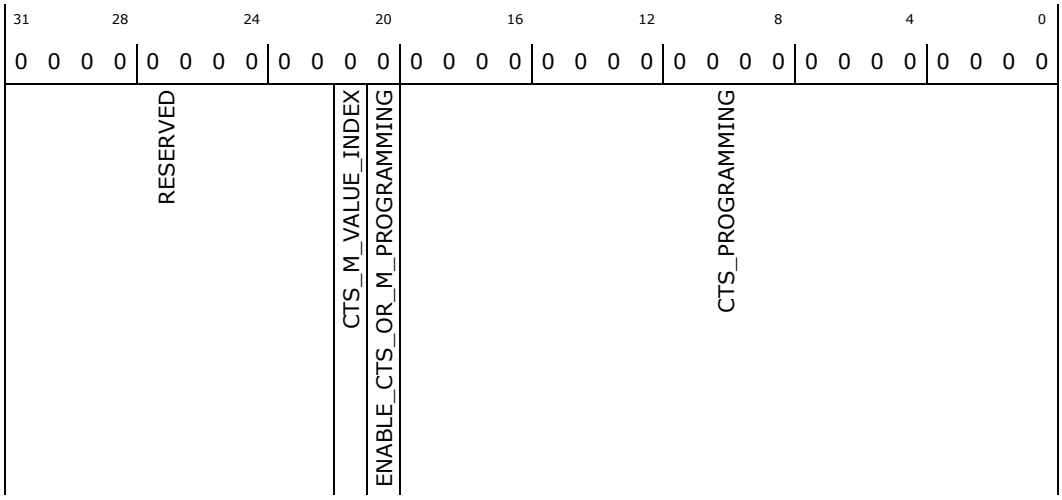
Audio CTS Programming Enable Pipe A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 62028h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:22	0x0 RO	**RESERVED:** Project: All Format:

Bit Range	Default & Access	Field Name (ID): Description
21	0x0 RW	**CTS_M_VALUE_INDEX:** Project: All Default Value: ;0b Value Name Description Project 0b CTS CTS value read on bits 23:4 reflects CTS value. Bit 23:4 is programmable to any CTS value. default is 0 All 1b M M value read on bits 21:4 reflects DP M value. Set this bit to 1 before programming M value register. When this is set to 1 23:4 will reflect the current N value All
20	0x0 RW	**ENABLE_CTS_OR_M_PROGRAMMING:** Project: All When set will enable CTS or M programming.
19:0	0x0 RW	**CTS_PROGRAMMING:** Project: All These are bits [19:0] of programmable CTS values for non-CEA modes. Bit 21 of this register must also be written in order to enable programming. Please note that the Pipe to which audio is attached must be disabled when changing this field.

4.2.307 AUD_PWRST—Offset 6204Ch

Audio Power State (Function Group, Convertor, Pin Widget)

Access Method

4.2.313 AUD_OUT_CH_STR—Offset 62088h

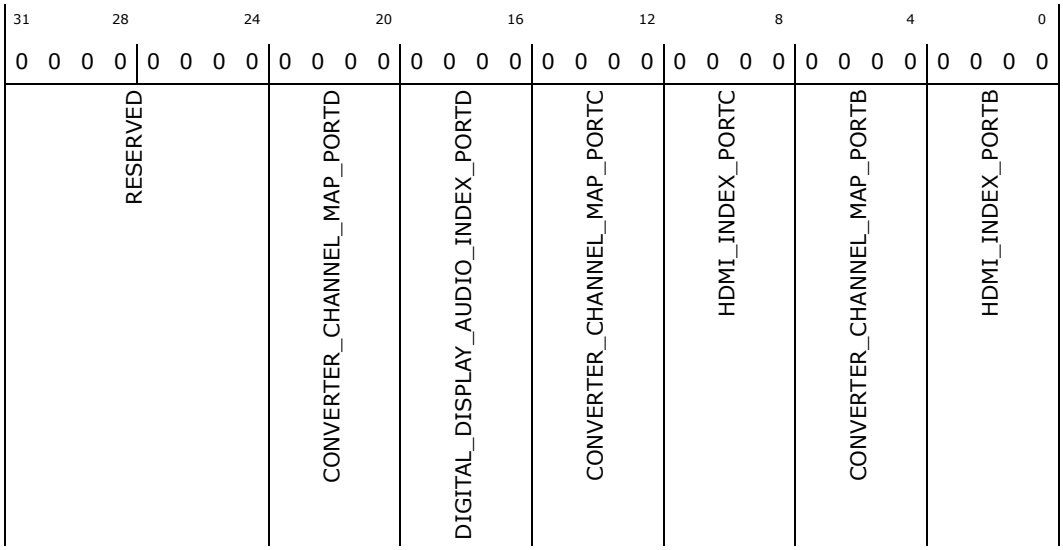
Audio Channel ID and Stream ID

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 62088h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format:
23:20	0x0 RO	**CONVERTER_CHANNEL_MAP_PORTD:** Project: All The number in this field reflects the HD audio channel to which the Digital Display Audio channel in bits 19:16 is mapped. This field is read only
19:16	0x0 RO	**DIGITAL_DISPLAY_AUDIO_INDEX_PORTD:** Project: All This field is the Digital Display Audio channel number. When these bits are written, the audio channel number assigned to the Digital Display Audio channel number are reflected in bits 20:23 of this register.
15:12	0x0 RO	**CONVERTER_CHANNEL_MAP_PORTC:** Project: All The number in this field reflects the HD audio channel to which the Digital Display Audio channel in bits 11:8 is mapped. This field is read only
11:8	0x0 RO	**HDMI_INDEX_PORTC:** Project: All This field is the Digital Display Audio channel number. When these bits are written, the audio channel number assigned to the Digital Display Audio channel number are reflected in bits 12:15 of this register.
7:4	0x0 RO	**CONVERTER_CHANNEL_MAP_PORTB:** Project: All The number in this field reflects the HD audio channel to which the Digital Display Audio channel in bits 3:0 is mapped. This field is read only
3:0	0x0 RO	**HDMI_INDEX_PORTB:** Project: All This field is the Digital Display Audio channel number. When these bits are written, the audio channel number assigned to the Digital Display Audio channel number are reflected in bits 4:7 of this register.

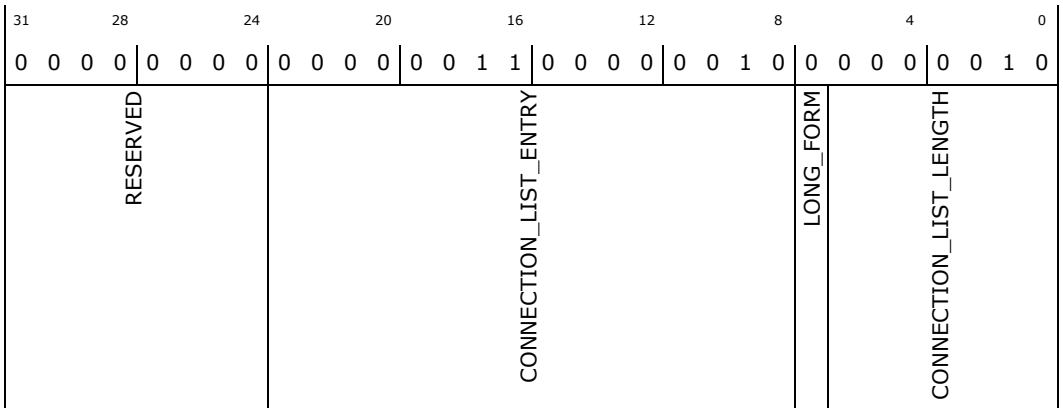
4.2.314 AUD_PINW_CONNLNG_LIST—Offset 620A8h

Audio Connection List

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 620A8h

Default: 00030202h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format:
23:8	0x302 RO	**CONNECTION_LIST_ENTRY:** Project: All Default Value: ;0000001100000010b Connection to Convertor Widget Node 0x0302
7	0x0 RO	**LONG_FORM:** Project: All Default Value: ;0b This bit indicates whether the items in the connection list are long form or short form. This bit is hardwired to 0 (items in connection list are short form)
6:0	0x2 RO	**CONNECTION_LIST_LENGTH:** Project: All Default Value: ;02h This field indicates the number of items in the connection list. If this field is 2, there is only one hardwired input possible, which is read from the Connection List, and there is no Connection Select Control.

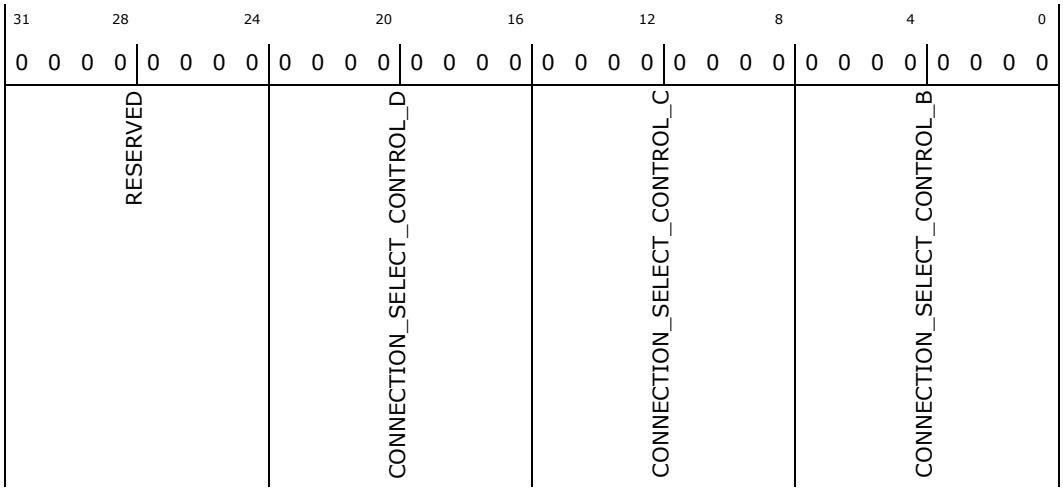
4.2.315 AUD_PINW_CONNLNG_SEL—Offset 620ACh

Audio Connection Select

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 620ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format:
23:16	0x0 RO	**CONNECTION_SELECT_CONTROL_D:** Project: All Format: Connection Index Currently Set [Default 0x00], Port D Widget is set to 0x00
15:8	0x0 RO	**CONNECTION_SELECT_CONTROL_C:** Project: All Format: Connection Index Currently Set [Default 0x00], Port C Widget is set to 0x00
7:0	0x0 RO	**CONNECTION_SELECT_CONTROL_B:** Project: All Format: Connection Index Currently Set [Default 0x00], Port B Widget is set to 0x00

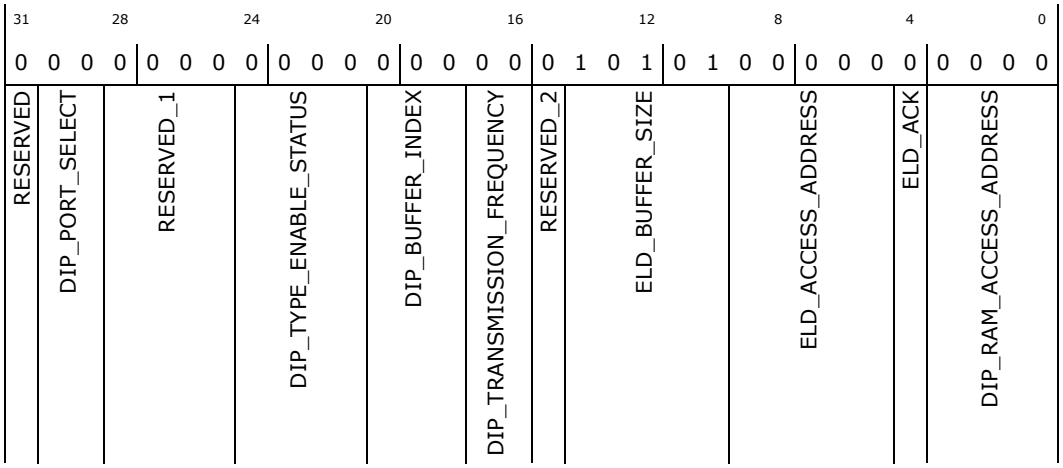
4.2.316 AUD_CNTL_ST_A—Offset 620B4h

Audio Control State Register Pipe A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 620B4h

Default: 00005400h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ
30:29	0x0 RO	**DIP_PORT_SELECT:** Project: All AccessType: Read Only Default Value: ;00b This read-only bit reflects which port is used to transmit the DIP data. This can only change when DIP is disabled. If one or more audio-related DIP packets is enabled and audio is enabled on a digital port, these bits will reflect the digital port to which audio is directed. Value Name Description Project 00b Reserved Reserved All 01b Digital Port B Digital Port B All 10b Digital Port C Digital Port C All 11b Digital Port D Digital Port D All
28:25	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
24:21	0x0 RO	**DIP_TYPE_ENABLE_STATUS:** Project: All AccessType: Read Only Default Value: ;0000b These bits reflect the DIP types enabled. It can be updated while the port is enabled. Within 2 vblank periods, the DIP is guaranteed to have been transmitted. Disabling a DIP type results in setting the contents of that DIP buffer to zero. A reserved setting reflects a disabled DIP. Value Name Description Project XXX0b Disable Audio DIP disabled All XXX1b Enable Audio DIP enabled All XX0Xb Disable Generic 1 (ACP) DIP disabled All XX1Xb Enable Generic 1 (ACP) DIP enabled All X0XXb Disable Generic 2 DIP disabled All X1XXb Enable Generic 2 DIP enabled, can be used by ISRC1 or ISRC2 All 1XXXb Reserved Reserved All

Bit Range	Default & Access	Field Name (ID): Description
20:18	0x0 RW	**DIP_BUFFER_INDEX:** Project: All Default Value: ;0000b This field is used during read of different DIPs, and during read or write of ELD data. These bits are used as an index to their respective DIP or ELD buffers. When the index is not valid, the contents of the DIP will return all 0s. Value Name Description Project 000b Audio Audio DIP (31 bytes of address space, 31 bytes of data) All 001b Gen 1 Generic 1 (ACP) Data Island Packet (31 bytes of address space, 31 bytes of data) All 010b Gen 2 Generic 2 (ISRC1) Data Island Packet (31 bytes of address space, 31 bytes of data) All 011b Gen 3 Generic 3 (ISRC2) Data Island Packet (31 bytes of address space, 31 bytes of data) All 1XXb Reserved Reserved All
17:16	0x0 RO	**DIP_TRANSMISSION_FREQUENCY:** Project: All AccessType: Read Only Default Value: ;00b These bits reflect the frequency of DIP transmission for the DIP buffer type designated in bits 20:18. When writing DIP data, this value is also latched when the first DW of the DIP is written. When read, this value reflects the DIP transmission frequency for the DIP buffer designated in bits 20:18. Value Name Description Project 00b Disable Disabled All 01b Reserved Reserved All 10b Send Once Send Once All 11b Best Effort Best effort (Send at least every other vsync) All
15	0x0 RO	**RESERVED_2:** Project: All Format: MBZ
14:10	0x15 RO	**ELD_BUFFER_SIZE:** Project: All AccessType: Read only 10101 = This field reflects the size of the ELD buffer in DWORDs (84 Bytes of ELD)
9:5	0x0 RW	**ELD_ACCESS_ADDRESS:** Project: All Selects the DWORD address for access to the ELD buffer (84 bytes). The value wraps back to zero when incremented past the max addressing value 0x1F. This field change takes effect immediately after being written. The read value indicates the current access address.
4	0x0 RO	**ELD_ACK:** Project: All AccessType: Read Only Acknowledgement from the audio driver that ELD read has been completed
3:0	0x0 RO	**DIP_RAM_ACCESS_ADDRESS:** Project: All AccessType: Read Only Selects the DWORD address for access to the DIP buffers. The value wraps back to zero when it incremented past the max addressing value of 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.

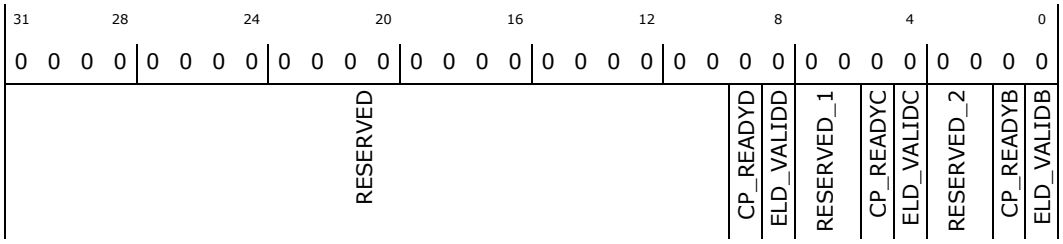
4.2.317 AUD_CNTL_ST2—Offset 620C0h

Audio Control State 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 620C0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:10	0x0 RO	**RESERVED:** Project: All Format:
9	0x0 RW	**CP_READYD:** Project: All Default Value: ;0b This R/W bit reflects the state of CP request from the audio unit. When an audio CP request has been serviced, it must be reset to 1 by the video software to indicate that the CP request has been serviced. Value Name Description Project 0b Pending or Not Ready CP request pending or not ready to receive requests All 1b Ready CP request ready All
8	0x0 RW	**ELD_VALIDD:** Project: All Default Value: ;0b This R/W bit reflects the state of the ELD data written to the ELD RAM. After writing the ELD data, the video software must set this bit to 1 to indicate that the ELD data is valid. At audio codec initialization, or on a hotplug event, this bit is set to 0 by the video software. This bit is reflected in the audio pin complex widget as the ELD valid status bit. Value Name Description Project 0b Invalid ELD data invalid (default, when writing ELD data, set 0 by software) All 1b Valid ELD data valid (Set by video software only) All

11:0	0x0 RW	**PIPE_C_HORIZONTAL_ACTIVE_DISPLAY:** Refer pipe A description

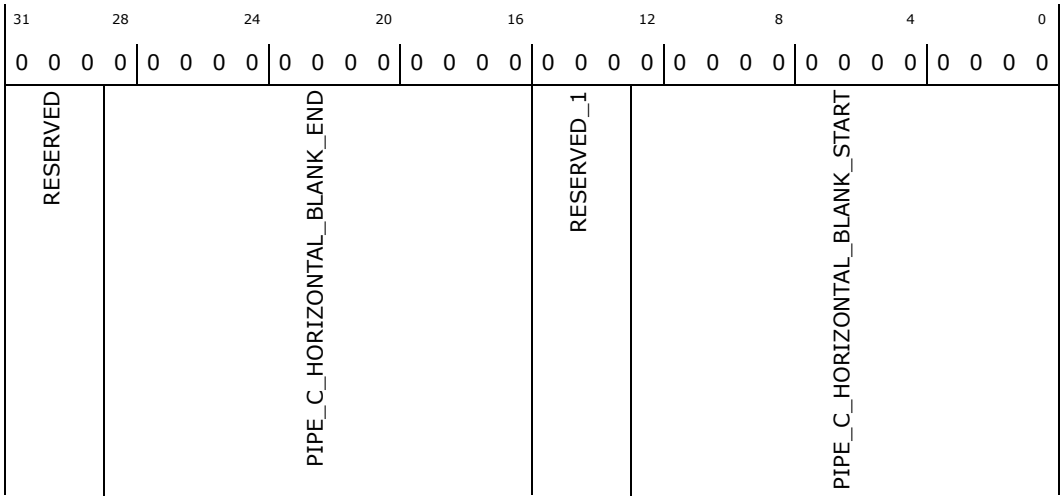
4.2.362 HBLANK_C—Offset 63004h

Pipe C Horizontal Blank Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63004h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** . Write as zero.
28:16	0x0 RW	**PIPE_C_HORIZONTAL_BLANK_END:** Refer pipe C description
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_C_HORIZONTAL_BLANK_START:** Refer pipe C description.

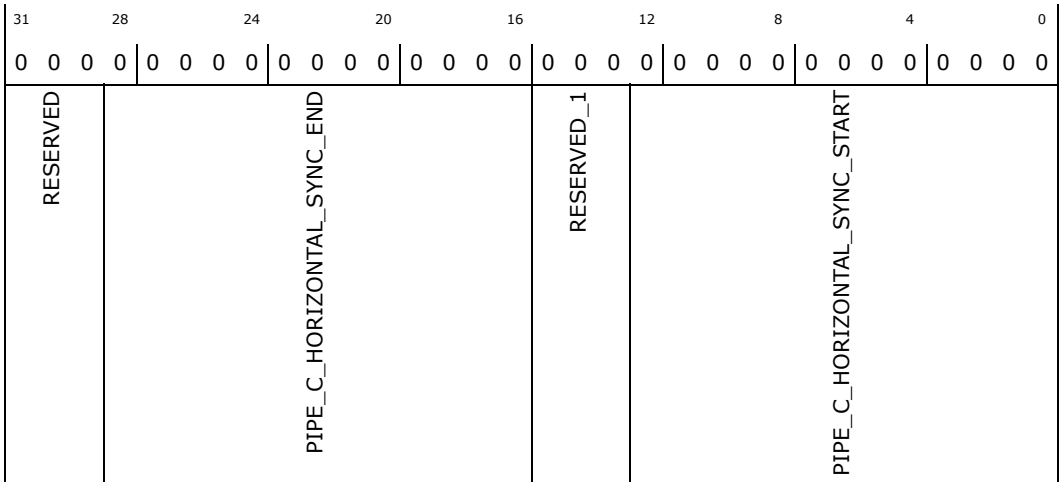
4.2.363 HSYNC_C—Offset 63008h

Pipe C Horizontal Sync Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63008h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_C_HORIZONTAL_SYNC_END:** Refer pipe C description.
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_C_HORIZONTAL_SYNC_START:** Refer pipe C description

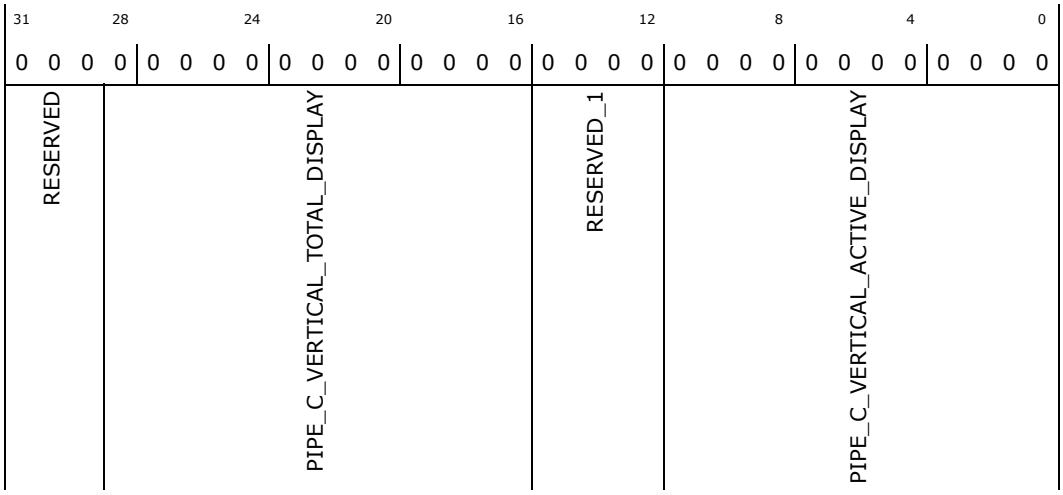
4.2.364 VTOTAL_C—Offset 6300Ch

Pipe C Vertical Total Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6300Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_C_VERTICAL_TOTAL_DISPLAY:** Refer pipe A description.
15:12	0x0 RO	**RESERVED_1:** Write as zero.
11:0	0x0 RW	**PIPE_C_VERTICAL_ACTIVE_DISPLAY:** Refer pipe A description.

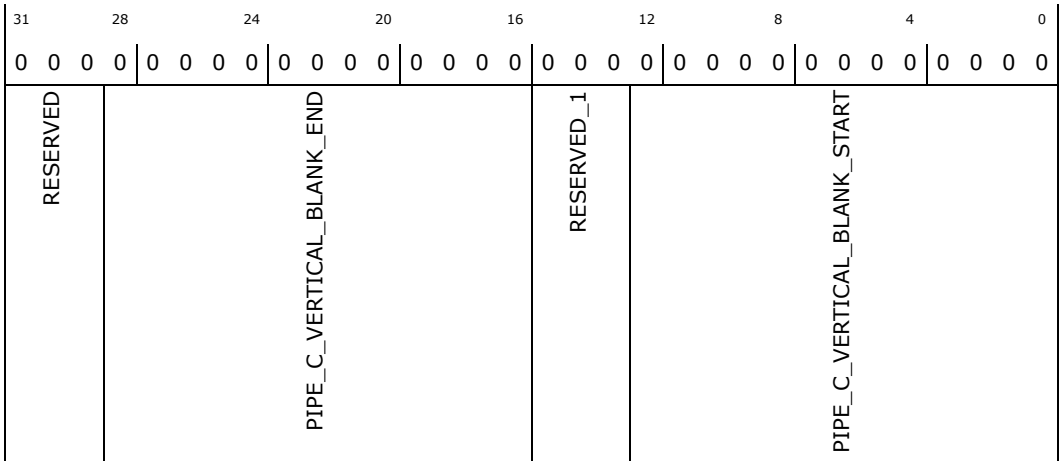
4.2.365 VBLANK_C—Offset 63010h

Pipe C Vertical Blank Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63010h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_C_VERTICAL_BLANK_END:** Refer pipe A description.
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_C_VERTICAL_BLANK_START:** Refer pipe A description.

4.2.366 VSYNC_C—Offset 63014h

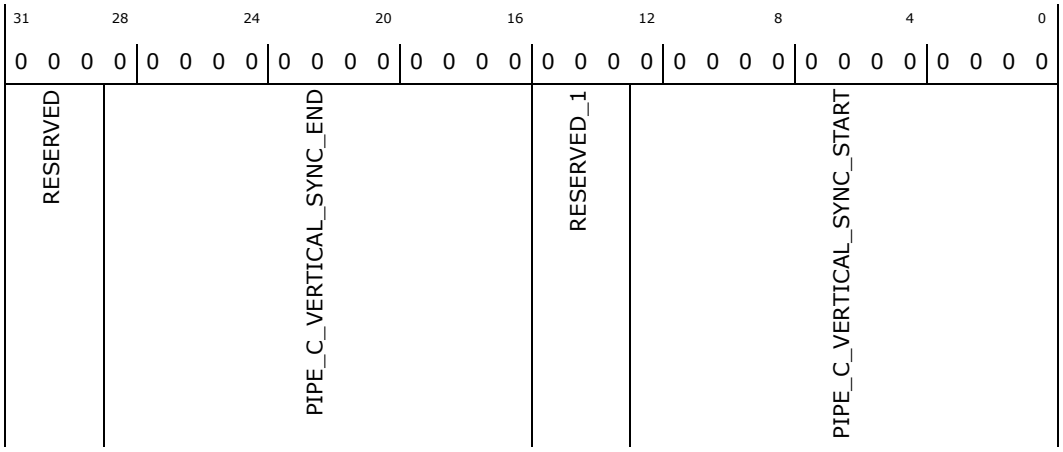
Pipe C Vertical Sync Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63014h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** Write as zero.
28:16	0x0 RW	**PIPE_C_VERTICAL_SYNC_END:** Refer pipe A description.
15:13	0x0 RO	**RESERVED_1:** Write as zero.
12:0	0x0 RW	**PIPE_C_VERTICAL_SYNC_START:** Refer pipe A description.

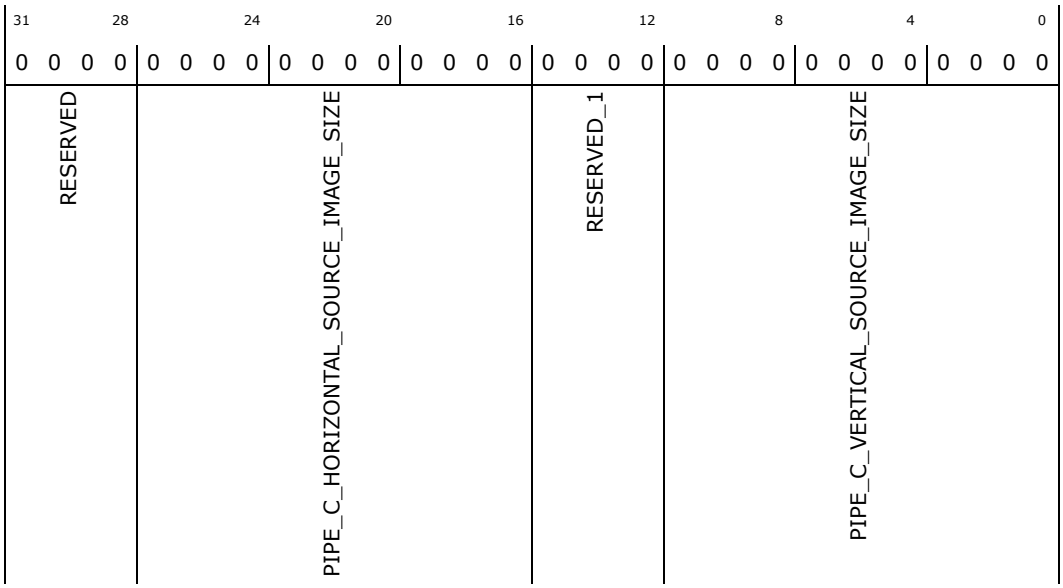
4.2.367 PIPECSRC—Offset 6301Ch

Pipe B Source Image Size

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6301Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PIPE_C_HORIZONTAL_SOURCE_IMAGE_SIZE:** Refer pipe A description.
15:12	0x0 RO	**RESERVED_1:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
11:0	0x0 RW	**PIPE_C_VERTICAL_SOURCE_IMAGE_SIZE:** Refer pipe A description.

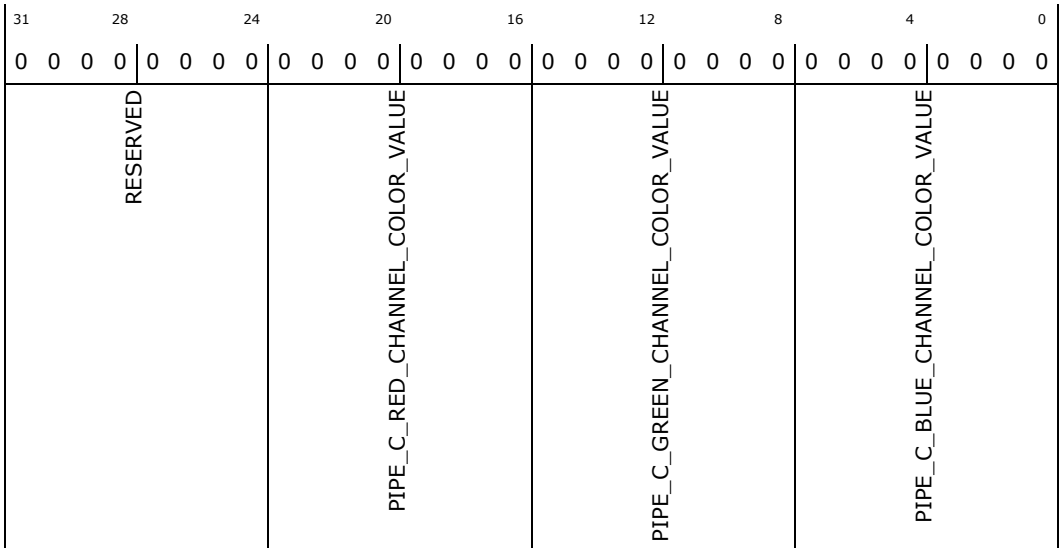
4.2.368 BCLRPAT_C—Offset 63020h

Pipe C Border Color Pattern Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63020h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**PIPE_C_RED_CHANNEL_COLOR_VALUE:** Reserved.
15:8	0x0 RW	**PIPE_C_GREEN_CHANNEL_COLOR_VALUE:** Reserved.
7:0	0x0 RW	**PIPE_C_BLUE_CHANNEL_COLOR_VALUE:** Reserved.

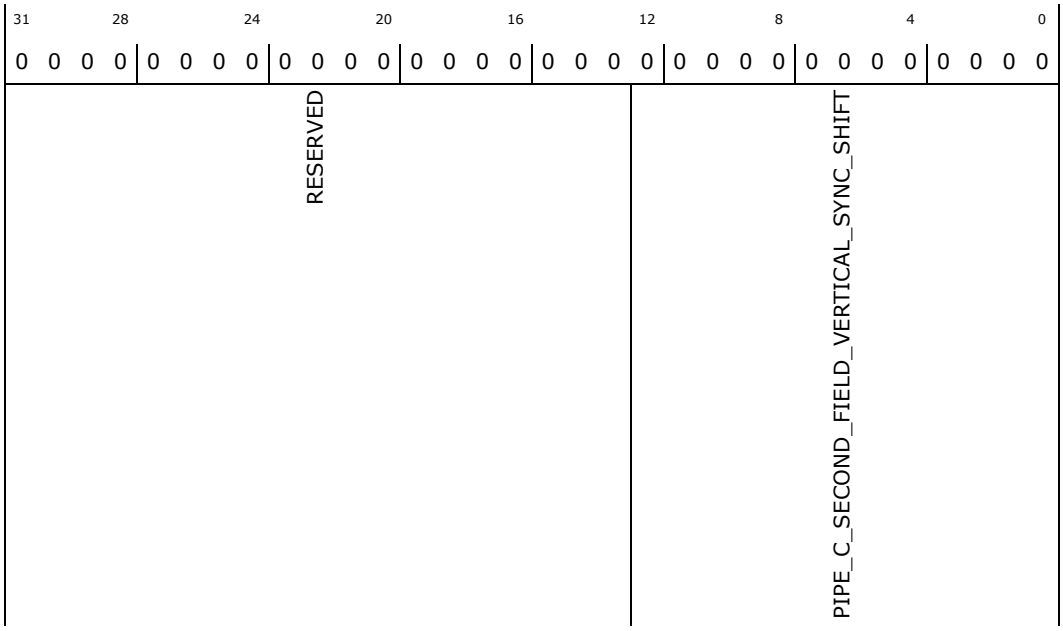
4.2.369 VSYNCSHIFT_C—Offset 63028h

Vertical Sync Shift Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63028h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** Write as zero.
12:0	0x0 RW	**PIPE_C_SECOND_FIELD_VERTICAL_SYNC_SHIFT:** This value specifies the vertical sync alignment for the start of the interlaced second field expressed in terms of the absolute pixel number relative to the horizontal active display start. This value will only be used if the PIPEBCONF is programmed to an interlaced mode using vsync shift. Otherwise a legacy value of floor[htotal / 2] will be used. Typically, the interlaced second field vertical sync should start one pixel after the point halfway between successive horizontal syncs, so the value of this register should be programmed to: (horizontal sync start - floor[horizontal total / 2]) (use the actual horizontal sync start and horizontal total values and not the minus one values programmed into registers). This vertical sync shift only occurs during the interlaced second field. In all other cases the vertical sync start position is aligned with horizontal sync start.

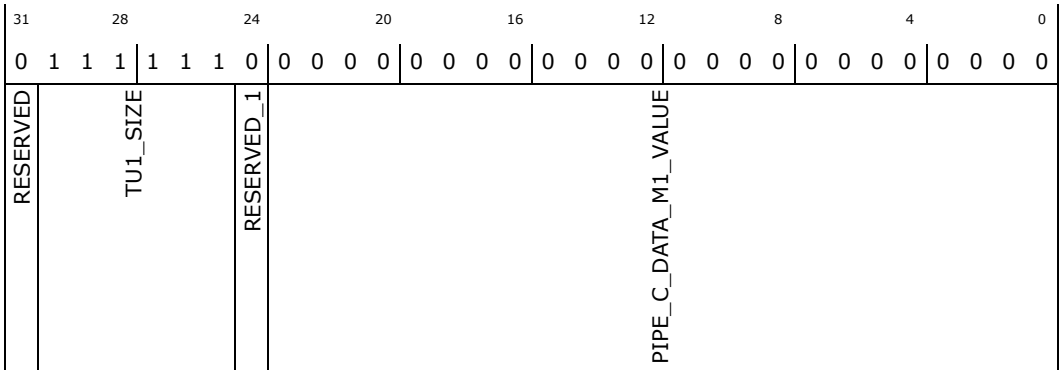
4.2.370 TRANSCDATAM1—Offset 63030h

Pipe B Data M value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63030h

Default: 7E000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ
30:25	0x3f RW	**TU1_SIZE:** Project: All Default Value: ;111111b 64 Refer Pipe A description.
24	0x0 RO	**RESERVED_1:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_C_DATA_M1_VALUE:** Project: All Refer Pipe A description.

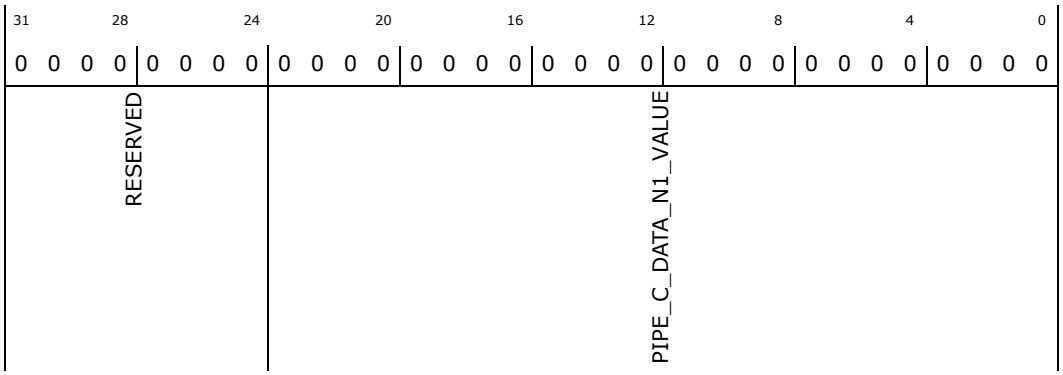
4.2.371 TRANSCDATAN1—Offset 63034h

Pipe C Data N value 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63034h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Project: All Format: MBZ
23:0	0x0 RW	**PIPE_C_DATA_N1_VALUE:** Project: All Refer Pipe A description.

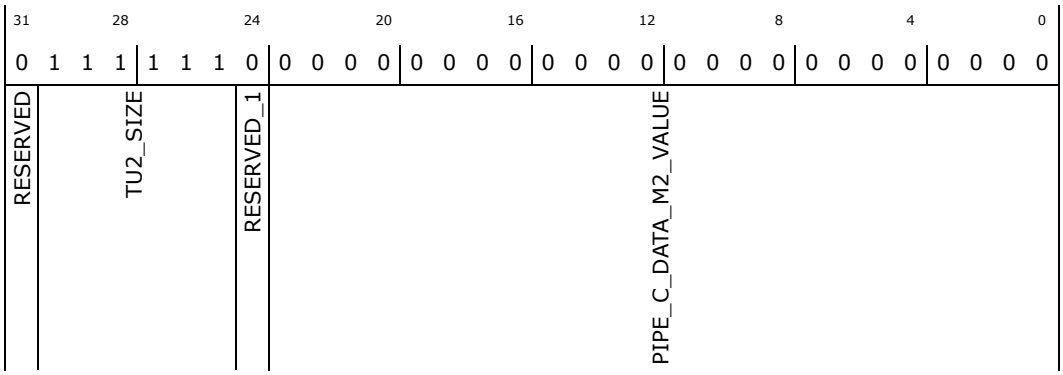
4.2.372 TRANSCDATAM2—Offset 63038h

Pipe C Data M value 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63038h

Default: 7E000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Project: All Format: MBZ

4.3.1 CRCCTRLREDC—Offset 63050h

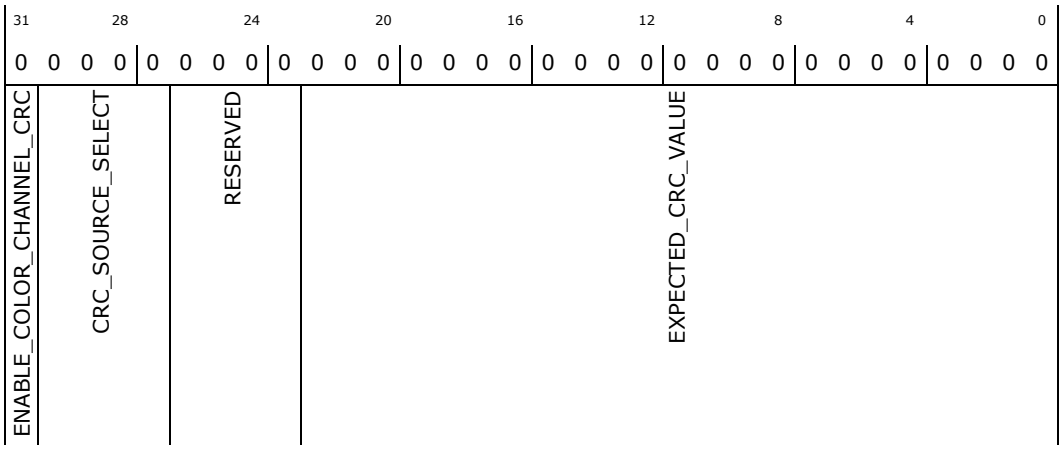
Pipe B CRC Color Control Register (Red)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63050h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_COLOR_CHANNEL_CRC:** After being enabled for the first time, you need to wait for two VBLANK events for a valid CRC result. After that, a CRC will be generated each frame. 0 = CRC Calculations are disabled 1 = CRC Calculations are enabled
30:27	0x0 RW	**CRC_SOURCE_SELECT:** These bits select the source of the data to put into the CRC logic. 0000: Pipe B (Not available when DisplayPort or TV is enabled on this pipe) 0001: sDVOB/HDMIB (30 bit format. Only select when HDMIB is set to pipe B) 0010: sDVOC/HDMIC (30 bit format. Only select when HDMIC is set to pipe B) 0011: DisplayPort D (40 bit format) [DevCTG] 0100: TV Encoder outputs (30 bit format) 0101: TV filter outputs (30 bit format) 0110: DisplayPort B (40 bit format) 0111: DisplayPort C (40 bit format) 1000: Audio DP (Audio for DisplayPort (pcdclk). Only select when Audio is on DisplayPort on Pipe B) 1001: Audio HDMI (Audio for HDMI (dotclock) Only select when Audio is on HDMI on Pipe B) Others: Reserved
26:23	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

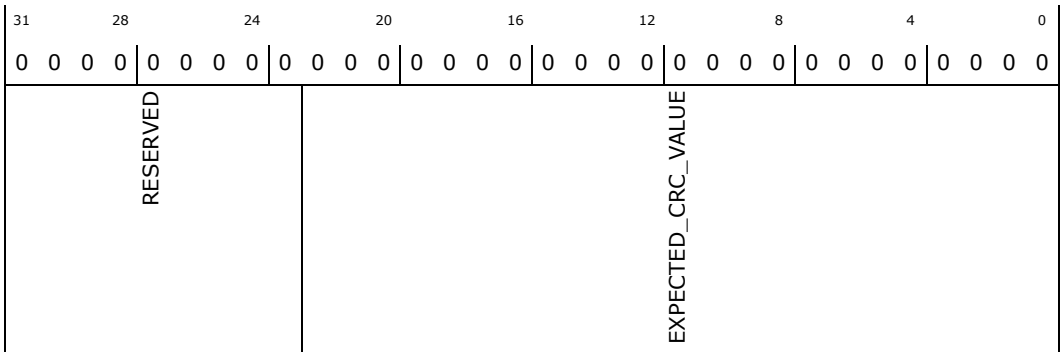
4.3.2 CRCCTRLGREENC—Offset 63054h

Pipe C CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63054h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

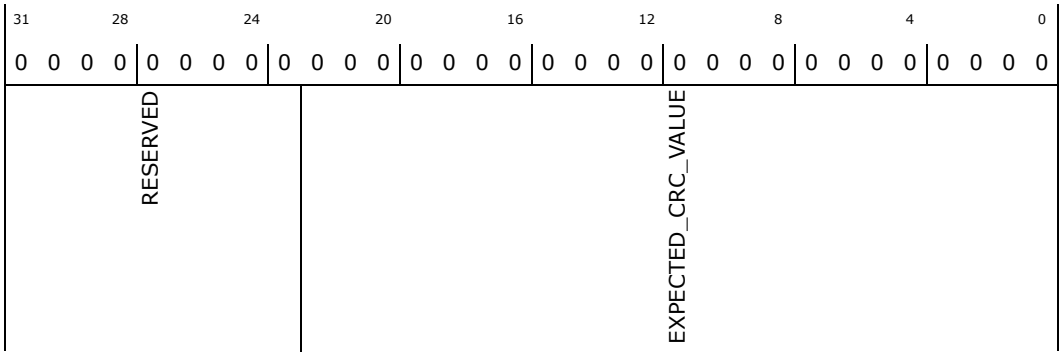
4.3.3 CRCCTRLBLUEC—Offset 63058h

Pipe C CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63058h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

4.3.4 CRCCTRLALPHAC—Offset 6305Ch

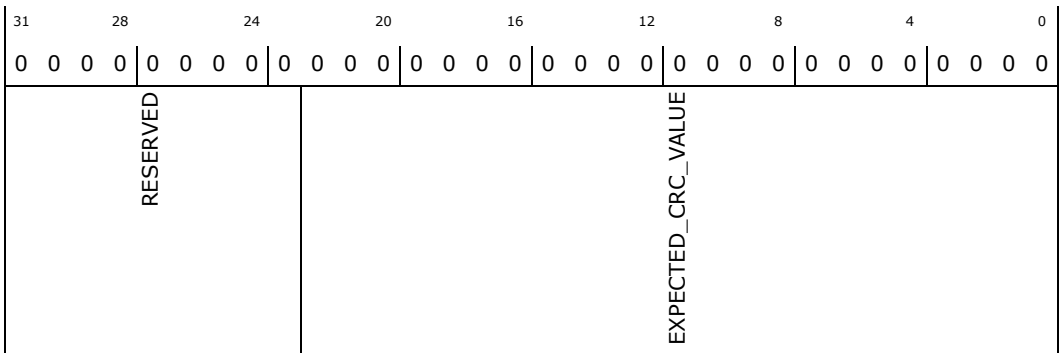
Pipe C CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6305Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

4.3.5 CRCRESREDC—Offset 63060h

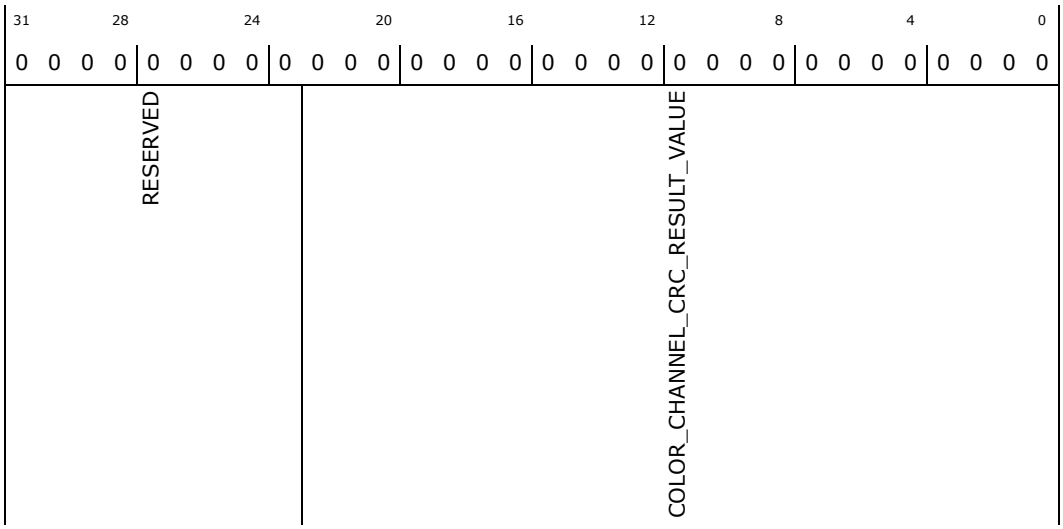
Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63060h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.3.6 CRCRESGREENC—Offset 63064h

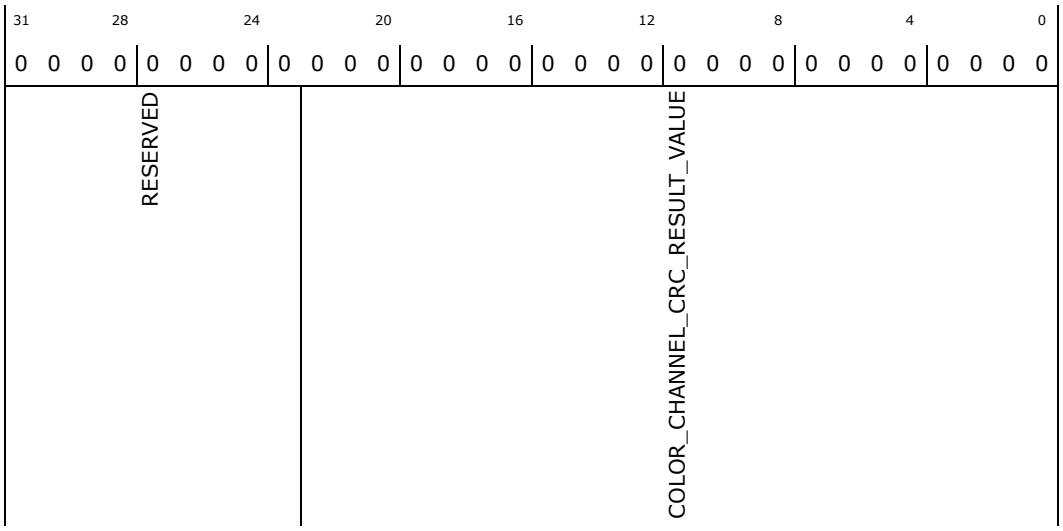
Pipe C CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63064h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.3.7 CRCRESBLUEC—Offset 63068h

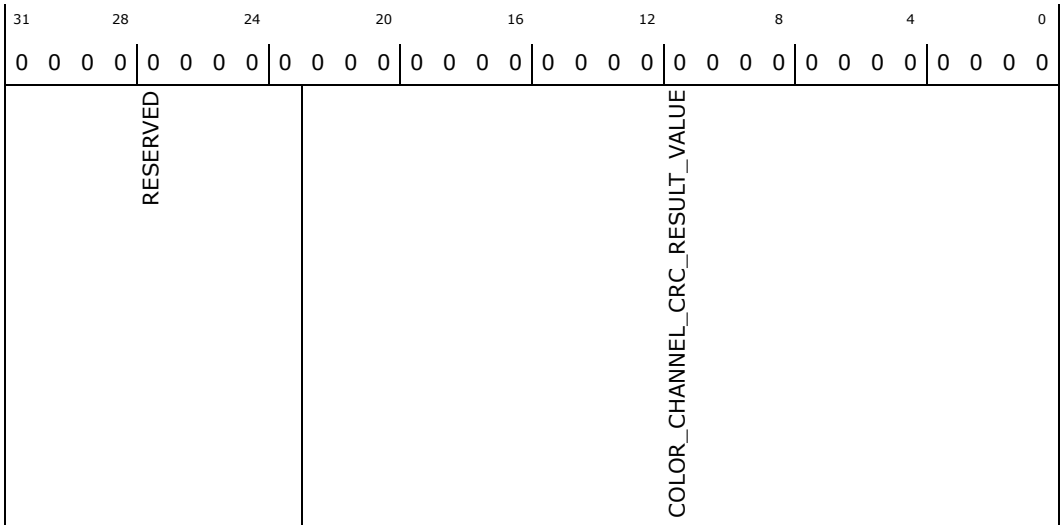
Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63068h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.3.8 CRCRESALPHAC—Offset 6306Ch

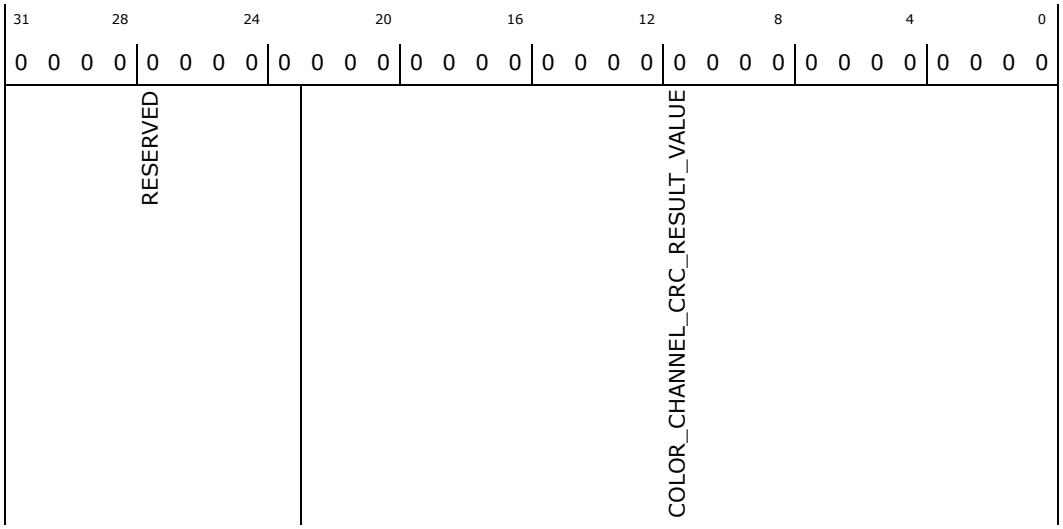
Pipe C CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6306Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

4.3.9 CRCCTRLRESIDUE2C—Offset 63070h

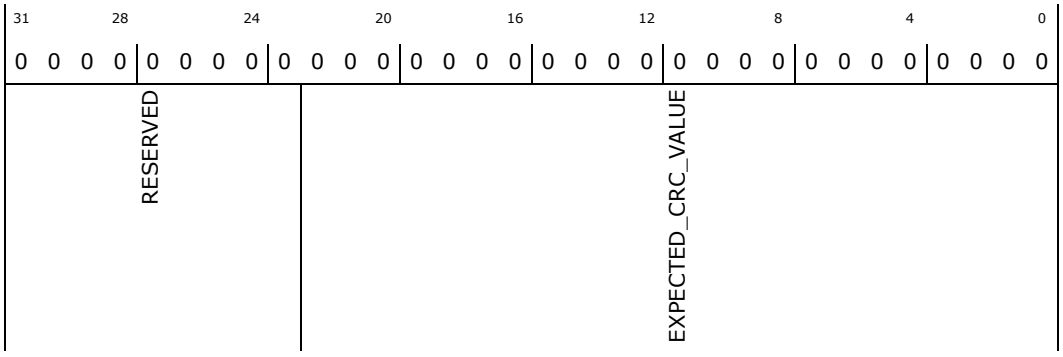
Pipe C CRC Color Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63070h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Write as zero
22:0	0x0 RW	**EXPECTED_CRC_VALUE:** Expected CRC Value for the Color Channel. This is the value used to generate the CRC error status and interrupt. Resultant CRC values are compared to this register after the completion of a CRC calculation. The status bit is in the PIPEBSTAT register.

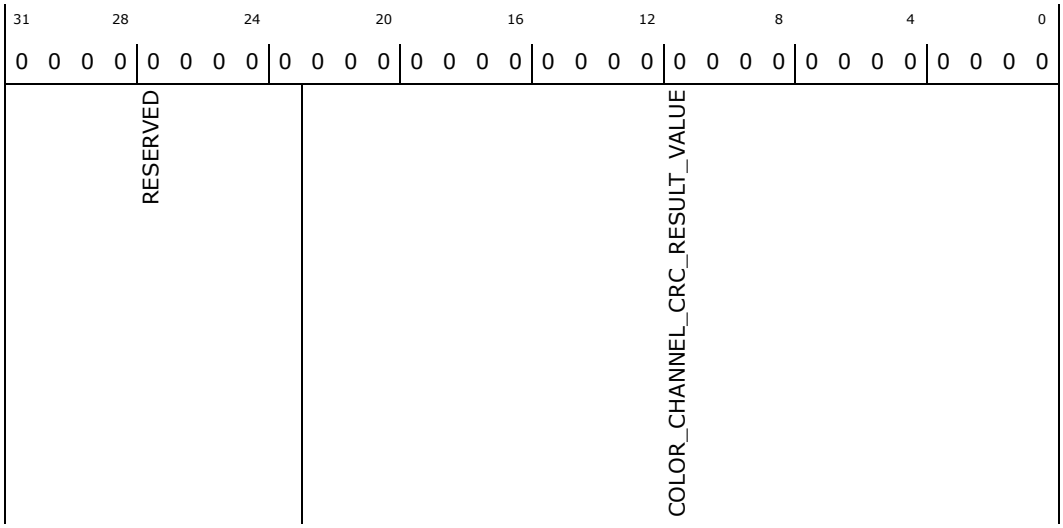
4.3.10 CRCRESRESIDUAL2C—Offset 63080h

Pipe B CRC Result Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63080h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x0 RO	**RESERVED:** Read only
22:0	0x0 RO	**COLOR_CHANNEL_CRC_RESULT_VALUE:** This field contains the resultant CRC value for the Color Channel at the end of a frame. A status bit can be used as an indication that the data is the valid result of a CRC calculation. The result of a CRC on an empty frame will be 7FFFFFh.

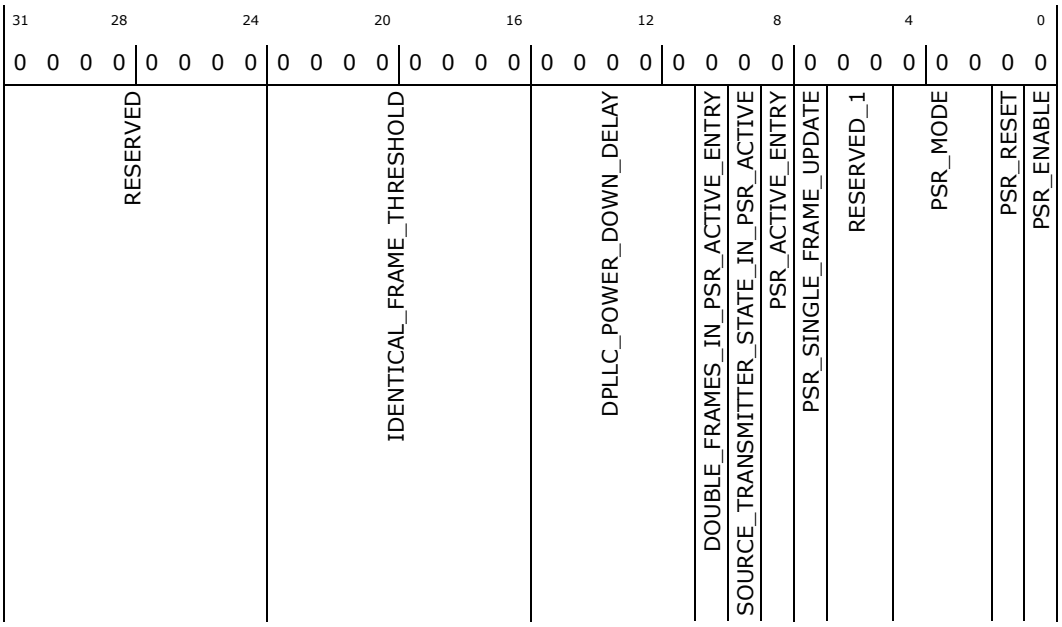
4.3.11 PSRCTLC—Offset 63090h

Pipe C Panel Self Refresh Control

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63090h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**IDENTICAL_FRAME_THRESHOLD:** Number of identical frames that display controller needs to exceed in order to transition to PSR active state in HW timer mode
15:11	0x0 RW	**DPLLC_POWER_DOWN_DELAY:** programmable delay from main link powerdown to DPLLC powerdown. The delay is in number of cdclk clocks.
10	0x0 RW	**DOUBLE_FRAMES_IN_PSR_ACTIVE_ENTRY:** . If asserted, HW will send two frames with same SDP active setting when entry PSR active state. This bit is set if the vertical blanking time is less than 330us.
9	0x0 RW	**SOURCE_TRANSMITTER_STATE_IN_PSR_ACTIVE:** . If asserted, HW will keep transmitter active during PSR active state and sends only idle symbols. If deasserted, HW will turn off transmitter during PSR active state. Display driver will keep this bit consistent with Source transmitter state in PSR active bit in DPCD register of the sink.
8	0x0 RW	**PSR_ACTIVE_ENTRY:** This bit is only valid in PSR_mode is SW timer mode. If it is asserted, HW will transition into PSR_active state. If it is deasserted, HW will transition to PSR_inactive state. SW should not set or clear this bit more than once within one vblank period.
7	0x0 RW	**PSR_SINGLE_FRAME_UPDATE:** In PSR persistent mode, SW set this bit before writing registers for a flip. It will be self-clear when it gets to the PSR active state.

Bit Range	Default & Access	Field Name (ID): Description
6:5	0x0 RO	**RESERVED_1:** Reserved.
4:2	0x0 RW	**PSR_MODE:** b011-111: reserved. b010: PSR with HW timer. HW timer decides PSR active entry point. PSR active state exits upon MMIO write registers that may change the frame buffer. b001: PSR with SW timer. In this mode, SW will keep track of idle frames and buffer modification in the driver and explicitly specify the entry and exit PSR active state point. b000: PSR manual (debug) mode. All of PSR state transitions and SDP content is managed by SW driver. SW is responsible to change SDP content for every frame with appropriate values to keep PSR panel in synchronized states.
1	0x0 RW	**PSR_RESET:** If assert all PSR functions are reset back to PSR inactive state. When it needs to resynchronize source and sync, SW writes 0x2 to DPCD register 600h and to this bit to get system back to PSR active states. This bit is self clear.
0	0x0 RW	**PSR_ENABLE:** Panel Self-refresh is enabled. When it is asserted PSR is enabled and operate in one of the mode that specified by PSR mode.

4.3.12 PSRSTATC—Offset 63094h

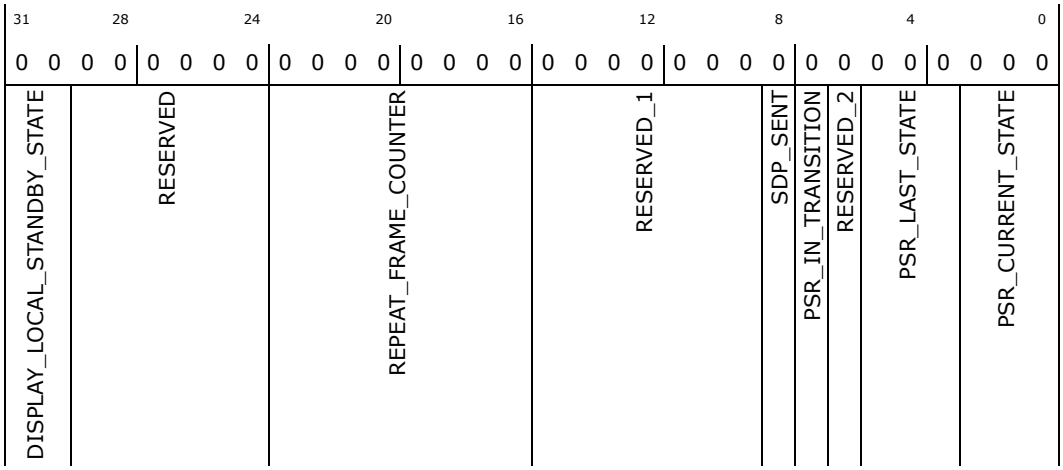
Pipe C PSR status register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63094h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**DISPLAY_LOCAL_STANDBY_STATE:**00: D0 idle state, fetch frame buffer from system memory 02: D0i2 PSR is active, display controller is trunk gated 03: D0i3 PSR is active, display controller is power gated
29:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RO	**REPEAT_FRAME_COUNTER:** Number of identical frames has been sent by display controller. Value is not roll over at 255.
15:9	0x0 RO	**RESERVED_1:** Reserved.
8	0x0 RO	**SDP_SENT:** it indicates if SDP packet has been sent in current frame.
7	0x0 RO	**PSR_IN_TRANSITION:** There is a period that source already committed to PSR active but sink did not. SW should not change the source state at this time but wait until this status bit is clear. The wait time should in the range of 120-250us in the worst case.
6	0x0 RO	**RESERVED_2:** Reserved.
5:3	0x0 RO	**PSR_LAST_STATE:** indicate last source state that PSR state machine were in (debug) 000: PSR_disabled 001: PSR_inactive 010: PSR_transition_to_active 011: PSR_active no RFB update 100: PSR_active single frame update 101: PSR_exit
2:0	0x0 RO	**PSR_CURRENT_STATE:** indicate current source state that PSR state machine are in 000: PSR_disabled 001: PSR_inactive 010: PSR_transition_to_active 011: PSR_active no RFB update 100: PSR_active single frame update 101: PSR_exit

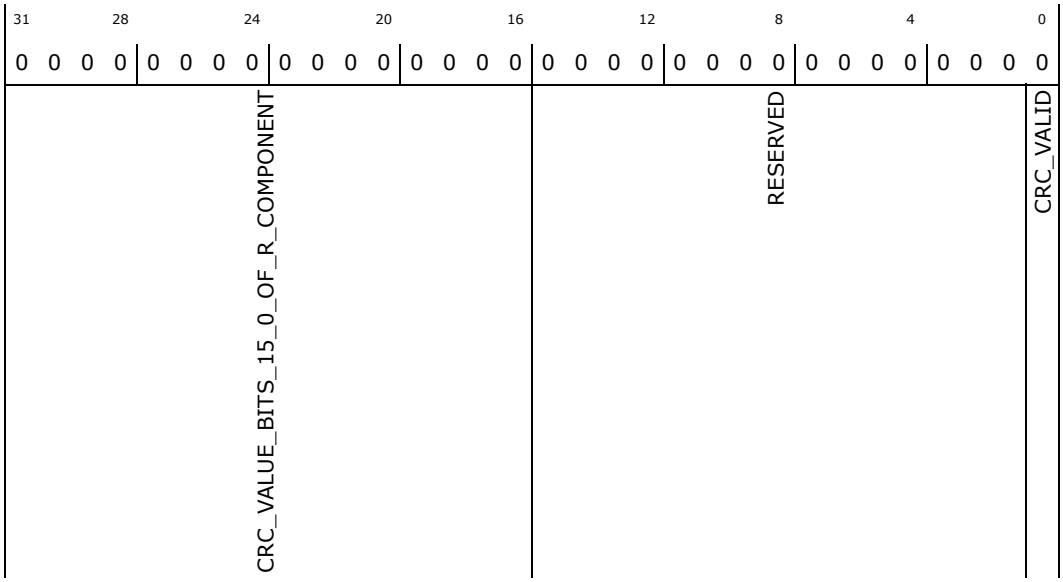
4.3.13 PSRCRC1C—Offset 63098h

Pipe C PSR CRC1 register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63098h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**CRC_VALUE_BITS_15_0_OF_R_COMPONENT:** Reserved.
15:1	0x0 RO	**RESERVED:** .
0	0x0 RO	**CRC_VALID:** CRC calculation complete and valid for previous frame.

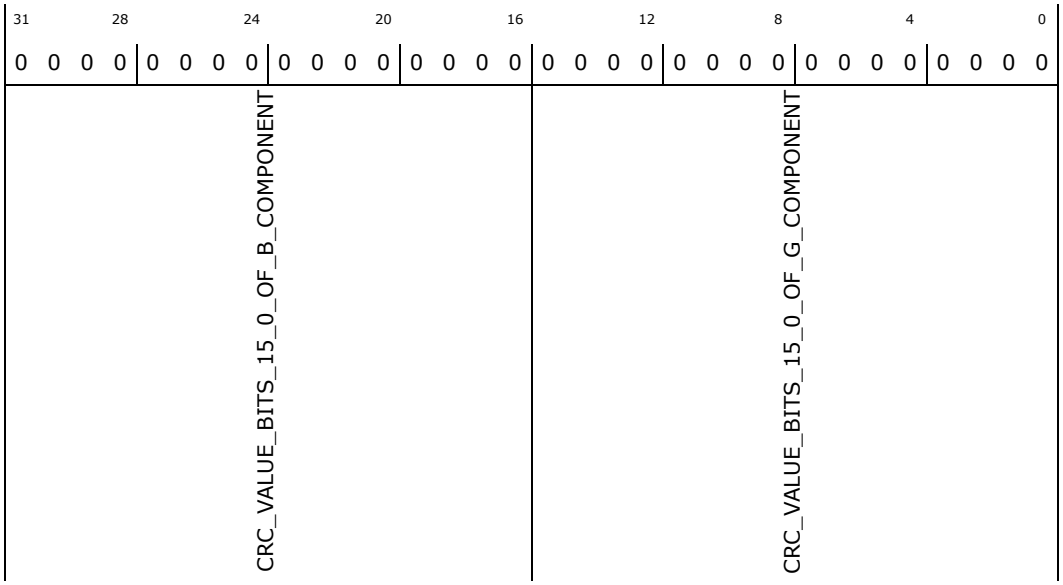
4.3.14 PSRCRC2C—Offset 6309Ch

Pipe C PSR CRC2 register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6309Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**CRC_VALUE_BITS_15_0_OF_B_COMPONENT:** Reserved.
15:0	0x0 RO	**CRC_VALUE_BITS_15_0_OF_G_COMPONENT:** Reserved.

4.3.15 VSCSDPC—Offset 630A0h

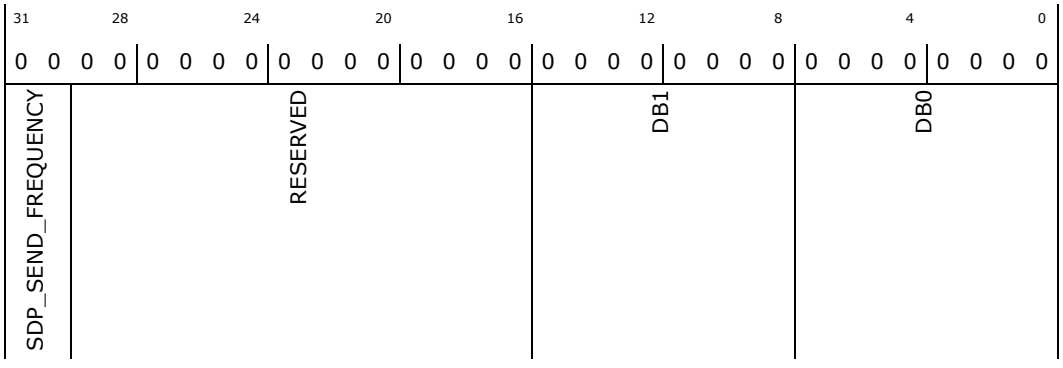
Pipe C VSC SDP register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RW	**SDP_SEND_FREQUENCY:** 00: off, not sending 01: send one every frame 10: send once 11: reserved When PSR is enabling this field is ignored. One SDP is sent in every frame until source is in PSR active state
29:16	0x0 RO	**RESERVED:** Reserved.
15:8	0x0 RW	**DB1:** Programmed by display driver in manual mode, auto-generate by display controller in all other modes
7:0	0x0 RW	**DB0:** Bits 7:4: Stereo Interface Method Specific Parameter Bits 3:0: Stereo Interface Method Code. This field is programmed by display driver for stereo display configuration

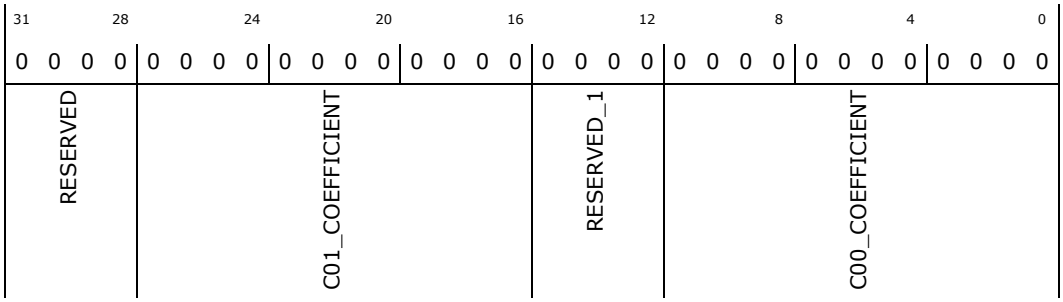
4.3.16 PIPECWIDEGAMUTCOLORCORRECTIONC01_C00COEFFICIENTS—Offset 630B0h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630B0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Reserved.
27:16	0x0 RW	**C01_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.
15:12	0x0 RO	**RESERVED_1:** Reserved.
11:0	0x0 RW	**C00_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

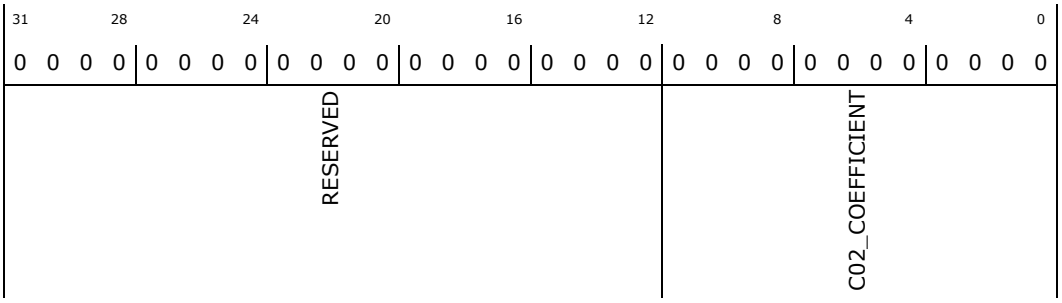
4.3.17 PIPECWIDEGAMUTCOLORCORRECTIONC02COEFFICIENT—Offset 630B4h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630B4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**RESERVED:** Reserved.
11:0	0x0 RW	**C02_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

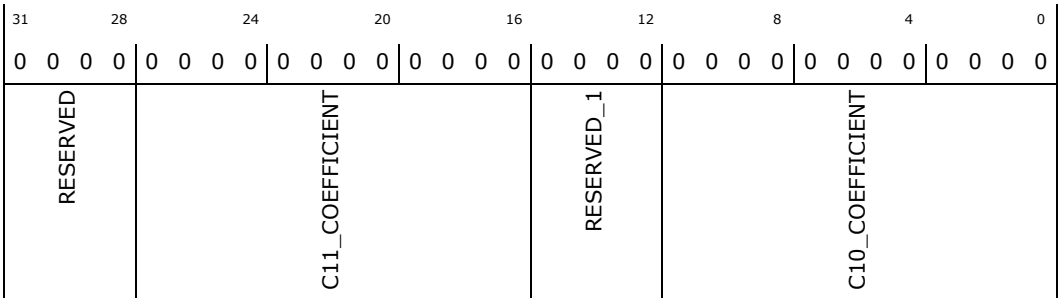
4.3.18 PIPECWIDEGAMUTCOLORCORRECTIONC11_C10COEFFICIENTS—Offset 630B8h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630B8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Reserved.
27:16	0x0 RW	**C11_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Reserved.
11:0	0x0 RW	**C10_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

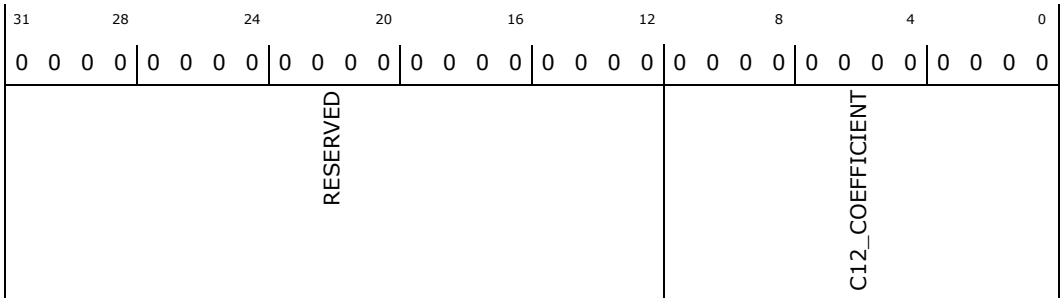
4.3.19 PIPECWIDEGAMUTCOLORCORRECTIONC12COEFFICIENT—Offset 630BCh

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630BCh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**RESERVED:** Reserved.
11:0	0x0 RW	**C12_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

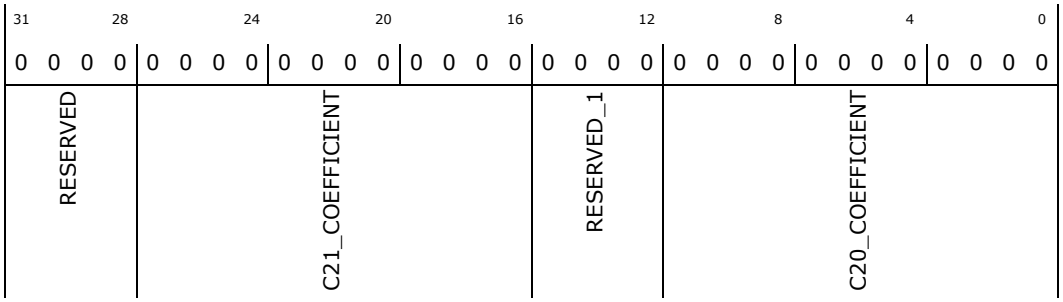
4.3.20 PIPECWIDEGAMUTCOLORCORRECTIONC21_C20COEFFICIENTS—Offset 630C0h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630C0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Reserved.
27:16	0x0 RW	**C21_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.
15:12	0x0 RO	**RESERVED_1:** Reserved.
11:0	0x0 RW	**C20_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

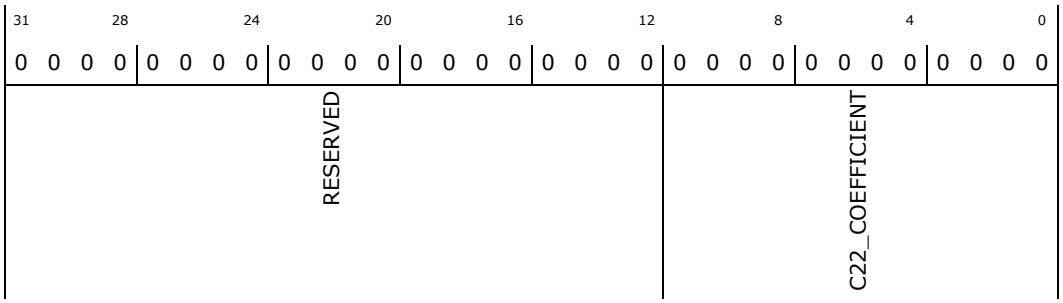
4.3.21 PIPECWIDEGAMUTCOLORCORRECTIONC22COEFFICIENT—Offset 630C4h

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 630C4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**RESERVED:** Reserved.
11:0	0x0 RW	**C22_COEFFICIENT:** 12-bit 2 s complement signed value that is programmed for linea. The range of the value can be from -1.999 to +1.999.

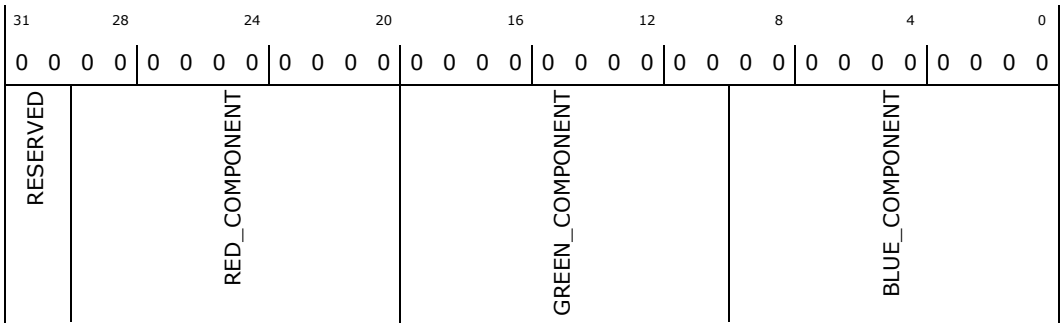
4.3.22 CANVAS_C—Offset 63A04h

Pipe C Canvas Color Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63A04h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** Reserved.
29:20	0x0 RO	**RED_COMPONENT:** Red Component
19:10	0x0 RO	**GREEN_COMPONENT:** GREEN Component
9:0	0x0 RO	**BLUE_COMPONENT:** BLUE Component

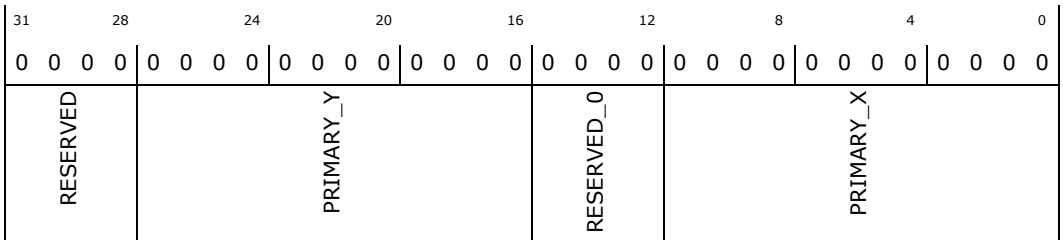
4.3.23 PRIMPOS_C—Offset 63A08h

These registers specify the screen position and size of the primary. This register is double buffered. The load register is transferred into the active register on the asserting edge of Vertical Blank for the pipe that the display is assigned. When using the primary as a secondary display, this should be set to the entire display rectangle.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 63A08h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as Zero.
27:16	0x0 RW	**Primary_Y (PRIMARY_Y):** These 12 bits specify the vertical position in lines of the primary (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the un-rotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_0:** Write as Zero
11:0	0x0 RW	**PRIMARY_X:** These 12 bits specify the horizontal position in lines of the primary (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the end of the active video area in the un-rotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

4.3.24 PRIMSIZE_C—Offset 63A0Ch

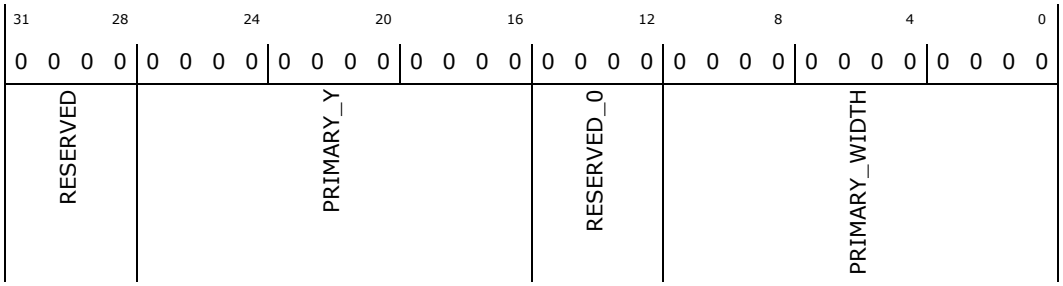
This register specifies the height and width of the primary in pixels and lines. The rectangle defined by the size and position should never exceed the boundaries of the display rectangle that the primary is assigned to.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63A0Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as Zero.
27:16	0x0 RW	**Primary_Height (PRIMARY_Y):** This register field is used to specify the height of the primary in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_0:** Write as Zero

Bit Range	Default & Access	Field Name (ID): Description
11:0	0x0 RW	**PRIMARY_WIDTH:** This register field is used to specify the width of the primary in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined primary rectangle must always be completely contained within the displayable area of the screen image.

4.3.25 PRIMC_CONSTANT—Offset 63A10h

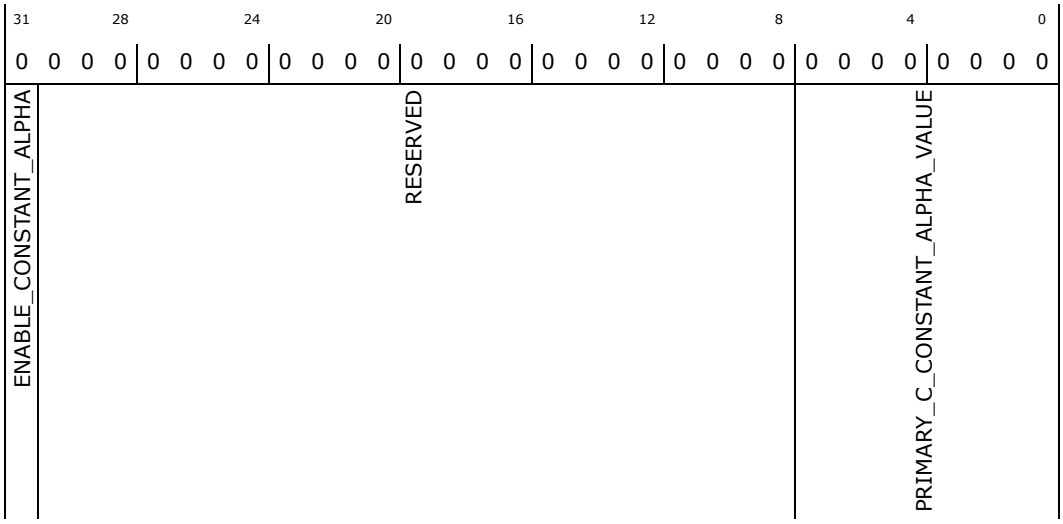
Primary C constant Alpha

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 63A10h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**Enable_CONSTANT_ALPHA (ENABLE_CONSTANT_ALPHA):** Primary C constant alpha provides a way to apply an alpha value to all primary pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. 0-Primary C Constant Alpha is disabled. 1-Primary C Constant Alpha Enabled
30:8	0x0 RO	**RESERVED:** RESERVED: MBZ
7:0	0x0 RW	**PRIMARY_C_CONSTATN_ALPHA_VALUE (PRIMARY_C_CONSTANT_ALPHA_VALUE):** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of primary with other surfaces.

4.3.26 DP_B—Offset 64100h

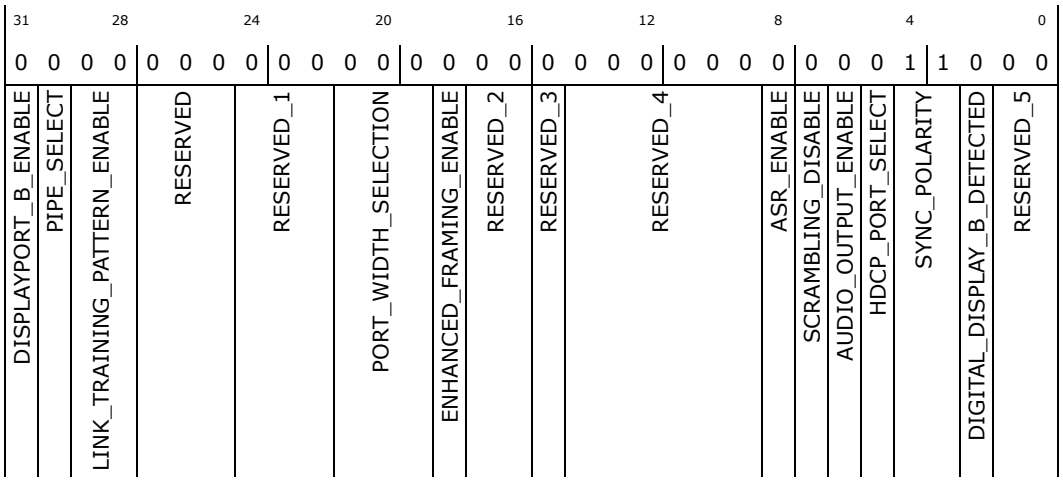
DisplayPort B Control Register Display Port B control (dprrega_b0.v ql_displayb1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64100h

Default: 00000018h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DISPLAYPORT_B_ENABLE:** Disabling this port will put it in its lowest power state. Port enable takes place on the Vblank after being written. 1 = Enable. This bit enables the Display Port B interface. 0 = Disable and tristates the Display Port B interface.
30	0x0 RW	**PIPE_SELECT:** This bit determines from which display pipe the source data will originate. Pipe selection takes place on the Vblank after being written 0 = Pipe A 1 = Pipe B
29:28	0x0 RW	**LINK_TRAINING_PATTERN_ENABLE:** These bits are used for link initialization as defined in the DisplayPort specification. Please note that the link must first be configured prior to sending training patterns. 00 Pattern 1 enabled: Repetition of D10.2 characters Default. 01 Pattern 2 enabled: Repetition of K28.5, D11.6, K28.5, D11.6, D10.2, D10.2, D10.2, D10.2, D10.2, D10.2. Please note that the entire pattern must complete before another pattern is sent. Scrambling initialization and disparity init commence at the end of the last iteration of pattern 2. 10 Idle Pattern enabled: Transmit BS followed by VB-ID with NoVideoStream_flag set to 1, at a minimum five times 11 Link not in training: Send normal pixels

Bit Range	Default & Access	Field Name (ID): Description
27:25	0x0 RO	**RESERVED:** Voltage swing level set: [DevCTG]: These bits are used for setting the voltage swing for pattern 1, defined as Vdiff_pp in the DisplayPort specification. They mirror registers in the PCI express configuration 000 0.4V (DEFAULT) 001 0.6V 010 0.8V 011 1.2V RESERVED 1xx RESERVED
24:22	0x0 RO	**RESERVED_1:** Pre-emphasis level set [DevCTG]: These bits are used for setting link pre-emphasis for pattern 2, as defined in the DisplayPort specification. They mirror registers in the PCI express configuration. 000 no pre-emphasis (default) 001 3.5dB pre-emphasis (1.5x) 010 6dB pre-emphasis (2x) 011 9.5dB pre-emphasis (3x) RESERVED 1xx RESERVED
21:19	0x0 RW	**PORT_WIDTH_SELECTION:** This bit selects the number of lanes to be enabled on the DisplayPort link. Port width selection takes place on the Vblank after being written. Port width change must be done as a part of mode set. 000 = x1 Mode (Default) 001 = x2 Mode. 010 = RESERVED 011 = x4 Mode. 1xx = RESERVED
18	0x0 RW	**ENHANCED_FRAMING_ENABLE:** This bit selects enhanced framing. It must be set when HDCP will be used invoked. 0 (Default) Enhanced framing disabled 1 Enhanced framing enabled. Locked once port is enabled. Updates when the port is disabled then re-enabled
17:16	0x0 RO	**RESERVED_2:** MBZ
15	0x0 RO	**RESERVED_3:** Port reversal [DevCTG]: Locked once port is enabled. Updates when the port is disabled then re-enabled
14:9	0x0 RO	**RESERVED_4:** MBZ
8	0x0 RW	**ASR_ENABLE:** this bit enables the Alternate Scrammbler Reset capability for eDP port to use alternate scrambler reset value of FFFEh 1 - ASR enable 0 ASR disable
7	0x0 RW	**SCRAMBLING_DISABLE:** This bit disables scrambling for this port. 0 = Scrambling enabled (Default) 1 = Scrambling disabled, no SR after initialization at loop 2 of training

Bit Range	Default & Access	Field Name (ID): Description
6	0x0 RW	**AUDIO_OUTPUT_ENABLE:** This bit enables audio on this output port. It may be enabled or disabled only when the link training is complete and set to Normal 0 = Audio output disabled 1 = Audio output enabled
5	0x0 RW	**HDCP_PORT_SELECT:** This bit directs HDCP to this port. When enabled, the information sent on this port will be encrypted using HDCP. Please note that this bit does not enable encryption on its own, but must be used in conjunction with HDCP registers. 0 = (Default) No HDCP encryption on this port 1 = Enable HDCP on this port
4:3	0x3 RW	**SYNC_POLARITY:** Indicates the polarity of Hsync and Vsync. 00 = VS and HS are active low (inverted) 01 = VS is active low (inverted), HS is active high 10 = VS is active high, HS is active low (inverted) 11 = (Default) VS and HS are active high
2	0x0 RO	**DIGITAL_DISPLAY_B_DETECTED:** Read-only bit indicating whether a digital display was detected during initialization. It signifies the level of the GMBUS port 4 (port B) data line at boot. 0 = digital display not detected during initialization (Default) 1 = digital display detected during initialization AccessType: Read Only
1:0	0x0 RO	**RESERVED_5:** MBZ

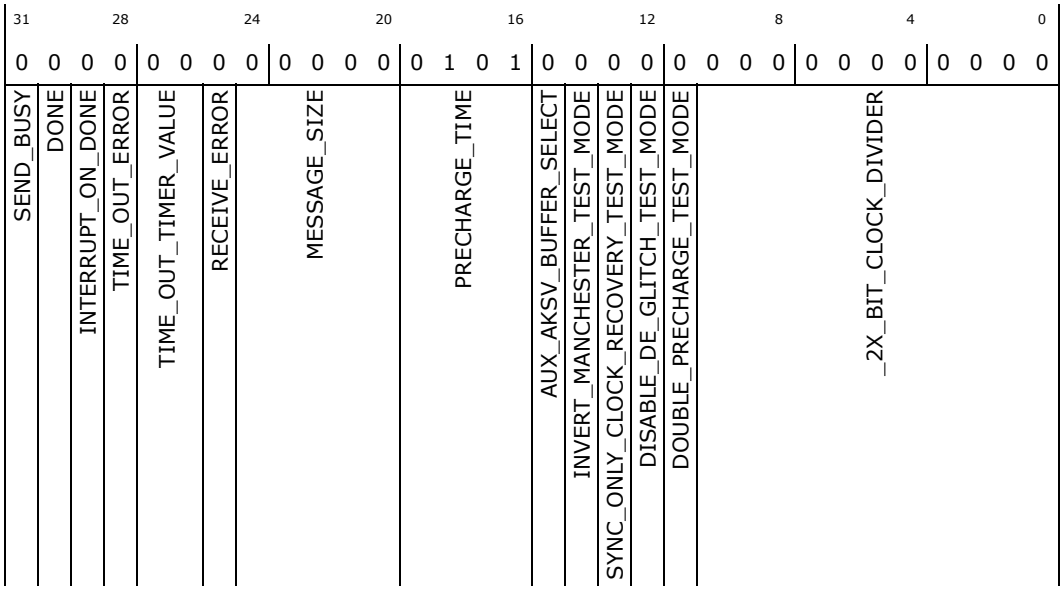
4.3.27 DPB_AUX_CH_CTL—Offset 64110h

Display Port B AUX Channel Control AuxB control (dprrega_b0.v auxb_ctl_rdback)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64110h

Default: 00050000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SEND_BUSY:** Setting this bit to a one initiates the transaction, when read this bit will be a 1 until the transmission completes. The transaction is completed when the response is received or when a timeout occurs. Do not write a 1 again until transaction completes. Writes of 0 will be ignored.
30	0x0 RW/1C	**DONE:** A sticky bit that indicates the transaction has completed. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
29	0x0 RW	**INTERRUPT_ON_DONE:** Enable an interrupt in the hotplug status register when the transaction completes or times out.
28	0x0 RW/1C	**TIME_OUT_ERROR:** A sticky bit that indicates the transaction has timed out. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
27:26	0x0 RW	**TIME_OUT_TIMER_VALUE:** 00: 400us (default) 01: 600us 10: 800us 11: 1600us The time count depends on the 2X bit clock divider (bits 10:0) being programmed for 2MHz.
25	0x0 RW/1C	**RECEIVE_ERROR:** A sticky bit that indicates that the data received was corrupted, not in multiples of a full byte, or more than 20 bytes. SW must write a 1 to this bit to clear the event. AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
24:20	0x0 RW	**MESSAGE_SIZE:** This field is used to indicate the total number bytes to transmit (including the header). It also indicates the number of bytes received in a transaction (including the header). This field is valid only only when the done bit is set and timeout or receive error has not occurred. Sync/ Stop are not part of the message or the message size. Reads of this field will give the response message size. The read value will not be valid while Busy bit 31 is asserted. Message sizes of 0 or)20 are not allowed.
19:16	0x5 RW	**PRECHARGE_TIME:** Used to determine the precharge time for the Aux Channel drivers. The value is the number of microseconds times 2. This depends on the 2X bit clock divider (bits 10:0) being programmed for 2MHz. Default is 5 decimal which gives 10us of precharge. Example: For 12us precharge, program 6 (12us/2us).
15	0x0 RW	**AUX_AKSV_BUFFER_SELECT:** This bit selects whether some of the data to be written over Display Port AUX comes from the Aksv buffer for HDCP authentication, or all from the AUX Data registers. Set this bit before initiating a transaction to write Aksv to the Display Port sink. All AUX protocol must be followed and Message Size set to 9 bytes. The first DWord transmitted will be from the AUX Data Register 1 for the header, then the DP_AUX_CH_AKSV_HI, then the last byte from DP_AUX_CH_AKSV_LO. The sink response is read back as usual from the AUX Data registers. More than one AUX channel can select to use the Aksv buffer simultaneously. 0 (Default) Use AUX Data registers for regular data transmission 1 Use Aksv Buffer for part of the data transmission.
14	0x0 RW	**INVERT_MANCHESTER_TEST_MODE:** 1 = Manchester code rising edge mid-clk signifies one (test mode) 0 = Manchester code rising edge mid-clk signifies zero (default)
13	0x0 RW	**SYNC_ONLY_CLOCK_RECOVERY_TEST_MODE:** 1 = Only recover clock during sync pattern (test mode) 0 = Recover clock during sync pattern and data phase (default)
12	0x0 RW	**DISABLE_DE_GLITCH_TEST_MODE:** 1 = Disable serial input de-glitch logic (test mode) 0 = Enable serial input de-glitch logic (default)
11	0x0 RW	**DOUBLE_PRECHARGE_TEST_MODE:** 1 = Precharge time is doubled 0 = Precharge time is as programmed
10:0	0x0 RW	**_2X_BIT_CLOCK_DIVIDER:** Used to determine the 2X bit clock the Aux Channel logic runs on. This value divides the input clock frequency down to 2X bit clock rate. The 2X bit clock rate is ideally 2MHz (0.5us). [DevCTG-A] the input clock is cdclk. the input clock is hrawclk (200MHz) Example: For 300MHz input clock and desired 2MHz 2X bit clock, program 150 (300MHz/2MHz).

4.3.28 DPB_AUX_CH_DATA1—Offset 64114h

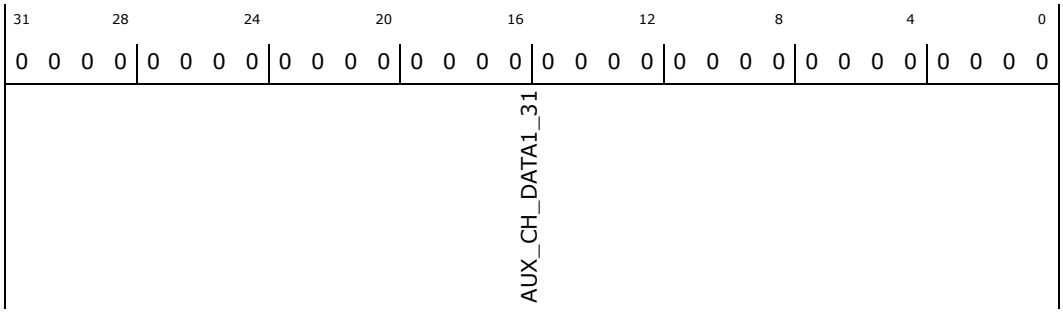
Display Port B AUX Data Register 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64114h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA1_31:** 0]: The first Dword of the message. The Msbyte is transmitted first. Reads will give the response data after transaction complete.

4.3.29 DPB_AUX_CH_DATA2—Offset 64118h

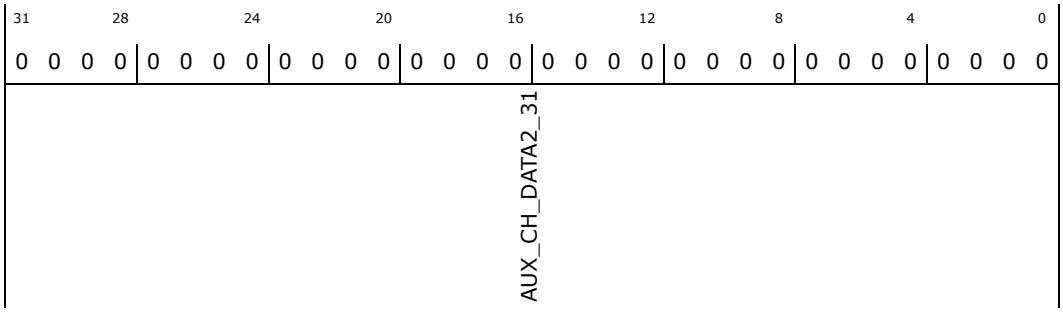
Display Port B AUX Data Register 2 AuxB Data2 (dprrega_b0.v auxb_dpr_data2, ql_auxb_d2)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64118h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA2_31:** 0]: The second Dword of the message. The Msbyte is transmitted first. Only used if the message size is greater than 4. Reads will give the response data after transaction complete.

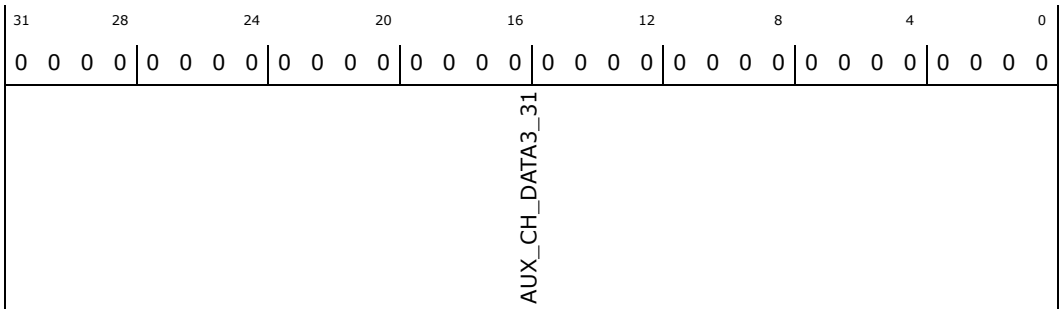
4.3.30 DPB_AUX_CH_DATA3—Offset 6411Ch

Display Port B AUX Data Register 3 AuxB Data3 (dprrega_b0.v auxb_dpr_data3, ql_auxb_d3)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6411Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA3_31:** 0]: The third Dword of the message. The Msbyte is transmitted first. Only used if the message size is greater than 8. Reads will give the response data after transaction complete.

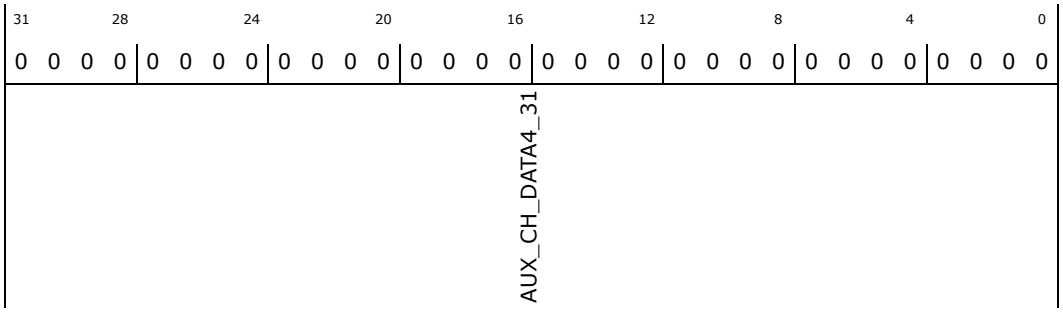
4.3.31 DPB_AUX_CH_DATA4—Offset 64120h

Display Port B AUX Data Register 4 AuxB Data4 (dprrega_b0.v auxb_dpr_data4, ql_auxb_d4)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64120h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA4_31:** 0]: The fourth Dword of the message. The Msbyte is transmitted first. Only used if the message size is greater than 12. Reads will give the response data after transaction complete.

4.3.32 DPB_AUX_CH_DATA5—Offset 64124h

Display Port B AUX Data Register 5 AuxB Data5 (dprrega_b0.v auxb_dpr_data5, ql_auxb_d5)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64124h

7:0	0x0 WO	**AKSV_BITS_39:** 32]

4.3.35 DPB_AUX_TST—Offset 64150h

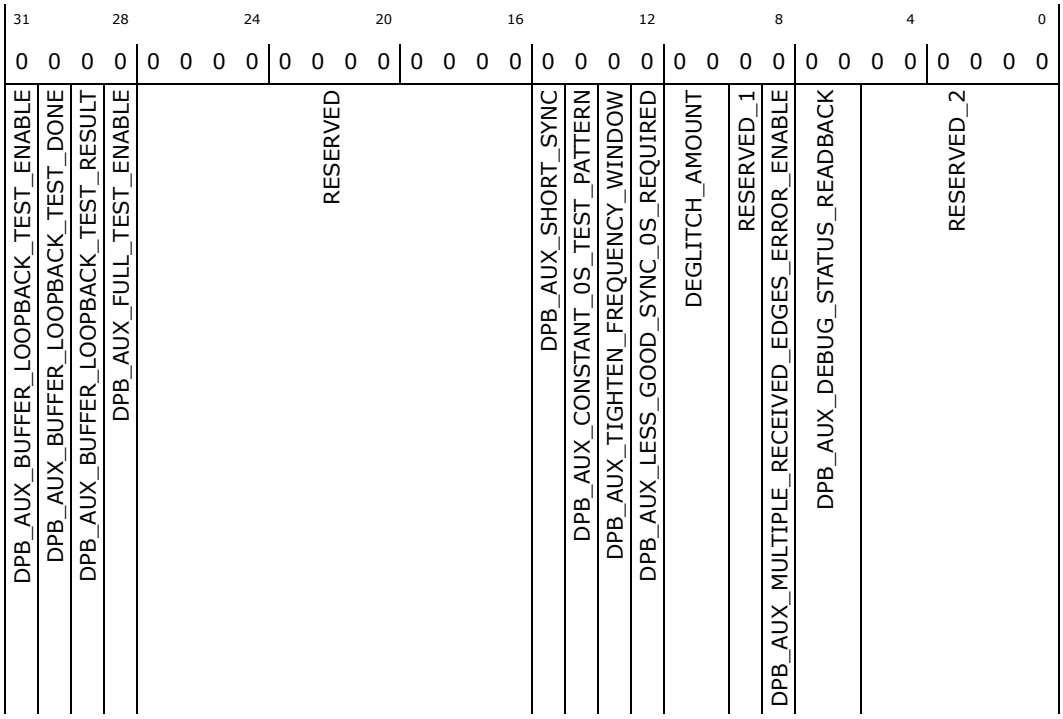
Display Port B AUX Test Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64150h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DPB_AUX_BUFFER_LOOPBACK_TEST_ENABLE:** Project: All Default Value: ;0b Enables test for the DPB-AUX I/O buffer. A 16 cycle clock pattern is output to the I/O buffer and compared against the looped back buffer output. The input clock is cdclk. With input clock at 512MHz the pattern will bea 1 MHz clock. It scales down with lower clock frequencies. The result is found in DP-AUX Buffer Loopback Test Result after DP-AUX Buffer Loopback Test Done is set. Clear this bit to 0 after test is done to return DP-AUX to normal operation. Loopback Test can be run simultaneously on all AUX buffers. Do not enable DP-AUX Buffer Loopback Test and DP-AUX Full Test simultaneously. Value Name Description Project 0b Disable Test disabled All 1b Enable Enable test. All

Bit Range	Default & Access	Field Name (ID): Description
30	0x0 RO	**DPB_AUX_BUFFER_LOOPBACK_TEST_DONE:** Project: All Default Value: ;0b AccessType: Read Only DPB-AUX Buffer Loopback Test has been run and completed. This is not the done for the DP-AUX Full Test. Value Name Description Project 0b Not Done Test not done. DP-AUX Buffer Loopback Test Result is not valid All 1b Done Test done. DP-AUX Buffer Loopback Test Result is now valid All
29	0x0 RO	**DPB_AUX_BUFFER_LOOPBACK_TEST_RESULT:** Project: All Default Value: ;0b AccessType: Read Only Result of the DPB-AUX Buffer Loopback Test. Value is only valid after a DP-AUX Loopback Test Done is 1. This is not the result of the DP-AUX Full Test. Value Name Description Project 0b Pass Pass All 1b Fail All
28	0x0 RW	**DPB_AUX_FULL_TEST_ENABLE:** Project: All Default Value: ;0b Enables test for the DPB-AUX core logic transmit and receive functions through the DPB-AUX and DPC-AUX buffers. DPB-AUX and DPC-AUX are interconnected through I/O buffer loopbacks. DPB-AUX is programmed as source to output a 20 byte test pattern. DPC-AUX is programmed as sink to receive the test pattern and reply with a different 20 byte test pattern. Test pattern 1 = 0xA55CC33E E770080C 0E0F0F8F CFEFF81C 3E77E3C8 Test pattern 2 = 0X183C7EE7 C381FF7F 3F1F0F07 030100EE 77CC33A5 Programming sequence: 1. Set DPB-AUX Full Test Enable to 1. 2. Program DPB_AUX_CH_DATA[1-5] with test pattern 1 to transmit as the source. 3. Program DPC_AUX_CH_DATA[1-5] with test pattern 2 to reply with as the sink. 4. Program all DPC_AUX_CH_CTL fields and set Send to 1. 5. Program all DPB_AUX_CH_CTL fields and set Send to 1. Then the test will start. Results checking sequence: 1. Poll DPB_AUX_CH_CTL for Done. To pass, Done must be set within 500us. 2. Read DPB_AUX_CH_CTL register. To pass, Timeout Error and Receive Error must be 0. 3. Read DPC_AUX_CH_CTL register. To pass, Receive Error must be 0. 4. Read DPB_AUX_CH_DATA[1-5] registers. To pass, they must contain test pattern 2. 5. Read DPC_AUX_CH_DATA[1-5] registers. To pass, they must contain test pattern 1. Clear this bit to 0 after test is done to return DP-AUX to normal operation. Test must be repeated with and without lane reversal to verify DPB-AUX buffer combinations. Only enable one DP-AUX Full Test at a time. To abort a test in progress, write the AUX_CH_CTL Send bits to 0 and Full Test Enable to 0. Value Name Description Project 0b Disable Test disabled All 1b Enable Enable test All

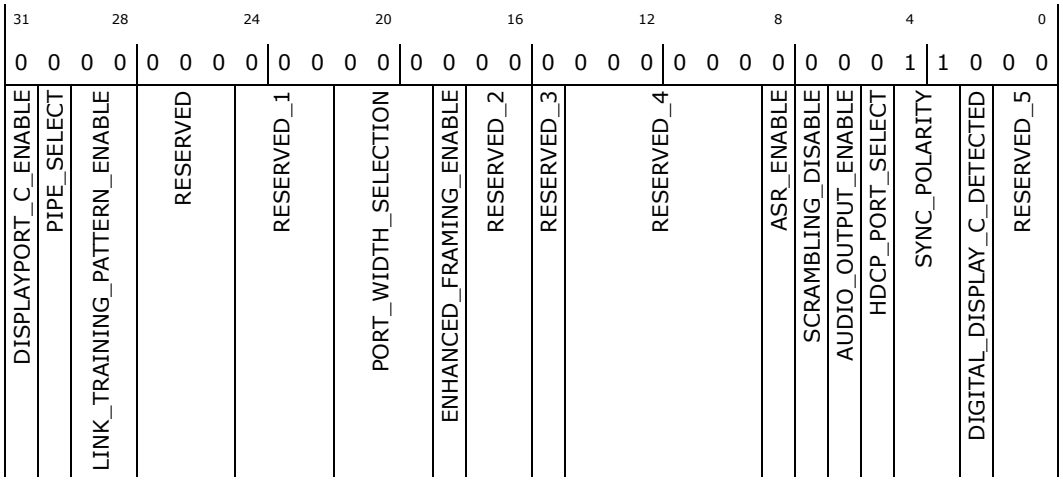
4.3.36 DP_C—Offset 64200h

Display Port C Control Register Display Port C control (dprrega_b0.v ql_displayc1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64200h

Default: 00000018h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DISPLAYPORT_C_ENABLE:** Disabling this port will put it in its lowest power state. Port enable takes place on the Vblank after being written. Both this bit and bit 6 of this register must be enabled to send audio over this port. 1 = Enable. This bit enables the Display Port C interface. 0 = Disable and tristates the Display Port C interface.
30	0x0 RW	**PIPE_SELECT:** This bit determines from which display pipe the source data will originate. Pipe selection takes place on the Vblank after being written 0 = Pipe A 1 = Pipe B
29:28	0x0 RW	**LINK_TRAINING_PATTERN_ENABLE:** These bits are used for link initialization as defined in the DisplayPort specification. Please note that the link must first be configured prior to sending training patterns. 00 Pattern 1 enabled: Repetition of D10.2 characters Default. 01 Pattern 2 enabled: Repetition of K28.5, D11.6, K28.5, D11.6, D10.2, D10.2, D10.2, D10.2, D10.2, D10.2. Please note that the entire pattern must complete before another pattern is sent. Scrambling initialization and disparity init commence at the end of the last iteration of pattern 2. 10 Idle Pattern enabled: Transmit BS followed by VB-ID with NoVideoStream_flag set to 1, five times 11 Link not in training: Send normal pixels
27:25	0x0 RO	**RESERVED:** Voltage swing level set [DevCTG]: These bits are used for setting the voltage swing for pattern 1, defined as Vdiff_pp in the DisplayPort specification. They mirror registers in the PCI express configuration. 000 0.4V (DEFAULT) 001 0.6V 010 0.8V 011 1.2V RESERVED 1xx RESERVED

Bit Range	Default & Access	Field Name (ID): Description
24:22	0x0 RO	**RESERVED_1:** Pre-emphasis level set [DevCTG]: These bits are used for setting link pre-emphasis for pattern 2, as defined in the DisplayPort specification. They mirror registers in the PCI express configuration. 000 no pre-emphasis (default) 001 3.5dB pre-emphasis (1.5x) 010 6dB pre-emphasis (2x) 011 9.5dB pre-emphasis (3x) RESERVED 1xx RESERVED
21:19	0x0 RW	**PORT_WIDTH_SELECTION:** This bit selects the number of lanes to be enabled on the DisplayPort link. Port width selection takes place on the Vblank after being written. Port width change must be done as a part of mode set. 000 = x1 Mode (Default) 001 = x2 Mode. 010 = RESERVED 011 = x4 Mode. 1xx = RESERVED
18	0x0 RW	**ENHANCED_FRAMING_ENABLE:** This bit selects enhanced framing. It must be set when HDCP will be used invoked. 0 (Default) Enhanced framing disabled 1 Enhanced framing enabled. Locked once port is enabled. Updates when the port is disabled then re-enabled
17:16	0x0 RO	**RESERVED_2:** MBZ
15	0x0 RO	**RESERVED_3:** Port reversal [DevCTG]: Locked once port is enabled. Updates when the port is disabled then re-enabled
14:9	0x0 RO	**RESERVED_4:** MBZ
8	0x0 RW	**ASR_ENABLE:** this bit enables the Alternate Scrammbler Reset capability for eDP port to use alternate scrambler reset value of FFFEh 1 - ASR enable 0 ASR disable
7	0x0 RW	**SCRAMBLING_DISABLE:** This bit disables scrambling for this port. 0 = Scrambling enabled (Default) 1 = Scrambling disabled, no SR after initialization at loop 2 of training
6	0x0 RW	**AUDIO_OUTPUT_ENABLE:** This bit enables audio on this output port. It may be enabled or disabled only when the link training is complete and set to Normal 0 = Audio output disabled 1 = Audio output enabled
5	0x0 RW	**HDCP_PORT_SELECT:** This bit directs HDCP to this port. When enabled, the information sent on this port will be encrypted using HDCP. Please note that this bit does not enable encryption on its own, but must be used in conjunction with HDCP registers. 0 = (Default) No HDCP encryption on this port 1 = Enable HDCP on this port

Bit Range	Default & Access	Field Name (ID): Description
4:3	0x3 RW	**SYNC_POLARITY:** Indicates the polarity of Hsync and Vsync. 00 = VS and HS are active low (inverted) 01 = VS is active low (inverted), HS is active high 10 = VS is active high, HS is active low (inverted) 11 = (Default) VS and HS are active high
2	0x0 RO	**DIGITAL_DISPLAY_C_DETECTED:** Read-only bit indicating whether a digital display was detected during initialization. It signifies the level of the GMBUS port (sDVO B/C) data line at boot. 0 = digital display not detected during initialization (Default) 1 = digital display detected during initialization AccessType: Read only
1:0	0x0 RO	**RESERVED_5:** MBZ

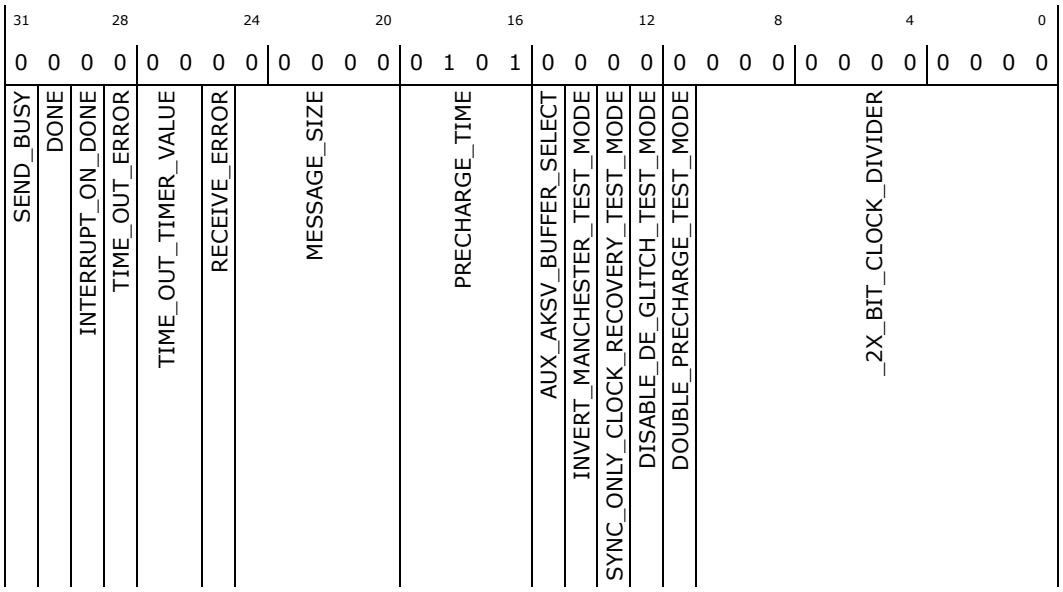
4.3.37 DPC_AUX_CH_CTL—Offset 64210h

Display Port C AUX Channel Control [DevCTG] AuxC Data1 (dprrega_b0.v auxc_dpr_data1, ql_auxc_d1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64210h

Default: 00050000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SEND_BUSY:** Setting this bit to a one initiates the transaction, when read this bit will be a 1 until the transmission completes. The transaction is completed when the response is received or when a timeout occurs. Do not write a 1 again until transaction completes. Writes of 0 will be ignored.
30	0x0 RW/1C	**DONE:** A sticky bit that indicates the transaction has completed. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
29	0x0 RW	**INTERRUPT_ON_DONE:** Enable an interrupt in the hotplug status register when the transaction completes or times out.
28	0x0 RW/1C	**TIME_OUT_ERROR:** A sticky bit that indicates the transaction has timed out. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
27:26	0x0 RW	**TIME_OUT_TIMER_VALUE:** 00: 400us (default) 01: 600us 10: 800us 11: 1600us The time count depends on the 2X bit clock divider (bits 10:0) being programmed for 2MHz.
25	0x0 RW/1C	**RECEIVE_ERROR:** A sticky bit that indicates that the data received was corrupted, not in multiples of a full byte, or more than 20 bytes. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
24:20	0x0 RW	**MESSAGE_SIZE:** This field is used to indicate the total number bytes to transmit (including the header). It also indicates the number of bytes received in a transaction (including the header). This field is valid only only when the done bit is set and timeout or receive error has not occurred. Sync/ Stop are not part of the message or the message size. Reads of this field will give the response message size. The read value will not be valid while Busy bit 31 is asserted. Message sizes of 0 or)20 are not allowed.
19:16	0x5 RW	**PRECHARGE_TIME:** Used to determine the precharge time for the Aux Channel drivers. The value is the number of microseconds times 2. This depends on the 2X bit clock divider (bits 10:0) being programmed for 2MHz. Default is 5 decimal which gives 10us of precharge. Example: For 12us precharge, program 6 (12us/2us).
15	0x0 RW	**AUX_AKSV_BUFFER_SELECT:** This bit selects whether some of the data to be written over Display Port AUX comes from the Aksv buffer for HDCP authentication, or all from the AUX Data registers. Set this bit before initiating a transaction to write Aksv to the Display Port sink. All AUX protocol must be followed and Message Size set to 9 bytes. The first DWord transmitted will be from the AUX Data Register 1 for the header, then the DP_AUX_CH_AKSV_HI, then the last byte from DP_AUX_CH_AKSV_LO. The sink response is read back as usual from the AUX Data registers. More than one AUX channel can select to use the Aksv buffer simultaneously. 0 (Default) Use AUX Data registers for regular data transmission 1 Use Aksv Buffer for part of the data transmission.

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RW	**INVERT_MANCHESTER_TEST_MODE:** 1 = Manchester code rising edge mid-clk signifies one (test mode) 0 = Manchester code rising edge mid-clk signifies zero (default)
13	0x0 RW	**SYNC_ONLY_CLOCK_RECOVERY_TEST_MODE:** 1 = Only recover clock during sync pattern (test mode) 0 = Recover clock during sync pattern and data phase (default)
12	0x0 RW	**DISABLE_DE_GLITCH_TEST_MODE:** 1 = Disable serial input de-glitch logic (test mode) 0 = Enable serial input de-glitch logic (default)
11	0x0 RW	**DOUBLE_PRECHARGE_TEST_MODE:** 1 = Precharge time is doubled 0 = Precharge time is as programmed
10:0	0x0 RW	**_2X_BIT_CLOCK_DIVIDER:** Used to determine the 2X bit clock the Aux Channel logic runs on. This value divides the input clock frequency down to 2X bit clock rate. The 2X bit clock rate is ideally 2MHz (0.5us). [DevCTG-A] the input clock is cdclk. [DevCTG-B] the input clock is hrawclk. Example: For 300MHz input clock and desired 2MHz 2X bit clock, program 150 (300MHz/2MHz).

4.3.38 DPC_AUX_CH_DATA1—Offset 64214h

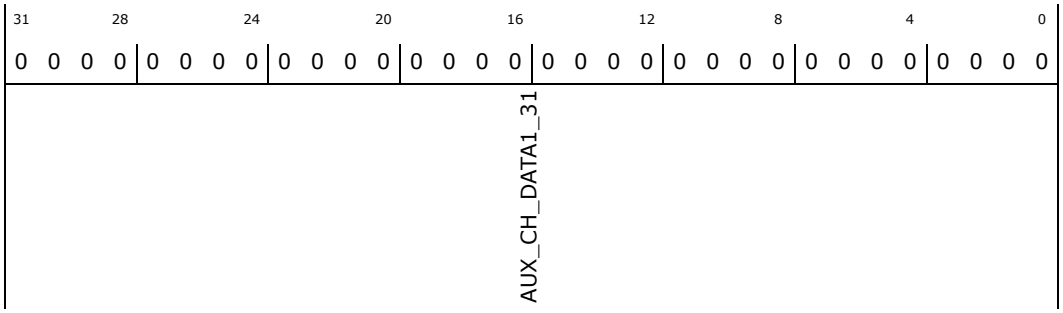
Display Port C AUX Data Register 1 AuxC Data1 (dprrega_b0.v auxc_dpr_data1, ql_auxc_d1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64214h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA1_31:** 0]: The first DWord of the message. The MSbyte is transmitted first. Reads will give the response data after transaction complete.

4.3.39 DPC_AUX_CH_DATA2—Offset 64218h

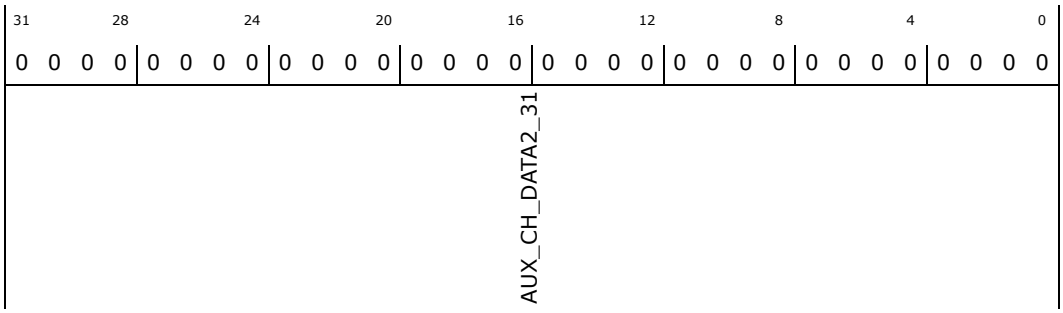
Display Port C AUX Data Register 2 AuxC Data2 (dprrega_b0.v auxc_dpr_data2, ql_auxc_d2)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64218h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA2_31:** 0]: The second DWord of the message. The MSbyte is transmitted first. Only used if the message size is greater than 4. Reads will give the response data after transaction complete.

4.3.40 DPC_AUX_CH_DATA3—Offset 6421Ch

Display Port C AUX Data Register 3 AuxC Data3 (dprrega_b0.v auxc_dpr_data3, ql_auxc_d3)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6421Ch

6	0x0 RW	**AUDIO_OUTPUT_ENABLE:** This bit enables audio on this output port. It may be enabled or disabled only when the link training is complete and set to Normal 0 = Audio output disabled 1 = Audio output enabled
5	0x0 RW	**HDCP_PORT_SELECT:** This bit directs HDCP to this port. When enabled, the information sent on this port will be encrypted using HDCP. Please note that this bit does not enable encryption on its own, but must be used in conjunction with HDCP registers. 0 = (Default) No HDCP encryption on this port 1 = Enable HDCP on this port
4:3	0x3 RW	**SYNC_POLARITY:** Indicates the polarity of Hsync and Vsync. 00 = VS and HS are active low (inverted) 01 = VS is active low (inverted), HS is active high 10 = VS is active high, HS is active low (inverted) 11 = (Default) VS and HS are active high
2	0x0 RO	**DIGITAL_DISPLAY_D_DETECTED (DIGITAL_DISPLAY_B_DETECTED):** Read-only bit indicating whether a digital display was detected during initialization. It signifies the level of the GMBUS port 4 (port D) data line at boot. 0 = digital display not detected during initialization (Default) 1 = digital display detected during initialization AccessType: Read Only
1:0	0x0 RO	**RESERVED_5:** MBZ

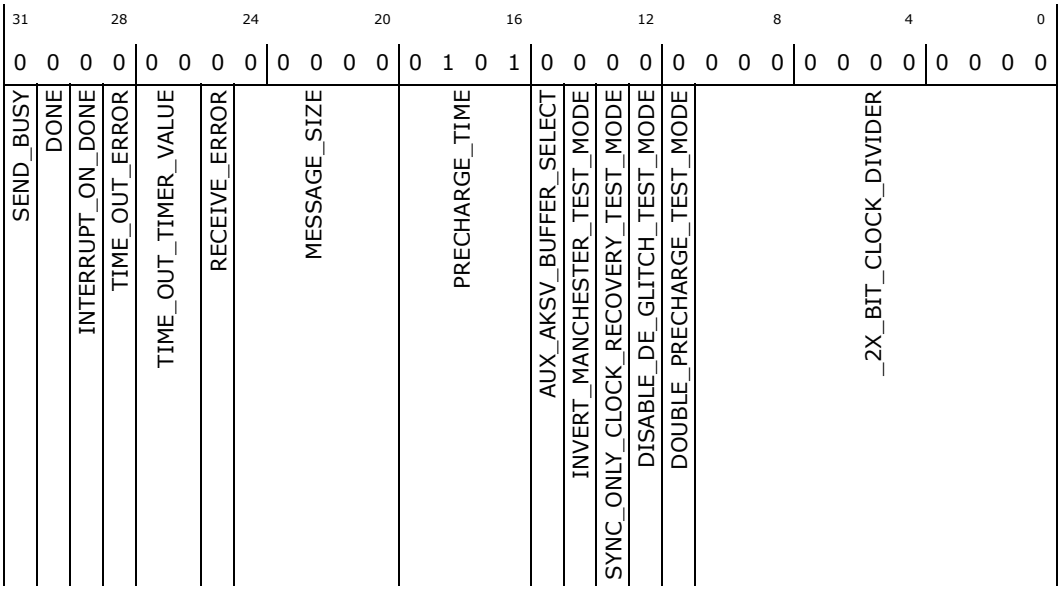
4.3.45 DPD_AUX_CH_CTL—Offset 64310h

Display Port D AUX Channel Control [DevCTG] AuxD Data1 (dprrega_b0.v auxd_dpr_data1, ql_auxc_d1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64310h

Default: 00050000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SEND_BUSY:** Setting this bit to a one initiates the transaction, when read this bit will be a 1 until the transmission completes. The transaction is completed when the response is received or when a timeout occurs. Do not write a 1 again until transaction completes. Writes of 0 will be ignored.
30	0x0 RW/1C	**DONE:** A sticky bit that indicates the transaction has completed. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
29	0x0 RW	**INTERRUPT_ON_DONE:** Enable an interrupt in the hotplug status register when the transaction completes or times out.
28	0x0 RW/1C	**TIME_OUT_ERROR:** A sticky bit that indicates the transaction has timed out. SW must write a 1 to this bit to clear the event. AccessType: One to Clear
27:26	0x0 RW	**TIME_OUT_TIMER_VALUE:** 00: 400us (default) 01: 600us 10: 800us 11: 1600us The time count depends on the 2X bit clock divider (bits 10:0) being programmed for 2MHz.
25	0x0 RW/1C	**RECEIVE_ERROR:** A sticky bit that indicates that the data received was corrupted, not in multiples of a full byte, or more than 20 bytes. SW must write a 1 to this bit to clear the event. AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
24:20	0x0 RW	**MESSAGE_SIZE:** This field is used to indicate the total number bytes to transmit (including the header). It also indicates the number of bytes received in a transaction (including the header). This field is valid only only when the done bit is set and timeout or receive error has not occurred. Sync/ Stop are not part of the message or the message size. Reads of this field will give the response message size. The read value will not be valid while Busy bit 31 is asserted. Message sizes of 0 or)20 are not allowed.
19:16	0x5 RW	**PRECHARGE_TIME:** Used to determine the precharge time for the Aux Channel drivers. The value is the number of microseconds times 2. This depends on the 2X bit clock divider (bits 10:0) being programmed for 2MHz. Default is 5 decimal which gives 10us of precharge. Example: For 12us precharge, program 6 (12us/2us).
15	0x0 RW	**AUX_AKSV_BUFFER_SELECT:** This bit selects whether some of the data to be written over Display Port AUX comes from the Aksv buffer for HDCP authentication, or all from the AUX Data registers. Set this bit before initiating a transaction to write Aksv to the Display Port sink. All AUX protocol must be followed and Message Size set to 9 bytes. The first DWord transmitted will be from the AUX Data Register 1 for the header, then the DP_AUX_CH_AKSV_HI, then the last byte from DP_AUX_CH_AKSV_LO. The sink response is read back as usual from the AUX Data registers. More than one AUX channel can select to use the Aksv buffer simultaneously. 0 (Default) Use AUX Data registers for regular data transmission 1 Use Aksv Buffer for part of the data transmission.
14	0x0 RW	**INVERT_MANCHESTER_TEST_MODE:** 1 = Manchester code rising edge mid-clk signifies one (test mode) 0 = Manchester code rising edge mid-clk signifies zero (default)
13	0x0 RW	**SYNC_ONLY_CLOCK_RECOVERY_TEST_MODE:** 1 = Only recover clock during sync pattern (test mode) 0 = Recover clock during sync pattern and data phase (default)
12	0x0 RW	**DISABLE_DE_GLITCH_TEST_MODE:** 1 = Disable serial input de-glitch logic (test mode) 0 = Enable serial input de-glitch logic (default)
11	0x0 RW	**DOUBLE_PRECHARGE_TEST_MODE:** 1 = Precharge time is doubled 0 = Precharge time is as programmed
10:0	0x0 RW	**_2X_BIT_CLOCK_DIVIDER:** Used to determine the 2X bit clock the Aux Channel logic runs on. This value divides the input clock frequency down to 2X bit clock rate. The 2X bit clock rate is ideally 2MHz (0.5us). [DevCTG-A] the input clock is cdclk. [DevCTG-B] the input clock is hrawclk. Example: For 300MHz input clock and desired 2MHz 2X bit clock, program 150 (300MHz/2MHz).

4.3.46 DPD_AUX_CH_DATA1—Offset 64314h

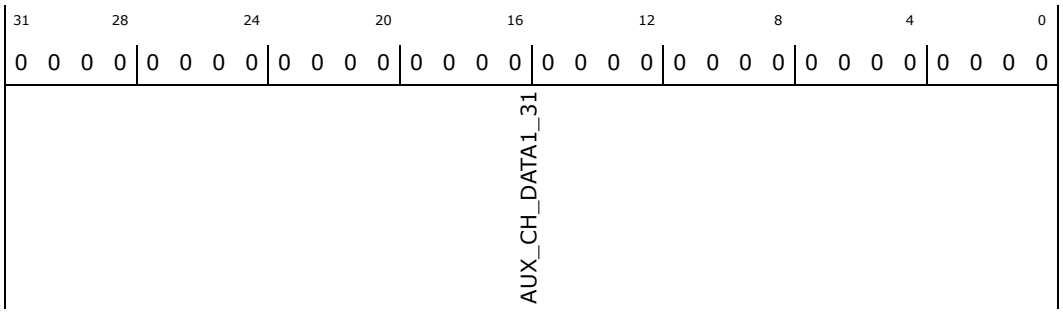
Display Port D AUX Data Register 1 AuxC Data1 (dprrega_b0.v auxc_dpr_data1, ql_auxc_d1)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64314h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA1_31:** 0]: The first DWord of the message. The MSbyte is transmitted first. Reads will give the response data after transaction complete.

4.3.47 DPD_AUX_CH_DATA2—Offset 64318h

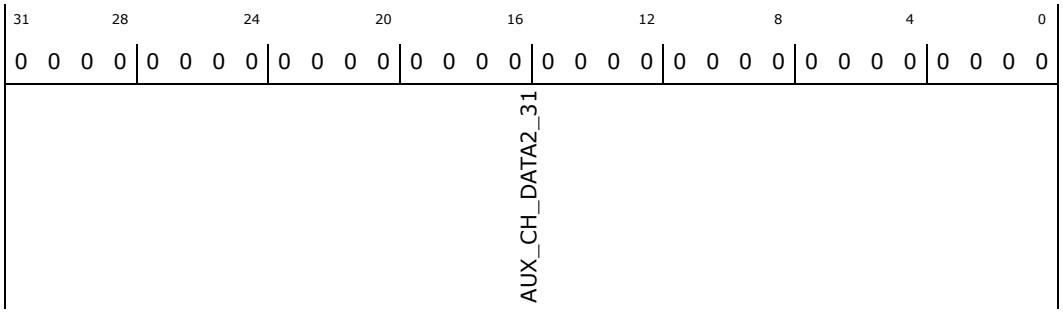
Display Port D AUX Data Register 2 AuxC Data2 (dprrega_b0.v auxc_dpr_data2, ql_auxc_d2)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 64318h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA2_31:** 0]: The second DWord of the message. The MSbyte is transmitted first. Only used if the message size is greater than 4. Reads will give the response data after transaction complete.

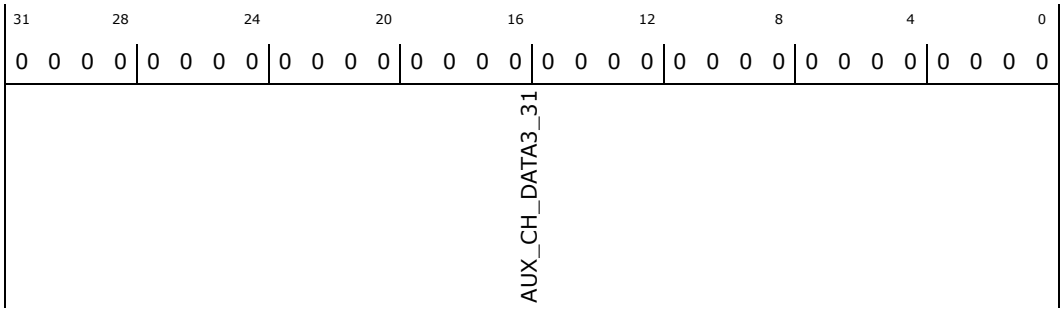
4.3.48 DPD_AUX_CH_DATA3—Offset 6431Ch

Display Port D AUX Data Register 3 AuxC Data3 (dprrega_b0.v auxc_dpr_data3, ql_auxc_d3)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6431Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA3_31:** 0]: The third DWord of the message. The MSbyte is transmitted first. Only used if the message size is greater than 8. Reads will give the response data after transaction complete.

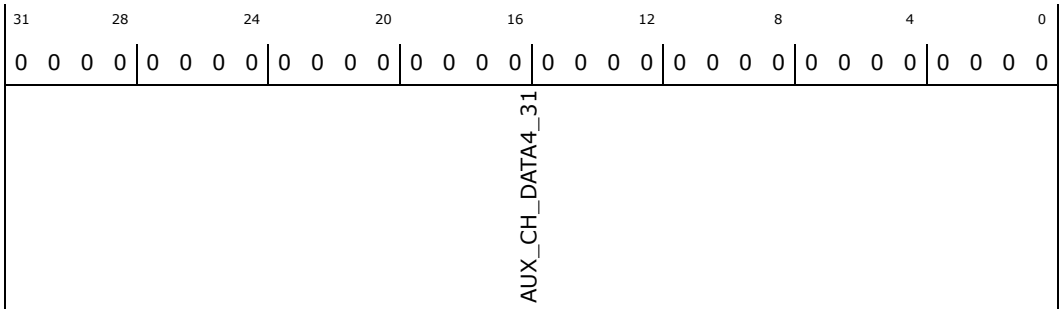
4.3.49 DPD_AUX_CH_DATA4—Offset 64320h

Display Port D AUX Data Register 4 AuxC Data4 (dprrega_b0.v auxc_dpr_data4, ql_auxc_d4)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64320h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA4_31:** 0]: The fourth DWord of the message. The MSbyte is transmitted first. Only used if the message size is greater than 12. Reads will give the response data after transaction complete.

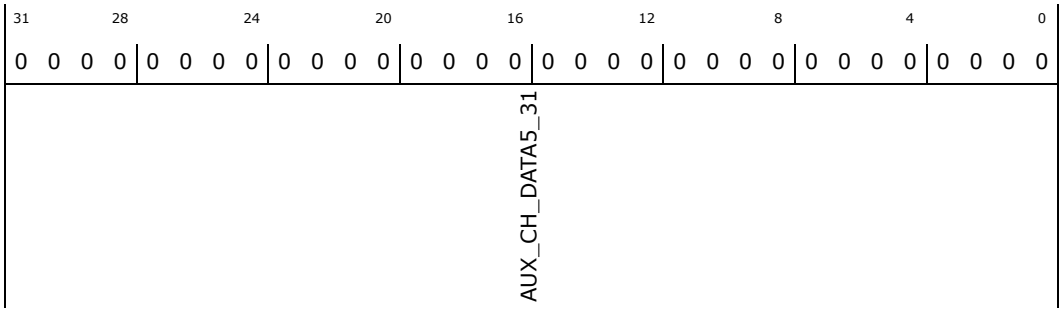
4.3.50 DPD_AUX_CH_DATA5—Offset 64324h

Display Port D AUX Data Register 5 AuxC Data5 (dprrega_b0.v auxc_dpr_data5, ql_auxc_d5)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64324h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**AUX_CH_DATA5_31:** 0]: The fifth DWord of the message. The MSbyte is transmitted first. Only used if the message size is greater than 16. Reads will give the response data after transaction complete.

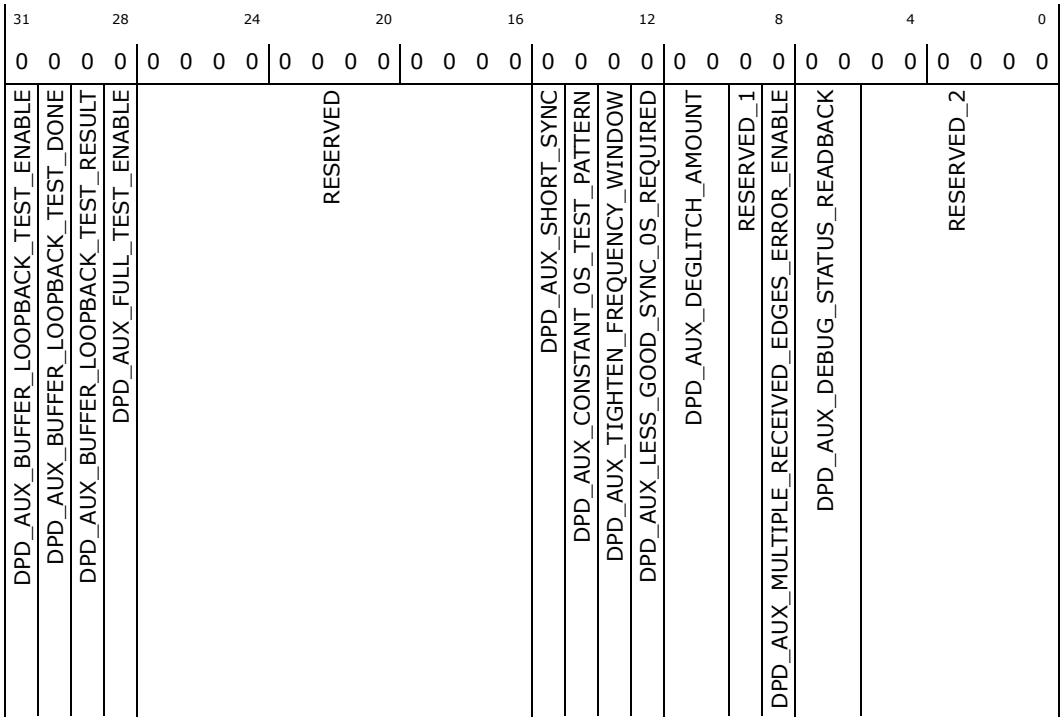
4.3.51 DPD_AUX_TST—Offset 64328h

Display Port D AUX Test Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 64328h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DPD_AUX_BUFFER_LOOPBACK_TEST_ENABLE:** Project: All Default Value: ;0b Refer DPB description. Value Name Description Project 0b Disable Test disabled All 1b Enable Enable test. All

4.3.52 STREAM_A_LPE_AUD_CONFIG—Offset 65000h

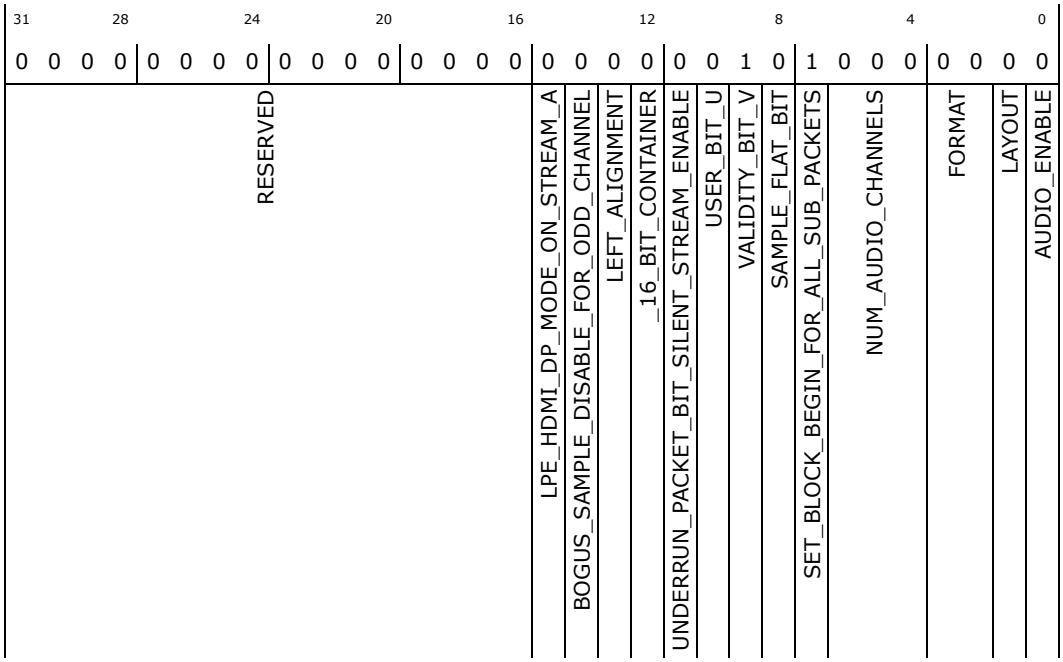
LPE Audio Configuration

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65000h

Default: 00000280h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15	0x0 RW	**LPE_HDMI_DP_MODE_ON_STREAM_A:** 1 = DP mode 0 = HDMI mode (default)
14	0x0 RW	**BOGUS_SAMPLE_DISABLE_FOR_ODD_CHANNEL:** When number of channels in a sample is odd (3, 5, or 7) source application may pad a bogus sample to the next even number of channels. If this bit is set there is no padding in input buffer1= No bogus sample present in buffer for odd number of channels 0= Bogus sample present in buffer for odd number of channels (default)
13	0x0 RW	**LEFT_ALIGNMENT:** When input buffer is in 32-bit container mode. If this bit is set the MSB of audio sample is aligned bit 31 of the container if this bit is clear MSB of audio sample is aligned with bit 23 of the container.1= MSB is bit 31 of 32-bit container 0= MSB is bit 23 of 32-bit container (default)
12	0x0 RW	**_16_BIT_CONTAINER:** When this bit is set 16-bit sample is stored in 16-bit container format. When it is clear container is 32-bit for each sample regardless of valid bits (default)1= 16-bit container 0= 32-bit container

Bit Range	Default & Access	Field Name (ID): Description
11	0x0 RW	**UNDERRUN_PACKET_BIT_SILENT_STREAM_ENABLE:** Set this bit will enable HW to send valid zero-filled packet with Sample flat bit set when no sample buffer is available, NCTS packets (or Timesstamp packet) are sent to keep sink in sync even no audio sound will heard.1= send underrun packets (silent stream) 0= send null packets (default)
10	0x0 RW	**USER_BIT_U:** HW will clear this bit in each sub-frames it sends, But this bit allows to overwrite hardware setting for special operation like debug or testing for compliance 1= sey U bit in sub-frame 0= clear U bit in sub-frame (default)
9	0x1 RW	**VALIDITY_BIT_V:** HW will set this bit in both each sub-frames it sends. But this bit allows to overwrite hardware setting for special operation like debug or testing for compliance 1= Set V bit in sub-frame (default) 0= clear V bit in sub-frame. For debug or testing
8	0x0 RW	**SAMPLE_FLAT_BIT:** When set the sample flat bit will be set in all HDMI sub-packets. 1= flat bit is set for valid sample 0= flat bit is not set for valid sample (default)
7	0x1 RW	**SET_BLOCK_BEGIN_FOR_ALL_SUB_PACKETS:** Controls the B bit in the header of only the first Audio Packet /frame of a 192 frame 60958 block in Layout 1 mode. This bit only applies to LPE HDMI mode. 0: The B bit will be set only for sub-packet 0 1: The B bit in the Audio sample packet header will be set for all valid sub-packets. (default)
6:4	0x0 RW	**NUM_AUDIO_CHANNELS:** 000: 2 channels (stereo) 001: 3 channels 010: 4 channels 011: 5 channels 100: 6 channels 101: 7 channels 110: 8 channels Note: When disable_bogus sample bit is clear HW will always treat odd number of channels similar to the next higher even number. Thus 3 is similar to 4, 5 to 6 and 7 to 8. This is because SW ensures that an even number of samples are packed in the audio buffers.
3:2	0x0 RW	**FORMAT:** 00: L-PCM or IEC 61937 01: High Bit Rate IEC 61937 stream packet (not supported) 10: One Bit Audio Sample packet (not supported) 11: DST Audio Sample packet (not supported)
1	0x0 RW	**LAYOUT:** 0: Layout 0 (2-ch) 1: Layout 1 (3-8 ch) Note: Layout bit doesn’t matter for HBR

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**AUDIO_ENABLE:** Controls generation of N/CTS and transmission of audio sample packets. 0: Audio sample packets are not transmitted, CTS calculation/transmission is disabled 1: Audio sample packets are transmitted and CTS calculation is enabled When enable audio unit will wait until the next vertical blank period before sending out the audio packets. When disable, audio unit may continue to send audio packet until the end of current active video frame before stopping.

4.3.53 STREAM_A_LPE_AUD_CH_STATUS_0—Offset 65008h

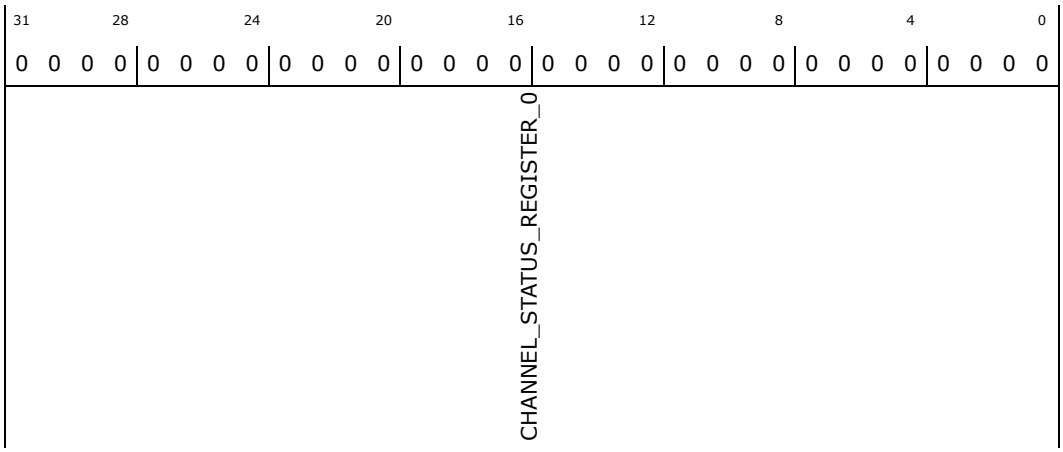
Audio Channel Status Attributes 0

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65008h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**CHANNEL_STATUS_REGISTER_0:** . These bits are transmitted as attributes of audio packets

4.3.54 STREAM_A_LPE_AUD_CH_STATUS_1—Offset 6500Ch

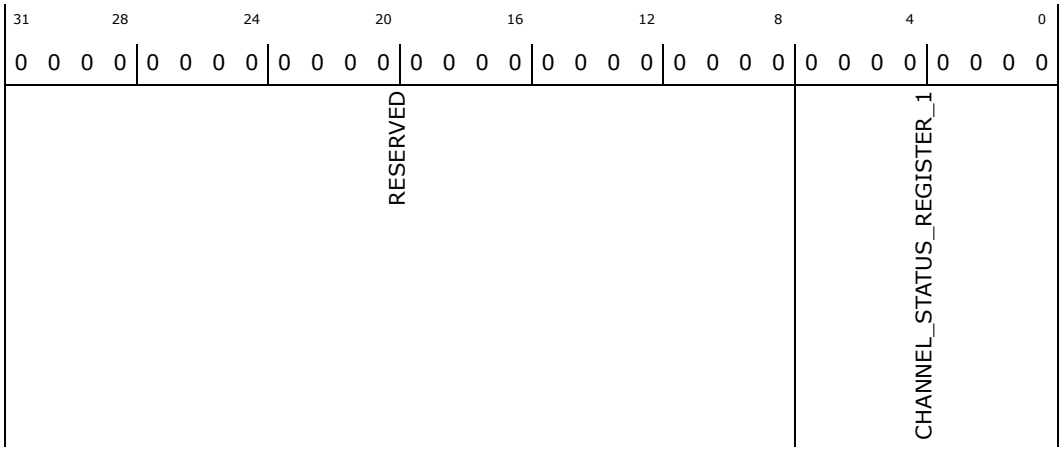
Audio Channel Status Attributes 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6500Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7:0	0x0 RW	**CHANNEL_STATUS_REGISTER_1:** . These bits are transmitted as attributes of audio packets. There is only 8 bits valid in this register.

4.3.55 STREAM_A_LPE_AUD_HDMI_CTS_DP_MAUD—Offset 65010h

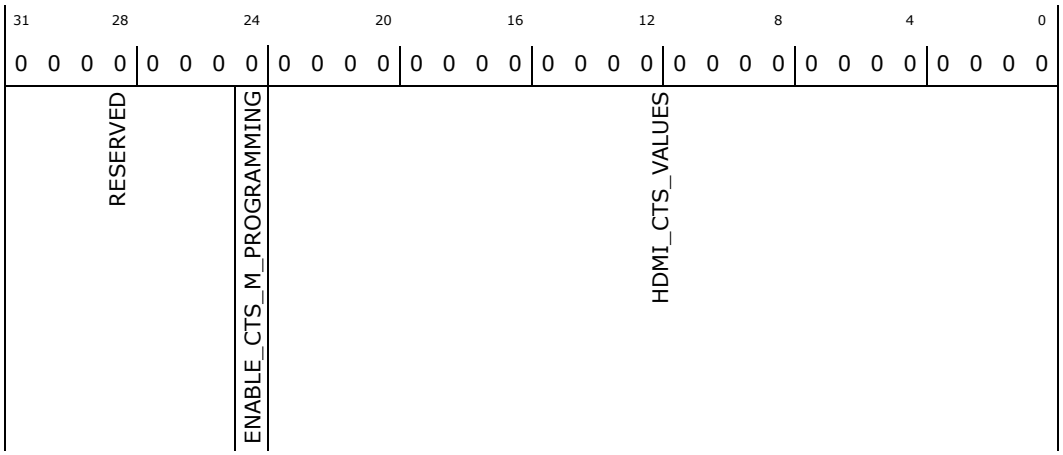
Audio HDMI CTS Register (DP Maud)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65010h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**ENABLE_CTS_M_PROGRAMMING:** 1 = Enable CTS/M programming 0 = Disable CTS/M programming
23:0	0x0 RW	**HDMI_CTS_VALUES:** These are bits [23:0] of programmable HDMI CTS values (or DP Maud) that is pre-calculated to achieve desired audio sample rates with a particular pixel clocks configuration. Audio function must be disabled when changing this field. Bit 24 also need to write to 1 to enable this field.

4.3.56 STREAM_A_LPE_AUD_HDMI_N_DP_NAUD—Offset 65014h

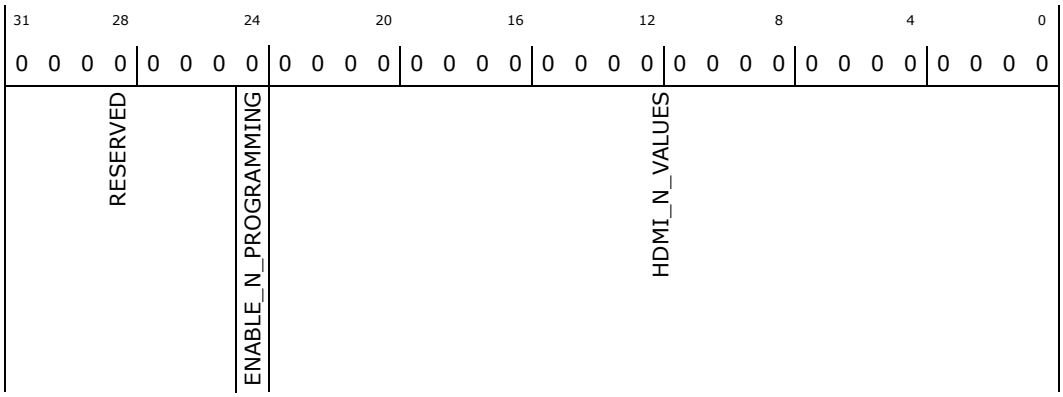
Audio HDMI N Register (DP Naud)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65014h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**ENABLE_N_PROGRAMMING:** 1 = Enable N programming 0 = Disable N programming
23:0	0x0 RW	**HDMI_N_VALUES:** These are bits [23:0] of programmable HDMI N (or DP Naud) values that is pre-calculated to achieve desired audio sample rates with a particular pixel clocks configuration. Audio function must be disabled when changing this field. Bit 24 also need to write to 1 to enable this field.

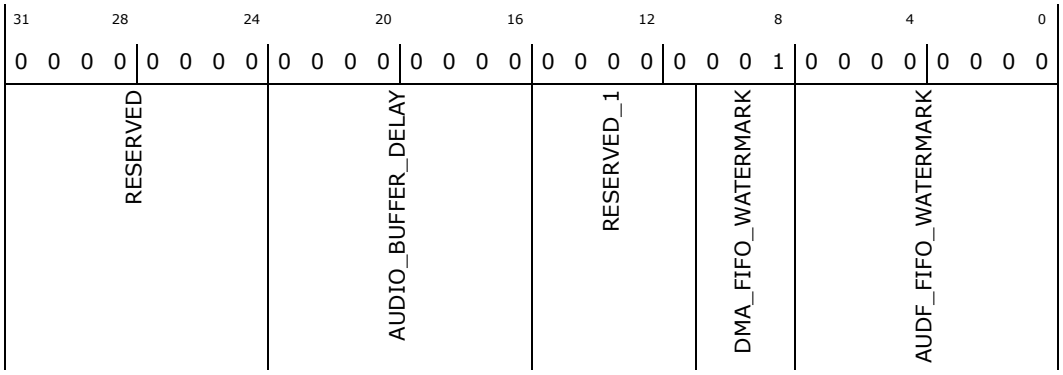
4.3.57 STREAM_A_LPE_AUD_BUFFER_CONFIG—Offset 65020h

LPE Audio buffer config

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65020h

Default: 00000100h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RO	**AUDIO_BUFFER_DELAY:** This field specifies a delay in number of video frames that the audio controller will count off when audio enable bit is set before start transmitting audio sample.
15:11	0x0 RO	**RESERVED_1:** Reserved.
10:8	0x1 RO	**DMA_FIFO_WATERMARK:** Audio unit has a 8x64 bytes fifo for pre-fetching and staging audio samples. This register provides a watermark value in SWORDs (64B). When enable and sample buffer is available audio unit will fetch samples until this FIFO is full then it waits until HDMI/DP packet assembler drains the samples to a level less or equal the watermark setting then it will start fetching the samples again. Default value is 1 cacheline (SW).
7:0	0x0 RO	**AUDF_FIFO_WATERMARK:** Audio unit has a 8x96 bytes fifo for pre-fetching and staging audio samples. This register provides a watermark value in DWORDs. When enable and sample buffer is available audio unit will fetch samples until this FIFO is full then it waits until HDMI packet assembler drains the samples to a level less or equal the watermark setting then it will start fetching the samples again

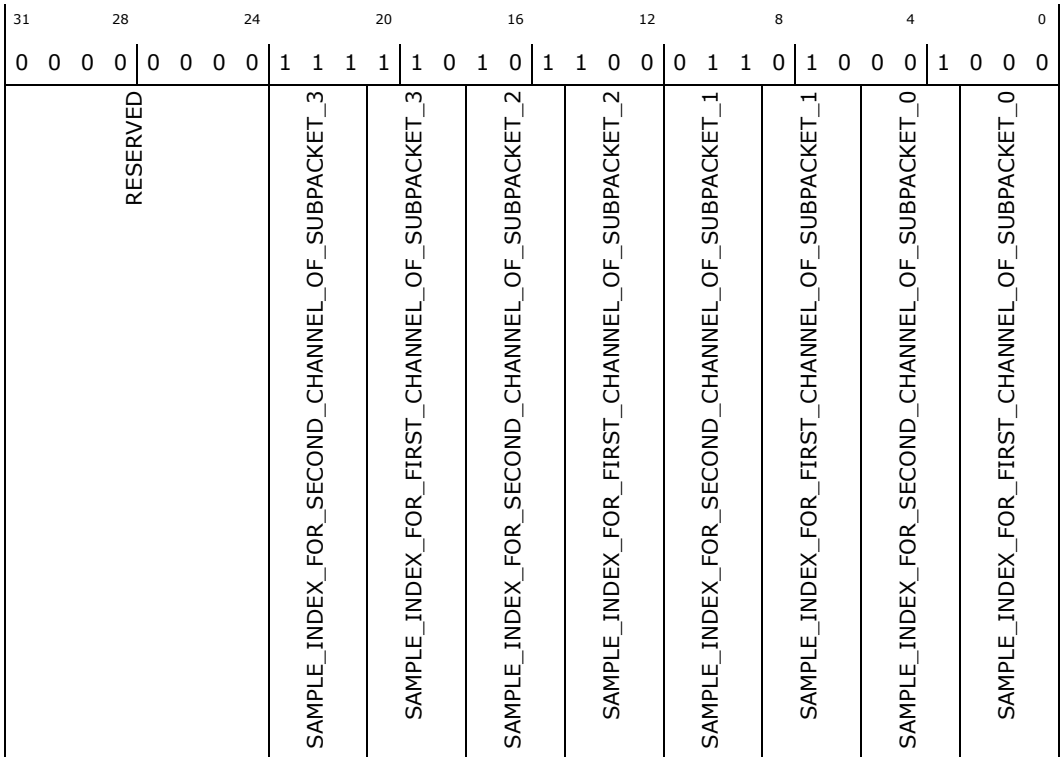
4.3.58 STREAM_A_LPE_AUD_BUF_CH_SWP—Offset 65024h

Audio Sample Swapping

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65024h

Default: 00FAC688h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:21	0x7 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_3:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 3 in a HDMI audio packet
20:18	0x6 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_3:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 1 in a HDMI audio packet
17:15	0x5 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_2:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 0 in a HDMI audio packet
14:12	0x4 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_2:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 0 in a HDMI audio packet
11:9	0x3 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_1:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 1 in a HDMI audio packet
8:6	0x2 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_1:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 1 in a HDMI audio packet

Bit Range	Default & Access	Field Name (ID): Description
5:3	0x1 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_0:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 0 in a HDMI audio packet
2:0	0x0 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_0:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 0 in a HDMI audio packet

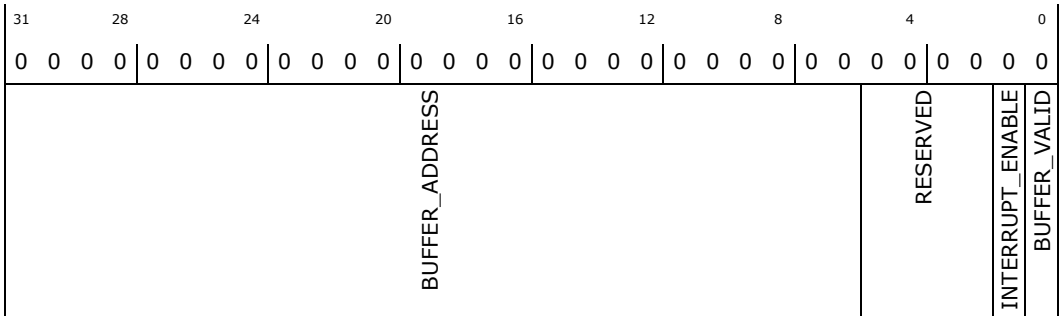
4.3.59 STREAM_A_LPE_AUD_BUF_A_ADDR—Offset 65040h

Address for Audio Buffer A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65040h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

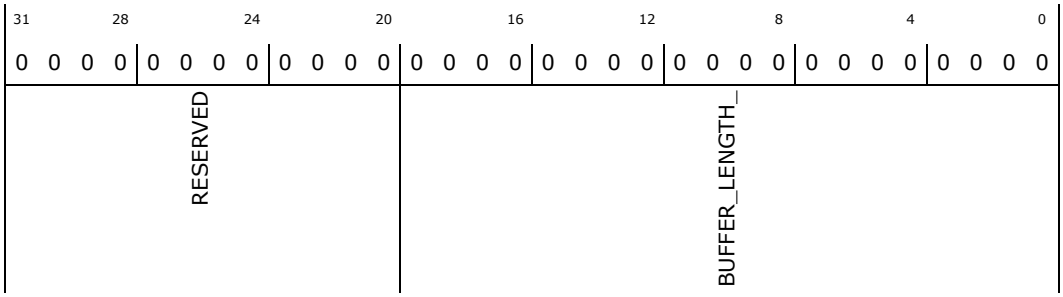
4.3.60 STREAM_A_LPE_AUD_BUF_A_LENGTH—Offset 65044h

Length for Audio Buffer A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65044h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.61 STREAM_A_LPE_AUD_BUF_B_ADDR—Offset 65048h

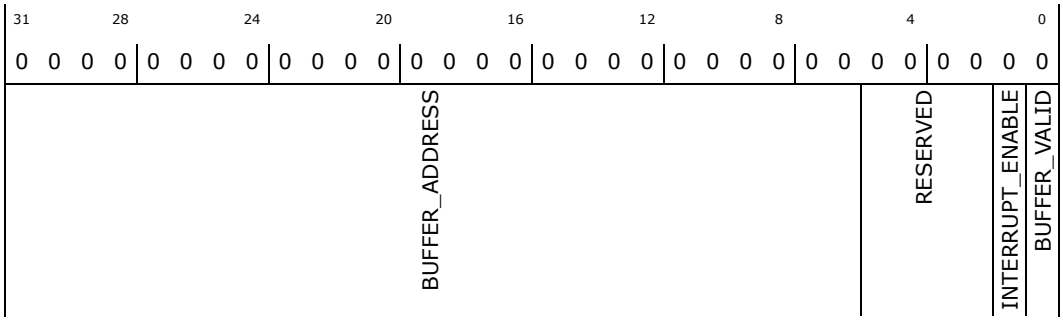
Address for Audio Buffer B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.62 STREAM_A_LPE_AUD_BUF_B_LENGTH—Offset 6504Ch

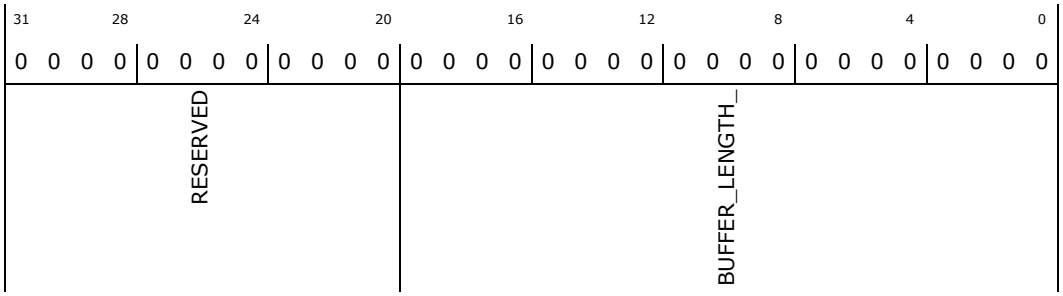
Length for Audio Buffer B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6504Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.63 STREAM_A_LPE_AUD_BUF_C_ADDR—Offset 65050h

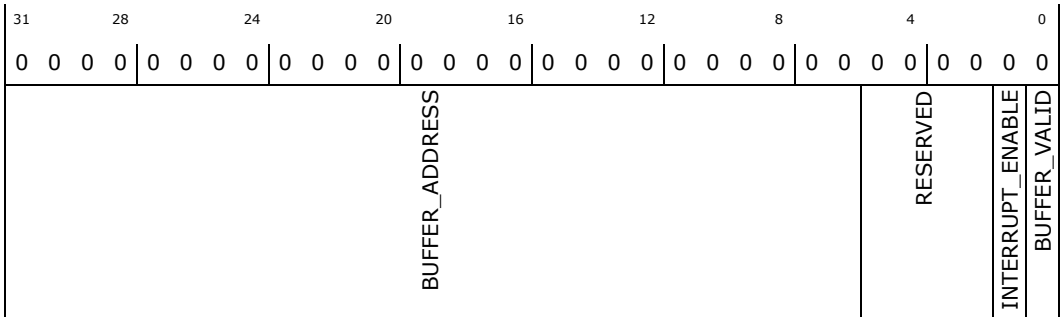
Address for Audio Buffer C

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65050h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.64 STREAM_A_LPE_AUD_BUF_C_LENGTH—Offset 65054h

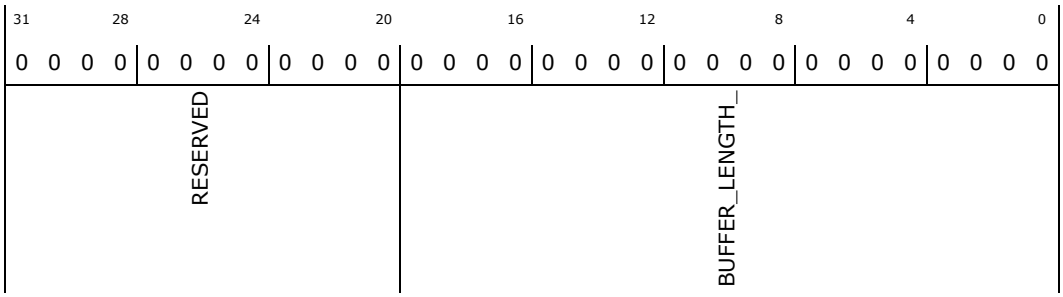
Length for Audio Buffer C

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65054h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.65 STREAM_A_LPE_AUD_BUF_D_ADDR—Offset 65058h

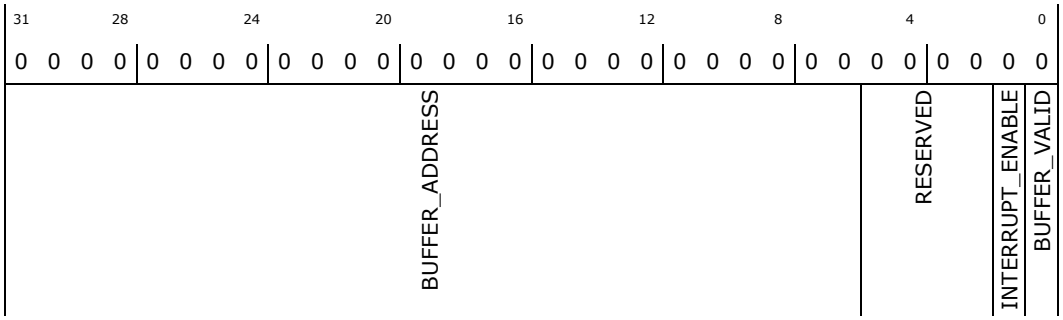
Address for Audio Buffer D

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65058h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.66 STREAM_A_LPE_AUD_BUF_D_LENGTH—Offset 6505Ch

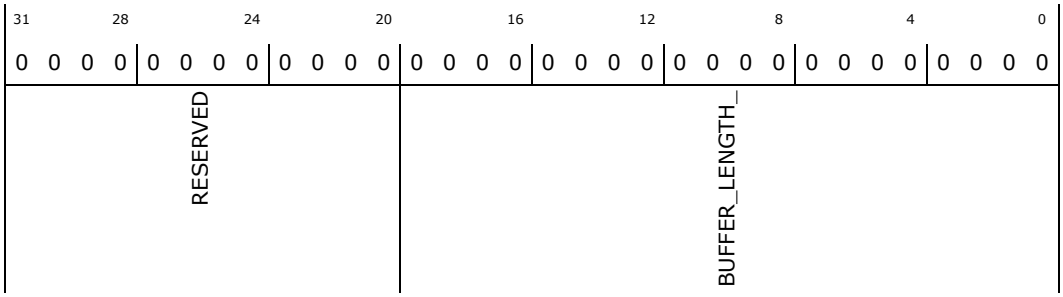
Length for Audio Buffer D

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6505Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.67 STREAM_A_LPE_AUD_CNTL_ST—Offset 65060h

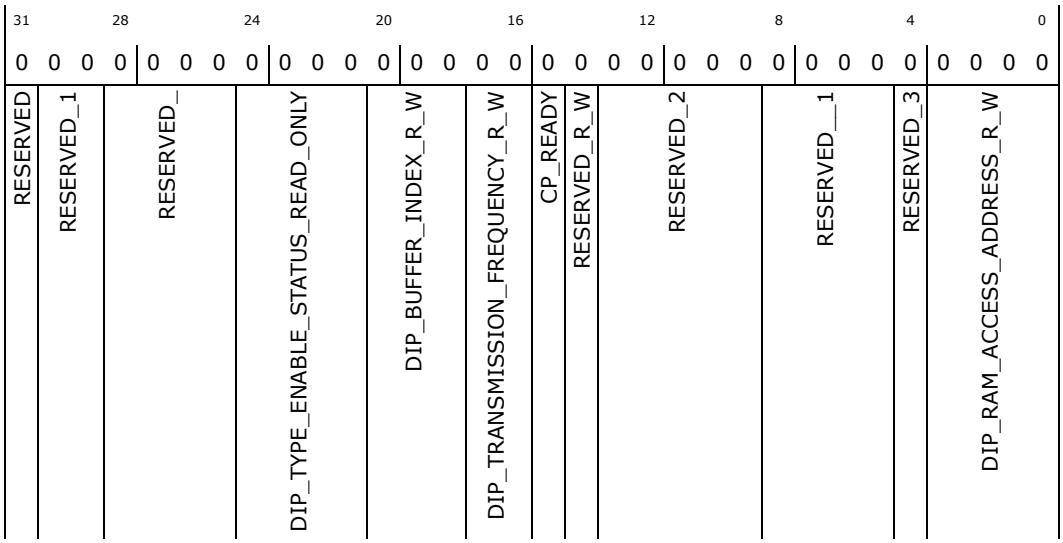
LPE Audio Control State Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65060h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Reserved.
30:29	0x0 RO	**RESERVED_1:** Reserved.
28:25	0x0 RO	**RESERVED_:** for later DIP type if needed: Must be 0.
24:21	0x0 RO	**DIP_TYPE_ENABLE_STATUS_READ_ONLY:** These bits reflects the DIP types enabled. It can be updated while the port is enabled. Within 2 vblank periods, the DIP is guaranteed to have been transmitted. Disabling an DIP type results in setting the contents of that DIP buffer to zero. A reserved setting reflects a disabled DIP. XXX1 = Audio DIP enable status (Default = disabled) XX1X = Generic 1 (ACP) DIP enable status (Default = disabled) X1XX = Generic 2 DIP enable status, can be used by ISRC1 or ISRC2 (Default = disabled) 1XXX = Reserved
20:18	0x0 RW	**DIP_BUFFER_INDEX_R_W:** This field is used during read or write of different DIPs, and during read or write of ELD data. These bits are used as an index to their respective DIP or ELD buffers. When the index is not valid, the contents of the DIP will return all 0 s. 000 = (Default) Audio DIP (31 bytes of address space, 13 bytes of data) 001 = Generic 1 (ACP) Data Island Packet (31 bytes of address space, 11 bytes of data) 010 = Generic 2 (ISRC1) Data Island Packet (31 bytes of address space, 31 bytes of data) 011 = Generic 3 (ISRC2) Data Island Packet (31 bytes of address space, 31 bytes of data) 1XX = reserved
17:16	0x0 RW	**DIP_TRANSMISSION_FREQUENCY_R_W:** These bits reflect the frequency of DIP transmission for the DIP buffer type designated in bits 20:18. When writing DIP data, this value is also latched when the first DW of the DIP is written.When read, this value reflects the DIP transmission frequency for the DIP buffer designated in bits 20:18. 00 = Disabled (Default) 01 = once per frame 10 = Send once 11 = Best effort (Send at least every other vsync)
15	0x0 RW	**CP_READY:** This R/W bit reflects the state of CP request from the audio unit. When an audio CP request has been serviced, it must be reset to 1 by the video software to indicate that the CP request has been serviced. 0 = CP request pending or not ready to receive requests (default) 1 = CP request ready CP_ready bit is programmable through Bit 14 for [DevCL, DevBLC]. CP_ready bit is programmable through Bit 15 for [DevCTG]. Bit 15 Reserved for [DevCL, DevBLC].

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RO	**RESERVED_R_W:** ELD valid: This bit reflects the state of the ELD data written to the ELD RAM. After writing the ELD data, the video software must set this bit to 1 to indicate that the ELD data is valid. At audio codec initialization, or on a hotplug event, this bit is set to 0 by the video software. This bit is reflected in the audio pin complex widget as the ELD valid status bit.0 = ELD data invalid (default, when writing ELD data, set 0 by software) 1 = ELD data valid (Set by video software only) ELD bit is programmable through Bit 13 for [DevCL, DevBLC]. ELD bit is programmable through Bit 14 for [DevCTG].
13:9	0x0 RO	**RESERVED_2:** ELD buffer size (read only)10000 = This field reflects the size of the ELD buffer in DWORDs 13:9 reflects ELD buffer size for [DevCTG]. 12:9 reflects ELD buffer size for [DevCL, DevBLC].
8:5	0x0 RO	**RESERVED__1:** ELD access address (R/W): Selects the DWORD address for access to the ELD buffer (48 bytes). The value wraps back to zero when incremented past the max addressing value 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.
4	0x0 RO	**RESERVED_3:** ELD ACK: Acknowledgement from the audio driver that ELD read has been completed
3:0	0x0 RW	**DIP_RAM_ACCESS_ADDRESS_R_W:** Selects the DWORD address for access to the DIP buffers. The value wraps back to zero when it incremented past the max addressing value of 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.

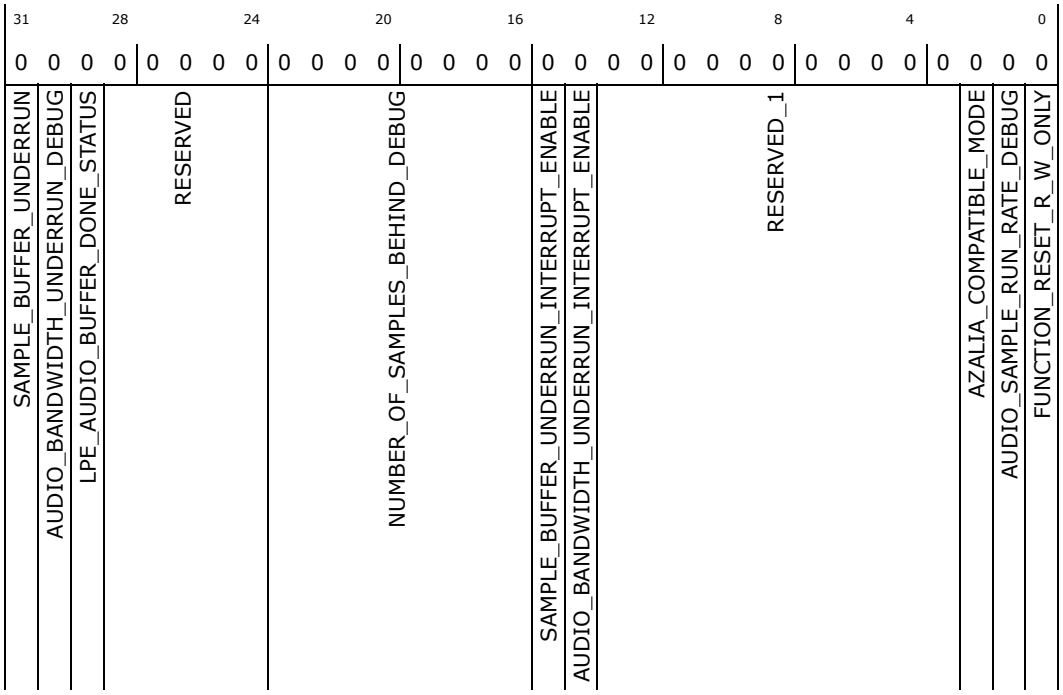
4.3.68 STREAM_A_LPE_AUD_HDMI_STATUS—Offset 65064h

LPE Audio Status

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65064h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW/1C	**SAMPLE_BUFFER_UNDERRUN:** This bit indicates an underrun in the sample buffer to HDMI controller when it needs to send. This bit is set at the last line of active video when there are no more sample in any valid buffers and HDMI audio unit has not satisfied number of audio samples intended in that video frame. Clearing this status bit is accomplished by writing a 1 to this bit through MMIO. AccessType: One to Clear
30	0x0 RW/1C	**AUDIO_BANDWIDTH_UNDERRUN_DEBUG:** This bit indicates an underrun of audio samples at HDMI audio packet assembly even there is still available sample buffers. Audio bandwidth underrun should not happen in normal functionality but it may happen when audio setting is unappropriate and/or memory bus was blocked by other clients, etc... This bit is set at the last line of active video when there is valid samples in a valid buffer and HDMI audio unit has not satisfied number of audio samples intended in that video frame Clearing this status bit is accomplished by writing a 1 to this bit through MMIO. AccessType: One to Clear
29	0x0 RW/1C	**LPE_AUDIO_BUFFER_DONE_STATUS:** This bit is set when a LPE audio buffer is completed transferred all of its data to LPE audio unit. This bit is clear when write 1 to it AccessType: One to Clear
28:24	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
23:16	0x0 RO	**NUMBER_OF_SAMPLES_BEHIND_DEBUG:** This field is read only to get the number of audio samples that controller needs to load and send at the time of reading. AccessType: Read Only
15	0x0 RW	**SAMPLE_BUFFER_UNDERRUN_INTERRUPT_ENABLE:** This bit is to enable the first line buffer underrun interrupt when sample buffer underrun status is detected 0 = LPE sample Buffer Underrun Interrupt Disabled 1 = LPE sample Buffer Underrun Interrupt Enabled
14	0x0 RW	**AUDIO_BANDWIDTH_UNDERRUN_INTERRUPT_ENABLE:** This bit is to enable the first line bandwidth underrun interrupt when bandwidth underrun status is detected 0 = LPE Bandwidth Underrun Interrupt Disabled 1 = LPE Bandwidth Underrun Interrupt Enabled
13:3	0x0 RO	**RESERVED_1:** Reserved.
2	0x0 RW	**AZALIA_COMPATIBLE_MODE:** This bit is to enable the vucp, PR, ECC to be generated in the Azalia way 0 = Disable Azalia compatible mode on vucp, PR, ECC 1 = Enable Azalia compatible mode on vucp, PR, ECC
1	0x0 RW	**AUDIO_SAMPLE_RUN_RATE_DEBUG:** When set it allows to fetch sample 128 times than the real sample rate to allow a faster drain of sample buffers.
0	0x0 RW	**FUNCTION_RESET_R_W_ONLY:** Write 1 to this bit will reset hardware within audio unit without needs of reset the full display controller. The FIFO and pointers will be reset and audio registers will be reset to default values. Write 0 will put the unit back to idle and ready to be programmed again.

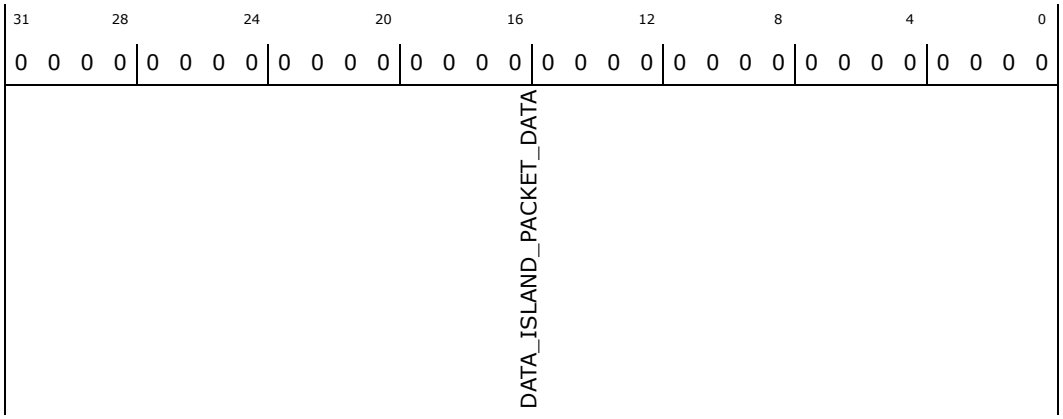
4.3.69 STREAM_A_LPE_AUD_HDMIW_INFOFR—Offset 65068h

Audio HDMI Data Island Packet Data

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65068h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**DATA_ISLAND_PACKET_DATA:** When read, this returns the current value at the location specified in the Video DIP buffer index select and Video DIP RAM access address fields. The index used to address the RAM is incremented after each read or write of this register. DIP data can be read at any time. Data should be loaded into the RAM before enabling the transmission through the DIP type enable bit. Accesses to this register are on a per-DWORD basis

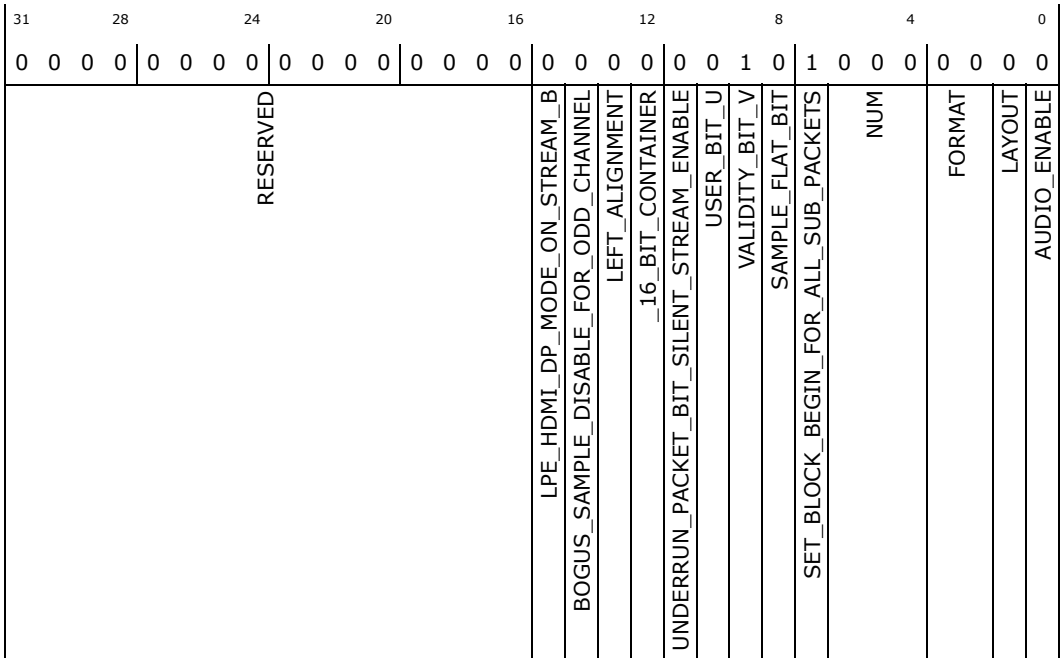
4.3.70 STREAM_B_LPE_AUD_CONFIG—Offset 65800h

LPE Audio Configuration

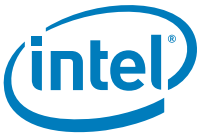
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65800h

Default: 00000280h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15	0x0 RW	**LPE_HDMI_DP_MODE_ON_STREAM_B:** 1= DP mode 0 = HDMI mode (default)
14	0x0 RW	**BOGUS_SAMPLE_DISABLE_FOR_ODD_CHANNEL:** When number of channels in a sample is odd (3, 5, or 7) source application may pad a bogus sample to the next even number of channels. If this bit is set there is no padding in input buffer1= No bogus sample present in buffer for odd number of channels 0= Bogus sample present in buffer for odd number of channels (default)
13	0x0 RW	**LEFT_ALIGNMENT:** When input buffer is in 32-bit container mode. If this bit is set the MSB of audio sample is aligned bit 31 of the container if this bit is clear MSB of audio sample is aligned with bit 23 of the container.1= MSB is bit 31 of 32-bit container 0= MSB is bit 23 of 32-bit container (default)
12	0x0 RW	**_16_BIT_CONTAINER:** When this bit is set 16-bit sample is stored in 16-bit container format. When it is clear container is 32-bit for each sample regardless of valid bits (default)1= 16-bit container 0= 32-bit container
11	0x0 RW	**UNDERRUN_PACKET_BIT_SILENT_STREAM_ENABLE:** Set this bit will enble HW to send valid zero-filled packet with Sample flat bit set when no sample buffer is available, NCTS packets (or Timesstamp packet) are sent to keep sink in sync even no audio sound will heard.1= send underrun packets (silent stream) 0= send null packets (default)



Bit Range	Default & Access	Field Name (ID): Description
10	0x0 RW	**USER_BIT_U:** HW will clear this bit in each sub-frames it sends, But this bit allows to overwrite hardware setting for special operation like debug or testing for compliance 1= sey U bit in sub-frame 0= clear U bit in sub-frame (default)
9	0x1 RW	**VALIDITY_BIT_V:** HW will set this bit in both each sub-frames it sends. But this bit allows to overwrite hardware setting for special operation like debug or testing for compliance 1= Set V bit in sub-frame (default) 0= clear V bit in sub-frame. For debug or testing
8	0x0 RW	**SAMPLE_FLAT_BIT:** When set the sample flat bit will be set in all HDMI sub-packets. 1= flat bit is set for valid sample 0= flat bit is not set for valid sample (default)
7	0x1 RW	**SET_BLOCK_BEGIN_FOR_ALL_SUB_PACKETS:** Controls the B bit in the header of only the first Audio Packet /frame of a 192 frame 60958 block in Layout 1 mode. This bit only applies to LPE HDMI mode. 0: The B bit will be set only for sub-packet 0 1: The B bit in the Audio sample packet header will be set for all valid sub-packets. (default)
6:4	0x0 RW	**NUM:** audio Channels 000: 2 channels (stereo) 001: 3 channels 010: 4 channels 011: 5 channels 100: 6 channels 101: 7 channels 110: 8 channels Note: When disable_bogus sample bit is clear HW will always treat odd number of channels similar to the next higher even number. Thus 3 is similar to 4, 5 to 6 and 7 to 8. This is because SW ensures that an even number of samples are packed in the audio buffers.
3:2	0x0 RW	**FORMAT:** 00: L-PCM or IEC 61937 01: High Bit Rate IEC 61937 stream packet (not supported) 10: One Bit Audio Sample packet (not supported) 11: DST Audio Sample packet (not supported)
1	0x0 RW	**LAYOUT:** 0: Layout 0 (2-ch) 1: Layout 1 (3-8 ch) Note: Layout bit does not matter for HBR
0	0x0 RW	**AUDIO_ENABLE:** Controls generation of N/CTS and transmission of audio sample packets. 0: Audio sample packets are not transmitted, CTS calculation/transmission is disabled 1: Audio sample packets are transmitted and CTS calculation is enabled When enable audio unit will wait until the next vertical blank period before sending out the audio packets. When disable, audio unit may continue to send audio packet until the end of current active video frame before stopping.

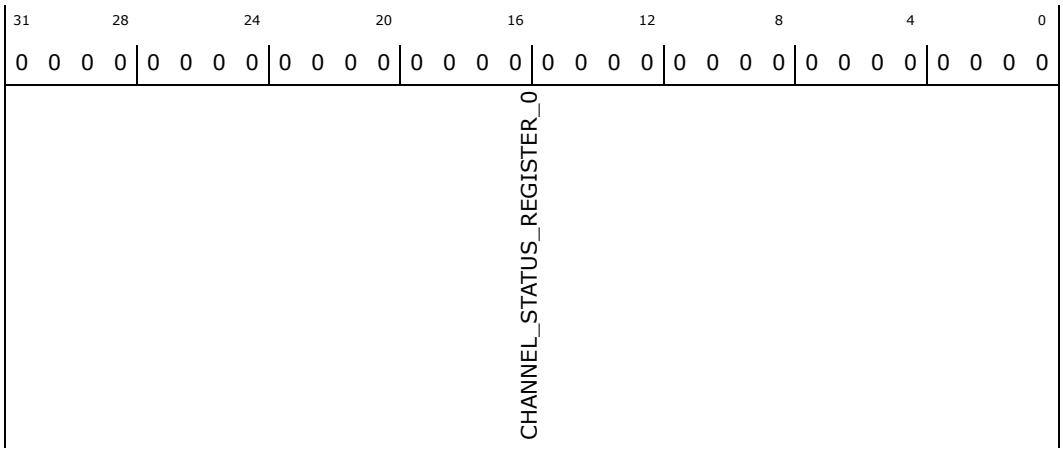
4.3.71 STREAM_B_LPE_AUD_CH_STATUS_0—Offset 65808h

Audio Channel Status Attributes 0

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65808h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**CHANNEL_STATUS_REGISTER_0:** . These bits are transmitted as attributes of audio packets

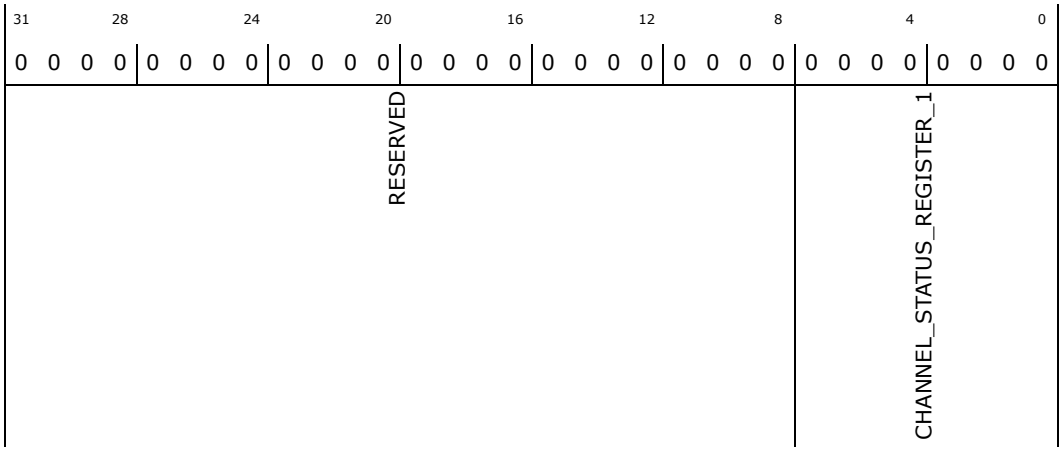
4.3.72 STREAM_B_LPE_AUD_CH_STATUS_1—Offset 6580Ch

Audio Channel Status Attributes 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6580Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7:0	0x0 RW	**CHANNEL_STATUS_REGISTER_1:** . These bits are transmitted as attributes of audio packets. There is only 8 bits valid in this register.

4.3.73 STREAM_B_LPE_AUD_HDMI_CTS_DP_MAUD—Offset 65810h

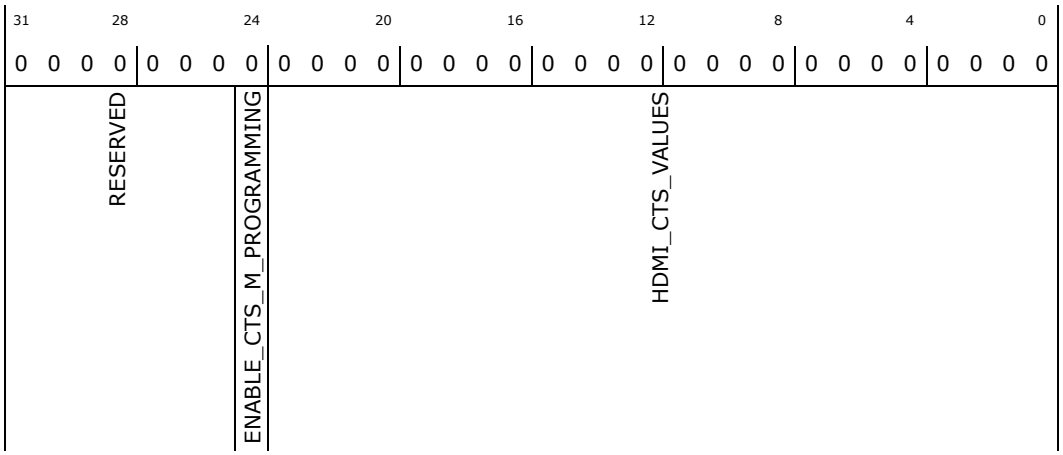
Audio HDMI CTS Register (DP Maud)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65810h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**ENABLE_CTS_M_PROGRAMMING:** 1 = Enable CTS/M programming 0 = Disable CTS/M programming
23:0	0x0 RW	**HDMI_CTS_VALUES:** These are bits [23:0] of programmable HDMI CTS values (or DP Maud) that is pre-calculated to achieve desired audio sample rates with a particular pixel clocks configuration. Audio function must be disabled when changing this field. Bit 24 also need to write to 1 to enable this field.

4.3.74 STREAM_B_LPE_AUD_HDMI_N_DP_NAUD—Offset 65814h

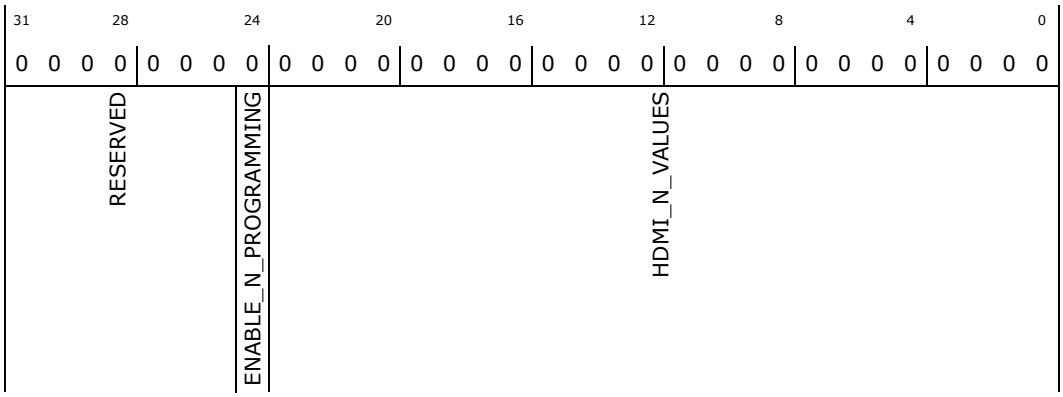
Audio HDMI N Register (DP Naud)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65814h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**ENABLE_N_PROGRAMMING:** 1 = Enable N programming 0 = Disable N programming
23:0	0x0 RW	**HDMI_N_VALUES:** These are bits [23:0] of programmable HDMI N (or DP Naud) values that is pre-calculated to achieve desired audio sample rates with a particular pixel clocks configuration. Audio function must be disabled when changing this field. Bit 24 also need to write to 1 to enable this field.

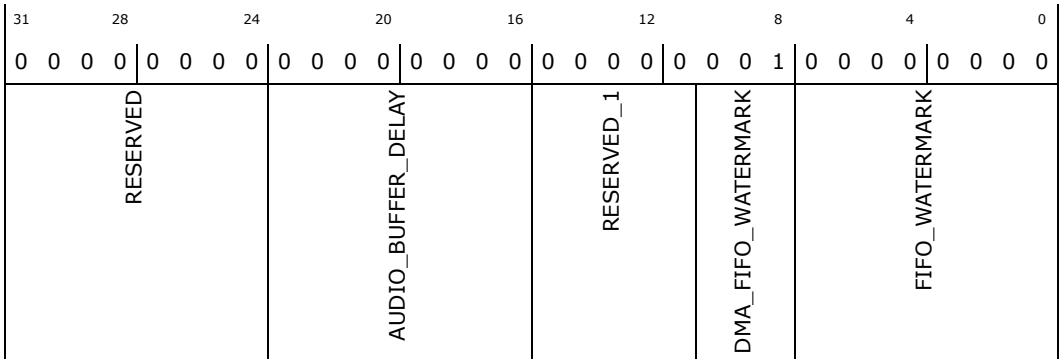
4.3.75 STREAM_B_LPE_AUD_BUFFER_CONFIG—Offset 65820h

LPE Audio buffer config

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65820h

Default: 00000100h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**AUDIO_BUFFER_DELAY:** This field specifies a delay in number of video frames that the audio controller will count off when audio enable bit is set before start transmitting audio sample.
15:11	0x0 RO	**RESERVED_1:** .
10:8	0x1 RW	**DMA_FIFO_WATERMARK:** Audio unit has a 8x64 bytes fifo for pre-fetching and staging audio samples. This register provides a watermark value in SWORDs (64B). When enable and sample buffer is available audio unit will fetch samples until this FIFO is full then it waits until HDMI/DP packet assembler drains the samples to a level less or equal the watermark setting then it will start fetching the samples again. Default value is 1 cacheline (SW).
7:0	0x0 RW	**FIFO_WATERMARK:** Audio unit has a 8x96 bytes fifo for pre-fetching and staging audio samples. This register provides a watermark value in DWORDs. When enable and sample buffer is available audio unit will fetch samples until this FIFO is full then it waits until HDMI packet assembler drains the samples to a level less or equal the watermark setting then it will start fetching the samples again

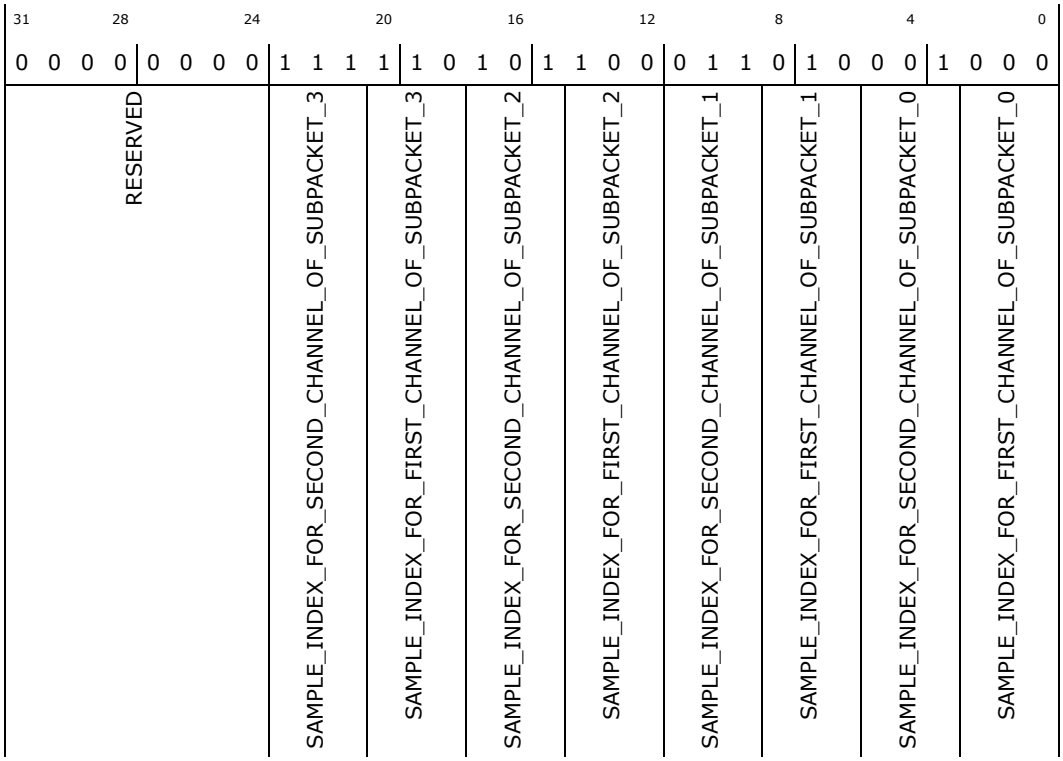
4.3.76 STREAM_B_LPE_AUD_BUF_CH_SWP—Offset 65824h

Audio Sample Swapping

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65824h

Default: 00FAC688h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:21	0x7 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_3:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 3 in a HDMI audio packet
20:18	0x6 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_3:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 1 in a HDMI audio packet
17:15	0x5 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_2:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 0 in a HDMI audio packet
14:12	0x4 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_2:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 0 in a HDMI audio packet
11:9	0x3 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_1:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 1 in a HDMI audio packet
8:6	0x2 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_1:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 1 in a HDMI audio packet

Bit Range	Default & Access	Field Name (ID): Description
5:3	0x1 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_0:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 0 in a HDMI audio packet
2:0	0x0 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_0:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 0 in a HDMI audio packet

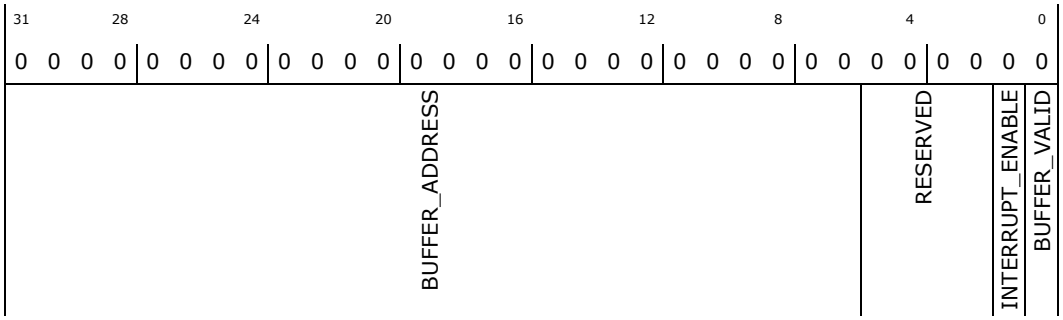
4.3.77 STREAM_B_LPE_AUD_BUF_A_ADDR—Offset 65840h

Address for Audio Buffer A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65840h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

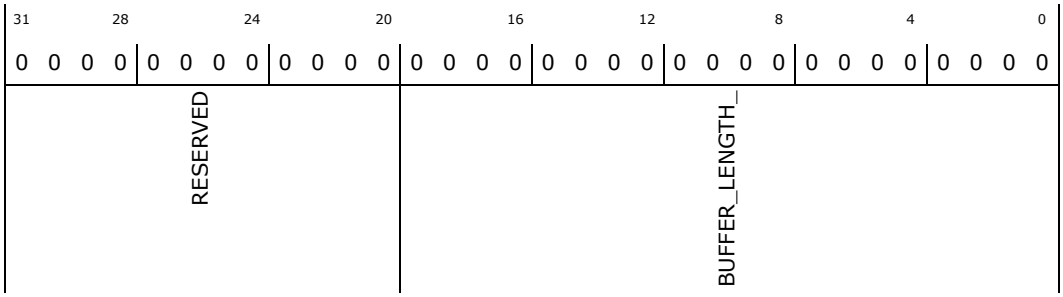
4.3.78 STREAM_B_LPE_AUD_BUF_A_LENGTH—Offset 65844h

Length for Audio Buffer A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65844h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.79 STREAM_B_LPE_AUD_BUF_B_ADDR—Offset 65848h

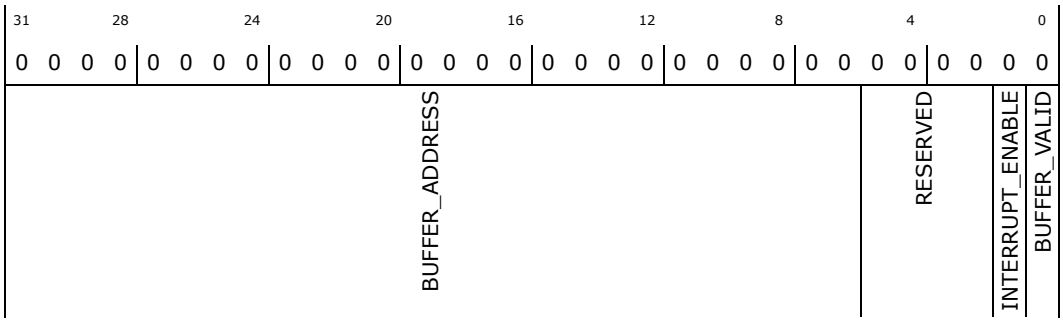
Address for Audio Buffer B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65848h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.80 STREAM_B_LPE_AUD_BUF_B_LENGTH—Offset 6584Ch

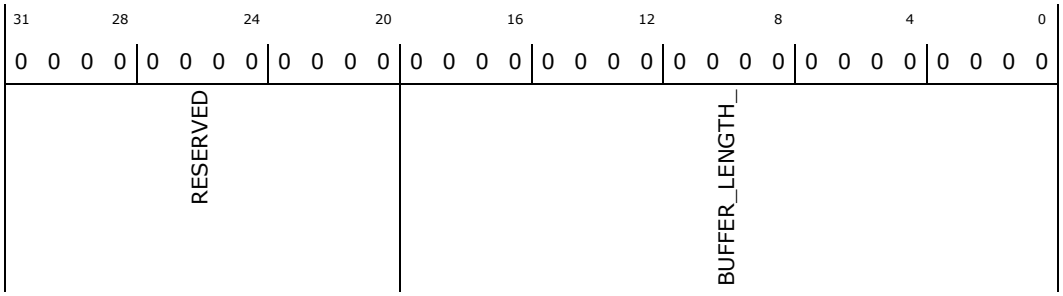
Length for Audio Buffer B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6584Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.81 STREAM_B_LPE_AUD_BUF_C_ADDR—Offset 65850h

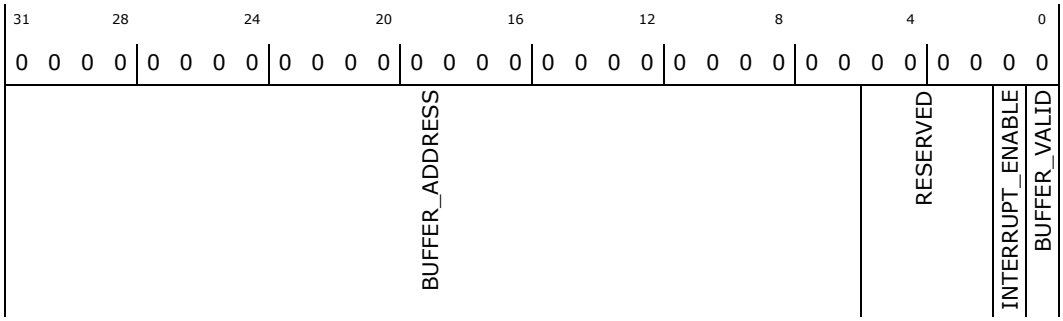
Address for Audio Buffer C

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65850h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.82 STREAM_B_LPE_AUD_BUF_C_LENGTH—Offset 65854h

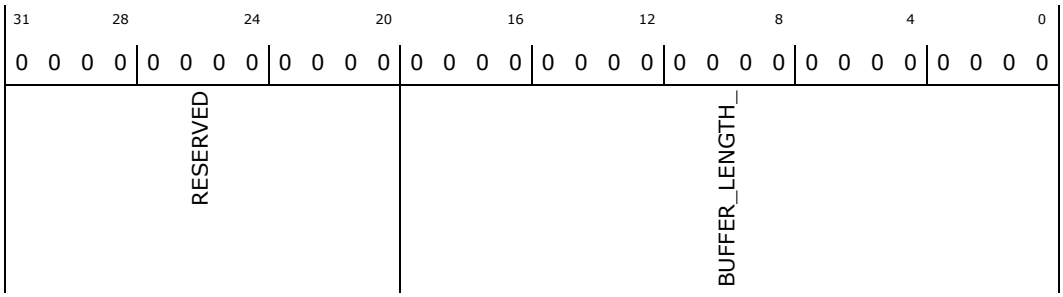
Length for Audio Buffer C

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65854h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.83 STREAM_B_LPE_AUD_BUF_D_ADDR—Offset 65858h

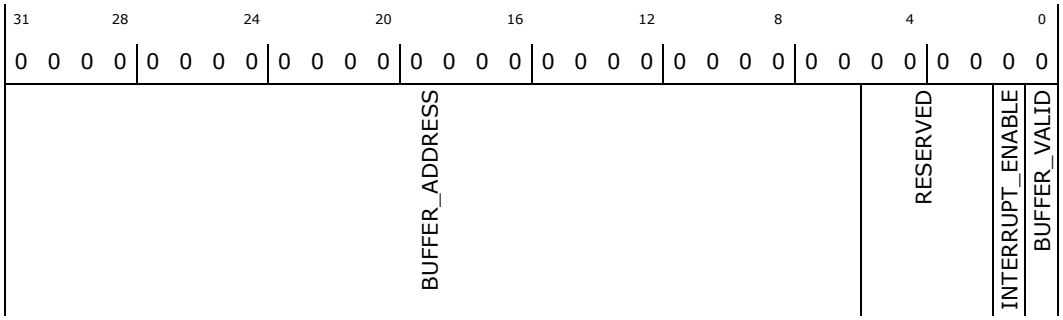
Address for Audio Buffer D

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65858h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.84 STREAM_B_LPE_AUD_BUF_D_LENGTH—Offset 6585Ch

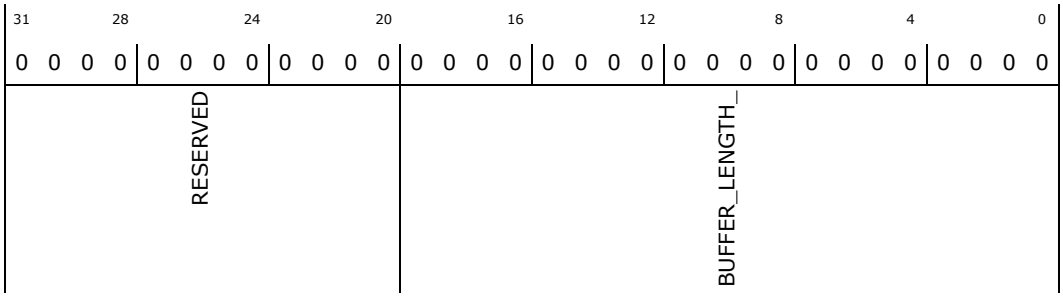
Length for Audio Buffer D

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6585Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.85 STREAM_B_LPE_AUD_CNTL_ST—Offset 65860h

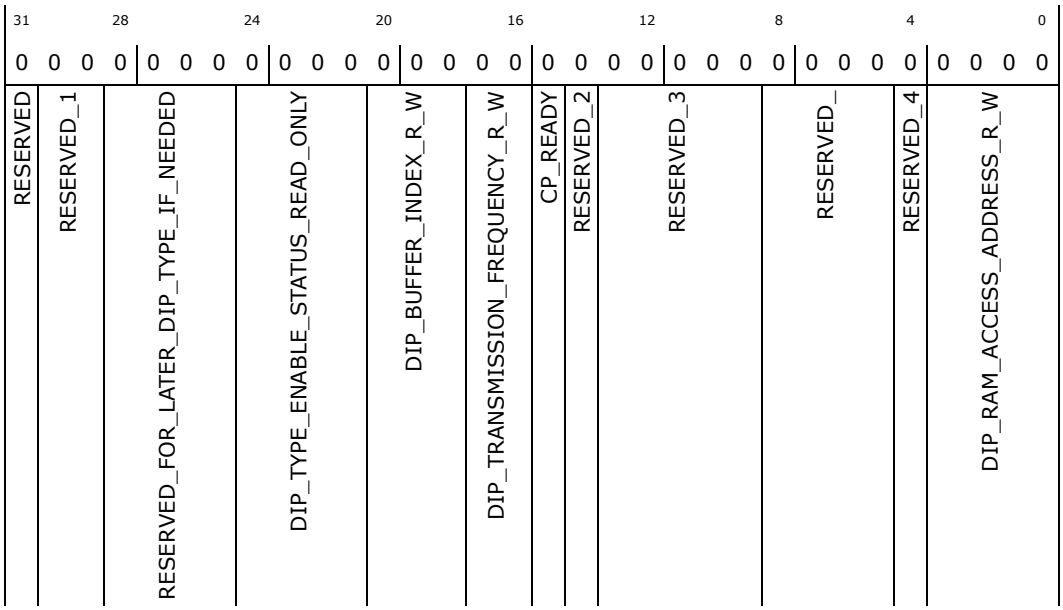
LPE Audio Control State Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65860h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Reserved.
30:29	0x0 RO	**RESERVED_1:**
28:25	0x0 RO	**RESERVED_FOR_LATER_DIP_TYPE_IF_NEEDED:** Must be 0.
24:21	0x0 RO	**DIP_TYPE_ENABLE_STATUS_READ_ONLY:** These bits reflects the DIP types enabled. It can be updated while the port is enabled. Within 2 vblank periods, the DIP is guaranteed to have been transmitted. Disabling an DIP type results in setting the contents of that DIP buffer to zero. A reserved setting reflects a disabled DIP. XXX1 = Audio DIP enable status (Default = disabled) XX1X = Generic 1 (ACP) DIP enable status (Default = disabled) X1XX = Generic 2 DIP enable status, can be used by ISRC1 or ISRC2 (Default = disabled) 1XXX = Reserved AccessType: Read Only
20:18	0x0 RW	**DIP_BUFFER_INDEX_R_W:** This field is used during read or write of different DIPs, and during read or write of ELD data. These bits are used as an index to their respective DIP or ELD buffers. When the index is not valid, the contents of the DIP will return all 0 s. 000 = (Default) Audio DIP (31 bytes of address space, 13 bytes of data) 001 = Generic 1 (ACP) Data Island Packet (31 bytes of address space, 11 bytes of data) 010 = Generic 2 (ISRC1) Data Island Packet (31 bytes of address space, 31 bytes of data) 011 = Generic 3 (ISRC2) Data Island Packet (31 bytes of address space, 31 bytes of data) 1XX = reserved
17:16	0x0 RW	**DIP_TRANSMISSION_FREQUENCY_R_W:** These bits reflect the frequency of DIP transmission for the DIP buffer type designated in bits 20:18. When writing DIP data, this value is also latched when the first DW of the DIP is written.When read, this value reflects the DIP transmission frequency for the DIP buffer designated in bits 20:18. 00 = Disabled (Default) 01 = once per frame 10 = Send once 11 = Best effort (Send at least every other vsync)
15	0x0 RW	**CP_READY:** This R/W bit reflects the state of CP request from the audio unit. When an audio CP request has been serviced, it must be reset to 1 by the video software to indicate that the CP request has been serviced. 0 = CP request pending or not ready to receive requests (default) 1 = CP request ready CP_ready bit is programmable through Bit 14 for [DevCL, DevBLC]. CP_ready bit is programmable through Bit 15 for [DevCTG]. Bit 15 Reserved for [DevCL, DevBLC].

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RO	**RESERVED_2:** ELD valid: This R/W bit reflects the state of the ELD data written to the ELD RAM. After writing the ELD data, the video software must set this bit to 1 to indicate that the ELD data is valid. At audio codec initialization, or on a hotplug event, this bit is set to 0 by the video software. This bit is reflected in the audio pin complex widget as the ELD valid status bit. 0 = ELD data invalid (default, when writing ELD data, set 0 by software) 1 = ELD data valid (Set by video software only) ELD bit is programmable through Bit 13 for [DevCL, DevBLC]. ELD bit is programmable through Bit 14 for [DevCTG].
13:9	0x0 RO	**RESERVED_3:** ELD buffer size (read only)10000 = This field reflects the size of the ELD buffer in DWORDs 13:9 reflects ELD buffer size for [DevCTG]. 12:9 reflects ELD buffer size for [DevCL, DevBLC].
8:5	0x0 RO	**RESERVED_:** ELD access address (R/W): Selects the DWORD address for access to the ELD buffer (48 bytes). The value wraps back to zero when incremented past the max addressing value 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.
4	0x0 RO	**RESERVED_4:** ELD ACK: Acknowledgement from the audio driver that ELD read has been completed
3:0	0x0 RW	**DIP_RAM_ACCESS_ADDRESS_R_W:** Selects the DWORD address for access to the DIP buffers. The value wraps back to zero when it incremented past the max addressing value of 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.

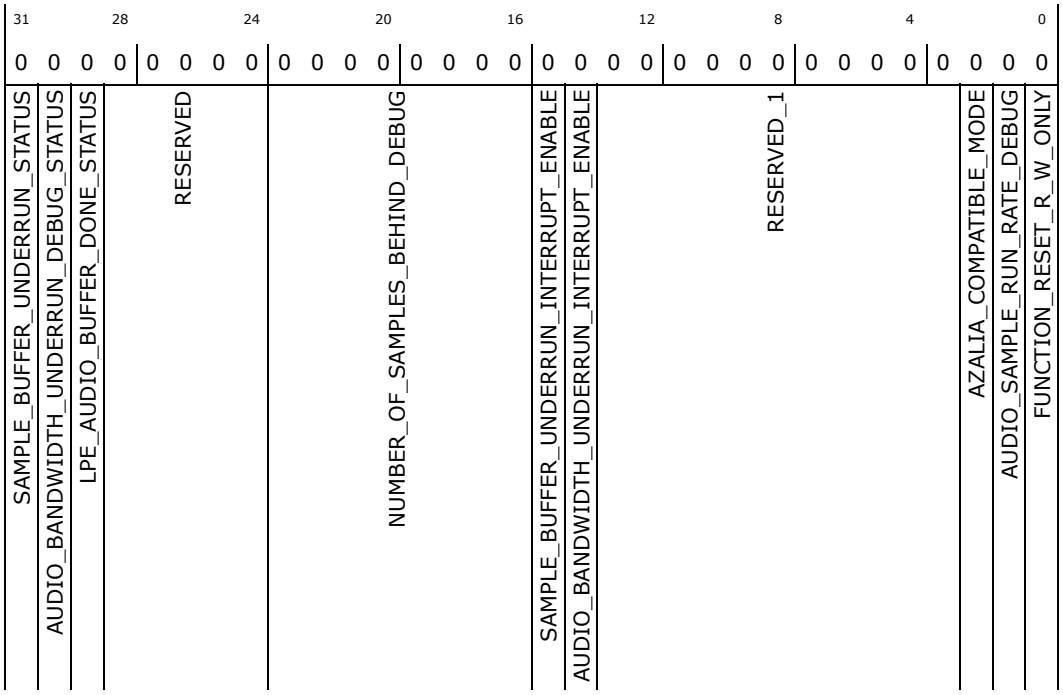
4.3.86 STREAM_B_LPE_AUD_HDMI_STATUS—Offset 65864h

LPE Audio Status

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65864h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW/1C	**SAMPLE_BUFFER_UNDERRUN_STATUS:** This bit indicates an underrun in the sample buffer to HDMI/DP controller when it needs to send. This bit is set at the last line of active video when there are no more sample in any valid buffers and HDMI/DP audio unit has not satisfied number of audio samples intended in that video frame. Clearing this status bit is accomplished by writing a 1 to this bit through MMIO. AccessType: One to Clear
30	0x0 RW/1C	**AUDIO_BANDWIDTH_UNDERRUN_DEBUG_STATUS:** This bit indicates an underrun of audio samples at HDMI audio packet assembly even there is still available sample buffers. Audio bandwidth underrun should not happen in normal functionality but it may happen when audio setting is unappropriate and/or memory bus was blocked by other clients, etc... This bit is set at the last line of active video when there is valid samples in a valid buffer and HDMI audio unit has not satisfied number of audio samples intended in that video frame Clearing this status bit is accomplished by writing a 1 to this bit through MMIO. AccessType: One to Clear
29	0x0 RW/1C	**LPE_AUDIO_BUFFER_DONE_STATUS:** This bit is set when a LPE audio buffer is completed transferred all of its data to LPE audio unit. This bit is clear when write 1 to it AccessType: One to Clear
28:24	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
23:16	0x0 RO	**NUMBER_OF_SAMPLES_BEHIND_DEBUG:** This field is read only to get the number of audio samples that controller needs to load and send at the time of reading. AccessType: Read Only
15	0x0 RW	**SAMPLE_BUFFER_UNDERRUN_INTERRUPT_ENABLE:** This bit is to enable the first line buffer underrun interrupt when sample buffer underrun status is detected 0 = LPE sample Buffer Underrun Interrupt Disabled 1 = LPE sample Buffer Underrun Interrupt Enabled
14	0x0 RW	**AUDIO_BANDWIDTH_UNDERRUN_INTERRUPT_ENABLE:** This bit is to enable the first line bandwidth underrun interrupt when bandwidth underrun status is detected 0 = LPE Bandwidth Underrun Interrupt Disabled 1 = LPE Bandwidth Underrun Interrupt Enabled
13:3	0x0 RO	**RESERVED_1:** Reserved.
2	0x0 RW	**AZALIA_COMPATIBLE_MODE:** This bit is to enable the vucp, PR, ECC to be generated in the Azalia way 0 = Disable Azalia compatible mode on vucp, PR, ECC 1 = Enable Azalia compatible mode on vucp, PR, ECC
1	0x0 RW	**AUDIO_SAMPLE_RUN_RATE_DEBUG:** When set it allows to fetch sample 128 times than the real sample rate to allow a faster drain of sample buffers.
0	0x0 RW	**FUNCTION_RESET_R_W_ONLY:** Write 1 to this bit will reset hardware within audio unit without needs of reset the full display controller. The FIFO and pointers will be reset and audio registers will be reset to default values. Write 0 will put the unit back to idle and ready to be programmed again.

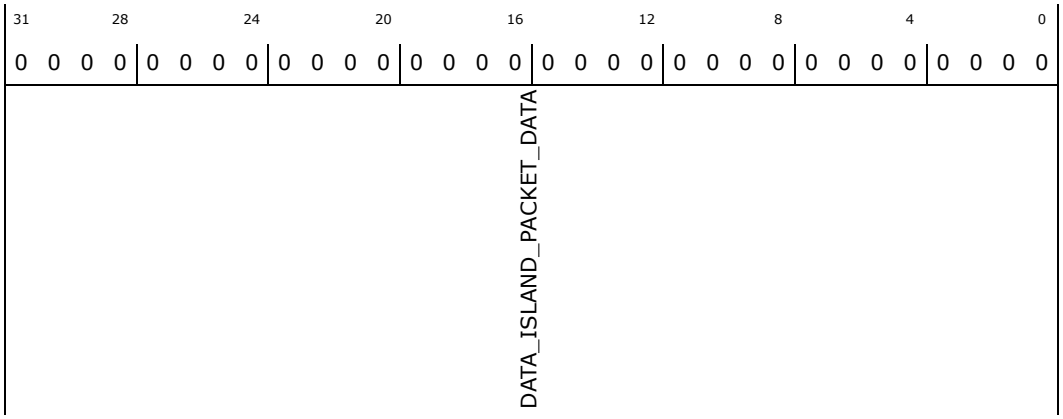
4.3.87 STREAM_B_LPE_AUD_HDMIW_INFOFR—Offset 65868h

Audio HDMI Data Island Packet Data

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65868h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**DATA_ISLAND_PACKET_DATA:** When read, this returns the current value at the location specified in the Video DIP buffer index select and Video DIP RAM access address fields. The index used to address the RAM is incremented after each read or write of this register. DIP data can be read at any time. Data should be loaded into the RAM before enabling the transmission through the DIP type enable bit. Accesses to this register are on a per-DWORD basis

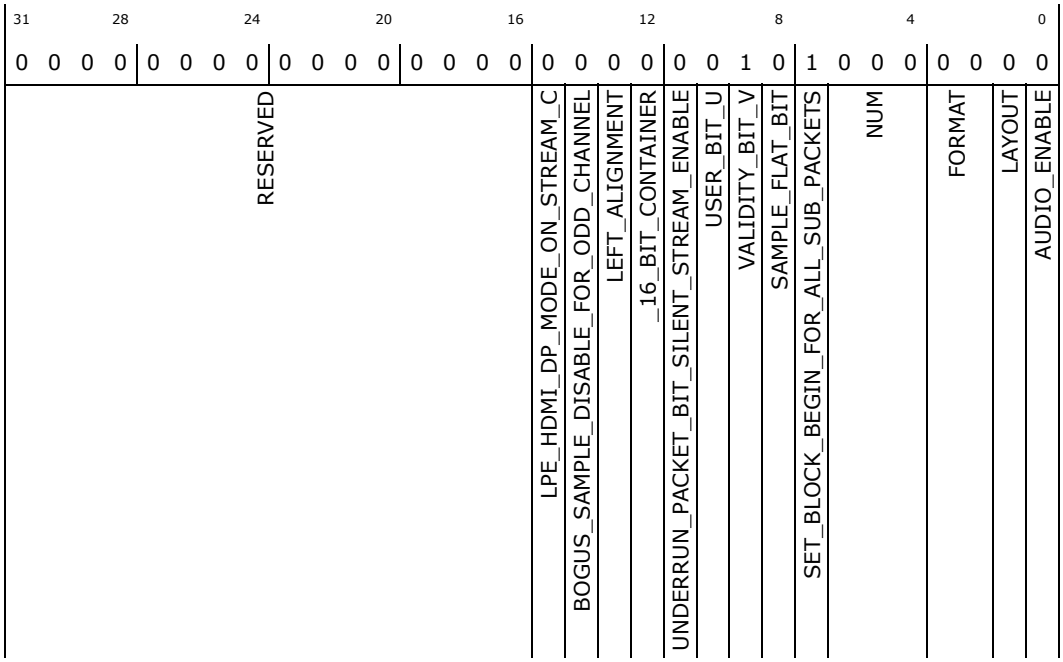
4.3.88 STREAM_C_LPE_AUD_CONFIG—Offset 65900h

LPE Audio Configuration

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65900h

Default: 00000280h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Reserved.
15	0x0 RW	**LPE_HDMI_DP_MODE_ON_STREAM_C:** 1= DP mode 0 = HDMI mode (default)
14	0x0 RW	**BOGUS_SAMPLE_DISABLE_FOR_ODD_CHANNEL:** When number of channels in a sample is odd (3, 5, or 7) source application may pad a bogus sample to the next even number of channels. If this bit is set there is no padding in input buffer1= No bogus sample present in buffer for odd number of channels 0= Bogus sample present in buffer for odd number of channels (default)
13	0x0 RW	**LEFT_ALIGNMENT:** When input buffer is in 32-bit container mode. If this bit is set the MSB of audio sample is aligned bit 31 of the container if this bit is clear MSB of audio sample is aligned with bit 23 of the container.1= MSB is bit 31 of 32-bit container 0= MSB is bit 23 of 32-bit container (default)
12	0x0 RW	**_16_BIT_CONTAINER:** When this bit is set 16-bit sample is stored in 16-bit container format. When it is clear container is 32-bit for each sample regardless of valid bits (default)1= 16-bit container 0= 32-bit container
11	0x0 RW	**UNDERRUN_PACKET_BIT_SILENT_STREAM_ENABLE:** Set this bit will enble HW to send valid zero-filled packet with Sample flat bit set when no sample buffer is available, NCTS packets (or Timesstamp packet) are sent to keep sink in sync even no audio sound will heard.1= send underrun packets (silent stream) 0= send null packets (default)

Bit Range	Default & Access	Field Name (ID): Description
10	0x0 RW	**USER_BIT_U:** HW will clear this bit in each sub-frames it sends, But this bit allows to overwrite hardware setting for special operation like debug or testing for compliance 1= sey U bit in sub-frame 0= clear U bit in sub-frame (default)
9	0x1 RW	**VALIDITY_BIT_V:** HW will set this bit in both each sub-frames it sends. But this bit allows to overwrite hardware setting for special operation like debug or testing for compliance 1= Set V bit in sub-frame (default) 0= clear V bit in sub-frame. For debug or testing
8	0x0 RW	**SAMPLE_FLAT_BIT:** When set the sample flat bit will be set in all HDMI sub-packets. 1= flat bit is set for valid sample 0= flat bit is not set for valid sample (default)
7	0x1 RW	**SET_BLOCK_BEGIN_FOR_ALL_SUB_PACKETS:** Controls the B bit in the header of only the first Audio Packet /frame of a 192 frame 60958 block in Layout 1 mode. This bit only applies to LPE HDMI mode. 0: The B bit will be set only for sub-packet 0 1: The B bit in the Audio sample packet header will be set for all valid sub-packets. (default)
6:4	0x0 RW	**NUM:** audio Channels 000: 2 channels (stereo) 001: 3 channels 010: 4 channels 011: 5 channels 100: 6 channels 101: 7 channels 110: 8 channels Note: When disable_bogus sample bit is clear HW will always treat odd number of channels similar to the next higher even number. Thus 3 is similar to 4, 5 to 6 and 7 to 8. This is because SW ensures that an even number of samples are packed in the audio buffers.
3:2	0x0 RW	**FORMAT:** 00: L-PCM or IEC 61937 01: High Bit Rate IEC 61937 stream packet (not supported) 10: One Bit Audio Sample packet (not supported) 11: DST Audio Sample packet (not supported)
1	0x0 RW	**LAYOUT:** 0: Layout 0 (2-ch) 1: Layout 1 (3-8 ch) Note: Layout bit does not matter for HBR
0	0x0 RW	**AUDIO_ENABLE:** Controls generation of N/CTS and transmission of audio sample packets. 0: Audio sample packets are not transmitted, CTS calculation/transmission is disabled 1: Audio sample packets are transmitted and CTS calculation is enabled When enable audio unit will wait until the next vertical blank period before sending out the audio packets. When disable, audio unit may continue to send audio packet until the end of current active video frame before stopping.

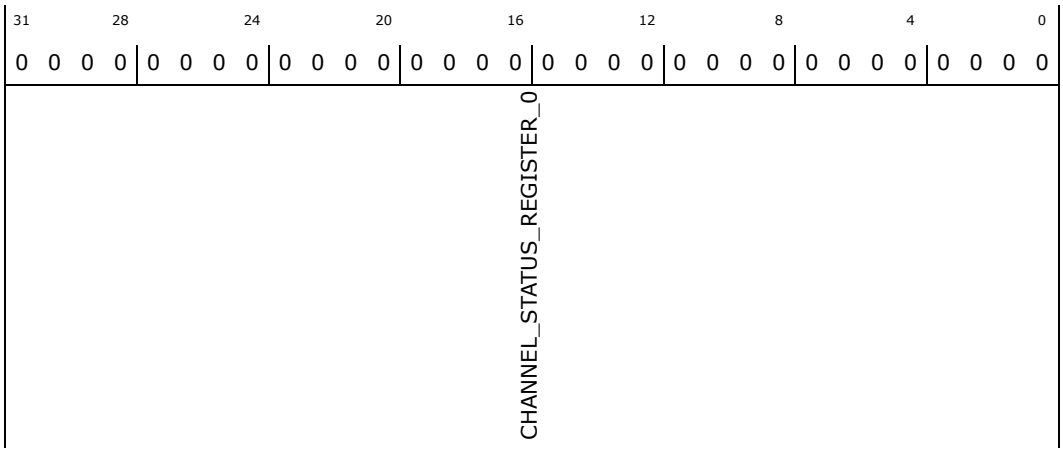
4.3.89 STREAM_C_LPE_AUD_CH_STATUS_0—Offset 65908h

Audio Channel Status Attributes 0

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65908h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**CHANNEL_STATUS_REGISTER_0:** . These bits are transmitted as attributes of audio packets

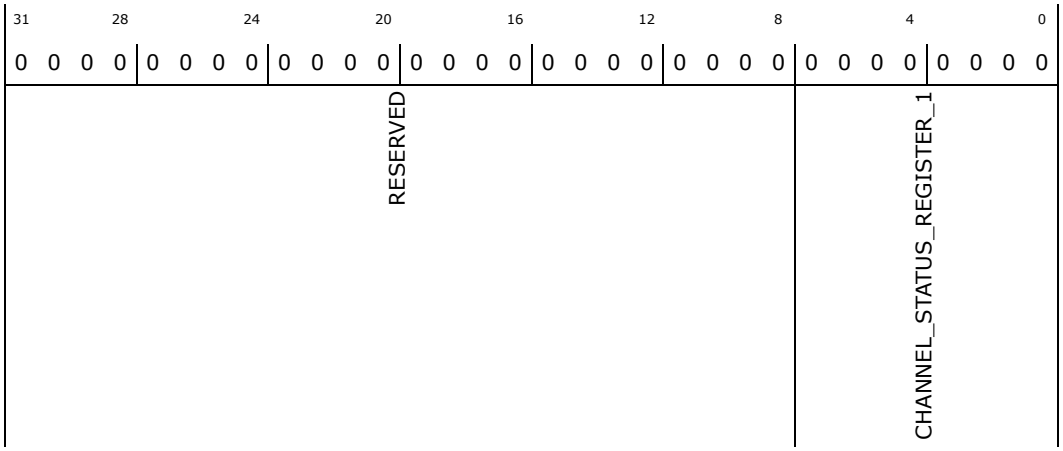
4.3.90 STREAM_C_LPE_AUD_CH_STATUS_1—Offset 6590Ch

Audio Channel Status Attributes 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6590Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:8	0x0 RO	**RESERVED:** Reserved.
7:0	0x0 RW	**CHANNEL_STATUS_REGISTER_1:** . These bits are transmitted as attributes of audio packets. There is only 8 bits valid in this register.

4.3.91 STREAM_C_LPE_AUD_HDMI_CTS_DP_MAUD—Offset 65910h

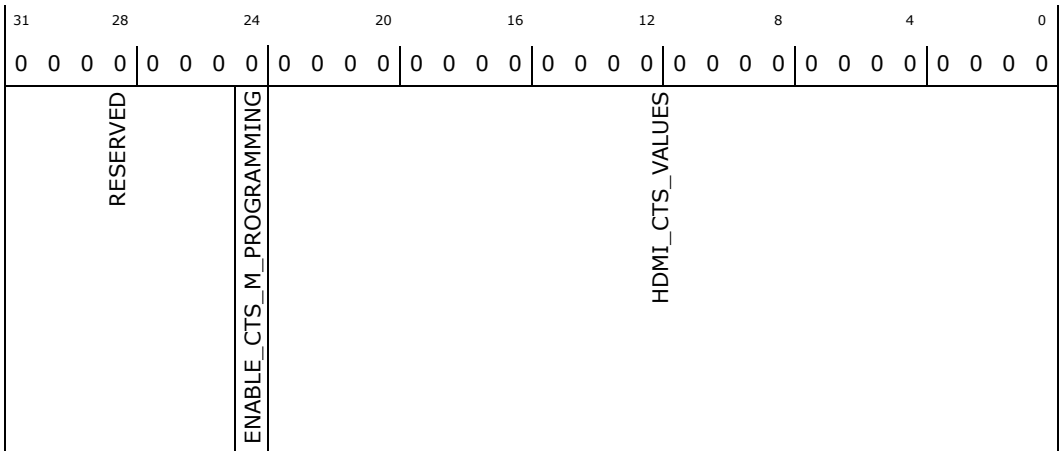
Audio HDMI CTS Register (DP Maud)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65910h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**ENABLE_CTS_M_PROGRAMMING:** 1 = Enable CTS/M programming 0 = Disable CTS/M programming
23:0	0x0 RW	**HDMI_CTS_VALUES:** These are bits [23:0] of programmable HDMI CTS values (or DP Maud) that is pre-calculated to achieve desired audio sample rates with a particular pixel clocks configuration. Audio function must be disabled when changing this field. Bit 24 also need to write to 1 to enable this field.

4.3.92 STREAM_C_LPE_AUD_HDMI_N_DP_NAUD—Offset 65914h

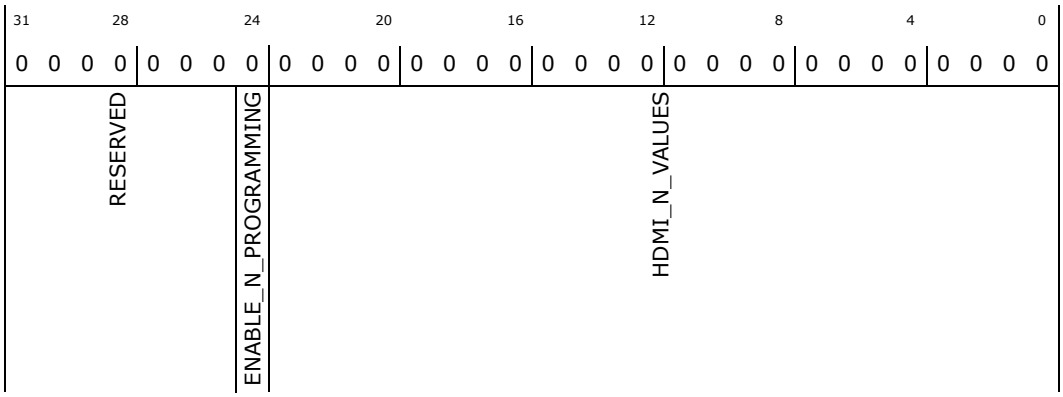
Audio HDMI N Register (DP Naud)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65914h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:25	0x0 RO	**RESERVED:** Reserved.
24	0x0 RW	**ENABLE_N_PROGRAMMING:** 1 = Enable N programming 0 = Disable N programming
23:0	0x0 RW	**HDMI_N_VALUES:** These are bits [23:0] of programmable HDMI N (or DP Naud) values that is pre-calculated to achieve desired audio sample rates with a particular pixel clocks configuration. Audio function must be disabled when changing this field. Bit 24 also need to write to 1 to enable this field.

4.3.93 STREAM_C_LPE_AUD_BUFFER_CONFIG—Offset 65920h

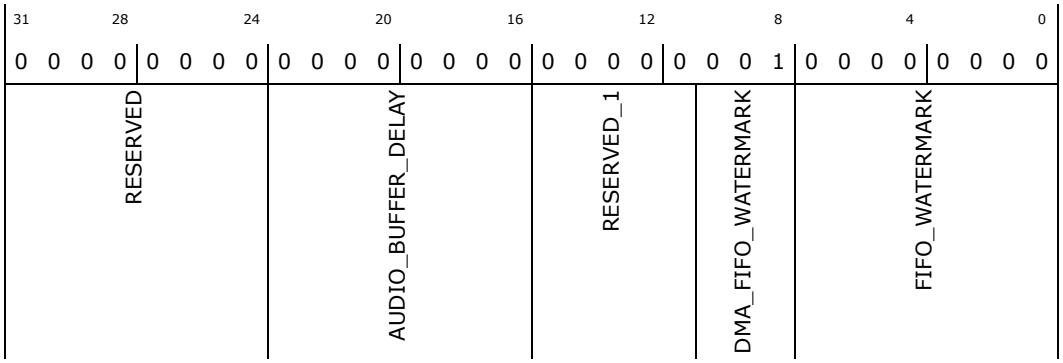
LPE Audio buffer config

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65920h

Default: 00000100h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**AUDIO_BUFFER_DELAY:** This field specifies a delay in number of video frames that the audio controller will count off when audio enable bit is set before start transmitting audio sample.
15:11	0x0 RO	**RESERVED_1:** .
10:8	0x1 RW	**DMA_FIFO_WATERMARK:** Audio unit has a 8x64 bytes fifo for pre-fetching and staging audio samples. This register provides a watermark value in SWORDs (64B). When enable and sample buffer is available audio unit will fetch samples until this FIFO is full then it waits until HDMI/DP packet assembler drains the samples to a level less or equal the watermark setting then it will start fetching the samples again. Default value is 1 cacheline (SW).
7:0	0x0 RW	**FIFO_WATERMARK:** Audio unit has a 8x96 bytes fifo for pre-fetching and staging audio samples. This register provides a watermark value in DWORDs. When enable and sample buffer is available audio unit will fetch samples until this FIFO is full then it waits until HDMI packet assembler drains the samples to a level less or equal the watermark setting then it will start fetching the samples again

4.3.94 STREAM_B_LPE_AUD_BUF_CH_SWP (STREAM_C_LPE_AUD_BUF_CH_SWP)—Offset 65924h

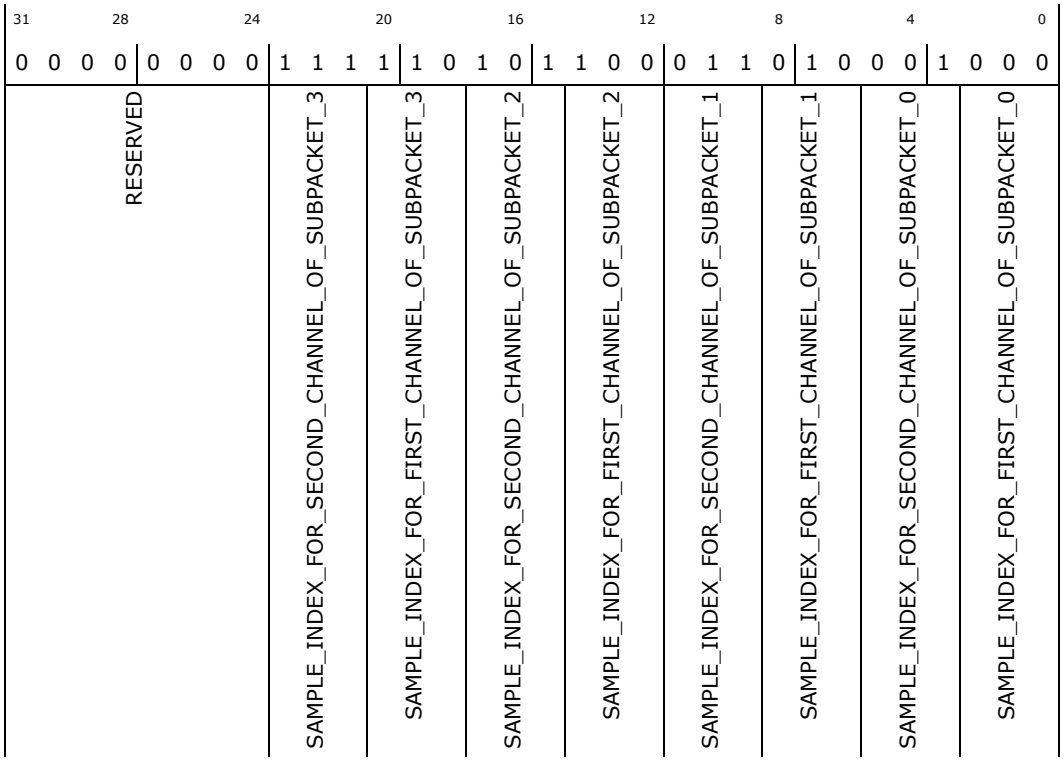
Audio Sample Swapping

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65924h

Default: 00FAC688h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:21	0x7 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_3:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 3 in a HDMI audio packet
20:18	0x6 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_3:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 1 in a HDMI audio packet
17:15	0x5 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_2:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 0 in a HDMI audio packet
14:12	0x4 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_2:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 0 in a HDMI audio packet
11:9	0x3 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_1:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 1 in a HDMI audio packet
8:6	0x2 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_1:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 1 in a HDMI audio packet

Bit Range	Default & Access	Field Name (ID): Description
5:3	0x1 RO	**SAMPLE_INDEX_FOR_SECOND_CHANNEL_OF_SUBPACKET_0:** This field has the index of 32-byte buffer block that will be send out as the second channel sample of subpacket 0 in a HDMI audio packet
2:0	0x0 RO	**SAMPLE_INDEX_FOR_FIRST_CHANNEL_OF_SUBPACKET_0:** This field has the index of 32-byte buffer block that will be send out as the first channel sample of subpacket 0 in a HDMI audio packet

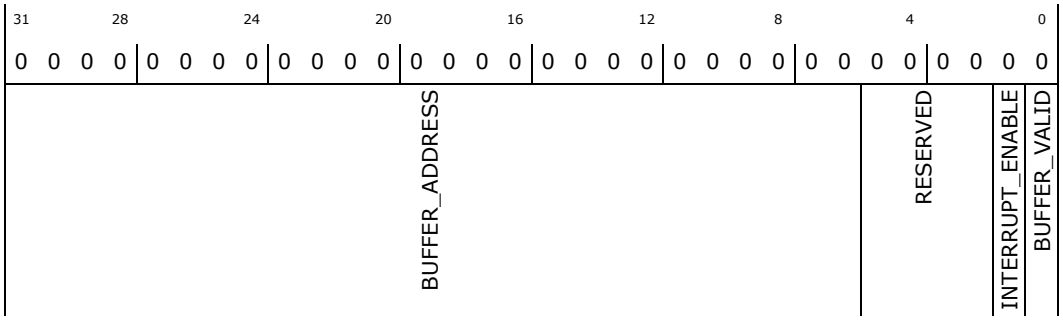
4.3.95 STREAM_C_LPE_AUD_BUF_A_ADDR—Offset 65940h

Address for Audio Buffer A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65940h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

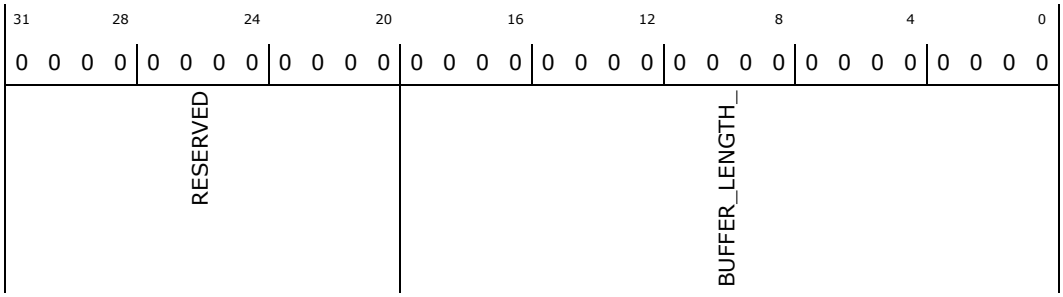
4.3.96 STREAM_C_LPE_AUD_BUF_A_LENGTH—Offset 65944h

Length for Audio Buffer A

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65944h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.97 STREAM_C_LPE_AUD_BUF_B_ADDR—Offset 65948h

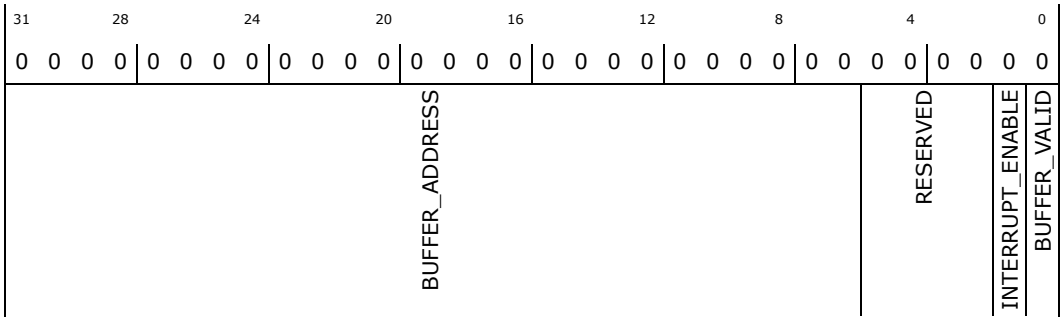
Address for Audio Buffer B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65948h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.98 STREAM_C_LPE_AUD_BUF_B_LENGTH—Offset 6594Ch

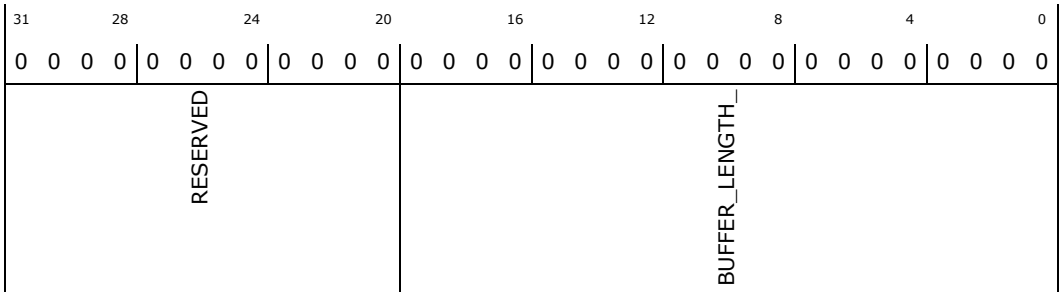
Length for Audio Buffer B

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6594Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.99 STREAM_C_LPE_AUD_BUF_C_ADDR—Offset 65950h

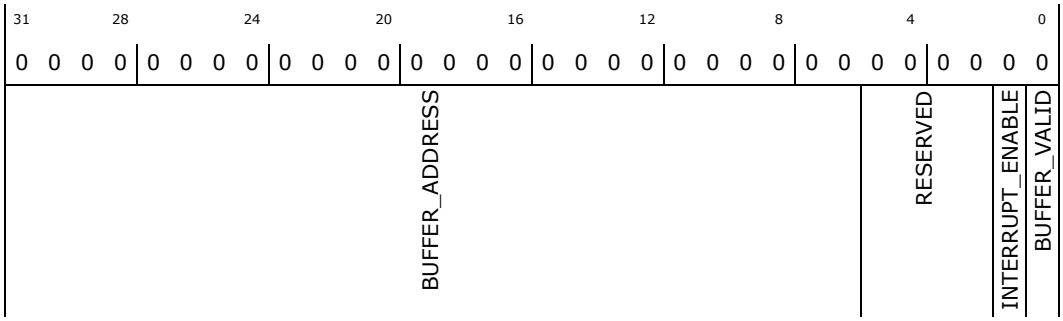
Address for Audio Buffer C

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65950h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.100 STREAM_C_LPE_AUD_BUF_C_LENGTH—Offset 65954h

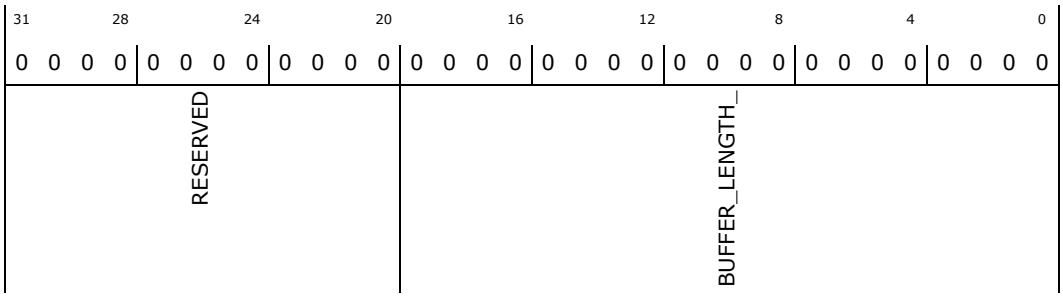
Length for Audio Buffer C

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65954h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

4.3.101 STREAM_C_LPE_AUD_BUF_D_ADDR—Offset 65958h

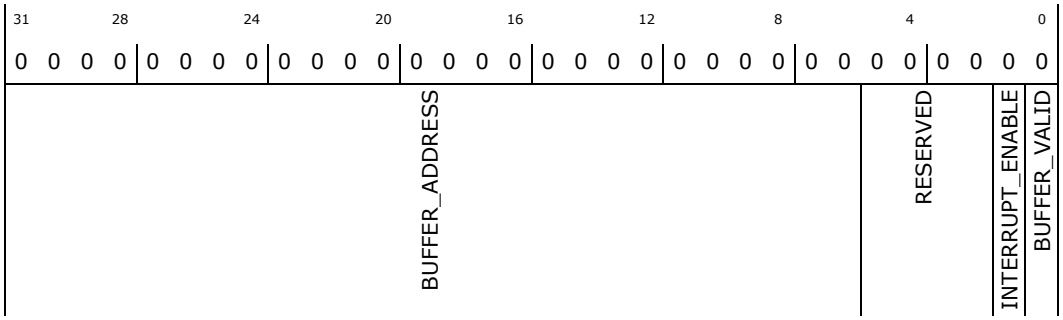
Address for Audio Buffer D

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 65958h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**BUFFER_ADDRESS:** . This is physical address of audio sample buffer A, need to 64-byte aligned.
5:2	0x0 RO	**RESERVED:** Reserved.
1	0x0 RW	**INTERRUPT_ENABLE:** If enable hardware will generate an interrupt when it is done fetching this buffer
0	0x0 RW	**BUFFER_VALID:** . This bit is set by S/W when the mem_addr is written and is cleared by H/W when done reading the data from memory

4.3.102 STREAM_C_LPE_AUD_BUF_D_LENGTH—Offset 6595Ch

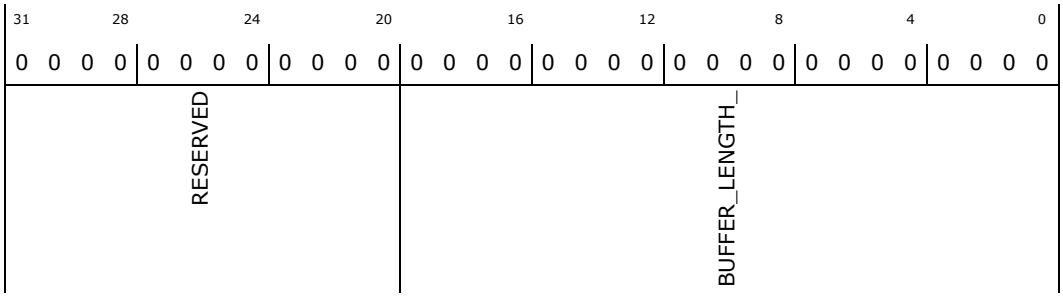
Length for Audio Buffer D

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6595Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:20	0x0 RO	**RESERVED:** Reserved.
19:0	0x0 RW	**BUFFER_LENGTH_:** This field shows the remaining length of data that needs to be read from memory; Initially set by S/W for total of bytes that are valid and is decremented by H/W as reads are issued. Software must end buffer at the boundary of a audio sample with all of channel values of that sample are valid.

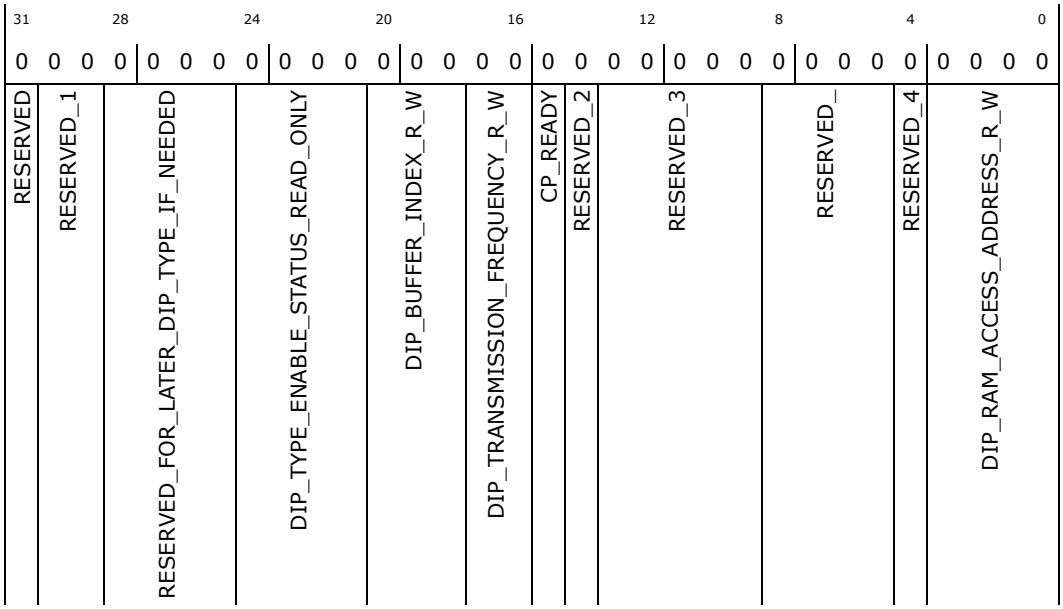
4.3.103 STREAM_C_LPE_AUD_CNTL_ST—Offset 65960h

LPE Audio Control State Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65960h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** Reserved.
30:29	0x0 RO	**RESERVED_1:**
28:25	0x0 RO	**RESERVED_FOR_LATER_DIP_TYPE_IF_NEEDED:** Must be 0.
24:21	0x0 RO	**DIP_TYPE_ENABLE_STATUS_READ_ONLY:** These bits reflects the DIP types enabled. It can be updated while the port is enabled. Within 2 vblank periods, the DIP is guaranteed to have been transmitted. Disabling an DIP type results in setting the contents of that DIP buffer to zero. A reserved setting reflects a disabled DIP. XXX1 = Audio DIP enable status (Default = disabled) XX1X = Generic 1 (ACP) DIP enable status (Default = disabled) X1XX = Generic 2 DIP enable status, can be used by ISRC1 or ISRC2 (Default = disabled) 1XXX = Reserved AccessType: Read Only
20:18	0x0 RW	**DIP_BUFFER_INDEX_R_W:** This field is used during read or write of different DIPs, and during read or write of ELD data. These bits are used as an index to their respective DIP or ELD buffers. When the index is not valid, the contents of the DIP will return all 0 s. 000 = (Default) Audio DIP (31 bytes of address space, 13 bytes of data) 001 = Generic 1 (ACP) Data Island Packet (31 bytes of address space, 11 bytes of data) 010 = Generic 2 (ISRC1) Data Island Packet (31 bytes of address space, 31 bytes of data) 011 = Generic 3 (ISRC2) Data Island Packet (31 bytes of address space, 31 bytes of data) 1XX = reserved
17:16	0x0 RW	**DIP_TRANSMISSION_FREQUENCY_R_W:** These bits reflect the frequency of DIP transmission for the DIP buffer type designated in bits 20:18. When writing DIP data, this value is also latched when the first DW of the DIP is written.When read, this value reflects the DIP transmission frequency for the DIP buffer designated in bits 20:18. 00 = Disabled (Default) 01 = once per frame 10 = Send once 11 = Best effort (Send at least every other vsync)
15	0x0 RW	**CP_READY:** This R/W bit reflects the state of CP request from the audio unit. When an audio CP request has been serviced, it must be reset to 1 by the video software to indicate that the CP request has been serviced. 0 = CP request pending or not ready to receive requests (default) 1 = CP request ready CP_ready bit is programmable through Bit 14 for [DevCL, DevBLC]. CP_ready bit is programmable through Bit 15 for [DevCTG]. Bit 15 Reserved for [DevCL, DevBLC].

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RO	**RESERVED_2:** ELD valid: This R/W bit reflects the state of the ELD data written to the ELD RAM. After writing the ELD data, the video software must set this bit to 1 to indicate that the ELD data is valid. At audio codec initialization, or on a hotplug event, this bit is set to 0 by the video software. This bit is reflected in the audio pin complex widget as the ELD valid status bit. 0 = ELD data invalid (default, when writing ELD data, set 0 by software) 1 = ELD data valid (Set by video software only) ELD bit is programmable through Bit 13 for [DevCL, DevBLC]. ELD bit is programmable through Bit 14 for [DevCTG].
13:9	0x0 RO	**RESERVED_3:** ELD buffer size (read only)10000 = This field reflects the size of the ELD buffer in DWORDs 13:9 reflects ELD buffer size for [DevCTG]. 12:9 reflects ELD buffer size for [DevCL, DevBLC].
8:5	0x0 RO	**RESERVED_:** ELD access address (R/W): Selects the DWORD address for access to the ELD buffer (48 bytes). The value wraps back to zero when incremented past the max addressing value 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.
4	0x0 RO	**RESERVED_4:** ELD ACK: Acknowledgement from the audio driver that ELD read has been completed
3:0	0x0 RW	**DIP_RAM_ACCESS_ADDRESS_R_W:** Selects the DWORD address for access to the DIP buffers. The value wraps back to zero when it incremented past the max addressing value of 0xF. This field change takes effect immediately after being written. The read value indicates the current access address.

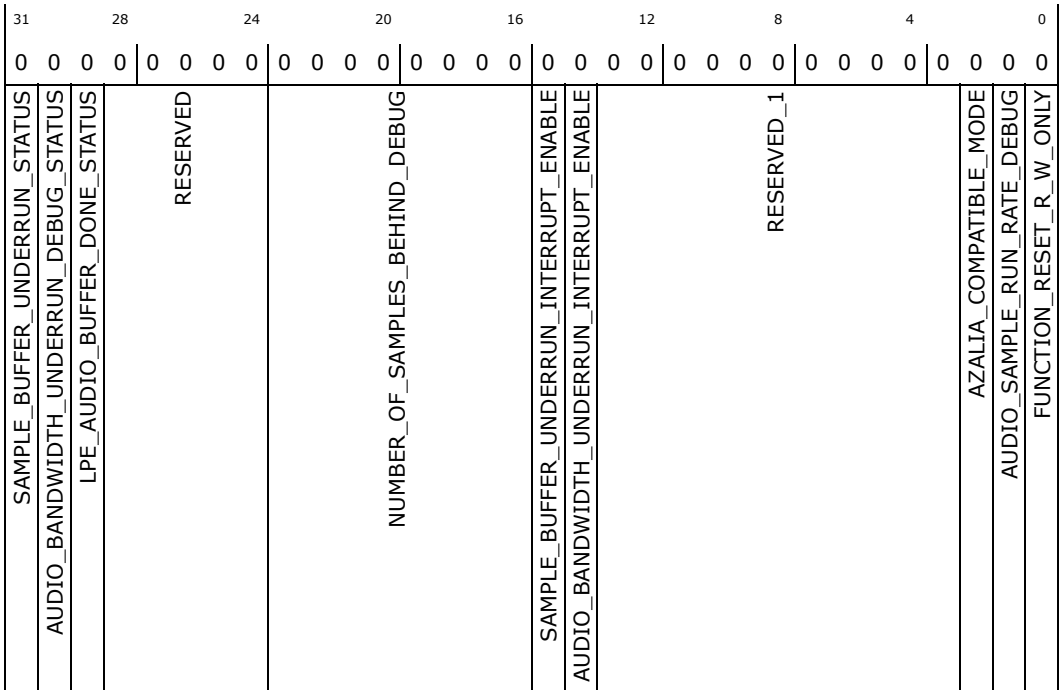
4.3.104 STREAM_C_LPE_AUD_HDMI_STATUS—Offset 65964h

LPE Audio Status

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65964h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW/1C	**SAMPLE_BUFFER_UNDERRUN_STATUS:** This bit indicates an underrun in the sample buffer to HDMI/DP controller when it needs to send. This bit is set at the last line of active video when there are no more sample in any valid buffers and HDMI/DP audio unit has not satisfied number of audio samples intended in that video frame. Clearing this status bit is accomplished by writing a 1 to this bit through MMIO. AccessType: One to Clear
30	0x0 RW/1C	**AUDIO_BANDWIDTH_UNDERRUN_DEBUG_STATUS:** This bit indicates an underrun of audio samples at HDMI audio packet assembly even there is still available sample buffers. Audio bandwidth underrun should not happen in normal functionality but it may happen when audio setting is unappropriate and/or memory bus was blocked by other clients, etc... This bit is set at the last line of active video when there is valid samples in a valid buffer and HDMI audio unit has not satisfied number of audio samples intended in that video frame Clearing this status bit is accomplished by writing a 1 to this bit through MMIO. AccessType: One to Clear
29	0x0 RW/1C	**LPE_AUDIO_BUFFER_DONE_STATUS:** This bit is set when a LPE audio buffer is completed transferred all of its data to LPE audio unit. This bit is clear when write 1 to it AccessType: One to Clear
28:24	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
23:16	0x0 RO	**NUMBER_OF_SAMPLES_BEHIND_DEBUG:** This field is read only to get the number of audio samples that controller needs to load and send at the time of reading. AccessType: Read Only
15	0x0 RW	**SAMPLE_BUFFER_UNDERRUN_INTERRUPT_ENABLE:** This bit is to enable the first line buffer underrun interrupt when sample buffer underrun status is detected 0 = LPE sample Buffer Underrun Interrupt Disabled 1 = LPE sample Buffer Underrun Interrupt Enabled
14	0x0 RW	**AUDIO_BANDWIDTH_UNDERRUN_INTERRUPT_ENABLE:** This bit is to enable the first line bandwidth underrun interrupt when bandwidth underrun status is detected 0 = LPE Bandwidth Underrun Interrupt Disabled 1 = LPE Bandwidth Underrun Interrupt Enabled
13:3	0x0 RO	**RESERVED_1:** Reserved.
2	0x0 RW	**AZALIA_COMPATIBLE_MODE:** This bit is to enable the vucp, PR, ECC to be generated in the Azalia way 0 = Disable Azalia compatible mode on vucp, PR, ECC 1 = Enable Azalia compatible mode on vucp, PR, ECC
1	0x0 RW	**AUDIO_SAMPLE_RUN_RATE_DEBUG:** When set it allows to fetch sample 128 times than the real sample rate to allow a faster drain of sample buffers.
0	0x0 RW	**FUNCTION_RESET_R_W_ONLY:** Write 1 to this bit will reset hardware within audio unit without needs of reset the full display controller. The FIFO and pointers will be reset and audio registers will be reset to default values. Write 0 will put the unit back to idle and ready to be programmed again.

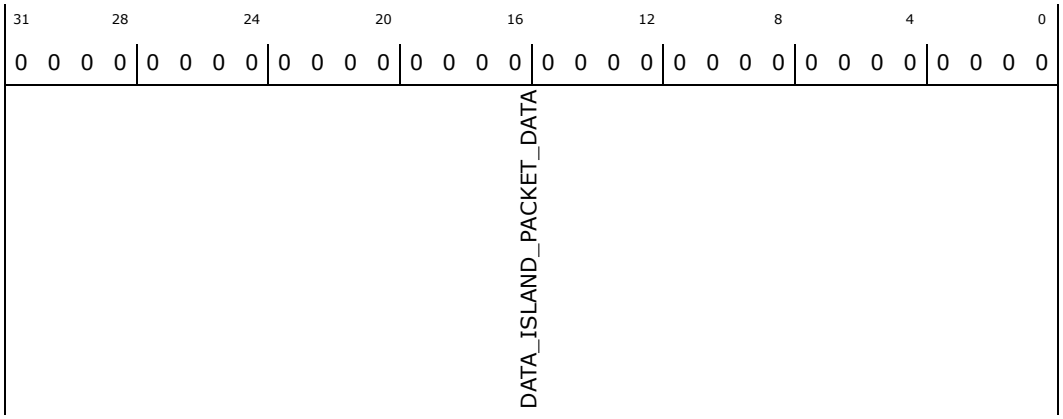
4.3.105 STREAM_C_LPE_AUD_HDMIW_INFOFR—Offset 65968h

Audio HDMI Data Island Packet Data

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 65968h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**DATA_ISLAND_PACKET_DATA:** When read, this returns the current value at the location specified in the Video DIP buffer index select and Video DIP RAM access address fields. The index used to address the RAM is incremented after each read or write of this register. DIP data can be read at any time. Data should be loaded into the RAM before enabling the transmission through the DIP type enable bit. Accesses to this register are on a per-DWORD basis

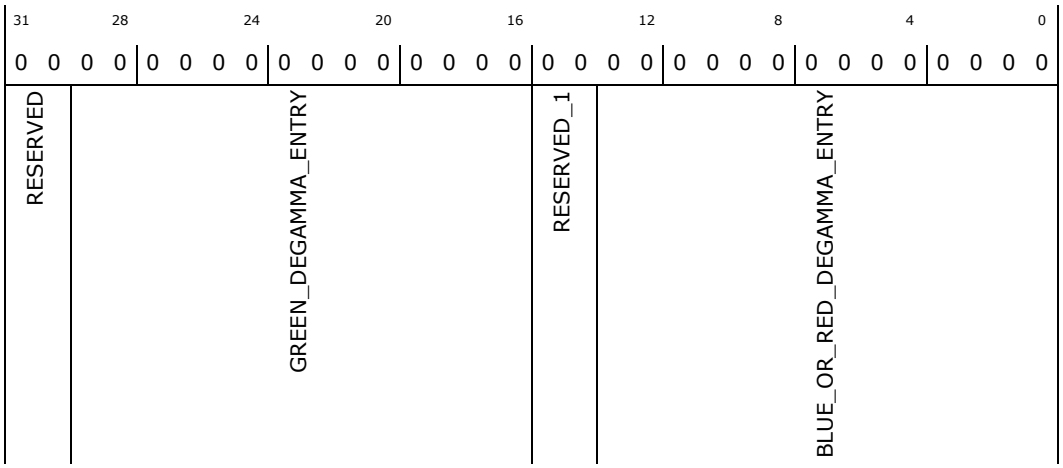
4.3.106 PIPEX_CGM_DEGAMME (PIPEX_CGM_DEGAMMA)—Offset 66000h

Pipe X Color Mapping DeGamma Table. The table has 65 logical entries which is 2 DWORDS as shown below:

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 66000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:30	0x0 RO	**RESERVED:** (read only).
29:16	0x0 RW	**GREEN_DEGAMMA_ENTRY:** Green DeGamma Entry is taken into consideration in DWORD0. For DWORD1, The entire 29:16 bits are in reserved section
15:14	0x0 RO	**RESERVED_1:** Reserved.
13:0	0x0 RW	**BLUE_OR_RED_DEGAMMA_ENTRY:** BLUE Entry for DWORD0 and RED Entry for DWORD0

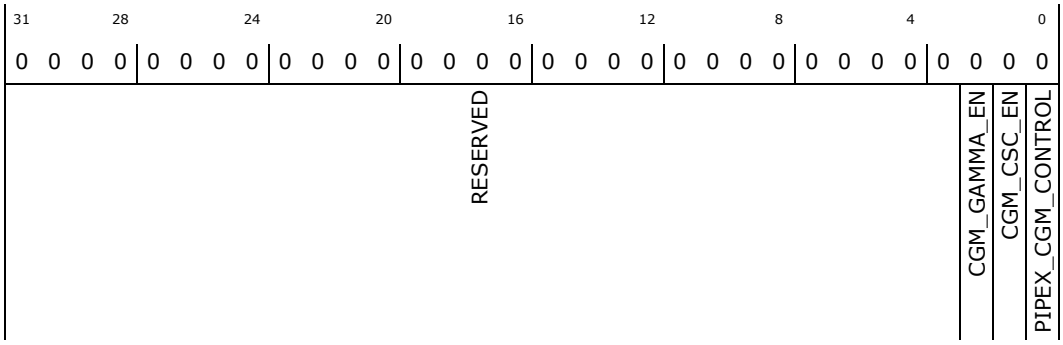
4.3.107 PIPEX_CGM_CONTROL—Offset 67A00h

Pipe X Color Mapping Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 67A00h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** (read only).
2	0x0 RW	**CGM_GAMMA_EN:** 0=gamma disabled. 1=gamma enabled
1	0x0 RW	**CGM_CSC_EN:** 0=CSC IS DISABLED. 1=CSC IS ENABLED
0	0x0 RW	**CGM_DEGAMMA_EN (PIPEX_CGM_CONTROL):** 0=DEGAMMA IS DISABLED. 1=DEGAMMA IS ENABLED

4.3.108 PCPSXCONFIG—Offset 6D000h

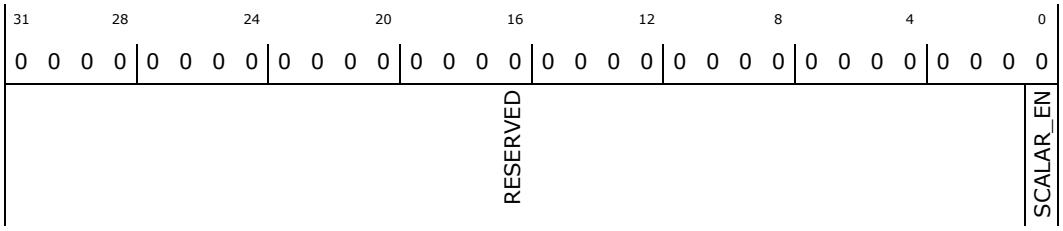
Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:** (read only).
0	0x0 RW	**SCALAR_EN:** 0=Perform Scaling per programmed parameters. 1=bypass horizontal and vertical scalers. Other programmed parameters have no effect in this case

4.3.109 PCPSXHS_H—Offset 6D104h

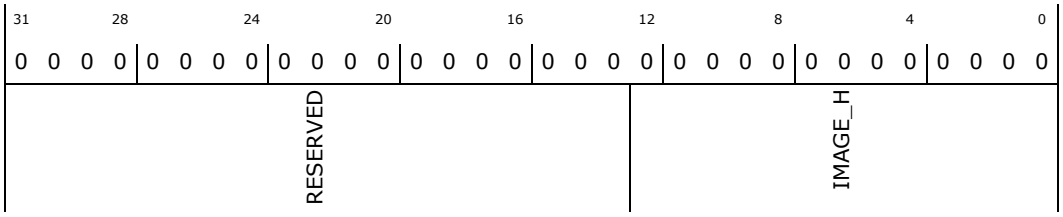
HSC Height Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D104h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:0	0x0 RW	**IMAGE_H:** Image Height in terms of pixels. This must match the source height specified for the plane

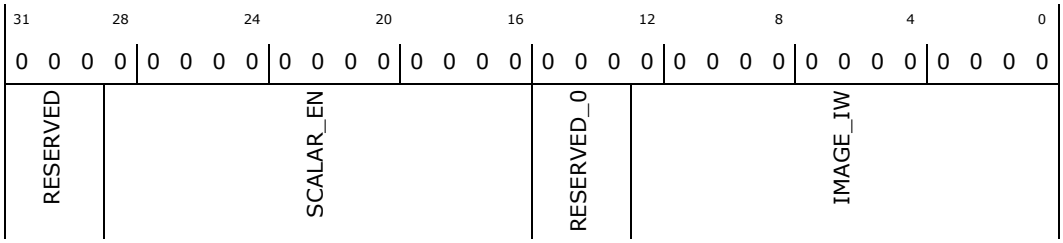
4.3.110 PCPSXHS_W—Offset 6D108h

HSC Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6D108h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** (read only).
28:16	0x0 RW	**IMAGE_OW (SCALAR_EN):** Image Output Width in terms of pixels.
15:13	0x0 RO	**RESERVED_0:** (read only).
12:0	0x0 RW	**IMAGE_IW:** Image input width

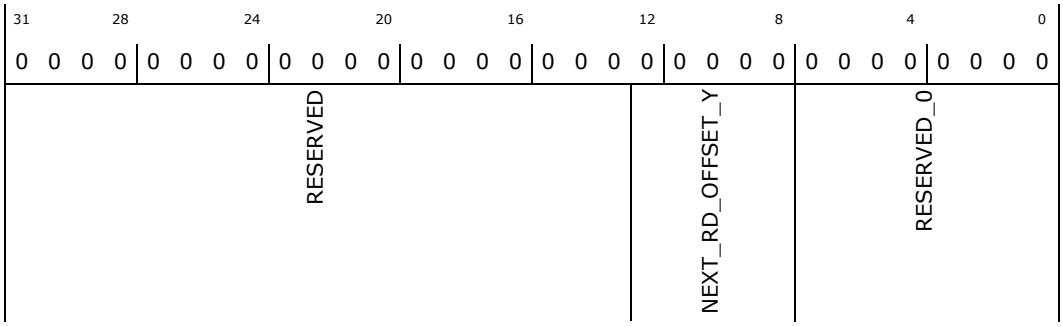
4.3.111 PCPSXHS_NBP—Offset 6D10Ch

Next Block Params Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6D10Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).

Bit Range	Default & Access	Field Name (ID): Description
12:8	0x0 RW	**Next_RD_OFFSET_Y (NEXT_RD_OFFSET_Y):** 1: Offset(mag) should be subtracted. 0:offset(mag) should be added
7:0	0x0 RO	**RESERVED_0:** (read only).

4.3.112 PCPSXHS_ISF—Offset 6D110h

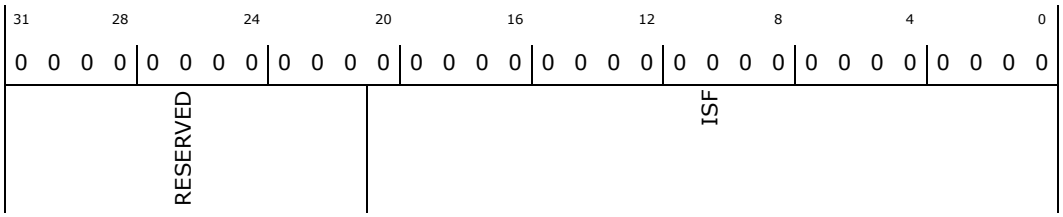
Inverse Scale Factor Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D110h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:21	0x0 RO	**RESERVED:** (read only).
20:0	0x0 RW	**ISF:** Inverse Scale Factor. The format is 5.16 For Example, If the scaling Ratio is 4/7, the inverse scale factor is 7/4.

4.3.113 PCPSXHS_PC—Offset 6D114h

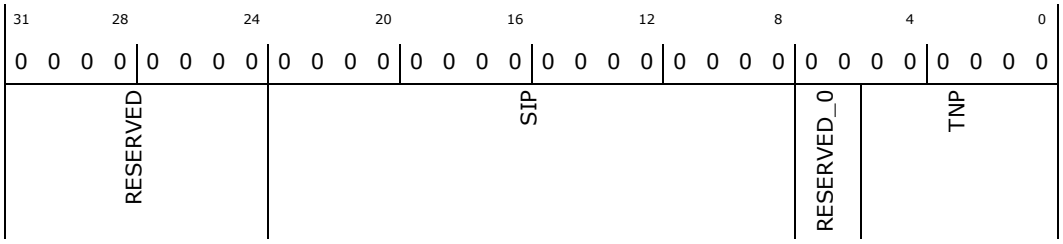
Phase Configuration Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D114h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** (read only).
23:8	0x0 RW	**SIP:** Scaled Initial Phase for the first pixel of every frame. This needs to be programmed to initial phase. The format of the SIP field is 0.16. Usage NOTE: While this field is technically programmable, the horizontal SIP does not change during regular usage. To Reduce validation overhead the only value of SIP tested is 0x7c00. This is the only value that should be programmed by SW.
7:6	0x0 RO	**RESERVED_0:** (read only).
5:0	0x0 RW	**TNP:** Total number of phases used in the filter bank. The horizontal scaler provides a max of 32 phases.

4.3.114 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXHS_PM)—Offset 6D200h

Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 128 bits) **Offset:** 6D200h

Default: 00000000000000000000000000000000h

Bit Range	Default & Access	Field Name (ID): Description
127:108	0x0 RO	**RESERVED:** Reserved.
107:96	0x0 RO	**C8:** Co efficient 8
95:84	0x0 RO	**C7:** Co efficient 7
83:72	0x0 RO	**C6:** Co efficient 6
71:60	0x0 RO	**C5:** Co efficient 5-First 4 bits
59:48	0x0 RO	**C4:** Co efficient 4
47:36	0x0 RO	**C3:** Co efficient 3
35:24	0x0 RO	**C2:** Co efficient 2-First Half
23:12	0x0 RO	**C1:** Co efficient 1
11:0	0x0 RO	**C0:** Co efficient 0

4.3.115 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXHS_APM)—Offset 6D300h

Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 128 bits) **Offset:** 6D300h

Default: 00000000000000000000000000000000h

Bit Range	Default & Access	Field Name (ID): Description
127:108	0x0 RO	**RESERVED:** Reserved.
107:96	0x0 RO	**C8:** Co efficient 8
95:84	0x0 RO	**C7:** Co efficient 7
83:72	0x0 RO	**C6:** Co efficient 6
71:60	0x0 RO	**C5:** Co efficient 5-First 4 bits
59:48	0x0 RO	**C4:** Co efficient 4
47:36	0x0 RO	**C3:** Co efficient 3
35:24	0x0 RO	**C2:** Co efficient 2-First Half
23:12	0x0 RO	**C1:** Co efficient 1
11:0	0x0 RO	**C0:** Co efficient 0

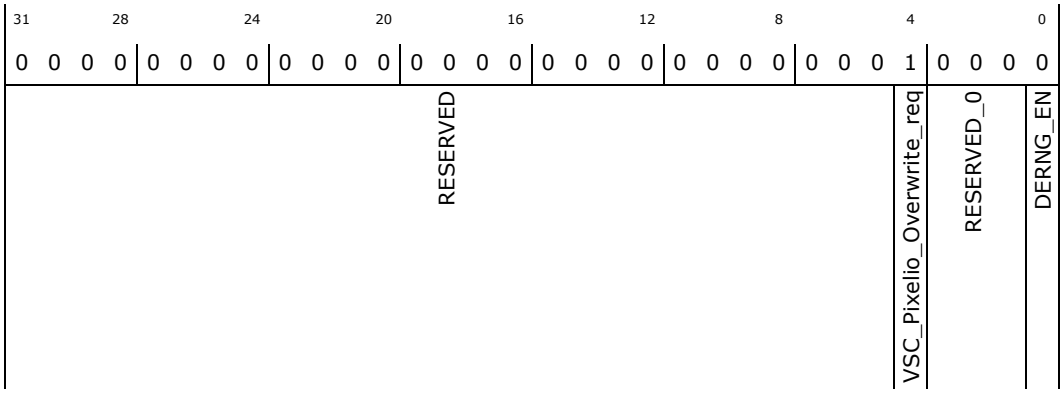
4.3.116 PCPSXVS_CTRL—Offset 6D500h

VSC Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6D500h

Default: 00000010h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RO	**RESERVED:** (read only).
4	0x1 RW	**VSC_Pixelio_Overwrite_req:** Chicken bit: When this bit is set to 1, logic for controlling row incremental information update timing inside pixelio will overwrite pixel request signal.
3:1	0x0 RO	**RESERVED_0:** (read only).
0	0x0 RW	**DERNG_EN:** 1: Enable check and removal ringing pixels. 0:disable checking and removing pixels.

4.3.117 PCPSXVS_H—Offset 6D504h

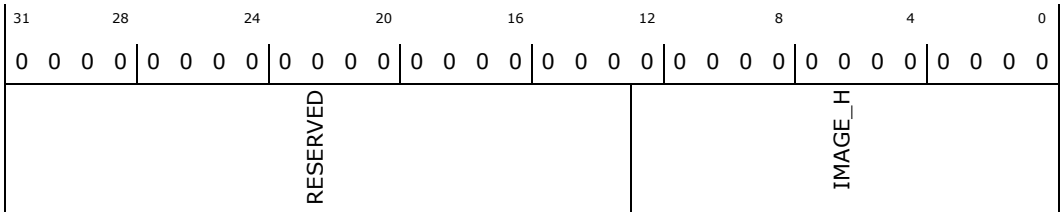
VSC Height Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D504h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:0	0x0 RW	**IMAGE_H:** Image Height in terms of pixels. This must match the source height specified for the plane

4.3.118 PCPSXVS_W—Offset 6D508h

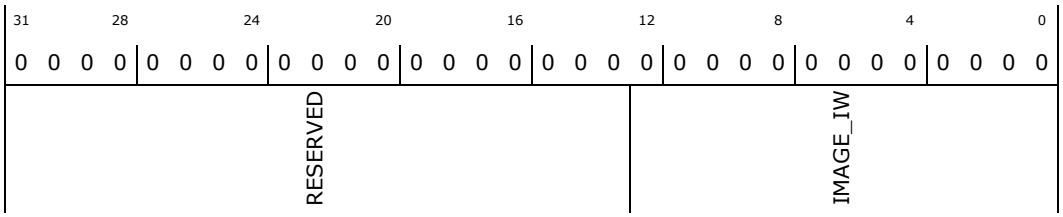
VSC Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D508h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:0	0x0 RW	**IMAGE_IW:** Image input width

4.3.119 PCPSXVS_ISF—Offset 6D510h

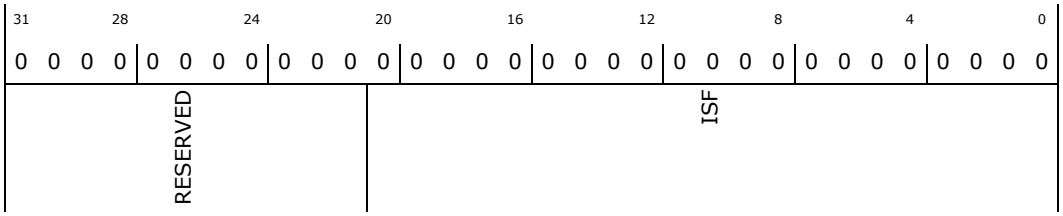
Inverse Scale Factor Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D510h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:21	0x0 RO	**RESERVED:** (read only).
20:0	0x0 RW	**ISF:** Inverse Scale Factor. The format is 5.16 For Example, If the scaling Ratio is 4/7, the inverse scale factor is 7/4.

4.3.120 PCPSXVS_PC—Offset 6D514h

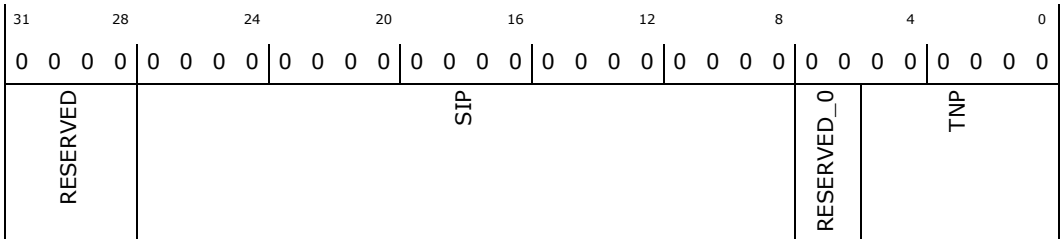
Phase Configuration Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D514h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** (read only).
27:8	0x0 RW	**SIP:** Scaled Initial Phase for the first pixel of every frame. This needs to be programmed to initial phase. The format of the SIP field is 4.16. For up scaling case, SIP should be smaller than 0x10000, for downscaling case to reduce validation overhead SIP is limited smaller than 0x40000.
7:6	0x0 RO	**RESERVED_0:** (read only).
5:0	0x0 RW	**TNP:** Total number of phases used in the filter bank. The vertical scaler provides a max of 32 phases.

4.3.121 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXVS_PM)—Offset 6D600h

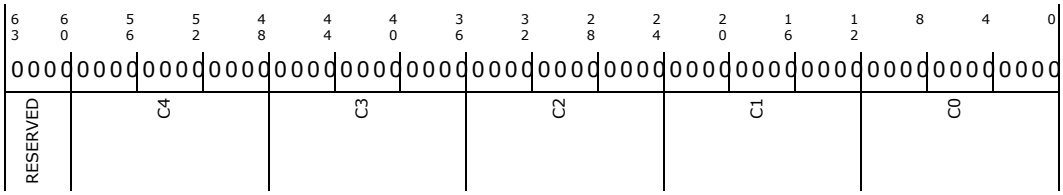
Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 64 bits)

Offset: 6D600h

Default: 0000000000000000h



Bit Range	Default & Access	Field Name (ID): Description
63:60	0x0 RO	**C5 (RESERVED):** RESERVED
59:48	0x0 RO	**C4:** Co efficient 4

Bit Range	Default & Access	Field Name (ID): Description
47:36	0x0 RO	**C3:** Co efficient 3
35:24	0x0 RO	**C2:** Co efficient 2-First Half
23:12	0x0 RO	**C1:** Co efficient 1
11:0	0x0 RO	**C0:** Co efficient 0

4.3.122 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXVS_APM)—Offset 6D700h

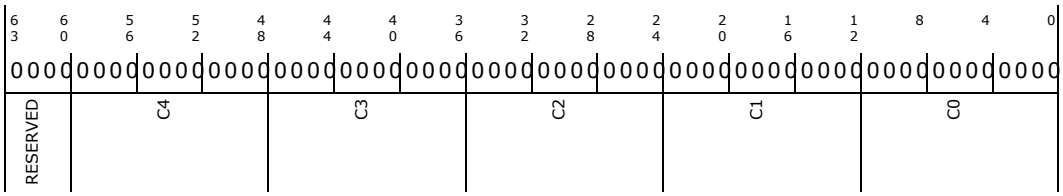
Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 64 bits)

Offset: 6D700h

Default: 0000000000000000h



Bit Range	Default & Access	Field Name (ID): Description
63:60	0x0 RO	**C5 (RESERVED):** RESERVED
59:48	0x0 RO	**C4:** Co efficient 4
47:36	0x0 RO	**C3:** Co efficient 3
35:24	0x0 RO	**C2:** Co efficient 2-First Half
23:12	0x0 RO	**C1:** Co efficient 1
11:0	0x0 RO	**C0:** Co efficient 0

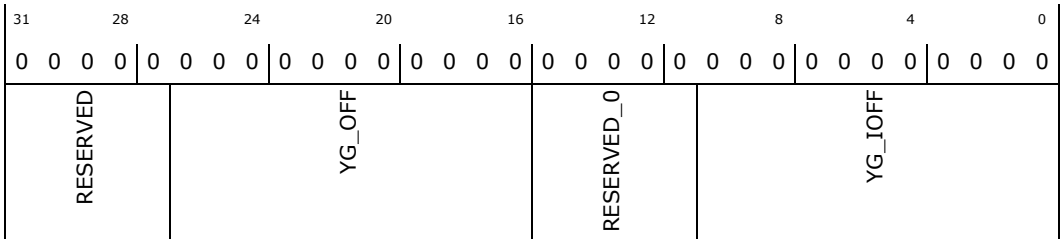
4.3.123 SPCSCYGOFF_C—Offset 6D900h

Sprite C CSC Y/G Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6D900h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**YG_OFF:** 2's Complement output offset for Y/G
15:11	0x0 RW	**RESERVED_0:** Reserved.
10:0	0x0 RW	**YG_IOFF:** 2's Complement signed input offset for Y/G

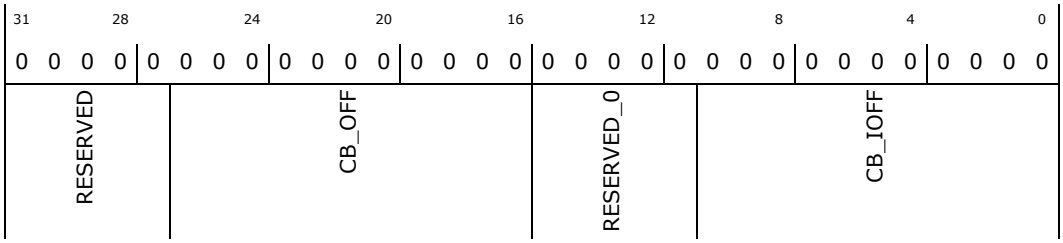
4.3.124 SPCSCCBOFF_C—Offset 6D904h

Sprite C CSC cb/B Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6D904h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**CB_OFF:** 2's Complement signed output offset for Cb/B
15:11	0x0 RW	**RESERVED_0:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
10:0	0x0 RW	**CB_IOFF:** 2's Complement signed input offset for Cb/B

4.3.125 SPCSCCROFF_C—Offset 6D908h

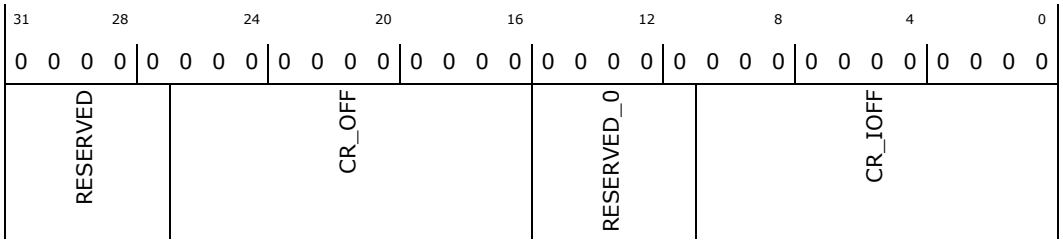
Sprite C CSC Cr/R Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D908h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**CR_OFF:** 2's Complement output offset for Cr/R
15:11	0x0 RO	**RESERVED_0:** Reserved.
10:0	0x0 RW	**CR_IOFF:** 2's Complement signed input offset for Cr/R

4.3.126 SPCSCC01_C—Offset 6D90Ch

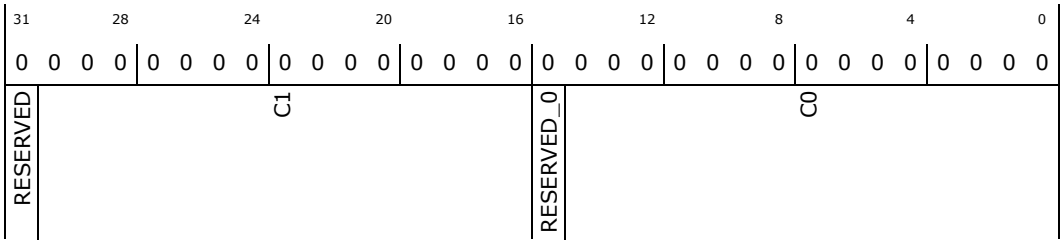
Sprite C CSC Coefficient01 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D90Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** (read only).
30:16	0x0 RW	**C1:** 2's Complement output offset for C1
15	0x0 RO	**RESERVED_0:** Reserved.
14:0	0x0 RW	**C0:** 2's Complement signed input offset for C0

4.3.127 SPCSCC23_C—Offset 6D910h

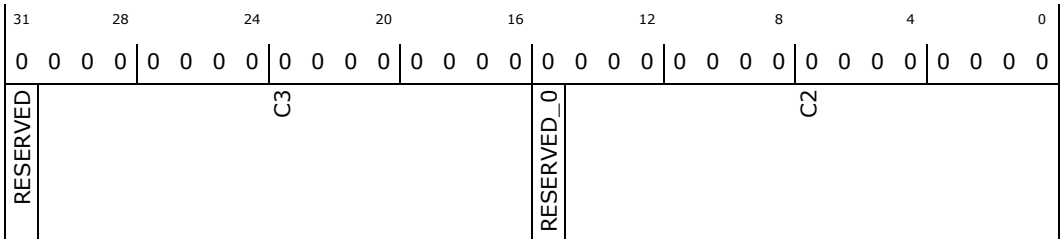
Sprite C CSC Coefficient23 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D910h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** (read only).
30:16	0x0 RW	**C3:** 2's Complement output offset for C3
15	0x0 RO	**RESERVED_0:** Reserved.
14:0	0x0 RW	**C2:** 2's Complement signed input offset for C2

4.3.128 SPCSCC45_C—Offset 6D914h

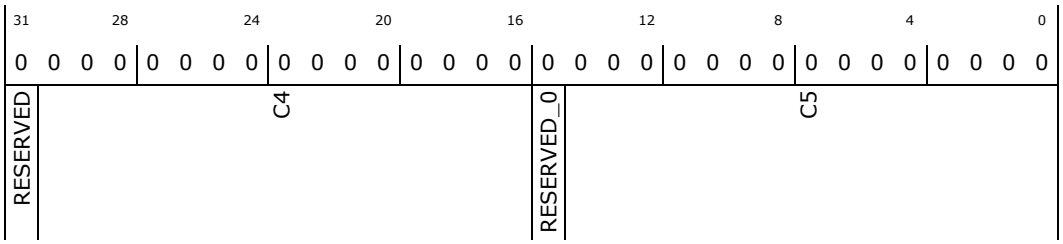
Sprite C CSC Coefficient45 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D914h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** (read only).
30:16	0x0 RW	**C4:** 2's Complement output offset for C4
15	0x0 RO	**RESERVED_0:** Reserved.
14:0	0x0 RW	**C5:** 2's Complement signed input offset for C5

4.3.129 SPCSCC67_C—Offset 6D918h

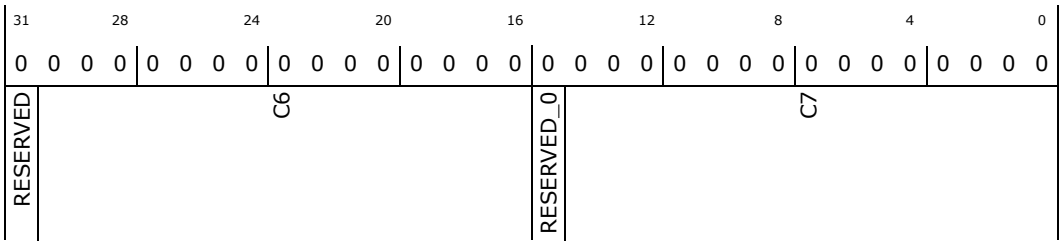
Sprite C CSC Coefficient67 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D918h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** (read only).

Bit Range	Default & Access	Field Name (ID): Description
30:16	0x0 RW	**C6:** 2's Complement output offset for C6
15	0x0 RO	**RESERVED_0:** Reserved.
14:0	0x0 RW	**C7:** 2's Complement signed input offset for C7

4.3.130 SPCSCC8_C—Offset 6D91Ch

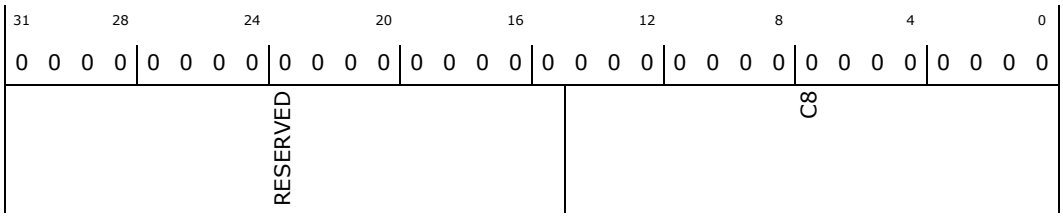
Sprite C CSC Coefficient8 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D91Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:15	0x0 RO	**RESERVED:** (read only).
14:0	0x0 RW	**C8:** 2's Complement output offset for C1

4.3.131 SPCSCYGICLAMP_C—Offset 6D920h

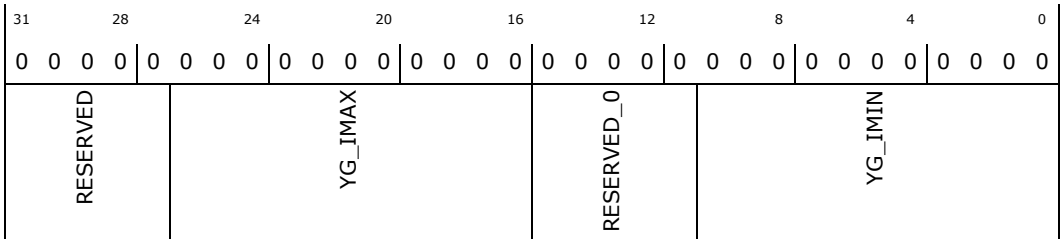
Sprite C CSC Y/G input clamping Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D920h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**YG_IMAX:** 2's Complement signed output offset for Y/G Input Max Value
15:11	0x0 RW	**RESERVED_0:** Reserved.
10:0	0x0 RW	**YG_IMIN:** 2's Complement signed input offset for YG_IMIN

4.3.132 SPCSCCBICLAMP_C—Offset 6D924h

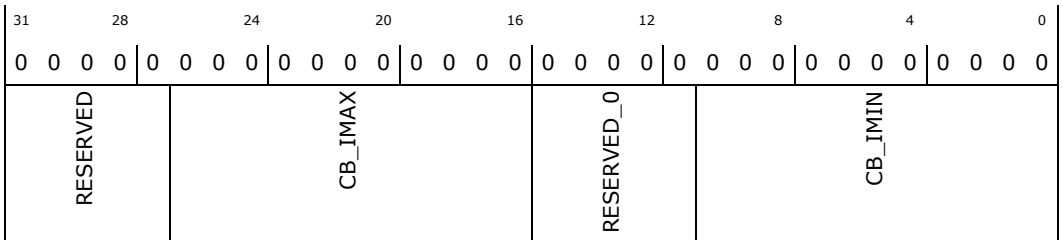
Sprite C CSC Cb/B Input Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D924h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**CB_IMAX:** 2's Complement signed output offset for CbIMAN
15:11	0x0 RO	**RESERVED_0:** Reserved.
10:0	0x0 RW	**CB_IMIN:** 2's Complement signed input offset for Cb/B

4.3.133 SPCSCCRICLAMP_C—Offset 6D928h

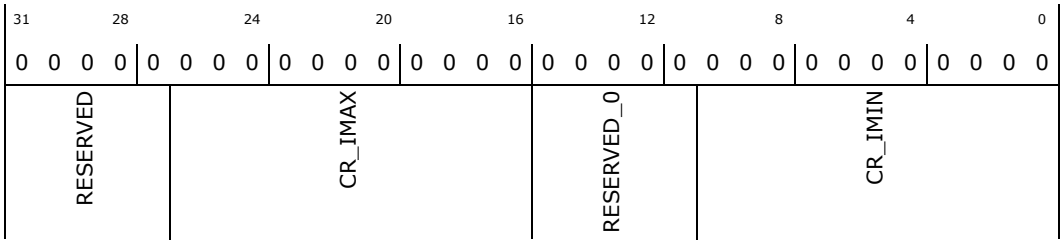
Sprite C CSC Cr/R Input Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D928h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**CR_IMAX:** 2's Complement signed output offset for CrIMAN
15:11	0x0 RO	**RESERVED_0:** Reserved.
10:0	0x0 RW	**CR_IMIN:** 2's Complement signed input offset for Cr/R

4.3.134 SPCSCYGOCLAMP_C—Offset 6D92Ch

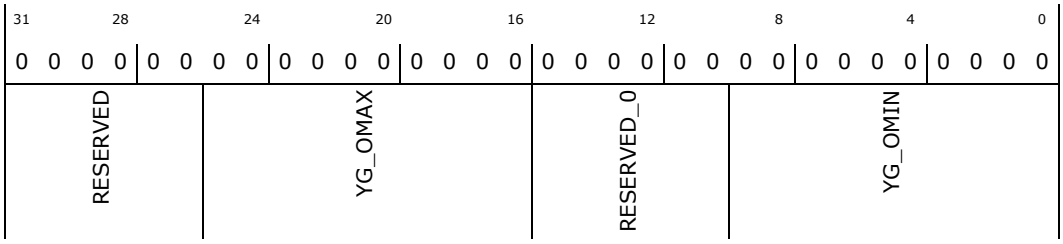
Sprite C CSC Y/G output Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D92Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED:** (read only).
25:16	0x0 RW	**YG_OMAX:** unsigned output offset for YGOMAX
15:10	0x0 RO	**RESERVED_0:** Reserved.
9:0	0x0 RW	**YG_OMIN:** unsigned output offset for YG

4.3.135 SPCSCCBOCLAMP_C—Offset 6D930h

Sprite C CSC Cb/B output Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D930h

Default: 00000000h

Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED:** (read only).
25:16	0x0 RW	**CB_OMAX:** unsigned output offset for CbOMAN
15:10	0x0 RO	**RESERVED_0:** Reserved.
9:0	0x0 RW	**CB_OMIN:** unsigned input offset for CbOMIN

4.3.136 SPCSCCROCLAMP_C—Offset 6D934h

Sprite C CSC Cr/R output Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6D934h

Default: 00000000h

Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED:** (read only).

Bit Range	Default & Access	Field Name (ID): Description
25:16	0x0 RW	**CR_OMAX:** unsigned output offset for CrOMAN
15:10	0x0 RO	**RESERVED_0:** Reserved.
9:0	0x0 RW	**CR_OMIN:** unsigned input offset for CrOMIN

4.3.137 PCPSXCONFIG (PCPSXCONFIG_SPR)—Offset 6E000h

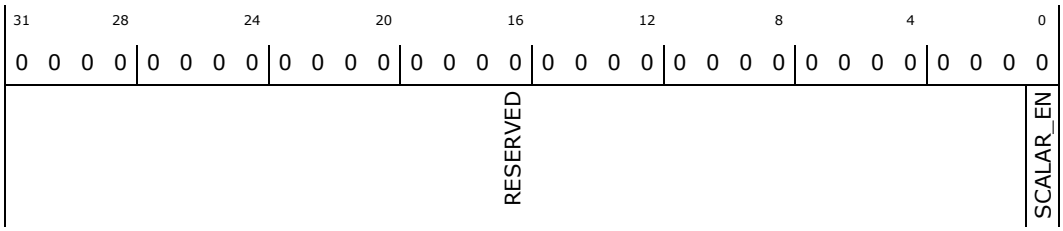
Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:1	0x0 RO	**RESERVED:** (read only).
0	0x0 RW	**SCALAR_EN:** 0=Perform Scaling per programmed parameters. 1=bypass horizontal and vertical scalers. Other programmed parameters have no effect in this case

4.3.138 PCPSXHS_H (PCPSXHS_SPR_H)—Offset 6E104h

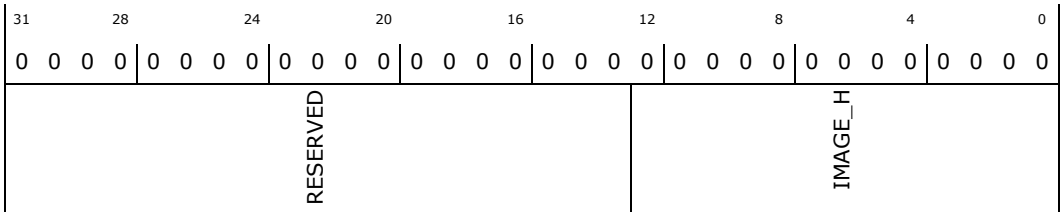
HSC Height Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E104h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:0	0x0 RW	**IMAGE_H:** Image Height in terms of pixels. This must match the source height specified for the plane

4.3.139 PCPSXHS_W (PCPSXHS_SPR_W)—Offset 6E108h

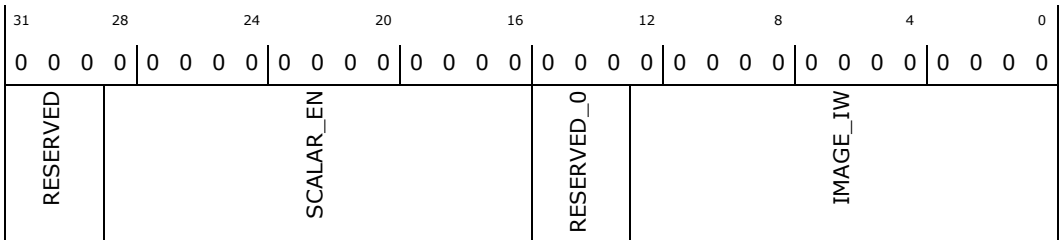
HSC Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E108h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:29	0x0 RO	**RESERVED:** (read only).
28:16	0x0 RW	**IMAGE_OW (SCALAR_EN):** Image Output Width in terms of pixels.
15:13	0x0 RO	**RESERVED_0:** (read only).
12:0	0x0 RW	**IMAGE_IW:** Image input width

4.3.140 PCPSXHS_NBP (PCPSXHS_SPR_NBP)—Offset 6E10Ch

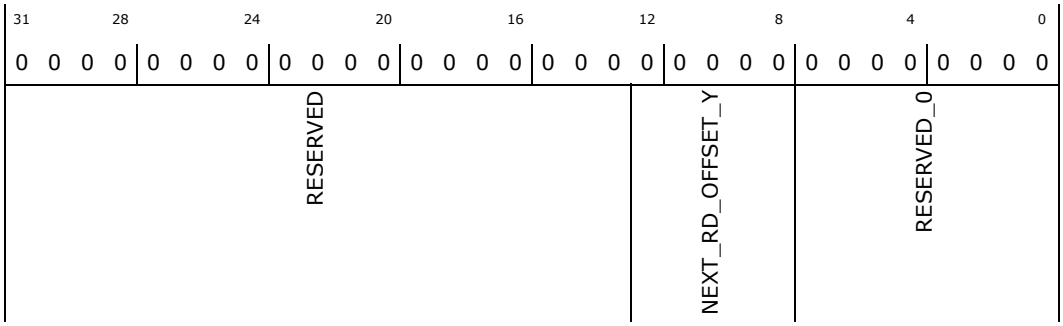
Next Block Params Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E10Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:8	0x0 RW	**Next_RD_OFFSET_Y (NEXT_RD_OFFSET_Y):** 1: Offset(mag) should be subtracted. 0:offset(mag) should be added
7:0	0x0 RO	**RESERVED_0:** (read only).

4.3.141 PCPSXHS_ISF (PCPSXHS_SPR_ISF)—Offset 6E110h

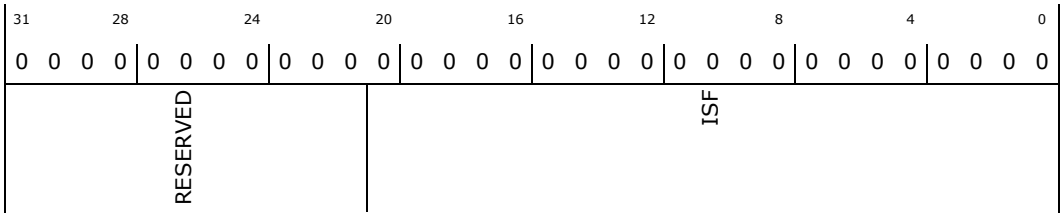
Inverse Scale Factor Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E110h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:21	0x0 RO	**RESERVED:** (read only).
20:0	0x0 RW	**ISF:** Inverse Scale Factor. The format is 5.16 For Example, If the scaling Ratio is 4/7, the inverse scale factor is 7/4.

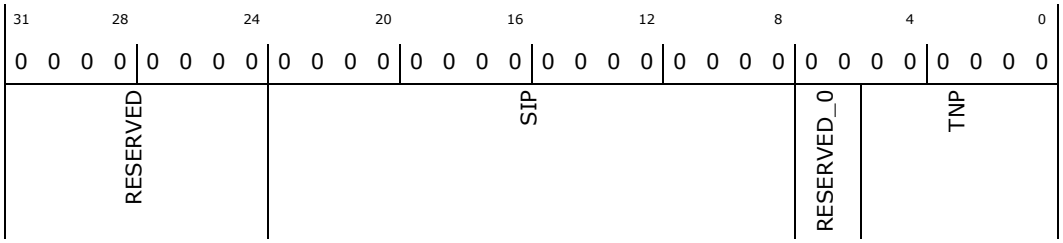
4.3.142 PCPSXHS_PC (PCPSXHS_SPR_PC)—Offset 6E114h

Phase Configuration Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E114h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** (read only).
23:8	0x0 RW	**SIP:** Scaled Initial Phase for the first pixel of every frame. This needs to be programmed to initial phase. The format of the SIP field is 0.16. Usage NOTE: While this field is technically programmable, the horizontal SIP does not change during regular usage. To Reduce validation overhead the only value of SIP tested is 0x7c00. This is the only value that should be programmed by SW.
7:6	0x0 RO	**RESERVED_0:** (read only).
5:0	0x0 RW	**TNP:** Total number of phases used in the filter bank. The horizontal scaler provides a max of 32 phases.

4.3.143 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXHS_SPR_PM)—Offset 6E200h

Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 128 bits) **Offset:** 6E200h

Default: 00000000000000000000000000000000h

Bit Range	Default & Access	Field Name (ID): Description
127:108	0x0 RO	**RESERVED:** Reserved.
107:96	0x0 RO	**C8:** Co efficient 8
95:84	0x0 RO	**C7:** Co efficient 7
83:72	0x0 RO	**C6:** Co efficient 6
71:60	0x0 RO	**C5:** Co efficient 5-First 4 bits

Bit Range	Default & Access	Field Name (ID): Description
59:48	0x0 RO	**C4:** Co efficient 4
47:36	0x0 RO	**C3:** Co efficient 3
35:24	0x0 RO	**C2:** Co efficient 2-First Half
23:12	0x0 RO	**C1:** Co efficient 1
11:0	0x0 RO	**C0:** Co efficient 0

4.3.144 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXHS_SPR_APM)—Offset 6E300h

Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 128 bits)

Offset: 6E300h

Default: 00000000000000000000000000000000h

Bit Range	Default & Access	Field Name (ID): Description
127:108	0x0 RO	**RESERVED:** Reserved.
107:96	0x0 RO	**C8:** Co efficient 8
95:84	0x0 RO	**C7:** Co efficient 7
83:72	0x0 RO	**C6:** Co efficient 6
71:60	0x0 RO	**C5:** Co efficient 5-First 4 bits
59:48	0x0 RO	**C4:** Co efficient 4
47:36	0x0 RO	**C3:** Co efficient 3
35:24	0x0 RO	**C2:** Co efficient 2-First Half
23:12	0x0 RO	**C1:** Co efficient 1
11:0	0x0 RO	**C0:** Co efficient 0

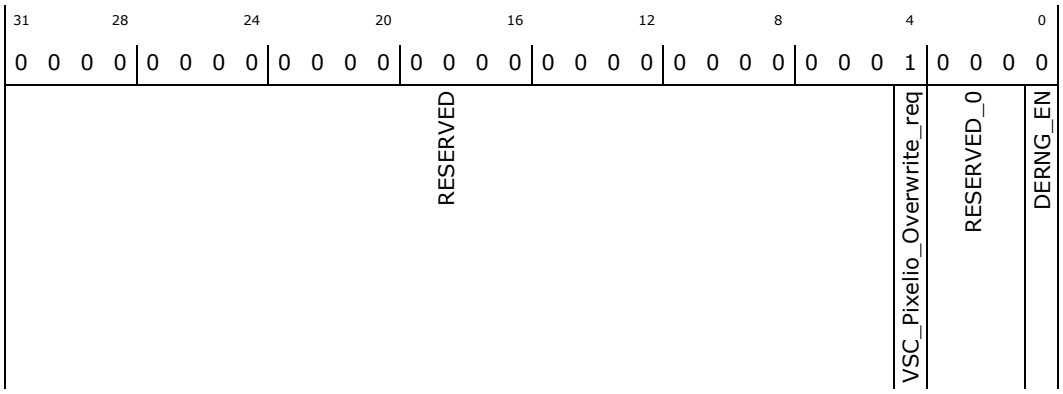
4.3.145 PCPSXVS_SPR_CTRL—Offset 6E500h

VSC Control Register FOR SPRITE

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E500h

Default: 00000010h



Bit Range	Default & Access	Field Name (ID): Description
31:5	0x0 RO	**RESERVED:** (read only).
4	0x1 RW	**VSC_Pixelio_Overwrite_req:** Chicken bit: When this bit is set to 1, logic for controlling row incremental information update timing inside pixelio will overwrite pixel request signal.
3:1	0x0 RO	**RESERVED_0:** (read only).
0	0x0 RW	**DERNG_EN:** 1: Enable check and removal ringing pixels. 0:disable checking and removing pixels.

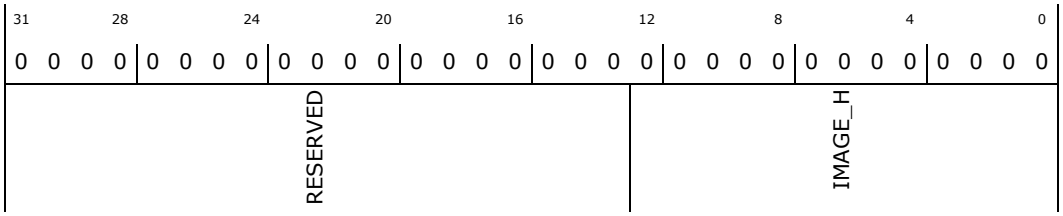
4.3.146 PCPSXVS_H (PCPSXVS_SPR_H)—Offset 6E504h

VSC Height Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E504h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:0	0x0 RW	**IMAGE_H:** Image Height in terms of pixels. This must match the source height specified for the plane

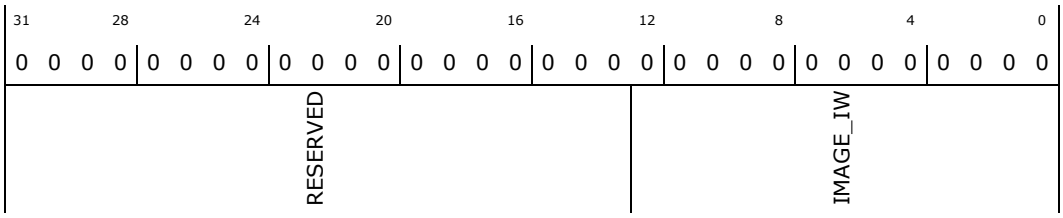
4.3.147 PCPSXVS_W (PCPSXVS_SPR_W)—Offset 6E508h

VSC Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E508h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:13	0x0 RO	**RESERVED:** (read only).
12:0	0x0 RW	**IMAGE_IW:** Image input width

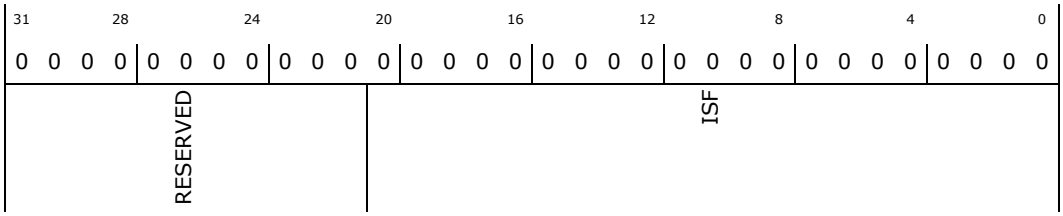
4.3.148 PCPSXVS_ISF (PCPSXVS_SPR_ISF)—Offset 6E510h

Inverse Scale Factor Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E510h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:21	0x0 RO	**RESERVED:** (read only).
20:0	0x0 RW	**ISF:** Inverse Scale Factor. The format is 5.16 For Example, If the scaling Ratio is 4/7, the inverse scale factor is 7/4.

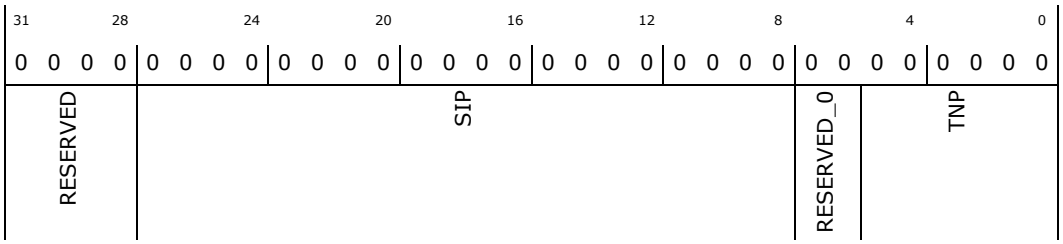
4.3.149 PCPSXVS_PC (PCPSXVS_SPR_PC)—Offset 6E514h

Phase Configuration Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E514h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** (read only).
27:8	0x0 RW	**SIP:** Scaled Initial Phase for the first pixel of every frame. This needs to be programmed to initial phase. The format of the SIP field is 4.16. For up scaling case, SIP should be smaller than 0x10000, for downscaling case to reduce validation overhead SIP is limited smaller than 0x40000.
7:6	0x0 RO	**RESERVED_0:** (read only).
5:0	0x0 RW	**TNP:** Total number of phases used in the filter bank. The vertical scaler provides a max of 32 phases.

4.3.150 PCPSX HSC PolyPhase YCbCr Co efficient Memory (PCPSXVS_SPR_PM)—Offset 6E600h

Config Register

Access Method

Type: Memory Mapped I/O Register (Size: 64 bits) **Offset:** 6E600h

Default: 0000000000000000h

14:0	0x0 RW	**C2:** 2's Complement signed input offset for C2

4.3.157 SPCSCC45_D—Offset 6E914h

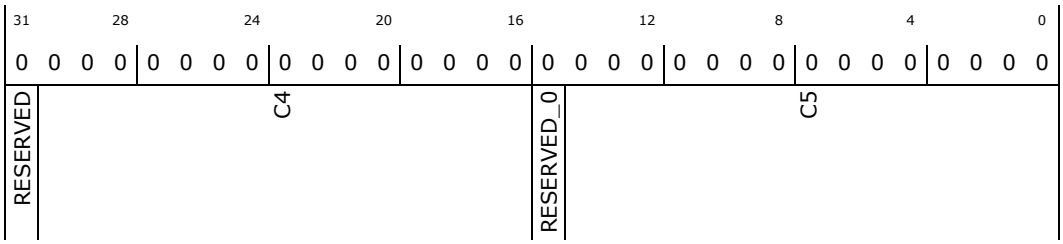
Sprite D CSC Coefficient45 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E914h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** (read only).
30:16	0x0 RW	**C4:** 2's Complement output offset for C4
15	0x0 RO	**RESERVED_0:** Reserved.
14:0	0x0 RW	**C5:** 2's Complement signed input offset for C5

4.3.158 SPCSCC67_D—Offset 6E918h

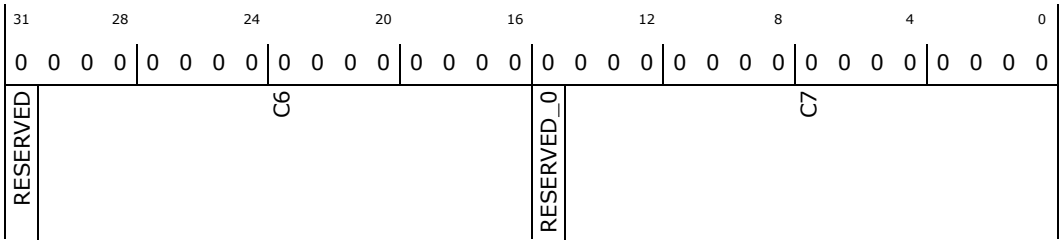
Sprite D CSC Coefficient67 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E918h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** (read only).
30:16	0x0 RW	**C6:** 2's Complement output offset for C6
15	0x0 RO	**RESERVED_0:** Reserved.
14:0	0x0 RW	**C7:** 2's Complement signed input offset for C7

4.3.159 SPCSCC8_D—Offset 6E91Ch

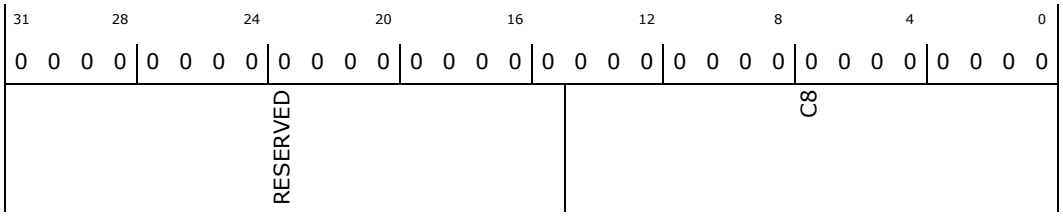
Sprite D CSC Coefficient8 Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E91Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:15	0x0 RO	**RESERVED:** (read only).
14:0	0x0 RW	**C8:** 2's Complement output offset for C1

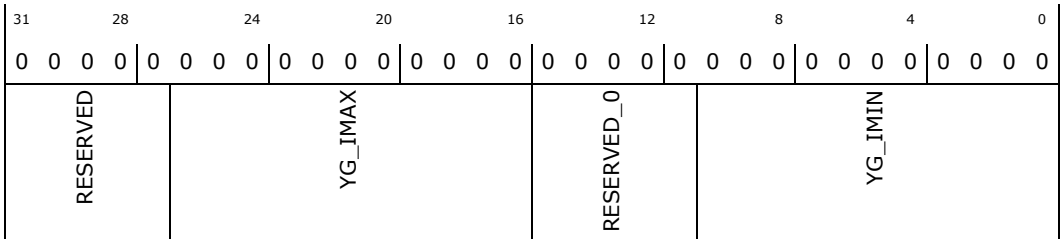
4.3.160 SPCSCYGICLAMP_D—Offset 6E920h

Sprite D CSC Y/G input clamping Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E920h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**YG_IMAX:** 2's Complement signed output offset for Y/G Input Max Value
15:11	0x0 RO	**RESERVED_0:** Reserved.
10:0	0x0 RW	**YG_IMIN:** 2's Complement signed input offset for YG_IMIN

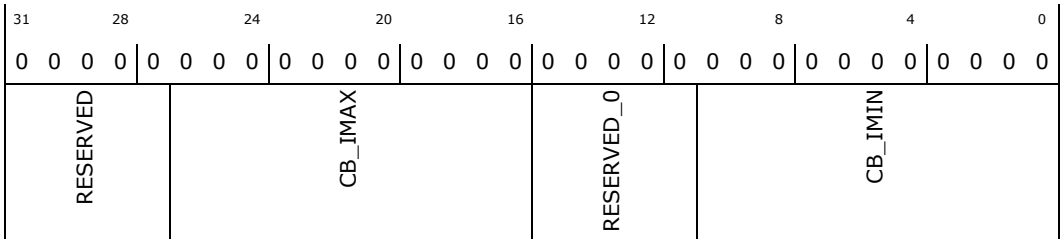
4.3.161 SPCSCCBICLAMP_D—Offset 6E924h

Sprite D CSC Cb/B Input Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 6E924h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**CB_IMAX:** 2's Complement signed output offset for CbIMAN
15:11	0x0 RO	**RESERVED_0:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
10:0	0x0 RW	**CB_IMIN:** 2's Complement signed input offset for Cb/B

4.3.162 SPCSCCRICLAMP_D—Offset 6E928h

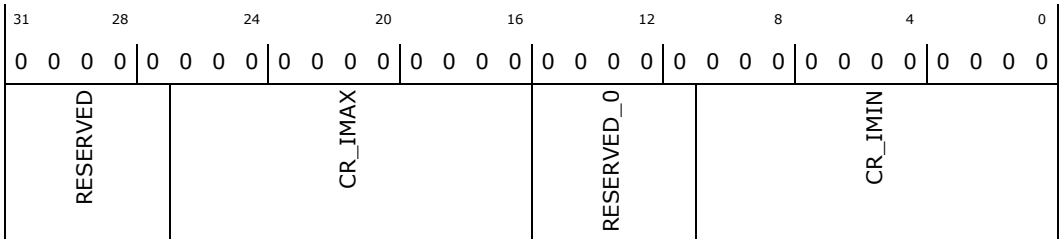
Sprite D CSC Cr/R Input Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E928h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** (read only).
26:16	0x0 RW	**CR_IMAX:** 2's Complement signed output offset for CrIMAN
15:11	0x0 RO	**RESERVED_0:** Reserved.
10:0	0x0 RW	**CR_IMIN:** 2's Complement signed input offset for Cr/R

4.3.163 SPCSCYGOCLAMP_D—Offset 6E92Ch

Sprite D CSC Y/G output Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E92Ch

Default: 00000000h

Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED:** (read only).
25:16	0x0 RW	**YG_OMAX:** unsigned output offset for YGOMAX
15:10	0x0 RO	**RESERVED_0:** Reserved.
9:0	0x0 RW	**YG_OMIN:** unsigned output offset for YG

4.3.164 SPCSCCBOCLAMP_D—Offset 6E930h

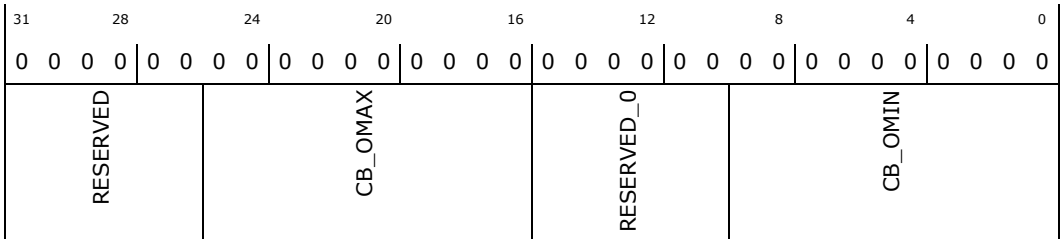
Sprite D CSC Cb/B output Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E930h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED:** (read only).
25:16	0x0 RW	**CB_OMAX:** unsigned output offset for CbOMAN
15:10	0x0 RO	**RESERVED_0:** Reserved.
9:0	0x0 RW	**CB_OMIN:** unsigned input offset for CbOMIN

4.3.165 SPCSCCROCLAMP_D—Offset 6E934h

Sprite D CSC Cr/R output Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 6E934h

Default: 00000000h

Bit Range	Default & Access	Field Name (ID): Description
31:26	0x0 RO	**RESERVED:** (read only).
25:16	0x0 RW	**CR_OMAX:** unsigned output offset for CrOMAN
15:10	0x0 RO	**RESERVED_0:** Reserved.
9:0	0x0 RW	**CR_OMIN:** unsigned input offset for CrOMIN

4.3.166 PIPEA_DSL—Offset 70000h

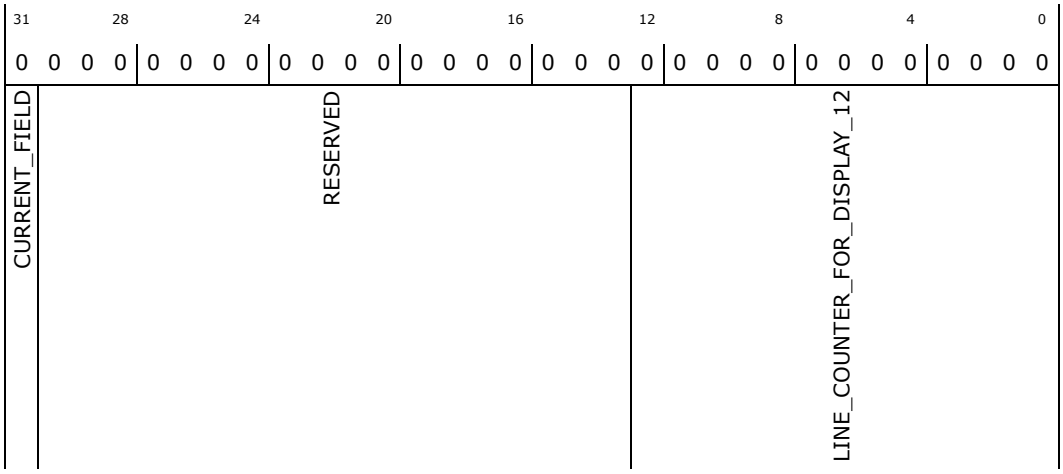
Pipe A Display Scan Line

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70000h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**CURRENT_FIELD:** Provides read back of the current field being displayed on display pipe A. Non-TV mode: 0 = first field (odd field) 1 = second field (even field) TV mode: 1 = first field (odd field) 0 = second field (even field) [DevBW] and [DevCL] Reserved: Read only.
30:13	0x0 RO	**RESERVED:** Read only.
12:0	0x0 RO	**LINE_COUNTER_FOR_DISPLAY_12:** 0]: Provides read back of the display pipe A vertical line counter. This is an indication of the current display scan line to be used by software to synchronize with the display.

4.3.167 PIPEA_SLC—Offset 70004h

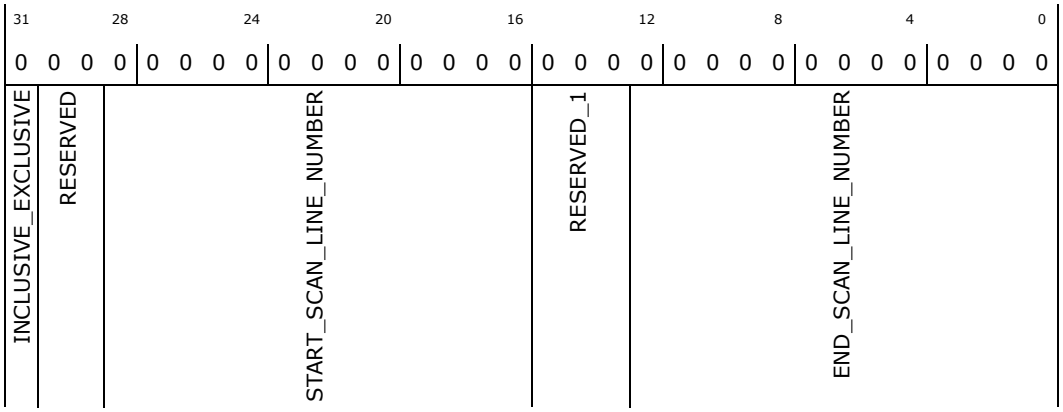
Pipe A Display Scan Line Count Range Compare

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70004h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**INCLUSIVE_EXCLUSIVE:** 1 = Inclusive: within the range. 0 = Exclusive: outside of the range.
30:29	0x0 RO	**RESERVED:** Read only.
28:16	0x0 RW	**START_SCAN_LINE_NUMBER:** This field specifies the starting scan line number of the Scan Line Window. Format = U16 in scan lines, where scan line 0 is the first line of the display frame. Range = [0,Display Buffer height in lines-1]. [DevBW, DevCL] End Scan Line Number: This field specifies the ending scan line number of the Scan Line Window. Format = U16 in scan lines, where scan line 0 is the first line of the display frame. Range = [0, Display Buffer height in lines-1].
15:13	0x0 RO	**RESERVED_1:** Read only.
12:0	0x0 RW	**END_SCAN_LINE_NUMBER:** This field specifies the ending scan line number of the Scan Line Window. Format = U16 in scan lines, where scan line 0 is the first line of the display frame. Range = [0, Display Buffer height in lines-1]. [DevBW] and [DevCL] Start Scan Line Number: This field specifies the starting scan line number of the Scan Line Window. Format = U16 in scan lines, where scan line 0 is the first line of the display frame. Range = [0,Display Buffer height in lines-1].

4.3.168 PIPEACONF—Offset 70008h

Pipe A Configuration Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70008h

Default: 00000000h

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

PIPE_A_ENABLE	PIPE_STATE	DSI_PLL_LOCK_LOCK	FRAME_START_DELAY				DISPLAY_PORT_AUDIO_ONLY_MODE			FORCE_BORDER	PIPE_A_GAMMA_UNIT_MODE			INTERLACED_MODE			MIPI_DISPLAY_SELF_REFRESH_MODE_FOR_MIPI_A_REFRESH	DISPLAY_OVERLAY_PLANES_OFF		CURSOR_PLANES_OFF	REFRESH_RATE_CXSR_MODE_ASSOCIATION		COLOR_CORRECTION_MATRIX_ENABLE_ON_PIPE_A_1_COLOR_CORRECTION_COEFFICIENTS_ARE_ENABLED_TO_PERFORM_COLOR_CORRECTION_0_COLOR_CORRECTION_COEFFICIENTS_ARE_DISABLED_		DISPLAYPORT_POWER_MODE_SWITCH_DEVVLVP	COLOR_RANGE_SELECT	S3D_SPRITE_ORDER	S3D_SPRITE_INTERLEAVING_FORMAT		RESERVED		BITS_PER_COLOR			DITHERING_ENABLE	DITHERING_TYPE		DDA_RESET_TEST_MODE	RESERVED_1

Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PIPE_A_ENABLE:** Setting this bit to the value of one, turns on pipe A. This must be done before any planes are enabled on this pipe. Changing it to a zero should only be done when all planes that are assigned to this pipe have been disabled. Turning the pipe enable bit off disables the timing generator in this pipe. Plane disable occurs after the next VBLANK event after the plane is disabled. Synchronization pulses to the display are not maintained if the timing generator is disabled. Power consumption will be at it s lowest state when disabled. A separate bit controls the DPLL enable for this pipe. Pipe timing registers should contain valid values before this bit is enabled. 0 = Disable 1 = Enable
30	0x0 RO	**PIPE_STATE:** This bit indicates the actual state of the pipe. Since there can be some delay between disabling the pipe and the pipe actually shutting off, this bit indicates the true current state of the pipe. 0 = Disabled 1 = Enabled AccessType: Read Only
29	0x0 RO	**DSI_PLL_LOCK_LOCK:** This bit indicates the clocks from DSI PLL are locked. 0 = Unlocked 1 = Locked AccessType: Read only
28:27	0x0 RW	**FRAME_START_DELAY:** (TEST MODE) Used to delay the frame start signal that is sent to the display planes. Normal operation uses the default 00 value and test modes can use the delayed frame start to shorten the test time. Care must be taken to insure that there are enough lines during VBLANK to support this setting. 00 = Frame Start occurs on the first HBLANK after the start of VBLANK 01 = Frame Start occurs on the second HBLANK after the start of VBLANK 10 = Frame Start occurs on the third HBLANK after the start of VBLANK 11 = Frame Start occurs on the forth HBLANK after the start of VBLANK
26	0x0 RW	**DISPLAY_PORT_AUDIO_ONLY_MODE:** Setting this bit to 1 indicates the DisplayPort will output audio only. 0 = DisplayPort will output Video or Video and Audio 1 = DisplayPort will output Audio only
25	0x0 RW	**FORCE_BORDER:** (TEST MODE)0 = Normal Operation 1 = Color information is ignored and border color is substituted during active region
24	0x0 RW	**PIPE_A_GAMMA_UNIT_MODE:** This bit selects which mode the pipe gamma correction logic works in. In the palette mode, it behaves as a 3X256x8 RAM lookup. Indexed mode operation should use the palette in 8-bit mode. In the 10-bit gamma mode, it will act as a piecewise linear interpolation. Other gamma units such as in the overlay or sprite are unaffected by this bit. 0 = 8-bit Palette Mode 1 = 10-bit Gamma Mode

Bit Range	Default & Access	Field Name (ID): Description
23:21	0x0 RW	**INTERLACED_MODE:** These bits are used for software control of interlaced behavior. They are updated immediately if the pipe is off, or in the vertical blank after programming if pipe is enabled. 0xx = Progressive 100 = Interlaced embedded panel using programmable vertical sync shift. (2x) 101 = Interlaced using vertical sync shift. Backup option to 110 setting. (2x) 110 = Interlaced with VSYNC/HSYNC Field Indication using legacy vertical sync shift. Used for SDVO. 111 = Interlaced with Field 0 Only using legacy vertical sync shift. Not used Setting the Interlaced embedded panel mode causes hardware to automatically modify the output to match the specifications of panels that support interlaced mode.
20	0x0 RW	**MIPI_DISPLAY_SELF_REFRESH_MODE_FOR_MIPI_A_REFRESH:** 0 = Normal Operation, display controller generate timing and refresh display panel at refresh rate 1 = Display self-refresh mode. Display controller update frame buffer in display module on demand only
19	0x0 RW	**DISPLAY_OVERLAY_PLANES_OFF:** This bit when set will cause all enabled Display and overlay planes that are assigned to this pipe to be disabled by overriding the current setting of the plane enable bit, at the next VBLANK. Timing signals continue as they were but the screen becomes blank. Setting the bit back to a zero will then allow the display and overlay planes to resume on the following VBLANK. 0 = Normal Operation 1 = Planes assigned to this pipe are disabled.
18	0x0 RW	**CURSOR_PLANES_OFF:** This bit when set will cause all enabled cursor planes that are assigned to this pipe to be disabled by overriding the current setting of the plane enable bit, at the next VBLANK. Timing signals continue as they were but the cursor(s) no longer appear on the screen. Setting the bit back to a zero will then allow the cursor planes to resume on the following VBLANK. 0 = Normal Operation 1 = Planes assigned to this pipe are disabled.
17:16	0x0 RW	**REFRESH_RATE_CXSR_MODE_ASSOCIATION:** These bits select how refresh rates are tied to big FIFO mode on pipe A. When they are set to anything other than 00, bits 23:21 of this register must be programmed to 0xx. Switching between 01 and 10 settings directly is not allowed. Software must program this field to 00 before switching. Software is responsible for enabling this mode only for integrated display panels that support corresponding mode. 00 Default no dynamic refresh rate change enabled. Software control only. 01 Progressive-to-progressive refresh rate change enabled and tied to big FIFO mode. Pixel clock values set in FPA0/FPA1 settings in the DPLLA control register and FPA0/FPA1 divider registers. FPA0 is tied to non-big-FIFO mode 10 Progressive-to-interlaced refresh rate change enabled and tied to big FIFO mode. Pixel clock value does not change in this case. Scaling must be disabled in this mode. Uses programmable VS shift 11 Reserved

Bit Range	Default & Access	Field Name (ID): Description
15	0x0 RW	**COLOR_CORRECTION_MATRIX_ENABLE_ON_PIPE_A_1_COLOR_CORRECTION_COEFFICIENTS_ARE_ENABLED_TO_PERFORM_COLOR_CORRECTION_0_COLOR_CORRECTION_COEFFICIENTS_ARE_DISABLED_:** Reserved.
14	0x0 RW	**DISPLAYPORT_POWER_MODE_SWITCH_DEVVLVP:** This bit selects the software controlled progressive to progressive power saving mode (software controlled DRRS). Hardware Controlled Refresh Rate Select must be disabled when enabling this. Link and data M/N 1 values are used for normal settings, M/N 2 values are used for low power settings. 0 Normal progressive refresh rate (default) 1 Low Power progressive refresh rate
13	0x0 RW	**COLOR_RANGE_SELECT:** : This bit is used to select the color range of RBG outputs. 0 = Apply full 0-255 color range to the output (Default) 1 = Apply 16-235 color range to the output
12	0x0 RW	**S3D_SPRITE_ORDER:** This bit controls the blending order of the sprite planes for S3D support: 0 = Sprite A first. The first line or pixel comes from Sprite A (default) 1 = Sprite B first. The first line or pixel comes from Sprite B
11:10	0x0 RW	**S3D_SPRITE_INTERLEAVING_FORMAT:** These bits control the Sprite A/B interleaving format in S3D mode 00 = No interleaving 01 = Line interleaving 10 = Pixel interleaving 11 = Reserved
9:8	0x0 RO	**RESERVED:** MBZ Scrambling enable [DevCTG]: This bit enables scrambling for DisplayPort. Software must set this bit appropriately when enabling a DisplayPort output. 00 = Scrambling disabled (Default) 01 = Scrambling enabled, no SR after initialization at loop 2 of training 10 - RESERVED 11 = Scrambling and SR enabled. Scrambling is reset every 512 BS symbols.
7:5	0x0 RW	**BITS_PER_COLOR:** This field selects the number of bits per color sent to a receiver device connected to this port. Color format takes place on the Vblank after being written. Color format change can be done independent of a pixel clock change in DisplayPort. Selecting a pixel color depth higher or lower than the pixel color depth of the frame buffer results in dithering the output stream. For further details on Display Port fixed frequency programming to accommodate these formats refer to DP Frequency Programming in DPLL section of Bspec. 000 = 8 bits per color (Default) 001 = 10 bits per color 010 = 6 bits per color 011 = RESERVED 1xx = RESERVED
4	0x0 RW	**DITHERING_ENABLE:** This bit enables dithering for DisplayPort 6bpc or 8bpc modes 0 Dithering disabled (Default) 1 Dithering enabled Programming note: Dithering should only be enabled for 8 bpc or 6 bpc.

Bit Range	Default & Access	Field Name (ID): Description
3:2	0x0 RW	**DITHERING_TYPE:** This bit selects dithering type for DisplayPort 6bpc or 8bpc modes 00 - Spatial only (default) 01- Spatio-Temporal 1 10- Spatio-Temporal 2 (testmode) 11- Temporal only (testmode)
1	0x0 RW	**DDA_RESET_TEST_MODE:** 0 Do not reset DDA 1 Reset DDA every 8th display frame
0	0x0 RO	**RESERVED_1:** Write as zero

4.3.169 PIPEAGCMAXRED—Offset 70010h

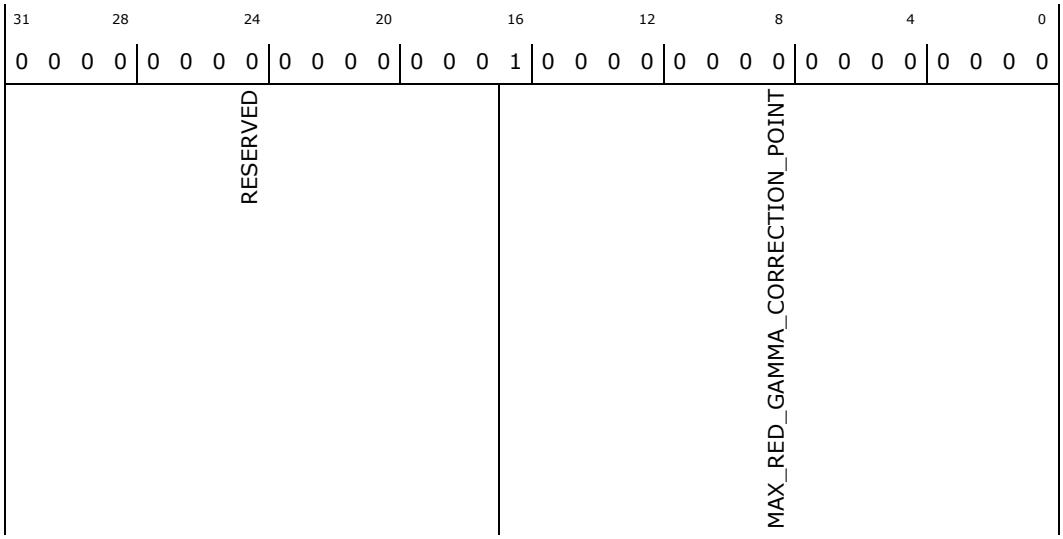
Pipe A Gamma Correction Max Red

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70010h

Default: 00010000h



Bit Range	Default & Access	Field Name (ID): Description
31:17	0x0 RO	**RESERVED:** Reserved.
16:0	0x10000 RW	**MAX_RED_GAMMA_CORRECTION_POINT:** 129th reference point for red channel of the pipe piecewise linear gamma correction. The value should always be programmed to be less than or equal to 1024.0. Format: 11.6 Default: 0x10000

4.3.170 PIPEAGCMAXGREEN—Offset 70014h

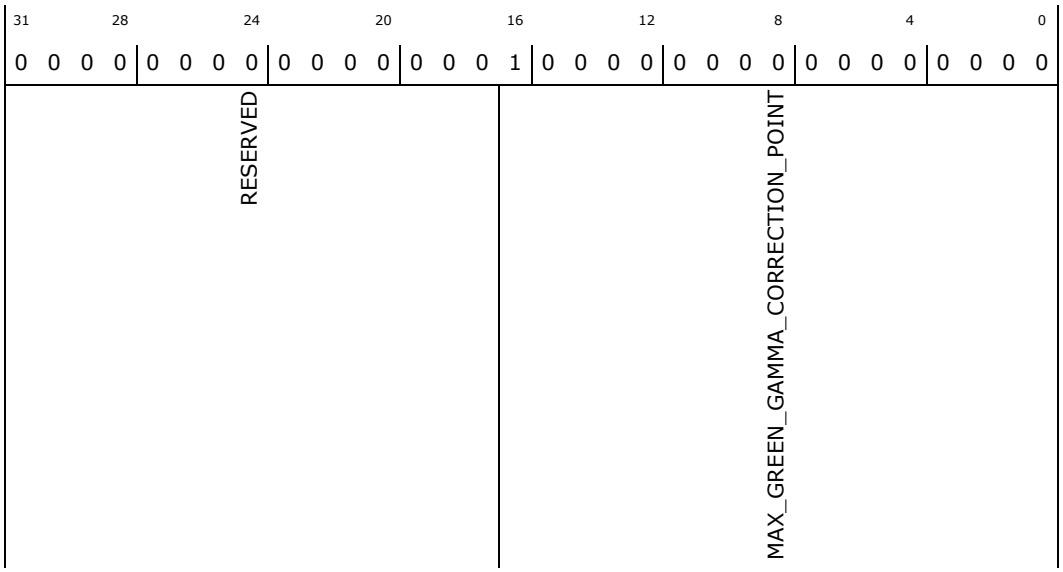
Pipe A Gamma Correction Max Green

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70014h

Default: 00010000h



Bit Range	Default & Access	Field Name (ID): Description
31:17	0x0 RO	**RESERVED:** Reserved.
16:0	0x10000 RW	**MAX_GREEN_GAMMA_CORRECTION_POINT:** 129th reference point for green channel of the pipe piecewise linear gamma correction. The value should always be programmed to be less than or equal to 1024.0. Format: 11.6 Default: 0x10000

4.3.171 PIPEAGCMAXBLUE—Offset 70018h

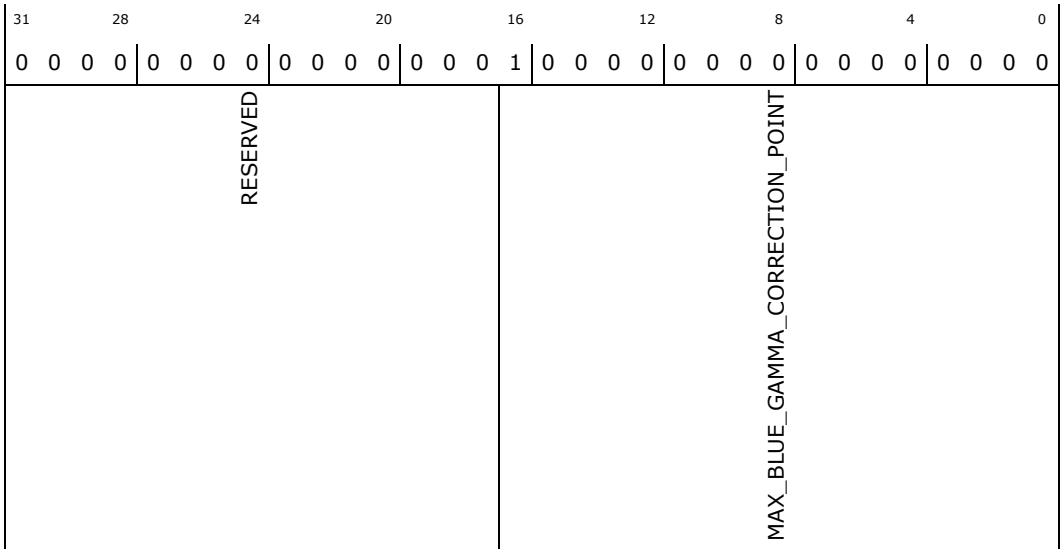
Pipe A Gamma Correction Max Blue

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70018h

Default: 00010000h



Bit Range	Default & Access	Field Name (ID): Description
31:17	0x0 RO	**RESERVED:** Reserved.
16:0	0x10000 RW	**MAX_BLUE_GAMMA_CORRECTION_POINT:** 129th reference point for blue channel of the pipe piecewise linear gamma correction. The value should always be programmed to be less than or equal to 1024.0. Format: 11.6 Default: 0x10000

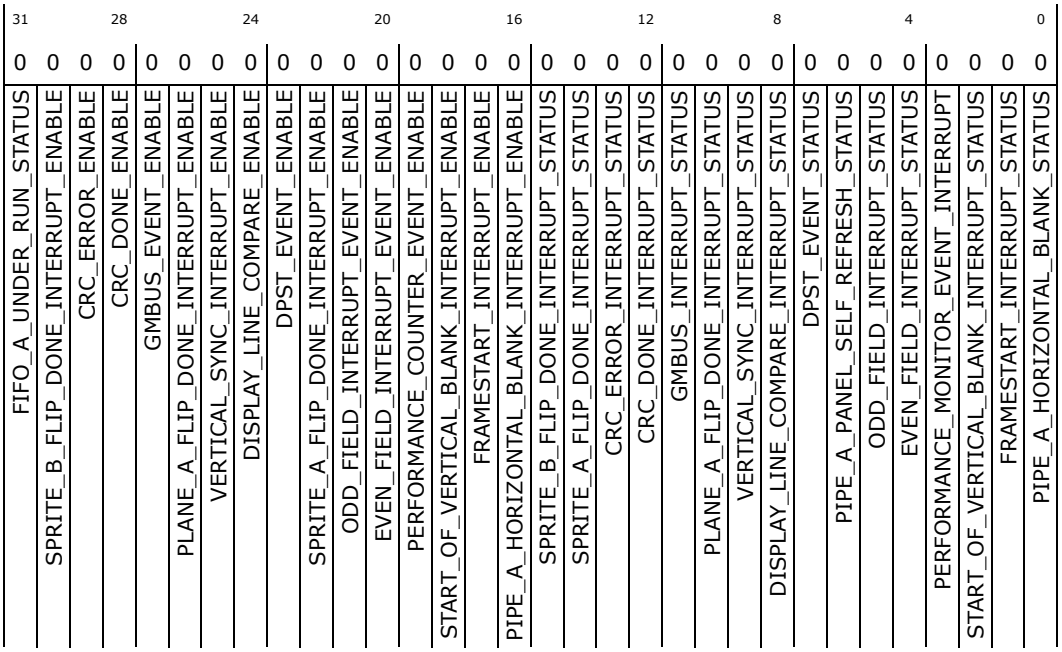
4.3.172 PIPEASTAT—Offset 70024h

Pipe A Display Status

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70024h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW/1C	**FIFO_A_UNDER_RUN_STATUS:** Set when a pipe A FIFO under-run occurs, cleared by a write of a 1. An underrun has occurred on an attempt to pop an empty FIFO. This does not feed into the first line interrupt status register. This will occur naturally during mode changes, to be useful, it should be cleared after a mode change has occurred. This bit is only valid after Pipe A has been completely configured. 1 = FIFO A Underflow occurred 0 = FIFO A Underflow did not occur AccessType: One to Clear
30	0x0 RW	**SPRITE_B_FLIP_DONE_INTERRUPT_ENABLE:** This will enable the consideration of the Sprite B flip done interrupt status bit in the first line interrupt logic 0 = Sprite B Flip Done Interrupt Disabled 1 = Sprite B Flip Done Interrupt Enabled
29	0x0 RW	**CRC_ERROR_ENABLE:** This will enable the consideration of the CRC error status bit in the first line interrupt/status logic. 0 = CRC Error Detect Disabled 1 = CRC Error Detect Enabled
28	0x0 RW	**CRC_DONE_ENABLE:** This will enable the consideration of the CRC error status bit in the first line interrupt/status logic. 0 = CRC Done Detect Disabled 1 = CRC Done Detect Enabled
27	0x0 RW	**GMBUS_EVENT_ENABLE:** This will enable the use of the GMBUS interrupt status bit in the first line interrupt/status logic. 0 = No GMBUS event enabled 1 = GMBUS event enabled

Bit Range	Default & Access	Field Name (ID): Description
26	0x0 RW	**PLANE_A_FLIP_DONE_INTERRUPT_ENABLE:** This will enable the consideration of the Plane A flip done interrupt status bit in the first line interrupt logic 0 = Plane A flip done Interrupt/Status Disabled 1 = Plane A flip done Interrupt/Status Enabled
25	0x0 RW	**VERTICAL_SYNC_INTERRUPT_ENABLE:** This will enable the consideration of the vertical sync interrupt status bit in the first line interrupt logic. 0 = Vertical Sync Interrupt/Status Disabled 1 = Vertical Sync Interrupt/Status Enabled
24	0x0 RW	**DISPLAY_LINE_COMPARE_ENABLE:** This will enable the consideration of the line compare interrupt status bit in the first line interrupt/status logic. 0 = Display Line Compare Interrupt/Status Disabled 1 = Display Line Compare Interrupt/Status Enabled
23	0x0 RW	**DPST_EVENT_ENABLE:** This interrupt is generated by the DPST logic. 0 = No DPST event enabled 1 = DPST event enabled
22	0x0 RW	**SPRITE_A_FLIP_DONE_INTERRUPT_ENABLE:** This will enable the consideration of the Sprite A flip done interrupt status bit in the first line interrupt logic 0 = Sprite A Flip Done Interrupt Disabled 1 = Sprite A Flip Done Interrupt Enabled
21	0x0 RW	**ODD_FIELD_INTERRUPT_EVENT_ENABLE:** This bit should only be used when this pipe is in an interlaced display timing. 0 = Odd Field Event disable 1 = Odd Field Event enable
20	0x0 RW	**EVEN_FIELD_INTERRUPT_EVENT_ENABLE:** This bit should only be used when this pipe is in an interlaced display timing. 0 = Even field Event disable 1 = Even field Event enable
19	0x0 RW	**PERFORMANCE_COUNTER_EVENT_ENABLE:** Reserved.
18	0x0 RW	**START_OF_VERTICAL_BLANK_INTERRUPT_ENABLE:** This will enable the consideration of the start of vertical blank interrupt status bit in the first line interrupt/status logic. 0 = Start of Vertical Blank Interrupt/Status Disabled 1 = Start of Vertical Blank Interrupt/Status Enabled
17	0x0 RW	**FRAMESTART_INTERRUPT_ENABLE:** This will enable the consideration of the vertical blank interrupt status bit in the first line interrupt/status logic. 0 = Vertical Blank Interrupt/Status Disabled 1 = Vertical Blank Interrupt/Status Enabled
16	0x0 RW	**PIPE_A_HORIZONTAL_BLANK_INTERRUPT_ENABLE:** This will enable the consideration of the start of horizontal blank interrupt status bit in the first line interrupt/status logic0 = Start of Horizontal Blank Interrupt/Status Disabled 1 = Start of Horizontal Blank Interrupt/Status Enabled

Bit Range	Default & Access	Field Name (ID): Description
15	0x0 RW/1C	**SPRITE_B_FLIP_DONE_INTERRUPT_STATUS:** MMIO Flip Event is completed on Sprite B 0 = Sprite B Flip Not Done 1 = Sprite B Flip Done AccessType: One to Clear
14	0x0 RW/1C	**SPRITE_A_FLIP_DONE_INTERRUPT_STATUS:** MMIO Flip Event is completed on Sprite A 0 = Sprite A Flip Not Done 1 = Sprite A Flip Done AccessType: One to Clear
13	0x0 RW/1C	**CRC_ERROR_INTERRUPT_STATUS:** This sticky status bit is set when a Pipe A CRC error is detected. It is cleared by a write of a one. For this bit to be meaningful, the pipe and pixel clock should be enabled and running. 0 = No CRC error has occurred 1 = CRC Error Detected AccessType: One to Clear
12	0x0 RW/1C	**CRC_DONE_INTERRUPT_STATUS:** This sticky status bit is set when Pipe A CRC calculation and compare are complete. It is cleared by a write of a one. For this bit to be meaningful, the pipe and pixel clock should be enabled and running. 0 = CRC Not Done 1 = CRC Done AccessType: One to Clear
11	0x0 RW/1C	**GMBUS_INTERRUPT_STATUS:** This status bit will be set on a GMBUS event. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. 0 = GMBUS event has not occurred 1 = GMBUS event has occurred AccessType: One to Clear
10	0x0 RW/1C	**PLANE_A_FLIP_DONE_INTERRUPT_STATUS:** Async/Sync Flip Event is completed on Display Plane A 0 = Plane A Flip Not Done 1 = Plane A Flip Done AccessType: One to Clear
9	0x0 RW/1C	**VERTICAL_SYNC_INTERRUPT_STATUS:** This bit provides a sticky status that is set when a pipe A vertical sync occurs, cleared by a write of a 1. For interlaced timing modes, this occurs once per field, when in progressive, it occurs once per frame. For this bit to be meaningful, the pipe and pixel clock should be enabled and running. 0 = Vertical Sync has not occurred 1 = Vertical Sync has occurred AccessType: One to Clear
8	0x0 RW/1C	**DISPLAY_LINE_COMPARE_INTERRUPT_STATUS:** Set when a pipe A compare match occurs, cleared by a write of a 1. 0 = Display Line Compare has not been satisfied 1 = Display Line Compare has been satisfied AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
7	0x0 RW/1C	**DPST_EVENT_STATUS:** This bit is cleared when a write to this register occurs with this bit as a one. Writes with this bit as a zero has no effect on the value of the bit. Multiple DPST events (Histogram or Phase In) can cause this bit to be asserted, determination of which event occurred is done in the DPST registers. 0 = DPST Interrupt has not occurred on pipe A 1 = DPST Interrupt has occurred on pipe A AccessType: One to Clear
6	0x0 RW/1C	**PIPE_A_PANEL_SELF_REFRESH_STATUS:** This bit indicates interrupt is generated by the PSR controller and intends to send interrupt to SW driver when the PSR interrupt enable bit (70028h bit 22) is set. This is cleared when a write to this register occurs with this bit as a one. Write with this bit as a zero has no effect on the value of the bit. 0 = PSR Interrupt has not occurred on pipe A 1 = PSR interrupt has occurred on pipe A AccessType: One to Clear
5	0x0 RW/1C	**ODD_FIELD_INTERRUPT_STATUS:** This status bit will be set on a Odd field VBLANK event. This bit should only be used when this pipe is in an interlaced display timing. For synchronization with register updates, the actual event will occur one line after the start of VBLANK. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. Note: This bit will not be set when pipe is in Interlaced with Field 0 Only using legacy vertical sync shift mode. 0 = Odd Field Vertical Blank has not occurred 1 = Odd Field Vertical Blank has occurred AccessType: One to Clear
4	0x0 RW/1C	**EVEN_FIELD_INTERRUPT_STATUS:** This status bit will be set on a even field VBLANK event. This bit should only be used when this pipe is in an interlaced display timing. For synchronization with register updates, the actual event will occur one line after the start of VBLANK. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. Note: This bit will not be set when pipe is in Interlaced with Field 0 Only using legacy vertical sync shift mode. 0 = Even Field Vertical Blank has not occurred 1 = Even Field Vertical Blank has occurred AccessType: One to Clear
3	0x0 RW/1C	**PERFORMANCE_MONITOR_EVENT_INTERRUPT:** AccessType: One to Clear
2	0x0 RW/1C	**START_OF_VERTICAL_BLANK_INTERRUPT_STATUS:** This status bit will be set at the beginning of a VBLANK event. At this point, the double buffered display registers flip, taking their new values. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. In MIPI DSR mode, GPIO TE trigger sets the Vblank Interrupt status 0 = Start of Vertical Blank has not occurred 1 = Start of Vertical Blank has occurred AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
1	0x0 RW/1C	**FRAMESTART_INTERRUPT_STATUS:** This status bit will be set on a VBLANK event, when the frame start occurs. The display registers are updated at the start of vertical blank, but the new register data is not utilized by the display pipeline until the point in the vertical blank period when the frame start occurs, which is the event that triggers this bit. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. 0 = Vertical Blank has not occurred 1 = Vertical Blank has occurred AccessType: One to Clear
0	0x0 RW/1C	**PIPE_A_HORIZONTAL_BLANK_STATUS:** 0 = Pipe A Horizontal Blank has not occurred 1 = Pipe A Horizontal Blank has occurred AccessType: One to Clear

4.3.173 DPFLIPSTAT—Offset 70028h

4.3.175 DSPARB—Offset 70030h

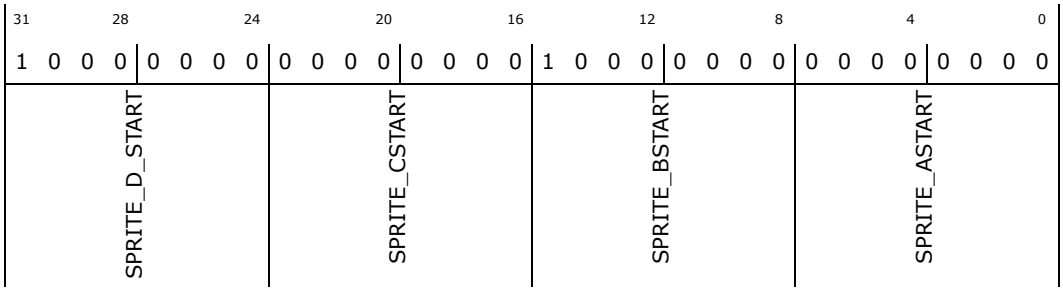
Display Arbitration Control

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70030h

Default: 80008000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x80 RW	**SPRITE_D_START:** This field selects the end of the ram used for Sprite C and the start of the RAM for Sprite D. If sprite C is unused, this field can be set to the same value as Sprite C START. If Sprite D is unused, this field can be set to TOTALSIZE-1. It must be programmed to a number greater than or equal to the value in Sprite C START and less than the total size of the RAM (TOTALSIZE). The size of the Sprite C FIFO will be (Sprite D START-Sprite C START)*64. The size of the Sprite D FIFO will be (TOTALSIZE-Sprite D START-1) *64 bytes. [DevBLC and DevCTG]: Reserved: Write as zero.

Bit Range	Default & Access	Field Name (ID): Description
23:16	0x0 RW	**SPRITE_CSTART:** This field selects the end of the ram used for display B and the start of the RAM for Sprite C. If display B is unused, this field can be set to zero. The value should never exceed the size of the RAM (TOTALSIZE). The size of the display B FIFO will be (Sprite C START)*64 bytes.
15:8	0x80 RW	**SPRITE_BSTART:** This field selects the end of the ram used for Sprite A and the start of the RAM for Sprite B. If sprite A is unused, this field can be set to the same value as Sprite A START. If Sprite B is unused, this field can be set to TOTALSIZE-1. It must be programmed to a number greater than or equal to the value in Sprite A START and less than the total size of the RAM (TOTALSIZE). The size of the Sprite A FIFO will be (Sprite B START-Sprite A START)*64. The size of the Sprite B FIFO will be (TOTALSIZE-Sprite B START-1) *64 bytes. [DevBLC and DevCTG]: Reserved: Write as zero.
7:0	0x0 RW	**SPRITE_ASTART:** This field selects the end of the ram used for display A and the start of the RAM for Sprite A. If display A is unused, this field can be set to zero. The value should never exceed the size of the RAM (TOTALSIZE). The size of the display A FIFO will be (Sprite A START)*64 bytes.

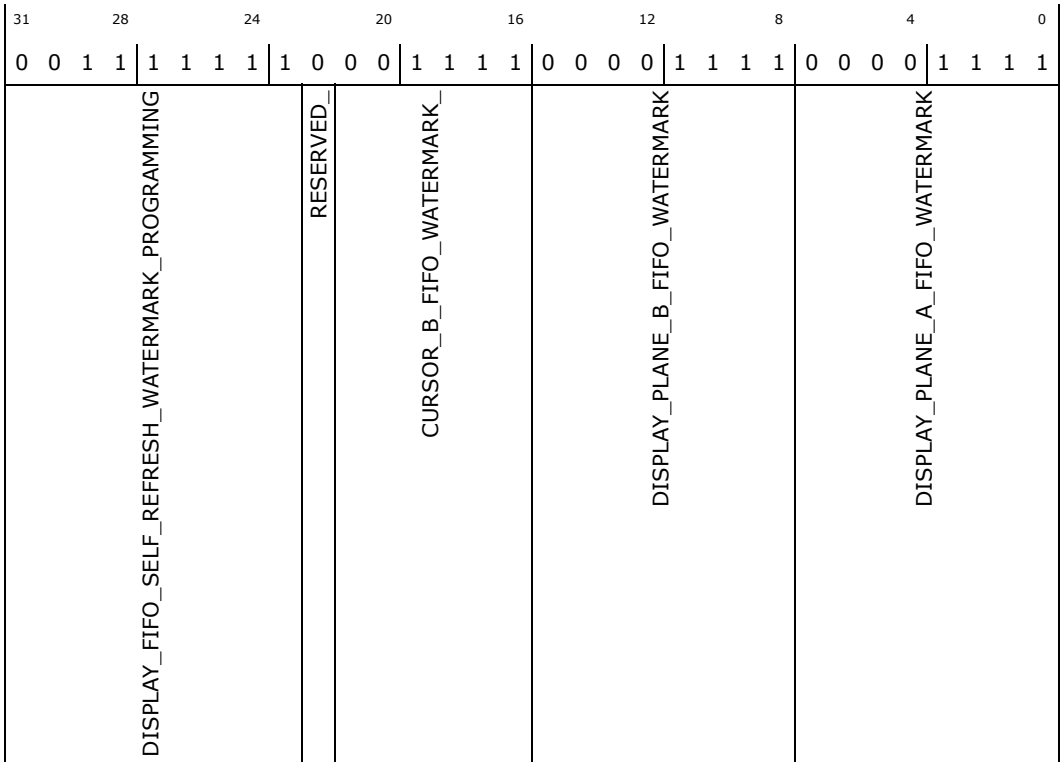
4.3.176 FW1—Offset 70034h

Display FIFO Watermark Control 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70034h

Default: 3F8F0F0Fh



Bit Range	Default & Access	Field Name (ID): Description
31:23	0x7f RW	**DISPLAY_FIFO_SELF_REFRESH_WATERMARK_PROGRAMMING:** This register defines the value of the watermark used by the Display streamer in case the CPU is in C2/C3/C4 and the memory has entered self refresh. Number in 64Bs of space in FIFO above which the Display Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet).Note: When calculating watermark values for 15/16bpp display formats, assume 32bpp for purposes of calculation using the high priority bandwidth analysis spreadsheet.
22	0x0 RO	**RESERVED_:** MBZ
21:16	0xf RW	**CURSOR_B_FIFO_WATERMARK_:** Number in 64Bs of space in the Cursor B FIFO above which the Cursor B Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet). Always program to 8.
15:8	0xf RW	**DISPLAY_PLANE_B_FIFO_WATERMARK:** Number in 64Bs of space in FIFO above which the Display B Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet). Always program to 8.

Bit Range	Default & Access	Field Name (ID): Description
7:0	0xf RW	**DISPLAY_PLANE_A_FIFO_WATERMARK:** Number in 64Bs of space in FIFO above which the Display A Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet). Always program to 8.

4.3.177 FW2—Offset 70038h

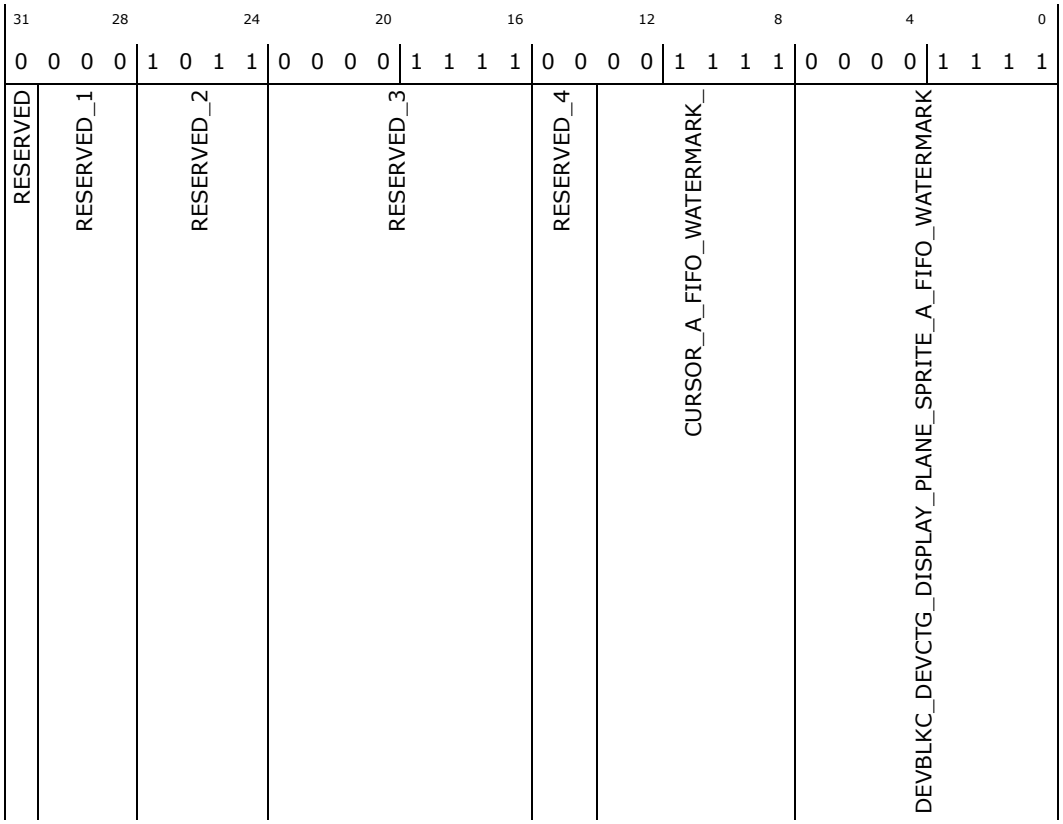
Display FIFO Watermark Control 2

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70038h

Default: 0B0F0F0Fh



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RO	**RESERVED:** [DevCTG] FBC SR Watermark Enable: Enables the FBC watermarks to be used in the fetch calculation 0: disabled 1: enabled
30:28	0x0 RO	**RESERVED_1:** [DevCTG] FBC SR Watermark: Number of equivalent lines of the primary display SR watermark
27:24	0xb RO	**RESERVED_2:** [DevCTG] FBC SR HPLL Watermark: Number of equivalent lines of the primary display SR HPLL watermark.
23:16	0xf RO	**RESERVED_3:** [DevBLKC, DevCTG] Display Plane Sprite B FIFO Watermark Number in 64Bs of space in FIFO above which the Display Sprite B Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet).
15:14	0x0 RO	**RESERVED_4:** MBZ
13:8	0xf RW	**CURSOR_A_FIFO_WATERMARK_:** Number in 64Bs of space in the Cursor A FIFO above which the Cursor A Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet). Always program to 8.
7:0	0xf RW	**DEVBLKC_DEVCTG_DISPLAY_PLANE_SPRITE_A_FIFO_WATERMARK:** Number in 64Bs of space in FIFO above which the Display Sprite A Stream will generate requests to Memory DevBW, DevCL] Display Plane C FIFO Watermark. Number in 64Bs of space in FIFO above which the Display C Stream will generate requests to Memory (Value should be as recommended in the high priority bandwidth analysis spreadsheet). Always program to 8.

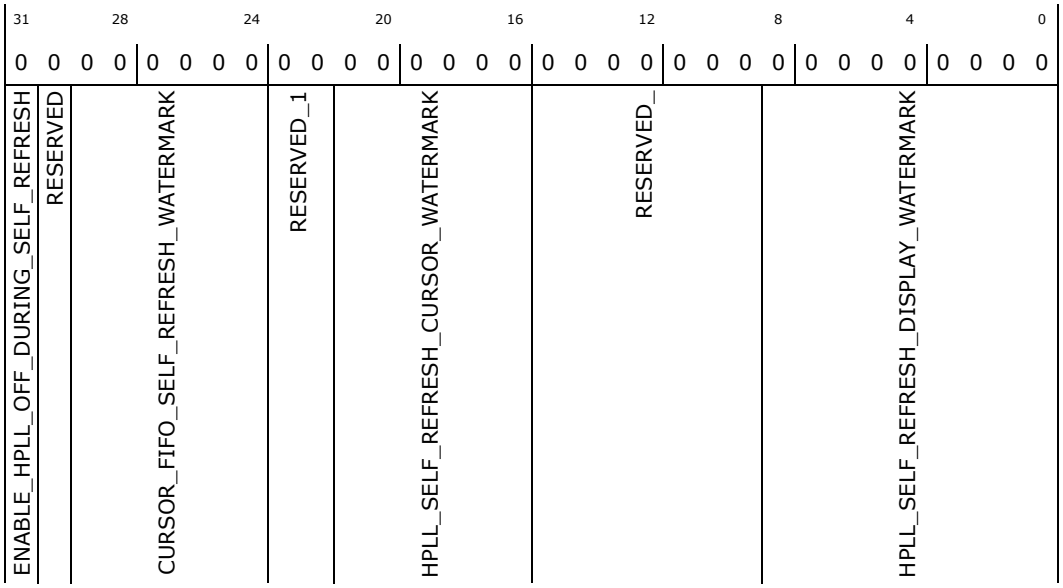
4.3.178 FW3—Offset 7003Ch

Display FIFO Watermark Control 3

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7003Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_HPLL_OFF_DURING_SELF_REFRESH:** . 0 = Disabled 1 = Enabled [DevCL] This bit may be enabled only if the BLC_PWM_CTL duty cycle register offset (0x61254) is programmed to 100% and non-legacy backlight is enabled. This restriction does not apply when I2C is used for back light modulation. [DevCL] When one or more display pipes are enabled, this bit should be disabled before accessing the 6XXXh MMIO register address space. Software must follow these steps: disable this bit (if enabled and one display pipe is enabled) wait for next vblank (switch from hrawclk back to cdclk will occur) access the 6XXXh address space as needed re-enable this bit Note that the wait on next vblank step requires an enabled display pipe.
30	0x0 RO	**RESERVED:** MBZ
29:24	0x0 RW	**CURSOR_FIFO_SELF_REFRESH_WATERMARK:** . Number in 64Bs of space in the Cursor FIFO above which the Cursor Stream will generate requests to Memory during self -refresh. (Value should be as recommended in the high priority bandwidth analysis spreadsheet).
23:22	0x0 RO	**RESERVED_1:** MBZ
21:16	0x0 RW	**HPLL_SELF_REFRESH_CURSOR_WATERMARK:** . Number in 64Bs of space in the Cursor FIFO above which the Cursor Stream will generate requests to Memory during HPLL self -refresh. (Value should be as recommended in the high priority bandwidth analysis spreadsheet).
15:9	0x0 RO	**RESERVED_:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
8:0	0x0 RW	**HPLL_SELF_REFRESH_DISPLAY_WATERMARK:** . Number in 64Bs of space in the FIFO above which the Display Stream will generate requests to Memory during HPLL self -refresh. (Value should be as recommended in the high priority bandwidth analysis spreadsheet).

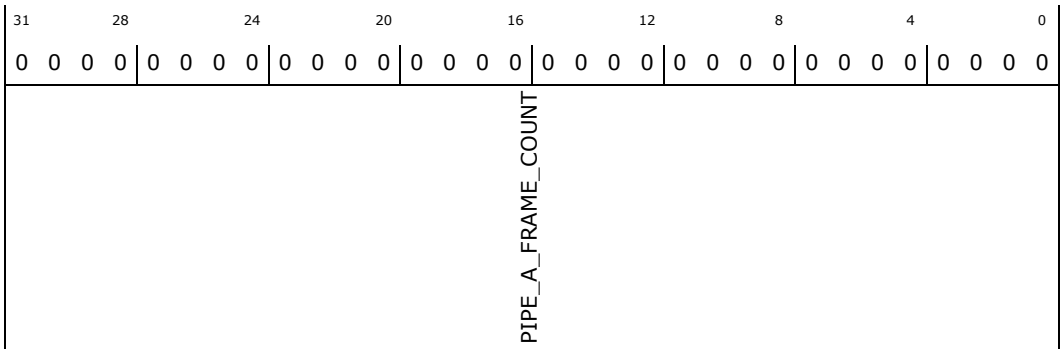
4.3.179 PIPEAFRAMECOUNT—Offset 70040h

Pipe A Frame Count High

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70040h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**PIPE_A_FRAME_COUNT:** Provides read back of the display pipe frame counter. This counter increments on every start of vertical blank and rolls over back to 0 after 2^32 frames

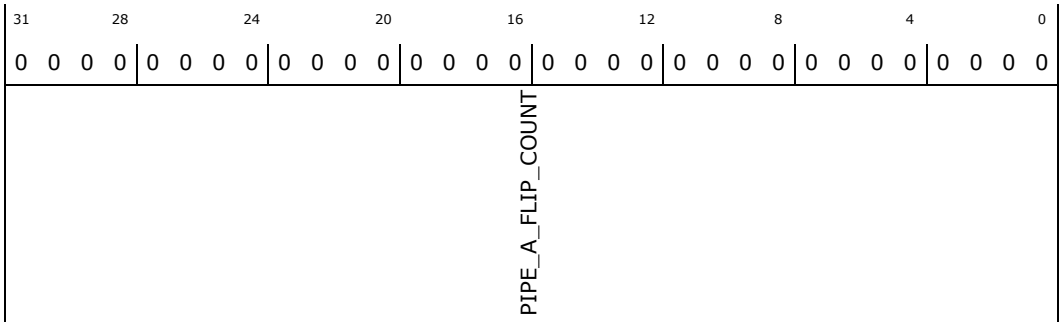
4.3.180 PIPEAFLIPCOUNT—Offset 70044h

Pipe A FLIP COUNTER

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70044h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**PIPE_A_FLIP_COUNT:** Provides read back of the display pipe flip counter. This counter increments on each flip of the surface of the primary plane on this pipe. This includes command streamer asynchronous and synchronous flips and any MMIO writes to the primary plane surface address. It rolls over back to 0 after 2^32 flips.

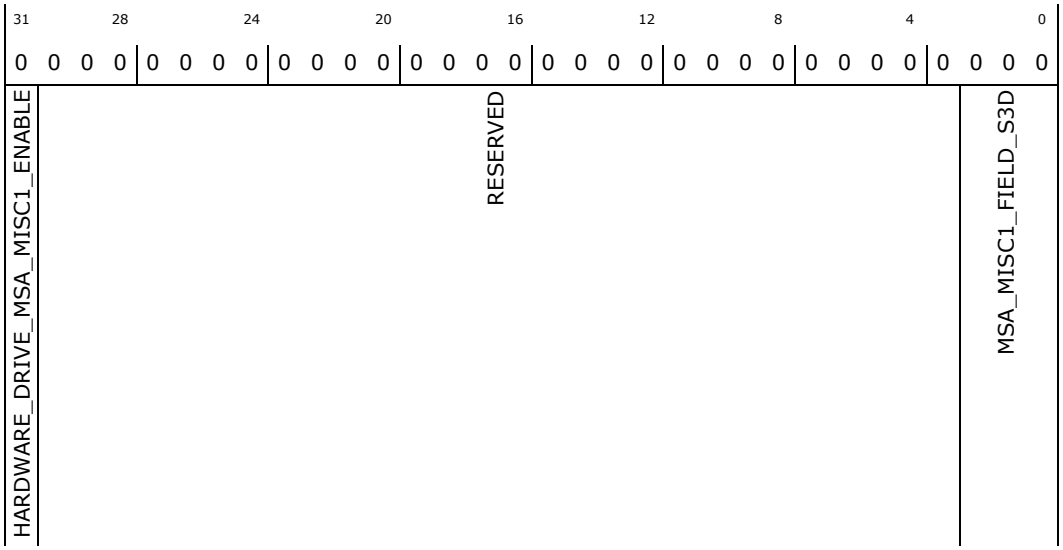
4.3.181 PIPEAMSAMISC—Offset 70048h

Pipe A MSA MISC

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**HARDWARE_DRIVE_MSA_MISC1_ENABLE:** This bit enables hardware to drive MSA MISC1 bit3:1 with the stereo 3D left/right eye field indication. Hardware will drive 000 when S3D mode is disabled, 001 when enabled and the upcoming video frame is right eye, 011 when enabled and the upcoming video frame is left eye. When this bit is disabled, software may manually program the MSA MISC1 Field S3D field in bit 2:0 in this register to set MISC1 bit 3:1 0 = Disable hardware driving MSA MISC1 bit 3:1. Allow software to manually program MSA MISC1 bit3:1 through MSA_MISC1_FIELD_S3D (default) 1 = Enable hardware to drive MSA MISC1 bit3:1 for S3D
30:3	0x0 RO	**RESERVED:** Reserved.
2:0	0x0 RW	**MSA_MISC1_FIELD_S3D:** This field provides software to manually program MSC1 stereo video attribute for DisplayPort: 000 = No stereo video transported 001 = For progressive video, the next (upcoming) video frame is RIGHT eye 010 = Reserved 011 = For progressive video, the next (upcoming) video frame is LEFT eye 100 = Stacked top and bottom top half represents left-eye view and bottom half represents right-eye view 101 = Stacked top and bottom top half represents right-eye view and bottom half represents left-eye view

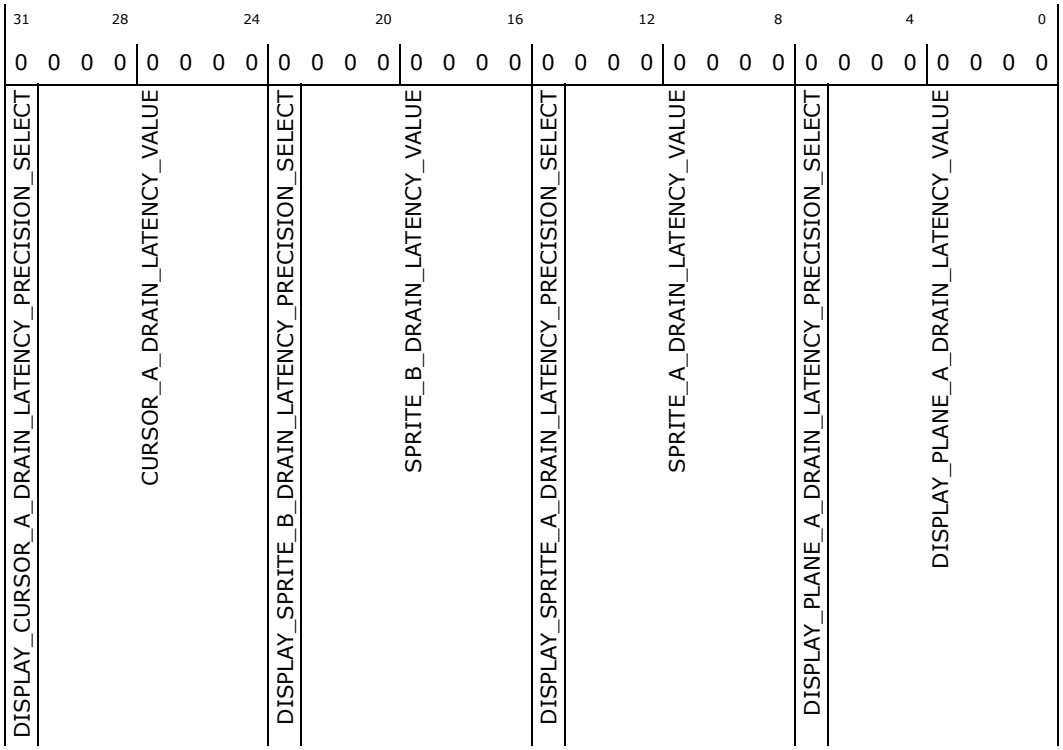
4.3.182 DDL1—Offset 70050h

Display FIFO Drain Latency 1

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70050h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DISPLAY_CURSOR_A_DRAIN_LATENCY_PRECISION_SELECT:** 1 use 32 as precision multiplier to increase precision to be stored in 7-bit Cursor A drain latency value 0 use 16 as precision multiplier to increase precision to be stored in 7-bit Cursor A drain latency value
30:24	0x0 RW	**CURSOR_A_DRAIN_LATENCY_VALUE:** For cursor latency, 4 BPP is assumed for all cursor formats. : Programmable drain latency value in time ticks per 64B FIFO entry

This is the default after reset. 01 = HW cursor is attached to Display Pipe B. 10 = Reserved for pipe C 11 = Reserved for pipe D [DevBLC] and [DevCTG] Reserved: Write as zero.
27	0x0 RW	**POPUP_CURSOR_ENABLED:** . This bit should be turned on when using Cursor A as a popup cursor. When in popup mode, hardware interprets the cursor base address as a physical address instead of a graphics address.0 = Cursor A is hi-res 1 = Cursor A is popup
26	0x0 RW	**CURSOR_GAMMA_ENABLE:** This bit only has an effect when using the cursor in display mode. 0 = Cursor pixel data bypasses gamma correction or palette (default). 1 = Cursor pixel data is gamma to be corrected in the pipe.
25:16	0x0 RO	**RESERVED_1:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
15	0x0 RW	**_180ROTATION:** This mode causes the cursor to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image. Only 32 bits per pixel cursors can be rotated. This field must be zero when the cursor format is 2 bits per pixel. 0 = No rotation 1 = 180 Rotation of 32 bit per pixel cursors
14:6	0x0 RO	**RESERVED_2:** Reserved.
5	0x0 RW	**CURSOR_MODE_SELECT_BIT:** Refer following table.
4	0x0 RO	**RESERVED_3:** Reserved.
3	0x0 RO	**RESERVED_4:** Reserved.
2:0	0x0 RW	**CURSOR_MODE_SELECT:** These three bits together with bit 5 select the mode for cursor as shown in the following table.

4.3.193 CURABASE—Offset 70084h

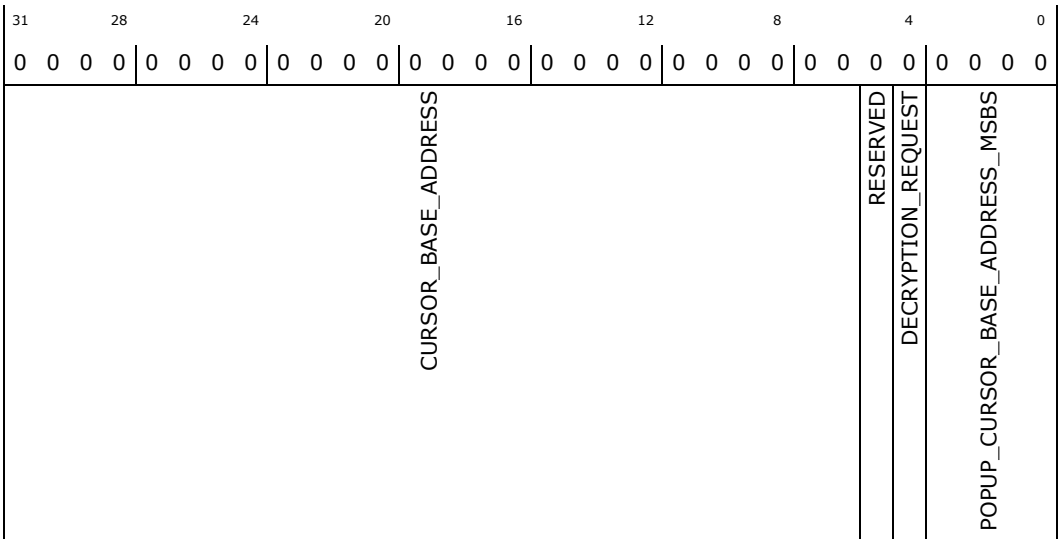
Cursor A Base Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70084h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**CURSOR_BASE_ADDRESS:** . This field specifies bits 31:6 of the graphics address of the base of the cursor. On [DevBW] and [DevCL] if the cursor is a popup, this field specifies bits 31:6 of the physical address of the base of the cursor, and bits 35:32 of the address are specified in the LSBs of this register. Popup cursor mode is selected within the CURACNTR register.The cursor surface address must be 4K byte aligned. The cursor must be in linear memory, it cannot be tiled. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the cursor data in its unrotated orientation and the cursor surface address. A write to this register also acts as a trigger event to force the update of active registers from the staging registers on the next display event. Each cursor register is double-buffered. The CPU writes to a set of holding registers. The active registers are updated from the holding registers following the leading edge of the vertical blank pulse. The update is postponed until the next vblank if a write cycle is active to any of the cursor registers at the time of the vblank. The update is also postponed if a write sequence is in progress. It is assumed that if the cursor mode is changed, the cursor image will also be changed. To prevent the cursor from appearing when it is only partially programmed, the active registers will not be updated until both the cursor control and base address registers have been programmed. If the cursor control register is written, the cursor base address must also be written before the change will be effective. However, the base address register may be changed (e.g., to change the shape of the cursor) without also writing to the control register. If both are to be written, the control register must be written first.
5	0x0 RO	**RESERVED:** MBZ
4	0x0 RW	**DECRYPTION_REQUEST:** This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. 0 = Decryption request disabled (default) 1 = Decryption request enabled
3:0	0x0 RW	**POPUP_CURSOR_BASE_ADDRESS_MSBS:** ([DevBW] and [DevCL] Only). This field specifies bits 35:32 of the popup cursor physical address. If popup mode is not selected, this field is ignored.

4.3.194 CURAPOS—Offset 70088h

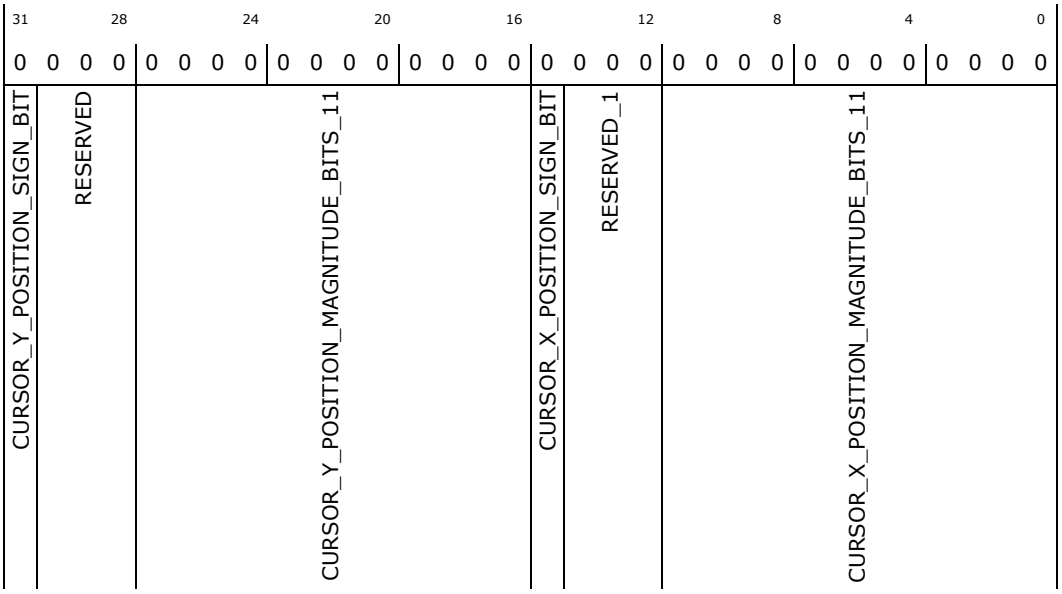
Cursor A Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70088h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**CURSOR_Y_POSITION_SIGN_BIT:** This bit provides the sign bit of a signed 13-bit value that specifies the horizontal position of cursor. (default is 0). For normal high resolution display modes, the cursor must have at least a single pixel positioned over the active screen.
30:28	0x0 RO	**RESERVED:** Write as zero.
27:16	0x0 RW	**CURSOR_Y_POSITION_MAGNITUDE_BITS_11:** 0: This register provides the magnitude bits of a signed 12-bit value that specifies the vertical position of cursor. The sign bit of this value is provided by bit 31of this register. (default is 0). For HDMI modes where the vertical zoom is greater than 1x, the position is specified using the zoomed grid. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation.
15	0x0 RW	**CURSOR_X_POSITION_SIGN_BIT:** This bit provides the sign bit of a signed 13-bit value that specifies the horizontal position of cursor. (default is 0).). For normal high resolution display modes, the cursor must have at least a single pixel positioned over the active screen.
14:12	0x0 RO	**RESERVED_1:** Write as zero.
11:0	0x0 RW	**CURSOR_X_POSITION_MAGNITUDE_BITS_11:** 0: These 12 bits provide the signed 13-bit value that specifies the horizontal position of cursor. The sign bit is provided by bit 15 of this register. (default is 0) For HDMI modes where the horizontal zoom is greater than 1x, the position is specified using the zoomed grid. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the end of the active video area in the unrotated orientation.

4.3.195 CURAPALET_0—Offset 70090h

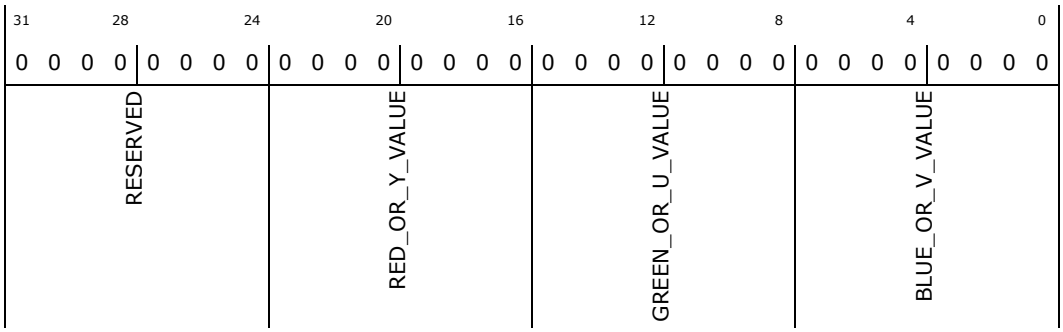
Cursor A Palette registers (4 Registers)

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70090h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero.
23:16	0x0 RW	**RED_OR_Y_VALUE:** These registers specify the cursor palette. RGB data is full range unsigned numbers. YUV data will be unsigned for the Y and excess 128 notation for the UV values. The data can be pre-gamma corrected and bypass the gamma correction logic or passed through the gamma corrector.
15:8	0x0 RW	**GREEN_OR_U_VALUE:**
7:0	0x0 RW	**BLUE_OR_V_VALUE:**

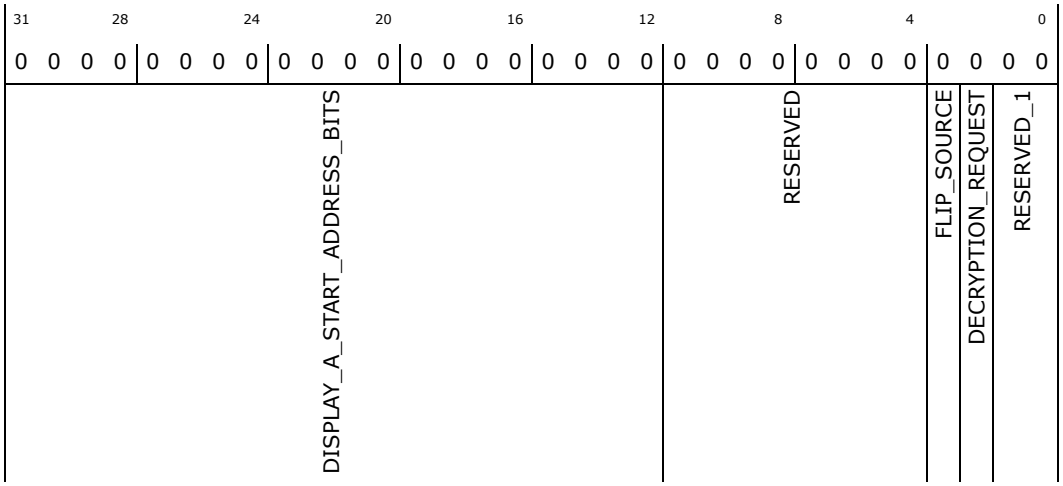
Display A Async flip Start Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7017Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**DISPLAY_A_START_ADDRESS_BITS:** This register provides the start address of the display A plane or the first eye when running in stereo mode. This address must be at least pixel aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. This address must be 4K aligned. When performing asynchronous flips and the display surface is in tiled memory, this address must be 256K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . Write to this register triggers async flip. The async flip address is written into the Display A Base Address register 0x7019C

Bit Range	Default & Access	Field Name (ID): Description
11:4	0x0 RO	**RESERVED:** MBZ
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register.
1:0	0x0 RO	**RESERVED_1:** MBZ

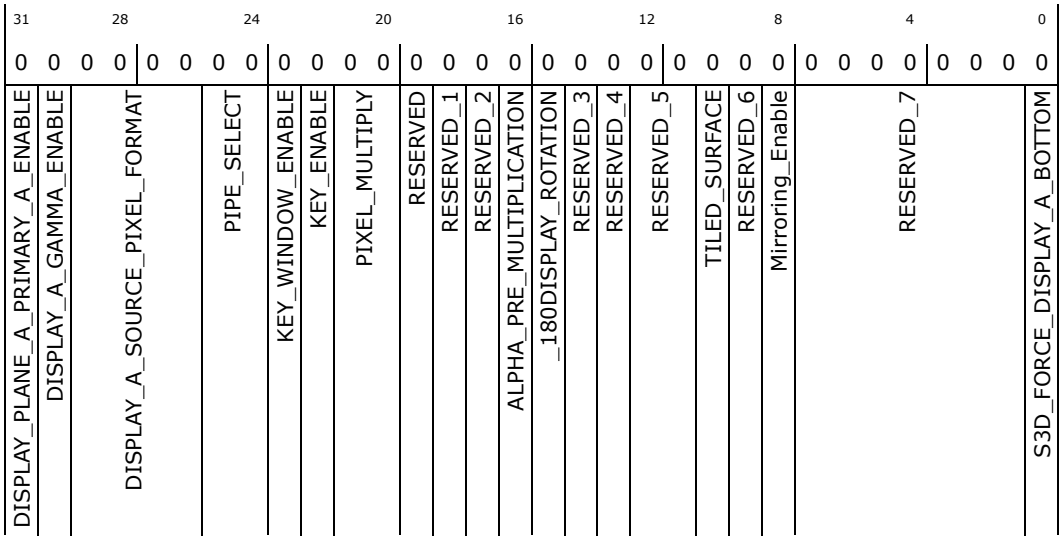
4.3.218 DSPACNTR—Offset 70180h

Display A Plane Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70180h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DISPLAY_PLANE_A_PRIMARY_A_ENABLE:** When this bit is set, the primary plane will generate pixels for display. When set to zero, display plane A memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that display A is assigned. The display pipe must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. 1 = Enable 0 = Disable
30	0x0 RW	**DISPLAY_A_GAMMA_ENABLE:** This bit should only be changed after the plane has been disabled. It controls the bypassing of the display pipe gamma unit for this display plane s pixel data only. For 8-bit indexed display data, this bit should be set to a one. 0 = Display A pixel data bypasses the display pipe gamma correction logic (default). 1 = Display A pixel data is gamma corrected in the display pipe gamma correction logic.

Bit Range	Default & Access	Field Name (ID): Description
29:26	0x0 RW	**DISPLAY_A_SOURCE_PIXEL_FORMAT:** These bits should only be changed after the plane has been disabled. Pixel formats with an alpha channel (8:8:8:8) should not use source keying. Pixel format of 8-bit indexed uses the palette. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 000x = Reserved. 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format. (with pre-multiplied alpha color format) 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format. (with pre-multiplied alpha color format) 1010 = 32-bit BGRX (10:10:10:2) pixel format Ignore alpha 1011 = 32-bit BGRA (10:10:10:2) pixel format (with pre-multiplied alpha color format) 1100 = 64-bit RGBX (16:16:16:16) 16 bit floating point pixel format. Ignore alpha. 1101 = 64-bit RGBA (16:16:16:16) 16-bit floating point pixel format (with pre-multiplied color format) 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8) pixel format (with pre-multiplied color format)
25:24	0x0 RO	**PIPE_SELECT:** Plane A always ties to Pipe A. AccessType: Read Only Reserved
23	0x0 RW	**KEY_WINDOW_ENABLE:** . This bit applies only to devices with a display plane C. This bit is set to one when the color key is used as a destination key for display C. Display plane C must be enabled on the same pipe and it s Z-order should be programmed to be behind display A for this to be set to a one.0 = Source Key applies to entire display plane A 1 = Source Key applies to only pixels within the intersection between Display A and Display C [DevBLC] and [DevCTG]: Reserved
22	0x0 RW	**KEY_ENABLE:** . This bit enables source keying for display A. Source keying allows a plane that is behind (below) this plane to show through where the display A key matches the display A data. This function is overloaded to provide display C destination keying when combined with the key window enable bit. Setting this bit is not allowed when the display pixel format includes an alpha channel.0 = Source key is disabled 1 = Source key is enabled [DevBLC] and [DevCTG]: Reserved In destination keying, primary plane pixel will be made transparent when blending with sprite pixel as the destination if the primary src key matches with the primary pixel value.

Bit Range	Default & Access	Field Name (ID): Description
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the pixel multiply mode, the horizontal pixels are doubled and lines are sent twice. Asynchronous flips are not used in this mode. Programming Notes: Asynchronous flips are not permitted when pixel multiply is enabled. 00 = No duplication 01 = Line/pixel Doubling 10 = Reserved 11 = Pixel Doubling only
19	0x0 RO	**RESERVED:** Software must preserve the contents of this bit.
18	0x0 RO	**RESERVED_1:** Write as zero
17	0x0 RO	**RESERVED_2:** Software must preserve the contents of this bit.
16	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image. [DevCL] Do not enable 180 rotation together with Frame Buffer Compression0 = No rotation 1 = 180 rotation
14	0x0 RO	**RESERVED_3:** [DevBLC] and [DevCTG] Display A Trickle Feed Enable: 0 = Trickle Feed Enabled - Display A data requests are sent whenever there is space in the Display Data Buffer. 1 = Trickle Feed Disabled - Display A data requests are sent in bursts. Note: On mobile products this bit will be ignored such that Trickle Feed is always disabled. [DevELK] Must always be programmed disabled
13	0x0 RO	**RESERVED_4:** [DevBLC] and [DevCTG] Display A Data Buffer Partitioning Control: 0 = Display A Data Buffer will encompass Sprite A buffer space when Sprite A is disabled. 1 = Display A Data Buffer will not use Sprite A buffer space when Sprite A is disabled. Note: When in C3xR Max FIFO mode, this bit will be ignored.
12:11	0x0 RO	**RESERVED_5:** Reserved.
10	0x0 RW	**TILED_SURFACE:** . This bit indicates that the display A surface data is in tiled memory. The tile pitch is specified in bytes in the DSPASTRIDE register. Only X tiling is supported for display surfaces.When this bit is set, it affects the hardware interpretation of the DSPATILEOFF, DSPALINOFF, and DSPASURF registers. 0 = Display A surface uses linear memory 1 = Display A surface uses X-tiled memory

Bit Range	Default & Access	Field Name (ID): Description
9	0x0 RO	**RESERVED_6:** Write as zero [DevBLC, DevCTG] Asynchronous Surface Address Update Enable: This bit will enable asynchronous updates of the surface address when written by MMIO. The surface address will change with the next TLB request or when start of vertical blank is reached. Updates during vertical blank may not complete until after the first few active lines are displayed. Restrictions: No command streamer initiated surface address updates are allowed when this bit is enabled. Only one asynchronous update may be made per frame. Must wait for vertical blank before again writing the surface address register. 0 = DSPASURF MMIO writes will update synchronous to start of vertical blank (default) 1 = DSPASURF MMIO writes will update asynchronously
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:1	0x0 RO	**RESERVED_7:** Write as zero
0	0x0 RW	**S3D_FORCE_DISPLAY_A_BOTTOM:** This bit will force the display A plane to be on the bottom of any sprite planes in the Z order. 0 = Display A Z-order is determined by the other control bits in pipe A 1 = Display A is forced to be on the bottom of any sprite planes in Z-order in pipe A

4.3.219 DSPALINOFF—Offset 70184h

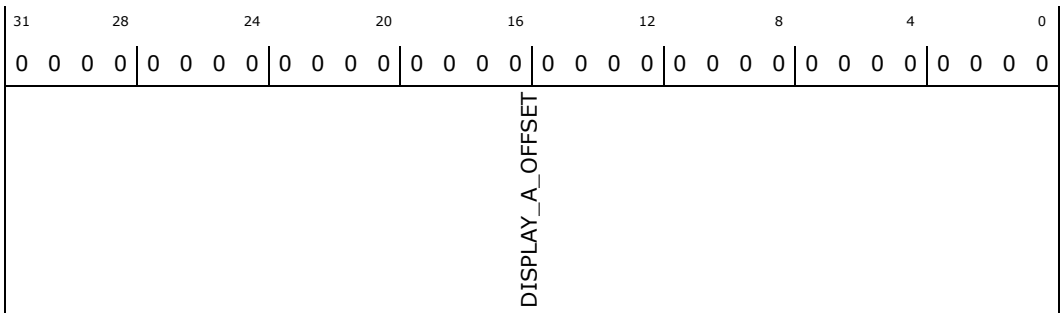
Display A Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70184h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**DISPLAY_A_OFFSET:** This register provides the panning offset into the display A plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

4.3.220 DSPASTRIDE—Offset 70188h

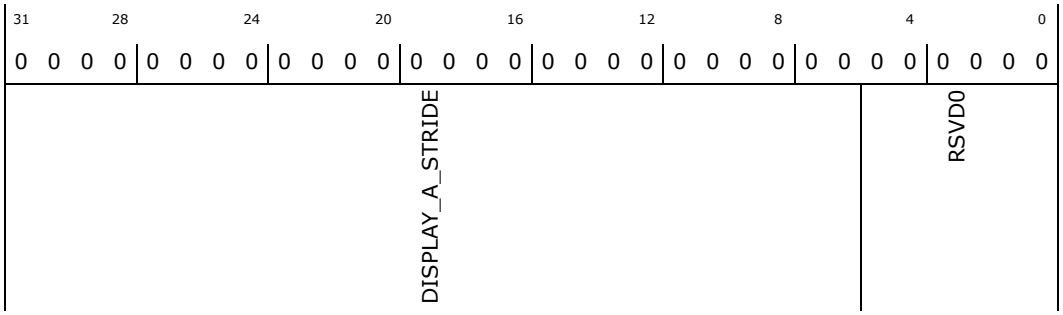
Display A Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70188h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**DISPLAY_A_STRIDE:** This is the stride for display A in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 512 byte aligned. This value is used to determine the line to line increment for the display. This register is updated either through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes. The display stride must be power of 2 when doing Asynch Flips. The display stride must be 8KB or greater when doing Asynch Flips together with 180 rotation. The value in this register is updated through the command streamer during a synchronous flip.
5:0	0x0 RO	**RSVD0:** Reserved

4.3.221 DSPAKEYVAL—Offset 70194h

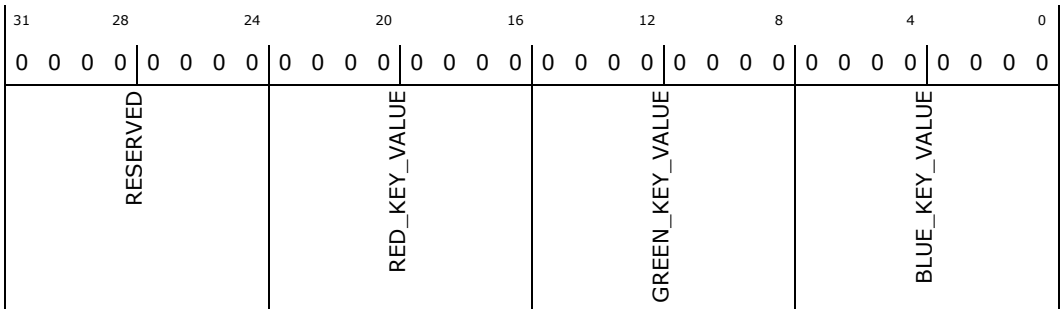
Sprite Color Key Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70194h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Reserved.
23:16	0x0 RW	**RED_KEY_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_VALUE:** Specifies the color key value for the sprite blue/Cb channel.

4.3.222 DSPAKEYMSK—Offset 70198h

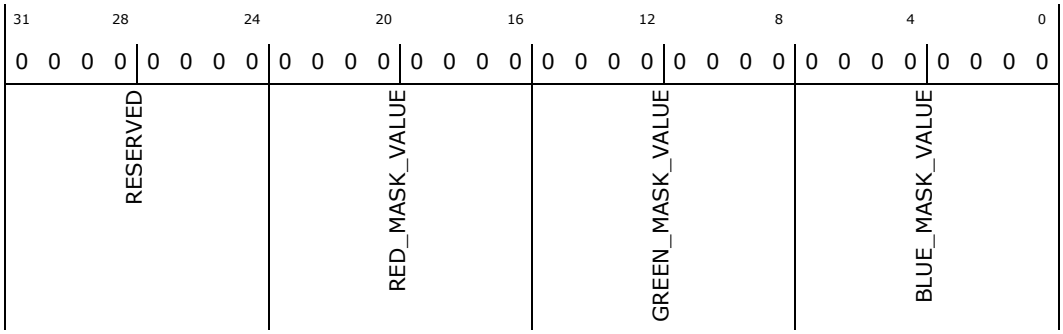
Sprite Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 70198h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:**
23:16	0x0 RW	**RED_MASK_VALUE:** Specifies the color key mask for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_MASK_VALUE:** Specifies the color key mask for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_MASK_VALUE:** Specifies the color key mask for the sprite blue/Cb channel.

4.3.223 DSPASURF—Offset 7019Ch

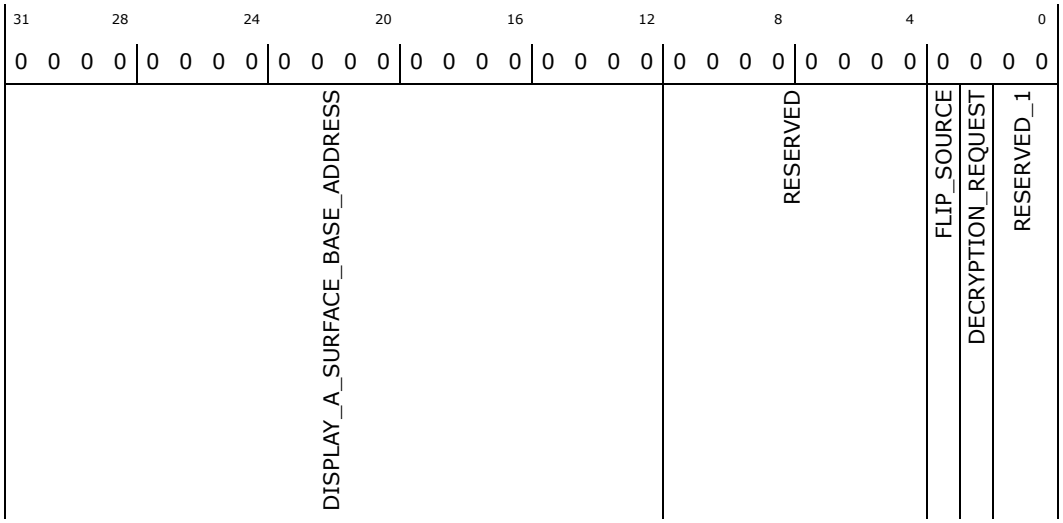
Display A Surface Base Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 7019Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**DISPLAY_A_SURFACE_BASE_ADDRESS:** . This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPATILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPALINOFF register.This address must be 4K aligned. When performing asynchronous flips and the display surface is in tiled memory, this address must be 256K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED:** Reserved.
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register.
1:0	0x0 RO	**RESERVED_1:** MBZ

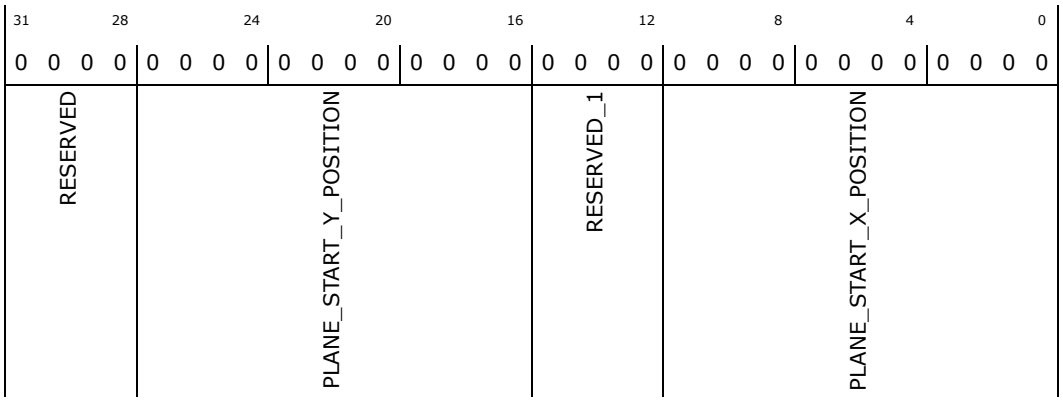
4.3.224 DSPATILEOFF—Offset 701A4h

Display A Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 701A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation. When display stride is 16KB and doing Asynch Flips, do not program the offset to give pans of 7680 to 8191 bytes.

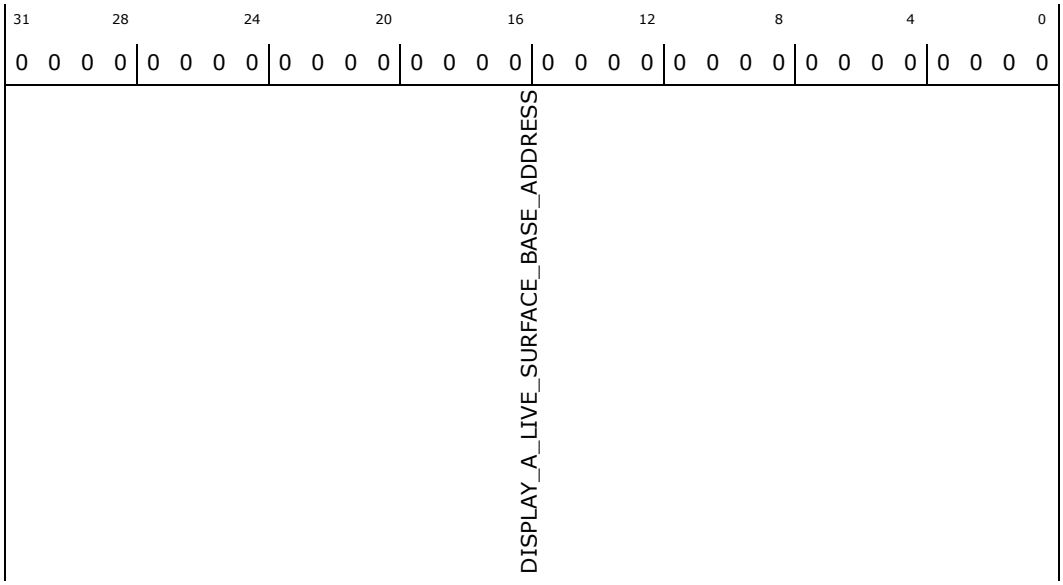
4.3.225 DSPASURFLIVE—Offset 701ACh

Display A Live Surface Base Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 701ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**DISPLAY_A_LIVE_SURFACE_BASE_ADDRESS:** . This gives the live value of the surface base address as being currently used for the plane.

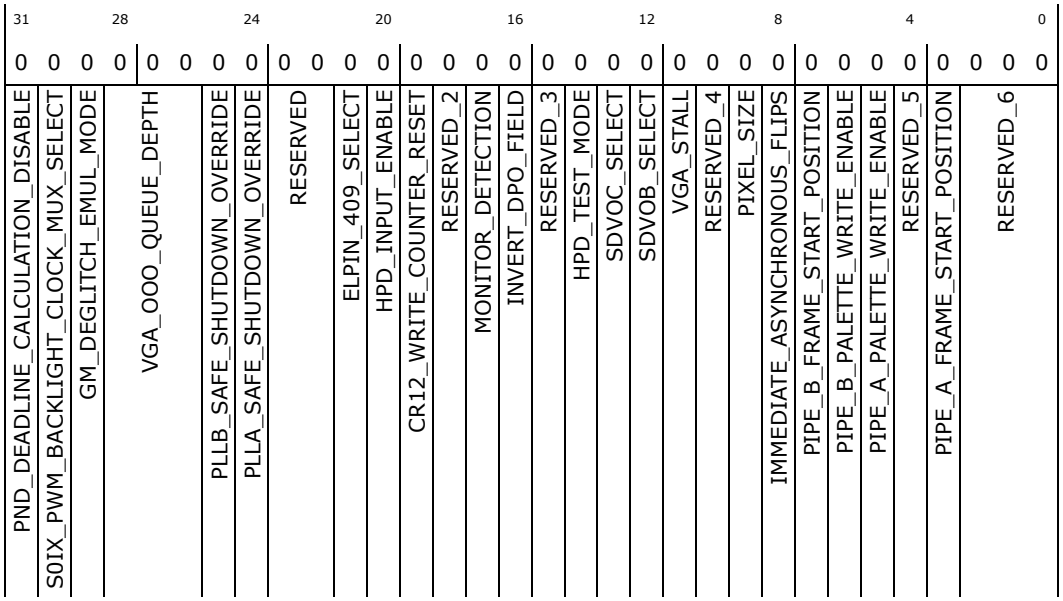
4.3.226 CBR1—Offset 70400h

Chicken Bit Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 70400h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PND_DEADLINE_CALCULATION_DISABLE:** 1 = PND deadline scheme is disabled. Latency deadline calculation is based on the pre-programmed watermark level and the 2-bit FIFO status region. 0 = PND deadline scheme is enabled. Latency deadline calculation is based on actual FIFO level
30	0x0 RW	**S0IX_PWM_BACKLIGHT_CLOCK_MUX_SELECT:** This bit is used to select the new pwm backlight control during s0ix mode 0 = select s0ix pwm backlight control based on 25 MHz oscillator clock (default) 1 = select normal pwm backlight control based on hrawclk Programming note: This bit is programmed to select either 200MHz refclk from CCK or 25MHz refclk from XTAL. This bit cannot be changed on the fly.
29	0x0 RW	**GM_DEGLITCH_EMUL_MODE:** Reserved.
25	0x0 RW	**PLLB_SAFE_SHUTDOWN_OVERRIDE:** This bit disables the dependency for pipe B to be disabled before the PLL is shut down
24	0x0 RW	**PLLA_SAFE_SHUTDOWN_OVERRIDE:** This bit disables the dependency for pipe A to be disabled before the PLL is shut down
23:22	0x0 RO	**RESERVED:** Reserved.

Range = [0, Display Buffer height in lines-1]. [DevBW] and [DevCL] Start Scan Line Number: This field specifies the starting scan line number of the Scan Line Window. Format = U16 in scan lines, where scan line 0 is the first line of the display frame. Range = [0,Display Buffer height in lines-1].

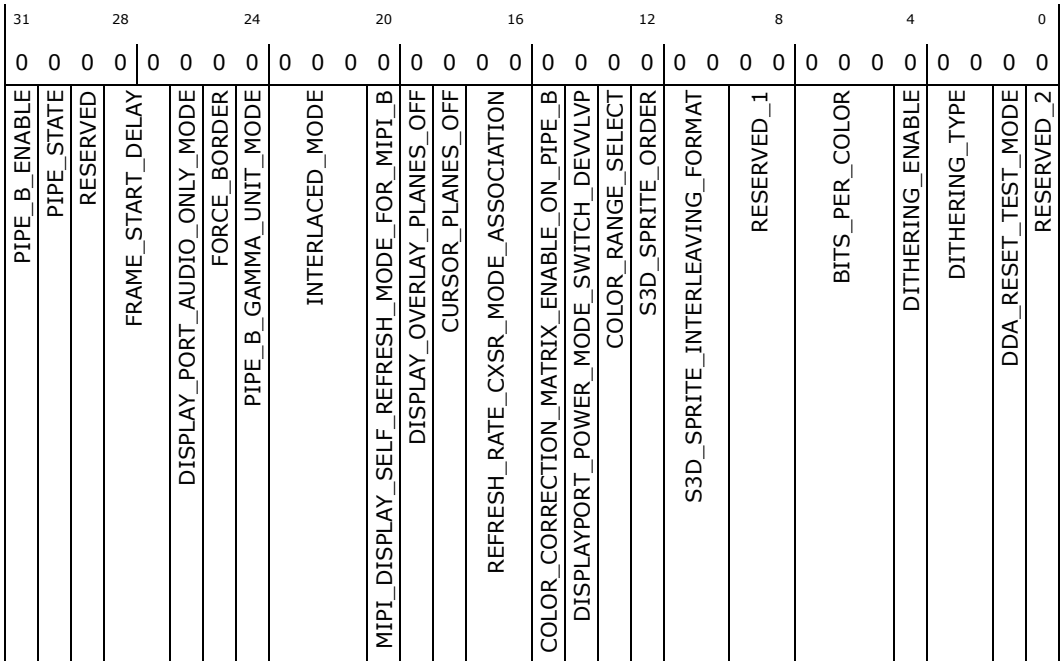
4.3.249 PIPEBCONF—Offset 71008h

Pipe B Configuration Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 71008h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PIPE_B_ENABLE:** Setting this bit to the value of one, turns on pipe B. This must be done before any planes are enabled on this pipe. Changing it to a zero should only be done when all planes that are assigned to this pipe have been disabled. Turning the pipe enable bit off disables the timing generator in this pipe. Plane disable occurs after the next VBLANK event after the plane is disabled. Synchronization pulses to the display are not maintained if the timing generator is disabled. Power consumption will be at its lowest state when disabled. A separate bit controls the DPLL enable for this pipe. Pipe timing registers should contain valid values before this bit is enabled. Disabling the Pipe and changing the timing registers and re-enabling the pipe before the next VBLANK will cause the mode change to occur at the end of the current frame. This requires no wait on the software s part. On the other hand, if this is the disabling of the pipe, that does require a software wait for VBLANK to occur. Synchronization pulses to the display are not maintained if the timing generator is disabled. Power consumption is at it s lowest state. 1 = Enable 0 = Disable
30	0x0 RO	**PIPE_STATE:** This bit indicates the actual state of the pipe. Since there can be some delay between disabling the pipe and the pipe actually shutting off, this bit indicates the true current state of the pipe. 0 = Disabled 1 = Enabled AccessType: Read Only
29	0x0 RO	**RESERVED:** Write as zero.

Bit Range	Default & Access	Field Name (ID): Description
28:27	0x0 RW	**FRAME_START_DELAY:** Used to delay the frame start signal that is sent to the display planes. Normal operation uses the default 00 value and test modes can use the delayed frame start to shorten the test time. This would be set to 00 for normal operation. 00 = Frame Start occurs on the first HBLANK after the start of VBLANK 01 = Frame Start occurs on the second HBLANK after the start of VBLANK 10 = Frame Start occurs on the third HBLANK after the start of VBLANK 11 = Frame Start occurs on the forth HBLANK after the start of VBLANK
26	0x0 RW	**DISPLAY_PORT_AUDIO_ONLY_MODE:** Setting this bit to 1 indicates the DisplayPort will output audio only. 0 = DisplayPort will output Video or Video and Audio 1 = DisplayPort will output Audio only
25	0x0 RW	**FORCE_BORDER:** (TEST MODE)0 = Normal Operation 1 = Color information is ignored and border color is substituted during active region
24	0x0 RW	**PIPE_B_GAMMA_UNIT_MODE:** . This bit selects which mode the pipe gamma correction logic works in. In the palette mode, it behaves as a 3X256x8 RAM lookup. Indexed mode operation should use the palette in 8-bit mode. In the 10-bit gamma mode, it will act as a piecewise linear interpolation. Other gamma units such as in the overlay and sprite are unaffected by this bit.0 = 8-bit Palette Mode 1 = 10-bit Gamma Mode
23:21	0x0 RW	**INTERLACED_MODE:** These bits are used for software control of interlaced behavior. They are updated immediately if the pipe is off, or in the vertical blank after programming if pipe is enabled. 0xx = Progressive 100 = Interlaced embedded panel using programmable vertical sync shift (2x) 101 = Interlaced using vertical sync shift. Backup option to setting 110. (2x) 110 = Interlaced with VSYNC/HSYNC Field Indication using legacy vertical sync shift. Used for SDVO. 111 = Interlaced with Field 0 Only using legacy vertical sync shift. Not used. Setting the Interlaced embedded panel mode causes hardware to automatically modify the output to match the specifications of panels that support interlaced mode.
20	0x0 RW	**MIPI_DISPLAY_SELF_REFRESH_MODE_FOR_MIPI_B:** .0 = Normal Operation, display controller generate timing and refresh display panel at refresh rate 1 = Display self-refresh mode. Display controller update frame buffer in display module on demand only
19	0x0 RW	**DISPLAY_OVERLAY_PLANES_OFF:** . This bit when set will cause all enabled Display and overlay planes that are assigned to this pipe to be disabled by overriding the current setting of the plane enable bit, at the next VBLANK. Timing signals continue as they were but the screen becomes blank. Setting the bit back to a zero will then allow the display and overlay planes to resume on the following VBLANK.0 = Normal Operation 1 = Planes assigned to this pipe are disabled.

Bit Range	Default & Access	Field Name (ID): Description
18	0x0 RW	**CURSOR_PLANES_OFF:** . This bit when set will cause all enabled cursor planes that are assigned to this pipe to be disabled by overriding the current setting of the plane enable bit, at the next VBLANK. Timing signals continue as they were but the screen becomes blank. Setting the bit back to a zero will then allow the cursor planes to resume on the following VBLANK. 0 = Normal Operation 1 = Planes assigned to this pipe are disabled.
17:16	0x0 RW	**REFRESH_RATE_CXSR_MODE_ASSOCIATION:** These bits select how refresh rates are tied to CxSR on pipe B. When they are set to anything other than 00, bits 23:21 of this register must be programmed to 0xx. Switching between 01 and 10 settings directly is not allowed. Software must program this field to 00 before switching. Software is responsible for enabling this mode only for integrated display panels that support corresponding mode. 00 Default no dynamic refresh rate change enabled. Software control only. 01 Progressive-to-progressive refresh rate change enabled and tied to CxSR. Pixel clock values set in FPB0/FPB1 settings in the DPLLB control register and FPB0/FPB1 divider registers. 10 Progressive-to-interlaced refresh rate change enabled and tied to CxSR. Pixel clock value does not change in this case. Scaling must be disabled in this mode. Uses programmable VS shift 11 Reserved
15	0x0 RW	**COLOR_CORRECTION_MATRIX_ENABLE_ON_PIPE_B:** 1 = Color Correction Coefficients are enabled to perform color correction 0 = Color Correction Coefficients are disabled
14	0x0 RW	**DISPLAYPORT_POWER_MODE_SWITCH_DEVVLVP:** This bit selects the software controlled progressive to progressive power saving mode (software controlled DRRS). Hardware Controlled Refresh Rate Select must be disabled when enabling this. Link and data M/N 1 values are used for normal settings, M/N 2 values are used for low power settings. 0 Normal progressive refresh rate (default) 1 Low Power progressive refresh rate
13	0x0 RW	**COLOR_RANGE_SELECT:** This bit is used to select the color range of RBG outputs. 0 = Apply full 0-255 color range to the output (Default) 1 = Apply 16-235 color range to the output
12	0x0 RW	**S3D_SPRITE_ORDER:** This bit controls the blending order of the sprite planes for S3D support: 0 = Sprite C first. The first line or pixel comes from Sprite C (default) 1 = Sprite D first. The first line or pixel comes from Sprite D
11:10	0x0 RW	**S3D_SPRITE_INTERLEAVING_FORMAT:** These bits control the Sprite C/D interleaving format in S3D mode 00 = No interleaving 01 = Line interleaving 10 = Pixel interleaving 11 = Reserved

Bit Range	Default & Access	Field Name (ID): Description
9:8	0x0 RO	**RESERVED_1:** MBZ Scrambling enable [DevCTG]: This bit enables scrambling for DisplayPort. Software must set this bit appropriately when enabling a DisplayPort output. 00 = Scrambling disabled (Default) 01 = Scrambling enabled, no SR after initialization at loop 2 of training 10 - RESERVED 11 = Scrambling and SR enabled. Scrambling is reset every 512 BS symbols.
7:5	0x0 RW	**BITS_PER_COLOR:** : This field selects the number of bits per color sent to a receiver device connected to this port. Color format takes place on the Vblank after being written. Color format change can be done independent of a pixel clock change. Selecting a pixel color depth higher or lower than the pixel color depth of the frame buffer results in dithering the output stream. For further details on Display Port fixed frequency programming to accommodate these formats refer to DP Frequency Programming in DPLL section of Bspec. 000 = 8 bits per color (Default) 001 = 10 bits per color 010 = 6 bits per color 011 = RESERVED 1xx = RESERVED
4	0x0 RW	**DITHERING_ENABLE:** This bit enables dithering for DisplayPort 6bpc or 8bpc modes 0 Dithering disabled (Default) 1 Dithering enabled Programming Note: Dithering should only be enabled for 8bpc or 6bpc.
3:2	0x0 RW	**DITHERING_TYPE:** This bit selects dithering type for DisplayPort 6bpc or 8bpc modes 00 - Spatial only (default) 01- Spatio-Temporal 1 10- Spatio-Temporal 2 (testmode) 11- Temporal only (testmode)
1	0x0 RW	**DDA_RESET_TEST_MODE:** 0 Do not reset DDA 1 Reset DDA every 8th display frame
0	0x0 RO	**RESERVED_2:** Write as zero

4.3.253 PIPEBSTAT—Offset 71024h

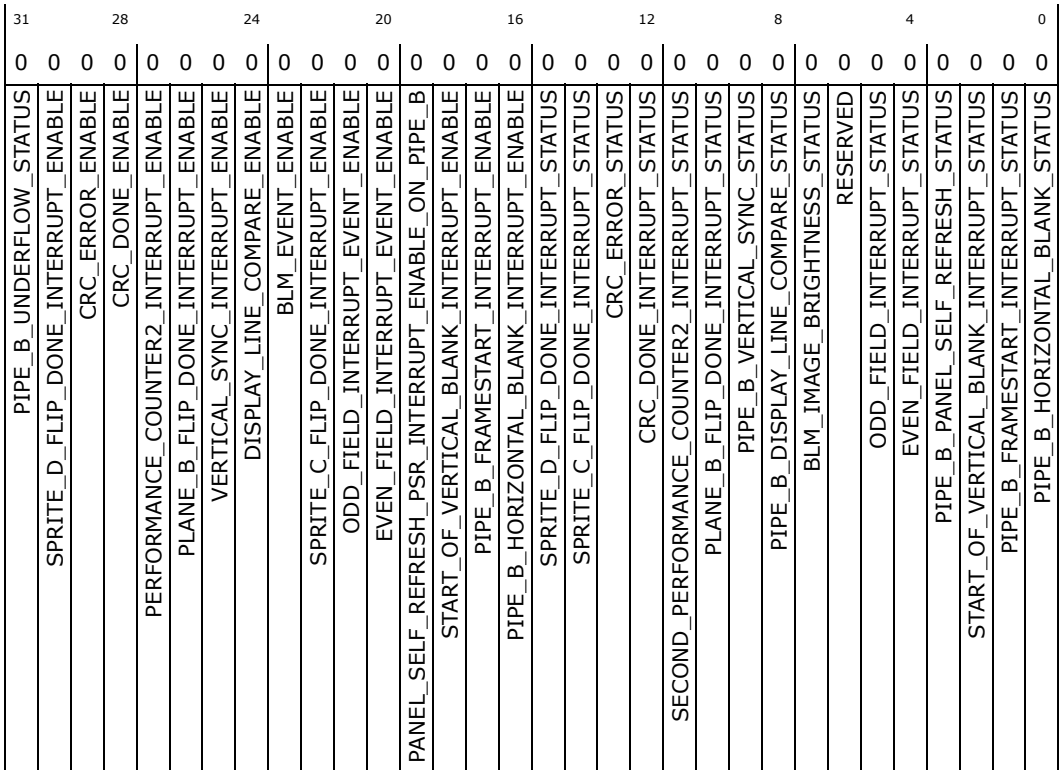
Pipe B Status

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

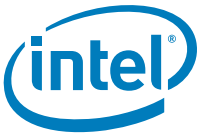
Offset: 71024h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW/1C	**PIPE_B_UNDERFLOW_STATUS:** This bit is set when an underflow occurs at the display pipe B. It is cleared by writing a one to this bit. This event will occur naturally during mode changes, to be effective, it should be cleared after a mode change. This bit is only valid after Pipe B has been completely configured. 1 = FIFO B Underflow occurred 0 = FIFO B Underflow did not occur AccessType: One to Clear
30	0x0 RW	**SPRITE_D_FLIP_DONE_INTERRUPT_ENABLE:** This will enable the consideration of the Sprite D flip done interrupt status bit in the first line interrupt logic 0 = Sprite D Flip Done Interrupt Disabled 1 = Sprite D Flip Done Interrupt Enabled
29	0x0 RW	**CRC_ERROR_ENABLE:** This will enable the consideration of the CRC error status bit in the first line interrupt/status logic. 0 = CRC Error Detect Disabled 1 = CRC Error Detect Enabled
28	0x0 RW	**CRC_DONE_ENABLE:** This will enable the consideration of the CRC done status bit in the first line interrupt/status logic. 0 = CRC Done Detect Disabled 1 = CRC Done Detect Enabled

Bit Range	Default & Access	Field Name (ID): Description
27	0x0 RW	**PERFORMANCE_COUNTER2_INTERRUPT_ENABLE:** This bit enables the second performance counter interrupt. 0 = Second Performance Counter2 Interrupt Status Disabled 1 = Second Performance Counter2 interrupt Status Enabled
26	0x0 RW	**PLANE_B_FLIP_DONE_INTERRUPT_ENABLE:** This will enable the consideration of the Plane B flip done interrupt status bit in the first line interrupt logic 0 = Plane B flip done Interrupt/Status Disabled 1 = Plane B flip done Interrupt/Status Enabled
25	0x0 RW	**VERTICAL_SYNC_INTERRUPT_ENABLE:** 0 = Vertical Sync Interrupt/ Status Disabled 1 = Vertical Sync Interrupt/Status Enabled
24	0x0 RW	**DISPLAY_LINE_COMPARE_ENABLE:** 0 = Pipe B Display Line Compare Status Report Disabled 1 = Pipe B Display Line Compare Status report Enabled
23	0x0 RW	**BLM_EVENT_ENABLE:** This interrupt is generated by the image brightness segment comparators. Which segment cause an interrupt are controlled by the BLM Histogram control register. 0 = No BLM event enabled 1 = BLM event enabled
22	0x0 RW	**SPRITE_C_FLIP_DONE_INTERRUPT_ENABLE:** This will enable the consideration of the Sprite C flip done interrupt status bit in the first line interrupt logic 0 = Sprite C Flip Done Interrupt Disabled 1 = Sprite C Flip Done Interrupt Enabled
21	0x0 RW	**ODD_FIELD_INTERRUPT_EVENT_ENABLE:** . This bit should only be used when this pipe is in an interlaced display timing.0 = Odd Field Event disable 1 = Odd Field Event enable
20	0x0 RW	**EVEN_FIELD_INTERRUPT_EVENT_ENABLE:** . This bit should only be used when this pipe is in an interlaced display timing.0 = Even field Event disable 1 = Even field Event enable
19	0x0 RW	**PANEL_SELF_REFRESH_PSR_INTERRUPT_ENABLE_ON_PIPE_B:** 0 = PSR interrupt Disabled on Pipe B 1 = PSR Interrupt Enabled on Pipe B
18	0x0 RW	**START_OF_VERTICAL_BLANK_INTERRUPT_ENABLE:** This will enable the consideration of the start of vertical blank interrupt status bit in the first line interrupt/status logic. 0 = Start of Vertical Blank Interrupt/Status Disabled 1 = Start of Vertical Blank Interrupt/Status Enabled
17	0x0 RW	**PIPE_B_FRAMESTART_INTERRUPT_ENABLE:** This will enable the consideration of the vertical blank interrupt status bit in the first line interrupt/status logic. 0 = Pipe B Framestart Interrupt/Status Disabled 1 = Pipe B Framestart Interrupt/Status Enabled



Bit Range	Default & Access	Field Name (ID): Description
16	0x0 RW	**PIPE_B_HORIZONTAL_BLANK_INTERRUPT_ENABLE:** This will enable the consideration of the start of horizontal blank interrupt status bit in the first line interrupt/status logic0 = Start of Horizontal Blank Interrupt/Status Disabled 1 = Start of Horizontal Blank Interrupt/Status Enabled
15	0x0 RW/1C	**SPRITE_D_FLIP_DONE_INTERRUPT_STATUS:** MMIO Flip Event is completed on Sprite D 0 = Sprite D Flip Not Done 1 = Sprite D Flip Done AccessType: One to Clear
14	0x0 RW/1C	**SPRITE_C_FLIP_DONE_INTERRUPT_STATUS:** MMIO Flip Event is completed on Sprite C 0 = Sprite C Flip Not Done 1 = Sprite C Flip Done AccessType: One to Clear
13	0x0 RW/1C	**CRC_ERROR_STATUS:** This bit is set when a Pipe B CRC error is detected. It is cleared by a write of a one. 0 = No CRC Error 1 = CRC Error detected AccessType: One to Clear
12	0x0 RW/1C	**CRC_DONE_INTERRUPT_STATUS:** This bit is set when Pipe B CRC calculation and compare are complete. It is cleared by a write of a one. 0 = CRC Not Done 1 = CRC Done AccessType: One to Clear
11	0x0 RW/1C	**SECOND_PERFORMANCE_COUNTER2_INTERRUPT_STATUS:** This bit is set when the second performance counter2 generates an interrupt. It is cleared by a write of a one. 0 = Second performance counter interrupt event not asserted 1 = Second performance counter interrupt event asserted AccessType: One to Clear
10	0x0 RW/1C	**PLANE_B_FLIP_DONE_INTERRUPT_STATUS:** Async/Sync Flip Event is completed on Display Plane B 0 = Plane B Flip Not Done 1 = Plane B Flip Done AccessType: One to Clear
9	0x0 RW/1C	**PIPE_B_VERTICAL_SYNC_STATUS:** 0 = Vertical Sync not asserted 1 = Vertical Sync asserted AccessType: One to Clear
8	0x0 RW/1C	**PIPE_B_DISPLAY_LINE_COMPARE_STATUS:** This bit is cleared when a write to this register occurs with this bit as a one. Writes with this bit as a zero has no effect on the value of the bit. 0 = Display Line Compare Status not asserted 1 = Display Line Compare Status asserted AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
7	0x0 RW/1C	**BLM_IMAGE_BRIGHTNESS_STATUS:** This bit is cleared when a write to this register occurs with this bit as a one. Writes with this bit as a zero has no effect on the value of the bit. 0 =DPST Interrupt has not occurred on pipe B 1 = DPST Interrupt has occurred on pipe B AccessType: One to Clear
6	0x0 RO	**RESERVED:** MBZ
5	0x0 RW/1C	**ODD_FIELD_INTERRUPT_STATUS:** . This status bit will be set on a Odd field VBLANK event. This bit should only be used when this pipe is in an interlaced display timing. For synchronization with register updates, the actual event will occur one line after the start of VBLANK. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set.Note: This bit will not be set when pipe is in Interlaced with Field 0 Only using legacy vertical sync shift mode. 0 = Odd Field Vertical Blank has not occurred 1 = Odd Field Vertical Blank has occurred AccessType: One to Clear
4	0x0 RW/1C	**EVEN_FIELD_INTERRUPT_STATUS:** . This status bit will be set on a even filed VBLANK event. This bit should only be used when this pipe is in an interlaced display timing. For synchronization with register updates, the actual event will occur one line after the start of VBLANK. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set.Note: This bit will not be set when pipe is in Interlaced with Field 0 Only using legacy vertical sync shift mode. 0 = Even Field Vertical Blank has not occurred 1 = Even Field Vertical Blank has occurred AccessType: One to Clear
3	0x0 RW/1C	**PIPE_B_PANEL_SELF_REFRESH_STATUS:** This bit indicates interrupt is generated by the PSR controller and intends to send interrupt to SW driver when the PSR interrupt enable bit (70028h bit 22) is set. This is cleared when a write to this register occurs with this bit as a one. Write with this bit as a zero has no effect on the value of the bit. 0 = PSR Interrupt has not occurred on pipe B 1 = PSR interrupt has occurred on pipe B AccessType: One to Clear
2	0x0 RW/1C	**START_OF_VERTICAL_BLANK_INTERRUPT_STATUS:** This status bit will be set at the beginning of a VBLANK event. At this point, the double buffered display registers flip, taking their new values. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. In MIPI DSR mode, GPIO TE trigger sets the Vblank Interrupt status 0 = Start of Vertical Blank has not occurred 1 = Start of Vertical Blank has occurred AccessType: One to Clear

Bit Range	Default & Access	Field Name (ID): Description
1	0x0 RW/1C	**PIPE_B_FRAMESTART_INTERRUPT_STATUS:** This status bit will be set on a VBLANK event, when the frame start occurs. The display registers are updated at the start of vertical blank, but the new register data is not utilized by the display pipeline until the point in the vertical blank period when the frame start occurs, which is the event that triggers this bit. To use this bit in a polling manner, clear the bit by writing a one to it followed by the polling loop waiting for it to become set. 0 = Pipe B Framestart Status has not occurred 1 = Pipe B Framestart Status has occurred AccessType: One to Clear
0	0x0 RW/1C	**PIPE_B_HORIZONTAL_BLANK_STATUS:** 0 = Pipe B Horizontal Blank has not occurred 1 = Pipe B Horizontal Blank has occurred AccessType: One to Clear

4.3.254 PIPEBFRAMECOUNT—Offset 71040h

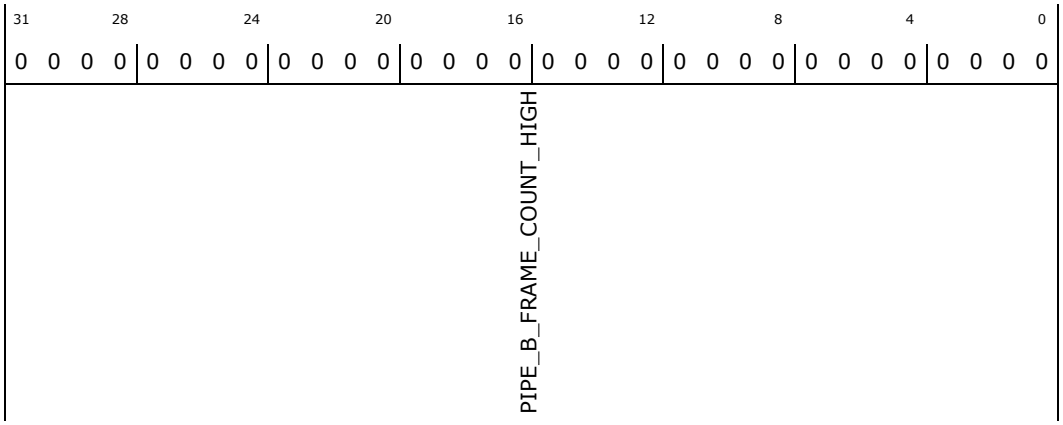
Pipe B Frame Count High

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 71040h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**PIPE_B_FRAME_COUNT_HIGH:** Refer PipeAFrameHigh description.

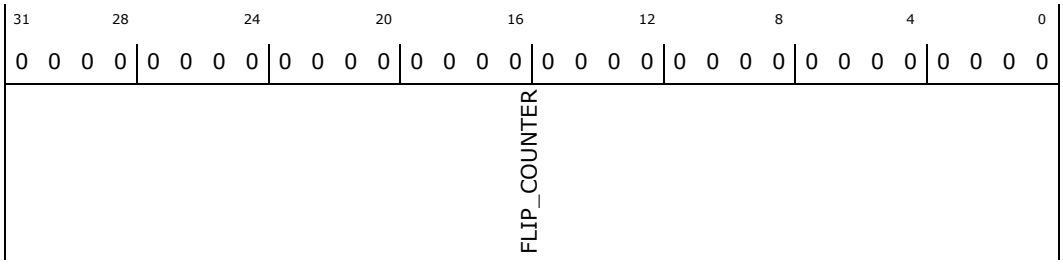
4.3.255 PIPEBFLIPCOUNT—Offset 71044h

Pipe B Flip count

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 71044h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**FLIP_COUNTER:** . Refer PipeAFlipCount description.

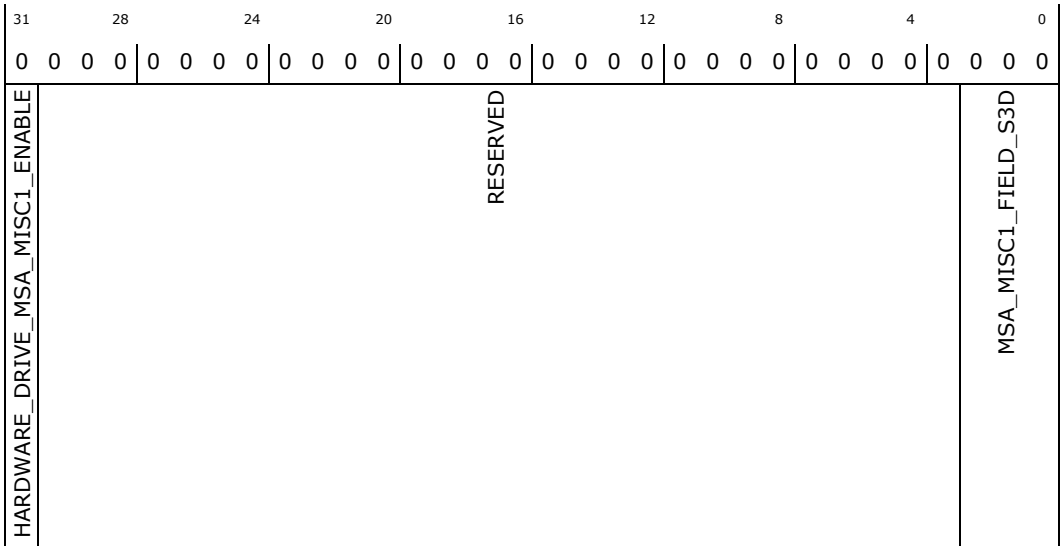
4.3.256 PIPEBMSAMISC—Offset 71048h

Pipe B MSA MISC

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 71048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**HARDWARE_DRIVE_MSA_MISC1_ENABLE:** This bit enables hardware to drive MSA MISC1 bit3:1 with the stereo 3D left/right eye field indication. Hardware will drive 000 when S3D mode is disabled, 001 when enabled and the upcoming video frame is right eye, 011 when enabled and the upcoming video frame is left eye. When this bit is disabled, software may manually program the MSA MISC1 Field S3D field in bit 2:0 in this register to set MISC1 bit 3:1 0 = Disable hardware driving MSA MISC1 bit 3:1. Allow software to manually program MSA MISC1 bit3:1 through MSA_MISC1_FIELD_S3D (default) 1 = Enable hardware to drive MSA MISC1 bit3:1 for S3D
30:3	0x0 RO	**RESERVED:** Reserved.
2:0	0x0 RW	**MSA_MISC1_FIELD_S3D:** This field provides software to manually program MSC1 stereo video attribute for DisplayPort: 000 = No stereo video transported 001 = For progressive video, the next (upcoming) video frame is RIGHT eye 010 = Reserved 011 = For progressive video, the next (upcoming) video frame is LEFT eye 100 = Stacked top and bottom top half represents left-eye view and bottom half represents right-eye view 101 = Stacked top and bottom top half represents right-eye view and bottom half represents left-eye view

4.3.257 DSPBADDR—Offset 7117Ch

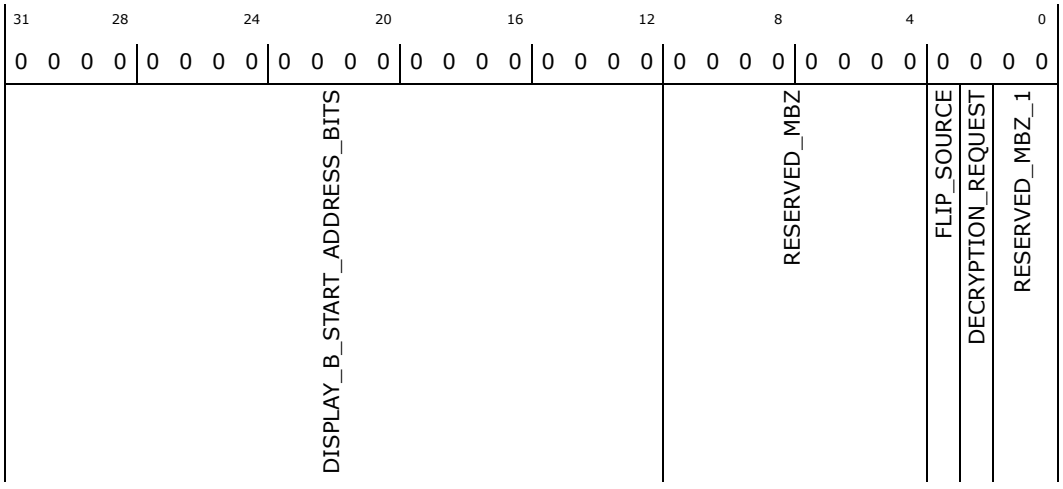
Display B Async flip Start Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 7117Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**DISPLAY_B_START_ADDRESS_BITS:** This register provides the start address of the display B plane or the first eye when running in stereo mode. This address must be at least pixel aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. This address must be 4K aligned. When performing asynchronous flips and the display surface is in tiled memory, this address must be 256K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . Write to this register triggers async flip The async flip address is written into the Display B Base Address register 0x7119C
11:4	0x0 RO	**RESERVED_MBZ:** Reserved.
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register.
1:0	0x0 RO	**RESERVED_MBZ_1:** Reserved.

4.3.258 DSPBCNTR—Offset 71180h

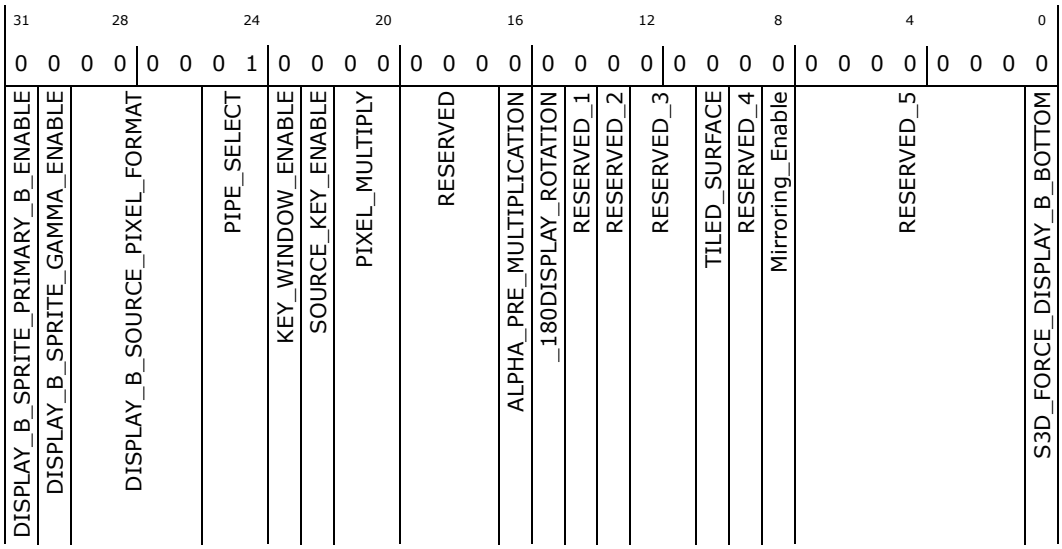
Display B/Sprite Plane Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 71180h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DISPLAY_B_SPRITE_PRIMARY_B_ENABLE:** This bit will enable or disable the display B/sprite. When this bit is set, the plane will generate pixels for display. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. 1 = Enable 0 = Disable
30	0x0 RW	**DISPLAY_B_SPRITE_GAMMA_ENABLE:** This bit should only be changed after the plane has been disabled. It controls the bypassing of the display pipe gamma unit for this display plane pixel data only. For 8-bit indexed display data, this bit should be set to a one. 0 = Display B pixel data bypasses the pipe gamma correction logic (default). 1 = Display B pixel data is gamma corrected in the pipe gamma correction logic
29:26	0x0 RW	**DISPLAY_B_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/display B. Pixel formats with an alpha channel (8:8:8:8) should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 000x = Reserved. 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format. (with pre-multiplied alpha color format) 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format. (with pre-multiplied alpha color format) 1010 = 32-bit BGRX (10:10:10:2) pixel format Ignore alpha 1011 = 32-bit BGRA (10:10:10:2) pixel format (with pre-multiplied alpha color format) 1100 = 64-bit RGBX (16:16:16:16) 16 bit floating point pixel format. Ignore alpha. 1101 = 64-bit RGBA (16:16:16:16) 16-bit floating point pixel format (with pre-multiplied color format) 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8) pixel format (with pre-multiplied color format)
25:24	0x1 RO	**PIPE_SELECT:** Plane B always ties to Pipe B. Reserved AccessType: Read Only

Bit Range	Default & Access	Field Name (ID): Description
23	0x0 RW	**KEY_WINDOW_ENABLE:** This applies only to devices with a Display Plane C. It determines what area of the screen the source key compare should be applied. This bit is set to one when the color key is used as a destination key for display C. Display plane C must be enabled on the same pipe and display A should not be enabled on this pipe for this to be used. The function is only effective when display C is enabled and defined by Z-order to be behind display B. 0 = If keying is enabled, it applies to the entire display B plane 1 = If keying is enabled, it applies only to the intersection between display B and display C [DevBLC] and [DevCTG]: Reserved
22	0x0 RW	**SOURCE_KEY_ENABLE:** When used as a sprite or a secondary this enables source color keying. Sprite pixel values that match the key will become transparent. Source keying allows a plane that is behind (below) this plane to show through where the display B data matches the display B key. This function is overloaded to provide display C destination keying when combined with the key window enable bit.. Setting this bit is not allowed when the display pixel format includes an alpha channel. 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled. [DevBLC] and [DevCTG]: Reserved In destination keying, primary plane pixel will be made transparent when blending with sprite pixel as the destination if the primary src key matches with the primary pixel value.
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. Asynchronous flips are not used in this mode. Programming Notes: Asynchronous flips are not permitted when pixel multiply is enabled. 00 = No duplication 01 = Line/pixel Doubling 10 = Reserved 11 = Pixel Doubling only
19:17	0x0 RO	**RESERVED:** Write as zero
16	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image. [DevCL] Do not enable 180 rotation together with Frame Buffer Compression 0 = No rotation 1 = 180 rotation

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RO	**RESERVED_1:** [DevBLC, DevCTG] Display B Trickle Feed Enable: 0 = Trickle Feed Enabled - Display B data requests are sent whenever there is space in the Display Data Buffer. 1 = Trickle Feed Disabled - Display B data requests are sent in bursts. Note: On mobile products this bit will be ignored such that Trickle Feed is always disabled. [DevELK] Must always be programmed disabled
13	0x0 RO	**RESERVED_2:** [DevBLC, DevCTG] Display B Data Buffer Partitioning Control: 0 = Display B Data Buffer will encompass Sprite B buffer space when Sprite B is disabled. 1 = Display B Data Buffer will not use Sprite B buffer space when Sprite B is disabled. Note: When in C3xR Max FIFO mode, this bit will be ignored.
12:11	0x0 RO	**RESERVED_3:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the display B surface data is in tiled memory. The tile pitch is specified in bytes in the DSPBSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPBLINOFF, DSPBTILEOFF, and DSPBSURF registers. 0 = Display B surface uses linear memory 1 = Display B surface uses X-tiled memory
9	0x0 RO	**RESERVED_4:** Write as zero [DevBLC, DevCTG] Asynchronous Surface Address Update Enable: This bit will enable asynchronous updates of the surface address when written by MMIO. The surface address will change with the next TLB request or when start of vertical blank is reached. Updates during vertical blank may not complete until after the first few active lines are displayed. Restrictions: No command streamer initiated surface address updates are allowed when this bit is enabled. Only one asynchronous update may be made per frame. Must wait for vertical blank before again writing the surface address register. 0 = DSPBSURF MMIO writes will update synchronous to start of vertical blank (default) 1 = DSPBSURF MMIO writes will update asynchronously
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:1	0x0 RO	**RESERVED_5:** Write as zero
0	0x0 RW	**S3D_FORCE_DISPLAY_B_BOTTOM:** This bit will force the display B plane to be on the bottom of any sprite planes in the Z order. 0 = Display B Z-order is determined by the other control bits in pipe B 1 = Display B is forced to be on the bottom of any sprite planes in Z-order in pipe B

4.3.259 DSPBLINOFFSET—Offset 71184h

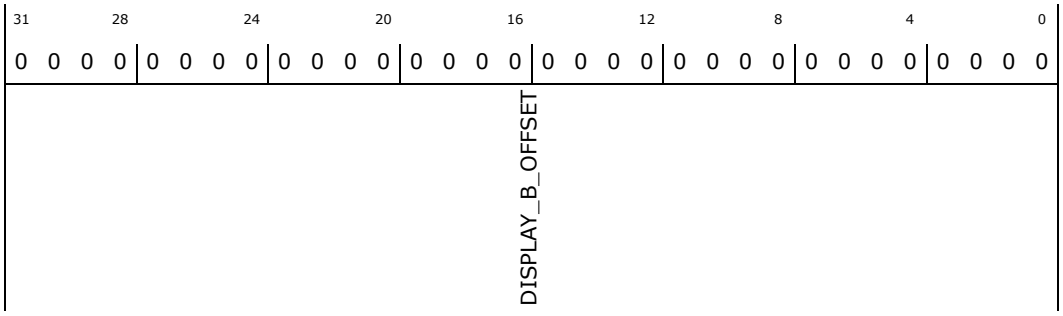
Display B/Sprite Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 71184h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**DISPLAY_B_OFFSET:** This register provides the panning offset into the display B plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

4.3.260 DSPBSTRIDE—Offset 71188h

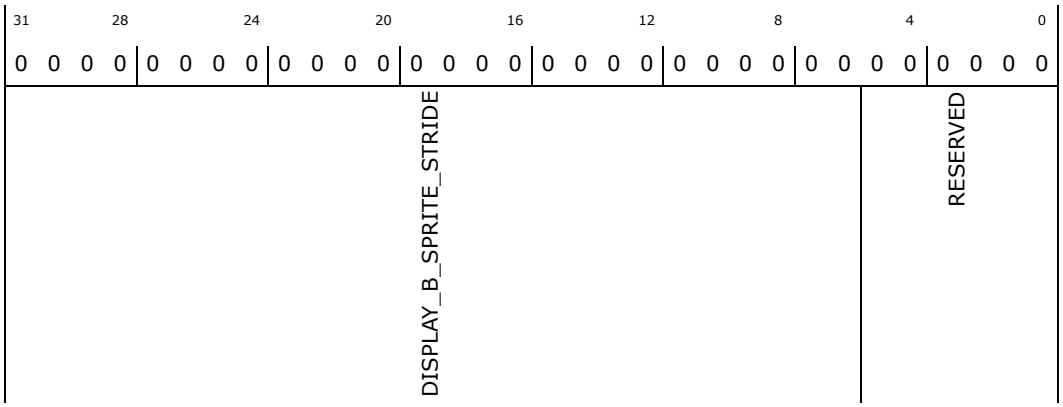
Display B/Sprite Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 71188h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**DISPLAY_B_SPRITE_STRIDE:** This is the stride for display B/Sprite in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 512 byte aligned. The maximum value for this register is fixed. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes. The display stride must be power of 2 when doing Asynch Flips. The display stride must be 8KB or greater when doing Asynch Flips together with 180 rotation. The value in this register is updated through the command streamer during a synchronous flip.
5:0	0x0 RO	**RESERVED:** Reserved.

4.3.261 DSPBKEYVAL—Offset 71194h

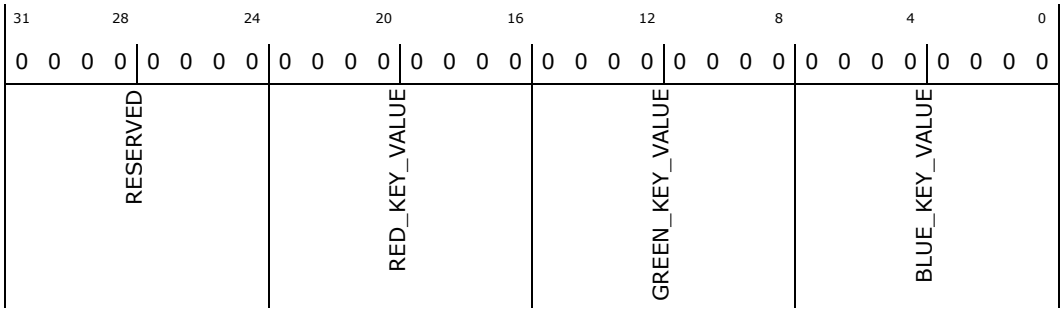
Sprite Color Key Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 71194h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:**
23:16	0x0 RW	**RED_KEY_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_VALUE:** Specifies the color key value for the sprite blue/Cb channel.

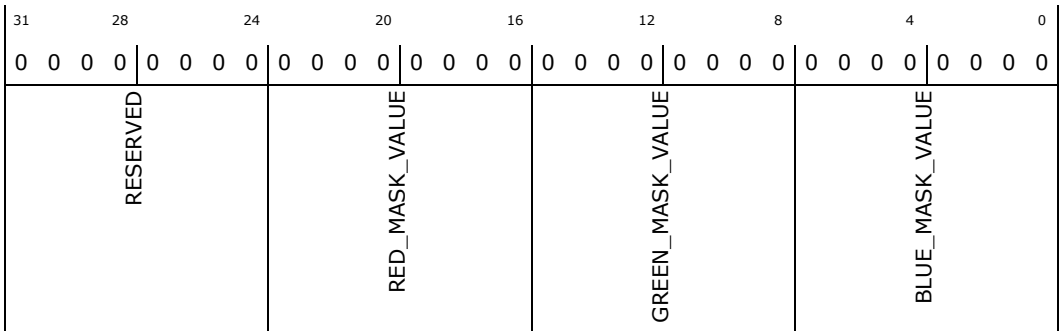
4.3.262 DSPBKEYMSK—Offset 71198h

Sprite Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 71198h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:**
23:16	0x0 RW	**RED_MASK_VALUE:** Specifies the color key mask for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_MASK_VALUE:** Specifies the color key mask for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_MASK_VALUE:** Specifies the color key mask for the sprite blue/Cb channel.

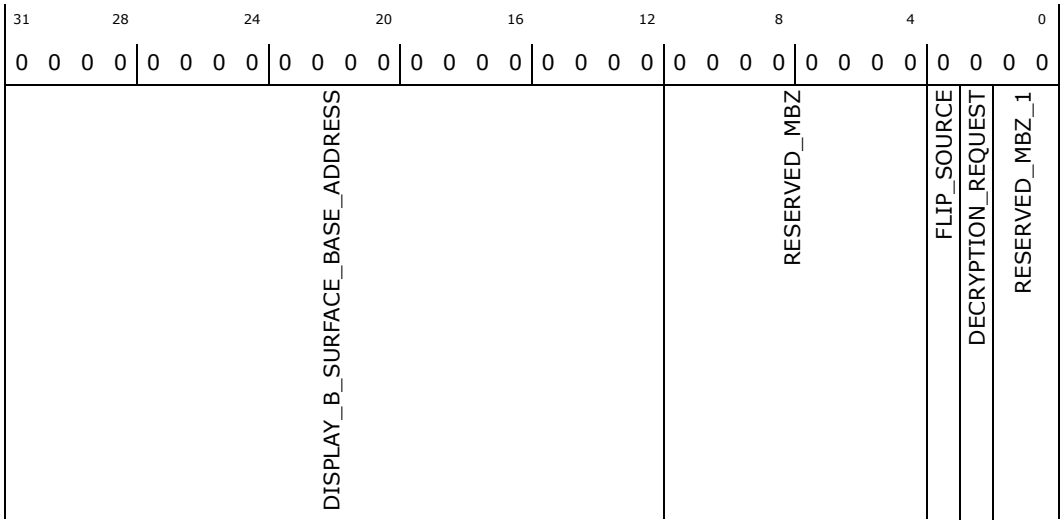
4.3.263 DSPBSURF—Offset 7119Ch

Display B Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7119Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**DISPLAY_B_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPBTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPBLINOFF register. This address must be 4K aligned. When performing asynchronous flips and the display surface is in tiled memory, this address must be 256K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED_MBZ:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register.

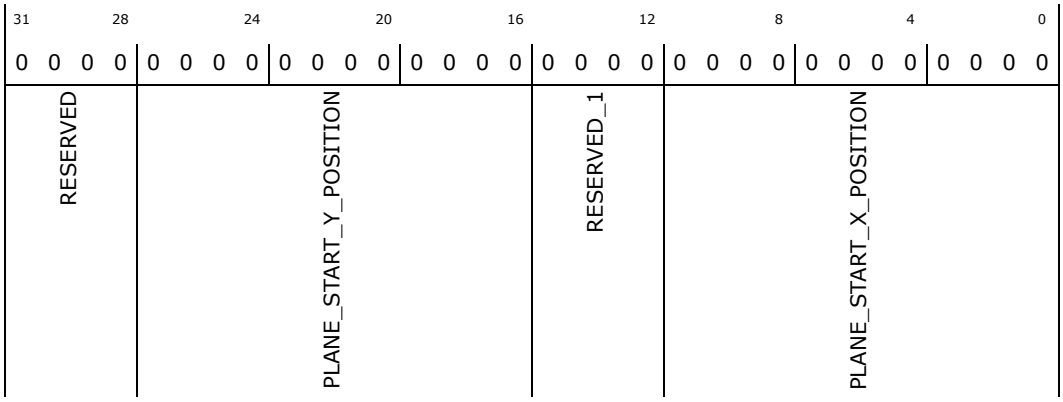
4.3.264 DSPBTILEOFF—Offset 711A4h

Display B Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 711A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation. When display stride is 16KB and doing Asynch Flips, do not program the offset to give pans of 7680 to 8191 bytes.

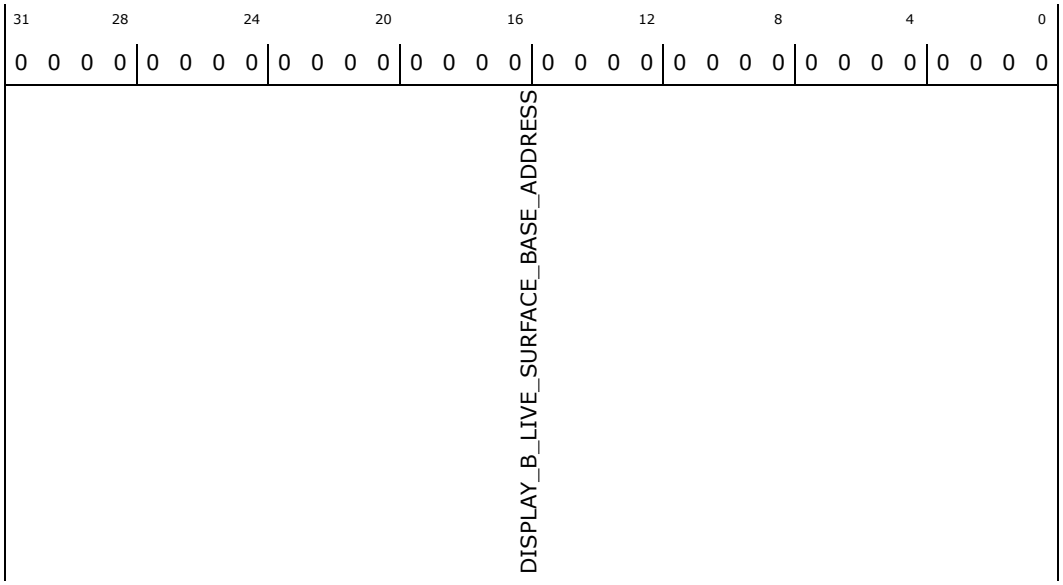
4.3.265 DSPBSURFLIVE—Offset 711ACh

Display B Live Surface Base Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 711ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**DISPLAY_B_LIVE_SURFACE_BASE_ADDRESS:** . This gives the live value of the surface base address as being currently used for the plane.

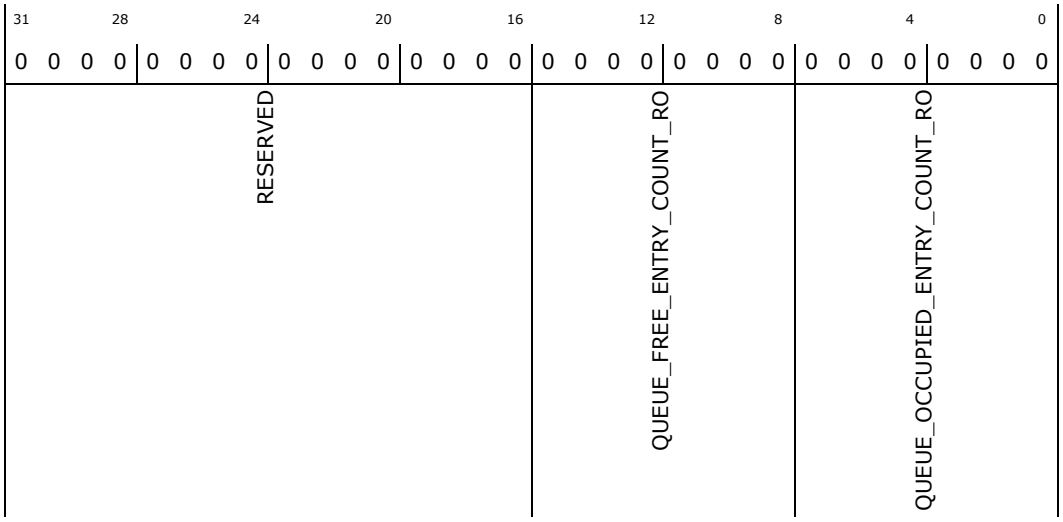
4.3.266 DSPBFLPQSTAT—Offset 71200h

Flip Queue Status Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 71200h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Write as zero (RO)
15:8	0x0 RO	**QUEUE_FREE_ENTRY_COUNT_RO:** This value indicates the number of free entries in the queue at the time that the register was read. The total number of entries in the queue is the sum of the occupied entry count and the free entry count.
7:0	0x0 RO	**QUEUE_OCCUPIED_ENTRY_COUNT_RO:** This value indicates the number of occupied entries in the queue at the time that the register was read. The total number of entries in the queue is the sum of the occupied entry count and the free entry count.

4.3.267 SWF10—Offset 71410h

Software Flag Registers

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

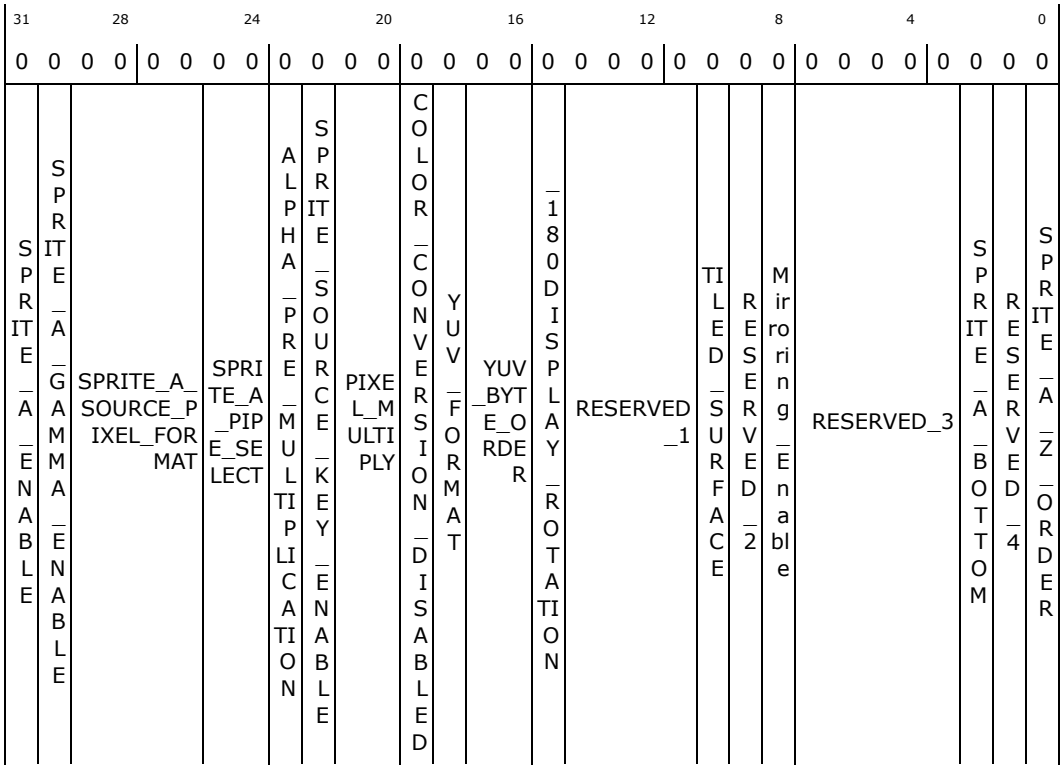
4.3.283 SPACNTR—Offset 72180h

Sprite A Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72180h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SPRITE_A_ENABLE:** This bit will enable or disable the Sprite A. When this bit is set, the plane will generate pixels for display to be combined by the blender for the target pipe. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. This bit only has an effect when the plane is not trusted. When the plane is marked trusted, this bit will be overridden and the display disabled when the registers are unlocked. 1 = Enable 0 = Disable
30	0x0 RW	**SPRITE_A_GAMMA_ENABLE:** There are two gamma adjustments possible in the Sprite A data path. This bit controls the gamma correction in the display pipe not the gamma control in this plane. It affects only the pixel data from this display plane. For pixel format of 8-bit indexed, this bit should be set to a one. Gamma correction logic that is contained in the Sprite A logic is disabled by loading the default values into those registers. When this plane is marked as trusted, this bit should always be set to zero to force the pipe gamma to be always be bypassed. 0 = Sprite A pixel data bypasses the display pipe gamma correction logic (default). 1 = Sprite A pixel data is gamma corrected in the pipe gamma correction logic
29:26	0x0 RW	**SPRITE_A_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/Sprite A. Pixel formats with an alpha channel should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 0000 = YUV 4:2:2 packed (see byte order below). 0001 = Reserved 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format with pre-multiplied alpha channel. 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format 1010 = Reserved. 1011 = Reserved. 1100 = Reserved. 1101 = Reserved. 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8)
25:24	0x0 RW	**SPRITE_A_PIPE_SELECT:** Sprite A always ties to pipe A. Reserved.
23	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.

Bit Range	Default & Access	Field Name (ID): Description
22	0x0 RW	**SPRITE_SOURCE_KEY_ENABLE:** When used as a sprite in the 16/32-bpp modes without alpha this enables source color keying. Sprite pixel values that match (within range) the key will become transparent. Setting this bit is not allowed when the Sprite A pixel format includes an alpha channel. [DevBW] Erratum: This bit must always be set to 0 when Sprite A pixel format is YUV 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled. Each sprite has built in source keying enabled/disabled. If the source keying is disabled and no alpha blending is enabled, the pixels are tagged as opaque. If sprite source keying is enabled and no alpha blending is enabled, it works as follows: For YUV sprite data, each yuv channel data is compared with the corresponding channel s key color Low and High (each channel inrange can be masked out). If all three channels are in range between the low and high key values, it is considered source compared. For RGB sprite data, each 24-bit RGB pixel data is compared with the 24-bit key value (note it only uses the 24-bit Low key value for comparison). Each 24-bit has to be equal (each bit comparison can also be masked out) for the source compared. If the sprite source data compare and matches, then the sprite data will be tagged as transparent when blending with its destination pixel. If the sprite source data does not compare, then the sprite data will be tagged as opaque when blending with its destination pixel.
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. This is a method of scaling the source image by two (both H and V). 00 = No line/Pixel duplication 01 = Line/Pixel Doubling 10 = Line Doubling only 11 = Pixel Doubling only
19	0x0 RW	**COLOR_CONVERSION_DISABLED:** This bit enables or disables the color conversion logic. Color conversion is intended to be used with the formats that support YUV formats such as the YUV 4:2:2 packed format and x:8:8:8 and 8:8:8:8 formats. Formats such as RGB5:5:5 and 5:6:5 do not have YUV versions. 0 = Pixel data is sent through the conversion logic (only applies to YUV formats) 1 = Pixel data is not sent through the YUV-)RGB conversion logic.
18	0x0 RW	**YUV_FORMAT:** This bit specifies the source YUV format for the YUV to RGB color conversion operation. This field is ignored when source data is RGB. 0 = ITU-R Recommendation BT.601 1 = ITU-R Recommendation BT.709
17:16	0x0 RW	**YUV_BYTE_ORDER:** This field is used to select the byte order when using YUV 4:2:2 data formats. For other formats, this field is ignored. 00 = YUYV 01 = UYVY 10 = YVYU 11 = VYUY

Bit Range	Default & Access	Field Name (ID): Description
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image and calculate the x, y offset as relative to the lower right corner. 0 = No rotation 1 = 180 rotation
14:11	0x0 RO	**RESERVED_1:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the Sprite A surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCTILEOFF, DSPCLINOFF, and DSPCSURFADDR registers. 0 = Sprite A surface uses linear memory 1 = Sprite A surface uses X-tiled memory
9	0x0 RO	**RESERVED_2:** Write as zero
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:3	0x0 RO	**RESERVED_3:** Write as zero
2	0x0 RW	**SPRITE_A_BOTTOM:** This bit will force the Sprite A plane to be on the bottom of the Z order. If the plane is marked as trusted, it only applies to the Z order of the trusted planes. 0 = Sprite A Z order is determined by the other control bits 1 = Sprite A is forced to be on the bottom of the Z order.
1	0x0 RO	**RESERVED_4:** Reserved.
0	0x0 RW	**SPRITE_A_Z_ORDER:** With Sprite A and B z-order, bottom control bits, Sprite A plane is placed in a specific z-order among other planes. Display Pipe A Z-orders SA zorderSA bottomSB zorderSB bottomResulting Pipe Z-order (from bottom to top)Source Keying 0000PA SA SB CAPA in Black 1000PA SB SA CAPA in Black 0001SB PA SA CAuse src keying on SB 0011SB PA SA CAuse src keying on SB 1001SB SA PA CAuse src keying on SA 1011SB SA PA CAuse src keying on SA 0100SA PA SB CAuse src keying on SA 1100SA PA SB CAuse src keying on SA 0110SA SB PA CAuse src keying on SB 1110SA SB PA CAuse src keying on SB 0: Sprite A z-order is disabled 1: Sprite A z-order is enabled

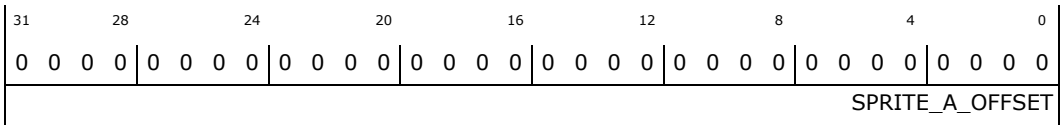
4.3.284 SPALINOFF—Offset 72184h

Sprite A Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72184h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SPRITE_A_OFFSET:** This register provides the panning offset into the Sprite A plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

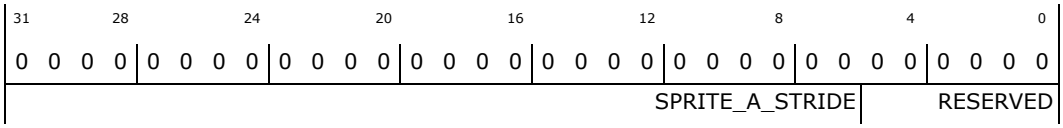
4.3.285 SPASTRIDE—Offset 72188h

Sprite A Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72188h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**SPRITE_A_STRIDE:** This is the stride for Sprite A in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 256 byte aligned. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes.
5:0	0x0 RO	**RESERVED:** Reserved.

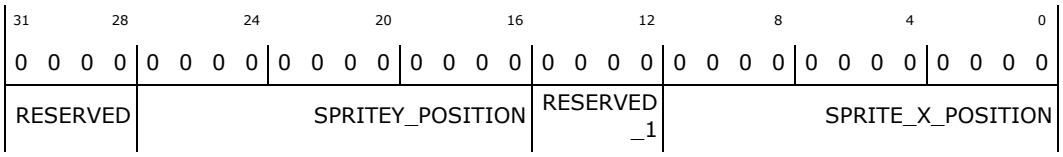
4.3.286 SPAPOS—Offset 7218Ch

Sprite A Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7218Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITEY_POSITION:** These 12 bits specify the vertical position in lines of the sprite (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_X_POSITION:** These 12 bits specify the horizontal position in pixels of the sprite (upper left corner) relative the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the original lower right corner relative to the original end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

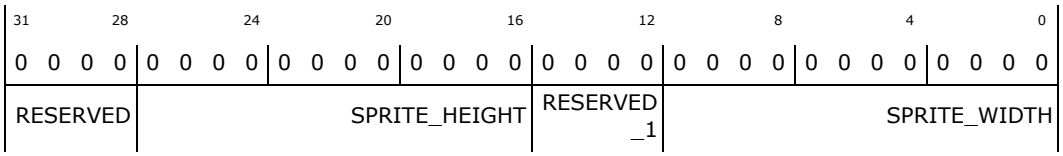
4.3.287 SPASIZE—Offset 72190h

Sprite A Height and Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72190h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITE_HEIGHT:** This register field is used to specify the height of the sprite in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_WIDTH:** This register field is used to specify the width of the sprite in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image. The sprite width is limited to even values when YUV source pixel format is used (actual width, not the width minus one value).

4.3.288 SPAKEYMINVAL—Offset 72194h

Sprite A Color Key Min Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72194h

Default: 00000000h

31 28	24	20	16	12	8	4	0
0 0 0 0 | 0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0
RESERVED	RED_KEY_MIN_VALUE			GREEN_KEY_MIN_VALUE		BLUE_KEY_MIN_VALUE	

Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite blue/Cb channel.

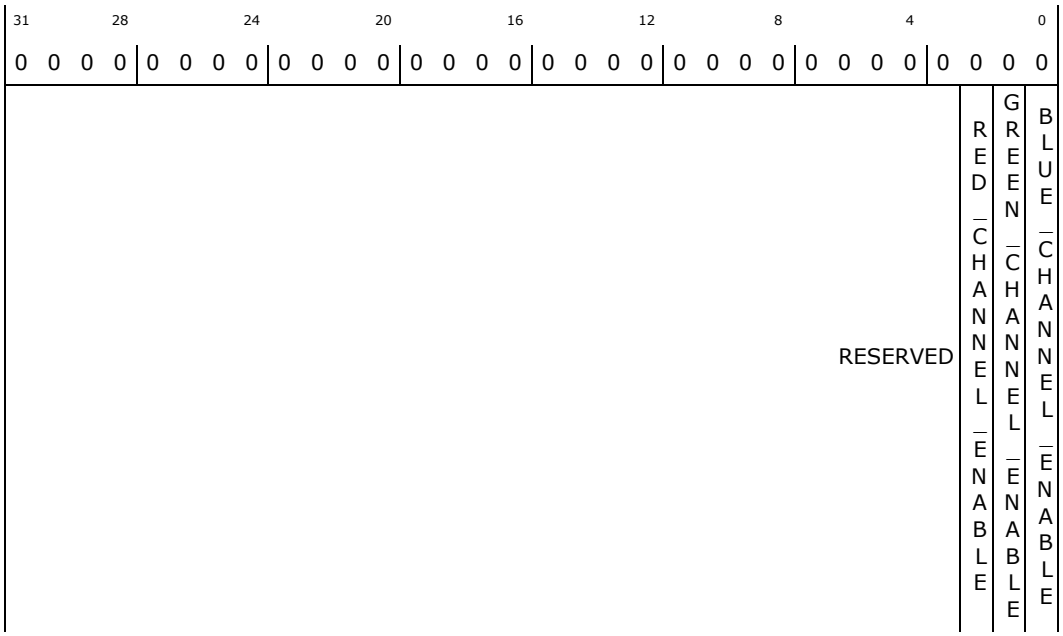
4.3.289 SPAKEYMSK—Offset 72198h

Sprite A Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72198h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Write as zero
2	0x0 RW	**RED_CHANNEL_ENABLE:** Specifies the source color key enable for the red/Cr channel.
1	0x0 RW	**GREEN_CHANNEL_ENABLE:** Specifies the source color key enable for the green/Y channel.
0	0x0 RW	**BLUE_CHANNEL_ENABLE:** Specifies the source color key enable for the blue/Cb channel

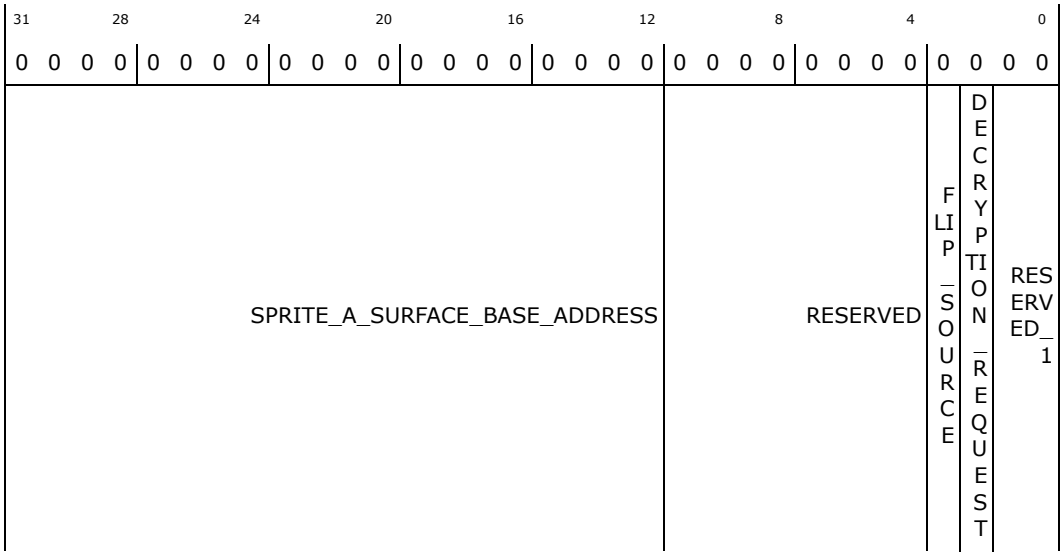
4.3.290 SPASURF—Offset 7219Ch

Sprite A Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7219Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**SPRITE_A_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . The value in this register is updated through the command streamer during synchronous flips. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. ValueNameDescriptionProject 0b Not requested Decrytpion not requested All 1b Requested Decryption requested All
1:0	0x0 RO	**RESERVED_1:** MBZ

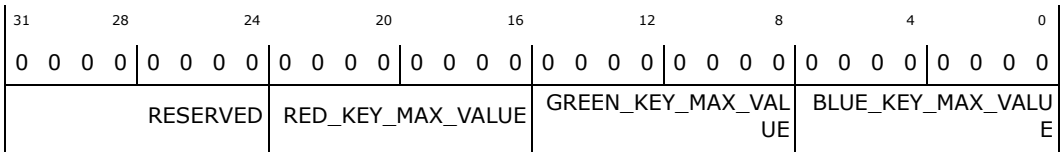
4.3.291 SPAKEYMAXVAL—Offset 721A0h

Sprite A Color Key Max Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 721A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MAX_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MAX_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MAX_VALUE:** Specifies the color key value for the sprite blue/Cb channel.

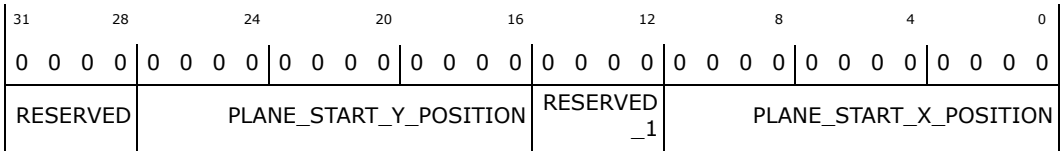
4.3.292 SPATILEOFF—Offset 721A4h

Sprite A Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 721A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

4.3.293 SPACONTALPHA—Offset 721A8h

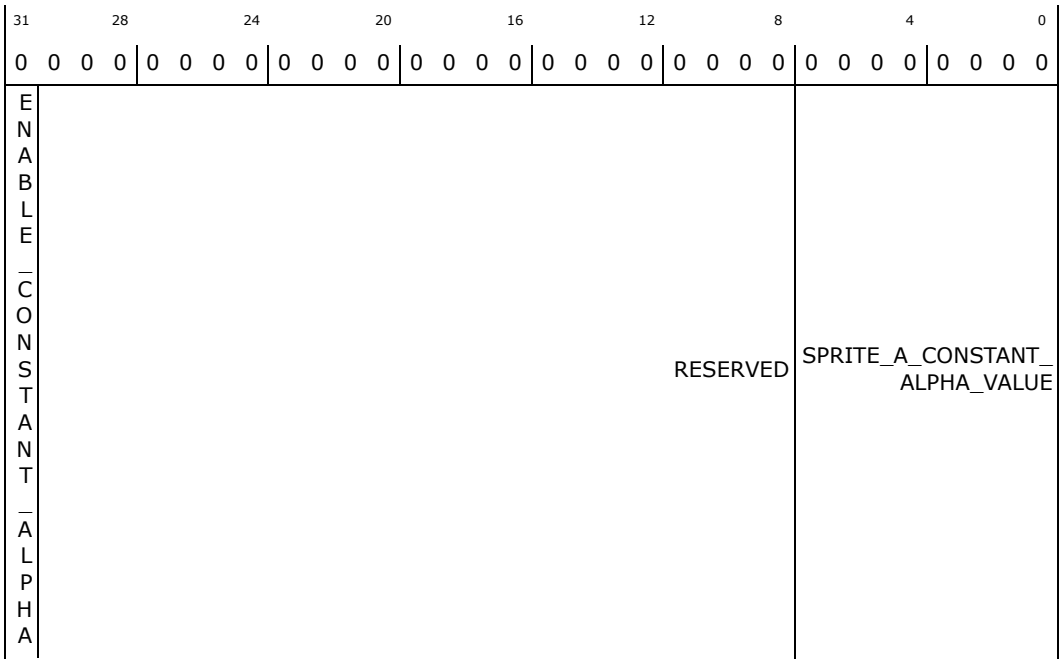
Sprite A Constant Alpha Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 721A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_CONSTANT_ALPHA:** Sprite A Sprite constant alpha provides a way to apply an alpha value to all video sprite pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. This can be used to create fade out effects. This is intended for CE device use where the video sprite might still be used to generate video output. 0 Sprite A Sprite Constant Alpha is disabled 1 Sprite A Sprite Constant Alpha is enabled

Bit Range	Default & Access	Field Name (ID): Description
30:8	0x0 RO	**RESERVED:** MBZ
7:0	0x0 RW	**SPRITE_A_CONSTANT_ALPHA_VALUE:** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of sprite with other surfaces.

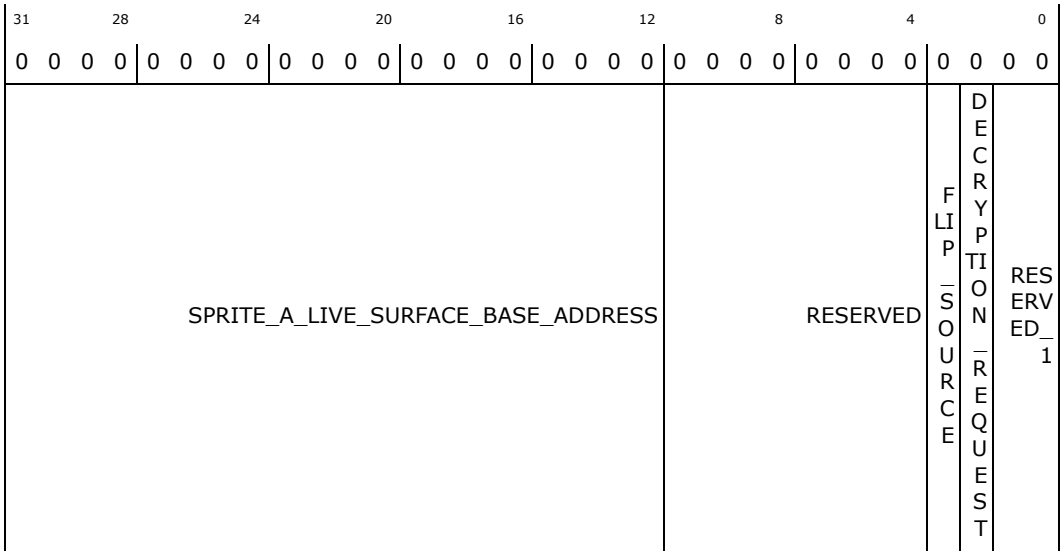
4.3.294 SPALIVESURF—Offset 721ACh

Sprite A Live Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 721ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**SPRITE_A_LIVE_SURFACE_BASE_ADDRESS:** This gives the live value of the surface base address as being currently used for the Sprite A plane.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RO	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RO	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. 1:0	0x0 RO	**RESERVED_1:** MBZ

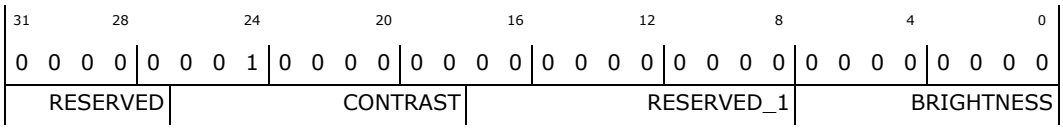
4.3.295 SPACLRC0—Offset 721D0h

Sprite A Color Correction 0 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 721D0h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:18	0x40 RW	**CONTRAST:** Contrast adjustment applies to YUV data. The Y channel is multiplied by the value contained in the register field. This signed fixed-point number is in 3i.6f format with the first 3 MSBs as the integer value and the last 6 LSBs as the fraction value. The allowed contrast value ranges from 0 to 7.53125 decimal. Bypassing Contrast, for YUV modes and for source data in RGB format, is accomplished by programming this field to a field value that represents 1.0 decimal or 001.000000 binary .
17:8	0x0 RO	**RESERVED_1:** Reserved.
7:0	0x0 RW	**BRIGHTNESS:** This field provides the brightness adjustment with a 8-bit 2 s compliment value ranging [-128, +127]. This value is added to the Y value after contrast multiply and before YUV to RGB conversion. A value of zero disables this adjustment affect. This 8-bit signed value provides half of the achievable brightness adjustment dynamic range. A full range brightness value would have a programmable range of [-255, +255]. Bypassing Brightness for YUV formats and for source data in RGB format, is accomplished by programming this field to 0.

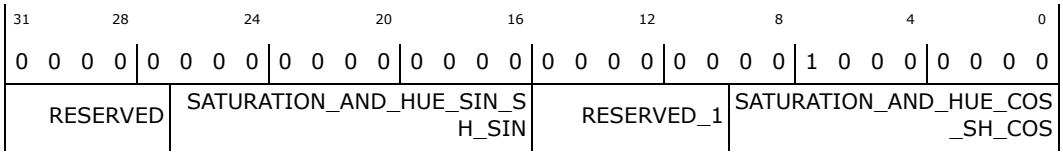
4.3.296 SPACLRC1—Offset 721D4h

Sprite A Color Correction 1 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 721D4h

Default: 00000080h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:16	0x0 RW	**SATURATION_AND_HUE_SIN_SH_SIN:** This 11-bit signed fixed-point number is in 2 s compliment (s3i.7f) format with the MSB as the sign, next 3 MSBs as the integer value and the last 7 LSBs as the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Hue, even for source data in RGB format, is accomplished by programming this field to 0.0.
15:10	0x0 RO	**RESERVED_1:** Reserved.
9:0	0x80 RW	**SATURATION_AND_HUE_COS_SH_COS:** This unsigned fixed-point number is in 3i.7f format with the first 3 MSBs be the integer value and the last 7 LSBs be the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Saturation, even for source data in RGB format, is accomplished by programming this field to 1.0.

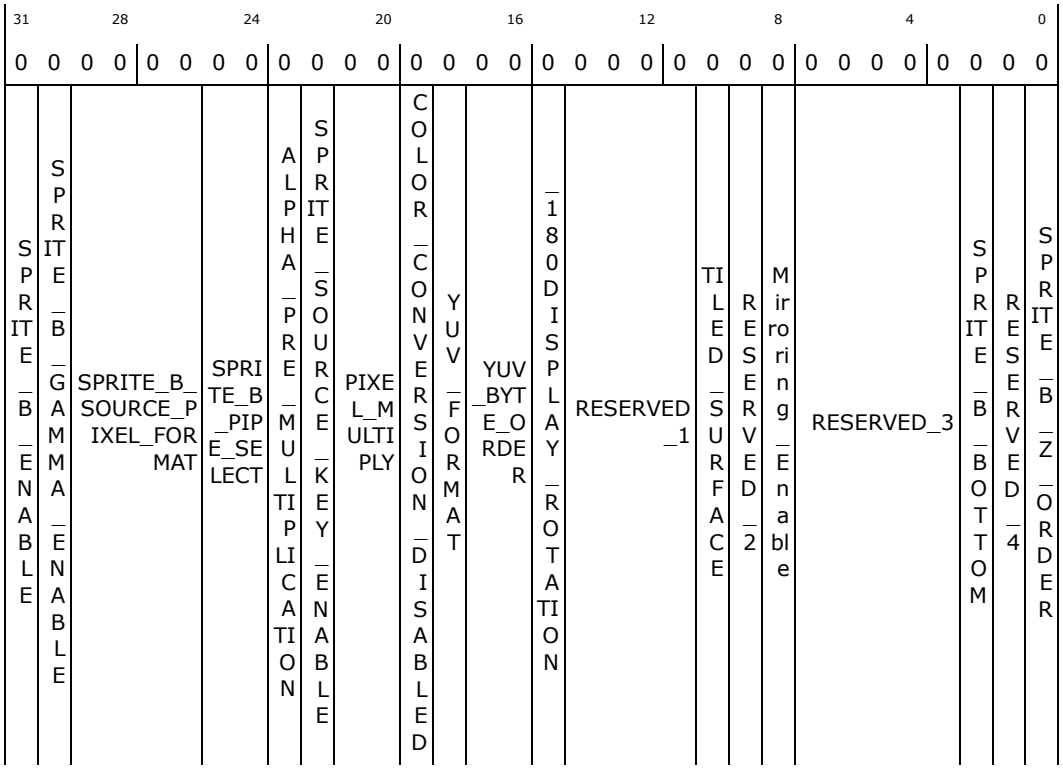
Sprite B Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72280h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SPRITE_B_ENABLE:** This bit will enable or disable the Sprite B. When this bit is set, the plane will generate pixels for display to be combined by the blender for the target pipe. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. This bit only has an effect when the plane is not trusted. When the plane is marked trusted, this bit will be overridden and the display disabled when the registers are unlocked. 1 = Enable 0 = Disable
30	0x0 RW	**SPRITE_B_GAMMA_ENABLE:** There are two gamma adjustments possible in the Sprite B data path. This bit controls the gamma correction in the display pipe not the gamma control in this plane. It affects only the pixel data from this display plane. For pixel format of 8-bit indexed, this bit should be set to a one. Gamma correction logic that is contained in the Sprite B logic is disabled by loading the default values into those registers. When this plane is marked as trusted, this bit should always be set to zero to force the pipe gamma to be always be bypassed. 0 = Sprite B pixel data bypasses the display pipe gamma correction logic (default). 1 = Sprite B pixel data is gamma corrected in the pipe gamma correction logic

Bit Range	Default & Access	Field Name (ID): Description
29:26	0x0 RW	**SPRITE_B_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/Sprite B. Pixel formats with an alpha channel should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 0000 = YUV 4:2:2 packed (see byte order below). 0001 = Reserved 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format with pre-multiplied alpha channel. 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format 1010 = Reserved. 1011 = Reserved. 1100 = Reserved. 1101 = Reserved. 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8)
25:24	0x0 RW	**SPRITE_B_PIPE_SELECT:** Sprite B always ties to Pipe A. Reserved
23	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
22	0x0 RW	**SPRITE_SOURCE_KEY_ENABLE:** When used as a sprite in the 16/32-bpp modes without alpha this enables source color keying. Sprite pixel values that match (within range) the key will become transparent. Setting this bit is not allowed when the Sprite B pixel format includes an alpha channel. [DevBW] Erratum: This bit must always be set to 0 when Sprite B pixel format is YUV 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled.
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. This is a method of scaling the source image by two (both H and V). 00 = No line/Pixel duplication 01 = Line/Pixel Doubling 10 = Line Doubling only 11 = Pixel Doubling only

Bit Range	Default & Access	Field Name (ID): Description
19	0x0 RW	**COLOR_CONVERSION_DISABLED:** This bit enables or disables the color conversion logic. Color conversion is intended to be used with the formats that support YUV formats such as the YUV 4:2:2 packed format and x:8:8:8 and 8:8:8:8 formats. Formats such as RGB5:5:5 and 5:6:5 do not have YUV versions. 0 = Pixel data is sent through the conversion logic (only applies to YUV formats) 1 = Pixel data is not sent through the YUV-)RGB conversion logic.
18	0x0 RW	**YUV_FORMAT:** This bit specifies the source YUV format for the YUV to RGB color conversion operation. This field is ignored when source data is RGB. 0 = ITU-R Recommendation BT.601 1 = ITU-R Recommendation BT.709
17:16	0x0 RW	**YUV_BYTE_ORDER:** This field is used to select the byte order when using YUV 4:2:2 data formats. For other formats, this field is ignored. 00 = YUYV 01 = UYVY 10 = YVYU 11 = VYUY
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image and calculate the x, y offset as relative to the lower right corner. 0 = No rotation 1 = 180 rotation
14:11	0x0 RO	**RESERVED_1:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the Sprite B surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCTILEOFF, DSPCLINOFF, and DSPCSURFADDR registers. 0 = Sprite B surface uses linear memory 1 = Sprite B surface uses X-tiled memory
9	0x0 RO	**RESERVED_2:** Write as zero
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:3	0x0 RO	**RESERVED_3:** Write as zero
2	0x0 RW	**SPRITE_B_BOTTOM:** This bit will force the Sprite B plane to be on the bottom of the Z order. If the plane is marked as trusted, it only applies to the Z order of the trusted planes. 0 = Sprite B Z order is determined by the other control bits 1 = Sprite B is forced to be on the bottom of the Z order.
1	0x0 RO	**RESERVED_4:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**SPRITE_B_Z_ORDER:** With Sprite A and B z-order, bottom control bits, Sprite B plane is placed in a specific z-order among other planes in pipe A. 4.3.304 SPBLINOFF—Offset 72284h

Sprite B Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72284h

Default: 00000000h

31 28	24	20	16	12	8	4	0
0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0
SPRITE_B_OFFSET							

Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SPRITE_B_OFFSET:** This register provides the panning offset into the Sprite B plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

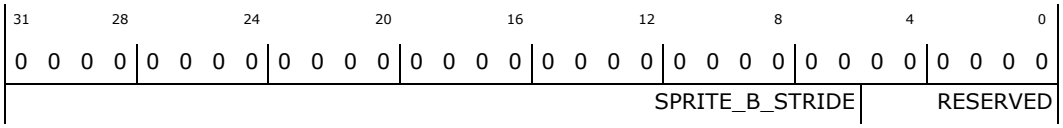
4.3.305 SPBSTRIDE—Offset 72288h

Sprite B Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72288h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**SPRITE_B_STRIDE:** This is the stride for Sprite B in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 256 byte aligned. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes.
5:0	0x0 RO	**RESERVED:** Reserved.

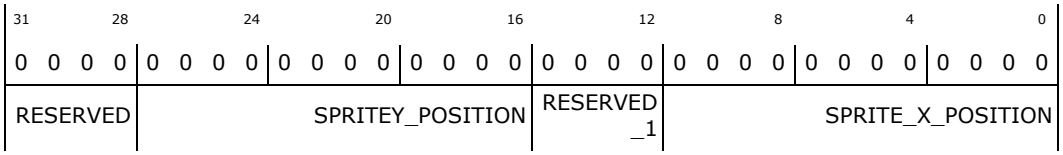
4.3.306 SPBPOS—Offset 7228Ch

Sprite B Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7228Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITEY_POSITION:** These 12 bits specify the vertical position in lines of the sprite (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
11:0	0x0 RW	**SPRITE_X_POSITION:** These 12 bits specify the horizontal position in pixels of the sprite (upper left corner) relative the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the original lower right corner relative to the original end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

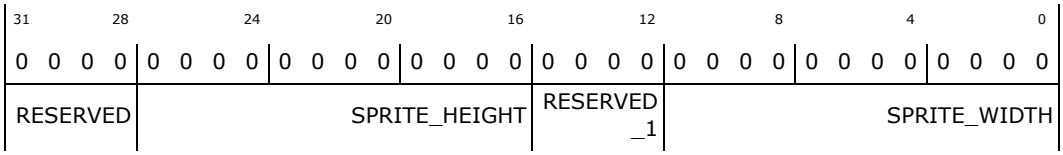
4.3.307 SPBSIZE—Offset 72290h

Sprite B Height and Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72290h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITE_HEIGHT:** This register field is used to specify the height of the sprite in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_WIDTH:** This register field is used to specify the width of the sprite in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image. The sprite width is limited to even values when YUV source pixel format is used (actual width, not the width minus one value).

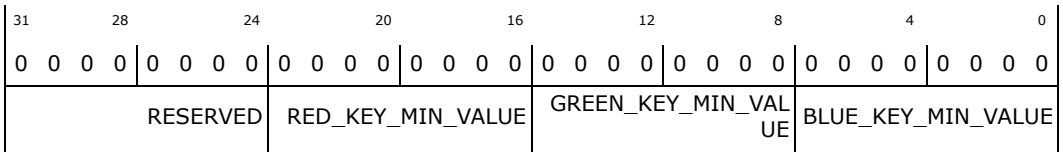
4.3.308 SPBKEYMINVAL—Offset 72294h

Sprite B Color Key Min Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72294h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite blue/Cb channel.

4.3.309 SPBKEYMSK—Offset 72298h

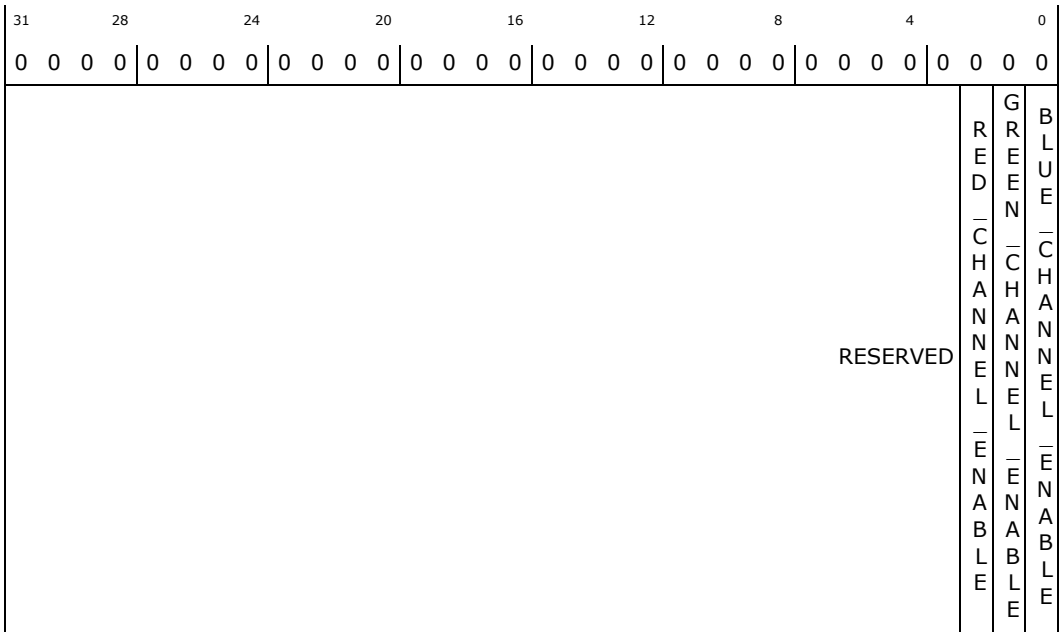
Sprite B Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72298h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Write as zero
2	0x0 RW	**RED_CHANNEL_ENABLE:** Specifies the source color key enable for the red/Cr channel.
1	0x0 RW	**GREEN_CHANNEL_ENABLE:** Specifies the source color key enable for the green/Y channel.
0	0x0 RW	**BLUE_CHANNEL_ENABLE:** Specifies the source color key enable for the blue/Cb channel

4.3.310 SPBSURF—Offset 7229Ch

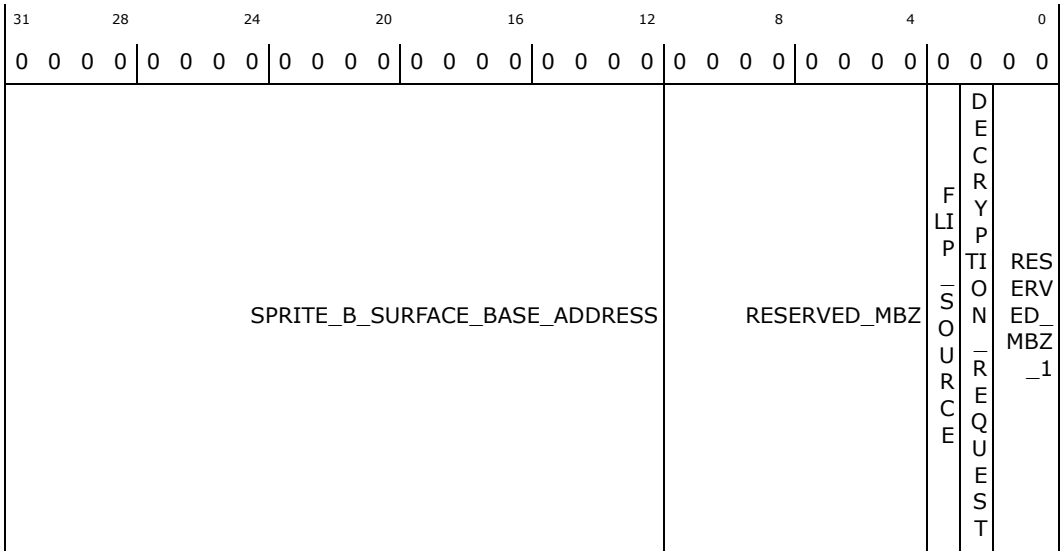
Sprite B Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 7229Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**SPRITE_B_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . The value in this register is updated through the command streamer during synchronous flips. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED_MBZ:** Reserved.
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. 1:0	0x0 RO	**RESERVED_MBZ_1:** Reserved.

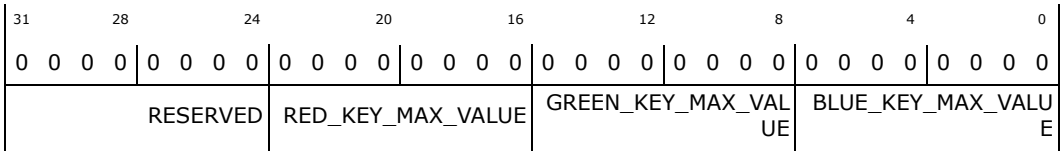
4.3.311 SPBKEYMAXVAL—Offset 722A0h

Sprite B Color Key Max Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 722A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MAX_VALUE:** Specifies the color key value for the sprite red/Cr channel.

Bit Range	Default & Access	Field Name (ID): Description
15:8	0x0 RW	**GREEN_KEY_MAX_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MAX_VALUE:** Specifies the color key value for the sprite blue/Cb channel.

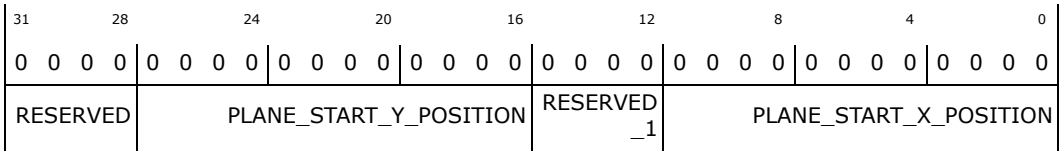
4.3.312 SPBTILEOFF—Offset 722A4h

Sprite B Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 722A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

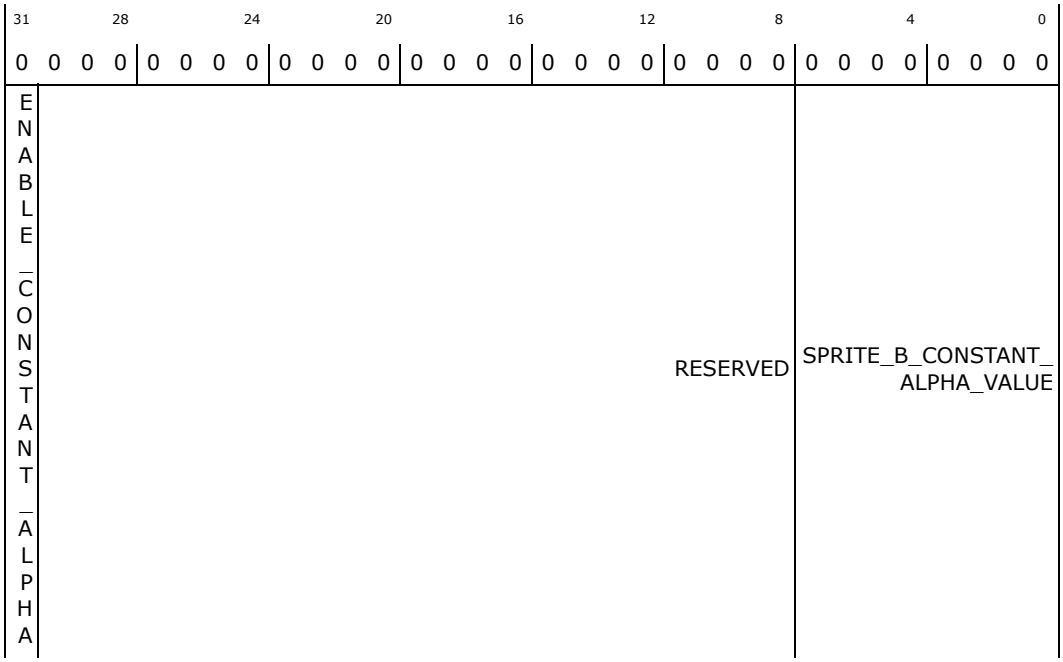
4.3.313 SPBCONTALPHA—Offset 722A8h

Sprite B Constant Alpha Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 722A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_CONSTANT_ALPHA:** Sprite B Sprite constant alpha provides a way to apply an alpha value to all video sprite pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. This can be used to create fade out effects. This is intended for CE device use where the video sprite might still be used to generate video output. 0 Sprite B Sprite Constant Alpha is disabled 1 Sprite B Sprite Constant Alpha is enabled
30:8	0x0 RO	**RESERVED:** MBZ
7:0	0x0 RW	**SPRITE_B_CONSTANT_ALPHA_VALUE:** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of sprite with other surfaces.

4.3.314 SPBLIVESURF—Offset 722ACh

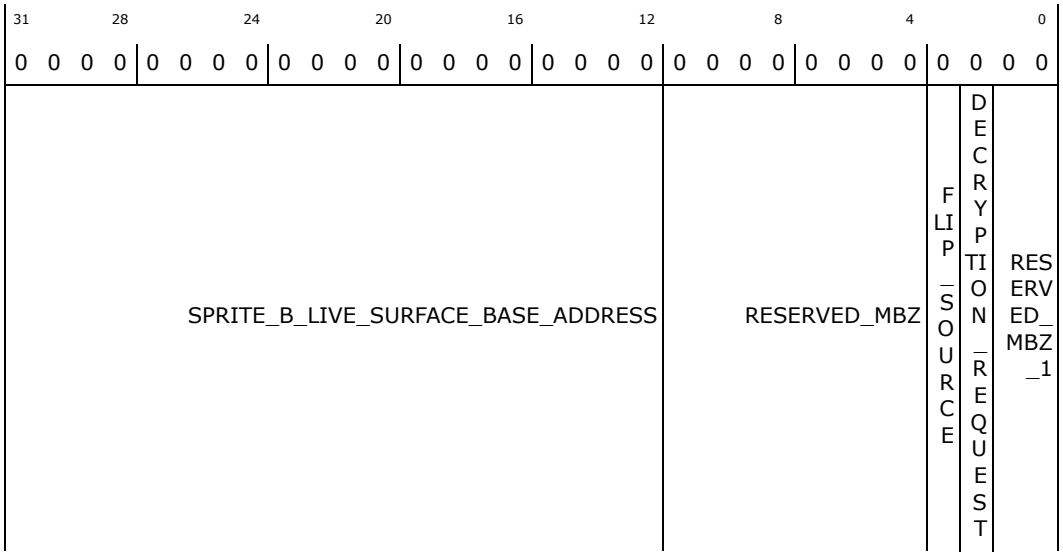
Sprite B Live Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 722ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**SPRITE_B_LIVE_SURFACE_BASE_ADDRESS:** This gives the live value of the surface base address as being currently used for Sprite B plane.
11:4	0x0 RO	**RESERVED_MBZ:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
26:16	0x0 RW	**SATURATION_AND_HUE_SIN_SH_SIN:** This 11-bit signed fixed-point number is in 2 s compliment (s3i.7f) format with the MSB as the sign, next 3 MSBs as the integer value and the last 7 LSBs as the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Hue, even for source data in RGB format, is accomplished by programming this field to 0.0.
15:10	0x0 RO	**RESERVED_1:** Reserved.
9:0	0x80 RW	**SATURATION_AND_HUE_COS_SH_COS:** This unsigned fixed-point number is in 3i.7f format with the first 3 MSBs be the integer value and the last 7 LSBs be the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Saturation, even for source data in RGB format, is accomplished by programming this field to 1.0.

4.3.323 SPCCNTR—Offset 72380h

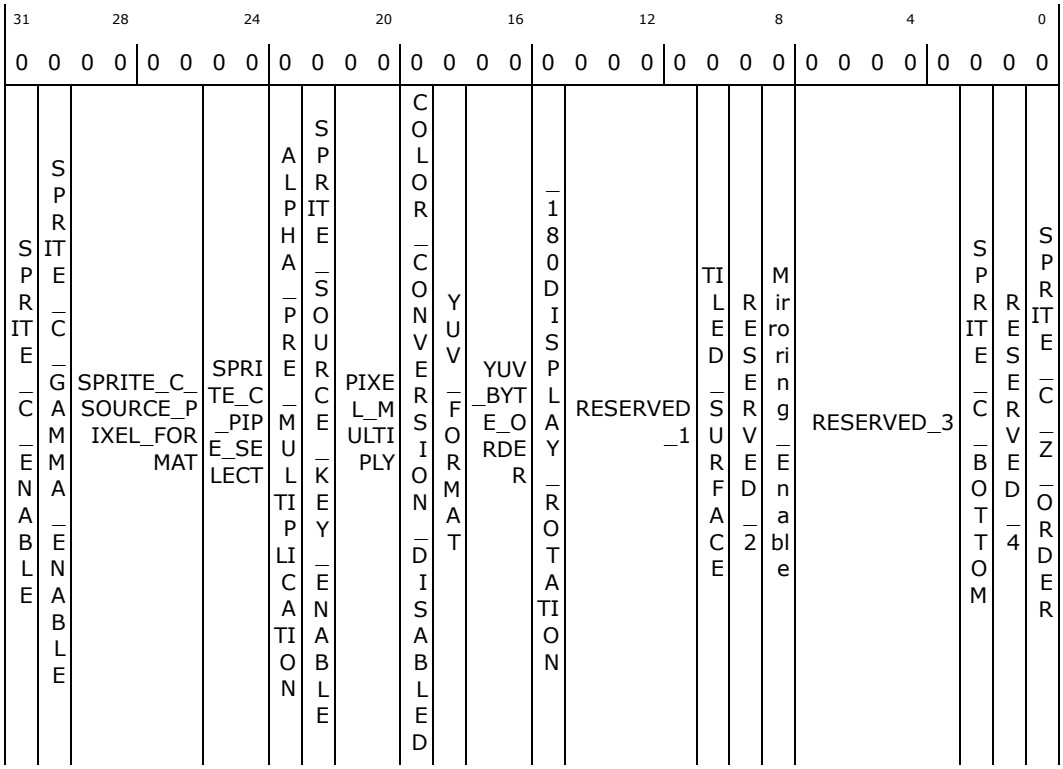
Sprite C Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72380h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SPRITE_C_ENABLE:** This bit will enable or disable the Sprite C. When this bit is set, the plane will generate pixels for display to be combined by the blender for the target pipe. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. This bit only has an effect when the plane is not trusted. When the plane is marked trusted, this bit will be overridden and the display disabled when the registers are unlocked. 1 = Enable 0 = Disable
30	0x0 RW	**SPRITE_C_GAMMA_ENABLE:** There are two gamma adjustments possible in the Sprite C data path. This bit controls the gamma correction in the display pipe not the gamma control in this plane. It affects only the pixel data from this display plane. For pixel format of 8-bit indexed, this bit should be set to a one. Gamma correction logic that is contained in the Sprite C logic is disabled by loading the default values into those registers. When this plane is marked as trusted, this bit should always be set to zero to force the pipe gamma to be always be bypassed. 0 = Sprite C pixel data bypasses the display pipe gamma correction logic (default). 1 = Sprite C pixel data is gamma corrected in the pipe gamma correction logic

Bit Range	Default & Access	Field Name (ID): Description
29:26	0x0 RW	**SPRITE_C_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/Sprite C. Pixel formats with an alpha channel should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 0000 = YUV 4:2:2 packed (see byte order below). 0001 = Reserved 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format with pre-multiplied alpha channel. 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format 1010 = 32-bitBGRX(10:10:10:2)pixel format alpha. 1011 = 32-bit BGRA(10:10:10:2)pixel format(with pre multiplied alpha color format). 1100 = Reserved. 1101 = Reserved. 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8)
25:24	0x0 RW	**SPRITE_C_PIPE_SELECT:** Sprite C always ties to Pipe B Reserved.
23	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
22	0x0 RW	**SPRITE_SOURCE_KEY_ENABLE:** When used as a sprite in the 16/32-bpp modes without alpha this enables source color keying. Sprite pixel values that match (within range) the key will become transparent. Setting this bit is not allowed when the Sprite C pixel format includes an alpha channel. [DevBW] Erratum: This bit must always be set to 0 when Sprite C pixel format is YUV 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled.
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. This is a method of scaling the source image by two (both H and V). 00 = No line/Pixel duplication 01 = Line/Pixel Doubling 10 = Line Doubling only 11 = Pixel Doubling only

Bit Range	Default & Access	Field Name (ID): Description
19	0x0 RW	**COLOR_CONVERSION_DISABLED:** This bit enables or disables the color conversion logic. Color conversion is intended to be used with the formats that support YUV formats such as the YUV 4:2:2 packed format and x:8:8:8 and 8:8:8:8 formats. Formats such as RGB5:5:5 and 5:6:5 do not have YUV versions. 0 = Pixel data is sent through the conversion logic (only applies to YUV formats) 1 = Pixel data is not sent through the YUV-)RGB conversion logic.
18	0x0 RW	**YUV_FORMAT:** This bit specifies the source YUV format for the YUV to RGB color conversion operation. This field is ignored when source data is RGB. 0 = ITU-R Recommendation BT.601 1 = ITU-R Recommendation BT.709
17:16	0x0 RW	**YUV_BYTE_ORDER:** This field is used to select the byte order when using YUV 4:2:2 data formats. For other formats, this field is ignored. 00 = YUYV 01 = UYVY 10 = YVYU 11 = VYUY
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image and calculate the x, y offset as relative to the lower right corner. 0 = No rotation 1 = 180 rotation
14:11	0x0 RO	**RESERVED_1:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the Sprite C surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCTILEOFF, DSPCLINOFF, and DSPCSURFADDR registers. 0 = Sprite C surface uses linear memory 1 = Sprite C surface uses X-tiled memory
9	0x0 RO	**RESERVED_2:** Write as zero
8	0x0 RW	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:3	0x0 RO	**RESERVED_3:** Write as zero
2	0x0 RW	**SPRITE_C_BOTTOM:** This bit will force the Sprite C plane to be on the bottom of the Z order. If the plane is marked as trusted, it only applies to the Z order of the trusted planes. 0 = Sprite C Z order is determined by the other control bits 1 = Sprite C is forced to be on the bottom of the Z order.
1	0x0 RO	**RESERVED_4:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**SPRITE_C_Z_ORDER:** With Sprite C and D z-order, bottom control bits, Sprite C plane is placed in a specific z-order among other planes in pipe B. 4.3.324 SPCLINOFF—Offset 72384h

Sprite C Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72384h

Default: 00000000h

31	28	24	20	16	12	8	4	0
0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	
SPRITE_C_OFFSET								

Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SPRITE_C_OFFSET:** This register provides the panning offset into the Sprite C plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

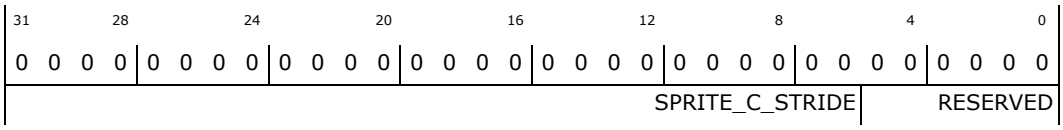
4.3.325 SPCSTRIDE—Offset 72388h

Sprite C Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72388h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**SPRITE_C_STRIDE:** This is the stride for Sprite C in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 256 byte aligned. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes.
5:0	0x0 RO	**RESERVED:** Reserved.

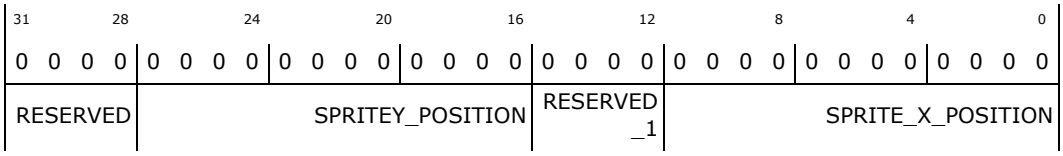
4.3.326 SPCPOS—Offset 7238Ch

Sprite C Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7238Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
27:16	0x0 RW	**SPRITEY_POSITION:** These 12 bits specify the vertical position in lines of the sprite (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_X_POSITION:** These 12 bits specify the horizontal position in pixels of the sprite (upper left corner) relative the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the original lower right corner relative to the original end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

4.3.327 SPCSIZE—Offset 72390h

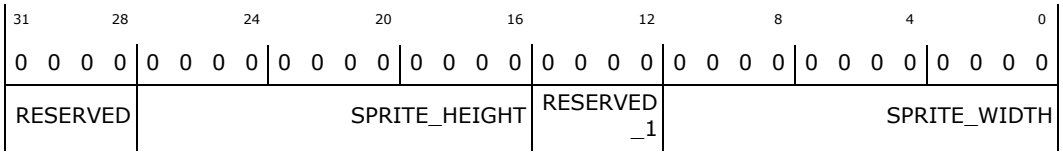
Sprite C Height and Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72390h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITE_HEIGHT:** This register field is used to specify the height of the sprite in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_WIDTH:** This register field is used to specify the width of the sprite in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image. The sprite width is limited to even values when YUV source pixel format is used (actual width, not the width minus one value).

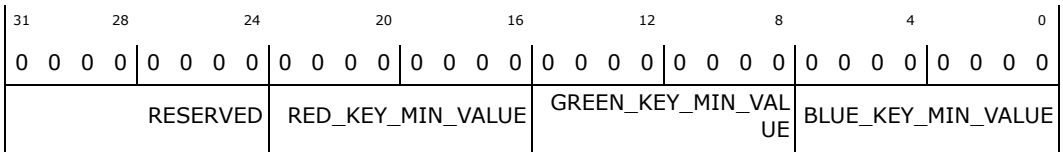
4.3.328 SPCKEYMINVAL—Offset 72394h

Sprite C Color Key Min Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72394h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite blue/Cb channel.

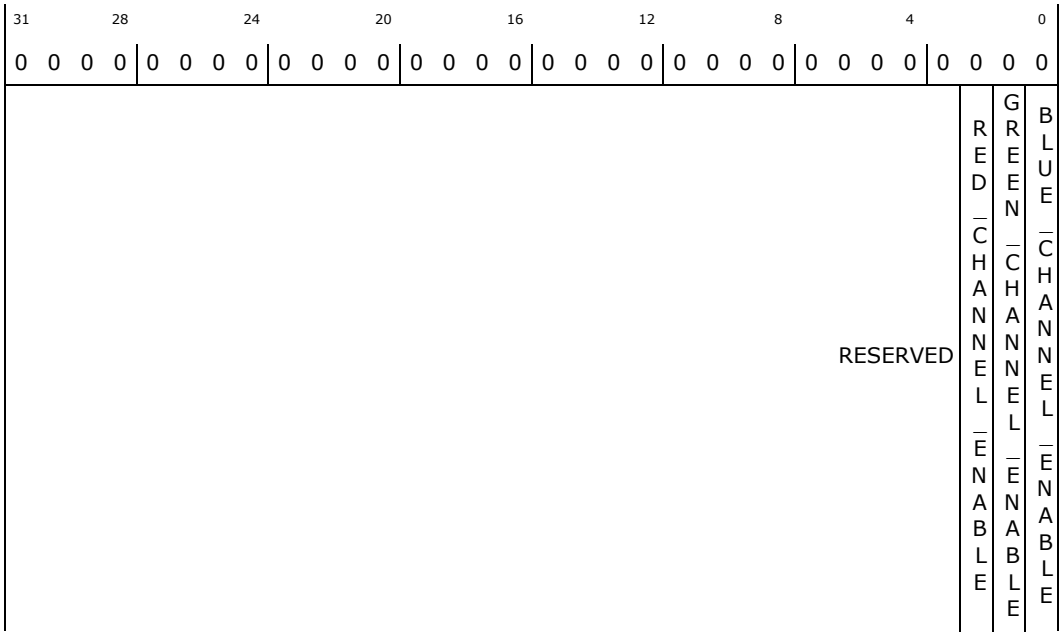
4.3.329 SPCKEYMSK—Offset 72398h

Sprite C Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72398h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Write as zero
2	0x0 RW	**RED_CHANNEL_ENABLE:** Specifies the source color key enable for the red/Cr channel.
1	0x0 RW	**GREEN_CHANNEL_ENABLE:** Specifies the source color key enable for the green/Y channel.
0	0x0 RW	**BLUE_CHANNEL_ENABLE:** Specifies the source color key enable for the blue/Cb channel

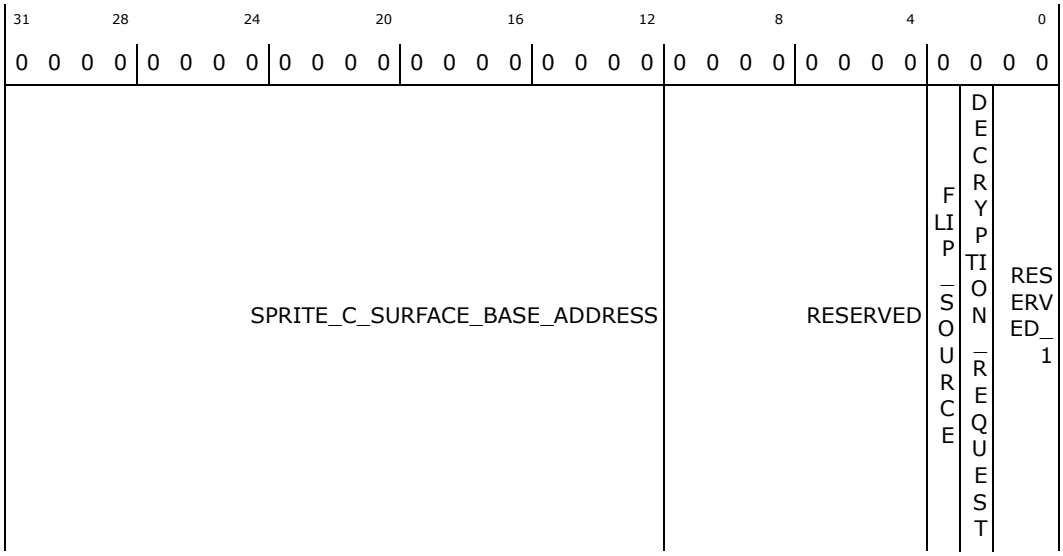
4.3.330 SPCSURF—Offset 7239Ch

Sprite C Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7239Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**SPRITE_C_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . The value in this register is updated through the command streamer during synchronous flips. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. ValueNameDescriptionProject 0b Not requested Decrytpion not requested All 1b Requested Decryption requested All
1:0	0x0 RO	**RESERVED_1:** MBZ

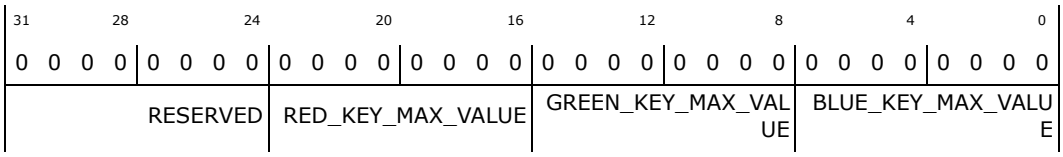
4.3.331 SPCKEYMAXVAL—Offset 723A0h

Sprite C Color Key Max Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 723A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MAX_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MAX_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MAX_VALUE:** Specifies the color key value for the Sprite Clue/Cb channel.

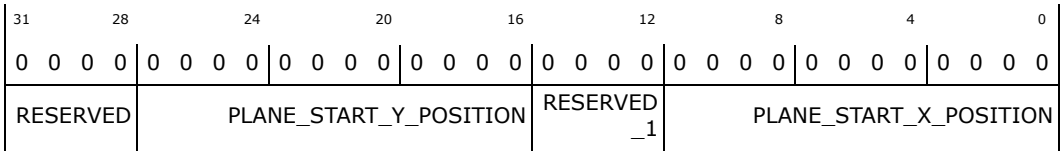
4.3.332 SPCTILEOFF—Offset 723A4h

Sprite C Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 723A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

4.3.333 SPCCONTALPHA—Offset 723A8h

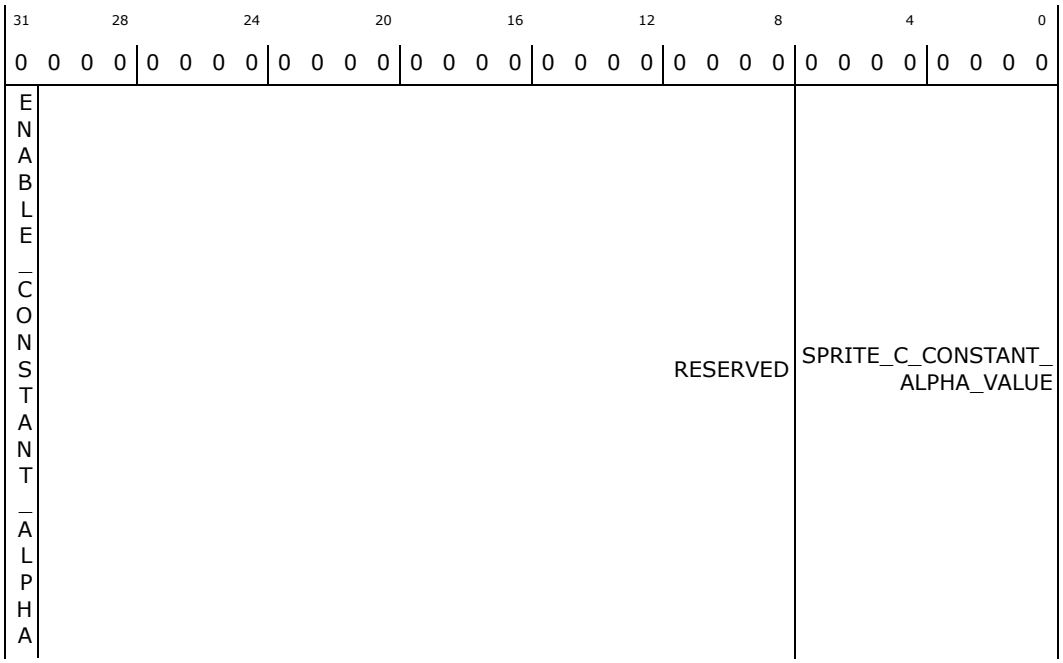
Sprite C Constant Alpha Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 723A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_CONSTANT_ALPHA:** Sprite C Sprite constant alpha provides a way to apply an alpha value to all video sprite pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. This can be used to create fade out effects. This is intended for CE device use where the video sprite might still be used to generate video output. 0 Sprite C Sprite Constant Alpha is disabled 1 Sprite C Sprite Constant Alpha is enabled

Bit Range	Default & Access	Field Name (ID): Description
30:8	0x0 RO	**RESERVED:** MBZ
7:0	0x0 RW	**SPRITE_C_CONSTANT_ALPHA_VALUE:** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of sprite with other surfaces.

4.3.334 SPCLIVESURF—Offset 723ACh

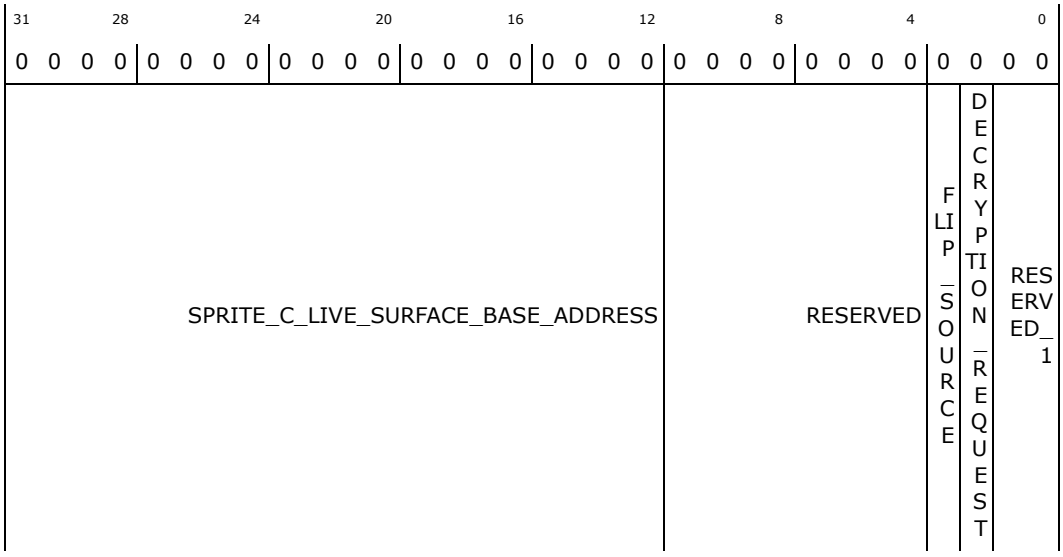
Sprite C Live Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 723ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**SPRITE_C_LIVE_SURFACE_BASE_ADDRESS:** This gives the live value of the surface base address as being currently used for Sprite C.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description

1:0	0x0 RO	**RESERVED_1:** MBZ

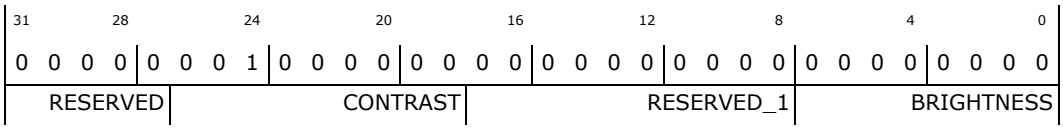
4.3.335 SPCCLRC0—Offset 723D0h

Sprite C Color Correction 0 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 723D0h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:18	0x40 RW	**CONTRAST:** Contrast adjustment applies to YUV data. The Y channel is multiplied by the value contained in the register field. This signed fixed-point number is in 3i.6f format with the first 3 MSBs as the integer value and the last 6 LSBs as the fraction value. The allowed contrast value ranges from 0 to 7.53125 decimal. Bypassing Contrast, for YUV modes and for source data in RGB format, is accomplished by programming this field to a field value that represents 1.0 decimal or 001.000000 binary .
17:8	0x0 RO	**RESERVED_1:** Reserved.
7:0	0x0 RW	**BRIGHTNESS:** This field provides the brightness adjustment with a 8-bit 2 s compliment value ranging [-128, +127]. This value is added to the Y value after contrast multiply and before YUV to RGB conversion. A value of zero disables this adjustment affect. This 8-bit signed value provides half of the achievable brightness adjustment dynamic range. A full range brightness value would have a programmable range of [-255, +255]. Bypassing Brightness for YUV formats and for source data in RGB format, is accomplished by programming this field to 0.

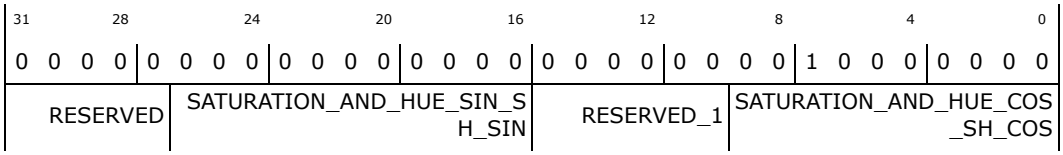
4.3.336 SPCCLRC1—Offset 723D4h

Sprite C Color Correction 1 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 723D4h

Default: 00000080h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:16	0x0 RW	**SATURATION_AND_HUE_SIN_SH_SIN:** This 11-bit signed fixed-point number is in 2 s compliment (s3i.7f) format with the MSB as the sign, next 3 MSBs as the integer value and the last 7 LSBs as the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Hue, even for source data in RGB format, is accomplished by programming this field to 0.0.
15:10	0x0 RO	**RESERVED_1:** Reserved.
9:0	0x80 RW	**SATURATION_AND_HUE_COS_SH_COS:** This unsigned fixed-point number is in 3i.7f format with the first 3 MSBs be the integer value and the last 7 LSBs be the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Saturation, even for source data in RGB format, is accomplished by programming this field to 1.0.

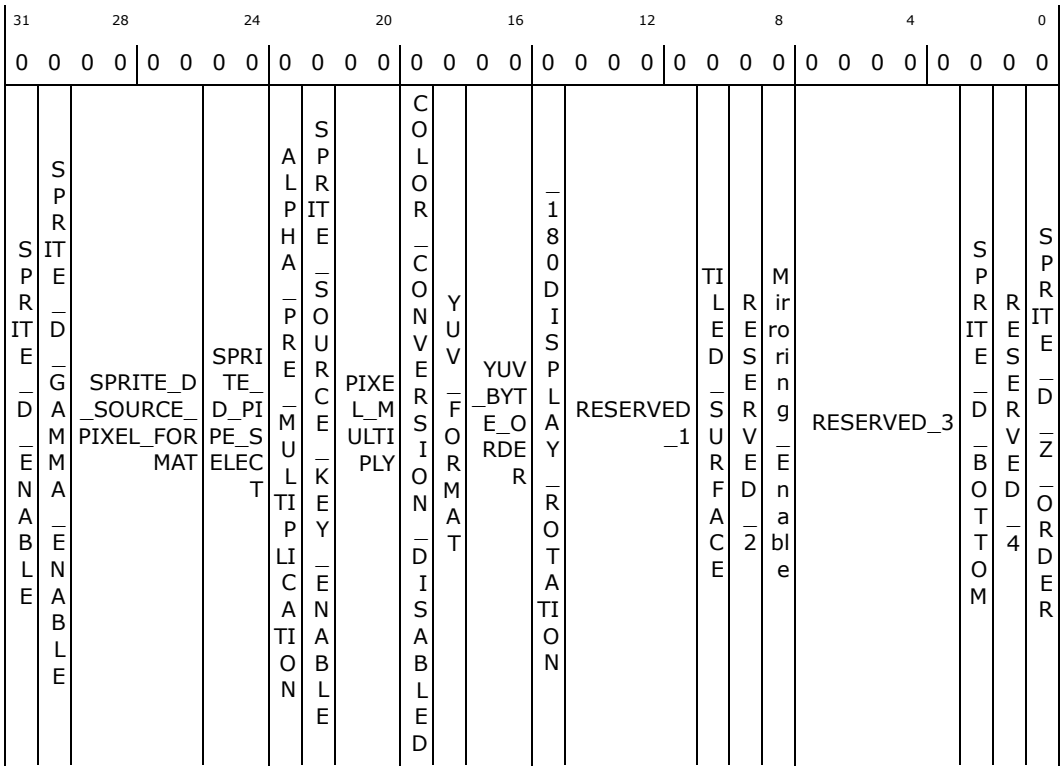
4.3.346 SPDCNTR—Offset 72480h

Sprite D Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72480h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SPRITE_D_ENABLE:** This bit will enable or disable the Sprite D. When this bit is set, the plane will generate pixels for display to be combined by the blender for the target pipe. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. This bit only has an effect when the plane is not trusted. When the plane is marked trusted, this bit will be overridden and the display disabled when the registers are unlocked. 1 = Enable 0 = Disable

Bit Range	Default & Access	Field Name (ID): Description
30	0x0 RW	**SPRITE_D_GAMMA_ENABLE:** There are two gamma adjustments possible in the Sprite D data path. This bit controls the gamma correction in the display pipe not the gamma control in this plane. It affects only the pixel data from this display plane. For pixel format of 8-bit indexed, this bit should be set to a one. Gamma correction logic that is contained in the Sprite D logic is disabled by loading the default values into those registers. When this plane is marked as trusted, this bit should always be set to zero to force the pipe gamma to be always be bypassed. 0 = Sprite D pixel data bypasses the display pipe gamma correction logic (default). 1 = Sprite D pixel data is gamma corrected in the pipe gamma correction logic
29:26	0x0 RW	**SPRITE_D_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/Sprite D. Pixel formats with an alpha channel should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 0000 = YUV 4:2:2 packed (see byte order below). 0001 = Reserved 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format with pre-multiplied alpha channel. 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format 1010 = 32-bit BGRX(10:10:10:2)pixel format Ignore alpha. 1011 = 32-bit BRGA(10:10:10:2)pixel format(with pre-multiplied alpha color format). 1100 = Reserved. 1101 = Reserved. 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8)
25:24	0x0 RW	**SPRITE_D_PIPE_SELECT:** Sprite D always ties to Pipe B. Reserved.
23	0x0 RW	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
22	0x0 RW	**SPRITE_SOURCE_KEY_ENABLE:** When used as a sprite in the 16/32-bpp modes without alpha this enables source color keying. Sprite pixel values that match (within range) the key will become transparent. Setting this bit is not allowed when the Sprite D pixel format includes an alpha channel. [DevBW] Erratum: This bit must always be set to 0 when Sprite D pixel format is YUV 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled.

Bit Range	Default & Access	Field Name (ID): Description
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. This is a method of scaling the source image by two (both H and V). 00 = No line/Pixel duplication 01 = Line/Pixel Doubling 10 = Line Doubling only 11 = Pixel Doubling only
19	0x0 RW	**COLOR_CONVERSION_DISABLED:** This bit enables or disables the color conversion logic. Color conversion is intended to be used with the formats that support YUV formats such as the YUV 4:2:2 packed format and x:8:8:8 and 8:8:8:8 formats. Formats such as RGB5:5:5 and 5:6:5 do not have YUV versions. 0 = Pixel data is sent through the conversion logic (only applies to YUV formats) 1 = Pixel data is not sent through the YUV-)RGB conversion logic.
18	0x0 RW	**YUV_FORMAT:** This bit specifies the source YUV format for the YUV to RGB color conversion operation. This field is ignored when source data is RGB. 0 = ITU-R Recommendation BT.601 1 = ITU-R Recommendation BT.709
17:16	0x0 RW	**YUV_BYTE_ORDER:** This field is used to select the byte order when using YUV 4:2:2 data formats. For other formats, this field is ignored. 00 = YUYV 01 = UYVY 10 = YVYU 11 = VYUY
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image and calculate the x, y offset as relative to the lower right corner. 0 = No rotation 1 = 180 rotation
14:11	0x0 RO	**RESERVED_1:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the Sprite D surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCTILEOFF, DSPCLINOFF, and DSPCSURFADDR registers. 0 = Sprite D surface uses linear memory 1 = Sprite D surface uses X-tiled memory
9	0x0 RO	**RESERVED_2:** Write as zero
8	0x0 RW	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:3	0x0 RO	**RESERVED_3:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 RW	**SPRITE_D_BOTTOM:** This bit will force the Sprite D plane to be on the bottom of the Z order. If the plane is marked as trusted, it only applies to the Z order of the trusted planes. 0 = Sprite D Z order is determined by the other control bits 1 = Sprite D is forced to be on the bottom of the Z order.
1	0x0 RO	**RESERVED_4:** Reserved.
0	0x0 RW	**SPRITE_D_Z_ORDER:** With Sprite C and D z-order, bottom control bits, Sprite D plane is placed in a specific z-order among other planes in pipe B. 4.3.347 SPDLINOFF—Offset 72484h

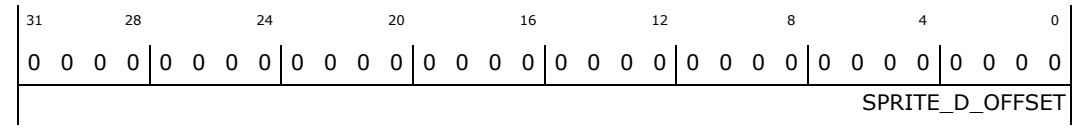
Sprite D Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72484h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SPRITE_D_OFFSET:** This register provides the panning offset into the Sprite D plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

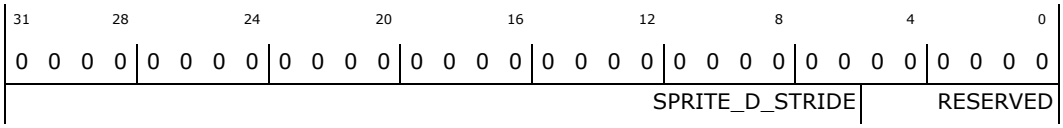
4.3.348 SPDSTRIDE—Offset 72488h

Sprite D Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72488h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**SPRITE_D_STRIDE:** This is the stride for Sprite D in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 256 byte aligned. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes.
5:0	0x0 RO	**RESERVED:** Reserved.

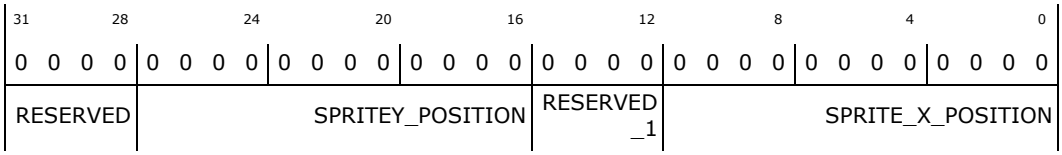
4.3.349 SPDPOS—Offset 7248Ch

Sprite D Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7248Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITEY_POSITION:** These 12 bits specify the vertical position in lines of the sprite (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_X_POSITION:** These 12 bits specify the horizontal position in pixels of the sprite (upper left corner) relative the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the original lower right corner relative to the original end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

4.3.350 SPDSIZE—Offset 72490h

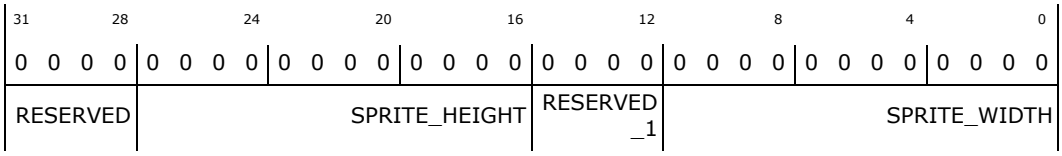
Sprite D Height and Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72490h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITE_HEIGHT:** This register field is used to specify the height of the sprite in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
11:0	0x0 RW	**SPRITE_WIDTH:** This register field is used to specify the width of the sprite in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image. The sprite width is limited to even values when YUV source pixel format is used (actual width, not the width minus one value).

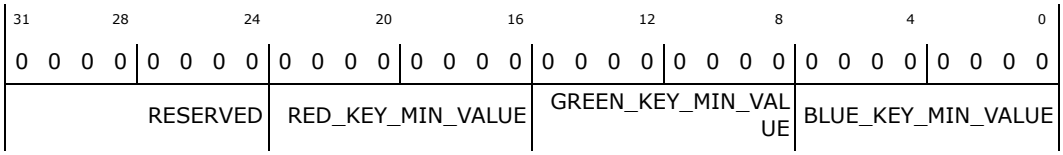
4.3.351 SPDKEYMINVAL—Offset 72494h

Sprite D Color Key Min Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72494h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite blue/Cb channel.

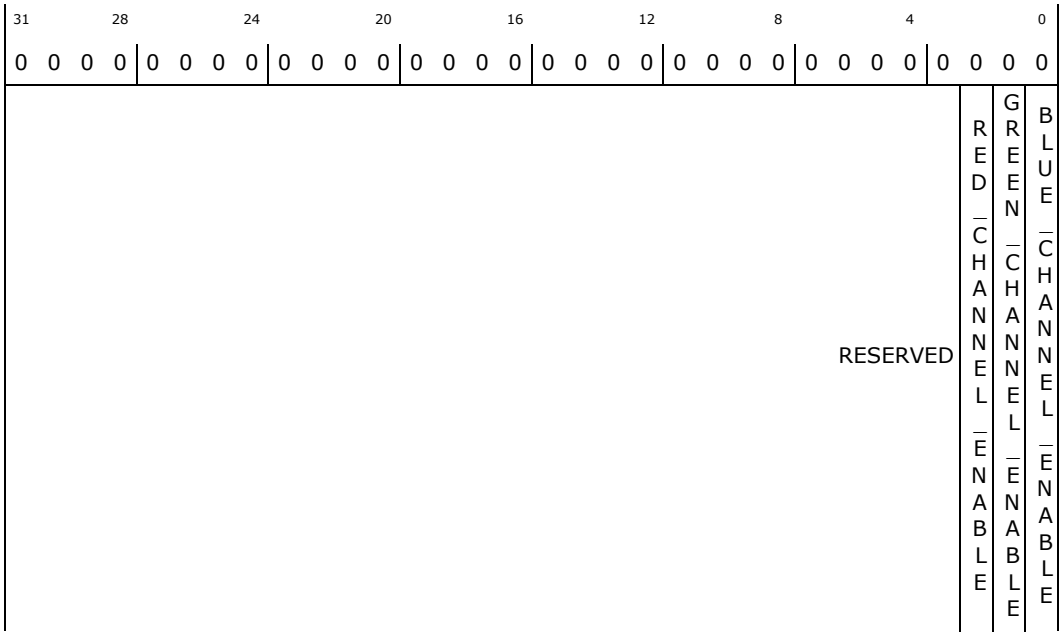
4.3.352 SPDKEYMSK—Offset 72498h

Sprite D Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72498h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Write as zero
2	0x0 RW	**RED_CHANNEL_ENABLE:** Specifies the source color key enable for the red/Cr channel.
1	0x0 RW	**GREEN_CHANNEL_ENABLE:** Specifies the source color key enable for the green/Y channel.
0	0x0 RW	**BLUE_CHANNEL_ENABLE:** Specifies the source color key enable for the blue/Cb channel

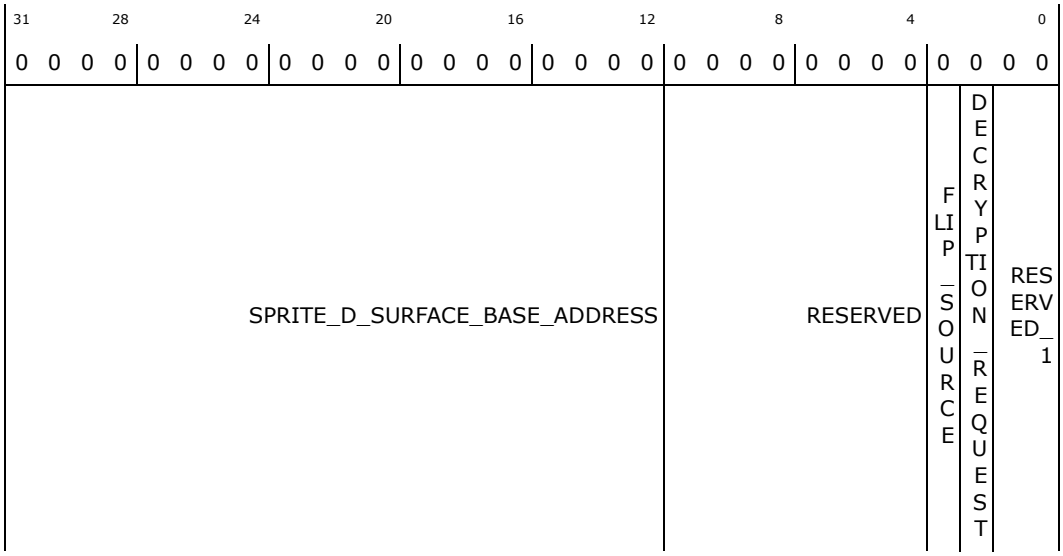
4.3.353 SPDSURF—Offset 7249Ch

Sprite D Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7249Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**SPRITE_D_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . The value in this register is updated through the command streamer during synchronous flips. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. ValueNameDescriptionProject 0b Not requested Decrytpion not requested All 1b Requested Decryption requested All
1:0	0x0 RO	**RESERVED_1:** MBZ

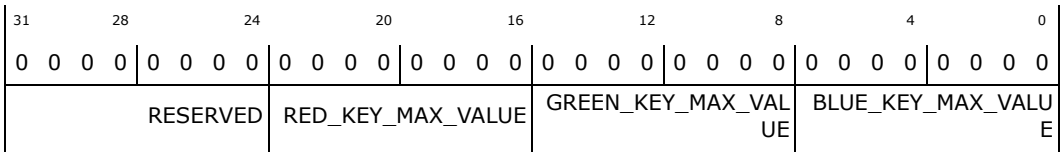
4.3.354 SPDKEYMAXVAL—Offset 724A0h

Sprite D Color Key Max Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 724A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MAX_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MAX_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MAX_VALUE:** Specifies the color key value for the Sprite blue/Cb channel.

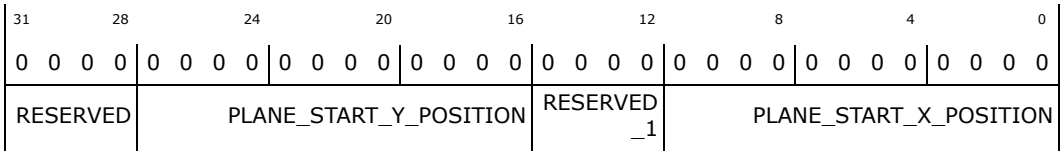
4.3.355 SPDTILEOFF—Offset 724A4h

Sprite D Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 724A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

4.3.356 SPDCONTALPHA—Offset 724A8h

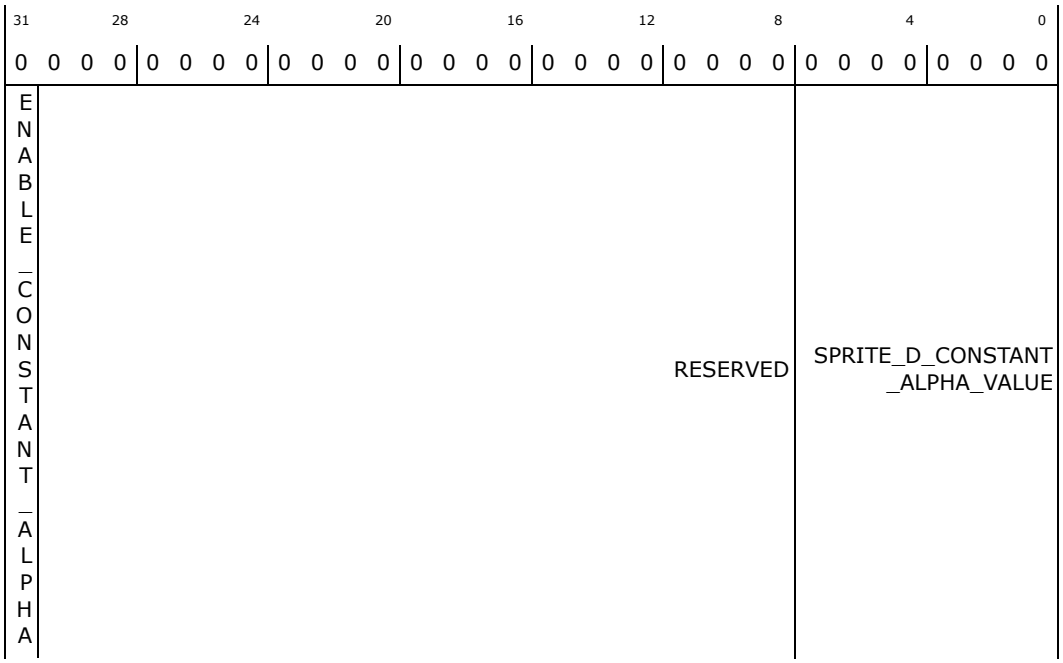
Sprite D Constant Alpha Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 724A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_CONSTANT_ALPHA:** Sprite D Sprite constant alpha provides a way to apply an alpha value to all video sprite pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. This can be used to create fade out effects. This is intended for CE device use where the video sprite might still be used to generate video output. 0 Sprite D Constant Alpha is disabled 1 Sprite D Constant Alpha is enabled

Bit Range	Default & Access	Field Name (ID): Description
30:8	0x0 RO	**RESERVED:** MBZ
7:0	0x0 RW	**SPRITE_D_CONSTANT_ALPHA_VALUE:** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of sprite with other surfaces.

4.3.357 SPDLIVESURF—Offset 724ACh

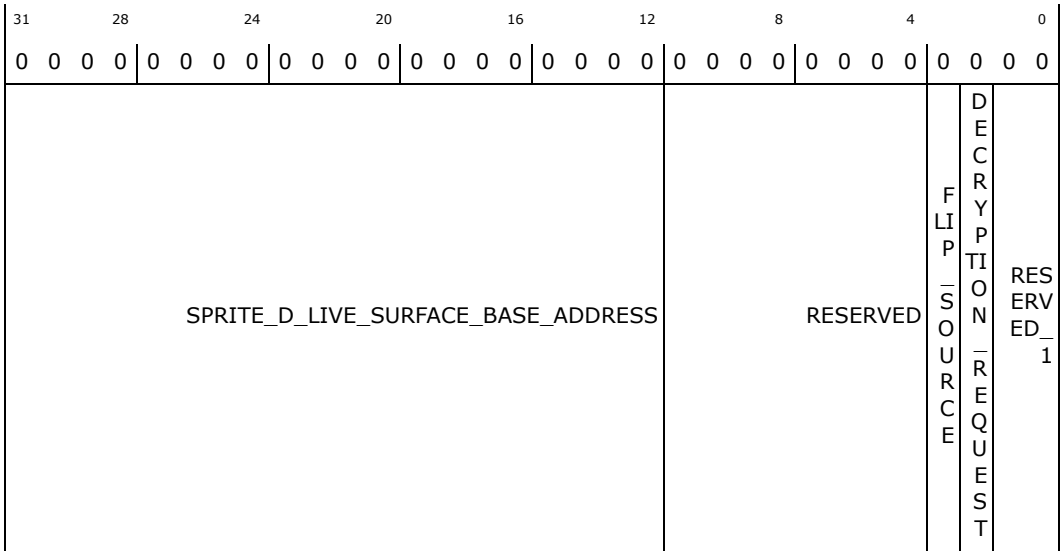
Sprite D Live Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 724ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**SPRITE_D_LIVE_SURFACE_BASE_ADDRESS:** This gives the live value of the surface base address as being currently used for Sprite D
11:4	0x0 RO	**RESERVED:** MBZ

4.3.358 SPDCLRC0—Offset 724D0h

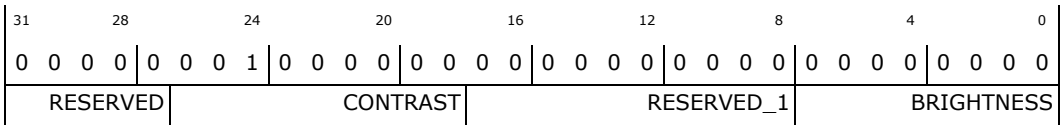
Sprite D Color Correction 0 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 724D0h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:18	0x40 RW	**CONTRAST:** Contrast adjustment applies to YUV data. The Y channel is multiplied by the value contained in the register field. This signed fixed-point number is in 3i.6f format with the first 3 MSBs as the integer value and the last 6 LSBs as the fraction value. The allowed contrast value ranges from 0 to 7.53125 decimal. Bypassing Contrast, for YUV modes and for source data in RGB format, is accomplished by programming this field to a field value that represents 1.0 decimal or 001.000000 binary .
17:8	0x0 RO	**RESERVED_1:** Reserved.
7:0	0x0 RW	**BRIGHTNESS:** This field provides the brightness adjustment with a 8-bit 2 s compliment value ranging [-128, +127]. This value is added to the Y value after contrast multiply and before YUV to RGB conversion. A value of zero disables this adjustment affect. This 8-bit signed value provides half of the achievable brightness adjustment dynamic range. A full range brightness value would have a programmable range of [-255, +255]. Bypassing Brightness for YUV formats and for source data in RGB format, is accomplished by programming this field to 0.

4.3.359 SPDCLRC1—Offset 724D4h

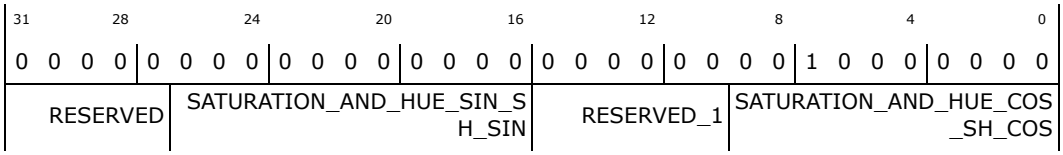
Sprite D Color Correction 1 Register

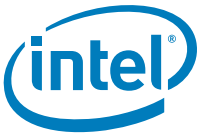
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 724D4h

Default: 00000080h





Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:16	0x0 RW	**SATURATION_AND_HUE_SIN_SH_SIN:** This 11-bit signed fixed-point number is in 2 s compliment (s3i.7f) format with the MSB as the sign, next 3 MSBs as the integer value and the last 7 LSBs as the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Hue, even for source data in RGB format, is accomplished by programming this field to 0.0.
15:10	0x0 RO	**RESERVED_1:** Reserved.
9:0	0x80 RW	**SATURATION_AND_HUE_COS_SH_COS:** This unsigned fixed-point number is in 3i.7f format with the first 3 MSBs be the integer value and the last 7 LSBs be the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Saturation, even for source data in RGB format, is accomplished by programming this field to 1.0.

4.3.366 SPECNTR—Offset 72580h

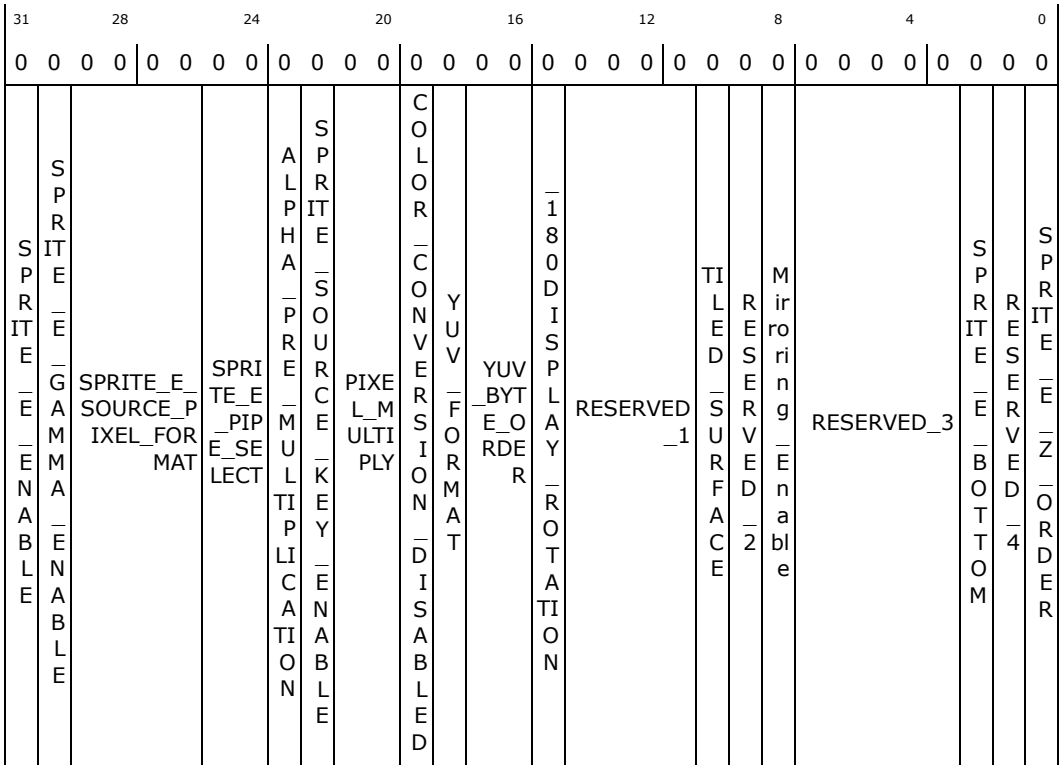
Sprite E Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72580h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SPRITE_E_ENABLE:** This bit will enable or disable the Sprite E. When this bit is set, the plane will generate pixels for display to be combined by the blender for the target pipe. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. This bit only has an effect when the plane is not trusted. When the plane is marked trusted, this bit will be overridden and the display disabled when the registers are unlocked. 1 = Enable 0 = Disable
30	0x0 RW	**SPRITE_E_GAMMA_ENABLE:** There are two gamma adjustments possible in the Sprite E data path. This bit controls the gamma correction in the display pipe not the gamma control in this plane. It affects only the pixel data from this display plane. For pixel format of 8-bit indexed, this bit should be set to a one. Gamma correction logic that is contained in the Sprite E logic is disabled by loading the default values into those registers. When this plane is marked as trusted, this bit should always be set to zero to force the pipe gamma to be always be bypassed. 0 = Sprite E pixel data bypasses the display pipe gamma correction logic (default). 1 = Sprite E pixel data is gamma corrected in the pipe gamma correction logic

Bit Range	Default & Access	Field Name (ID): Description
29:26	0x0 RW	**SPRITE_E_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/Sprite E. Pixel formats with an alpha channel should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 0000 = YUV 4:2:2 packed (see byte order below). 0001 = Reserved 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format with pre-multiplied alpha channel. 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format 1010 = Reserved. 1011 = Reserved. 1100 = Reserved. 1101 = Reserved. 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8)
25:24	0x0 RW	**SPRITE_E_PIPE_SELECT:** Sprite E always ties to Pipe C. Reserved.
23	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
22	0x0 RW	**SPRITE_SOURCE_KEY_ENABLE:** When used as a sprite in the 16/32-bpp modes without alpha this enables source color keying. Sprite pixel values that match (within range) the key will become transparent. Setting this bit is not allowed when the Sprite E pixel format includes an alpha channel. [DevBW] Erratum: This bit must always be set to 0 when Sprite E pixel format is YUV 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled.
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. This is a method of scaling the source image by two (both H and V). 00 = No line/Pixel duplication 01 = Line/Pixel Doubling 10 = Line Doubling only 11 = Pixel Doubling only

Bit Range	Default & Access	Field Name (ID): Description
19	0x0 RW	**COLOR_CONVERSION_DISABLED:** This bit enables or disables the color conversion logic. Color conversion is intended to be used with the formats that support YUV formats such as the YUV 4:2:2 packed format and x:8:8:8 and 8:8:8:8 formats. Formats such as RGB5:5:5 and 5:6:5 do not have YUV versions. 0 = Pixel data is sent through the conversion logic (only applies to YUV formats) 1 = Pixel data is not sent through the YUV-)RGB conversion logic.
18	0x0 RW	**YUV_FORMAT:** This bit specifies the source YUV format for the YUV to RGB color conversion operation. This field is ignored when source data is RGB. 0 = ITU-R Recommendation BT.601 1 = ITU-R Recommendation BT.709
17:16	0x0 RW	**YUV_BYTE_ORDER:** This field is used to select the byte order when using YUV 4:2:2 data formats. For other formats, this field is ignored. 00 = YUYV 01 = UYVY 10 = YVYU 11 = VYUY
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image and calculate the x, y offset as relative to the lower right corner. 0 = No rotation 1 = 180 rotation
14:11	0x0 RO	**RESERVED_1:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the Sprite E surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCTILEOFF, DSPCLINOFF, and DSPCSURFADDR registers. 0 = Sprite E surface uses linear memory 1 = Sprite E surface uses X-tiled memory
9	0x0 RO	**RESERVED_2:** Write as zero
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:3	0x0 RO	**RESERVED_3:** Write as zero
2	0x0 RW	**SPRITE_E_BOTTOM:** This bit will force the Sprite E plane to be on the bottom of the Z order. If the plane is marked as trusted, it only applies to the Z order of the trusted planes. 0 = Sprite E Z order is determined by the other control bits 1 = Sprite E is forced to be on the bottom of the Z order.
1	0x0 RO	**RESERVED_4:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**SPRITE_E_Z_ORDER:** With Sprite C and D z-order, bottom control bits, Sprite E plane is placed in a specific z-order among other planes in pipe B. 4.3.367 SPELINOFF—Offset 72584h

Sprite E Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72584h

Default: 00000000h

31	28	24	20	16	12	8	4	0
0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	
SPRITE_E_OFFSET								

Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SPRITE_E_OFFSET:** This register provides the panning offset into the Sprite E plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

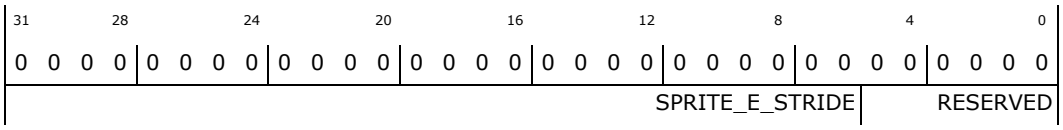
4.3.368 SPESTRIDE—Offset 72588h

Sprite E Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72588h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**SPRITE_E_STRIDE:** This is the stride for Sprite E in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 256 byte aligned. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes.
5:0	0x0 RO	**RESERVED:** Reserved.

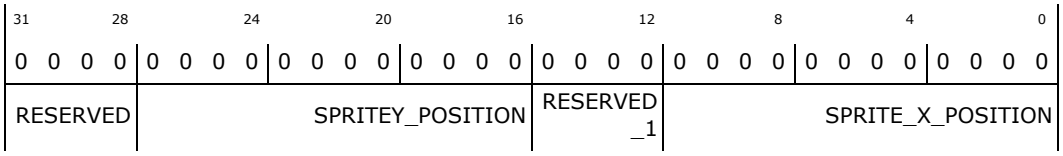
4.3.369 SPEPOS—Offset 7258Ch

Sprite E Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7258Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
27:16	0x0 RW	**SPRITEY_POSITION:** These 12 bits specify the vertical position in lines of the sprite (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_X_POSITION:** These 12 bits specify the horizontal position in pixels of the sprite (upper left corner) relative the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the original lower right corner relative to the original end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

4.3.370 SPESIZE—Offset 72590h

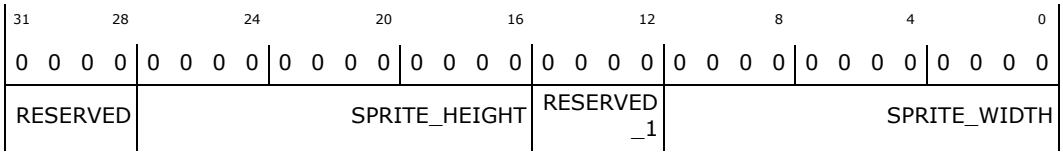
Sprite E Height and Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72590h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITE_HEIGHT:** This register field is used to specify the height of the sprite in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_WIDTH:** This register field is used to specify the width of the sprite in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image. The sprite width is limited to even values when YUV source pixel format is used (actual width, not the width minus one value).

4.3.371 SPEKEYMINVAL—Offset 72594h

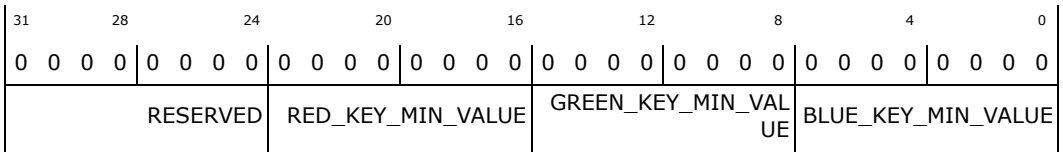
Sprite E Color Key Min Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72594h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite blue/Cb channel.

4.3.372 SPEKEYMSK—Offset 72598h

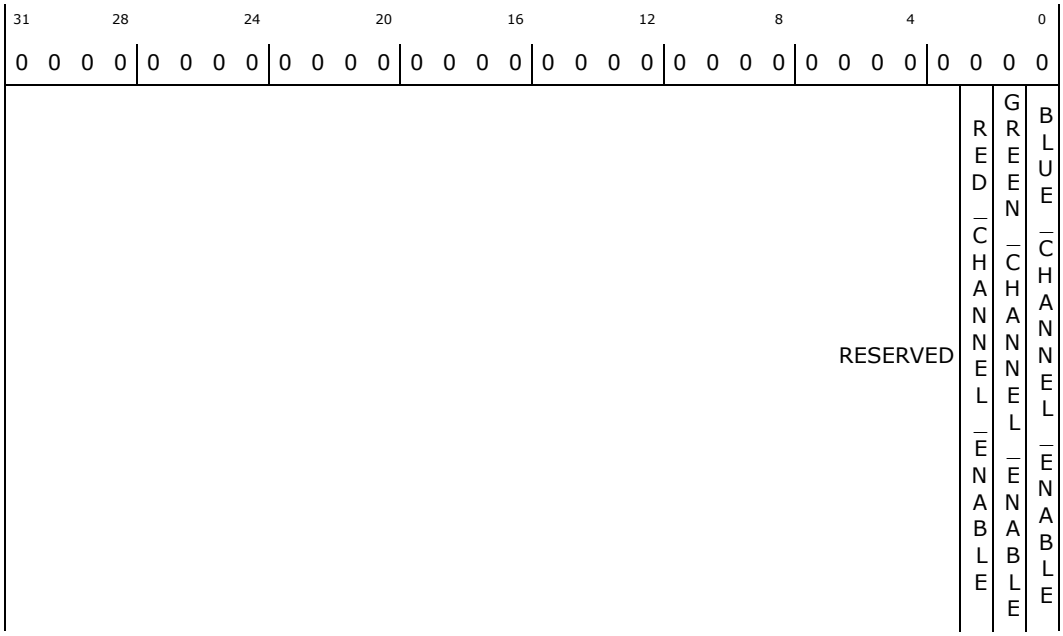
Sprite E Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72598h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Write as zero
2	0x0 RW	**RED_CHANNEL_ENABLE:** Specifies the source color key enable for the red/Cr channel.
1	0x0 RW	**GREEN_CHANNEL_ENABLE:** Specifies the source color key enable for the green/Y channel.
0	0x0 RW	**BLUE_CHANNEL_ENABLE:** Specifies the source color key enable for the blue/Cb channel

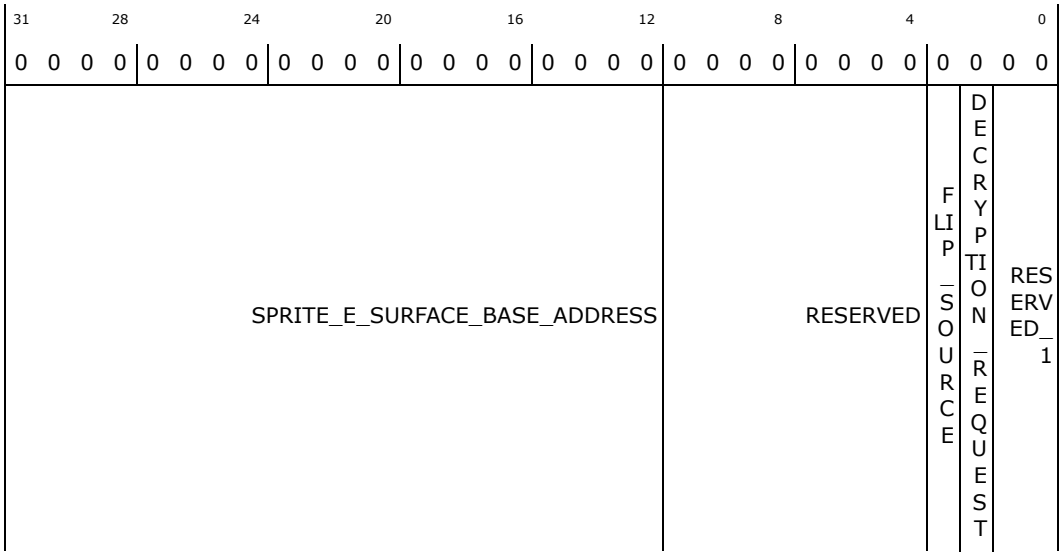
4.3.373 SPESURF—Offset 7259Ch

Sprite E Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7259Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**SPRITE_E_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . The value in this register is updated through the command streamer during synchronous flips. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. ValueNameDescriptionProject 0b Not requested Decrytpion not requested All 1b Requested Decryption requested All
1:0	0x0 RO	**RESERVED_1:** MBZ

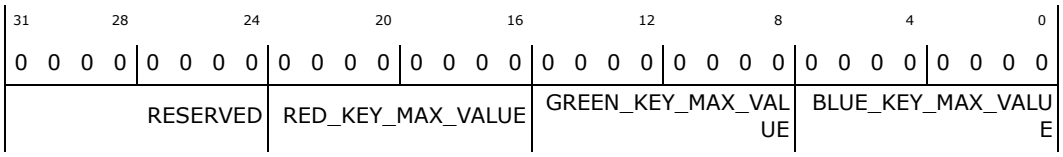
4.3.374 SPEKEYMAXVAL—Offset 725A0h

Sprite E Color Key Max Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 725A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MAX_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MAX_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MAX_VALUE:** Specifies the color key value for the Sprite blue/Cb channel.

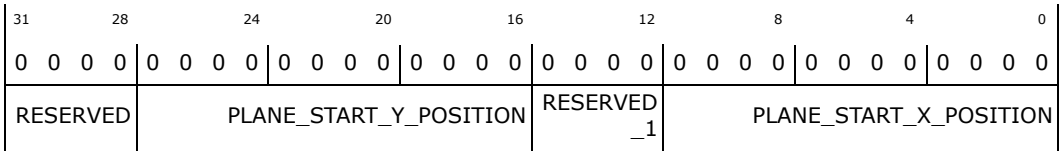
4.3.375 SPETILEOFF—Offset 725A4h

Sprite E Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 725A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

4.3.376 SPECONTALPHA—Offset 725A8h

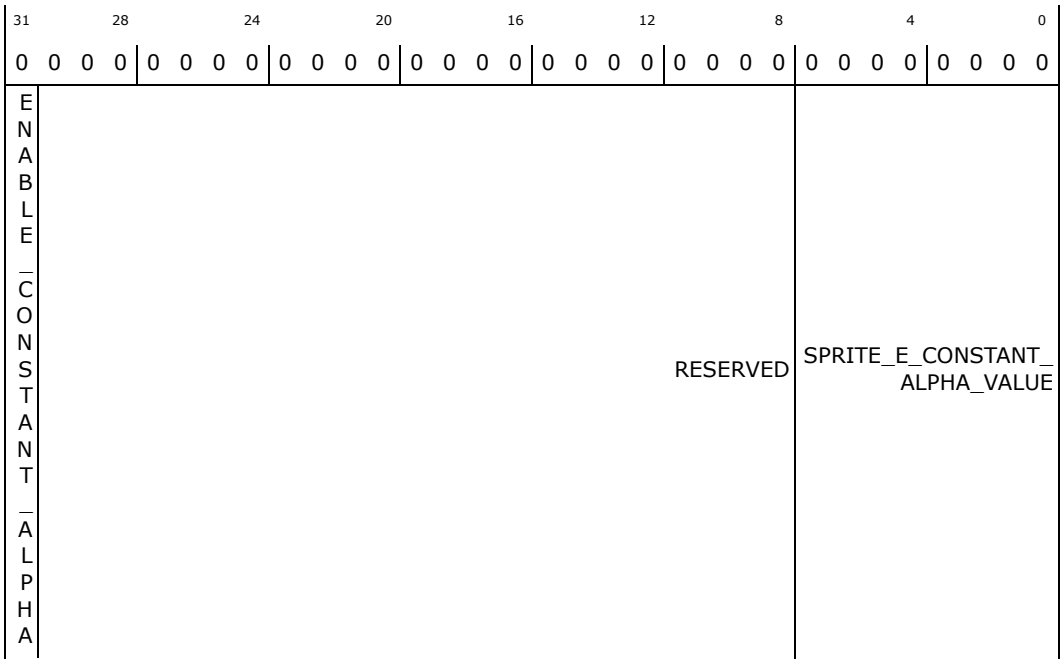
Sprite E Constant Alpha Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 725A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_CONSTANT_ALPHA:** Sprite E Sprite constant alpha provides a way to apply an alpha value to all video sprite pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. This can be used to create fade out effects. This is intended for CE device use where the video sprite might still be used to generate video output. 0 Sprite E Constant Alpha is disabled 1 Sprite E Constant Alpha is enabled

Bit Range	Default & Access	Field Name (ID): Description
30:8	0x0 RO	**RESERVED:** MBZ
7:0	0x0 RW	**SPRITE_E_CONSTANT_ALPHA_VALUE:** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of sprite with other surfaces.

4.3.377 SPELIVESURF—Offset 725ACh

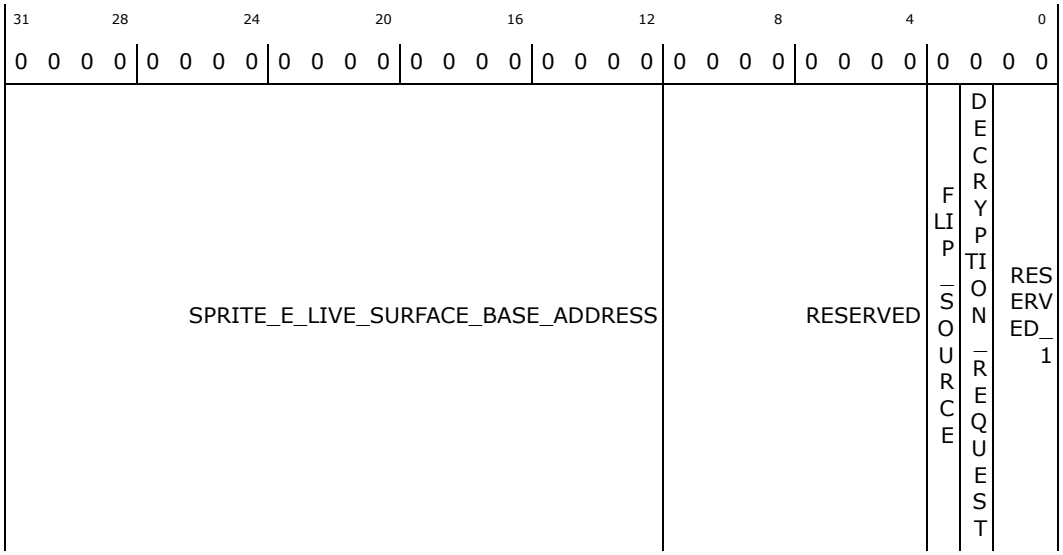
Sprite E Live Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 725ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**SPRITE_E_LIVE_SURFACE_BASE_ADDRESS:** This gives the live value of the surface base address as being currently used for Sprite E
11:4	0x0 RO	**RESERVED:** MBZ

1:0	0x0 RO	**RESERVED_1:** MBZ

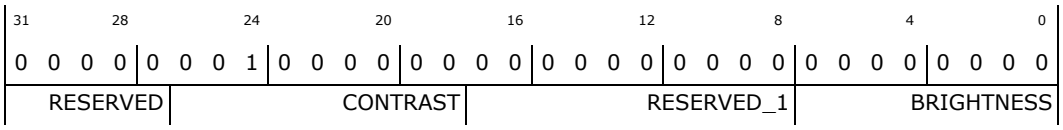
4.3.378 SPECLRC0—Offset 725D0h

Sprite E Color Correction 0 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 725D0h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:18	0x40 RW	**CONTRAST:** Contrast adjustment applies to YUV data. The Y channel is multiplied by the value contained in the register field. This signed fixed-point number is in 3i.6f format with the first 3 MSBs as the integer value and the last 6 LSBs as the fraction value. The allowed contrast value ranges from 0 to 7.53125 decimal. Bypassing Contrast, for YUV modes and for source data in RGB format, is accomplished by programming this field to a field value that represents 1.0 decimal or 001.000000 binary .
17:8	0x0 RO	**RESERVED_1:** Reserved.
7:0	0x0 RW	**BRIGHTNESS:** This field provides the brightness adjustment with a 8-bit 2 s compliment value ranging [-128, +127]. This value is added to the Y value after contrast multiply and before YUV to RGB conversion. A value of zero disables this adjustment affect. This 8-bit signed value provides half of the achievable brightness adjustment dynamic range. A full range brightness value would have a programmable range of [-255, +255]. Bypassing Brightness for YUV formats and for source data in RGB format, is accomplished by programming this field to 0.

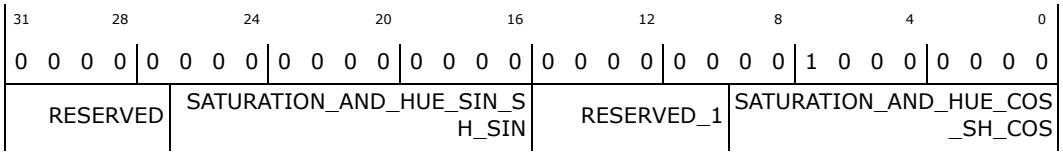
4.3.379 SPECLRC1—Offset 725D4h

Sprite E Color Correction 1 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 725D4h

Default: 00000080h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:16	0x0 RW	**SATURATION_AND_HUE_SIN_SH_SIN:** This 11-bit signed fixed-point number is in 2 s compliment (s3i.7f) format with the MSB as the sign, next 3 MSBs as the integer value and the last 7 LSBs as the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Hue, even for source data in RGB format, is accomplished by programming this field to 0.0.
15:10	0x0 RO	**RESERVED_1:** Reserved.
9:0	0x80 RW	**SATURATION_AND_HUE_COS_SH_COS:** This unsigned fixed-point number is in 3i.7f format with the first 3 MSBs be the integer value and the last 7 LSBs be the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Saturation, even for source data in RGB format, is accomplished by programming this field to 1.0.

4.3.386 SPFCNTR—Offset 72680h

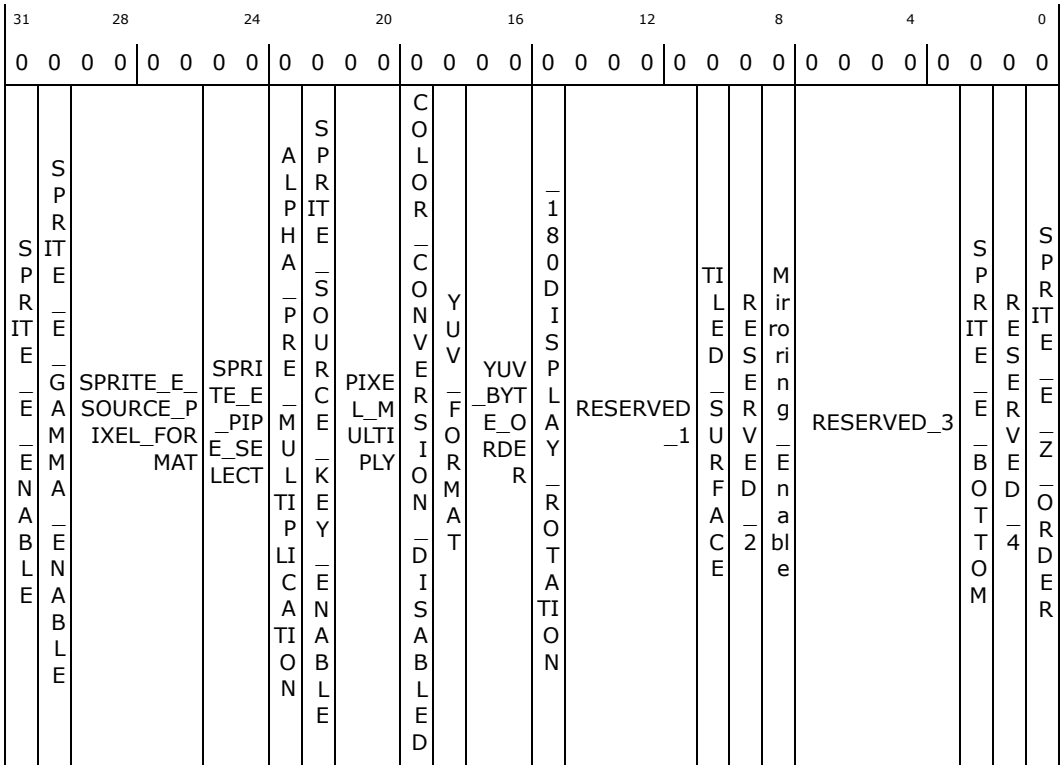
Sprite F Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72680h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**SPRITE_E_ENABLE:** This bit will enable or disable the Sprite F. When this bit is set, the plane will generate pixels for display to be combined by the blender for the target pipe. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. This bit only has an effect when the plane is not trusted. When the plane is marked trusted, this bit will be overridden and the display disabled when the registers are unlocked. 1 = Enable 0 = Disable
30	0x0 RW	**SPRITE_E_GAMMA_ENABLE:** There are two gamma adjustments possible in the Sprite F data path. This bit controls the gamma correction in the display pipe not the gamma control in this plane. It affects only the pixel data from this display plane. For pixel format of 8-bit indexed, this bit should be set to a one. Gamma correction logic that is contained in the Sprite F logic is disabled by loading the default values into those registers. When this plane is marked as trusted, this bit should always be set to zero to force the pipe gamma to be always be bypassed. 0 = Sprite F pixel data bypasses the display pipe gamma correction logic (default). 1 = Sprite F pixel data is gamma corrected in the pipe gamma correction logic

Bit Range	Default & Access	Field Name (ID): Description
29:26	0x0 RW	**SPRITE_E_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/Sprite F. Pixel formats with an alpha channel should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 0000 = YUV 4:2:2 packed (see byte order below). 0001 = Reserved 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format with pre-multiplied alpha channel. 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format 1010 = Reserved. 1011 = Reserved. 1100 = Reserved. 1101 = Reserved. 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8)
25:24	0x0 RW	**SPRITE_E_PIPE_SELECT:** Sprite F always ties to Pipe C. Reserved.
23	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
22	0x0 RW	**SPRITE_SOURCE_KEY_ENABLE:** When used as a sprite in the 16/32-bpp modes without alpha this enables source color keying. Sprite pixel values that match (within range) the key will become transparent. Setting this bit is not allowed when the Sprite F pixel format includes an alpha channel. [DevBW] Erratum: This bit must always be set to 0 when Sprite F pixel format is YUV 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled.
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. This is a method of scaling the source image by two (both H and V). 00 = No line/Pixel duplication 01 = Line/Pixel Doubling 10 = Line Doubling only 11 = Pixel Doubling only

Bit Range	Default & Access	Field Name (ID): Description
19	0x0 RW	**COLOR_CONVERSION_DISABLED:** This bit enables or disables the color conversion logic. Color conversion is intended to be used with the formats that support YUV formats such as the YUV 4:2:2 packed format and x:8:8:8 and 8:8:8:8 formats. Formats such as RGB5:5:5 and 5:6:5 do not have YUV versions. 0 = Pixel data is sent through the conversion logic (only applies to YUV formats) 1 = Pixel data is not sent through the YUV-)RGB conversion logic.
18	0x0 RW	**YUV_FORMAT:** This bit specifies the source YUV format for the YUV to RGB color conversion operation. This field is ignored when source data is RGB. 0 = ITU-R Recommendation BT.601 1 = ITU-R Recommendation BT.709
17:16	0x0 RW	**YUV_BYTE_ORDER:** This field is used to select the byte order when using YUV 4:2:2 data formats. For other formats, this field is ignored. 00 = YUYV 01 = UYVY 10 = YVYU 11 = VYUY
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image and calculate the x, y offset as relative to the lower right corner. 0 = No rotation 1 = 180 rotation
14:11	0x0 RO	**RESERVED_1:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the Sprite F surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCTILEOFF, DSPCLINOFF, and DSPCSURFADDR registers. 0 = Sprite F surface uses linear memory 1 = Sprite F surface uses X-tiled memory
9	0x0 RO	**RESERVED_2:** Write as zero
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:3	0x0 RO	**RESERVED_3:** Write as zero
2	0x0 RW	**SPRITE_E_BOTTOM:** This bit will force the Sprite F plane to be on the bottom of the Z order. If the plane is marked as trusted, it only applies to the Z order of the trusted planes. 0 = Sprite F Z order is determined by the other control bits 1 = Sprite F is forced to be on the bottom of the Z order.
1	0x0 RO	**RESERVED_4:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RW	**SPRITE_E_Z_ORDER:** With Sprite C and D z-order, bottom control bits, Sprite F plane is placed in a specific z-order among other planes in Pipe C. 4.3.387 SPFLINOFF—Offset 72684h

Sprite F Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72684h

Default: 00000000h

31	28	24	20	16	12	8	4	0
0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	0 0 0 0	
SPRITE_E_OFFSET								

Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**SPRITE_E_OFFSET:** This register provides the panning offset into the Sprite F plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

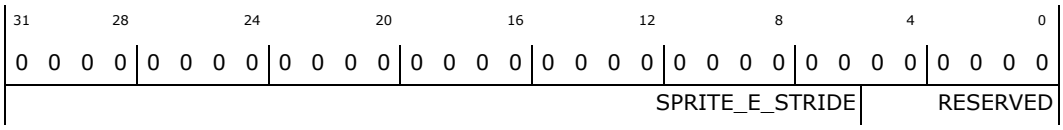
4.3.388 SPFSTRIDE—Offset 72688h

Sprite F Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72688h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**SPRITE_E_STRIDE:** This is the stride for Sprite F in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 256 byte aligned. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes.
5:0	0x0 RO	**RESERVED:** Reserved.

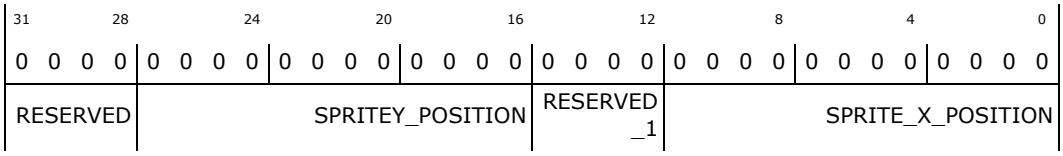
4.3.389 SPFPOS—Offset 7268Ch

Sprite F Position Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7268Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero

Bit Range	Default & Access	Field Name (ID): Description
27:16	0x0 RW	**SPRITEY_POSITION:** These 12 bits specify the vertical position in lines of the sprite (upper left corner) relative to the beginning of the active video area. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_X_POSITION:** These 12 bits specify the horizontal position in pixels of the sprite (upper left corner) relative the beginning of the active video area. When performing 180 rotation, this field specifies the horizontal position of the original lower right corner relative to the original end of the active video area in the unrotated orientation. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.

4.3.390 SPFSIZE—Offset 72690h

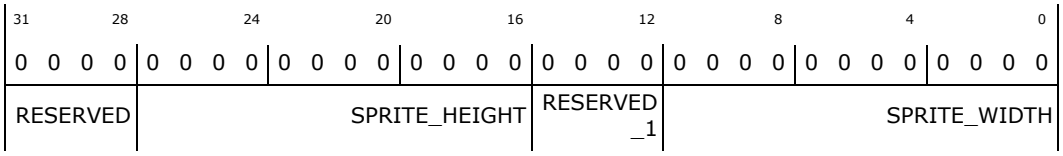
Sprite F Height and Width Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 72690h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**SPRITE_HEIGHT:** This register field is used to SPFcify the height of the sprite in lines. The value in the register is the height minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**SPRITE_WIDTH:** This register field is used to specify the width of the sprite in pixels. This does not have to be the same as the stride but should be less than or equal to the stride (converted to pixels). The value in the register is the width minus one. The defined sprite rectangle must always be completely contained within the displayable area of the screen image. The sprite width is limited to even values when YUV source pixel format is used (actual width, not the width minus one value).

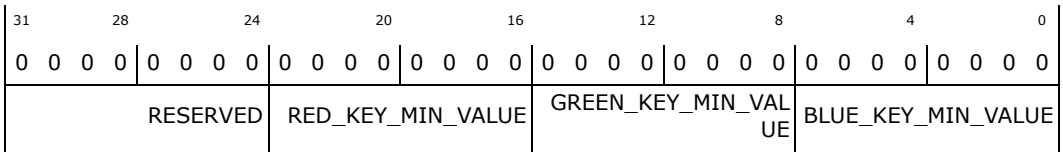
4.3.391 SPFKEYMINVAL—Offset 72694h

Sprite F Color Key Min Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72694h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MIN_VALUE:** Specifies the color key minimum value for the sprite blue/Cb channel.

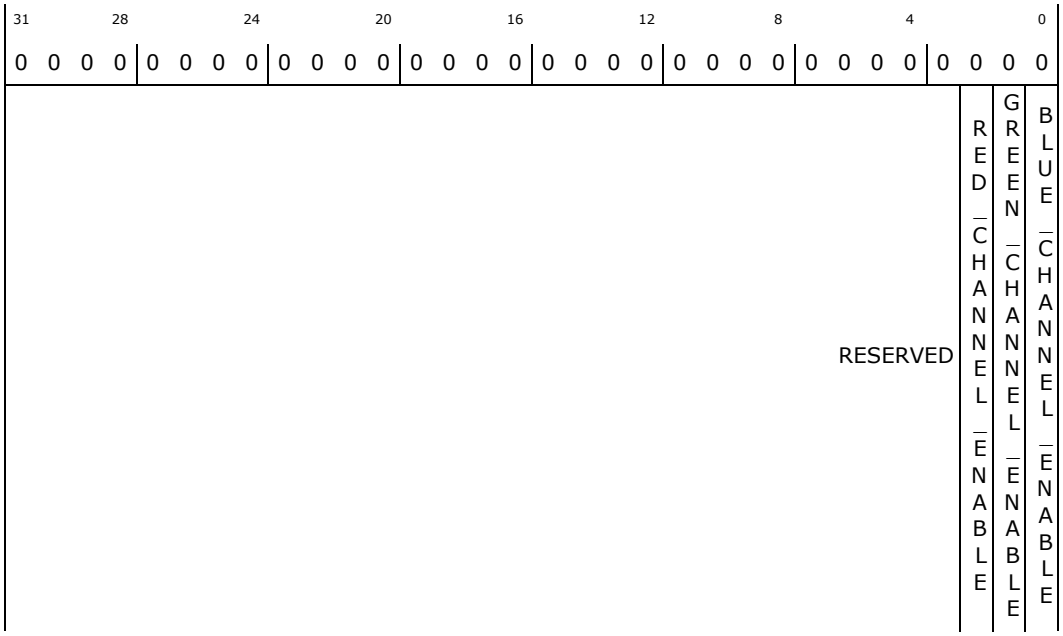
4.3.392 SPFKEYMSK—Offset 72698h

Sprite F Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 72698h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:3	0x0 RO	**RESERVED:** Write as zero
2	0x0 RW	**RED_CHANNEL_ENABLE:** Specifies the source color key enable for the red/Cr channel.
1	0x0 RW	**GREEN_CHANNEL_ENABLE:** Specifies the source color key enable for the green/Y channel.
0	0x0 RW	**BLUE_CHANNEL_ENABLE:** Specifies the source color key enable for the blue/Cb channel

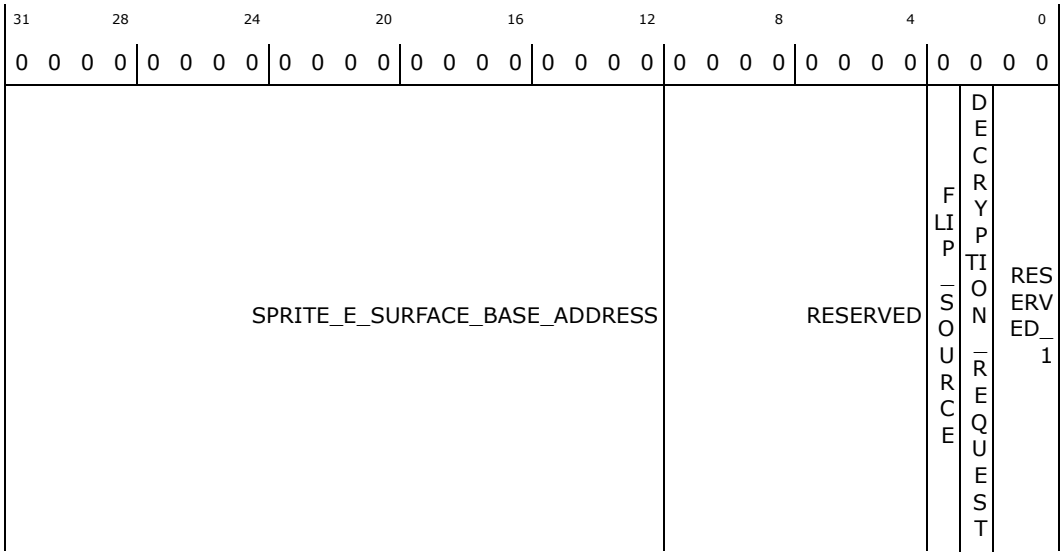
4.3.393 SPFSURF—Offset 7269Ch

Sprite F Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7269Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**SPRITE_E_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . The value in this register is updated through the command streamer during synchronous flips. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. ValueNameDescriptionProject 0b Not requested Decrytpion not requested All 1b Requested Decryption requested All
1:0	0x0 RO	**RESERVED_1:** MBZ

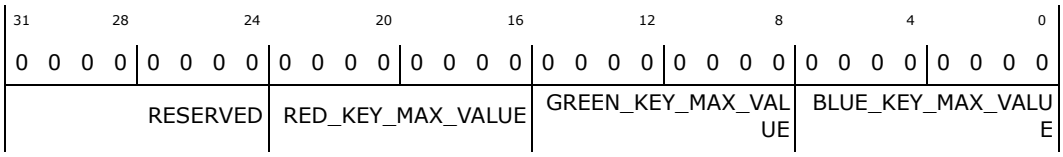
4.3.394 SPFKEYMAXVAL—Offset 726A0h

Sprite F Color Key Max Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 726A0h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:** Write as zero
23:16	0x0 RW	**RED_KEY_MAX_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_MAX_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_MAX_VALUE:** Specifies the color key value for the Sprite blue/Cb channel.

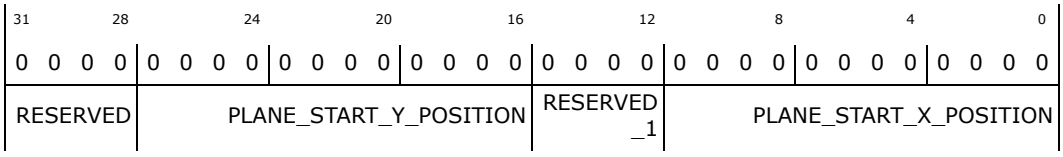
4.3.395 SPFTILEOFF—Offset 726A4h

Sprite F Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 726A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

Bit Range	Default & Access	Field Name (ID): Description
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation.

4.3.396 SPFCONTALPHA—Offset 726A8h

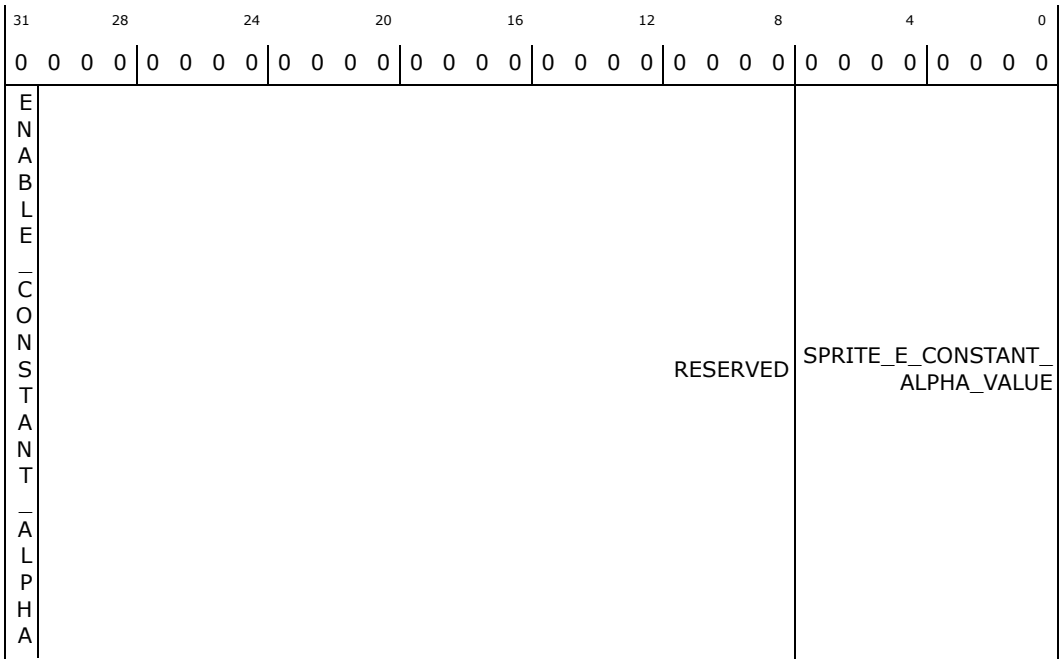
Sprite F Constant Alpha Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 726A8h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**ENABLE_CONSTANT_ALPHA:** Sprite F Sprite constant alpha provides a way to apply an alpha value to all video sprite pixels. Each pixel color channel is multiplied by the constant alpha before proceeding to the blender. This can be used to create fade out effects. This is intended for CE device use where the video sprite might still be used to generate video output. 0 Sprite F Constant Alpha is disabled 1 Sprite F Constant Alpha is enabled

Bit Range	Default & Access	Field Name (ID): Description
30:8	0x0 RO	**RESERVED:** MBZ
7:0	0x0 RW	**SPRITE_E_CONSTANT_ALPHA_VALUE:** This field provides the alpha value when constant alpha is enabled. A value of FF means fully opaque and a value of zero means fully transparent. Values in between those values allow for a blending of sprite with other surfaces.

4.3.397 SPFLIVESURF—Offset 726ACh

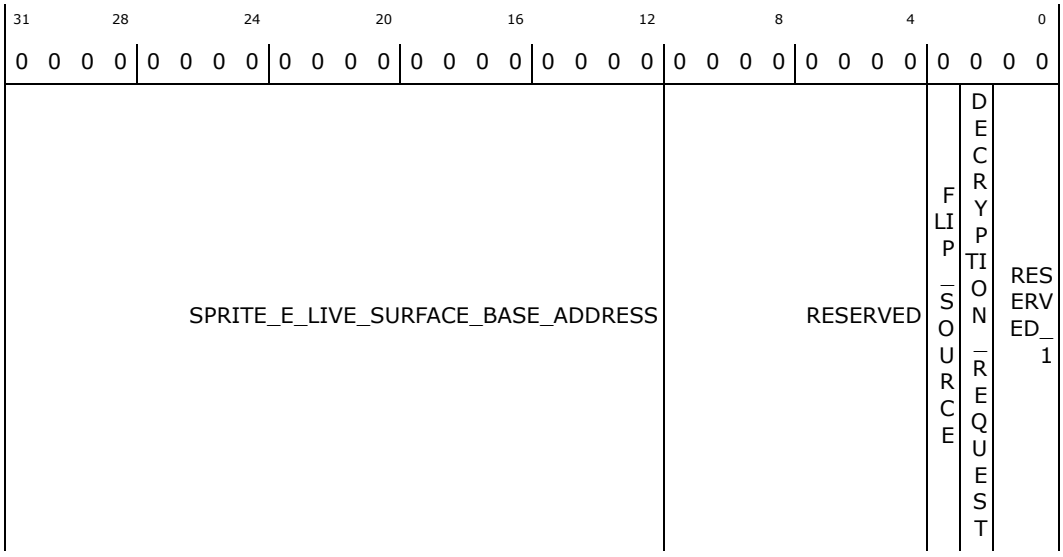
Sprite F Live Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 726ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RO	**SPRITE_E_LIVE_SURFACE_BASE_ADDRESS:** This gives the live value of the surface base address as being currently used for Sprite F
11:4	0x0 RO	**RESERVED:** MBZ

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RO	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RO	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register. ValueNameDescriptionProject 0b Not requested Decrytpion not requested All 1b Requested Decryption requested All
1:0	0x0 RO	**RESERVED_1:** MBZ

4.3.398 SPFCLRC0—Offset 726D0h

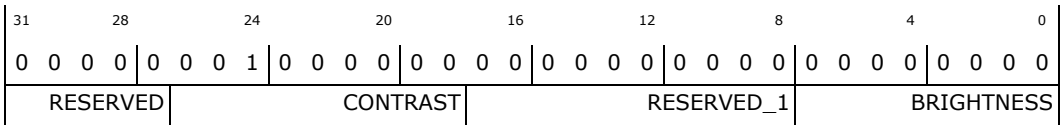
Sprite F Color Correction 0 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 726D0h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:18	0x40 RW	**CONTRAST:** Contrast adjustment applies to YUV data. The Y channel is multiplied by the value contained in the register field. This signed fixed-point number is in 3i.6f format with the first 3 MSBs as the integer value and the last 6 LSBs as the fraction value. The allowed contrast value ranges from 0 to 7.53125 decimal. Bypassing Contrast, for YUV modes and for source data in RGB format, is accomplished by programming this field to a field value that represents 1.0 decimal or 001.000000 binary .
17:8	0x0 RO	**RESERVED_1:** Reserved.
7:0	0x0 RW	**BRIGHTNESS:** This field provides the brightness adjustment with a 8-bit 2 s compliment value ranging [-128, +127]. This value is added to the Y value after contrast multiply and before YUV to RGB conversion. A value of zero disables this adjustment affect. This 8-bit signed value provides half of the achievable brightness adjustment dynamic range. A full range brightness value would have a programmable range of [-255, +255]. Bypassing Brightness for YUV formats and for source data in RGB format, is accomplished by programming this field to 0.

4.3.399 SPFCLRC1—Offset 726D4h

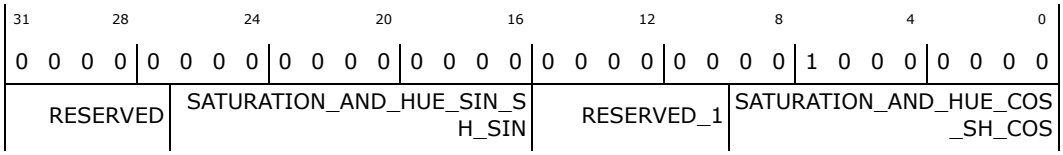
Sprite F Color Correction 1 Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 726D4h

Default: 00000080h



Bit Range	Default & Access	Field Name (ID): Description
31:27	0x0 RO	**RESERVED:** Reserved.
26:16	0x0 RW	**SATURATION_AND_HUE_SIN_SH_SIN:** This 11-bit signed fixed-point number is in 2 s compliment (s3i.7f) format with the MSB as the sign, next 3 MSBs as the integer value and the last 7 LSBs as the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Hue, even for source data in RGB format, is accomplished by programming this field to 0.0.
15:10	0x0 RO	**RESERVED_1:** Reserved.
9:0	0x80 RW	**SATURATION_AND_HUE_COS_SH_COS:** This unsigned fixed-point number is in 3i.7f format with the first 3 MSBs be the integer value and the last 7 LSBs be the fraction value. This field can be used in two modes. When full range YUV data is operated on, this field contains the saturation value. When the range-limited YCbCr data is used, software should program this field with the product of the saturation multiplier value multiplied by the CbCr range scale factor (=128/112). Similar to the contrast field, there is no limit for saturation reduction saturation = 0 means all pixels become the same value. However, increasing contrast can only be increased by a factor less than 8. For example, the largest contrast with value of 0x7.7F can bring input range [0, 32] to a full display color range of [0, 255]. Bypassing Saturation, even for source data in RGB format, is accomplished by programming this field to 1.0.

Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**PIPE_C_ENABLE:** Setting this bit to the value of one, turns on pipe B. This must be done before any planes are enabled on this pipe. Changing it to a zero should only be done when all planes that are assigned to this pipe have been disabled. Turning the pipe enable bit off disables the timing generator in this pipe. Plane disable occurs after the next VBLANK event after the plane is disabled. Synchronization pulses to the display are not maintained if the timing generator is disabled. Power consumption will be at its lowest state when disabled. A separate bit controls the DPLL enable for this pipe. Pipe timing registers should contain valid values before this bit is enabled. Disabling the Pipe and changing the timing registers and re-enabling the pipe before the next VBLANK will cause the mode change to occur at the end of the current frame. This requires no wait on the software s part. On the other hand, if this is the disabling of the pipe, that does require a software wait for VBLANK to occur. Synchronization pulses to the display are not maintained if the timing generator is disabled. Power consumption is at it s lowest state. 1 = Enable 0 = Disable
30	0x0 RO	**PIPE_STATE:** This bit indicates the actual state of the pipe. Since there can be some delay between disabling the pipe and the pipe actually shutting off, this bit indicates the true current state of the pipe. 0 = Disabled 1 = Enabled AccessType: Read Only
29	0x0 RO	**RESERVED:** Write as zero.
28:27	0x0 RW	**FRAME_START_DELAY:** Used to delay the frame start signal that is sent to the display planes. Normal operation uses the default 00 value and test modes can use the delayed frame start to shorten the test time. This would be set to 00 for normal operation. 00 = Frame Start occurs on the first HBLANK after the start of VBLANK 01 = Frame Start occurs on the second HBLANK after the start of VBLANK 10 = Frame Start occurs on the third HBLANK after the start of VBLANK 11 = Frame Start occurs on the forth HBLANK after the start of VBLANK
26	0x0 RW	**DISPLAY_PORT_AUDIO_ONLY_MODE:** Setting this bit to 1 indicates the DisplayPort will output audio only. 0 = DisplayPort will output Video or Video and Audio 1 = DisplayPort will output Audio only
25	0x0 RW	**FORCE_BORDER:** (TEST MODE)0 = Normal Operation 1 = Color information is ignored and border color is substituted during active region
24	0x0 RW	**PIPE_C_GAMMA_UNIT_MODE:** . This bit selects which mode the pipe gamma correction logic works in. In the palette mode, it behaves as a 3X256x8 RAM lookup. Indexed mode operation should use the palette in 8-bit mode. In the 10-bit gamma mode, it will act as a piecewise linear interpolation. Other gamma units such as in the overlay and sprite are unaffected by this bit.0 = 8-bit Palette Mode 1 = 10-bit Gamma Mode

Bit Range	Default & Access	Field Name (ID): Description
23:21	0x0 RW	**INTERLACED_MODE:** These bits are used for software control of interlaced behavior. They are updated immediately if the pipe is off, or in the vertical blank after programming if pipe is enabled. 0xx = Progressive 100 = Interlaced embedded panel using programmable vertical sync shift (2x) 101 = Interlaced using vertical sync shift. Backup option to setting 110. (2x) 110 = Interlaced with VSYNC/HSYNC Field Indication using legacy vertical sync shift. Used for SDVO. 111 = Interlaced with Field 0 Only using legacy vertical sync shift. Not used. Setting the Interlaced embedded panel mode causes hardware to automatically modify the output to match the specifications of panels that support interlaced mode.
20	0x0 RW	**MIPI_DISPLAY_SELF_REFRESH_MODE_FOR_MIPI_B:** .0 = Normal Operation, display controller generate timing and refresh display panel at refresh rate 1 = Display self-refresh mode. Display controller update frame buffer in display module on demand only
19	0x0 RW	**DISPLAY_OVERLAY_PLANES_OFF:** . This bit when set will cause all enabled Display and overlay planes that are assigned to this pipe to be disabled by overriding the current setting of the plane enable bit, at the next VBLANK. Timing signals continue as they were but the screen becomes blank. Setting the bit back to a zero will then allow the display and overlay planes to resume on the following VBLANK.0 = Normal Operation 1 = Planes assigned to this pipe are disabled.
18	0x0 RW	**CURSOR_PLANES_OFF:** . This bit when set will cause all enabled cursor planes that are assigned to this pipe to be disabled by overriding the current setting of the plane enable bit, at the next VBLANK. Timing signals continue as they were but the screen becomes blank. Setting the bit back to a zero will then allow the cursor planes to resume on the following VBLANK. 0 = Normal Operation 1 = Planes assigned to this pipe are disabled.
17:16	0x0 RW	**REFRESH_RATE_CXSR_MODE_ASSOCIATION:** These bits select how refresh rates are tied to CxSR on pipe B. When they are set to anything other than 00, bits 23:21 of this register must be programmed to 0xx. Switching between 01 and 10 settings directly is not allowed. Software must program this field to 00 before switching. Software is responsible for enabling this mode only for integrated display panels that support corresponding mode. 00 Default no dynamic refresh rate change enabled. Software control only. 01 Progressive-to-progressive refresh rate change enabled and tied to CxSR. Pixel clock values set in FPB0/FPB1 settings in the DPLLB control register and FPB0/FPB1 divider registers. 10 Progressive-to-interlaced refresh rate change enabled and tied to CxSR. Pixel clock value does not change in this case. Scaling must be disabled in this mode. Uses programmable VS shift 11 Reserved
15	0x0 RW	**COLOR_CORRECTION_MATRIX_ENABLE_ON_PIPE_C:** 1 = Color Correction Coefficients are enabled to perform color correction 0 = Color Correction Coefficients are disabled

Bit Range	Default & Access	Field Name (ID): Description
14	0x0 RW	**DISPLAYPORT_POWER_MODE_SWITCH_DEVVLVP:** This bit selects the software controlled progressive to progressive power saving mode (software controlled DRRS). Hardware Controlled Refresh Rate Select must be disabled when enabling this. Link and data M/N 1 values are used for normal settings, M/N 2 values are used for low power settings. 0 Normal progressive refresh rate (default) 1 Low Power progressive refresh rate
13	0x0 RW	**COLOR_RANGE_SELECT:** : This bit is used to select the color range of RBG outputs. 0 = Apply full 0-255 color range to the output (Default) 1 = Apply 16-235 color range to the output
12	0x0 RW	**S3D_SPRITE_ORDER:** This bit controls the blending order of the sprite planes for S3D support: 0 = Sprite C first. The first line or pixel comes from Sprite C (default) 1 = Sprite D first. The first line or pixel comes from Sprite D
11:10	0x0 RW	**S3D_SPRITE_INTERLEAVING_FORMAT:** These bits control the Sprite C/D interleaving format in S3D mode 00 = No interleaving 01 = Line interleaving 10 = Pixel interleaving 11 = Reserved
9:8	0x0 RO	**RESERVED_1:** MBZ Scrambling enable [DevCTG]: This bit enables scrambling for DisplayPort. Software must set this bit appropriately when enabling a DisplayPort output. 00 = Scrambling disabled (Default) 01 = Scrambling enabled, no SR after initialization at loop 2 of training 10 - RESERVED 11 = Scrambling and SR enabled. Scrambling is reset every 512 BS symbols.
7:5	0x0 RW	**BITS_PER_COLOR:** This field selects the number of bits per color sent to a receiver device connected to this port. Color format takes place on the Vblank after being written. Color format change can be done independent of a pixel clock change. Selecting a pixel color depth higher or lower than the pixel color depth of the frame buffer results in dithering the output stream. For further details on Display Port fixed frequency programming to accommodate these formats refer to DP Frequency Programming in DPLL section of Bspec. 000 = 8 bits per color (Default) 001 = 10 bits per color 010 = 6 bits per color 011 = RESERVED 1xx = RESERVED
4	0x0 RW	**DITHERING_ENABLE:** This bit enables dithering for DisplayPort 6bpc or 8bpc modes 0 Dithering disabled (Default) 1 Dithering enabled Programming Note: Dithering should only be enabled for 8bpc or 6bpc.

Bit Range	Default & Access	Field Name (ID): Description
3:2	0x0 RW	**DITHERING_TYPE:** This bit selects dithering type for DisplayPort 6bpc or 8bpc modes 00 - Spatial only (default) 01- Spatio-Temporal 1 10- Spatio-Temporal 2 (testmode) 11- Temporal only (testmode)
1	0x0 RW	**DDA_RESET_TEST_MODE::** 0 Do not reset DDA 1 Reset DDA every 8th display frame
0	0x0 RO	**RESERVED_2:** Write as zero

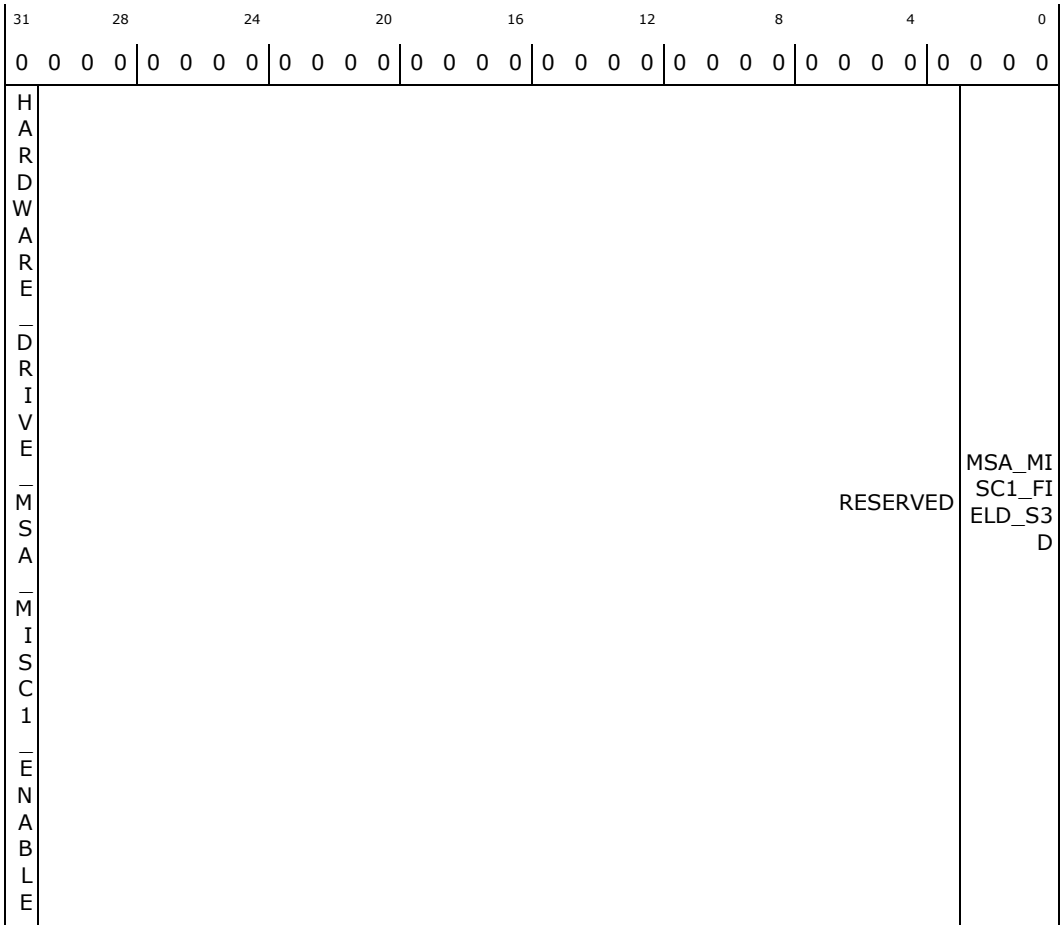
4.3.421 PIPECMSAMISC—Offset 74048h

Pipe C MSA MISC

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 74048h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**HARDWARE_DRIVE_MSA_MISC1_ENABLE:** This bit enables hardware to drive MSA MISC1 bit3:1 with the stereo 3D left/right eye field indication. Hardware will drive 000 when S3D mode is disabled, 001 when enabled and the upcoming video frame is right eye, 011 when enabled and the upcoming video frame is left eye. When this bit is disabled, software may manually program the MSA MISC1 Field S3D field in bit 2:0 in this register to set MISC1 bit 3:1 0 = Disable hardware driving MSA MISC1 bit 3:1. Allow software to manually program MSA MISC1 bit3:1 through MSA_MISC1_FIELD_S3D (default) 1 = Enable hardware to drive MSA MISC1 bit3:1 for S3D
30:3	0x0 RO	**RESERVED:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
2:0	0x0 RW	**MSA_MISC1_FIELD_S3D:** This field provides software to manually program MSC1 stereo video attribute for DisplayPort: 000 = No stereo video transported 001 = For progressive video, the next (upcoming) video frame is RIGHT eye 010 = Reserved 011 = For progressive video, the next (upcoming) video frame is LEFT eye 100 = Stacked top and bottom top half represents left-eye view and bottom half represents right-eye view 101 = Stacked top and bottom top half represents right-eye view and bottom half represents left-eye view

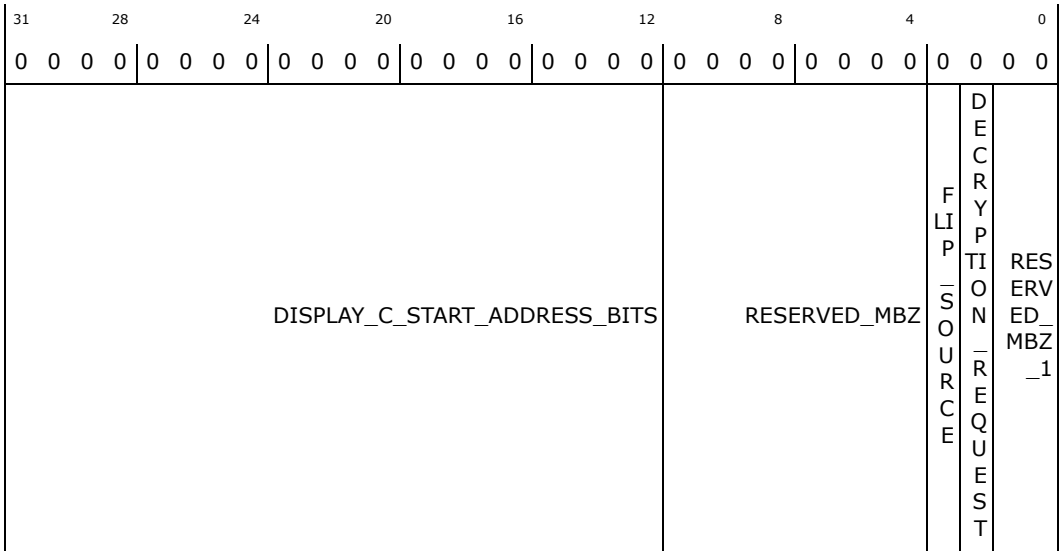
4.3.422 DSPCADDR—Offset 7417Ch

Display C Async flip Start Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7417Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**DISPLAY_C_START_ADDRESS_BITS:** This register provides the start address of the display C plane or the first eye when running in stereo mode. This address must be at least pixel aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. This address must be 4K aligned. When performing asynchronous flips and the display surface is in tiled memory, this address must be 256K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. If the device supports trusted operation and this plane is not marked trusted, the memory pages must not be marked NoDMA . Write to this register triggers async flip The async flip address is written into the Display C Base Address register 0x7119C
11:4	0x0 RO	**RESERVED_MBZ:** Reserved.
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All

Bit Range	Default & Access	Field Name (ID): Description
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register.
1:0	0x0 RO	**RESERVED_MBZ_1:** Reserved.

4.3.423 DSPCCNTR—Offset 74180h

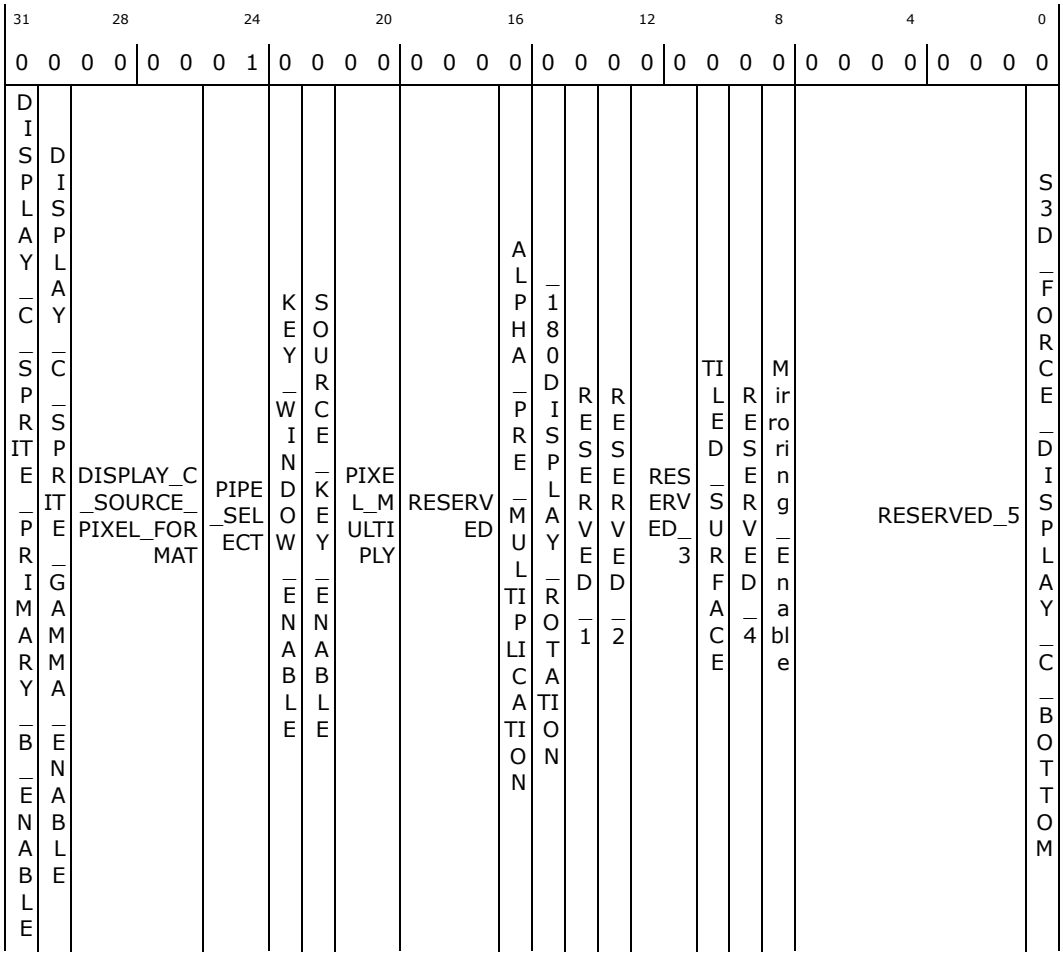
Display C/Sprite Plane Control Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 74180h

Default: 01000000h



Bit Range	Default & Access	Field Name (ID): Description
31	0x0 RW	**DISPLAY_C_SPRITE_PRIMARY_B_ENABLE:** This bit will enable or disable the display C/sprite. When this bit is set, the plane will generate pixels for display. When set to zero, memory fetches cease and display is blanked (from this plane) at the next VBLANK event from the pipe that this plane is assigned. At least one of the display pipes must be enabled to enable this plane. There is an override for the enable of this plane in the Pipe Configuration register. 1 = Enable 0 = Disable
30	0x0 RW	**DISPLAY_C_SPRITE_GAMMA_ENABLE:** This bit should only be changed after the plane has been disabled. It controls the bypassing of the display pipe gamma unit for this display plane pixel data only. For 8-bit indexed display data, this bit should be set to a one. 0 = Display C pixel data bypasses the pipe gamma correction logic (default). 1 = Display C pixel data is gamma corrected in the pipe gamma correction logic

Bit Range	Default & Access	Field Name (ID): Description
29:26	0x0 RW	**DISPLAY_C_SOURCE_PIXEL_FORMAT:** This field selects the pixel format for the sprite/display C. Pixel formats with an alpha channel (8:8:8:8) should not use source keying. Before entering the blender, each source format is converted to 10 bits per pixel (details are described in the intermediate precision for the blender section of the Display Functions chapter). 000x = Reserved. 0010 = 8-bpp Indexed. 0011 = Reserved. 0100 = Reserved. 0101 = 16-bit BGRX (5:6:5:0) pixel format (XGA compatible). 0110 = 32-bit BGRX (8:8:8:8) pixel format. Ignore alpha. 0111 = 32-bit BGRA (8:8:8:8) pixel format. (with pre-multiplied alpha color format) 1000 = 32-bit RGBX (10:10:10:2) pixel format. Ignore alpha. 1001 = 32-bit RGBA (10:10:10:2) pixel format. (with pre-multiplied alpha color format) 1010 = 32-bit BGRX (10:10:10:2) pixel format Ignore alpha 1011 = 32-bit BGRA (10:10:10:2) pixel format (with pre-multiplied alpha color format) 1100 = 64-bit RGBX (16:16:16:16) 16 bit floating point pixel format. Ignore alpha. 1101 = 64-bit RGBA (16:16:16:16) 16-bit floating point pixel format (with pre-multiplied color format) 1110 = 32-bit RGBX (8:8:8:8) pixel format. Ignore alpha. 1111 = 32-bit RGBA (8:8:8:8) pixel format (with pre-multiplied color format)
25:24	0x1 RO	**PIPE_SELECT:** Plane C always ties to Pipe C. Reserved AccessType: Read Only
23	0x0 RW	**KEY_WINDOW_ENABLE:** This applies only to devices with a Display Plane C. It determines what area of the screen the source key compare should be applied. This bit is set to one when the color key is used as a destination key for display C. Display plane C must be enabled on the same pipe and display A should not be enabled on this pipe for this to be used. The function is only effective when display C is enabled and defined by Z-order to be behind display C. 0 = If keying is enabled, it applies to the entire display C plane 1 = If keying is enabled, it applies only to the intersection between display B and display C [DevBLC] and [DevCTG]: Reserved
22	0x0 RW	**SOURCE_KEY_ENABLE:** When used as a sprite or a secondary this enables source color keying. Sprite pixel values that match the key will become transparent. Source keying allows a plane that is behind (below) this plane to show through where the display B data matches the display B key. This function is overloaded to provide display C destination keying when combined with the key window enable bit.. Setting this bit is not allowed when the display pixel format includes an alpha channel. 0 = Sprite source key is disabled (default) 1 = Sprite source key is enabled. [DevBLC] and [DevCTG]: Reserved In destination keying, primary plane pixel will be made transparent when blending with sprite pixel as the destination if the primary src key matches with the primary pixel value.

Bit Range	Default & Access	Field Name (ID): Description
21:20	0x0 RW	**PIXEL_MULTIPLY:** This cause the display plane to duplicate lines and pixels sent to the assigned pipe. In the line/pixel doubling mode, the horizontal pixels are doubled and lines are sent twice. Asynchronous flips are not used in this mode. Programming Notes: Asynchronous flips are not permitted when pixel multiply is enabled. 00 = No duplication 01 = Line/pixel Doubling 10 = Reserved 11 = Pixel Doubling only
19:17	0x0 RO	**RESERVED:** Write as zero
16	0x0 RO	**ALPHA_PRE_MULTIPLICATION:** This Bit allows plane logic to alpha multiply ARGB/RGBA pizels if they are not pre multiplied already. 0: RGB Components are pre multiplied with alpha channel of the pixel. 1: RGB components have not been multiplied with alpha channel of the pixel. Plane will performed multiplication before alpha blending.
15	0x0 RW	**_180DISPLAY_ROTATION:** This mode causes the display plane to be rotated 180 . In addition to setting this bit, software must also set the base address to the lower right corner of the unrotated image. [DevCL] Do not enable 180 rotation together with Frame Buffer Compression 0 = No rotation 1 = 180 rotation
14	0x0 RO	**RESERVED_1:** [DevBLC, DevCTG] Display C Trickle Feed Enable: 0 = Trickle Feed Enabled - Display B data requests are sent whenever there is space in the Display Data Buffer. 1 = Trickle Feed Disabled - Display C data requests are sent in bursts. Note: On mobile products this bit will be ignored such that Trickle Feed is always disabled. [DevELK] Must always be programmed disabled
13	0x0 RO	**RESERVED_2:** [DevBLC, DevCTG] Display C Data Buffer Partitioning Control: 0 = Display C Data Buffer will encompass Sprite C buffer space when Sprite B is disabled. 1 = Display C Data Buffer will not use Sprite B buffer space when Sprite B is disabled. Note: When in C3xR Max FIFO mode, this bit will be ignored.
12:11	0x0 RO	**RESERVED_3:** Reserved.
10	0x0 RW	**TILED_SURFACE:** This bit indicates that the display C surface data is in tiled memory. The tile pitch is specified in bytes in the DSPCSTRIDE register. Only X tiling is supported for display surfaces. When this bit is set, it affects the hardware interpretation of the DSPCLINOFF, DSPCTILEOFF, and DSPCSURF registers. 0 = Display C surface uses linear memory 1 = Display C surface uses X-tiled memory

Bit Range	Default & Access	Field Name (ID): Description
9	0x0 RO	**RESERVED_4:** Write as zero [DevBLC, DevCTG] Asynchronous Surface Address Update Enable: This bit will enable asynchronous updates of the surface address when written by MMIO. The surface address will change with the next TLB request or when start of vertical blank is reached. Updates during vertical blank may not complete until after the first few active lines are displayed. Restrictions: No command streamer initiated surface address updates are allowed when this bit is enabled. Only one asynchronous update may be made per frame. Must wait for vertical blank before again writing the surface address register. 0 = DSPCSURF MMIO writes will update synchronous to start of vertical blank (default) 1 = DSPCSURF MMIO writes will update asynchronously
8	0x0 RO	**Mirroring_Enable:** 0: Mirroring is not enabled. 1: Mirroring is enabled.
7:1	0x0 RO	**RESERVED_5:** Write as zero
0	0x0 RW	**S3D_FORCE_DISPLAY_B_BOTTOM (S3D_FORCE_DISPLAY_C_BOTTOM):** This bit will force the display C plane to be on the bottom of any sprite planes in the Z order. 0 = Display C Z-order is determined by the other control bits in pipe C 1 = Display C is forced to be on the bottom of any sprite planes in Z-order in pipe C

4.3.424 DSPCLINOFFSET—Offset 74184h

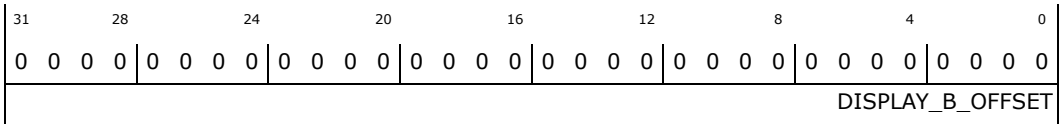
Display C/Sprite Linear Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 74184h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RW	**DISPLAY_C_OFFSET (DISPLAY_B_OFFSET):** This register provides the panning offset into the display B plane. This value is added to the surface address to get the graphics address of the first pixel to be displayed. This offset must be at least pixel aligned. This offset is the difference between the address of the upper left pixel to be displayed and the display surface address. When performing 180 rotation, this offset must be the difference between the last pixel of the last line of the display data in its unrotated orientation and the display surface address.

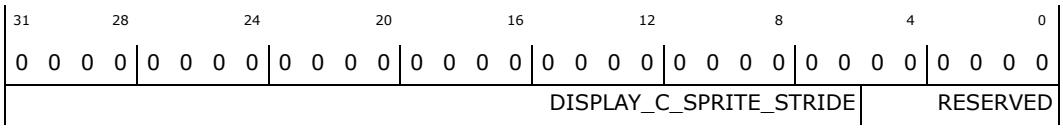
4.3.425 DSPCSTRIDE—Offset 74188h

Display C/Sprite Stride Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 74188h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:6	0x0 RW	**DISPLAY_C_SPRITE_STRIDE:** This is the stride for display C/Sprite in bytes. When using linear memory, this must be 64 byte aligned. When using tiled memory, this must be 512 byte aligned. The maximum value for this register is fixed. This register is updated through a command packet passed through the command stream or writes to this register. When it is desired to update both this and the start register, the stride register must be written first because the write to the start register is the trigger that causes the update of both registers on the next VBLANK event. When using tiled memory, the actual memory buffer stride is limited to a maximum of 16K bytes. The display stride must be power of 2 when doing Asynch Flips. The display stride must be 8KB or greater when doing Asynch Flips together with 180 rotation. The value in this register is updated through the command streamer during a synchronous flip.
5:0	0x0 RO	**RESERVED:** Reserved.

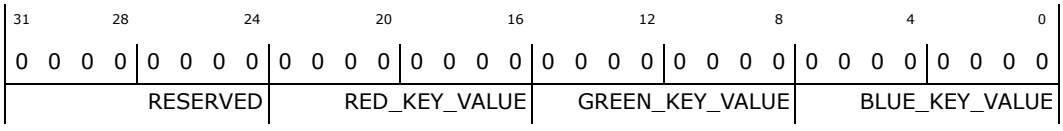
4.3.426 DSPCKEYVAL—Offset 74194h

Sprite Color Key Value Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 74194h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:**

Bit Range	Default & Access	Field Name (ID): Description
23:16	0x0 RW	**RED_KEY_VALUE:** Specifies the color key value for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_KEY_VALUE:** Specifies the color key value for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_KEY_VALUE:** Specifies the color key value for the sprite blue/Cb channel.

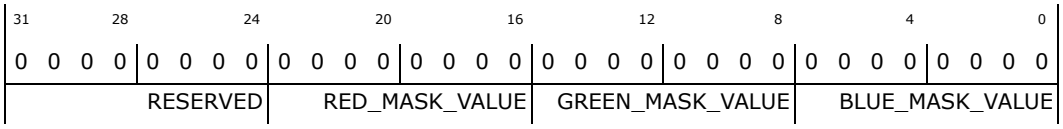
4.3.427 DSPCKEYMSK—Offset 74198h

Sprite Color Key Mask Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 74198h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:24	0x0 RO	**RESERVED:**
23:16	0x0 RW	**RED_MASK_VALUE:** Specifies the color key mask for the sprite red/Cr channel.
15:8	0x0 RW	**GREEN_MASK_VALUE:** Specifies the color key mask for the sprite green/Y channel.
7:0	0x0 RW	**BLUE_MASK_VALUE:** Specifies the color key mask for the sprite blue/Cb channel.

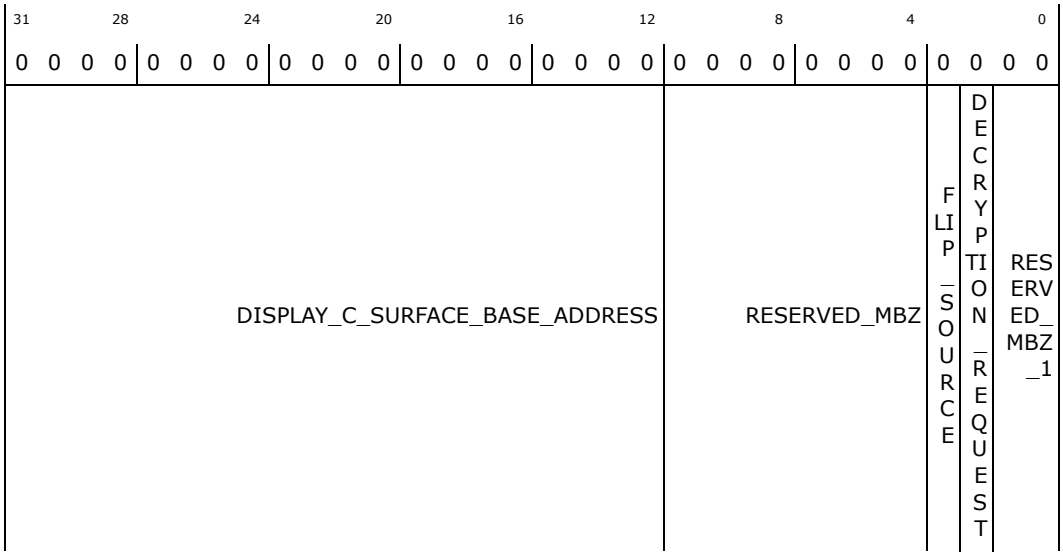
4.3.428 DSPCSURF—Offset 7419Ch

Display C Surface Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 7419Ch

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:12	0x0 RW	**DISPLAY_C_SURFACE_BASE_ADDRESS:** This address specifies the surface base address. When the surface is tiled, panning is specified using (x, y) offsets in the DSPCTILEOFF register. When the surface is in linear memory, panning is specified using a linear offset in the DSPCLINOFF register. This address must be 4K aligned. When performing asynchronous flips and the display surface is in tiled memory, this address must be 256K aligned. This register can be written directly through software or by command packets in the command stream. It represents an offset from the graphics memory aperture base and is mapped to physical pages through the global GTT. [DevBW] and [DevCL]: This address must be 128K aligned for linear memory.
11:4	0x0 RO	**RESERVED_MBZ:** Reserved.

Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**FLIP_SOURCE:** Project: All Default Value: 0b This bit indicates if the source of the flip is CS or BCS so display can send the flip done response to the appropriate destination. ValueNameDescriptionProject 0b CS Flip source is CS All 1b BCS Flip source is BCS All
2	0x0 RW	**DECRYPTION_REQUEST:** Project: All Default Value: 0b This bit requests decryption to be enabled for this plane. This request will be qualified with the separate decryption allow message in order to create the decryption enable. This bit is only allowed to change on a synchronous flip, but once set with a synchronous flip, the bit can remain set while using asynchronous flips. This value is loaded into the surface base address register of the associated plane. Usage must conform to the rules outlined in the plane surface base address register.
1:0	0x0 RO	**RESERVED_MBZ_1:** Reserved.

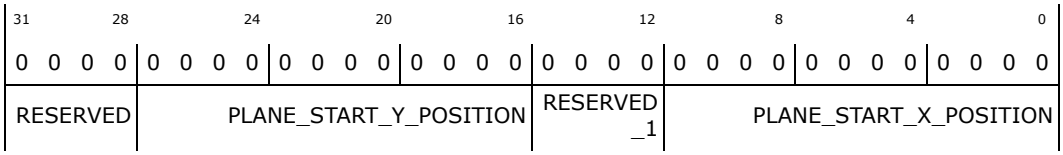
4.3.429 DSPCTILEOFF—Offset 741A4h

Display C Tiled Offset Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits) **Offset:** 741A4h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:28	0x0 RO	**RESERVED:** Write as zero
27:16	0x0 RW	**PLANE_START_Y_POSITION:** These 12 bits specify the vertical position in lines of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the vertical position of the lower right corner relative to the start of the active display plane in the unrotated orientation.
15:12	0x0 RO	**RESERVED_1:** Write as zero
11:0	0x0 RW	**PLANE_START_X_POSITION:** These 12 bits specify the horizontal offset in pixels of the beginning of the active display plane relative to the display surface. When performing 180 rotation, this field specifies the horizontal position of the lower right corner relative to the start of the active display plane in the unrotated orientation. When display stride is 16KB and doing Asynch Flips, do not program the offset to give pans of 7680 to 8191 bytes.

4.3.430 DSPCSURFLIVE—Offset 741ACh

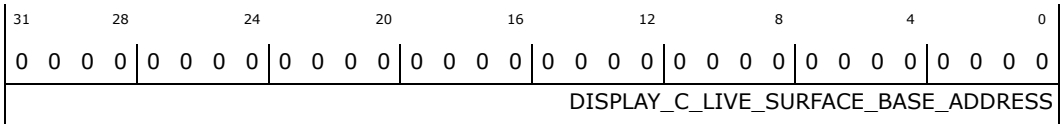
Display C Live Surface Base Address Register

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 741ACh

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:0	0x0 RO	**DISPLAY_C_LIVE_SURFACE_BASE_ADDRESS:** . This gives the live value of the surface base address as being currently used for the plane.

4.3.431 DSPCFLPQSTAT—Offset 74200h

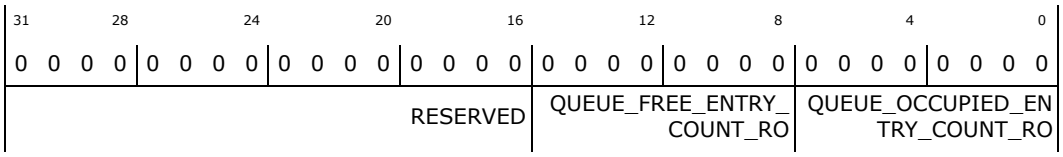
Flip Queue Status Register

Access Method

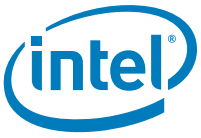
Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: 74200h

Default: 00000000h



Bit Range	Default & Access	Field Name (ID): Description
31:16	0x0 RO	**RESERVED:** Write as zero (RO)
15:8	0x0 RO	**QUEUE_FREE_ENTRY_COUNT_RO:** This value indicates the number of free entries in the queue at the time that the register was read. The total number of entries in the queue is the sum of the occupied entry count and the free entry count.
7:0	0x0 RO	**QUEUE_OCCUPIED_ENTRY_COUNT_RO:** This value indicates the number of occupied entries in the queue at the time that the register was read. The total number of entries in the queue is the sum of the occupied entry count and the free entry count.



4.4 READ Address Map (Read Only)

Table 24. Summary of Display Memory Mapped I/O Registers

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
3BA–3BAh	1	"ST01 (ST01_MDA)—Offset 3BAh" on page 961	00h
3C2–3C2h	1	"ST00—Offset 3C2h" on page 962	00h
3C7–3C7h	1	"DACSTATE—Offset 3C7h" on page 963	00h
3DA–3DAh	1	"ST01 (ST01_CGA)—Offset 3DAh" on page 964	00h

4.4.1 ST01 (ST01_MDA)—Offset 3BAh

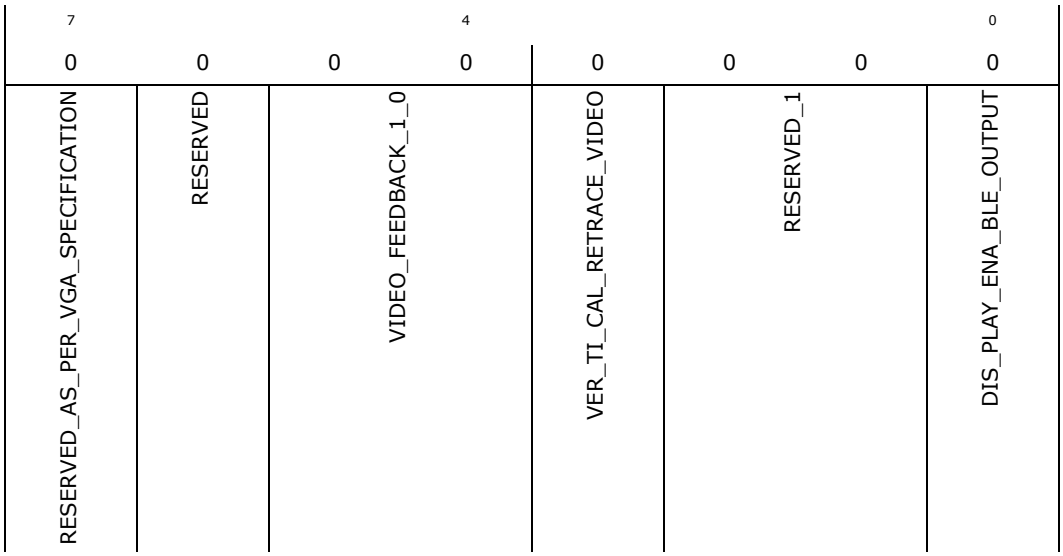
Input Status 1

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3BAh

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
6	0x0 RO	**RESERVED:** Read as 0.
5:4	0x0 RO	**VIDEO_FEEDBACK_1_0:** These are diagnostic video bits that are selected by the Color Plane Enable Register. These bits that are programmable connected to 2 of the 8 color bits sent to the palette. Bits 4 and 5 of the Color Plane Enable Register (AR12) selects which two of the 8 possible color bits become connected to these 2 bits of this register. The current software normally does not use these 2 bits. They exist for EGA compatibility.
3	0x0 RO	**VER_TI_CAL_RETRACE_VIDEO:** 0 = VSYNC inactive (Indicates that a vertical retrace interval is not taking place). 1 = VSYNC active (Indicates that a vertical retrace interval is taking place).
2:1	0x0 RO	**RESERVED_1:** Read as 0s.

Bit Range	Default & Access	Field Name (ID): Description
0	0x0 RO	**DIS_PLAY_ENA_BLE_OUTPUT:** Display Enable is a status bit (bit 0) in Input Status Register 1 that indicates when either a horizontal retrace interval or a vertical retrace interval is taking place. This was used with the IBM* EGA graphics system (and the ones that preceded it, including MDA and CGA). In those cases, it was important to check the status of this bit to ensure that one or the other retrace intervals was taking place before reading from or writing to the frame buffer. In these earlier systems, reading from or writing to frame buffer at times outside the retrace intervals meant that the CRT controller would be denied access to the frame buffer. This resulted in either snow or a flickering display. This bit provides compatibility with software designed for those early graphics controllers. This bit is currently used in DOS applications that access the palette to prevent the sparkle associated with read and write accesses to the palette ram with the same address on the same clock cycle. 0 = Active display data is being sent to the display. Neither a horizontal retrace interval or a vertical retrace interval is currently taking place. 1 = Either a horizontal retrace interval (horizontal blanking) or a vertical retrace interval (vertical blanking) is currently taking place.

4.4.2 ST00—Offset 3C2h

Input Status 0

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3C2h

Default: 00h

7			4				0
0	0	0	0	0	0	0	0
CRT_INTER_RUPT_PENDING	RESERVED		RGB_COMPARATOR_SENSE	RESERVED_1			

Bit Range	Default & Access	Field Name (ID): Description
7	0x0 RO	**CRT_INTER_RUPT_PENDING:** This bit is here for EGA compatibility and will always return zero. Note that the generation of interrupts was originally enabled, through bits [4,5] of the Vertical Retrace End Register (CR11). This ability to generate interrupts at the start of the vertical retrace interval is a feature that is typically unused by DOS software and therefore is only supported through other means for use under a operating system support. 0 = CRT (vertical retrace interval) interrupt is not pending. 1 = CRT (vertical retrace interval) interrupt is pending
6:5	0x0 RO	**RESERVED:** Read as 0s.
4	0x0 RO	**RGB_COMPARATOR_SENSE:** This bit returns the state of the output of the RGB output comparator(s). Video BIOS uses this bit during POST to determine whether the display is connected and if it is a color or monochrome CRT. BIOS blanks the screen or clears the frame buffer to display only black. Next, BIOS outputs a ramp to the D-to-A converters to test for the presence of a color display by determining which code cause the comparator to switch. Finally, if the BIOS does not detect any termination resistors on Red or Blue, it tests for the presence of a display using the Green signal. The result of each such test is read via this bit. 0 = Below threshold 1 = Above threshold
3:0	0x0 RO	**RESERVED_1:** Read as 0s.

4.4.3 DACSTATE—Offset 3C7h

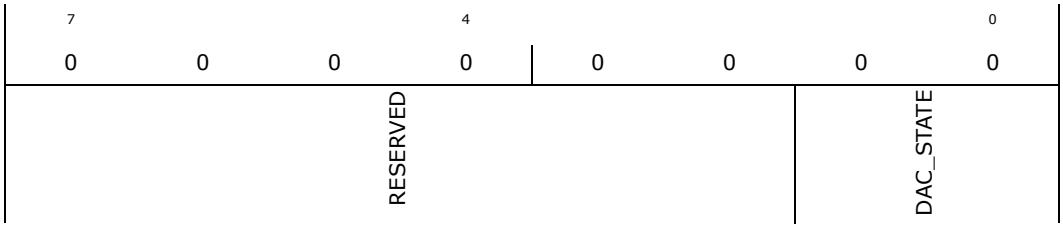
DAC State Register

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3C7h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:2	0x0 RO	**RESERVED:** Read as 0.

Bit Range	Default & Access	Field Name (ID): Description
1:0	0x0 RO	**DAC_STATE:** This field indicates which of the two index registers was most recently written. Bits [1:0] Index Register Indicated 00 Palette Write Index Register at I/O Address 3C7h (default) 01 Reserved 10 Reserved 11 Palette Read Index Register at I/O Address 3C8h

4.4.4 ST01 (ST01_CGA)—Offset 3DAh

Input Status 1

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3DAh

Default: 00h

7			4				0
0	0	0	0	0	0	0	0
RESERVED_AS_PER_VGA_SPECIFICATION	RESERVED	VIDEO_FEEDBACK_1_0		VER_TI_CAL_RETRACE_VIDEO	RESERVED_1		DIS_PLAY_ENA_BLE_OUTPUT

Bit Range	Default & Access	Field Name (ID): Description
6	0x0 RO	**RESERVED:** Read as 0.
5:4	0x0 RO	**VIDEO_FEEDBACK_1_0:** These are diagnostic video bits that are selected by the Color Plane Enable Register. These bits that are programmably connected to 2 of the 8 color bits sent to the palette. Bits 4 and 5 of the Color Plane Enable Register (AR12) selects which two of the 8 possible color bits become connected to these 2 bits of this register. The current software normally does not use these 2 bits. They exist for EGA compatibility.
3	0x0 RO	**VER_TI_CAL_RETRACE_VIDEO:** 0 = VSYNC inactive (Indicates that a vertical retrace interval is not taking place). 1 = VSYNC active (Indicates that a vertical retrace interval is taking place).

Bit Range	Default & Access	Field Name (ID): Description
2:1	0x0 RO	**RESERVED_1:** Read as 0s.
0	0x0 RO	**DIS_PLAY_ENA_BLE_OUTPUT:** Display Enable is a status bit (bit 0) in Input Status Register 1 that indicates when either a horizontal retrace interval or a vertical retrace interval is taking place. This was used with the IBM* EGA graphics system (and the ones that preceded it, including MDA and CGA). In those cases, it was important to check the status of this bit to ensure that one or the other retrace intervals was taking place before reading from or writing to the frame buffer. In these earlier systems, reading from or writing to frame buffer at times outside the retrace intervals meant that the CRT controller would be denied access to the frame buffer. This resulted in either snow or a flickering display. This bit provides compatibility with software designed for those early graphics controllers. This bit is currently used in DOS applications that access the palette to prevent the sparkle associated with read and write accesses to the palette ram with the same address on the same clock cycle.

4.5 WRITE Address Map (Read Only)

Table 25. Summary of Display Memory Mapped I/O Registers

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
3BA–3BAh	1	"FCR (FCR_MDA_Write)—Offset 3BAh" on page 967	00h
3C2–3C2h	1	"MSR (MSR_Write)—Offset 3C2h" on page 967	00h
3C7–3C7h	1	"DACRX—Offset 3C7h" on page 968	00h
3DA–3DAh	1	"FCR (FCR_CGA_Write)—Offset 3DAh" on page 969	00h

4.5.1 FCR (FCR_MDA_Write)—Offset 3BAh

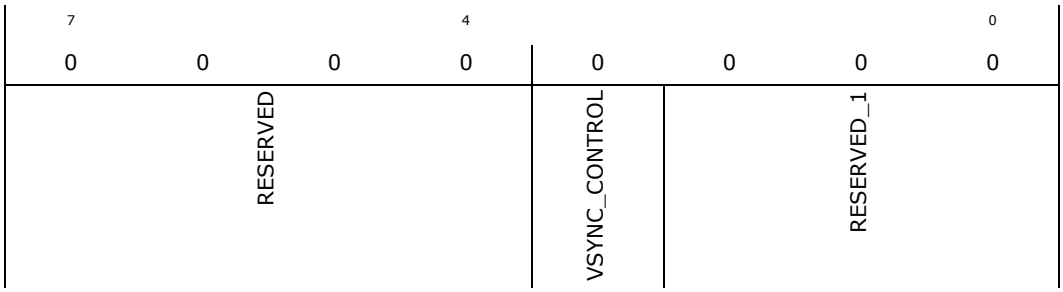
Feature Control

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3BAh

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:4	0x0 RO	**RESERVED:** Read as 0.
3	0x0 RW	**VSYNC_CONTROL:** This bit is provided for compatibility only and has no other function. Reads and writes to this bit have no effect other than to change the value of this bit. The previous definition of this bit selected the output on the VSYNC pin. 0 = Was used to set VSYNC out put on the VSYNC pin (default). 1 = Was used to set the log i cal 'OR' of VSYNC and Display Enable output on the VSYNC pin. This capability was not typically very useful..
2:0	0x0 RO	**RESERVED_1:** Read as 0.

4.5.2 MSR (MSR_Write)—Offset 3C2h

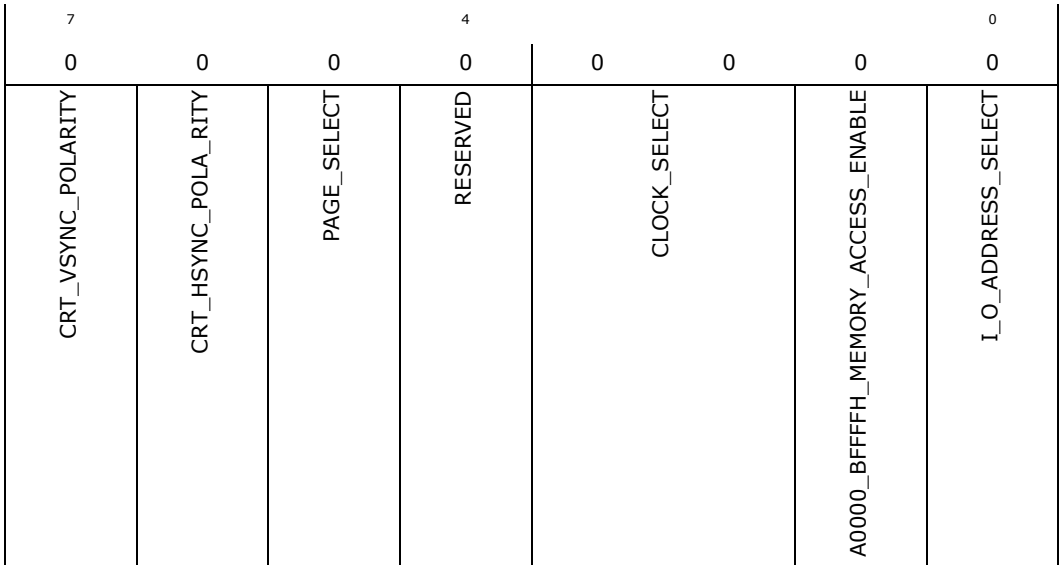
Miscellaneous Output

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3C2h

Default: 00h



7			4				0
0	0	0	0	0	0	0	0
CRT_VSYNC_POLARITY	CRT_HSYNC_POLA_RITY	PAGE_SELECT	RESERVED	CLOCK_SELECT		A0000_BFFFFH_MEMORY_ACCESS_ENABLE	I_O_ADDRESS_SELECT

Bit Range	Default & Access	Field Name (ID): Description
5	0x0 RW	**PAGE_SELECT:** In Odd/Even Memory Map Mode 1 (GR6), this bit selects the upper or lower 64 KB page in dis play memory for CPU access: 0 = Upper page (default) 1 = Lower page. Selects between two 64KB pages of frame buffer memory during standard odd/even modes (modes 0h through 5h). Bit 1 of register GR06 can also program this bit in other modes. Note that this bit is would normally set to 1 by the software.
4	0x0 RO	**RESERVED:** Read as 0.
0	0x0 RW	**I_O_ADDRESS_SELECT:** This bit selects 3Bxh or 3Dxh as the I/O address for the CRT Controller registers, the Feature Control Register (FCR), and Input Status Register 1 (ST01). Presently ignored (whole range is claimed), but will ignore 3Bx for color configuration or 3Dx for monochrome. Note that it is typical in AGP chipsets to shadow this bit and properly steer I/O cycles to the proper bus for operation where a MDA exists on another bus such as ISA. 0 = Select 3Bxh I/O address (MDA emulation) (default). 1 = Select 3Dxh I/O address (CGA emulation).

4.5.3 DACRX—Offset 3C7h

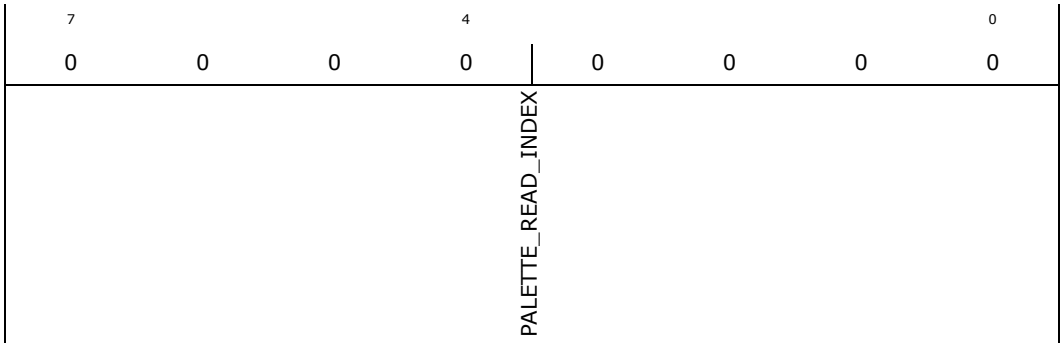
Palette Read Index Register

Access Method

Type: ??? Register
(Size: 8 bits)

Offset: 3C7h

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:0	0x0 WO	**PALETTE_READ_INDEX:** The 8-bit index value programmed into this register chooses which of 256 standard color data positions within the palette are to be made accessible for being read from via the Palette Data Register (DACDATA). The index value held in this register is automatically incremented when all three bytes of the color data position selected by the current index have been read. A write to this register will abort a uncompleted palette write sequence. This register allows access to the palette even when running display modes.

4.5.4 FCR (FCR_CGA_Write)—Offset 3DAh

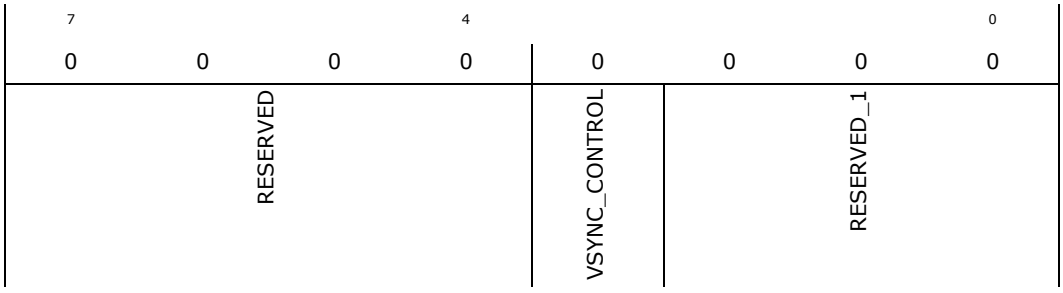
Feature Control

Access Method

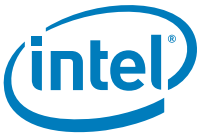
Type: ??? Register
(Size: 8 bits)

Offset: 3DAh

Default: 00h



Bit Range	Default & Access	Field Name (ID): Description
7:4	0x0 RO	**RESERVED:** Read as 0.



Bit Range	Default & Access	Field Name (ID): Description
3	0x0 RW	**VSYNC_CONTROL:** This bit is provided for compatibility only and has no other function. Reads and writes to this bit have no effect other than to change the value of this bit. The previous definition of this bit selected the output on the VSYNC pin. 0 = Was used to set VSYNC out put on the VSYNC pin (default). 1 = Was used to set the log i cal 'OR' of VSYNC and Display Enable output on the VSYNC pin. This capability was not typically very useful..
2:0	0x0 RO	**RESERVED_1:** Read as 0.

5 MIPI*- CSI (Camera Serial Interface) and ISP Registers

5.1 Image Signal Processor PCI Configuration Registers

Table 26. Summary of Image Signal Processor PCI Configuration Registers—0/3/0

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value

5.1.1 iunit_ID_type (ID)—Offset 0h

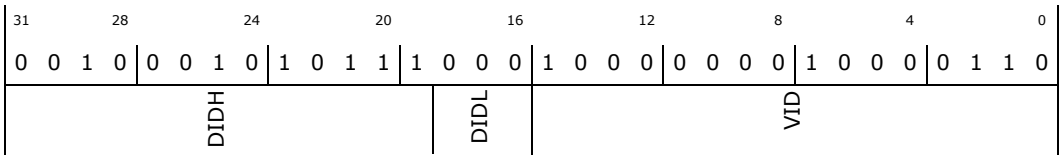
PCI Device and Vendor ID Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 0h

Default: 22B88086h



Bit Range	Default and Access	Field Name (ID): Description
31:19	0x457 RO	**DIDH:** DEVICE_IDENTIFICATION_NUMBER_HIGH: Upper bits of ISP Device ID. Connected to straps at I-unit top level.
18:16	0x0 RO	**DIDL:** DEVICE_IDENTIFICATION_NUMBER_LOW: Lower bits of ISP Device ID. Connected to fuse FB_isp_device_id.
15:0	0x8086 RO	**VID:** VENDOR_IDENTIFICATION_NUMBER: PCI standard identification for Intel.

5.1.2 iunit_PCICMDSTS_type (PCICMDSTS)—Offset 4h

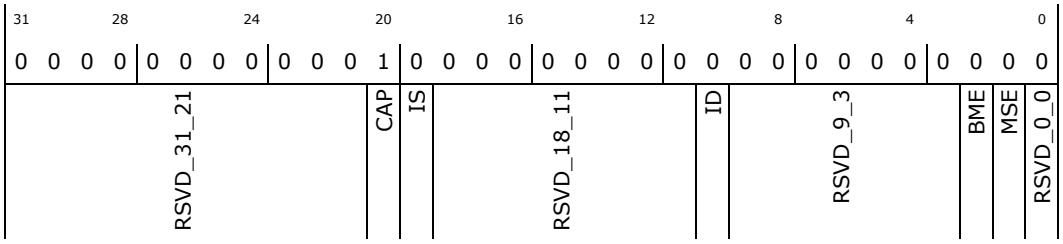
PCI Command and Status Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 4h

Default: 00100000h



Bit Range	Default and Access	Field Name (ID): Description
31:21	0x0 RO	**RSVD_31_21:** Reserved
20	0x1 RO	**CAP:** CAPABILITY_LIST: Indicates that the CAPPOINT register at 34h provides an offset into PCI Configuration Space containing a pointer to the location of the first item in the list.

Bit Range	Default and Access	Field Name (ID): Description
19	0x0 RO	**IS:** INTERRUPT_STATUS: Reflects the state of the interrupt in the camera device. Is set to 1 if IER and IIR are both set. Otherwise is set to 0.
18:11	0x0 RO	**RSVD_18_11:** Reserved
10	0x0 RW	**ID:** INTERRUPT_DISABLE: When 1, blocks the sending of ASSERT_INTA and DEASSERT_INTA messages to the Intel Legacy Block (ILB). The interrupt status is not blocked from being reflected in PCICMDSTS.IS. When 0, permits the sending of ASSERT_INTA and DEASSERT_INTA messages to the ILB.
9:3	0x0 RO	**RSVD_9_3:** Reserved
2	0x0 RW	**BME:** BUS_MASTER_ENABLE: Enables ISP to function as a PCI compliant master. When 0, blocks the sending of MSI interrupts. When 1, permits the sending of MSI interrupts.
1	0x0 RW	**MSE:** MEMORY_SPACE_ENABLE: When set, accesses to this device's memory space is enabled. When 1, the ISP will compare the incoming address on the IOSF bus with ISPMMADR(31:22). If there is a match and if the IOSF command is either a MEMRD or MEMWR, the ISP will select the command and present it on the AHB bus. When 0, the ISP will not claim MEMRD or MEMWR IOSF commands.
0	0x0 RO	**RSVD_0_0:** Reserved

5.1.3 iunit_RIDCC_type (RIDCC)—Offset 8h

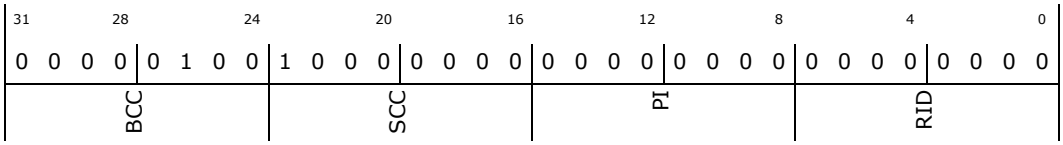
Revision Identification and Class Codes

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 8h

Default: 04800000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x4 RO	**BCC:** BASE_CLASS_CODE: Indicates a multimedia device.
23:16	0x80 RO	**SCC:** SUB_CLASS_CODE: Indicates other multimedia device.
15:8	0x0 RO	**PI:** PROGRAMMING_INTERFACE: Default programming interface.

Bit Range	Default and Access	Field Name (ID): Description
7:0	0x0 RO	**RID:** REVISION_ID: The value in this field reflects the value of strapRID(7:0) (which is an input pin of ISP) and can be changed with each stepping of the silicon.

5.1.4 iunit_HDR_type (HDR)—Offset Ch

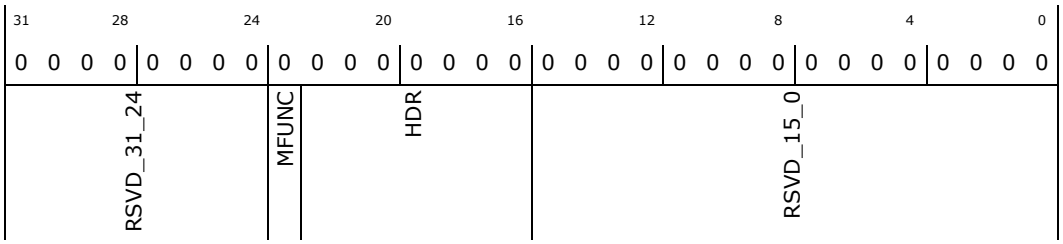
Header Type

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + Ch

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RO	**RSVD_31_24:** Reserved
23	0x0 RO	**MFUNC:** MULTI_FUNCTION_STATUS: I-unit is a single function.
22:16	0x0 RO	**HDR:** HEADER_CODE: Indicates a type 0 header format.
15:0	0x0 RO	**RSVD_15_0:** Reserved

5.1.5 iunit_ISPMMADR_type (ISPMMADR)—Offset 10h

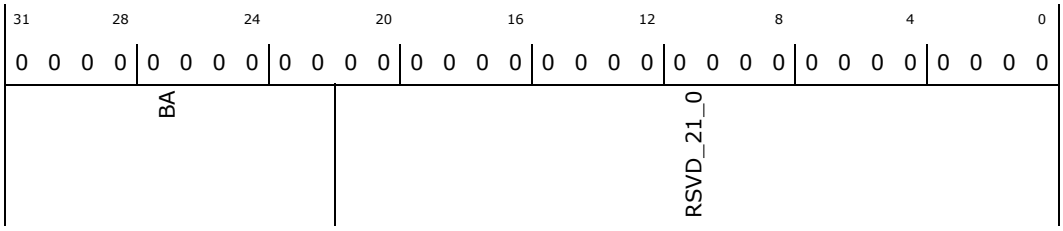
Memory Mapped Address Range. This is the base address for all memory mapped registers.

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:22	0x0 RW	**BA:** BASE_ADDRESS: Set by the OS, these bits correspond to address signals (31:22). The ISP will compare the IOSF address (31:22) with ISPMMADR(31:22). If there is a match, and PCICMDSTS(1) = MSE = 1 and the IOSF command is either a MEMRD or MEMWR, the ISP will select the command and present it on the AHB bus to the vendor IP.
21:0	0x0 RO	**RSVD_21_0:** Reserved

5.1.6 iunit_SSID_type (SSID)—Offset 2Ch

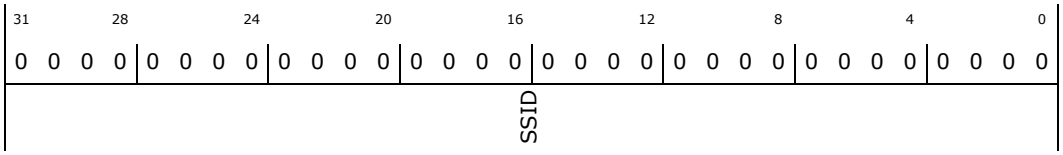
Subsystem Identifiers

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 2Ch

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**SSID:** SUBSYSTEM_IDENTIFIERS: The value in this field is a copy of the SSID register programmed by the graphics device driver or BIOS in the Device 0/2/0 PCI header. To change the subsystem ID, write to Device 0/2/0 SSID instead of to this SSID.

5.1.7 iunit_CAPPOINT_type (CAPPOINT)—Offset 34h

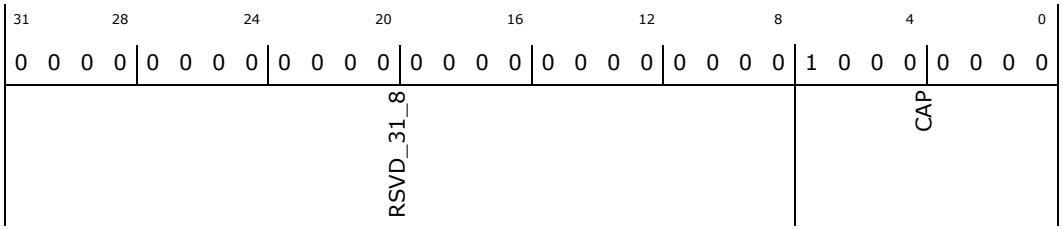
Capabilities Pointer

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 34h

Default: 00000080h



Bit Range	Default and Access	Field Name (ID): Description
31:8	0x0 RO	**RSVD_31_8:** Reserved
7:0	0x80 RO	**CAP:** CAPABILITIES_POINTER: The first item in the capabilities list is at address 80h.

5.1.8 iunit_INTR_type (INTR)—Offset 3Ch

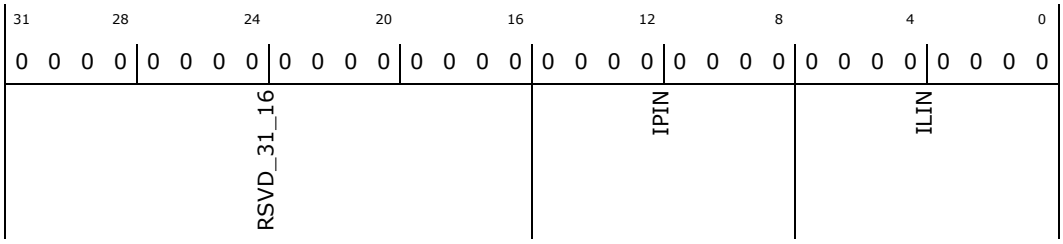
Interrupt—This register is programmed by SBIOS.

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 3Ch

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RO	**RSVD_31_16:** Reserved
15:8	0x0 RO	**IPIN:** INTERRUPT_PIN: PCI Device 0/3/0 (I-unit) is a single function device. If INTx is used, the PCI spec requires that it use INTA#. If INTx is used (FB_intx_supported fuse is 1), then this field is hard coded to 01h. If INTx is not used (FB_intx_supported fuse is 0), this field is hard coded to 00h.
7:0	0x0 RW	**ILIN:** INTERRUPT_LINE: BIOS written value to communicate interrupt line routing information to the ISP device driver.

5.1.9 iunit_PMCAP_type (PMCAP)—Offset 80h

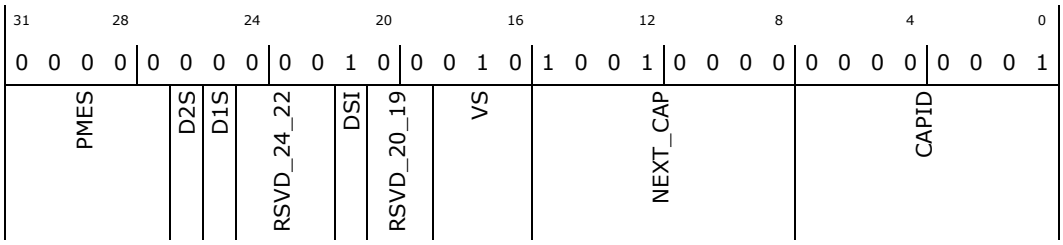
Power Management Capabilities

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 80h

Default: 00229001h



Bit Range	Default and Access	Field Name (ID): Description
31:27	0x0 RO	**PMES:** PME_SUPPORT: The camera controller does not generate PME#.
26	0x0 RO	**D2S:** D2_SUPPORT: The D2 power management state is not supported.

Bit Range	Default and Access	Field Name (ID): Description
25	0x0 RO	**D1S:** D1_SUPPORT: The D1 power management state is not supported.
24:22	0x0 RO	**RSVD_24_22:** Reserved
21	0x1 RO	**DSI:** DEVICE_SPECIFIC_INITIALIZATION: Hardwired to 1 to indicate that special initialization of the camera controller is required before generic class device driver is to use it.
20:19	0x0 RO	**RSVD_20_19:** Reserved
18:16	0x2 RO	**VS:** VERSION: Indicates compliance with revision 1.1 of the PCI Power Management Specification.
15:8	0x90 RO	**NEXT_CAP:** POINTER_TO_NEXT_CAPABILITY: Indicates the next item in the capabilities list.
7:0	0x1 RO	**CAPID:** CAPABILITIES: SIG defines this ID is 01h for power management.

5.1.10 iunit_PMCS_type (PMCS)—Offset 84h

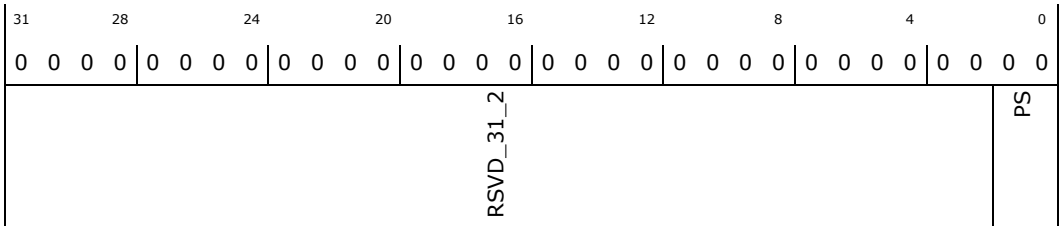
Power Management Control/Status.

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 84h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RO	**RSVD_31_2:** Reserved
1:0	0x0 RW	**PS:** POWER_STATE: Power management is implemented by writing to control registers in the P-unit. This field may be programmed by the software driver, but no action is taken based on writing to this field.

5.1.11 iunit_MSI_CAPID_type (MSI_CAPID)—Offset 90h

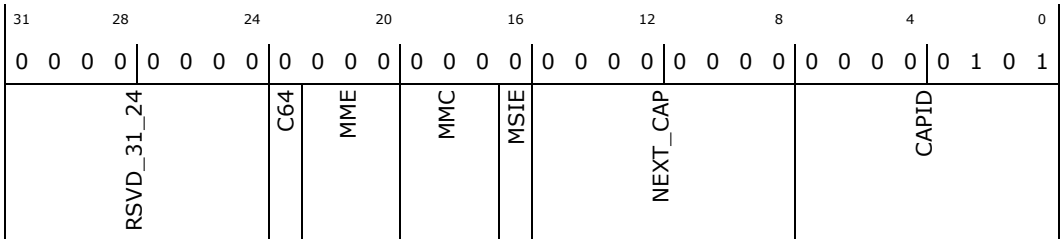
Message Signaled Interrupts Capability ID and Control Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 90h

Default: 00000005h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RO	**RSVD_31_24:** Reserved
23	0x0 RO	**C64:** 64_BIT_ADDRESS_CAPABLE: 32-bit capable only.
22:20	0x0 RW	**MME:** MULTIPLE_MESSAGE_ENABLE: This field is RW for software compatibility, but only a single message is ever generated.
19:17	0x0 RO	**MMC:** MULTIPLE_MESSAGE_CAPABLE: This device is only single message capable.
16	0x0 RW	**MSIE:** MSI_ENABLE: If set, MSI is enabled. PCICMDSTS.BME must be set for an MSI to be generated.When 0, blocks the sending of a MSI interrupt. The interrupt status is not blocked from being reflected in the PCICMDSTS.IS bit. When 1, permits sending of a MSI interrupt.
15:8	0x0 RO	**NEXT_CAP:** POINTER_TO_NEXT_CAPABILITY: Indicates this is the last item in the list.
7:0	0x5 RO	**CAPID:** CAPABILITY_ID: Indicates an MSI capability.

5.1.12 iunit_MSI_ADDRESS_type (MSI_ADDRESS)—Offset 94h

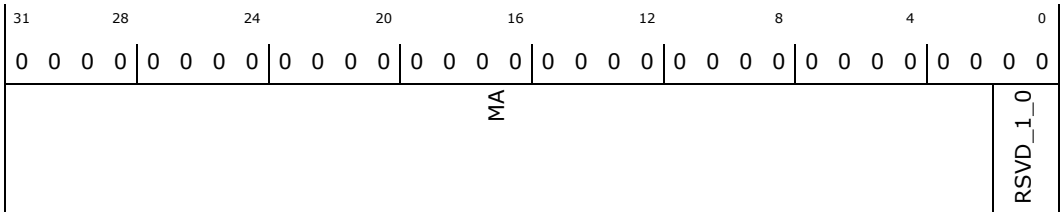
MSI Message Address

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 94h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**MA:** MSI_ADDRESS: System specified message address, always DW aligned. When the ISP issues an MSI interrupt as a MEMWR on the IOSF, the memory address used is 12xFEE, MSI_ADDRESS[19:0].
1:0	0x0 RO	**RSVD_1_0:** Reserved

5.1.13 iunit_MSI_DATA_type (MSI_DATA)—Offset 98h

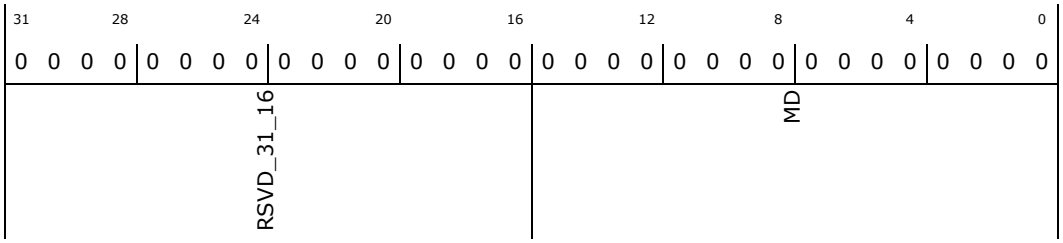
MSI Message Data

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 98h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RO	**RSVD_31_16:** Reserved
15:0	0x0 RW	**MD:** MSI_DATA: This 16-bit field is programmed by system software and is driven onto the lower word of data during the data phase of the MSI write transaction. When the ISP issues an MSI interrupt as a MEMWR on the IOSF, the write data corresponds to the value of this field.

5.1.14 iunit_INTERRUPT_CONTROL_type (INTERRUPT_CONTROL)—Offset 9Ch

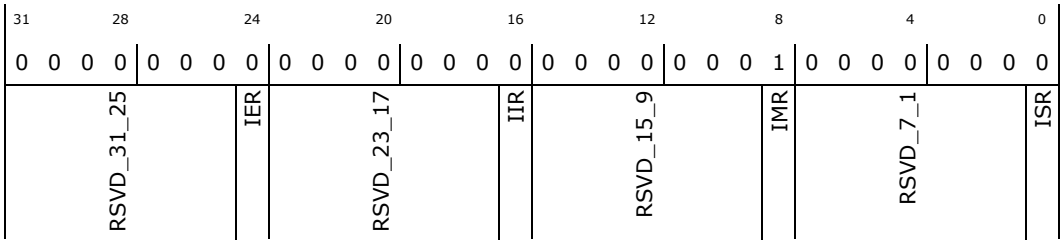
INTERRUPT_CONTROL

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + 9Ch

Default: 00000100h



Bit Range	Default and Access	Field Name (ID): Description
31:25	0x0 RO	**RSVD_31_25:** Reserved
24	0x0 RW	**IER:** IER: This is an enable bit that allows the sending of an interrupt to the CPU using either MSI or INTR mechanisms. The interrupt is sent immediately to the CPU. The firmware running on the ISP guarantees ordering by reading the last data write from memory before raising the interrupt. 1 = If MSI_ENABLE is set, then an MSI is sent to the CPU when the IIR bit is set, or if the IIR bit remains set after software writes to this register. If INTERRUPT_DISABLE is not set, then an ASSERT_INTA message is sent to the Intel Legacy Block (ILB) when the IIR bit is set by hardware, or if the IIR bit remains set after software writes to this register. If software clears the IIR bit, and INTERRUPT_DISABLE is not set then a DEASSERT_INTA message is sent to the ILB. 0 = Do not generate an MSI even if the MSI_ENABLE bit is set. Do not send ASSERT_INTA or DEASSERT_INTA messages to the ILB even if the INTERRUPT_DISABLE bit is not set.
23:17	0x0 RO	**RSVD_23_17:** Reserved
16	0x0 RW/1C	**IIR:** IIR: This is the persistent value of the interrupt bit. It is set by hardware, and cleared by software. Software must write a 1 to clear this bit. Writing a 0 is a NOP. If both software and hardware attempt to write to this field in the same clock cycle, hardware wins. 1 = An interrupt was received from the vendor IP when the IMR bit was not set, and software has not yet cleared it. 0 = There is no pending interrupt.
15:9	0x0 RO	**RSVD_15_9:** Reserved
8	0x1 RW	**IMR:** IMR: Interrupt Mask bit. 1 = IIR bit will not be set when the ISR bit is set. 0 = IIR bit will be set when the ISR bit is set.
7:1	0x0 RO	**RSVD_7_1:** Reserved
0	0x0 RO	**ISR:** ISR: Reflects the state of the interrupt line from the vendor IP, after it is synchronized to the czclk domain.

5.1.15 iunit_PERF0_type (PERF0)—Offset B0h

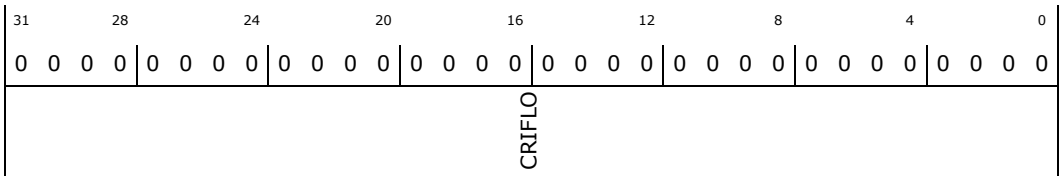
Performance

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + B0h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW/SE	**CRIFLO:** The I-unit has four performance counters. When counting is enabled, the 11-bit reads_in_flight counter keeps track of the number of outstanding reads that have been requested, but not yet returned back at the OCP master interface. The 11-bit max_reads_in_flight counter keeps track of the maximum number of reads in flight in any given clock cycle. Each clock cycle, if there are any reads in flight, the reads_in_fight counter is added to a 64-bit cumulative_reads_in_flight counter, and the 48-bit active_cycles counter is incremented by 1. Reading this register returns bits 31:0 of the cumulative_reads_in_flight counter. This counter should be read only after counting is disabled. Reading while the counters are enabled will return undefined values. All four counters are disabled at reset. Writing (any value) to this register, will enable all four counters.

5.1.16 iunit_PERF1_type (PERF1)—Offset B4h

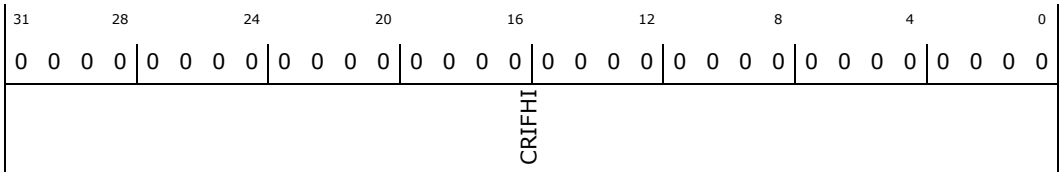
Performance

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + B4h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW/SE	**CRIFHI:** I-unit has four performance counters. When counting is enabled, the 11-bit reads_in_flight counter keeps track of the number of outstanding reads that have been requested, but not yet returned back at the OCP master interface. The 11-bit max_reads_in_flight counter keeps track of the maximum number of reads in flight in any given clock cycle. Each clock cycle, if there are any reads in flight, the reads_in_fight counter is added to a 64-bit cumulative_reads_in_flight counter, and the 48-bit active_cycles counter is incremented by 1. Reading this register returns bits 63:32 of the cumulative_reads_in_flight counter. This counter should be read only after counting is disabled. Reading while the counters are enabled will return undefined values. All four counters are disabled at reset. Writing (any value) to this register, will disable all four counters.

5.1.17 iunit_PERF2_type (PERF2)—Offset B8h

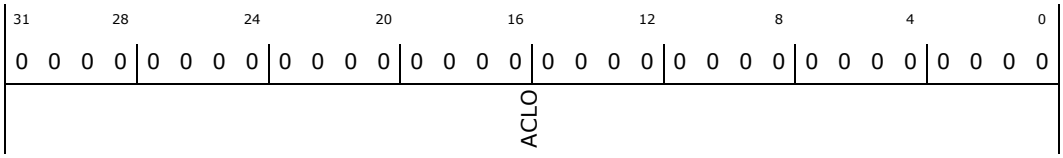
Performance

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + B8h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW/SE	**ACLO:** I-unit has four performance counters. When counting is enabled, the 11-bit reads_in_flight counter keeps track of the number of outstanding reads that have been requested, but not yet returned back at the OCP master interface. The 11-bit max_reads_in_flight counter keeps track of the maximum number of reads in flight in any given clock cycle. Each clock cycle, if there are any reads in flight, the reads_in_fight counter is added to a 64-bit cumulative_reads_in_flight counter, and the 48-bit active_cycles counter is incremented by 1. Reading this register returns bits 31:0 of the active_cycles counter. This counter should be read only after counting is disabled. Reading while the counters are enabled will return undefined values. All four counters are disabled at reset. Writing (any value) to this register, will clear all four counters. The counters should only be cleared after they are disabled.

5.1.18 iunit_PERF3_type (PERF3)—Offset BCh

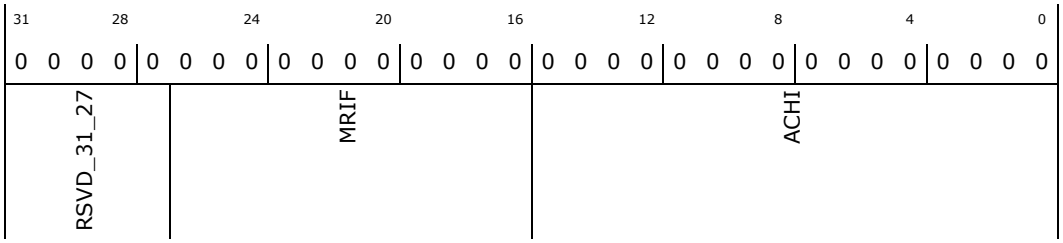
Performance

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + BCh

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:27	0x0 RO	**RSVD_31_27:** Reserved
26:16	0x0 RW/SE	**MRIF:** I-unit has four performance counters. When counting is enabled, the 11-bit reads_in_flight counter keeps track of the number of outstanding reads that have been requested, but not yet returned back at the OCP master interface. The 11-bit max_reads_in_flight counter keeps track of the maximum number of reads in flight in any given clock cycle. Each clock cycle, if there are any reads in flight, the reads_in_fight counter is added to a 64-bit cumulative_reads_in_flight counter, and the 48-bit active_cycles counter is incremented by 1. Reading this register returns bits 11:0 of the max_reads_in_flight counter. This counter should be read only after counting is disabled. Reading while the counters are enabled will return undefined values. All four counters are disabled at reset. Writing (any value) to this register, will clear the max_reads_in_flight counters only. The counters should only be cleared after they are disabled.
15:0	0x0 RW/SE	**ACHI:** I-unit has four performance counters. When counting is enabled, the 11-bit reads_in_flight counter keeps track of the number of outstanding reads that have been requested, but not yet returned back at the OCP master interface. The 11-bit max_reads_in_flight counter keeps track of the maximum number of reads in flight in any given clock cycle. Each clock cycle, if there are any reads in flight, the reads_in_fight counter is added to a 64-bit cumulative_reads_in_flight counter, and the 48-bit active_cycles counter is incremented by 1. Reading this register returns bits 47:32 of the active_cycles counter. This counter should be read only after counting is disabled. Reading while the counters are enabled will return undefined values. All four counters are disabled at reset. Writing (any value) to this register, will clear the max_reads_in_flight counters only. The counters should only be cleared after they are disabled.

5.1.19 iunit_MISR0_type (MISR0)—Offset C0h

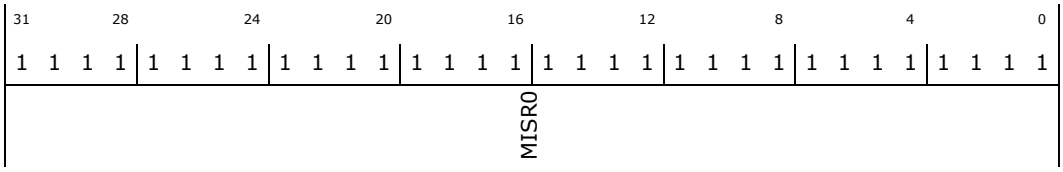
OCP Master Write Data

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + C0h

Default: FFFFFFFFh



Bit Range	Default and Access	Field Name (ID): Description
31:0	0xffffffff RW/C	**MISR0:** MISR0: Write to this register address clears this MISR. This is a 8:1 compression MISR capturing the 256-bit write data on the OCP interface between ISP_CSS and I-unit wrapper.

5.1.20 iunit_MISR1_type (MISR1)—Offset C4h

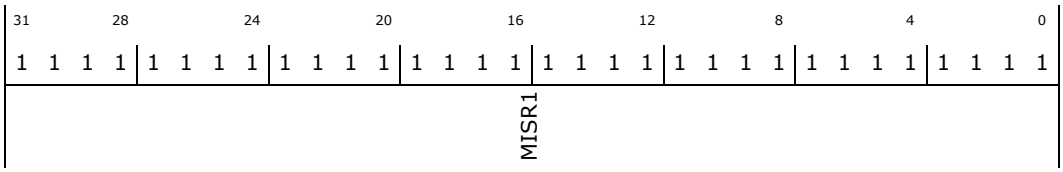
OCP Master Read Data

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + C4h

Default: FFFFFFFFh



Bit Range	Default and Access	Field Name (ID): Description
31:0	0xffffffff RW/C	**MISR1:** MISR1: Write to this register address clears this MISR. This is a 8:1 compression MISR capturing the 256-bit read return data on the OCP interface between ISP_CSS and I-unit wrapper.

5.1.21 iunit_MISR2_type (MISR2)—Offset C8h

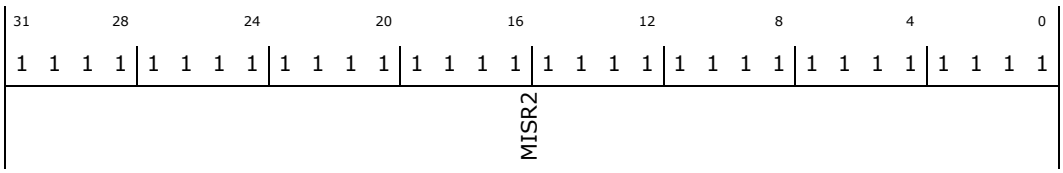
OCP Master Address and Control

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + C8h

Default: FFFFFFFFh



Bit Range	Default and Access	Field Name (ID): Description
31:0	0xffffffff RW/C	**MISR2:** MISR2: Write to this register address clears this MISR. This is a 4:1 compression MISR capturing the control signals on the OCP Master port in the I-unit.

5.1.22 iunit_MISR3_type (MISR3)—Offset CCh

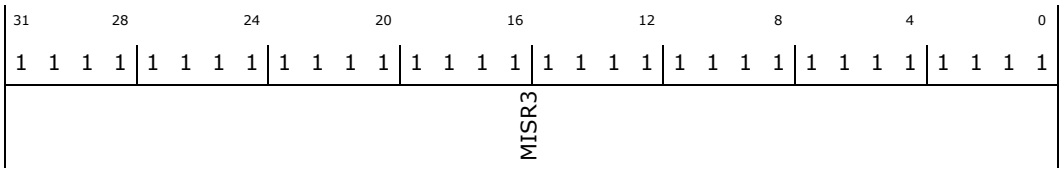
Scalar Processor Output

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + CCh

Default: FFFFFFFFh



Bit Range	Default and Access	Field Name (ID): Description
31:0	0xffffffff RW/C	**MISR3:** MISR3: Write to this register address clears this MISR. This is a 4:1 compression MISR capturing the output signals of the Scalar Processor.

5.1.23 iunit_MANUFACTURING_ID_type (MANUFACTURING_ID)—Offset D0h

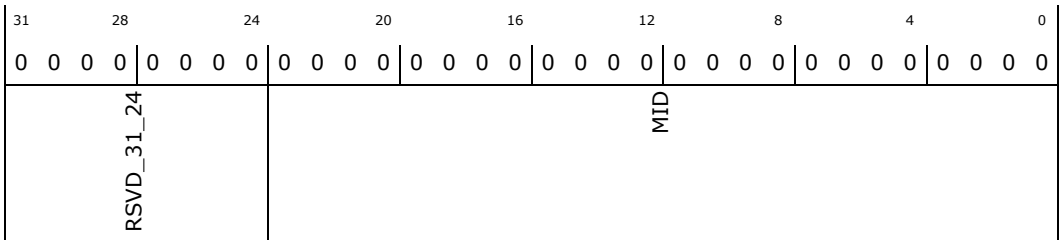
Manufacturing ID

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + D0h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RO	**RSVD_31_24:** Reserved
23:0	0x0 RO	**MID:** MANUFACTURING_ID: Hardwired to strapMANID (23:0).

5.1.24 iunit_IUNIT_ACCESS_CTRL_VIOL_type (IUNIT_ACCESS_CTRL_VIOL)—Offset D4h

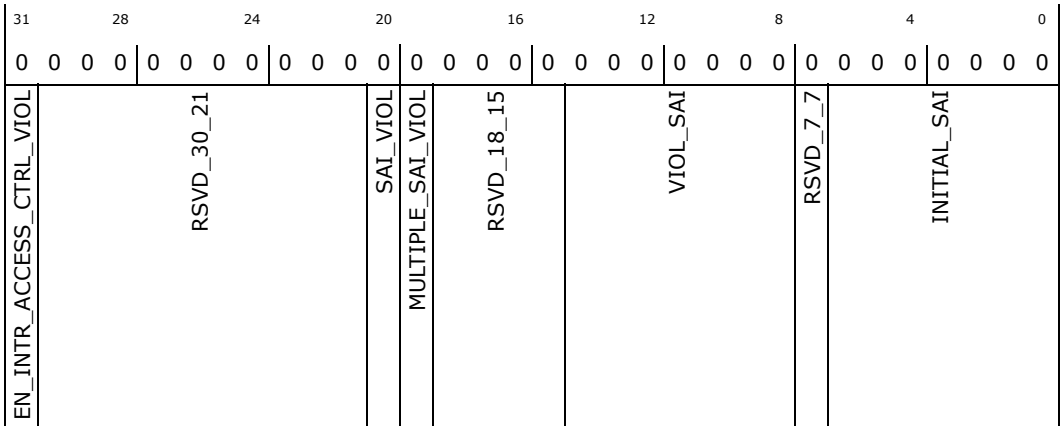
I-unit Access Control Violation Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + D4h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31	0x0 RW	**EN_INTR_ACCESS_CTRL_VIOL:** Enable Interrupt on access control violation: When set, the I-unit will latch violation information into this register and send an interrupt request (opcode 0XEE) and (port 0x04) to the P-unit.
30:21	0x0 RO	**RSVD_30_21:** Reserved
20	0x0 RW	**SAI_VIOL:** SAI_VIOL: If set, the I-unit has detected an SAI violation and has captured the status in this register. This bit must be cleared by software in order for I-unit to capture the next violation.
19	0x0 RW	**MULTIPLE_SAI_VIOL:** If set, more than one SAI violation has been detected in the I-unit. Status for the 1st violation has been captured in this register. It is recommend that software clear this bit whenever it clears bit[20] of this register.

Bit Range	Default and Access	Field Name (ID): Description
18:15	0x0 RO	**RSVD_18_15:** Reserved
14:8	0x0 RW	**VIOL_SAI:** VIOL_SAI: SAI bits that triggered the violation: This 7-bit value indicates the SAI of the subsequent transaction which caused the violation.
7	0x0 RO	**RSVD_7_7:** Reserved
6:0	0x0 RW	**INITIAL_SAI:** INITIAL_SAI: This 7-bit value indicates the SAI of the initial transaction for SAI mismatch error codes.

5.1.25 iunit_IUNIT_DEADLINE_STATUS_type (IUNIT_DEADLINE_STATUS)—Offset D8h

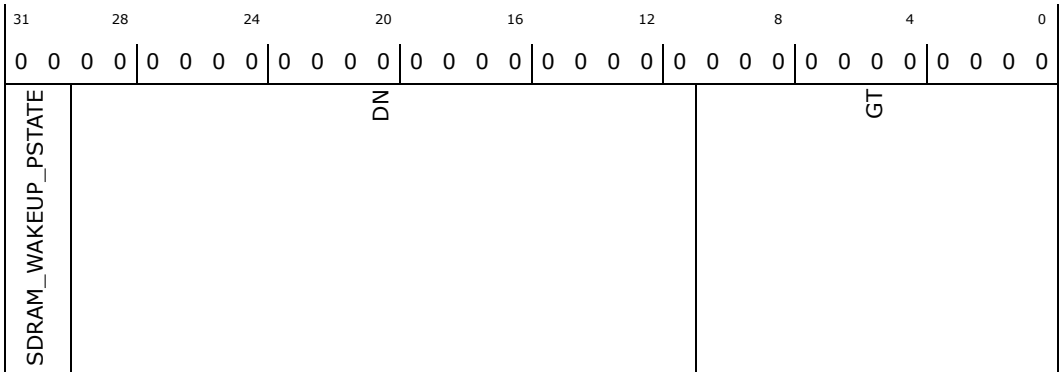
I-unit Deadline Status Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + D8h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:30	0x0 RO	**SDRAM_WAKEUP_PSTATE:** SDRAM_WAKEUP_PSTATE: State of the SDRAM_WAKEUP state machine. 00b = State machine is idle; 01b = sdram_wakeup seen, waiting for all memory transactions in flight to complete; 10b = All memory transactions are completed, waiting for acknowledgement from czclk domain before returning to idle state;
29:11	0x0 RO	**DN:** DN: Computed deadline value to be send with the next request on IB PFI bus. This is the internal deadline value. The actual deadline that is sent on the IB PFI bus is the maximum of GT+MDD or DN.
10:0	0x0 RO	**GT:** GT: Current value of Global Timer

5.1.26 iunit_IUNIT_AFE_HS_CONTROL_type (IUNIT_AFE_HS_CONTROL)—Offset DCh

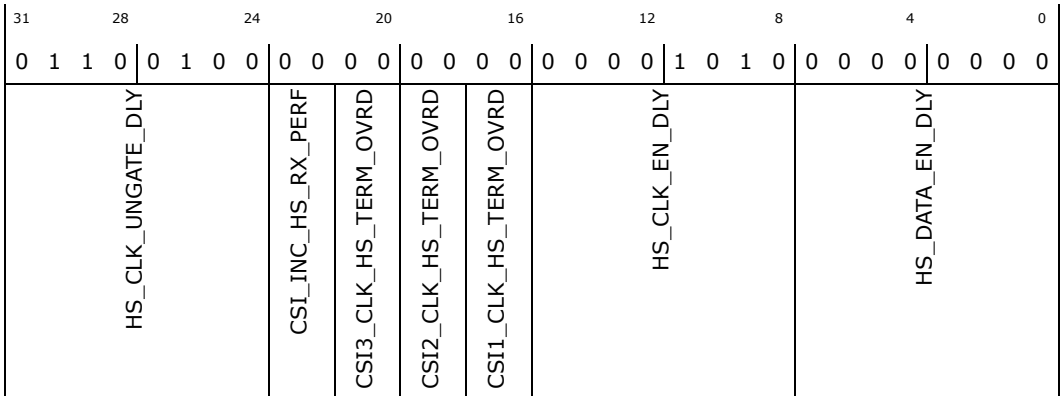
High-speed Termination Control MIPI*-CSI DPHY

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + DCh

Default: 64000A00h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x64 RW	**HS_CLK_UNGATE_DLY:** HS_CLK_UNGATE_DLY: Delay between the assertion of HS enable and the ungating of the HS clocks going to the DPHY logic for all clock lanes. HS clocks are gated by default and are ungated after Tclk-settle time. The range of this field is 0–510 nanoseconds in increments of 2 nanoseconds, with reset value 0x64 indicating 200 nanoseconds. **Note**: Intel uses the czclk to increment the counter, hence the actual delay can be as much as 10 nanoseconds larger than the programmed value.
23:22	0x0 RW	**CSI_INC_HS_RX_PERF:** INC_HS_RX_PERF: Config bits to increase the High-speed Receiver performance; 00 = POR (default), 01 = +10% bias current (Stage 1 adder), 10 = TBD, 11 = TBD
21:20	0x0 RW	**CSI3_CLK_HS_TERM_OVRD:** CSI3_CLK_HS_TERM_OVRD: Override for HS termination enable for CSI3 clock lane. 00b = Use the termination enable output from the DPHY IP and gate XOR clocks in high speed mode; 01b = Keep HS termination (and HS enable) always-on; 10b = Generate HS termination by sampling the CP/CN lines using coreclk and gate XOR clocks in high speed mode; 11b = Use the termination enable output from the DPHY IP;
19:18	0x0 RW	**CSI2_CLK_HS_TERM_OVRD:** CSI2_CLK_HS_TERM_OVRD: Override for HS termination enable for CSI2 clock lane. 00b = Use the termination enable output from the DPHY IP and gate XOR clocks in high speed mode; 01b = Keep HS termination (and HS enable) always-on; 10b = Generate HS termination by sampling the CP/CN lines using coreclk and gate XOR clocks in high speed mode; 11b = Use the termination enable output from the DPHY IP;

Bit Range	Default and Access	Field Name (ID): Description
17:16	0x0 RW	**CSI1_CLK_HS_TERM_OVRD:** CSI1_CLK_HS_TERM_OVRD: Override for HS termination enable for CSI1 clock lane. 00b = Use the termination enable output from the DPHY IP and gate XOR clocks in high speed mode; 01b = Keep HS termination (and HS enable) always-on; 10b = Generate HS termination by sampling the CP/CN lines using coreclk and gate XOR clocks in high speed mode; 11b = Use the termination enable output from the DPHY IP;
15:8	0xa RW	**HS_CLK_EN_DLY:** HS_CLK_EN_DLY: Delay between the assertion of HS termination enable and the assertion of HS enable for all clock lanes. The range of this field is 0 nanoseconds to 510 nanoseconds in increments of 2 nanoseconds, with reset value 0x0A indicating 20 nanoseconds. **Note**: that we use czclk to increment the counter, hence the actual delay can be as much as 10 nanoseconds larger than the programmed value.
7:0	0x0 RW	**HS_DATA_EN_DLY:** HS_DATA_EN_DLY: Delay between the assertion of HS termination enable and the assertion of HS enable for all data lanes. The range of this field is 0 nanoseconds to 510 nanoseconds in increments of 2 nanoseconds, with reset value 0x0 indicating 0 nanoseconds. **Note**: Use czclk to increment the counter, hence the actual delay can be as much as 10 nanoseconds larger than the programmed value.

5.1.27 iunit_IUNIT_AFE_RCOMP_CONTROL_type (IUNIT_AFE_RCOMP_CONTROL)—Offset E0h

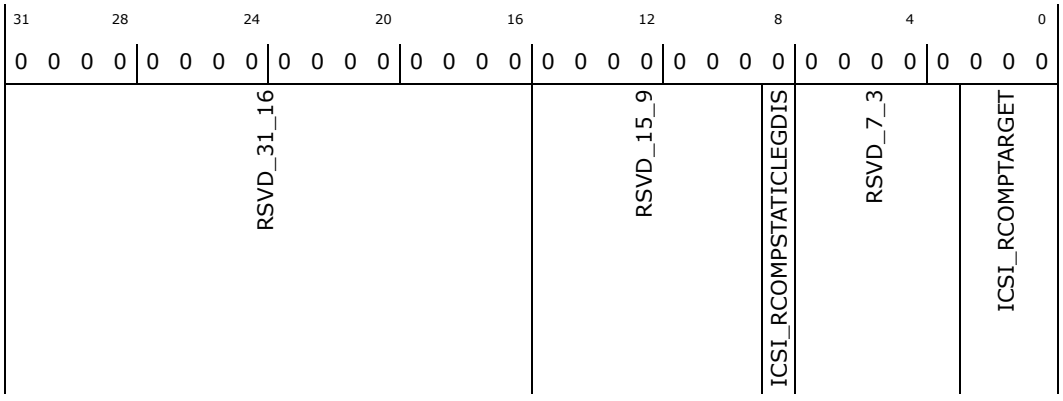
AFE RCOMP control

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + E0h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RO	**RSVD_31_16:** Reserved
15:9	0x0 RW	**RSVD_15_9:** Reserved
8	0x0 RW	**ICSI_RCOMPSTATICLEGDIS:** ICSI_RCOMPSTATICLEGDIS: Disable RCOMP static leg in AFE
7:3	0x0 RW	**RSVD_7_3:** Reserved
2:0	0x0 RW	**ICSI_RCOMPTARGET:** ICSI_RCOMPTARGET: RCOMP target level range is 90 Ohms or 100 Ohms differential impedance. 000b = 50 Ohms; 001b = 45 Ohms; other values = reserved

5.1.28 iunit_IUNIT_CSI_CONTROL_type (IUNIT_CSI_CONTROL)—Offset E8h

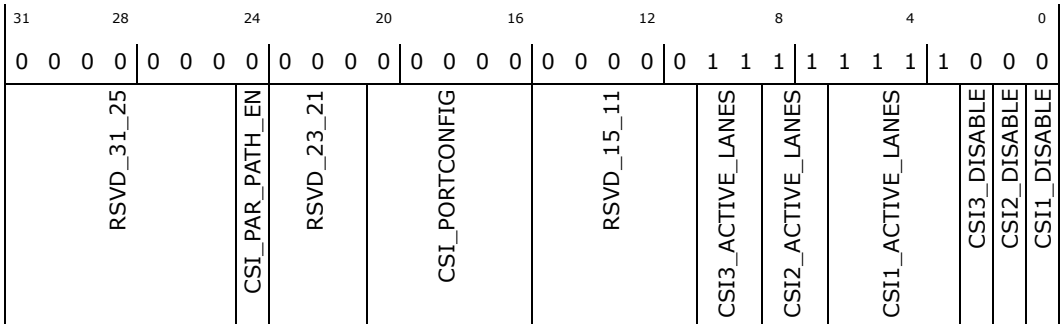
Control Register for MIPI*-CSI

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + E8h

Default: 000007F8h



Bit Range	Default and Access	Field Name (ID): Description
31:25	0x0 RW	**RSVD_31_25:** Reserved
24	0x0 RW	**CSI_PAR_PATH_EN:** PAR_PATH_EN: Selection between Arasan DPHY and VIED DPHY; 0b = Arasan DPHY supporting up to 1.0Gbps (default), 1b = VIED DPHY supporting up to 1.5Gbps
23:21	0x0 RW	**RSVD_23_21:** Reserved
20:16	0x0 RW	**CSI_PORTCONFIG:** CSI_PORTCONFIG: Used to enable the CSI data lanes to CSI ports if FB_csi_portconfig_override fuse is set. This field is ignored if FB_csi_portconfig_override fuse is clear.

Bit Range	Default and Access	Field Name (ID): Description
15:11	0x0 RW	**RSVD_15_11:** Reserved
10:9	0x3 RW	**CSI3_ACTIVE_LANES:** Used to determine which of the lanes that are enabled by the FB_csi_portconfig fuses or the CSI_PORTCONFIG field, are currently being used on the MIPI*-CSI-3 interface. 1=active, 0=inactive.
8:7	0x3 RW	**CSI2_ACTIVE_LANES:** Used to determine which of the lanes that are enabled by the FB_csi_portconfig fuses or the CSI_PORTCONFIG field, are currently being used on the MIPI*-CSI-2 interface. 1=active, 0=inactive.
6:3	0xf RW	**CSI1_ACTIVE_LANES:** Used to determine which of the lanes that are enabled by the FB_csi_portconfig fuses or the CSI_PORTCONFIG field, are currently being used on the MIPI*-CSI-1 interface. 1=active, 0=inactive.
2	0x0 RW	**CSI3_DISABLE:** 1 = Disable MIPI*-CSI-3 interface. 0 = Enable MIPI*-CSI-3 interface if FB_csi_portdisable[2] fuse is cleared
1	0x0 RW	**CSI2_DISABLE:** 1 = Disable MIPI*-CSI-2 interface. 0 = Enable MIPI*-CSI-2 interface if FB_csi_portdisable[1] fuse is cleared
0	0x0 RW	**CSI1_DISABLE:** 1 = Disable MIPI*-CSI-1 interface. 0 = Enable MIPI*-CSI-1 interface if FB_csi_portdisable[0] fuse is cleared

5.1.29 iunit_IUNIT_DEADLINE_CONTROL_type (IUNIT_DEADLINE_CONTROL)—Offset ECh

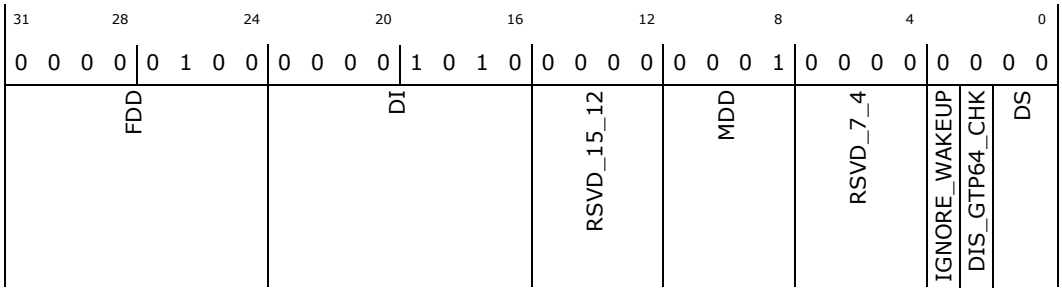
I-unit Deadline Control Register

Access Method

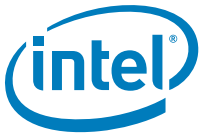
Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + ECh

Default: 040A0100h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x4 RW	**FDD:** FIRST_DEADLINE_DELAY: Delay between the rising edge of WAKEUP signal and the fake deadline that will be specified for the first request of that line. Unit in 250 nanoseconds. Reset value of 8'h04 indicates FDD = 1 µsec.



Bit Range	Default and Access	Field Name (ID): Description
23:16	0xa RW	**DI:** DEADLINE_INCREMENT: Difference in deadline times between adjacent requests. If the current request is for 32B, the next deadline will be DI more than the current deadline. If the current request is for 64B, the next deadline will be 2*DI more than the current deadline. Unit in 1/1024 µsec. Reset value of 8'h0A indicates DI = 9.765625 nanoseconds.
15:12	0x0 RW	**RSVD_15_12:** Reserved
11:8	0x1 RW	**MDD:** MINIMUM_DEADLINE_DELAY: Minimum separation between current Global Timer value and the deadline specified with any request on the PFI interface. Unit is 250 nanoseconds. Reset value of 4'h1 indicates MDD = 250 nanoseconds.
7:4	0x0 RW	**RSVD_7_4:** Reserved
3	0x0 RW	**IGNORE_WAKEUP:** If clear, then after each rising edge of sdram_wakeup, the OCP master interface is stalled until all reads in flight and all FIFOs are empty and then the next deadline is set to GT + FDD. If set, the sdram_wakeup signal from ISP_CSS is ignored.
2	0x0 RW	**DIS_GTP64_CHK:** If clear, then the PFI interface is stalled whenever the next deadline value exceeds GT + 64 µsec. This check is a safety measure to make sure that deadline does not drift too far into the future. If set, this check is not performed.
1:0	0x0 RW	**DS:** DEADLINE_SCHEME: 11b = Reserved; 10b = Reserved; 01b = When WAKEUP is asserted, FDD is added to the current global timer to compute DN. With each request, the deadline sent to System Agent is either DN, or the sum of the global timer and MDD, whichever is larger. After each request is sent, DN is computed by adding DI for each 32Byte request sent to either DN or the sum of the global timer and MDD, whichever is larger. Each clock cycle, DN is checked to make sure it is greater than the current global timer, else it is set to the global timer.; 00b = When WAKEUP is asserted, FDD is added to the current global timer to compute DN. With each request, the deadline sent to System Agent is either DN, or the sum of the global timer and MDD, whichever is larger. After each request is sent, DN is computed by adding DI for each 32Byte request sent to DN. Each cycle, DN is checked to make sure that it is either greater than the current global timer, or is less than the global timer by no more than 64 µsec, else it is set to the global timer minus 64 µsec.

5.1.30 iunit_IUNIT_RCOMP_STATUS_type (IUNIT_RCOMP_STATUS)—Offset F0h

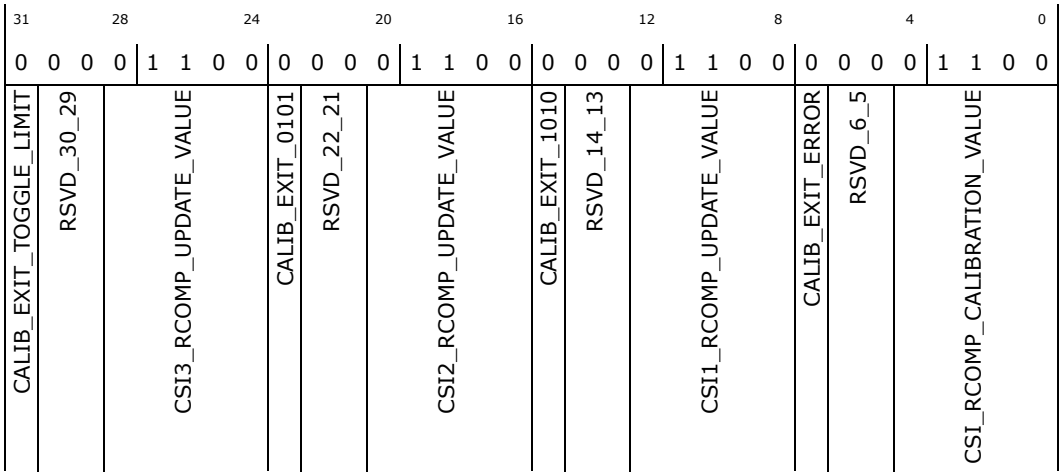
I-unit RCOMP Status Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + F0h

Default: 0C0C0C0Ch



Bit Range	Default and Access	Field Name (ID): Description
31	0x0 RO	**CALIB_EXIT_TOGGLE_LIMIT:** CALIB_EXIT_TOGGLE_LIMIT: If set, indicates that the last calibration cycle exited because the number of toggles matched the value specified by the CSI_HS_ROGGLE_LIMIT_CREG_ENC field of the IUNIT_RCOMP_CONTROL register.
30:29	0x0 RO	**RSVD_30_29:** Reserved
28:24	0xc RO	**CSI3_RCOMP_UPDATE_VALUE:** MIPI*-CSI-3 RCOMP value: Current RCOMP value on MIPI*-CSI-3 port
23	0x0 RO	**CALIB_EXIT_0101:** CALIB_EXIT_0101: If set, indicates that the last calibration cycle exited because the last four states of rcompcountup were 0101
22:21	0x0 RO	**RSVD_22_21:** Reserved
20:16	0xc RO	**CSI2_RCOMP_UPDATE_VALUE:** MIPI*-CSI-2 RCOMP value: Current RCOMP value on MIPI*-CSI-2 port
15	0x0 RO	**CALIB_EXIT_1010:** CALIB_EXIT_1010: If set, indicates that the last calibration cycle exited because the last four states of rcompcountup were 1010
14:13	0x0 RO	**RSVD_14_13:** Reserved
12:8	0xc RO	**CSI1_RCOMP_UPDATE_VALUE:** MIPI*-CSI-1 RCOMP value: Current RCOMP value on MIPI*-CSI-1 port
7	0x0 RO	**CALIB_EXIT_ERROR:** CALIB_EXIT_ERROR: If set, indicates that the last calibration cycle exited due to an error condition.
6:5	0x0 RO	**RSVD_6_5:** Reserved
4:0	0xc RO	**CSI_RCOMP_CALIBRATION_VALUE:** MIPI*-CSI RCOMP value from last calibration cycle

5.1.31 iunit_IUNIT_RCOMP_CONTROL_type (IUNIT_RCOMP_CONTROL)—Offset F4h

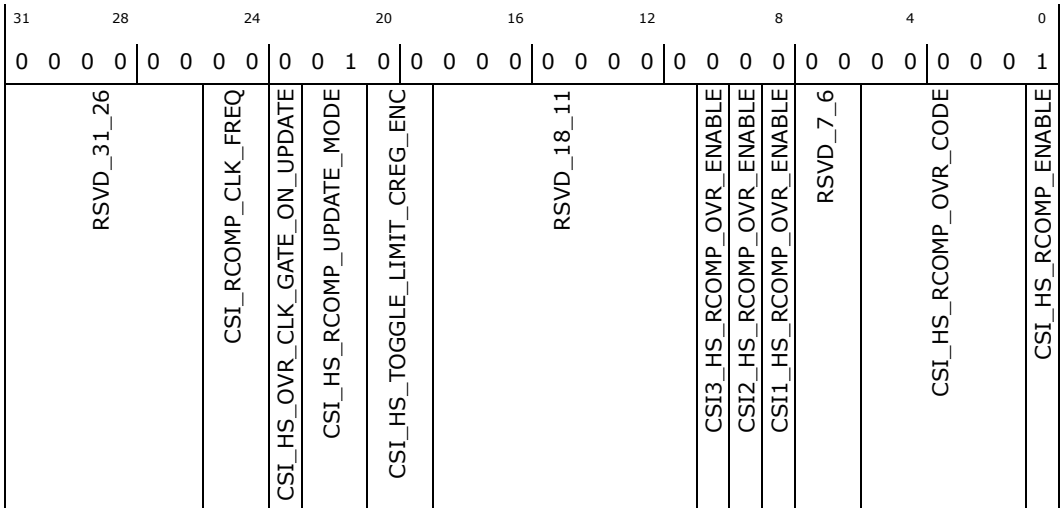
MIPI*-CSI RCOMP Control Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + F4h

Default: 00200001h



Bit Range	Default and Access	Field Name (ID): Description
31:26	0x0 RW	**RSVD_31_26:** Reserved
25:24	0x0 RW	**CSI_RCOMP_CLK_FREQ:** CSI_RCOMP_CLK_FREQ: Bandgap/RCOMP clock frequency. 0h=)20 MHz; 1h=)15 MHz; 2h=)10 MHz; 3h=)reserved. At the start of each RCOMP calibration cycle, the state machine waits for 8 clock cycles before starting to sample the count up/down signal.
23	0x0 RW	**CSI_HS_OVR_CLK_GATE_ON_UPDATE:** CSI_HS_OVR_CLK_GATE_ON_UPDATE: If cleared, the high speed clock going to the digital logic is gated when RCOMP update is happening. The clock is gated for a minimum of 100 nanoseconds. If this bit is set, then the high speed clock is not gated during the update cycle.
22:21	0x1 RW	**CSI_HS_RCOMP_UPDATE_MODE:** CSI_HS_RCOMP_UPDATE_MODE: 00b = RCOMP is updated if the clock lane is in LP11 state. 01b = RCOMP is updated if all the data lanes are in LP11 state. 10b = RCOMP is updated immediately after calibration is completed, or the CSI[1-3]_HS_RCOMP_OVR_ENABLE bits are written to 1 by software. 11b = Reserved.
20:19	0x0 RW	**CSI_HS_TOGGLE_LIMIT_CREG_ENC:** CSI_HS_TOGGLE_LIMIT_CREG_ENC: HS state machine toggle limit. Number of times RCOMP state machine will toggle before exiting. 2'b00: 6 toggles; 2'b01: 4 toggles; 2'b10: 8 toggles; 2'b11: 10 toggles;

Bit Range	Default and Access	Field Name (ID): Description
18:11	0x0 RW	**RSVD_18_11:** Reserved
10	0x0 RW	**CSI3_HS_RCOMP_OVR_ENABLE:** CSI3_HS_RCOMP_OVR_ENABLE: If set, then the CSI_HS_RCOMP_OVRD field is used as the RCOMP value during the update cycle for CSI port 3. If clear, then the output of the RCOMP calibration engine (stored in CSI_RCOMP_CALIBRATION_VALUE field of IUNIT_RCOMP_STATUS register) is used as the RCOMP value during the update cycle for CSI port 3.
9	0x0 RW	**CSI2_HS_RCOMP_OVR_ENABLE:** CSI2_HS_RCOMP_OVR_ENABLE: If set, then the CSI_HS_RCOMP_OVRD field is used as the RCOMP value during the update cycle for CSI port 2. If clear, then the output of the RCOMP calibration engine (stored in CSI_RCOMP_CALIBRATION_VALUE field of IUNIT_RCOMP_STATUS register) is used as the RCOMP value during the update cycle for CSI port 2.
8	0x0 RW	**CSI1_HS_RCOMP_OVR_ENABLE:** CSI1_HS_RCOMP_OVR_ENABLE: If set, then the CSI_HS_RCOMP_OVRD field is used as the RCOMP value during the update cycle for CSI port 1. If clear, then the output of the RCOMP calibration engine (stored in CSI_RCOMP_CALIBRATION_VALUE field of IUNIT_RCOMP_STATUS register) is used as the RCOMP value during the update cycle for CSI port 1.
7:6	0x0 RW	**RSVD_7_6:** Reserved
5:1	0x0 RW	**CSI_HS_RCOMP_OVR_CODE:** CSI_HS_RCOMP_OVR_CODE: Software defined value to use as the RCOMP value for CSI[1-3] ports if the CSI[1-3]_HS_RCOMP_OVR_ENABLE fields are set.
0	0x1 RW	**CSI_HS_RCOMP_ENABLE:** CSI_HS_RCOMP_ENABLE: Enable CSI HS RCOMP. **Note**: This bit does not affect the initial RCOMP at the de-assertion of reset which is controlled by the fuse FB_disable_initial_RCOMP.)

5.1.32 iunit_IUNIT_STATUS_type (IUNIT_STATUS)—Offset F8h

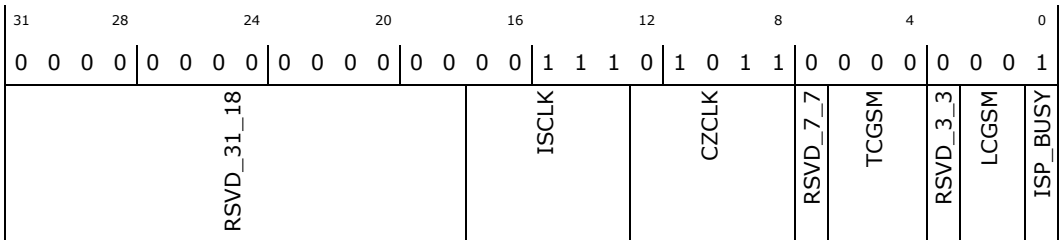
I-unit Status Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + F8h

Default: 0000EB01h



Bit Range	Default and Access	Field Name (ID): Description
31:18	0x0 RO	**RSVD_31_18:** Reserved
17:13	0x7 RO	**ISCLK:** Reflects the value of cck_isp_isclk_ratio_zcznfwh input pin.
12:8	0xb RO	**CZCLK:** Reflects the value of cck_xxx_czclk_ratio_zcznfwh input pin.
7	0x0 RO	**RSVD_7_7:** Reserved
6:4	0x0 RO	**TCGSM:** ISP trunk clock gating state machine. 0h = RUN_TRUNK_CLK; 1h = STOP_TRUNK_CLK; 2h = WAIT_FOR_RESUME; 3h = START_TRUNK_CLK; 4h = WAIT_FOR_LOCAL_CLK_TO_START. The reset value will be RUN_TRUNK_CLK. If the FB_override_initial_clock_gating fuse is not set, then shortly after reset, the value of this register will automatically change to STOP_TRUNK_CLK.
3	0x0 RO	**RSVD_3_3:** Reserved
2:1	0x0 RO	**LCGSM:** ISP local clock gating state machine. 0h = RUN_LOCAL_CLK; 1h = WAIT_FOR_FIFO_EMPTY; 2h = STOP_LOCAL_CLK. The reset value will be RUN_LOCAL_CLK. If the FB_override_initial_clock_gating fuse is not set, then shortly after reset, the value of this register will automatically change to STOP_LOCAL_CLK.
0	0x1 RO	**ISP_BUSY:** ISP_BUSY: 1 = ISP is busy; 0 = ISP is idle.

5.1.33 iunit_IUNIT_CONTROL_type (IUNIT_CONTROL)—Offset FCh

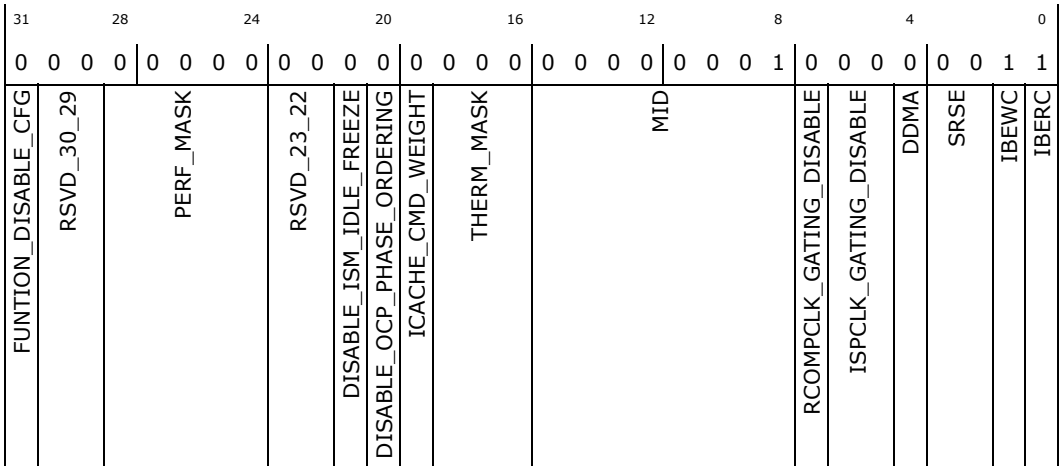
I-unit Control Register

Access Method

Type: PCI Configuration Register (Size: 32 bits)

Offset: [B:0, D:3, F:0] + FCh

Default: 00000103h



Bit Range	Default and Access	Field Name (ID): Description
31	0x0 RW	**FUNTION_DISABLE_CFG:** FUNCTION_DISABLE_INT: When set, both legacy and MSI interrupts are disabled.
30:29	0x0 RW	**RSVD_30_29:** Reserved
28:24	0x0 RW	**PERF_MASK:** PERF_MASK: This field determines the amount of performance throttling applied to ispclk. The value of this field determines how many beat periods of ispclk are killed, where a beat period is defined as 16 ispclk cycles. A 16 cycle period was chosen to make the throttling independent of the actual clock ratio between ispclk and coreclk. **Note**: Clock gating should be enabled when thermal throttling is enabled.
23:22	0x0 RW	**RSVD_23_22:** Reserved
21	0x0 RW	**DISABLE_ISM_IDLE_FREEZE:** DISABLE_ISM_IDLE_FREEZE: When the I-unit receives a RESET_WARN message from P-unit, it will freeze the IOSF primary Idle State Machine (among other things), before sending an OK_TO_RESET message to P-unit. If the DISABLE_ISM_IDLE_FREEZE bit is set, I-unit will not freeze the ISM in the IDLE state as part of this reset sequence.
20	0x0 RW	**DISABLE_OCP_PHASE_ORDERING:** DISABLE_OCP_PHASE_ORDERING: By default the I-unit will follow the OCP phase ordering protocol and wait until a write command is accepted before accepting the write data corresponding to that command. If the DISABLE_OCP_PHASE_ORDERING bit is set, the I-unit wrapper will accept the write data independent of the write command.
19	0x0 RW	**ICACHE_CMD_WEIGHT:** ICACHE_CMD_WEIGHT: 0b = Requests from the OCP master port sending Icache miss traffic will win arbitration over requests from the OCP master port that sends pixel data traffic. 1b = Requests from the two OCP master interfaces will be accepted in a round robin fashion.

Bit Range	Default and Access	Field Name (ID): Description
18:16	0x0 RW	**THERM_MASK:** THERM_MASK: This field determines the amount of thermal throttling applied to ispclk. The value of this field determines how many beat periods of ispclk are killed, where a beat period is defined as 16 ispclk cycles. A 16 cycle period was chosen to make the throttling independent of the actual clock ratio between ispclk and coreclk. 000 = No throttling; 001 = 12.5% throttling; 010 = 25% throttling; 011 = 37.5% throttling; 100 = 50% throttling; 101 = 62.5% throttling; 110 = 75% throttling; 111 = 87.5% throttling;
15:8	0x1 RW	**MID:** MIN_IDLE_DELAY: Minimum wait time after the rising edge of idle, before the clock gating state machine will start the sequence to gate ispclk. Range is 0–130 µsec. Unit is 0.512 µsec. Reset value of 8'h1 indicates MID = 0.512 µsec.
7	0x0 RW	**RCOMPCLK_GATING_DISABLE:** 1 = Disable clock gating for rcompclk. 0 = Enable clock gating for rcompclk. **Note**: All clock gating is disabled by hardware while reset is asserted, regardless of the state of this field.
6:5	0x0 RW	**ISPCLK_GATING_DISABLE:** ISPCLK_GATING_DISABLE: 11 = Disable local clock gating and trunk clock gating for ispclk.; 10 = Enable local clock gating for ispclk, but disable trunk clock gating.; 01 = Reserved; 00 = Enable local clock gating and trunk clock gating for ispclk. **Note**: All clock gating is disabled by hardware while reset is asserted, regardless of the state of this field.
4	0x0 RW	**DDMA:** 1 = Disable DMA. Stop sending any requests on the IB PFI port. 0 = Enable DMA. IB PFI port operates normally.
3:2	0x0 RW	**SRSE:** SOFT_RESET_SEQUENCE_ENABLE: If SRSE=2b00: When an IUNIT_RESET_WARN message is received from P-unit, I-unit will a) stop accepting requests on the IOSF primary interface, b) stop accepting new requests from the OCP master interface, c) wait until read data from all earlier read requests received from the OCP master interface have been returned by SSA, d) wait until SSA reads data for all earlier PFI write requests, and e) wait for all DPHY lanes to enter stop state (LP11), and then f) send an IUNIT_OK_TO_RESET posted message to P-unit. If SRSE=2b01: When an IUNIT_RESET_WARN message is received from P-unit, I-unit will a) stop accepting requests on the IOSF primary interface, b) stop accepting new requests from the OCP master interface, c) wait until read data from all earlier read requests received from the OCP master interface have been returned by SSA, d) wait until SSA reads data for all earlier PFI write requests, and then e) send an IUNIT_OK_TO_RESET posted message to P-unit. If SRSE=2b10: When an IUNIT_RESET_WARN message is received from P-unit, I-unit will wait for all DPHY lanes to enter stop state (LP11), and then send an IUNIT_OK_TO_RESET posted message to P-unit. If SRSE=2b11: When an IUNIT_RESET_WARN message is received from P-unit, I-unit will immediately send an IUINT_OK_TO_RESET posted message to P-unit.
1	0x1 RW	**IBEWC:** IB_ENABLE_WRITE_COMBINING: When set, enables the combining of adjacent 32-byte write requests to the same cache line. When cleared, each 32-byte write request is sent as a separate request on the IB interface.

Bit Range	Default and Access	Field Name (ID): Description
0	0x1 RW	**IBERC:** IB_ENABLE_READ_COMBINING: When set, enables the combining of adjacent 32-byte read requests to the same cache line. When cleared, each 32-byte read request is sent as a separate request on the IB interface.

5.2 Image Signal Processor Memory Mapped I/O Registers

Table 27. Summary of Memory Mapped I/O Registers—ISPMMADR

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
0–3h	4	"reg_gp_sdram_wakeup (gpd_gp_reg_reg_gp_sdram_wakeup)—Offset 0h" on page 1040	00000000h
4–7h	4	"reg_gp_idle (gpd_gp_reg_reg_gp_idle)—Offset 4h" on page 1040	00000000h
8–Bh	4	"reg_gp_irq_req0 (gpd_gp_reg_reg_gp_irq_req0)—Offset 8h" on page 1041	00000000h
C–Fh	4	"reg_gp_irq_req1 (gpd_gp_reg_reg_gp_irq_req1)—Offset Ch" on page 1042	00000000h
10–13h	4	"reg_gp_sp_stream_stat (gpd_gp_reg_reg_gp_sp_stream_stat)—Offset 10h" on page 1042	00222222h
14–17h	4	"reg_gp_sp_stream_stat_b (gpd_gp_reg_reg_gp_sp_stream_stat_b)—Offset 14h" on page 1046	00000000h
18–1Bh	4	"reg_gp_isp_stream_stat (gpd_gp_reg_reg_gp_isp_stream_stat)—Offset 18h" on page 1047	02222222h
1C–1Fh	4	"reg_gp_mod_stream_stat (gpd_gp_reg_reg_gp_mod_stream_stat)—Offset 1Ch" on page 1050	AAAA2222h
20–23h	4	"reg_gp_sp_stream_stat_irq_cond (gpd_gp_reg_reg_gp_sp_stream_stat_irq_cond)—Offset 20h" on page 1053	00000000h
24–27h	4	"reg_gp_sp_stream_stat_b_irq_cond (gpd_gp_reg_reg_gp_sp_stream_stat_b_irq_cond)—Offset 24h" on page 1054	00000000h
28–2Bh	4	"reg_gp_isp_stream_stat_irq_cond (gpd_gp_reg_reg_gp_isp_stream_stat_irq_cond)—Offset 28h" on page 1055	00000000h
2C–2Fh	4	"reg_gp_mod_stream_stat_irq_cond (gpd_gp_reg_reg_gp_mod_stream_stat_irq_cond)—Offset 2Ch" on page 1056	00000000h
30–33h	4	"reg_gp_sp_stream_stat_irq_enable (gpd_gp_reg_reg_gp_sp_stream_stat_irq_enable)—Offset 30h" on page 1057	00000000h

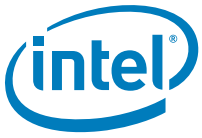


Table 27. Summary of Memory Mapped I/O Registers—ISPMMADR (Continued)

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
34–37h	4	"reg_gp_sp_stream_stat_b_irq_enable (gpd_gp_reg_reg_gp_sp_stream_stat_b_irq_enable)—Offset 34h" on page 1058	00000000h
38–3Bh	4	"reg_gp_isp_stream_stat_irq_enable (gpd_gp_reg_reg_gp_isp_stream_stat_irq_enable)—Offset 38h" on page 1060	00000000h
3C–3Fh	4	"reg_gp_mod_stream_stat_irq_enable (gpd_gp_reg_reg_gp_mod_stream_stat_irq_enable)—Offset 3Ch" on page 1060	00000000h
40–43h	4	"reg_gp_switch_if (gpd_gp_reg_reg_gp_switch_if)—Offset 40h" on page 1061	00000000h
44–47h	4	"reg_gp_switch_gdc1 (gpd_gp_reg_reg_gp_switch_gdc1)—Offset 44h" on page 1062	00000000h
48–4Bh	4	"reg_gp_switch_gdc2 (gpd_gp_reg_reg_gp_switch_gdc2)—Offset 48h" on page 1063	00000000h
4C–4Fh	4	"reg_gp_srst (gpd_gp_reg_reg_gp_srst)—Offset 4Ch" on page 1064	00000000h
50–53h	4	"reg_gp_slv_reg_srst (gpd_gp_reg_reg_gp_slv_reg_srst)—Offset 50h" on page 1066	00000000h
54–57h	4	"reg_gpd_gp_reg_reg_gp_isel_switch_type (gpd_gp_reg_reg_gp_isel_switch)—Offset 54h" on page 1067	00000000h
100–103h	4	"FifoWriteCmd (gpd_tc_FifoWriteCmd)—Offset 100h" on page 1068	00000000h
400–403h	4	"reg_gpio_doe (gpd_c_gpio_reg_gpio_doe)—Offset 400h" on page 1068	00000000h
404–407h	4	"reg_gpio_do_select (gpd_c_gpio_reg_gpio_do_select)—Offset 404h" on page 1069	00000000h
408–40Bh	4	"reg_gpio_do_0 (gpd_c_gpio_reg_gpio_do_0)—Offset 408h" on page 1070	00000000h
40C–40Fh	4	"reg_gpio_do_1 (gpd_c_gpio_reg_gpio_do_1)—Offset 40Ch" on page 1071	00000000h
410–413h	4	"reg_gpio_do_pwm_cnt_0 (gpd_c_gpio_reg_gpio_do_pwm_cnt_0)—Offset 410h" on page 1072	00000000h
414–417h	4	"reg_gpio_do_pwm_cnt_1 (gpd_c_gpio_reg_gpio_do_pwm_cnt_1)—Offset 414h" on page 1072	00000000h
418–41Bh	4	"reg_gpio_do_pwm_cnt_2 (gpd_c_gpio_reg_gpio_do_pwm_cnt_2)—Offset 418h" on page 1073	00000000h
41C–41Fh	4	"reg_gpio_do_pwm_cnt_3 (gpd_c_gpio_reg_gpio_do_pwm_cnt_3)—Offset 41Ch" on page 1074	00000000h
420–423h	4	"reg_gpio_do_pwm_main_cnt (gpd_c_gpio_reg_gpio_do_pwm_main_cnt)—Offset 420h" on page 1075	00000000h
424–427h	4	"reg_gpio_do_pwm_enable (gpd_c_gpio_reg_gpio_do_pwm_enable)—Offset 424h" on page 1076	00000000h

Table 27. Summary of Memory Mapped I/O Registers—ISPMMADR (Continued)

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
428–42Bh	4	"reg_gpio_di_debouncemethod (gpd_c_gpio_reg_gpio_di_debouncemethod)—Offset 428h" on page 1077	00000000h
42C–42Fh	4	"reg_gpio_di_debounce_cnt0 (gpd_c_gpio_reg_gpio_di_debounce_cnt0)—Offset 42Ch" on page 1078	00000000h
430–433h	4	"reg_gpio_di_debounce_cnt1 (gpd_c_gpio_reg_gpio_di_debounce_cnt1)—Offset 430h" on page 1079	00000000h
434–437h	4	"reg_gpio_di_debounce_cnt2 (gpd_c_gpio_reg_gpio_di_debounce_cnt2)—Offset 434h" on page 1080	00000000h
438–43Bh	4	"reg_gpio_di_debounce_cnt3 (gpd_c_gpio_reg_gpio_di_debounce_cnt3)—Offset 438h" on page 1080	00000000h
43C–43Fh	4	"reg_gpio_di_activelevel (gpd_c_gpio_reg_gpio_di_activelevel)—Offset 43Ch" on page 1081	00000FFFh
440–443h	4	"reg_gpio_di_debouncemethod (gpd_c_gpio_reg_gpio_di_debouncemethod)—Offset 428h" on page 1077	00000FFFh
500–503h	4	"reg_irq_edge (gpd_irq_ctrl_reg_irq_edge)—Offset 500h" on page 1082	00000000h
504–507h	4	"reg_irq_mask (gpd_irq_ctrl_reg_irq_mask)—Offset 504h" on page 1083	00000000h
508–50Bh	4	"reg_irq_status (gpd_irq_ctrl_reg_irq_status)—Offset 508h" on page 1083	00000000h
50C–50Fh	4	"reg_irq_clear (gpd_irq_ctrl_reg_irq_clear)—Offset 50Ch" on page 1085	00000000h
510–513h	4	"reg_irq_enable (gpd_irq_ctrl_reg_irq_enable)—Offset 510h" on page 1086	00000000h
514–517h	4	"reg_irq_level_not_pulse (gpd_irq_ctrl_reg_irq_level_not_pulse)—Offset 514h" on page 1086	00000000h
518–51Bh	4	"reg_irq_str_out_enable (gpd_irq_ctrl_reg_irq_str_out_enable)—Offset 518h" on page 1087	00000000h
600–603h	4	"reg_reset (gpd_gptimer_reg_reset)—Offset 600h" on page 1088	00000000h
604–607h	4	"overall_enable (gpd_gptimer_overall_enable)—Offset 604h" on page 1088	00000000h
608–60Bh	4	"enable_timer_0 (gpd_gptimer_enable_timer_0)—Offset 608h" on page 1089	00000000h
60C–60Fh	4	"enable_timer_1 (gpd_gptimer_enable_timer_1)—Offset 60Ch" on page 1090	00000000h
610–613h	4	"enable_timer_2 (gpd_gptimer_enable_timer_2)—Offset 610h" on page 1090	00000000h

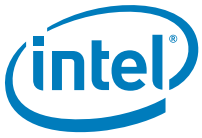

Table 27. Summary of Memory Mapped I/O Registers—ISPMMADR (Continued)

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
614–617h	4	"enable_timer_3 (gpd_gptimer_enable_timer_3)—Offset 614h" on page 1091	00000000h
618–61Bh	4	"enable_timer_4 (gpd_gptimer_enable_timer_4)—Offset 618h" on page 1092	00000000h
61C–61Fh	4	"enable_timer_5 (gpd_gptimer_enable_timer_5)—Offset 61Ch" on page 1092	00000000h
620–623h	4	"enable_timer_6 (gpd_gptimer_enable_timer_6)—Offset 620h" on page 1093	00000000h
624–627h	4	"enable_timer_7 (gpd_gptimer_enable_timer_7)—Offset 624h" on page 1094	00000000h
628–62Bh	4	"value_timer_0 (gpd_gptimer_value_timer_0)—Offset 628h" on page 1094	00000000h
62C–62Fh	4	"value_timer_1 (gpd_gptimer_value_timer_1)—Offset 62Ch" on page 1095	00000000h
630–633h	4	"value_timer_2 (gpd_gptimer_value_timer_2)—Offset 630h" on page 1096	00000000h

60008–6000Bh	4	"woi_y (gdc2_woi_y)—Offset 60008h" on page 1585	00000000h
6000C–6000Fh	4	"bpp (gdc2_bpp)—Offset 6000Ch" on page 1585	00000000h
60010–60013h	4	"fryipxfrx_start (gdc2_fryipxfrx_start)—Offset 60010h" on page 1586	00000000h
60014–60017h	4	"oxdim (gdc2_oxdim)—Offset 60014h" on page 1587	00000000h
60018–6001Bh	4	"oydim (gdc2_oydim)—Offset 60018h" on page 1587	00000000h
6001C–6001Fh	4	"src_addr (gdc2_src_addr)—Offset 6001Ch" on page 1588	00000000h
60020–60023h	4	"src_end (gdc2_src_end)—Offset 60020h" on page 1588	00000000h

Table 27. Summary of Memory Mapped I/O Registers—ISPMMADR (Continued)

Offset	Size (Bytes)	Register Name (Register Symbol)	Default Value
60024–60027h	4	"src_wrap (gdc2_src_wrap)—Offset 60024h" on page 1589	00000000h
60028–6002Bh	4	"src_stride (gdc2_src_stride)—Offset 60028h" on page 1590	00000000h
6002C–6002Fh	4	"dst_addr (gdc2_dst_addr)—Offset 6002Ch" on page 1590	00000000h
60030–60033h	4	"dst_stride (gdc2_dst_stride)—Offset 60030h" on page 1591	00000000h
60034–60037h	4	"dx (gdc2_dx)—Offset 60034h" on page 1592	00000000h
60038–6003Bh	4	"dy (gdc2_dy)—Offset 60038h" on page 1592	00000000h
6003C–6003Fh	4	"P0_primX_ixdim (gdc2_P0_primX_ixdim)—Offset 6003Ch" on page 1593	00000000h
60040–60043h	4	"P0_primY_iydim (gdc2_P0_primY_iydim)—Offset 60040h" on page 1593	00000000h
60044–60047h	4	"P1_primX (gdc2_P1_primX)—Offset 60044h" on page 1594	00000000h
60048–6004Bh	4	"P1_primY (gdc2_P1_primY)—Offset 60048h" on page 1595	00000000h
6004C–6004Fh	4	"P2_primX (gdc2_P2_primX)—Offset 6004Ch" on page 1595	00000000h
60050–60053h	4	"P2_primY (gdc2_P2_primY)—Offset 60050h" on page 1596	00000000h
60054–60057h	4	"P3_primX (gdc2_P3_primX)—Offset 60054h" on page 1596	00000000h
60058–6005Bh	4	"P3_primY (gdc2_P3_primY)—Offset 60058h" on page 1597	00000000h
6005C–6005Fh	4	"perf_mode (gdc2_perf_mode)—Offset 6005Ch" on page 1598	00000000h
60060–60063h	4	"interp_type (gdc2_interp_type)—Offset 60060h" on page 1598	00000000h
60064–60067h	4	"scan_mode (gdc2_scan_mode)—Offset 60064h" on page 1599	00000000h
60068–6006Bh	4	"proc_mode (gdc2_proc_mode)—Offset 60068h" on page 1600	00000000h
70000–70003h	4	"MMU_invalidate_cache (data_out_sys_c_mmu_MMU_invalidate_cache)—Offset 70000h" on page 1600	00000000h
70004–70007h	4	"MMU_page_table_base (data_out_sys_c_mmu_MMU_page_table_base)—Offset 70004h" on page 1601	00000000h

5.2.1 reg_gp_sdram_wakeup (gpd_gp_reg_reg_gp_sdram_wakeup)—Offset 0h

When set to 1, this signal will cause the memory controller to bring the external SDRAM into an active state.

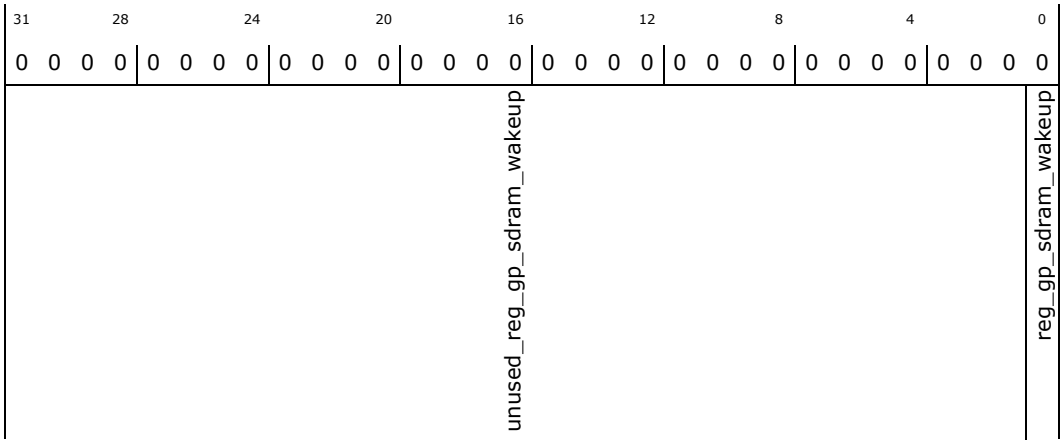
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 0h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_sdram_wakeup):** Unused
0	0x0 RW	**reg_gp_sdram_wakeup:** when set to 1, this signal will cause the memory controller to bring the external SDRAM into an active state.

5.2.2 reg_gp_idle (gpd_gp_reg_reg_gp_idle)—Offset 4h

Should be set to 1 when ISP system is in idle mode.

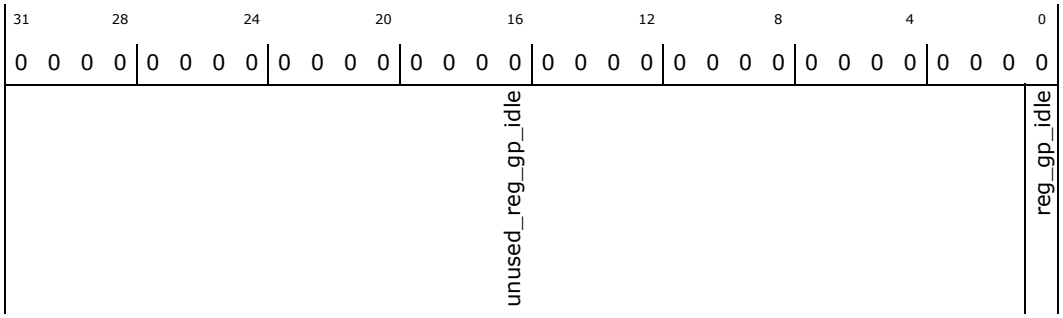
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_idle):** Unused
0	0x0 RW	**reg_gp_idle:** Should be set to 1 when ISP system is in ?idle? mode.

5.2.3 reg_gp_irq_req0 (gpd_gp_reg_reg_gp_irq_req0)—Offset 8h

Possibly causes an interrupt request (if the host interrupt controller is properly configured)

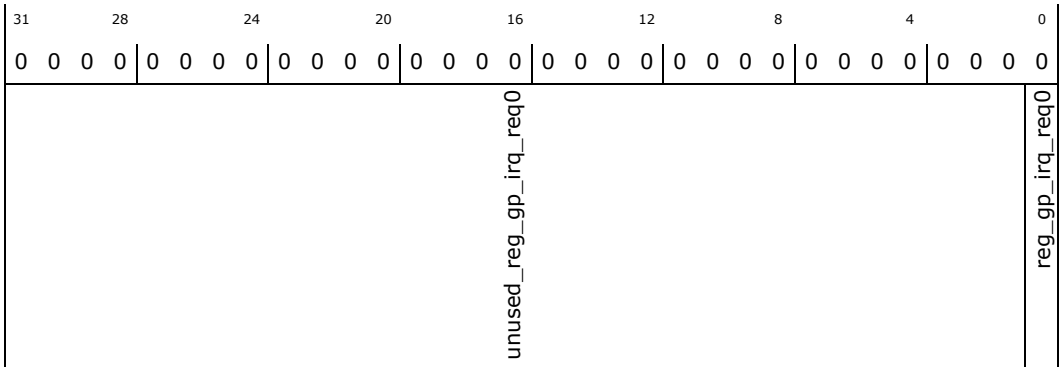
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 8h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_irq_req0):** Unused

Bit Range	Default and Access	Field Name (ID): Description
0	0x0 RW	**reg_gp_irq_req0:** possibly causes an interrupt request (if the host interrupt controller is properly configured)

5.2.4 reg_gp_irq_req1 (gpd_gp_reg_reg_gp_irq_req1)—Offset Ch

Possibly causes an interrupt request (if the host interrupt controller is properly configured).

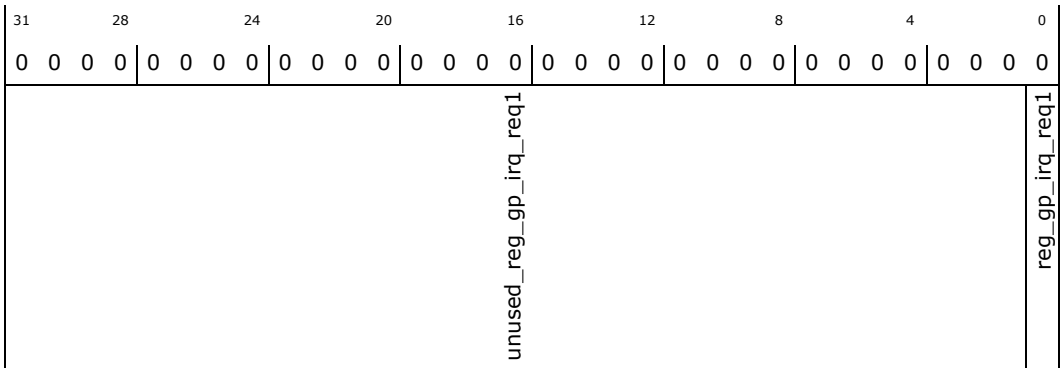
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_irq_req1):** Unused
0	0x0 RW	**reg_gp_irq_req1:** possibly causes an interrupt request (if the host interrupt controller is properly configured)

5.2.5 reg_gp_sp_stream_stat (gpd_gp_reg_reg_gp_sp_stream_stat)—Offset 10h

Indicates the status of the streaming ports of the scalar processor. All valid and accept signals of the scalar processor are reflected in this register and in reg_gp_sp_stream_stat_b.

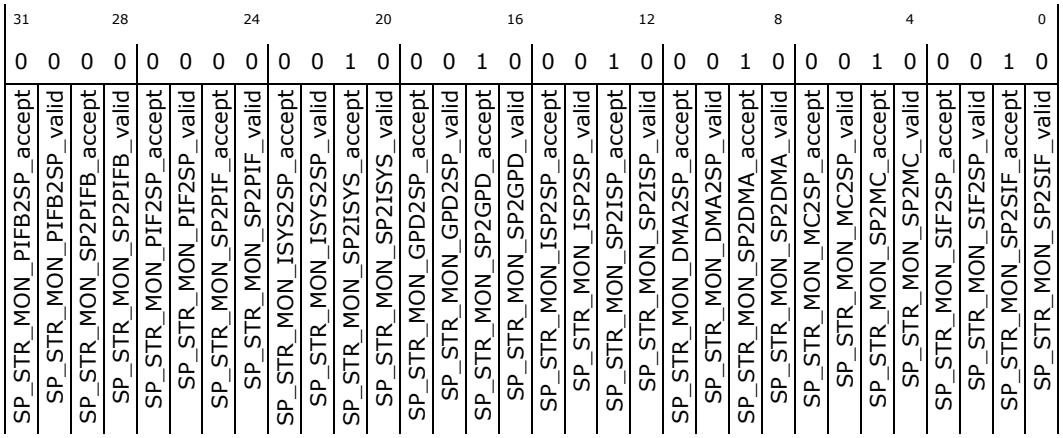
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 10h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00222222h



Bit Range	Default and Access	Field Name (ID): Description
31	0x0 RO	**SP_STR_MON_PIFB2SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the primary input formatter B acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
30	0x0 RO	**SP_STR_MON_PIFB2SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the primary input formatter B acknowledge port and the SP, is present on the primary input formatter B input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
29	0x0 RO	**SP_STR_MON_SP2PIFB_accept:** Returns the value 1 if the command FIFO between SP and the Primary input formatter B can accept a command from the SP. Returns the value 0 if this FIFO cannot accept a token from the SP.
28	0x0 RO	**SP_STR_MON_SP2PIFB_valid:** Returns the value 1 if SP sends a command using the streaming port connected to the Primary Input Formatter B command FIFO. Returns the value 0 if the SP does not send a command to this FIFO
27	0x0 RO	**SP_STR_MON_PIF2SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the primary input formatter acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
26	0x0 RO	**SP_STR_MON_PIF2SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the primary input formatter acknowledge port and the SP, is present on the primary input formatter input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.

Bit Range	Default and Access	Field Name (ID): Description
25	0x0 RO	**SP_STR_MON_SP2PIF_accept:** Returns the value 1 if the command FIFO between SP and the Primary input formatter can accept a command from the SP. Returns the value 0 if this command FIFO cannot accept a command from the SP.
24	0x0 RO	**SP_STR_MON_SP2PIF_valid:** Returns the value 1 if SP sends a command using the streaming port connected to the Primary Input Formatter command FIFO. Returns the value 0 if the SP does not send a command to the Primary Input formatter
23	0x0 RO	**SP_STR_MON_ISYS2SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the input system acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
22	0x0 RO	**SP_STR_MON_ISYS2SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the input system acknowledge port and the SP, is present on the input system input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
21	0x1 RO	**SP_STR_MON_SP2ISYS_accept:** Returns the value 1 if the command FIFO between SP and the input system can accept a command from the SP. Returns the value 0 if this command FIFO cannot accept a command from the SP.
20	0x0 RO	**SP_STR_MON_SP2ISYS_valid:** Returns the value 1 if SP sends a command using the streaming port connected to the input system command FIFO. Returns the value 0 if the SP does not send a command to the input system
19	0x0 RO	**SP_STR_MON_GPD2SP_accept:** Returns the value 1 if the SP can accept a token from the streaming FIFO between the FIFO adapter in GP devices and the SP. Returns 0 if the SP cannot accept a token from this FIFO.
18	0x0 RO	**SP_STR_MON_GPD2SP_valid:** Returns the value 1 if the streaming FIFO between the FIFO adapter in GP devices and the SP has a valid token for the SP. Returns the value 0 if this FIFO is empty.
17	0x1 RO	**SP_STR_MON_SP2GPD_accept:** Returns the value 1 if the token FIFO between SP and FIFO adapter can accept a token from the SP. Returns the value 0 if this token FIFO is full.
16	0x0 RO	**SP_STR_MON_SP2GPD_valid:** Returns the value 1 if SP sends a token using the streaming port connected to the token FIFO between the SP and the FIFO adapter in GP_devices. Returns the value 0 if the SP does not send a token to the FIFO adapter.
15	0x0 RO	**SP_STR_MON_ISP2SP_accept:** Returns the value 1 if the SP can accept a token from the streaming FIFO between the ISP and the SP. Returns 0 if the SP cannot accept a token from this FIFO.
14	0x0 RO	**SP_STR_MON_ISP2SP_valid:** Returns the value 1 if the streaming FIFO between the ISP and the SP has a valid token for the SP. Returns the value 0 if this FIFO is empty
13	0x1 RO	**SP_STR_MON_SP2ISP_accept:** Returns the value 1 if the token FIFO between SP and ISP can accept a token from the SP. Returns the value 0 if this token FIFO is full.

Bit Range	Default and Access	Field Name (ID): Description
12	0x0 RO	**SP_STR_MON_SP2ISP_valid:** Returns the value 1 if SP sends a token using the streaming port connected to the ISP token FIFO. Returns the value 0 if the SP does not send a token to the ISP
11	0x0 RO	**SP_STR_MON_DMA2SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the DMA acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
10	0x0 RO	**SP_STR_MON_DMA2SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the DMA acknowledge port and the SP, is present on the DMA input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
9	0x1 RO	**SP_STR_MON_SP2DMA_accept:** Returns the value 1 if the command FIFO between SP and the DMA can accept a command from the SP. Returns the value 0 if this command FIFO cannot accept a command from the SP.
8	0x0 RO	**SP_STR_MON_SP2DMA_valid:** Returns the value 1 if SP sends a command using the streaming port connected to the DMA command FIFO. Returns the value 0 if the SP does not send a command to the DMA
7	0x0 RO	**SP_STR_MON_MC2SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the stream2mem acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
6	0x0 RO	**SP_STR_MON_MC2SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the stream2mem acknowledge port and the SP, is present on the stream2mem input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
5	0x1 RO	**SP_STR_MON_SP2MC_accept:** Returns the value 1 if the command FIFO between SP and the stream2mem can accept a command from the SP. Returns the value 0 if this command FIFO is full.
4	0x0 RO	**SP_STR_MON_SP2MC_valid:** Returns the value 1 if SP sends a command using the streaming port connected to the stream2mem command FIFO. Returns the value 0 if the SP does not send a command to the stream2mem
3	0x0 RO	**SP_STR_MON_SIF2SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the secondary input formatter acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
2	0x0 RO	**SP_STR_MON_SIF2SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the secondary input formatter acknowledge port and the SP, is present on the secondary input formatter input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
1	0x1 RO	**SP_STR_MON_SP2SIF_accept:** Returns the value 1 if the command FIFO between SP and the secondary input formatter can accept a command from the SP. Returns the value 0 if this command FIFO is full.
0	0x0 RO	**SP_STR_MON_SP2SIF_valid:** Returns the value 1 if SP sends a command using the streaming port connected to the Secondary Input Formatter command FIFO. Returns the value 0 if the SP does not send a command to the Secondary Input formatter

5.2.6 reg_gp_sp_stream_stat_b (gpd_gp_reg_reg_gp_sp_stream_stat_b)—Offset 14h

Indicates the status of the streaming ports of the scalar processor. All valid and accept signals of the scalar processor are reflected in this register and in reg_gp_sp_stream_stat.

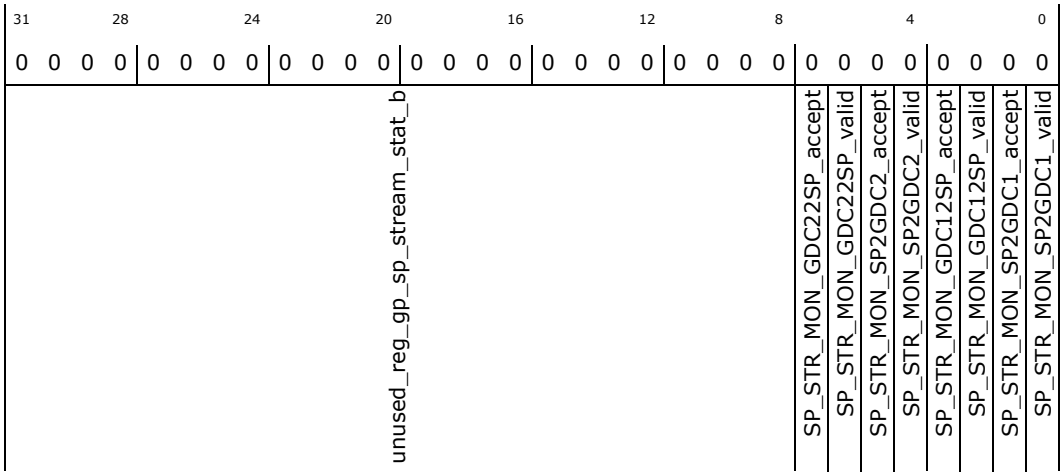
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 14h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:8	0x0 RO	**Reserved (unused_reg_gp_sp_stream_stat_b):** Unused
7	0x0 RO	**SP_STR_MON_GDC22SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the GDC2 acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
6	0x0 RO	**SP_STR_MON_GDC22SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the GDC2 acknowledge port and the SP, is present on the GDC2 input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
5	0x0 RO	**SP_STR_MON_SP2GDC2_accept:** Returns the value 1 if the command FIFO between SP and GDC2 can accept a command from the SP. Returns the value 0 if this command FIFO cannot accept a command from the SP.
4	0x0 RO	**SP_STR_MON_SP2GDC2_valid:** Returns the value 1 if SP sends a command using the streaming port connected to GDC2 command FIFO. Returns the value 0 if the SP does not send a command to GDC2

Bit Range	Default and Access	Field Name (ID): Description
3	0x0 RO	**SP_STR_MON_GDC12SP_accept:** Returns the value 1 if the SP can accept an acknowledge token from the FIFO between the GDC1 acknowledge port and the SP. Returns the value 0 if the SP cannot accept a token on this SP input port.
2	0x0 RO	**SP_STR_MON_GDC12SP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the GDC1 acknowledge port and the SP, is present on the GDC1 input port of the SP. Returns the value 0 if there is no valid acknowledge token available on this SP input port.
1	0x0 RO	**SP_STR_MON_SP2GDC1_accept:** Returns the value 1 if the command FIFO between SP and GDC1 can accept a command from the SP. Returns the value 0 if this command FIFO cannot accept a command from the SP.
0	0x0 RO	**SP_STR_MON_SP2GDC1_valid:** Returns the value 1 if SP sends a command using the streaming port connected to GDC1 command FIFO. Returns the value 0 if the SP does not send a command to GDC1

5.2.7 reg_gp_isp_stream_stat (gpd_gp_reg_reg_gp_isp_stream_stat)—Offset 18h

Indicate the status of the streaming ports of the vector processor. All valid and accept signals of the vector processor are reflected in this register.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 18h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 02222222h

Bit Range	Default and Access	Field Name (ID): Description
31:28	0x0 RO	**Reserved (unused_reg_gp_isp_stream_stat):** Unused
27	0x0 RO	**ISP_STR_MON_SP2ISP_accept:** Returns the value 1 if the ISP can accept a token from the streaming FIFO between the SP and the ISP. Returns 0 if the ISP cannot accept a token from this FIFO.
26	0x0 RO	**ISP_STR_MON_SP2ISP_valid:** Returns the value 1 if the streaming FIFO between the SP and the ISP has a valid token for the ISP. Returns the value 0 if this FIFO is empty
25	0x1 RO	**ISP_STR_MON_ISP2SP_accept:** Returns the value 1 if the token FIFO between ISP and SP can accept a token from the ISP. Returns the value 0 if this token FIFO is full.
24	0x0 RO	**ISP_STR_MON_ISP2SP_valid:** Returns the value 1 if ISP sends a token using the streaming port connected to the SP token FIFO. Returns the value 0 if the ISP does not send a token to the SP
23	0x0 RO	**ISP_STR_MON_GPD2ISP_accept:** Returns the value 1 if the ISP can accept a token from the streaming FIFO between the FIFO adapter in GP devices and the ISP. Returns 0 if the ISP cannot accept a token from this FIFO.
22	0x0 RO	**ISP_STR_MON_GPD2ISP_valid:** Returns the value 1 if the streaming FIFO between the FIFO adapter in GP devices and the ISP has a valid token for the ISP. Returns the value 0 if this FIFO is empty.
21	0x1 RO	**ISP_STR_MON_ISP2GPD_accept:** Returns the value 1 if the token FIFO between ISP and FIFO adapter can accept a token from the ISP. Returns the value 0 if this token FIFO is full.
20	0x0 RO	**ISP_STR_MON_ISP2GPD_valid:** Returns the value 1 if ISP sends a token using the streaming port connected to the token FIFO between the ISP and the FIFO adapter in GP_devices. Returns the value 0 if the ISP does not send a token to the FIFO adapter.
19	0x0 RO	**ISP_STR_MON_GDC22ISP_accept:** Returns the value 1 if the ISP can accept an acknowledge token from the FIFO between the GDC2 acknowledge port and the ISP. Returns the value 0 if the ISP cannot accept a token on this ISP input port.
18	0x0 RO	**ISP_STR_MON_GDC22ISP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the GDC2 acknowledge port and the ISP, is present on the GDC2 input port of the ISP. Returns the value 0 if there is no valid acknowledge token available on this ISP input port.
17	0x1 RO	**ISP_STR_MON_ISP2GDC2_accept:** Returns the value 1 if the command FIFO between ISP and GDC2 can accept a command from the ISP. Returns the value 0 if this command FIFO is full.
16	0x0 RO	**ISP_STR_MON_ISP2GDC2_valid:** Returns the value 1 if ISP sends a command using the streaming port connected to the GDC2 command FIFO. Returns the value 0 if the ISP does not send a command to GDC2
15	0x0 RO	**ISP_STR_MON_GDC12ISP_accept:** Returns the value 1 if the ISP can accept an acknowledge token from the FIFO between the GDC1 acknowledge port and the ISP. Returns the value 0 if the ISP cannot accept a token on this ISP input port.

Bit Range	Default and Access	Field Name (ID): Description
14	0x0 RO	**ISP_STR_MON_GDC12ISP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the GDC1 acknowledge port and the ISP, is present on the GDC1 input port of the ISP. Returns the value 0 if there is no valid acknowledge token available on this ISP input port.
13	0x1 RO	**ISP_STR_MON_ISP2GDC1_accept:** Returns the value 1 if the command FIFO between ISP and GDC1 can accept a command from the ISP. Returns the value 0 if this command FIFO is full.
12	0x0 RO	**ISP_STR_MON_ISP2GDC1_valid:** Returns the value 1 if ISP sends a command using the streaming port connected to the GDC1 command FIFO. Returns the value 0 if the ISP does not send a command to GDC1
11	0x0 RO	**ISP_STR_MON_DMA2ISP_accept:** Returns the value 1 if the ISP can accept an acknowledge token from the FIFO between the DMA acknowledge port and the ISP. Returns the value 0 if the ISP cannot accept a token on this ISP input port.
10	0x0 RO	**ISP_STR_MON_DMA2ISP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the DMA acknowledge port and the ISP, is present on the DMA input port of the ISP. Returns the value 0 if there is no valid acknowledge token available on this ISP input port.
9	0x1 RO	**ISP_STR_MON_ISP2DMA_accept:** Returns the value 1 if the command FIFO between ISP and the DMA can accept a command from the ISP. Returns the value 0 if this command FIFO cannot accept a token from the ISP.
8	0x0 RO	**ISP_STR_MON_ISP2DMA_valid:** Returns the value 1 if ISP sends a command using the streaming port connected to the DMA command FIFO. Returns the value 0 if the ISP does not send a command to the DMA
7	0x0 RO	**ISP_STR_MON_PIFB2ISP_accept:** Returns the value 1 if the ISP can accept an acknowledge token from the FIFO between the primary input formatter B acknowledge port and the ISP. Returns the value 0 if the ISP cannot accept a token on this ISP input port.
6	0x0 RO	**ISP_STR_MON_PIFB2ISP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the primary input formatter B acknowledge port and the ISP, is present on the primary input formatter B input port of the ISP. Returns the value 0 if there is no valid acknowledge token available on this ISP input port.
5	0x1 RO	**ISP_STR_MON_ISP2PIFB_accept:** Returns the value 1 if the command FIFO between ISP and the Primary input formatter B can accept a command from the ISP. Returns the value 0 if this FIFO cannot accept a command from the ISP.
4	0x0 RO	**ISP_STR_MON_ISP2PIFB_valid:** Returns the value 1 if ISP sends a command using the streaming port connected to the Primary Input Formatter B command FIFO. Returns the value 0 if the ISP does not send a command to the Primary Input formatter B
3	0x0 RO	**ISP_STR_MON_PIF2ISP_accept:** Returns the value 1 if the ISP can accept an acknowledge token from the FIFO between the primary input formatter acknowledge port and the ISP. Returns the value 0 if the ISP cannot accept a token on this ISP input port.

Bit Range	Default and Access	Field Name (ID): Description
2	0x0 RO	**ISP_STR_MON_PIF2ISP_valid:** Returns the value 1 if a valid acknowledge token from the FIFO between the primary input formatter acknowledge port and the ISP, is present on the primary input formatter input port of the ISP. Returns the value 0 if there is no valid acknowledge token available on this ISP input port.
1	0x1 RO	**ISP_STR_MON_ISP2PIF_accept:** Returns the value 1 if the command FIFO between ISP and the Primary input formatter can accept a command from the ISP. Returns the value 0 if this command FIFO is full.
0	0x0 RO	**ISP_STR_MON_ISP2PIF_valid:** Returns the value 1 if ISP sends a command using the streaming port connected to the Primary Input Formatter command FIFO. Returns the value 0 if the ISP does not send a command to the Primary Input formatter

5.2.8 reg_gp_mod_stream_stat (gpd_gp_reg_reg_gp_mod_stream_stat)—Offset 1Ch

Indicates the status of the streaming ports of the modules. All modules valid and accept ports used for control are reflected in this register.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 1Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: AAAA2222h

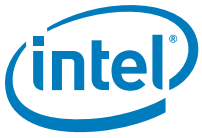
Bit Range	Default and Access	Field Name (ID): Description
31	0x1 RO	**MOD_STR_MON_CELLS2GDC2_accept:** Returns the value 1 if the acknowledge FIFO between GDC2 and ISP/SP can accept an acknowledge token from GDC2. Returns the value 0 if this FIFO is full.
30	0x0 RO	**MOD_STR_MON_CELLS2GDC2_valid:** Returns the value 1 if GDC2 sends an acknowledge token using the streaming port connected to the acknowledge FIFO to the ISP/SP. Returns the value 0 if GDC2 does not send an acknowledge token to this FIFO.
29	0x1 RO	**MOD_STR_MON_GDC22CELLS_accept:** Returns the value 1 if GDC2 can accept a command token from the command FIFO between the ISP/SP and GDC2. Returns the value 0 if GDC2 cannot accept a command token.
28	0x0 RO	**MOD_STR_MON_GDC22CELLS_valid:** Returns the value 1 if there is a command available on the command FIFO between SP/ISP and GDC2. Returns the value 0 if the command FIFO for GDC2 is empty.
27	0x1 RO	**MOD_STR_MON_CELLS2GDC1_accept:** Returns the value 1 if the acknowledge FIFO between GDC1 and ISP/SP can accept an acknowledge token from GDC1. Returns the value 0 if this FIFO is full.
26	0x0 RO	**MOD_STR_MON_CELLS2GDC1_valid:** Returns the value 1 if GDC1 sends an acknowledge token using the streaming port connected to the acknowledge FIFO to the ISP/SP. Returns the value 0 if GDC1 does not send an acknowledge token to this FIFO.
25	0x1 RO	**MOD_STR_MON_GDC12CELLS_accept:** Returns the value 1 if GDC1 can accept a command token from the command FIFO between the ISP/SP and GDC1. Returns the value 0 if GDC1 cannot accept a command token.
24	0x0 RO	**MOD_STR_MON_GDC12CELLS_valid:** Returns the value 1 if there is a command available on the command FIFO between SP/ISP and GDC1. Returns the value 0 if the command FIFO for GDC1 is empty.
23	0x1 RO	**MOD_STR_MON_SP2DMA_accept:** Returns the value 1 if the acknowledge FIFO between the DMA and SP can accept an acknowledge token from the DMA. Returns the value 0 if this FIFO is full.
22	0x0 RO	**MOD_STR_MON_SP2DMA_valid:** Returns the value 1 if DMA sends an acknowledge token using the streaming port connected to the acknowledge FIFO to the SP. Returns the value 0 if the DMA does not send an acknowledge token to this FIFO.
21	0x1 RO	**MOD_STR_MON_DMA2SP_accept:** Returns the value 1 if the DMA can accept a command token from the command FIFO between the SP and the DMA. Returns the value 0 if the DMA cannot accept a command token.
20	0x0 RO	**MOD_STR_MON_DMA2SP_valid:** Returns the value 1 if there is a command available on the command FIFO between SP and the DMA. Returns the value 0 if the command FIFO for the DMA is empty.
19	0x1 RO	**MOD_STR_MON_ISP2DMA_accept:** Returns the value 1 if the acknowledge FIFO between the DMA and ISP can accept an acknowledge token from the DMA. Returns the value 0 if this FIFO is full.
18	0x0 RO	**MOD_STR_MON_ISP2DMA_valid:** Returns the value 1 if DMA sends an acknowledge token using the streaming port connected to the acknowledge FIFO to the ISP. Returns the value 0 if the DMA does not send an acknowledge token to this FIFO.



Bit Range	Default and Access	Field Name (ID): Description
17	0x1 RO	**MOD_STR_MON_DMA2ISP_accept:** Returns the value 1 if the DMA can accept a command token from the command FIFO between the SP and the DMA. Returns the value 0 if the DMA cannot accept a command token.
16	0x0 RO	**MOD_STR_MON_DMA2ISP_valid:** Returns the value 1 if there is a command available on the command FIFO between ISP and the DMA. Returns the value 0 if the command FIFO for the DMA is empty.
15	0x0 RO	**MOD_STR_MON_SP2MC_accept:** Returns the value 1 if stream2mem can accept a command token from the command FIFO between the SP and the stream2mem. Returns the value 0 if stream2mem cannot accept a command token.
14	0x0 RO	**MOD_STR_MON_SP2MC_valid:** Returns the value 1 if there is a command available on the command FIFO between the SP and the stream2mem. Returns the value 0 if the command FIFO for the stream2mem is empty.
13	0x1 RO	**MOD_STR_MON_MC2SP_accept:** Returns the value 1 if the acknowledge FIFO between the stream2mem and the SP can accept an acknowledge token from the stream2mem. Returns the value 0 if this FIFO is full.
12	0x0 RO	**MOD_STR_MON_MC2SP_valid:** Returns the value 1 if the stream2mem sends an acknowledge token using its acknowledge output port connected to the acknowledge FIFO between the stream2mem and the SP. Returns the value 0 if the stream2mem does not send an acknowledge token to this FIFO.
11	0x0 RO	**MOD_STR_MON_SP2SIF_accept:** Returns the value 1 if secondary input formatter can accept a command token from the command FIFO between the SP and the secondary input formatter. Returns the value 0 if this FIFO is full.
10	0x0 RO	**MOD_STR_MON_SP2SIF_valid:** Returns the value 1 if there is a command available on the command FIFO between the SP and the secondary input formatter. Returns the value 0 if the command FIFO for the secondary input formatter is empty.
9	0x1 RO	**MOD_STR_MON_SIF2SP_accept:** Returns the value 1 if the acknowledge FIFO between the secondary input formatter and the SP can accept an acknowledge token from the secondary input formatter. Returns the value 0 if this FIFO is full.
8	0x0 RO	**MOD_STR_MON_SIF2SP_valid:** Returns the value 1 if the secondary input formatter sends an acknowledge token using its acknowledge output port connected to the acknowledge FIFO between the secondary input formatter and the SP. Returns the value 0 if the secondary input formatter does not send an acknowledge token to this FIFO.
7	0x0 RO	**MOD_STR_MON_CELLS2PIFB_accept:** Returns the value 1 if primary input formatter B can accept a command token from the command FIFO between the ISP/SP and the primary input formatter B. Returns the value 0 if the primary input formatter B cannot accept a command token.
6	0x0 RO	**MOD_STR_MON_CELLS2PIFB_valid:** Returns the value 1 if there is a command available on the command FIFO between SP/ISP and the primary input formatter B. Returns the value 0 if the command FIFO for the primary input formatter B is empty.
5	0x1 RO	**MOD_STR_MON_PIFB2CELLS_accept:** Returns the value 1 if the acknowledge FIFO between the primary input formatter B and the ISP/SP can accept an acknowledge token from the primary input formatter B. Returns the value 0 if this command FIFO is full.

Bit Range	Default and Access	Field Name (ID): Description
4	0x0 RO	**MOD_STR_MON_PIFB2CELLS_valid:** Returns the value 1 if primary input formatter B sends an acknowledge token using the streaming port connected to the acknowledge FIFO to the ISP/SP. Returns the value 0 if the primary input formatter B does not send an acknowledge token to this FIFO.
3	0x0 RO	**MOD_STR_MON_CELLS2PIFA_accept:** Returns the value 1 if primary input formatter A can accept a command token from the command FIFO between the ISP/SP and the primary input formatter A. Returns the value 0 if the primary input formatter A cannot accept a command token.
2	0x0 RO	**MOD_STR_MON_CELLS2PIFA_valid:** Returns the value 1 if there is a command available on the command FIFO between SP/ISP and the primary input formatter A. Returns the value 0 if the command FIFO for the primary input formatter A is empty.
1	0x1 RO	**MOD_STR_MON_PIFA2CELLS_accept:** Returns the value 1 if the acknowledge FIFO between the primary input formatter A and the ISP/SP can accept an acknowledge token from the primary input formatter A. Returns the value 0 if this command FIFO is full.
0	0x0 RO	**MOD_STR_MON_PIFA2CELLS_valid:** Returns the value 1 if primary input formatter A sends an acknowledge token using the streaming port connected to the acknowledge FIFO to the ISP/SP. Returns the value 0 if the primary input formatter A does not send an acknowledge token to this FIFO.

5.2.9 reg_gp_sp_stream_stat_irq_cond (gpd_gp_reg_reg_gp_sp_stream_stat_irq_cond)—Offset 20h

This register indicates which condition of the SP streaming ports will enable the SP streaming stat IRQ output.

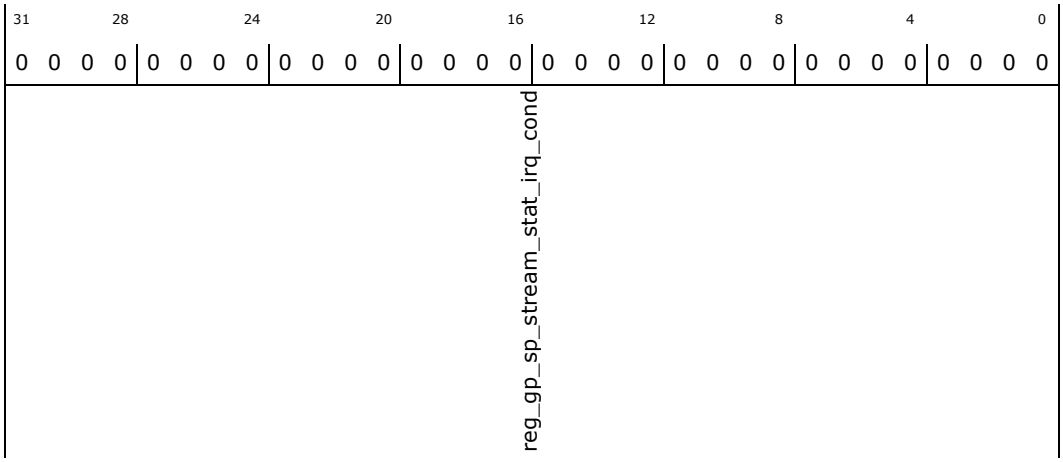
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 20h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_gp_sp_stream_stat_irq_cond:** This register indicates which condition of the SP streaming ports will enable the SP streaming stat IRQ output

5.2.10 reg_gp_sp_stream_stat_b_irq_cond (gpd_gp_reg_reg_gp_sp_stream_stat_b_irq_cond)—Offset 24h

This register indicates which condition of the SP streaming ports b will enable the SP streaming stat b IRQ output

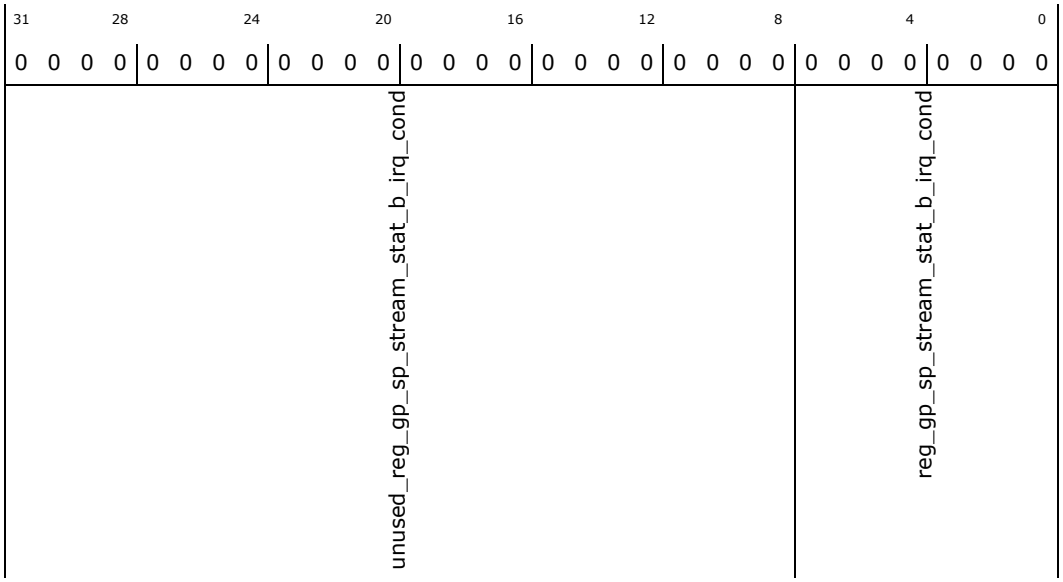
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 24h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:8	0x0 RW	**Reserved (unused_reg_gp_sp_stream_stat_b_irq_cond):** Unused
7:0	0x0 RW	**reg_gp_sp_stream_stat_b_irq_cond:** This register indicates which condition of the SP streaming ports b will enable the SP streaming stat b IRQ output

5.2.11 reg_gp_isp_stream_stat_irq_cond (gpd_gp_reg_reg_gp_isp_stream_stat_irq_cond)—Offset 28h

This register indicates which condition of the ISP streaming ports will enable the ISP streaming stat IRQ output

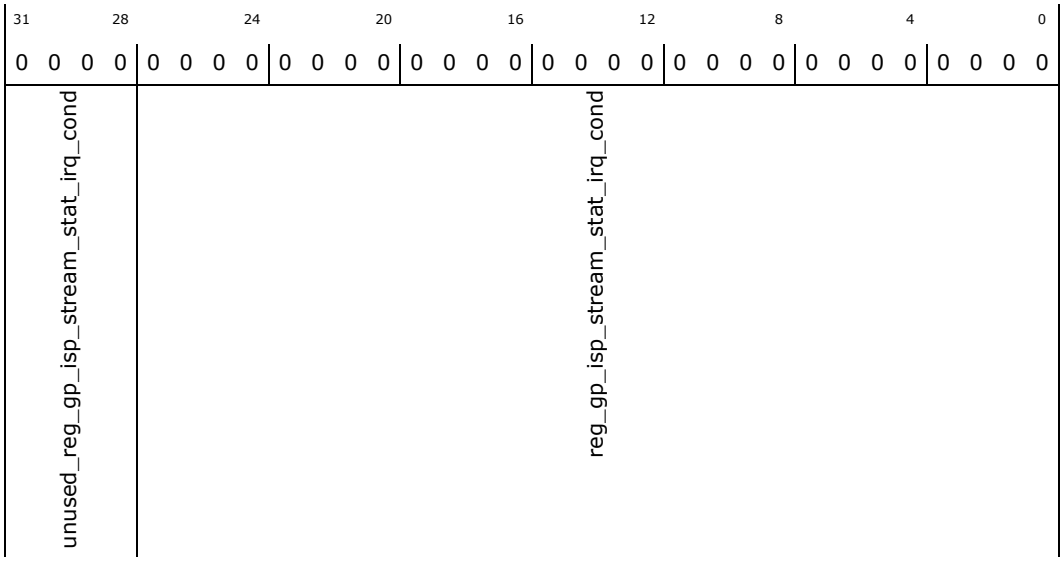
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 28h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:28	0x0 RW	**Reserved (unused_reg_gp_isp_stream_stat_irq_cond):** Unused
27:0	0x0 RW	**reg_gp_isp_stream_stat_irq_cond:** This register indicates which condition of the ISP streaming ports will enable the ISP streaming stat IRQ output

5.2.12 reg_gp_mod_stream_stat_irq_cond (gpd_gp_reg_reg_gp_mod_stream_stat_irq_cond)—Offset 2Ch

This register indicates which condition of the MOD streaming ports will enable the MOD streaming stat IRQ output

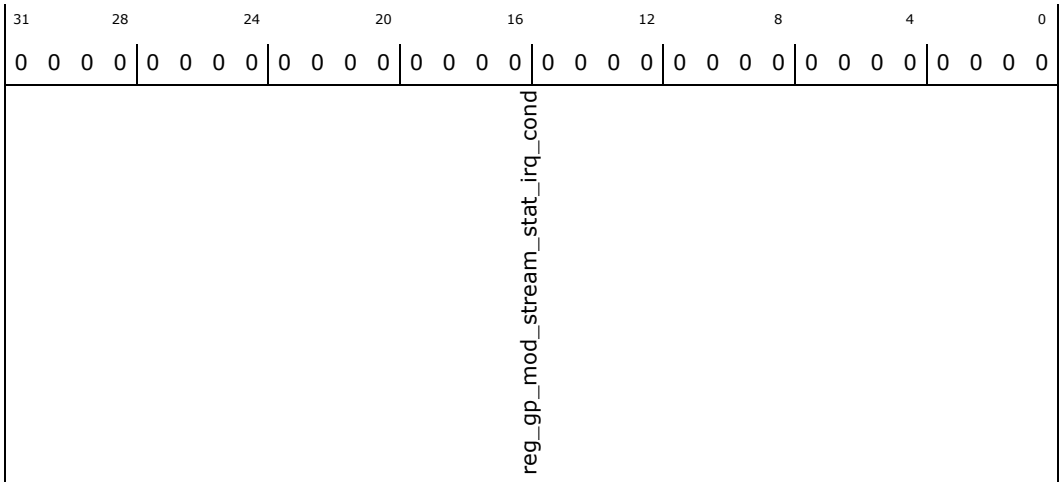
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 2Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_gp_mod_stream_stat_irq_cond:** This register indicates which condition of the MOD streaming ports will enable the MOD streaming stat IRQ output

5.2.13 reg_gp_sp_stream_stat_irq_enable (gpd_gp_reg_reg_gp_sp_stream_stat_irq_enable)—Offset 30h

This register enables the SP streaming stat IRQ output for each of the 16 ports

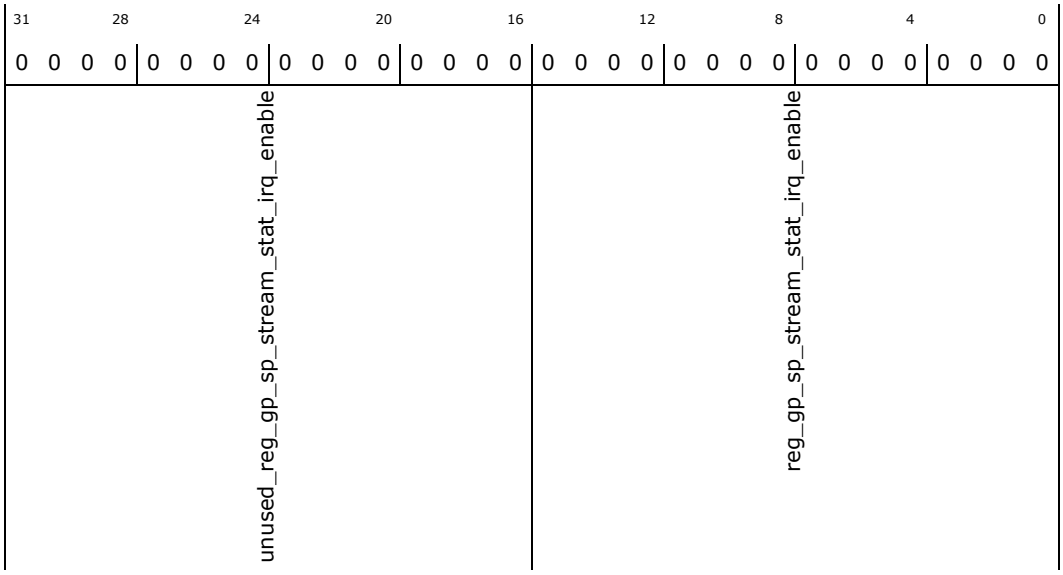
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_reg_gp_sp_stream_stat_irq_enable):** Unused
15:0	0x0 RW	**reg_gp_sp_stream_stat_irq_enable:** This register enables the SP streaming stat IRQ output for each of the 16 ports

5.2.14 reg_gp_sp_stream_stat_b_irq_enable (gpd_gp_reg_reg_gp_sp_stream_stat_b_irq_enable)—Offset 34h

This register enables the SP streaming stat b IRQ output for each of the 4 ports.

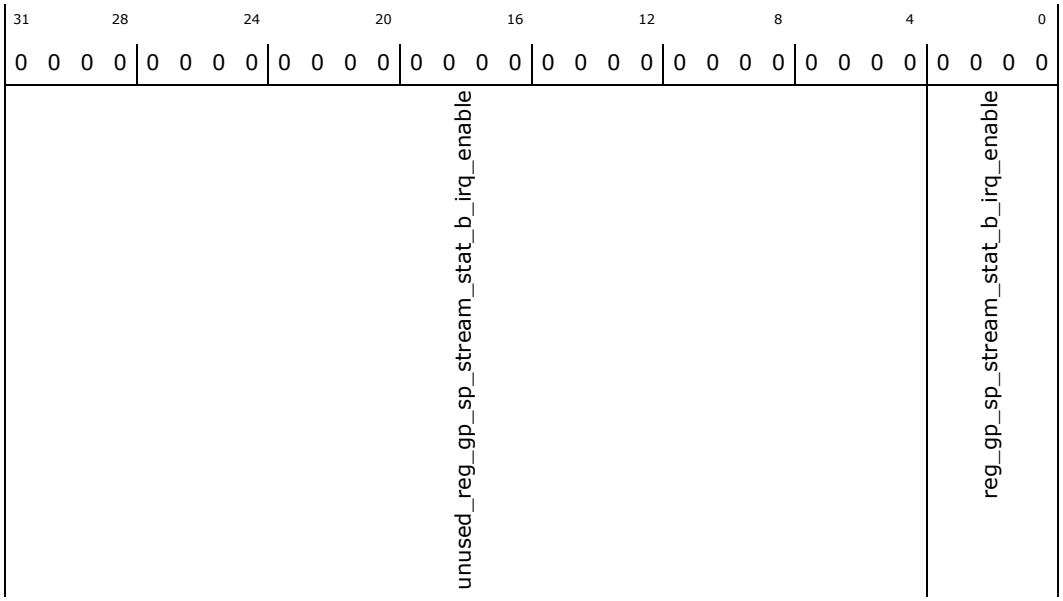
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 34h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RW	**Reserved (unused_reg_gp_sp_stream_stat_b_irq_enable):** Unused
3:0	0x0 RW	**reg_gp_sp_stream_stat_b_irq_enable:** This register enables the SP streaming stat b IRQ output for each of the 4 ports

5.2.15 reg_gp_isp_stream_stat_irq_enable (gpd_gp_reg_reg_gp_isp_stream_stat_irq_enable)—Offset 38h

This register enables the ISP streaming stat IRQ output for each of the 14 ports

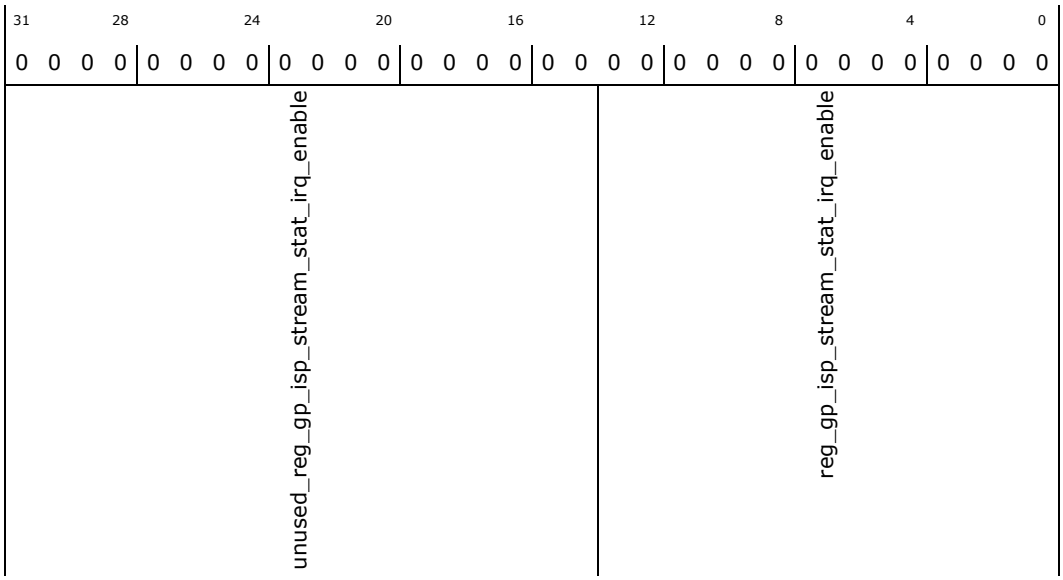
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 38h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:14	0x0 RW	**Reserved (unused_reg_gp_isp_stream_stat_irq_enable):** Unused
13:0	0x0 RW	**reg_gp_isp_stream_stat_irq_enable:** This register enables the ISP streaming stat IRQ output for each of the 14 ports

5.2.16 reg_gp_mod_stream_stat_irq_enable (gpd_gp_reg_reg_gp_mod_stream_stat_irq_enable)—Offset 3Ch

This register enables the MOD streaming stat IRQ output for each of the 16 ports.

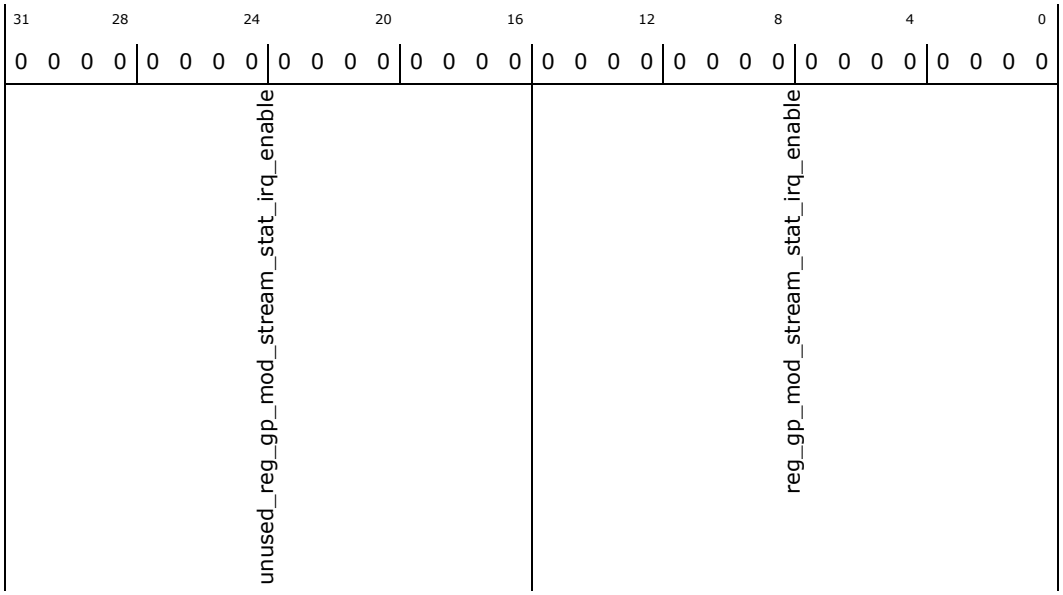
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_reg_gp_mod_stream_stat_irq_enable):** Unused
15:0	0x0 RW	**reg_gp_mod_stream_stat_irq_enable:** This register enables the MOD streaming stat IRQ output for each of the 16 ports

5.2.17 reg_gp_switch_if (gpd_gp_reg_reg_gp_switch_if)—Offset 40h

Selects the control stream switch for the primary input formatter and for primary input formatter b. The input formatters can be controlled by the scalar processor (value=1) or by the ISP (value=0)

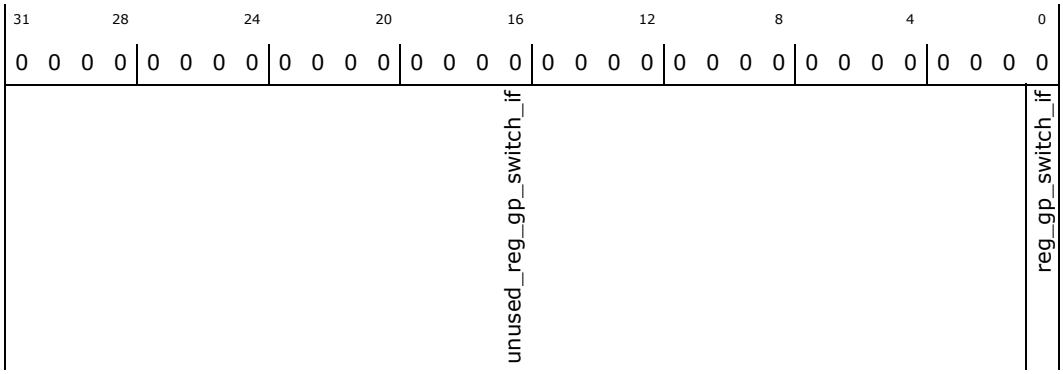
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 40h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_switch_if):** Unused
0	0x0 RW	**reg_gp_switch_if:** Selects the control stream switch for the primary input formatter and for primary input formatter b. The input formatters can be controlled by the scalar processor (value=1) or by the ISP (value=0)

5.2.18 reg_gp_switch_gdc1 (gpd_gp_reg_reg_gp_switch_gdc1)—Offset 44h

Selects the control stream switch for the GDC1. GDC1 can be controlled by the scalar processor (value=1) or the ISP (value=0)

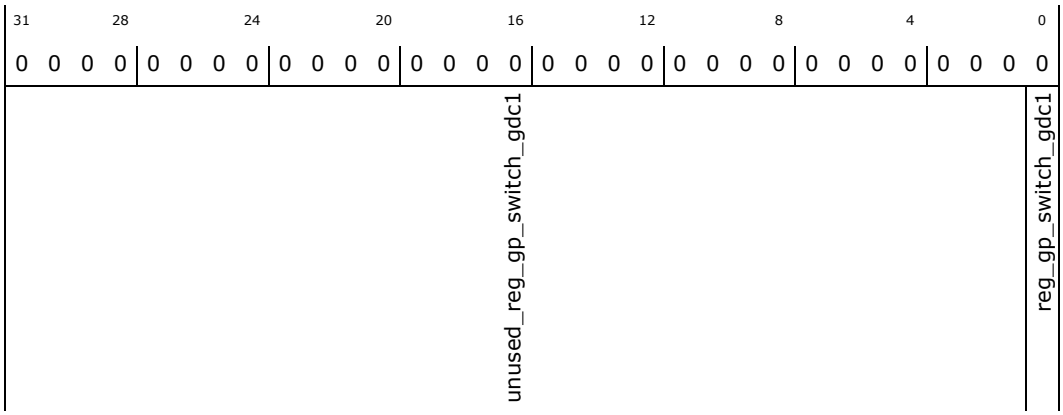
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 44h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_switch_gdc1):** Unused
0	0x0 RW	**reg_gp_switch_gdc1:** Selects the control stream switch for the GDC1. GDC1 can be controlled by the scalar processor (value=1) or the ISP (value=0)

5.2.19 reg_gp_switch_gdc2 (gpd_gp_reg_reg_gp_switch_gdc2)—Offset 48h

Selects the control stream switch for the GDC2. GDC2 can be controlled by the scalar processor (value=1) or the ISP (value=0)

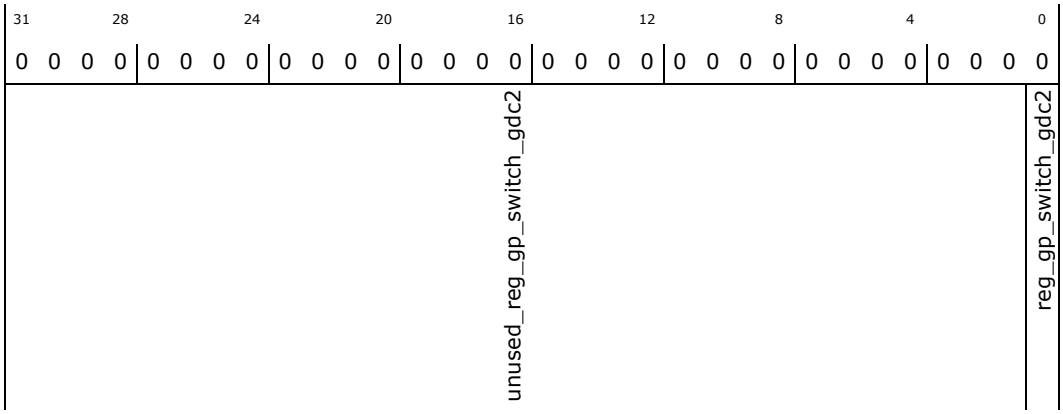
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 48h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_reg_gp_switch_gdc2):** Unused
0	0x0 RW	**reg_gp_switch_gdc2:** Selects the control stream switch for the GDC2. GDC2 can be controlled by the scalar processor (value=1) or the ISP (value=0)

5.2.20 reg_gp_srst (gpd_gp_reg_reg_gp_srst)—Offset 4Ch

Soft reset for several modules in the system. If '1' is written to a bit, the module(s) connected to that bit are held in reset until a '0' is written to that bit.

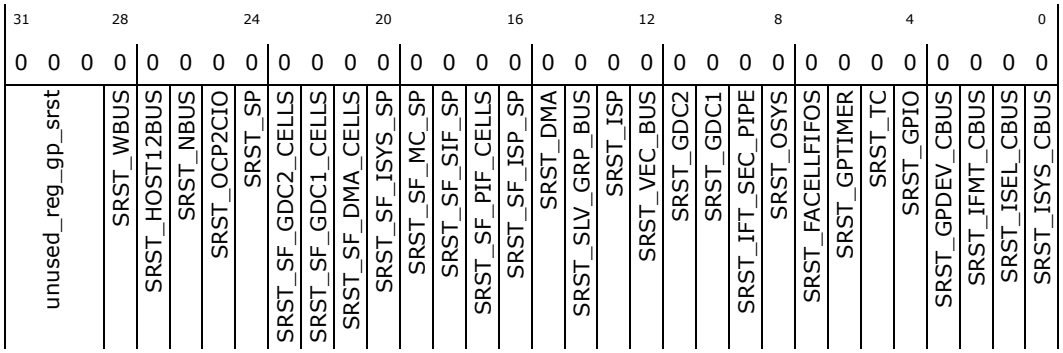
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:29	0x0 RO	**Reserved (unused_reg_gp_srst):** Unused
28	0x0 RW	**SRST_WBUS:** soft reset bit for the wide bus
27	0x0 RW	**SRST_HOST12BUS:** soft reset bit for the bus from host to FIFO adapters
26	0x0 RW	**SRST_NBUS:** soft reset bit for the narrow bus
25	0x0 RW	**SRST_OCP2CIO:** soft reset bit for the OCP2CIO converter
24	0x0 RW	**SRST_SP:** soft reset bit for the SP
23	0x0 RW	**SRST_SF_GDC2_CELLS:** soft reset bit for the FIFOs between the GDC2 and the cells
22	0x0 RW	**SRST_SF_GDC1_CELLS:** soft reset bit for the FIFOs between the GDC1 and the cells
21	0x0 RW	**SRST_SF_DMA_CELLS:** soft reset bit for the FIFOs between the DMA and the cells
20	0x0 RW	**SRST_SF_ISYS_SP:** soft reset bit for the FIFOs between the input system and the SP
19	0x0 RW	**SRST_SF_MC_SP:** soft reset bit for the FIFOs between the stream2memory and the SP
18	0x0 RW	**SRST_SF_SIF_SP:** soft reset bit for the FIFOs between the secondary input formatter and the SP
17	0x0 RW	**SRST_SF_PIF_CELLS:** soft reset bit for the FIFOs between the primary input formatters and the cells
16	0x0 RW	**SRST_SF_ISP_SP:** soft reset bit for the FIFOs between SP and ISP
15	0x0 RW	**SRST_DMA:** soft reset bit for the DMA
14	0x0 RW	**SRST_SLV_GRP_BUS:** soft reset bit for the slave group bus

Bit Range	Default and Access	Field Name (ID): Description
13	0x0 RW	**SRST_ISP:** soft reset bit for the ISP (vector processor)
12	0x0 RW	**SRST_VEC_BUS:** soft reset bit for the vector bus
11	0x0 RW	**SRST_GDC2:** soft reset bit for the GDC2 block
10	0x0 RW	**SRST_GDC1:** soft reset bit for the GDC1 block
9	0x0 RW	**SRST_IFT_SEC_PIPE:** soft reset bit for the CIO pipeline after the secondary input formatter
8	0x0 RW	**SRST_OSYS:** soft reset bit for the blocks in the output system cluster
7	0x0 RW	**SRST_FACELLFIFOS:** soft reset bit for the FIFO's connected to the FIFO adapter between host and cells
6	0x0 RW	**SRST_GPTIMER:** soft reset bit for the GP timer block
5	0x0 RW	**SRST_TC:** soft reset bit for the timed controller block
4	0x0 RW	**SRST_GPIO:** soft reset bit for the GPIO block
3	0x0 RW	**SRST_GPDEV_CBUS:** soft reset bit for the gp devices cluster control bus
2	0x0 RW	**SRST_IFMT_CBUS:** soft reset bit for the input formatting cluster control bus
1	0x0 RW	**SRST_ISEL_CBUS:** soft reset bit for the input selector cluster control bus
0	0x0 RW	**SRST_ISYS_CBUS:** soft reset bit for the input system control bus

5.2.21 reg_gp_slv_reg_srst (gpd_gp_reg_reg_gp_slv_reg_srst)—Offset 50h

Soft reset for the slave accessible registers in some blocks. If '1' is written to a bit, the attached registers get their default value. They can only be overwritten after writing a '0' to this bit

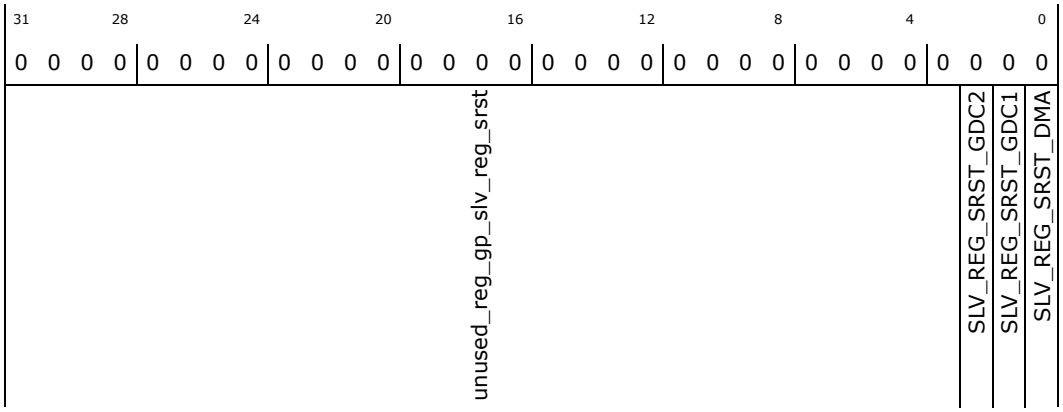
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 50h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RO	**Reserved (unused_reg_gp_slv_reg_srst):** Unused
2	0x0 RW	**SLV_REG_SRST_GDC2:** soft reset bit for the slave registers in the GDC2
1	0x0 RW	**SLV_REG_SRST_GDC1:** soft reset bit for the slave registers in the GDC1
0	0x0 RW	**SLV_REG_SRST_DMA:** soft reset bit for the slave registers in the DMA

5.2.22 reg_gpd_gp_reg_reg_gp_isel_switch_type (gpd_gp_reg_reg_gp_isel_switch)—Offset 54h

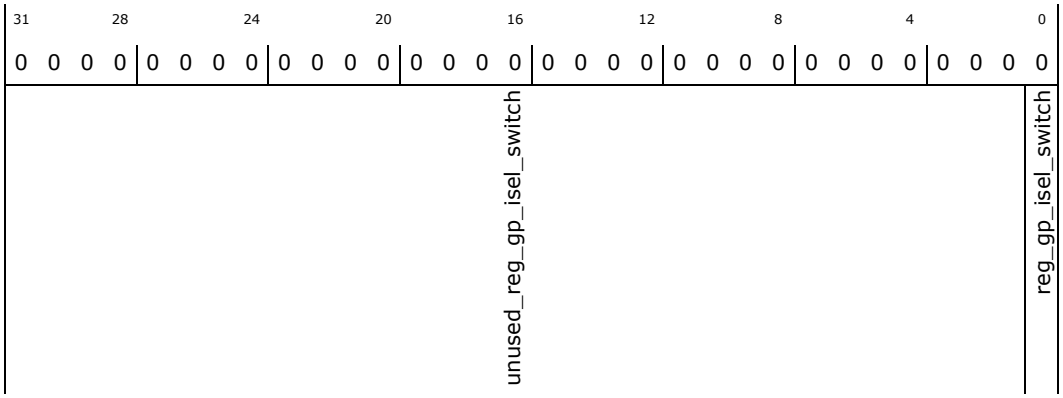
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 54h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**unused_reg_gp_isel_switch:** Unused
0	0x0 RW	**reg_gp_isel_switch:** Selects whether the legacy 2400 input system is used, value=0, or the new 2401 input system, value=1

5.2.23 FifoWriteCmd (gpd_tc_FifoWriteCmd)—Offset 100h

Timed controller Command input. A Timed Controller command consists of 5 32-bit tokens that need to be written sequentially to this register location

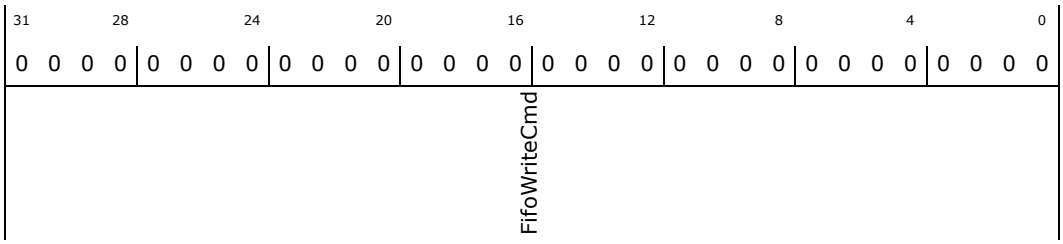
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 100h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 WO	**FifoWriteCmd:** Timed controller Command input. A Timed Controller command consists of 5 32-bit tokens that need to be written sequentially to this register location

5.2.24 reg_gpio_doe (gpd_c_gpio_reg_gpio_doe)—Offset 400h

indicates for each bit whether it is intended to be an input (value='0') or an output (value='1')

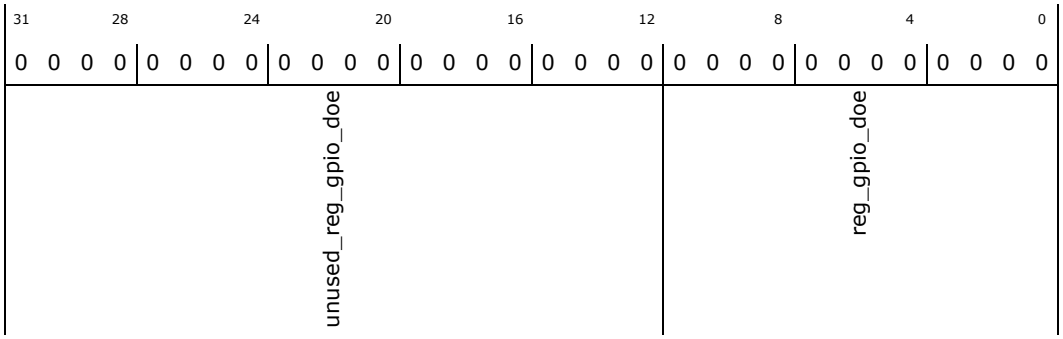
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 400h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_doe):** Unused
11:0	0x0 RW	**reg_gpio_doe:** indicates for each bit whether it is intended to be an input (value='0') or an output (value='1')

5.2.25 reg_gpio_do_select (gpd_c_gpio_reg_gpio_do_select)—Offset 404h

indicates for each bit of gpio_do whether it should have the value from source 0 (value='0') or source 1 (value='1').

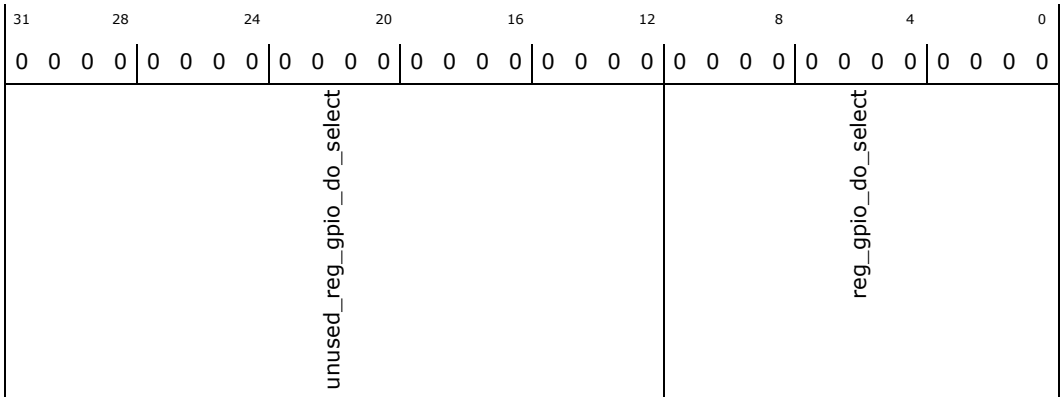
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 404h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_do_select):** Unused
11:0	0x0 RW	**reg_gpio_do_select:** indicates for each bit of gpio_do whether it should have the value from source 0 (value='0') or source 1 (value='1').

5.2.26 reg_gpio_do_0 (gpd_c_gpio_reg_gpio_do_0)—Offset 408h

Provides the value for each of the output bits (source 0)

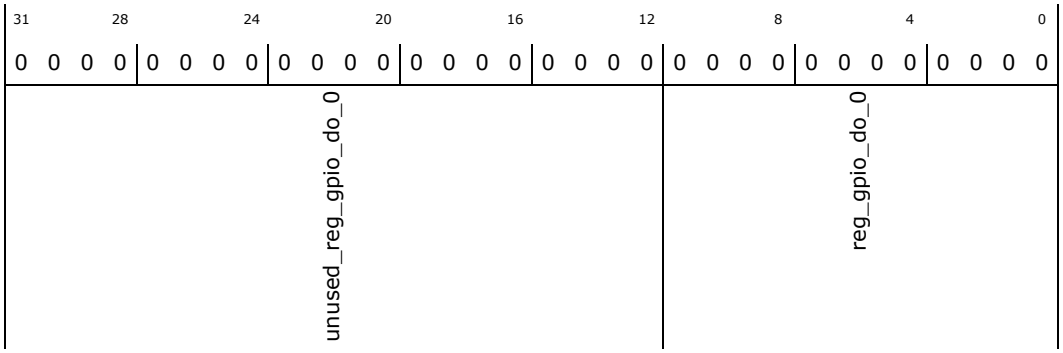
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 408h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_do_0):** Unused
11:0	0x0 RW	**reg_gpio_do_0:** provides the value for each of the output bits (source 0)

5.2.27 reg_gpio_do_1 (gpd_c_gpio_reg_gpio_do_1)—Offset 40Ch

Provides the value for each of the output bits (source 1)

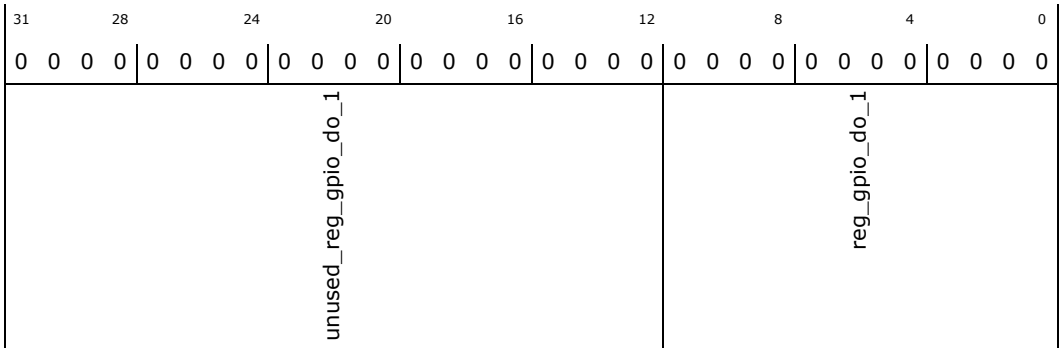
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 40Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_do_1):** Unused

Bit Range	Default and Access	Field Name (ID): Description
11:0	0x0 RW	**reg_gpio_do_1:** provides the value for each of the output bits (source 1)

5.2.28 reg_gpio_do_pwm_cnt_0 (gpd_c_gpio_reg_gpio_do_pwm_cnt_0)—Offset 410h

indicates duty cycle for PWM output 0. value d means duty cycle d/64

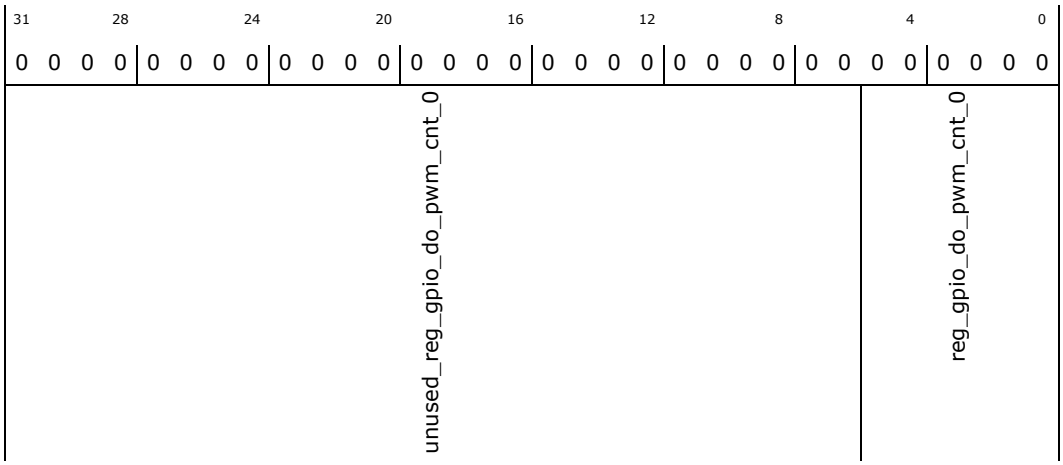
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 410h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_reg_gpio_do_pwm_cnt_0):** Unused
5:0	0x0 RW	**reg_gpio_do_pwm_cnt_0:** indicates duty cycle for PWM output 0. value d means duty cycle d/64

5.2.29 reg_gpio_do_pwm_cnt_1 (gpd_c_gpio_reg_gpio_do_pwm_cnt_1)—Offset 414h

Indicates duty cycle for PWM output 1. Value d means duty cycle d/64.

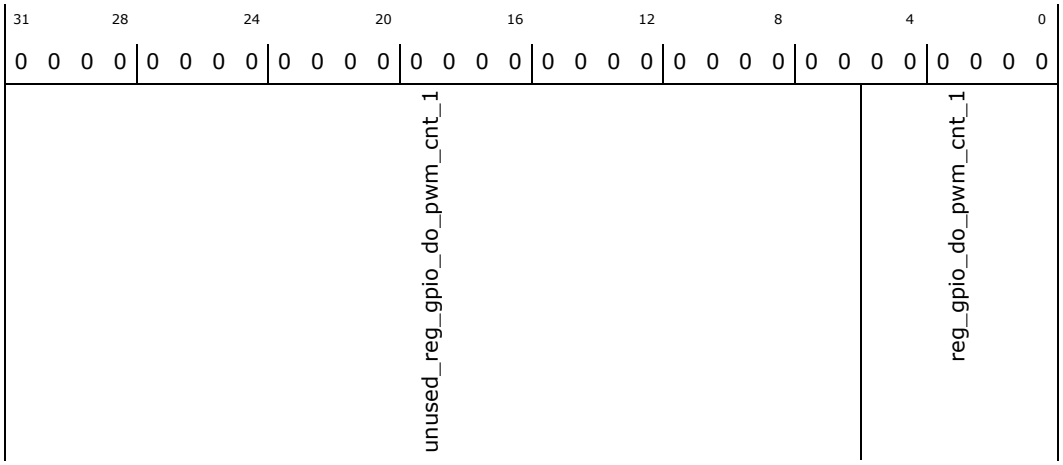
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 414h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_reg_gpio_do_pwm_cnt_1):** Unused
5:0	0x0 RW	**reg_gpio_do_pwm_cnt_1:** indicates duty cycle for PWM output 1. value d means duty cycle d/64

5.2.30 reg_gpio_do_pwm_cnt_2 (gpd_c_gpio_reg_gpio_do_pwm_cnt_2)—Offset 418h

Indicates duty cycle for PWM output 2. Value d means duty cycle d/64.

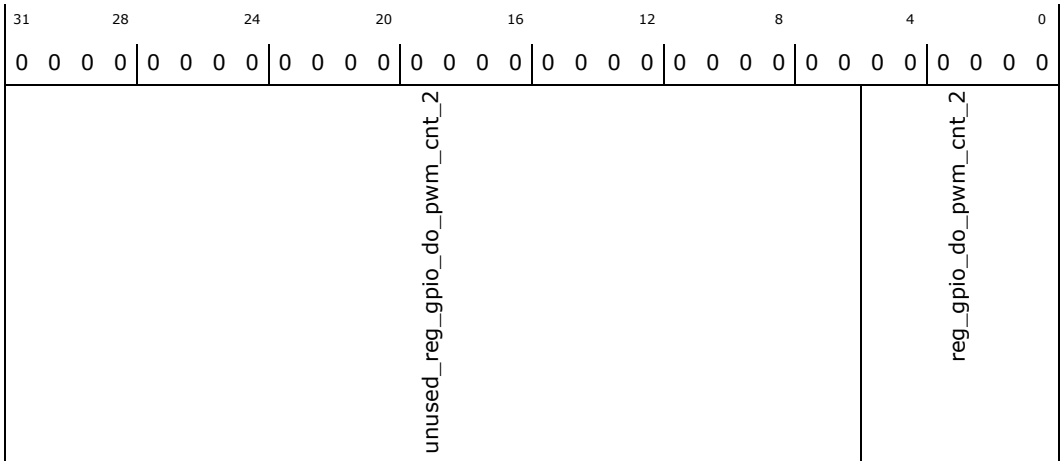
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 418h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_reg_gpio_do_pwm_cnt_2):** Unused
5:0	0x0 RW	**reg_gpio_do_pwm_cnt_2:** indicates duty cycle for PWM output 2. Value d means duty cycle d/64.

5.2.31 reg_gpio_do_pwm_cnt_3 (gpd_c_gpio_reg_gpio_do_pwm_cnt_3)—Offset 41Ch

Indicates duty cycle for PWM output 3. Value d means duty cycle d/64

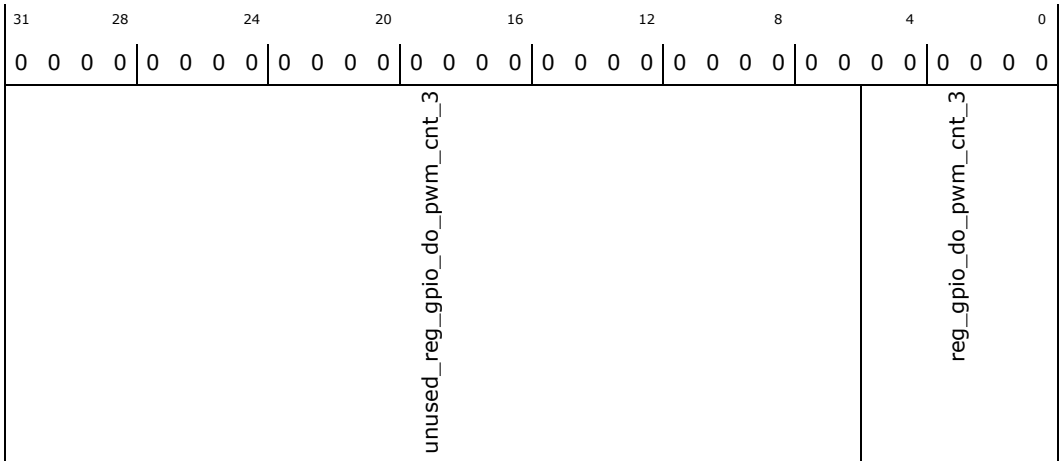
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_reg_gpio_do_pwm_cnt_3):** Unused
5:0	0x0 RW	**reg_gpio_do_pwm_cnt_3:** indicates duty cycle for PWM output 3. value d means duty cycle d/64

5.2.32 reg_gpio_do_pwm_main_cnt (gpd_c_gpio_reg_gpio_do_pwm_main_cnt)—Offset 420h

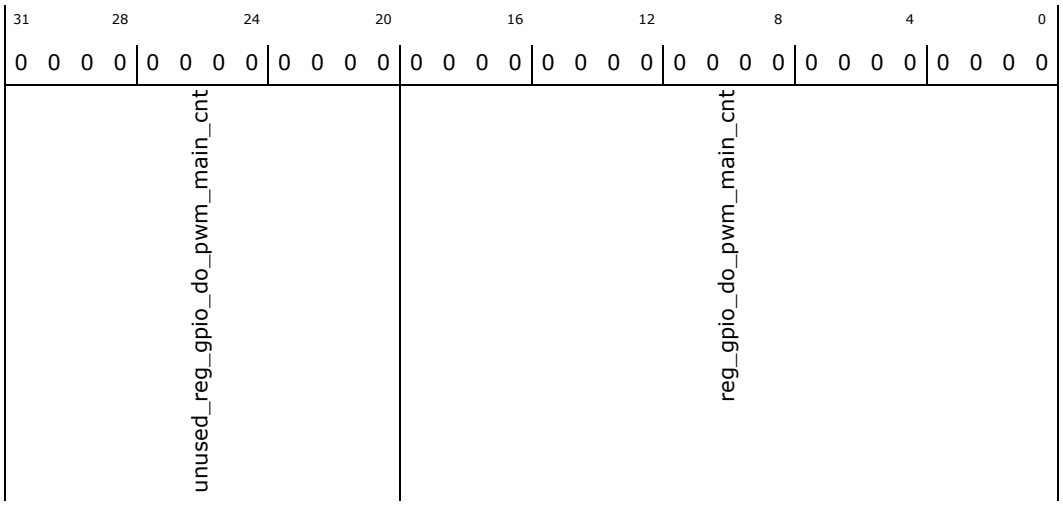
Indicates wrapping value for PWM main counter.**Access Method**

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 420h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:20	0x0 RW	**Reserved (unused_reg_gpio_do_pwm_main_cnt):** Unused
19:0	0x0 RW	**reg_gpio_do_pwm_main_cnt:** indicates wrapping value for PWM main counter

5.2.33 reg_gpio_do_pwm_enable (gpd_c_gpio_reg_gpio_do_pwm_enable)—Offset 424h

Indicates per bit whether PWM is on (value='1') or output is fixed '0' (value='0').

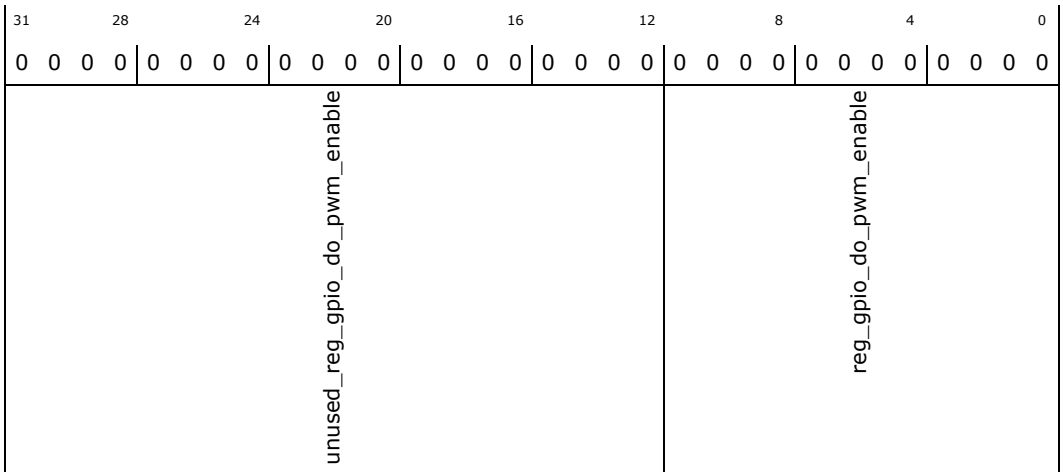
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 424h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_do_pwm_enable):** Unused
11:0	0x0 RW	**reg_gpio_do_pwm_enable:** indicates per bit whether PWM is on (value='1') or output is fixed '0' (value='0')

5.2.34 reg_gpio_di_debouncemethod (gpd_c_gpio_reg_gpio_di_debouncemethod)—Offset 428h

Indicates for each input bit which debouncing counter value is chosen: '00': debounce_cnt0, '01': debounce_cnt1, '10': debounce_cnt2, '11': debounce_cnt3'

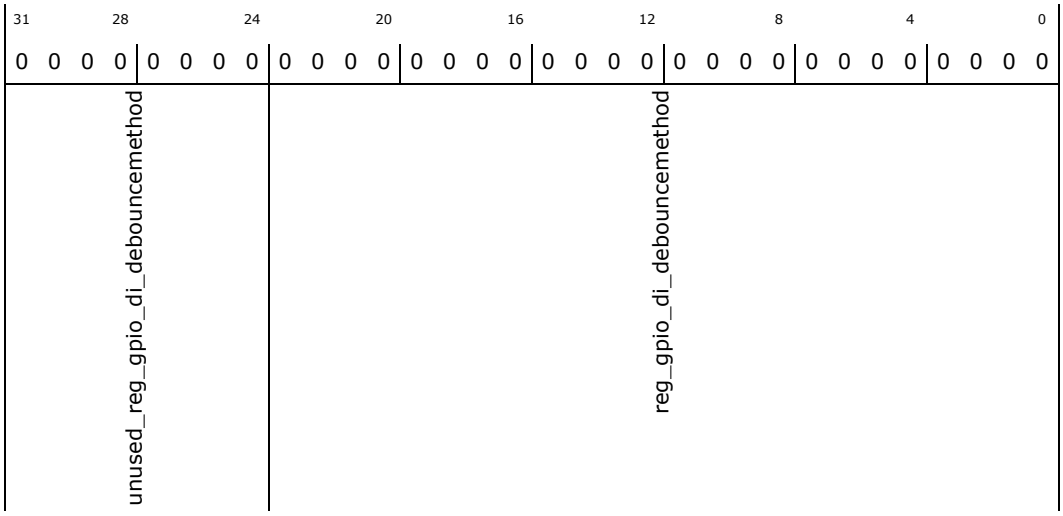
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 428h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_reg_gpio_di_debouncemethod):** Unused
23:0	0x0 RW	**reg_gpio_di_debouncemethod:** indicates for each input bit which debouncing counter value is chosen: '00': debounce_cnt0, '01': debounce_cnt1, '10': debounce_cnt2, '11': debounce_cnt3'

5.2.35 reg_gpio_di_debounce_cnt0 (gpd_c_gpio_reg_gpio_di_debounce_cnt0)—Offset 42Ch

Indicates the period an input has to be stable before passing its value to the output*.

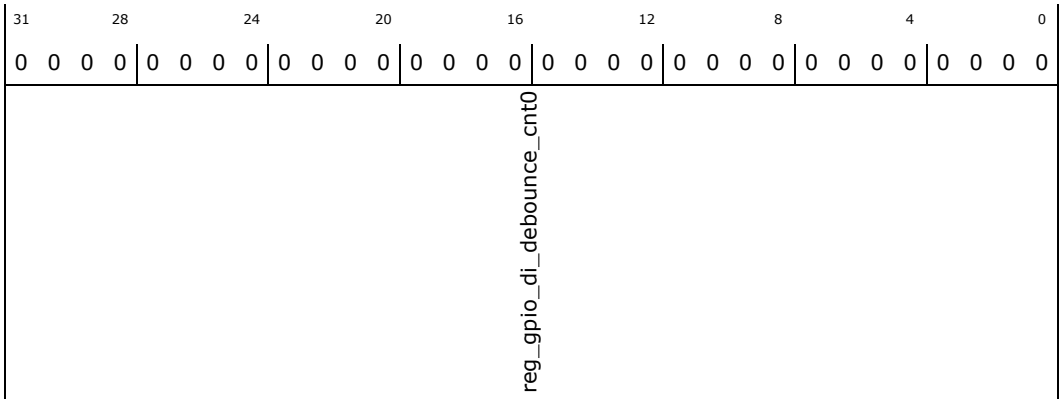
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 42Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_gpio_di_debounce_cnt0:** Indicates the period an input has to be stable before passing its value to the output*

5.2.36 reg_gpio_di_debounce_cnt1 (gpd_c_gpio_reg_gpio_di_debounce_cnt1)—Offset 430h

Indicates the period an input has to be stable before passing its value to the output*.

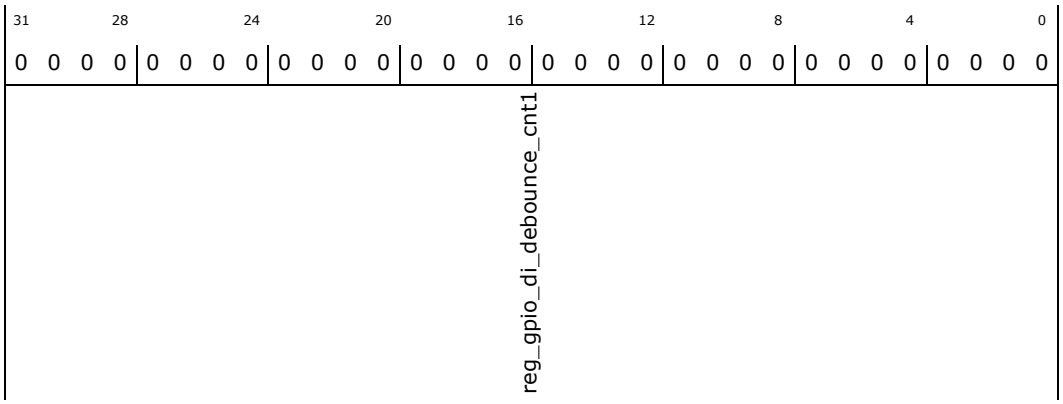
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 430h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_gpio_di_debounce_cnt1:** Indicates the period an input has to be stable before passing its value to the output*

5.2.37 reg_gpio_di_debounce_cnt2 (gpd_c_gpio_reg_gpio_di_debounce_cnt2)—Offset 434h

Indicates the period an input has to be stable before passing its value to the output.

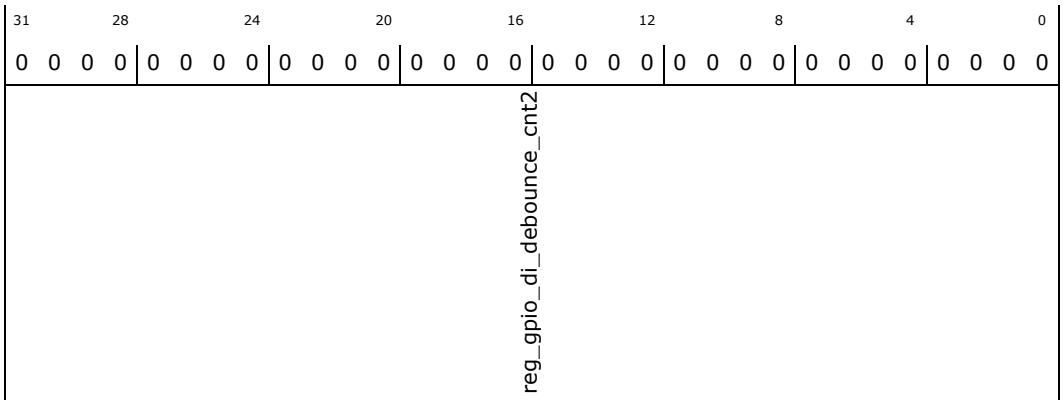
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 434h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_gpio_di_debounce_cnt2:** Indicates the period an input has to be stable before passing its value to the output

5.2.38 reg_gpio_di_debounce_cnt3 (gpd_c_gpio_reg_gpio_di_debounce_cnt3)—Offset 438h

Indicates the period an input has to be stable before passing its value to the output

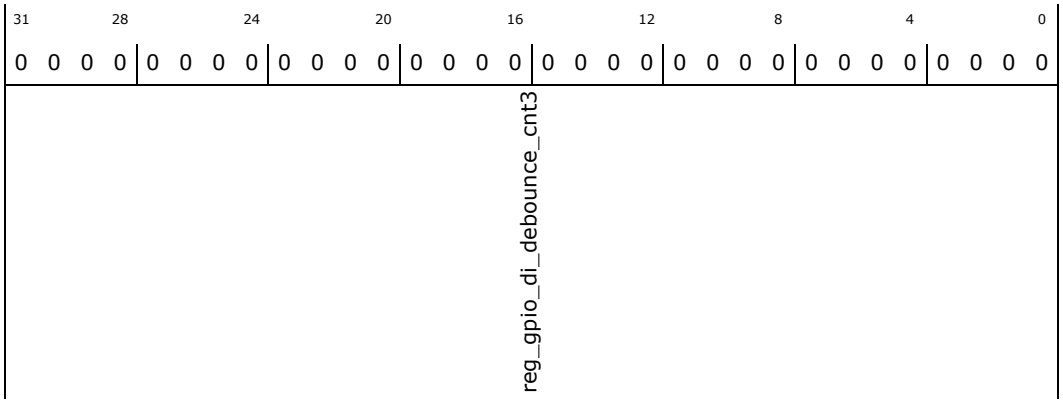
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 438h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_gpio_di_debounce_cnt3:** Indicates the period an input has to be stable before passing its value to the output

5.2.39 reg_gpio_di_activelevel (gpd_c_gpio_reg_gpio_di_activelevel)—Offset 43Ch

Indicates for each bit whether it is intended to be active low (value='0') or active high (value='1').

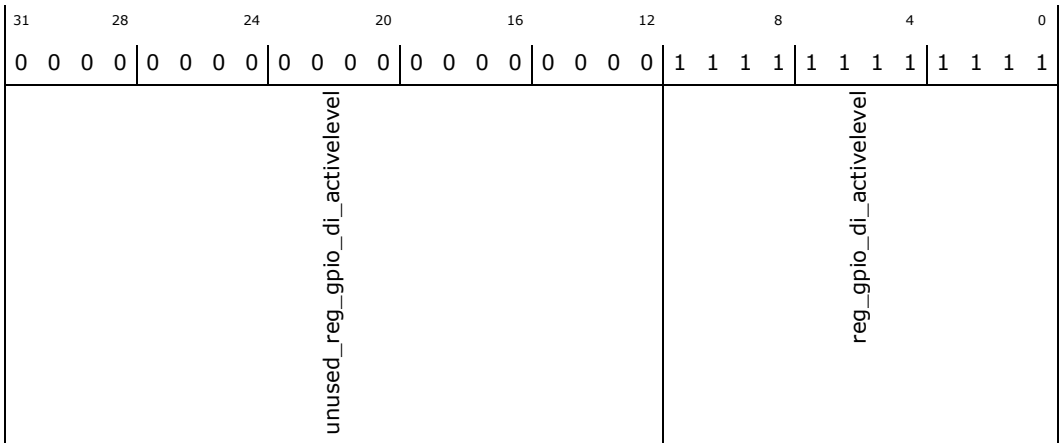
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 43Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000FFFh



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_di_activelevel):** Unused
11:0	0xfff RW	**reg_gpio_di_activelevel:** indicates for each bit whether it is intended to be active low (value='0') or active high (value='1').

5.2.40 reg_gpio_di (gpd_c_gpio_reg_gpio_di)—Offset 440h

Contains the values of all debounced, active level compensated inputs

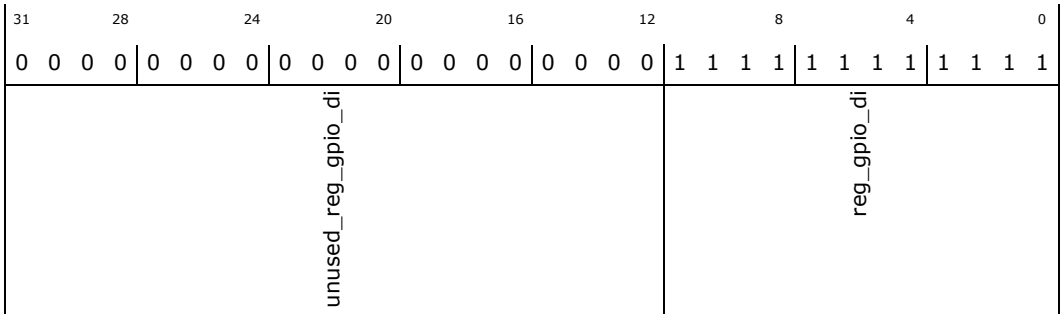
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 440h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000FFFh



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_reg_gpio_di):** Unused
11:0	0xfff RO	**reg_gpio_di:** contains the values of all debounced, active level compensated inputs

5.2.41 reg_irq_edge (gpd_irq_ctrl_reg_irq_edge)—Offset 500h

indicates for each bit whether an interrupt request should be generated on a falling edge (value='0') or a rising edge (value='1').

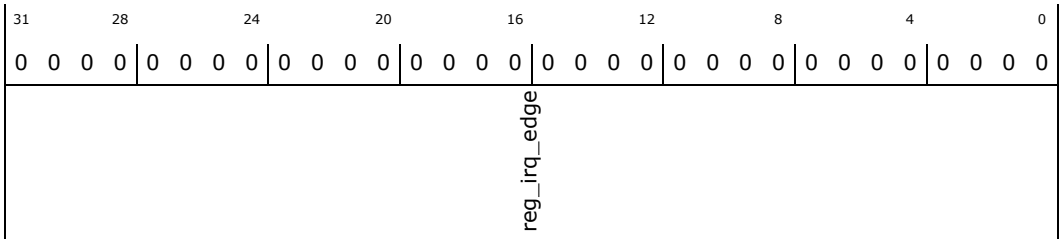
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 500h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_irq_edge:** indicates for each bit whether an interrupt request should be generated on a falling edge (value='0') or a rising edge (value='1').

5.2.42 reg_irq_mask (gpd_irq_ctrl_reg_irq_mask)—Offset 504h

Indicates for each bit of irq_di whether it can generate an interrupt request (value='1') or not (value='0'). Setting will affect reg_irq_value as well as IRQ output pin

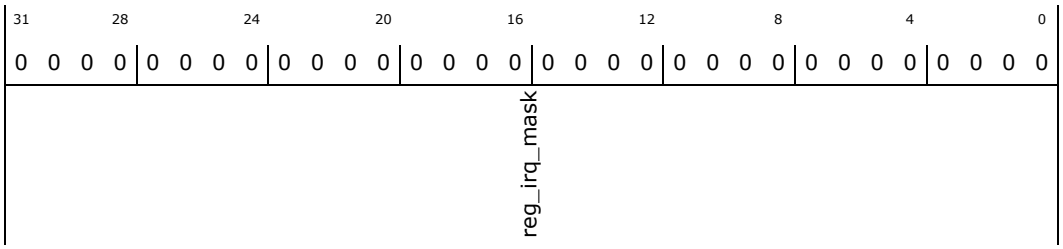
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 504h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_irq_mask:** indicates for each bit of irq_di whether it can generate an interrupt request (value='1') or not (value='0'). Setting will affect reg_irq_value as well as IRQ output pin

5.2.43 reg_irq_status (gpd_irq_ctrl_reg_irq_status)—Offset 508h

Indicates for each bit whether a non-masked interrupt has been generated (value='1'). Can be cleared by writing a '1' into the corresponding bit of the req_irq_clear register.

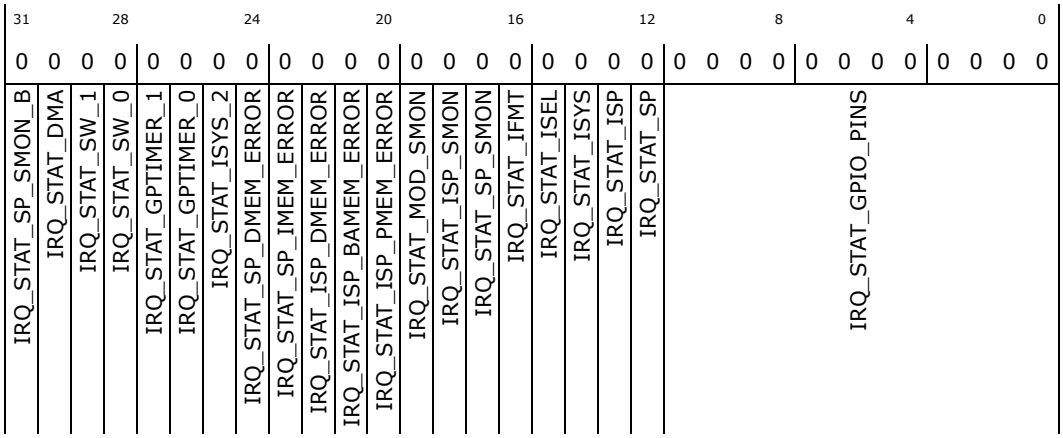
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 508h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31	0x0 RO	**IRQ_STAT_SP_SMON_B:** Represents the IRQ status of the irq_out from the SP streaming monitor b
30	0x0 RO	**IRQ_STAT_DMA:** Represents the IRQ status of the DMA
29	0x0 RO	**IRQ_STAT_SW_1:** Represents the IRQ status of the GP register IRQ SW 1
28	0x0 RO	**IRQ_STAT_SW_0:** Represents the IRQ status of the GP register IRQ SW 0
27	0x0 RO	**IRQ_STAT_GPTIMER_1:** Represents the IRQ status of the IRQ[1] out signal from the GP Timer block
26	0x0 RO	**IRQ_STAT_GPTIMER_0:** Represents the IRQ status of the IRQ[0] out signal from the GP Timer block
25	0x0 RO	**IRQ_STAT_ISYS_2:** Represents the IRQ status of the IRQ out signal from the input system
24	0x0 RO	**IRQ_STAT_SP_DMEM_ERROR:** Represents the IRQ status of the error signal from the SP data memory
23	0x0 RO	**IRQ_STAT_SP_IMEM_ERROR:** Represents the IRQ status of the error signal from the SP instruction cache memory
22	0x0 RO	**IRQ_STAT_ISP_DMEM_ERROR:** Represents the IRQ status of the error signal from the ISP data memory
21	0x0 RO	**IRQ_STAT_ISP_BAMEM_ERROR:** Represents the IRQ status of the error signal from the ISP vector memory
20	0x0 RO	**IRQ_STAT_ISP_PMEM_ERROR:** Represents the IRQ status of the error signal from the ISP program memory

Bit Range	Default and Access	Field Name (ID): Description
19	0x0 RO	**IRQ_STAT_MOD_SMON:** Represents the IRQ status of the irq_out from the MOD streaming monitor
18	0x0 RO	**IRQ_STAT_ISP_SMON:** Represents the IRQ status of the irq_out from the ISP streaming monitor
17	0x0 RO	**IRQ_STAT_SP_SMON:** Represents the IRQ status of the irq_out from the SP streaming monitor
16	0x0 RO	**IRQ_STAT_IFMT:** Represents the IRQ status of the irq_out from the input formatting subsystem
15	0x0 RO	**IRQ_STAT_ISEL:** Represents the IRQ status of the irq_out from the input selector
14	0x0 RO	**IRQ_STAT_ISYS:** Represents the IRQ status of the irq_out from the input system
13	0x0 RO	**IRQ_STAT_ISP:** Represents the IRQ status of the irq_out from isp2300
12	0x0 RO	**IRQ_STAT_SP:** Represents the IRQ status of the irq_out from scalar processor
11:0	0x0 RO	**IRQ_STAT_GPIO_PINS:** Represents the IRQ status of the - potentially debounced - GPIO input pins

5.2.44 reg_irq_clear (gpd_irq_ctrl_reg_irq_clear)—Offset 50Ch

Clears (set to '0') bits in reg_irq_status. When writing a '1' into a bit of this register, the corresponding bit in the req_irq_status is cleared. When writing a '0' into a bit of this register, the corresponding bit in the req_irq_status is not affected.

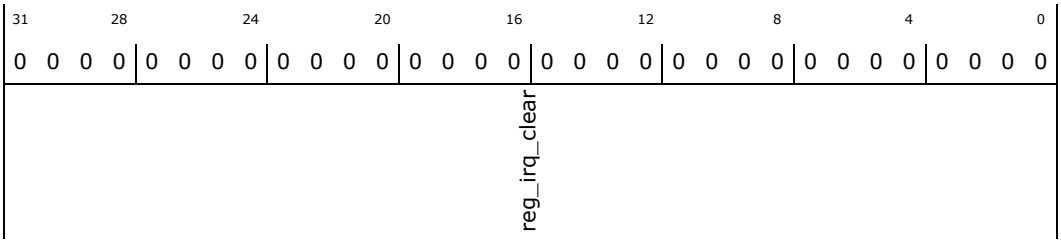
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 50Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 WO	**reg_irq_clear:** Clears (set to '0') bits in reg_irq_status. When writing a '1' into a bit of this register, the corresponding bit in the req_irq_status is cleared. When writing a '0' into a bit of this register, the corresponding bit in the req_irq_status is not affected.

5.2.45 reg_irq_enable (gpd_irq_ctrl_reg_irq_enable)—Offset 510h

Indicates for each bit whether an interrupt cause as monitored by the req_irq_status register also affects the IRQ pin (value='1') or not (value='0')

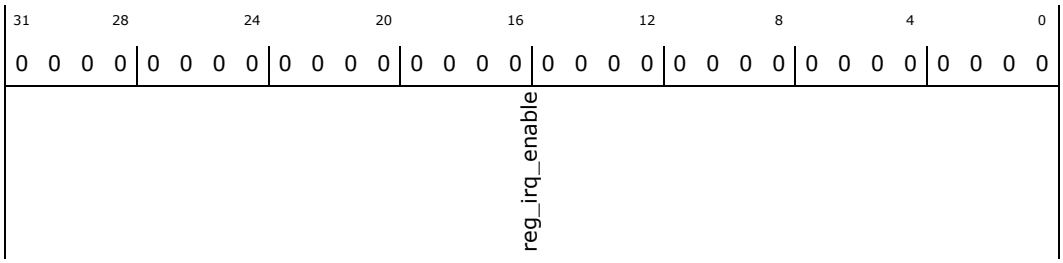
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 510h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_irq_enable:** Indicates for each bit whether an interrupt cause as monitored by the req_irq_status register also affects the IRQ pin (value='1') or not (value='0')

5.2.46 reg_irq_level_not_pulse (gpd_irq_ctrl_reg_irq_level_not_pulse)—Offset 514h

Indicates for each bit whether an interrupt cause is translated into a pulse (value='0') or into a constant level '1' (value='1') on the IRQ pin

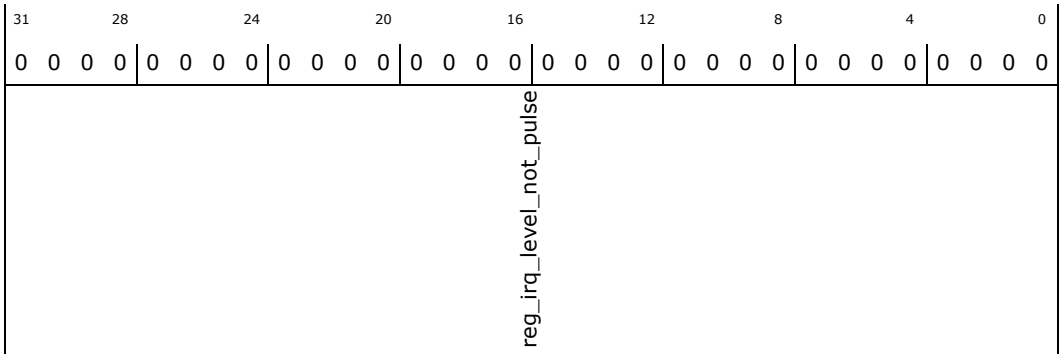
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 514h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_irq_level_not_pulse:** Indicates for each bit whether an interrupt cause is translated into a pulse (value='0') or into a constant level '1' (value='1') on the IRQ pin

5.2.47 reg_irq_str_out_enable (gpd_irq_ctrl_reg_irq_str_out_enable)—Offset 518h

Indicates for each bit whether an interrupt cause as monitored by the req_irq_status register also results in a send token on the irq_str_out port (value='1') or not (value='0')

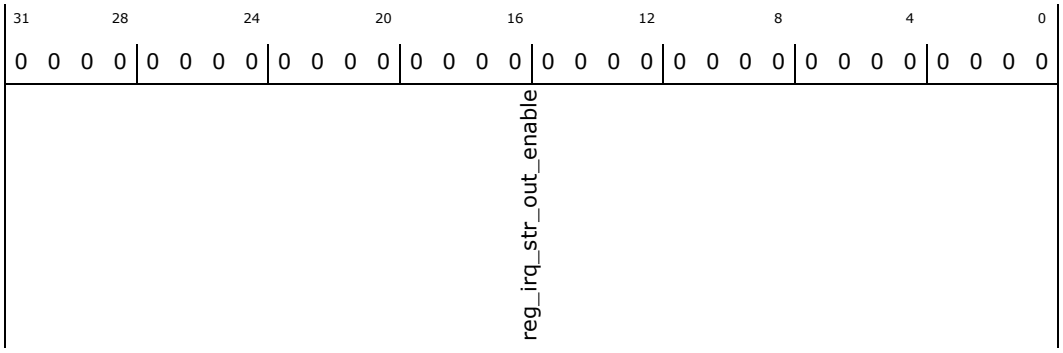
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 518h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**reg_irq_str_out_enable:** Indicates for each bit whether an interrupt cause as monitored by the req_irq_status register also results in a send token on the irq_str_out port (value='1') or not (value='0')

5.2.48 reg_reset (gpd_gptimer_reg_reset)—Offset 600h

GP Timer reset. Write '1' to bit x to reset timer x. Write 0xFF to reset all timers.

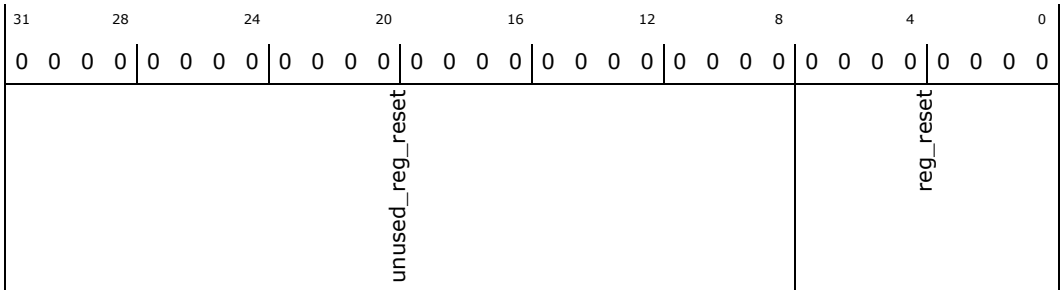
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 600h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:8	0x0 RW	**Reserved (unused_reg_reset):** Unused
7:0	0x0 WO	**reg_reset:** GP Timer reset. Write '1' to bit x to reset timer x. Write 0xFF to reset all timers.

5.2.49 overall_enable (gpd_gptimer_overall_enable)—Offset 604h

GP Timer enable. Write '1' to enable all enabled timers, write '0' to disable all timers.

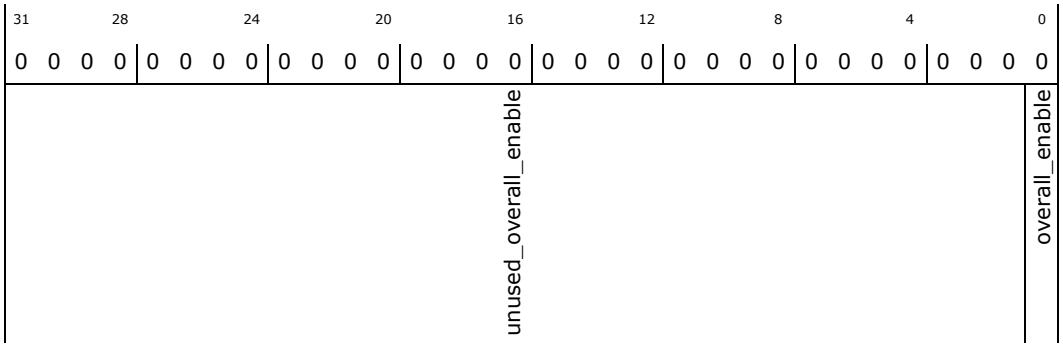
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 604h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_overall_enable):** Unused
0	0x0 RW	**overall_enable:** GP Timer enable. Write '1' to enable all enabled timers, write '0' to disable all timers.

5.2.50 enable_timer_0 (gpd_gptimer_enable_timer_0)—Offset 608h

GP Timer enable. Write '1' to enable timer 0. Write '0' to disable timer 0.

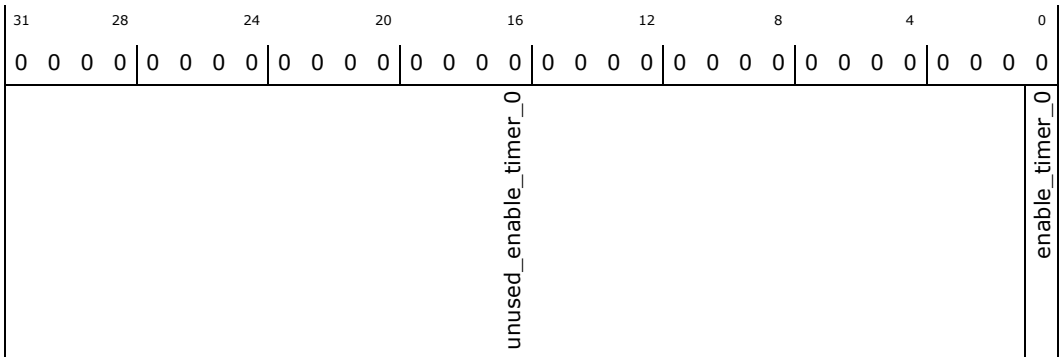
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 608h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_0):** Unused
0	0x0 RW	**enable_timer_0:** GP Timer enable. Write '1' to enable timer 0. Write '0' to disable timer 0

5.2.51 enable_timer_1 (gpd_gptimer_enable_timer_1)—Offset 60Ch

GP Timer enable. Write '1' to enable timer 1. Write '0' to disable timer 1.

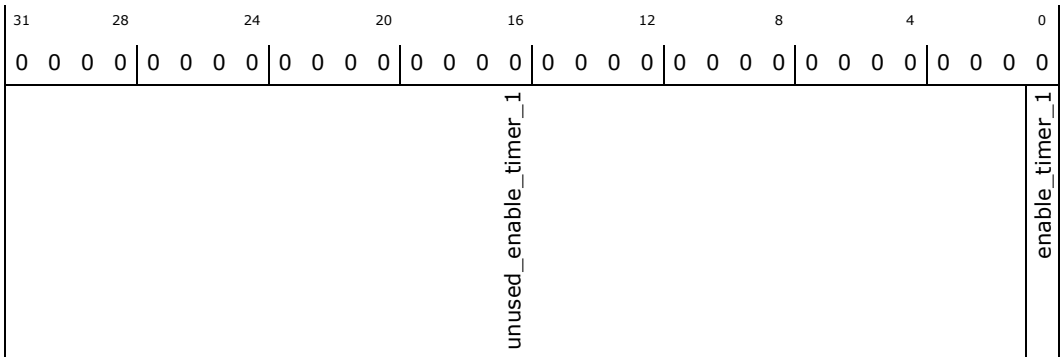
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 60Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_1):** Unused
0	0x0 RW	**enable_timer_1:** GP Timer enable. Write '1' to enable timer 1. Write '0' to disable timer 1

5.2.52 enable_timer_2 (gpd_gptimer_enable_timer_2)—Offset 610h

GP Timer enable. Write '1' to enable timer 2. Write '0' to disable timer 2

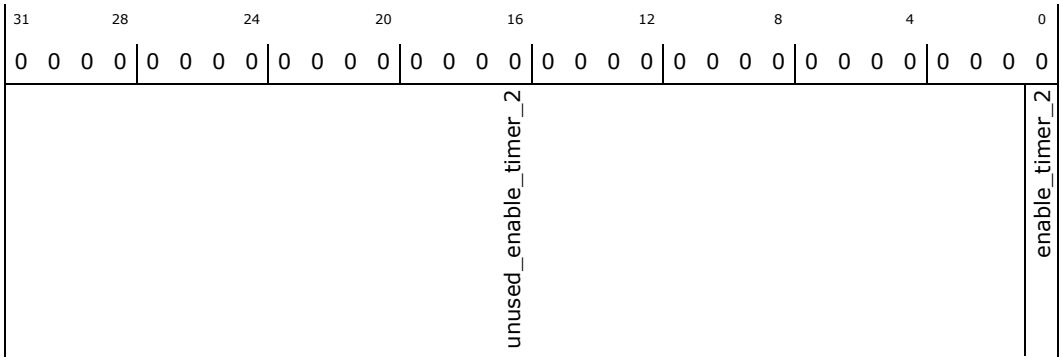
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 610h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_2):** Unused
0	0x0 RW	**enable_timer_2:** GP Timer enable. Write '1' to enable timer 2. Write '0' to disable timer 2

5.2.53 enable_timer_3 (gpd_gptimer_enable_timer_3)—Offset 614h

GP Timer enable. Write '1' to enable timer 3. Write '0' to disable timer 3.

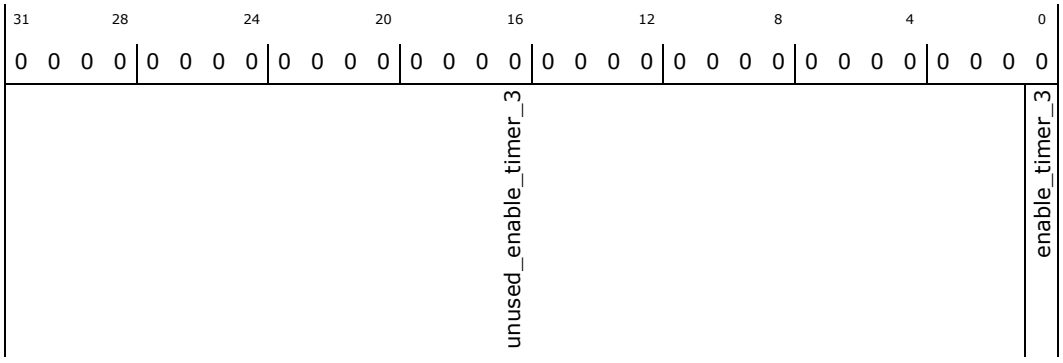
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 614h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_3):** Unused
0	0x0 RW	**enable_timer_3:** GP Timer enable. Write '1' to enable timer 3. Write '0' to disable timer 3

5.2.54 enable_timer_4 (gpd_gptimer_enable_timer_4)—Offset 618h

GP Timer enable. Write '1' to enable timer 4. Write '0' to disable timer 4.

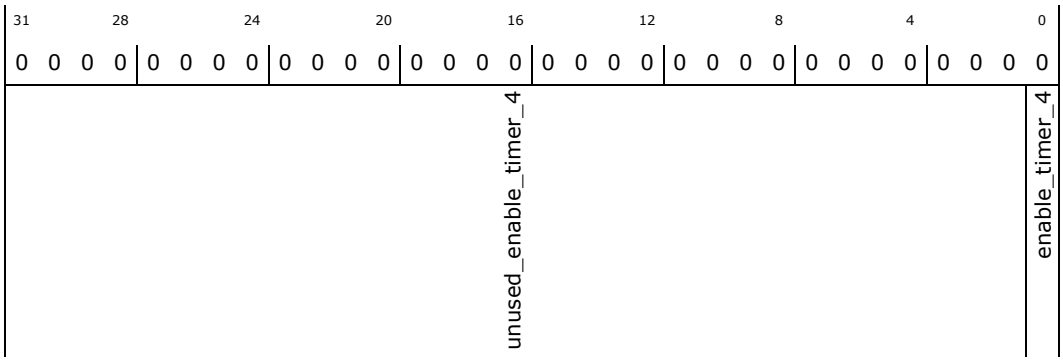
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 618h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_4):** Unused
0	0x0 RW	**enable_timer_4:** GP Timer enable. Write '1' to enable timer 4. Write '0' to disable timer 4

5.2.55 enable_timer_5 (gpd_gptimer_enable_timer_5)—Offset 61Ch

GP Timer enable. Write '1' to enable timer 5. Write '0' to disable timer 5.

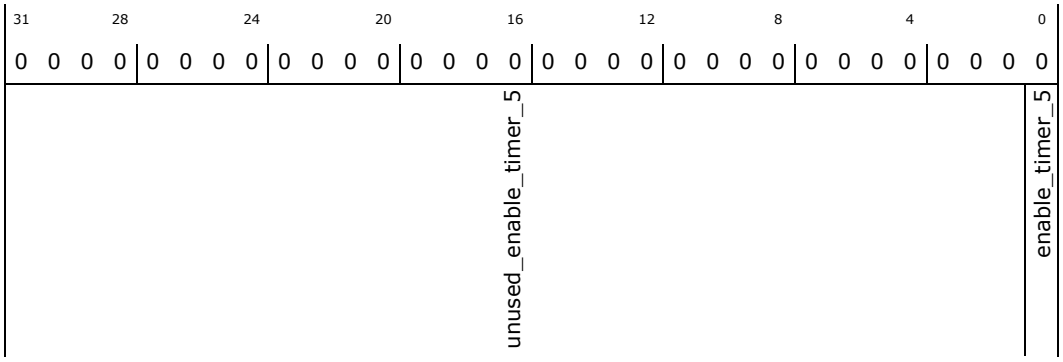
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 61Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_5):** Unused
0	0x0 RW	**enable_timer_5:** GP Timer enable. Write '1' to enable timer 5. Write '0' to disable timer 5

5.2.56 enable_timer_6 (gpd_gptimer_enable_timer_6)—Offset 620h

GP Timer enable. Write '1' to enable timer 6. Write '0' to disable timer 6.

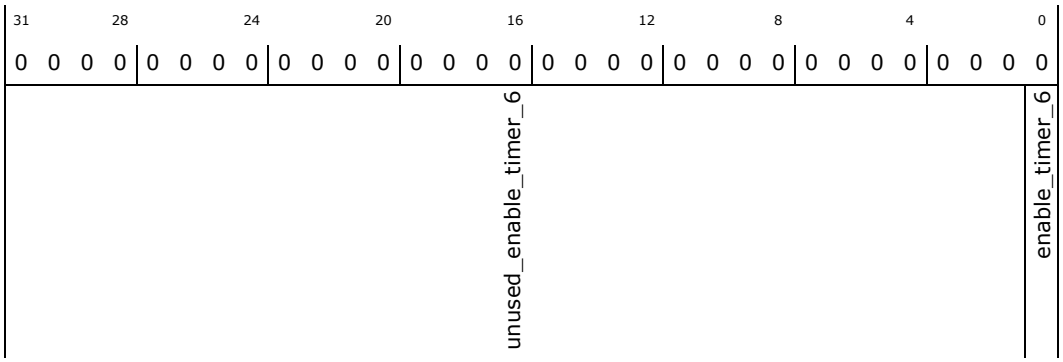
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 620h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_6):** Unused
0	0x0 RW	**enable_timer_6:** GP Timer enable. Write '1' to enable timer 6. Write '0' to disable timer 6

5.2.57 enable_timer_7 (gpd_gptimer_enable_timer_7)—Offset 624h

GP Timer enable. Write '1' to enable timer 7. Write '0' to disable timer 7.

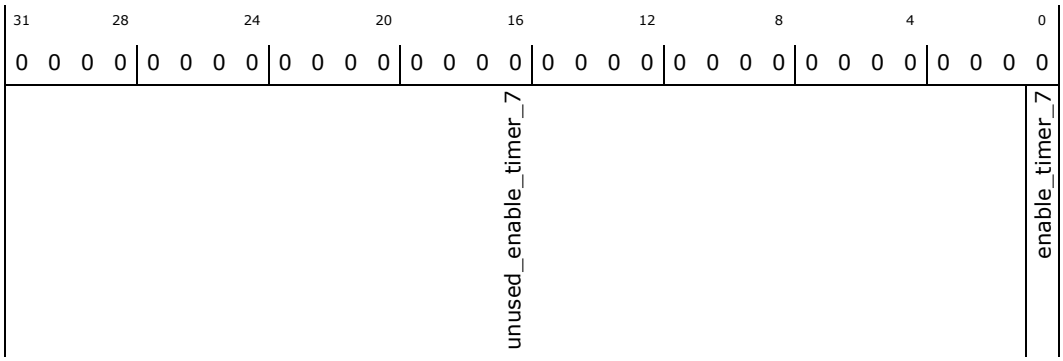
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 624h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_enable_timer_7):** Unused
0	0x0 RW	**enable_timer_7:** GP Timer enable. Write '1' to enable timer 7. Write '0' to disable timer 7

5.2.58 value_timer_0 (gpd_gptimer_value_timer_0)—Offset 628h

Returns the value of timer 0

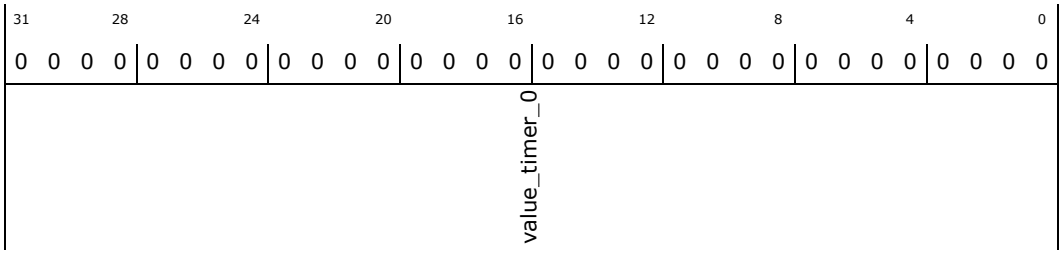
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 628h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_0:** Returns the value of timer 0

5.2.59 value_timer_1 (gpd_gptimer_value_timer_1)—Offset 62Ch

Returns the value of timer 1.

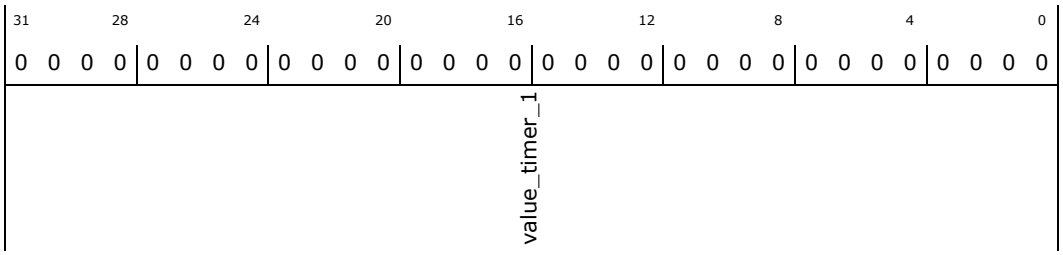
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 62Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_1:** Returns the value of timer 1

5.2.60 value_timer_2 (gpd_gptimer_value_timer_2)—Offset 630h

Returns the value of timer 2.

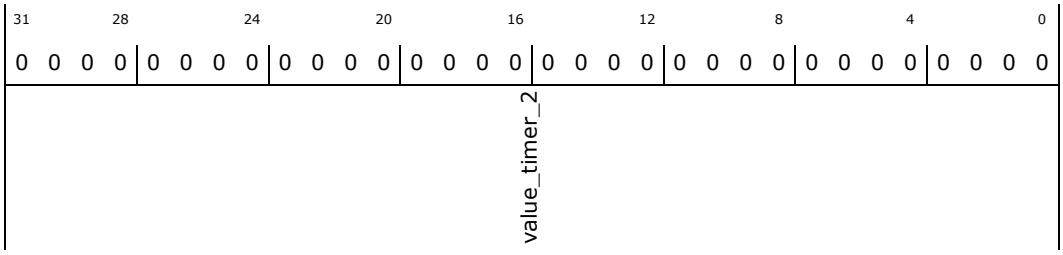
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 630h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_2:** Returns the value of timer 2

5.2.61 value_timer_3 (gpd_gptimer_value_timer_3)—Offset 634h

Returns the value of timer 3

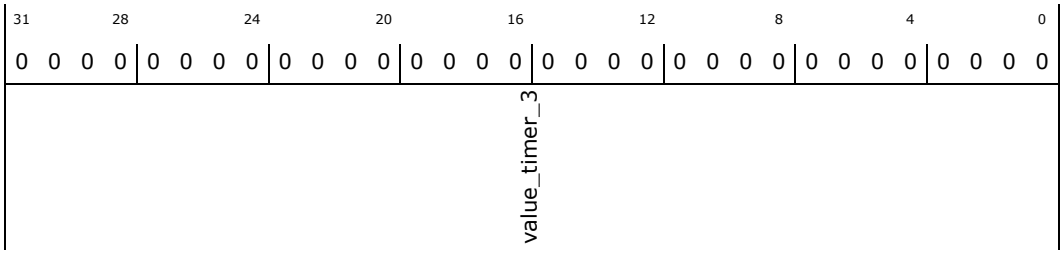
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 634h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_3:** Returns the value of timer 3

5.2.62 value_timer_4 (gpd_gptimer_value_timer_4)—Offset 638h

Returns the value of timer 4.

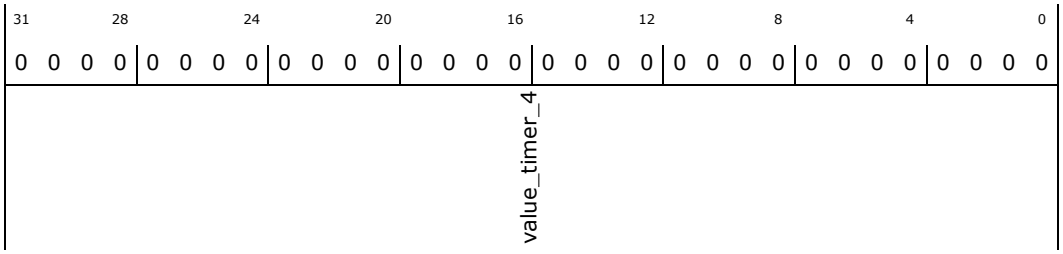
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 638h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_4:** Returns the value of timer 4

5.2.63 value_timer_5 (gpd_gptimer_value_timer_5)—Offset 63Ch

Returns the value of timer 5

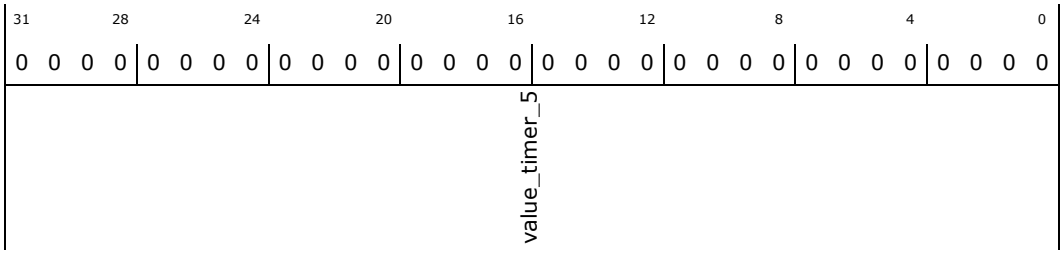
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 63Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_5:** Returns the value of timer 5

5.2.64 value_timer_6 (gpd_gptimer_value_timer_6)—Offset 640h

Returns the value of timer 6

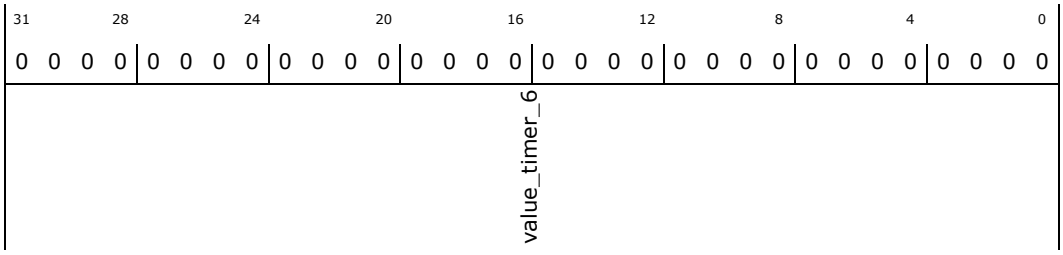
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 640h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_6:** Returns the value of timer 6

5.2.65 value_timer_7 (gpd_gptimer_value_timer_7)—Offset 644h

Returns the value of timer 7

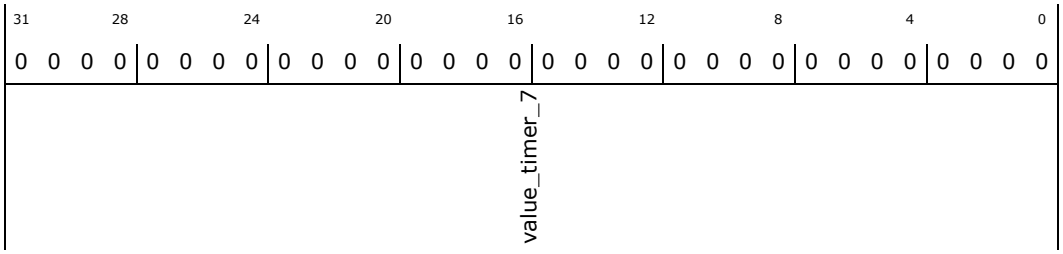
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 644h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**value_timer_7:** Returns the value of timer 7

5.2.66 count_type_timer_0 (gpd_gptimer_count_type_timer_0)—Offset 648h

Indicates what needs to be counted by timer 0, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

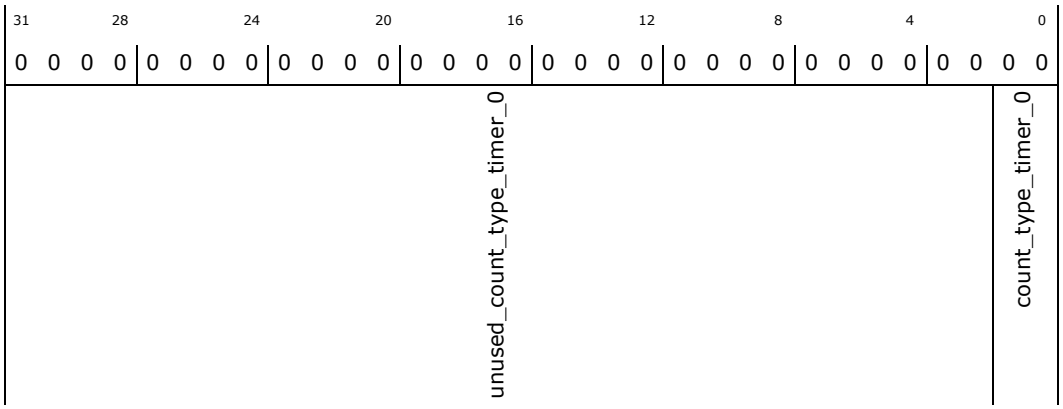
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 648h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_0):** Unused
1:0	0x0 RW	**count_type_timer_0:** Indicates what needs to be counted by timer 0, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.67 count_type_timer_1 (gpd_gptimer_count_type_timer_1)—Offset 64Ch

Indicates what needs to be counted by timer 1, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

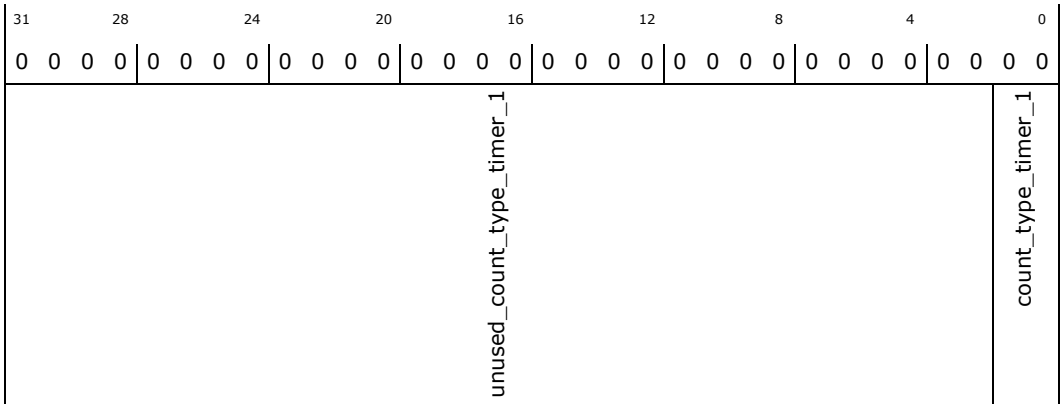
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 64Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_1):** Unused
1:0	0x0 RW	**count_type_timer_1:** Indicates what needs to be counted by timer 1, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.68 count_type_timer_2 (gpd_gptimer_count_type_timer_2)—Offset 650h

Indicates what needs to be counted by timer 2, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

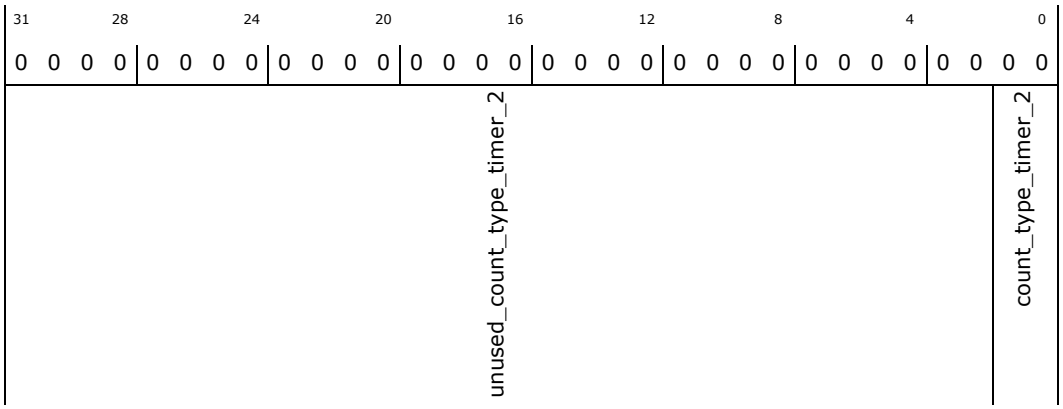
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 650h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_2):** Unused
1:0	0x0 RW	**count_type_timer_2:** Indicates what needs to be counted by timer 2, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.69 count_type_timer_3 (gpd_gptimer_count_type_timer_3)—Offset 654h

Indicates what needs to be counted by timer 3, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

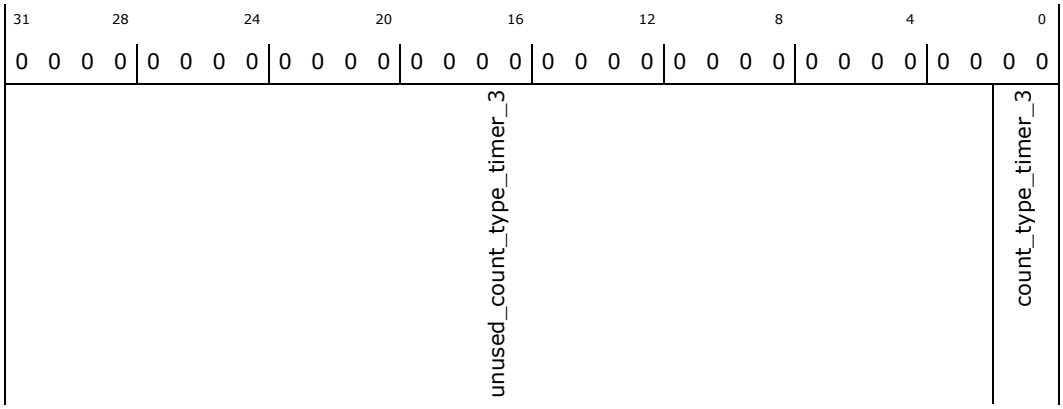
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 654h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_3):** Unused
1:0	0x0 RW	**count_type_timer_3:** Indicates what needs to be counted by timer 3, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.70 count_type_timer_4 (gpd_gptimer_count_type_timer_4)—Offset 658h

Indicates what needs to be counted by timer 4, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

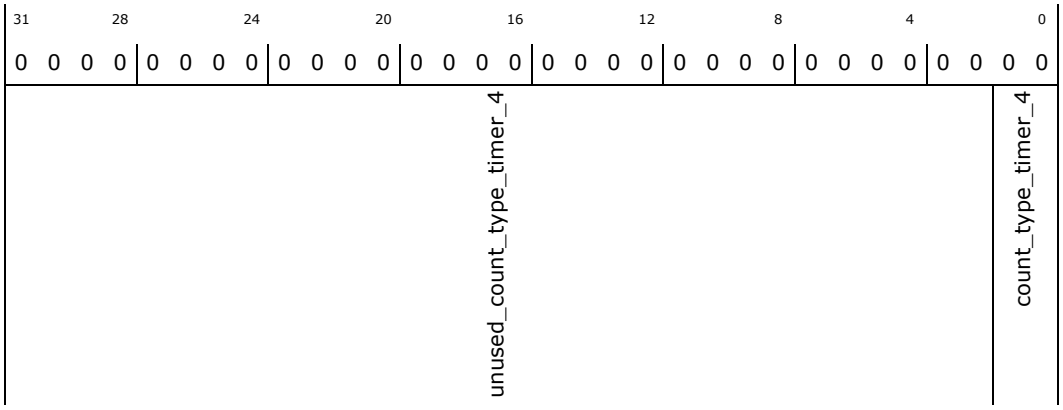
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 658h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_4):** Unused
1:0	0x0 RW	**count_type_timer_4:** Indicates what needs to be counted by timer 4, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.71 count_type_timer_5 (gpd_gptimer_count_type_timer_5)—Offset 65Ch

Indicates what needs to be counted by timer 5, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

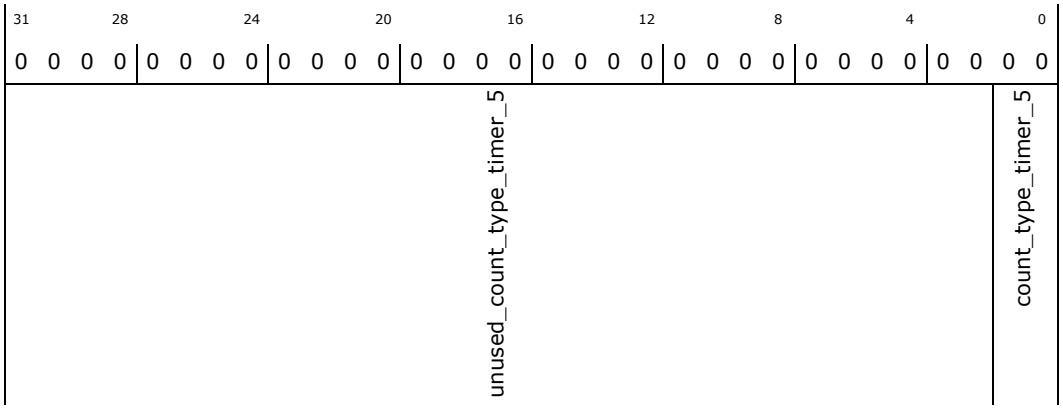
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 65Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_5):** Unused
1:0	0x0 RW	**count_type_timer_5:** Indicates what needs to be counted by timer 5, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.72 count_type_timer_6 (gpd_gptimer_count_type_timer_6)—Offset 660h

Indicates what needs to be counted by timer 6, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

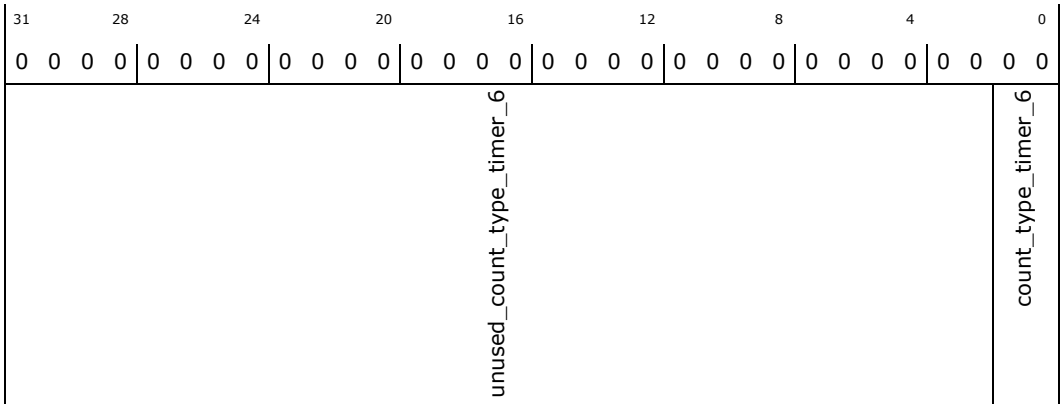
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 660h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_6):** Unused
1:0	0x0 RW	**count_type_timer_6:** Indicates what needs to be counted by timer 6, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.73 count_type_timer_7 (gpd_gptimer_count_type_timer_7)—Offset 664h

Indicates what needs to be counted by timer 7, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

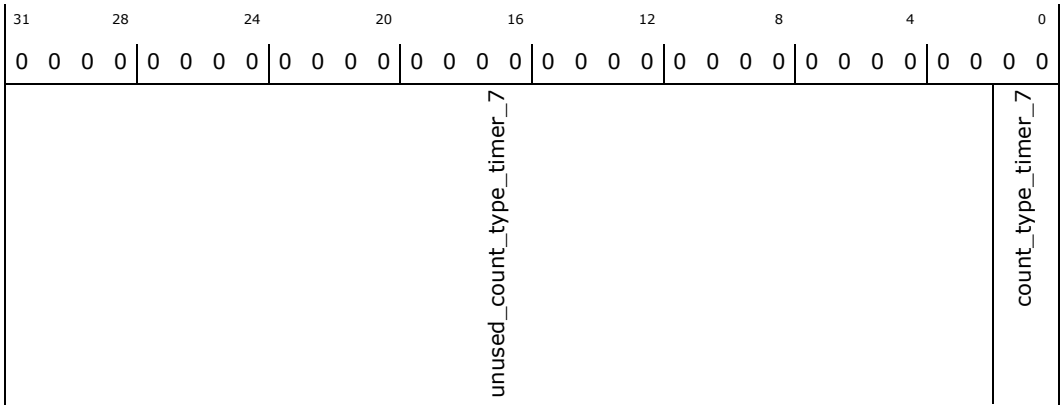
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 664h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_count_type_timer_7):** Unused
1:0	0x0 RW	**count_type_timer_7:** Indicates what needs to be counted by timer 7, 00- # cycles the signal is high (1), 01- # cycles the signal is low (0), 10- # changes from low to high, 11- # changes from high to low

5.2.74 signal_select_timer_0 (gpd_gptimer_signal_select_timer_0)—Offset 668h

Selects which of the 55 input signals are counted by timer 0

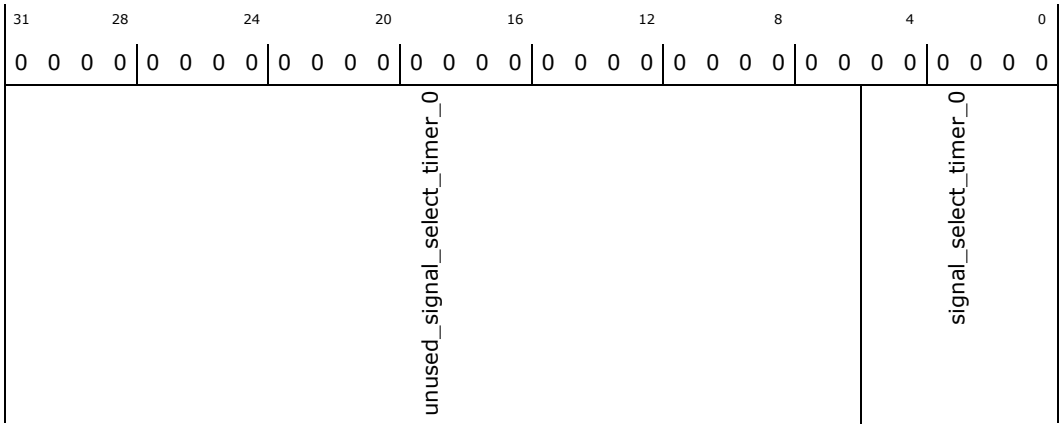
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 668h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_0):** Unused
5:0	0x0 RW	**signal_select_timer_0:** Selects which of the 55 input signals are counted by timer 0

5.2.75 signal_select_timer_1 (gpd_gptimer_signal_select_timer_1)—Offset 66Ch

Selects which of the 55 input signals are counted by timer 1

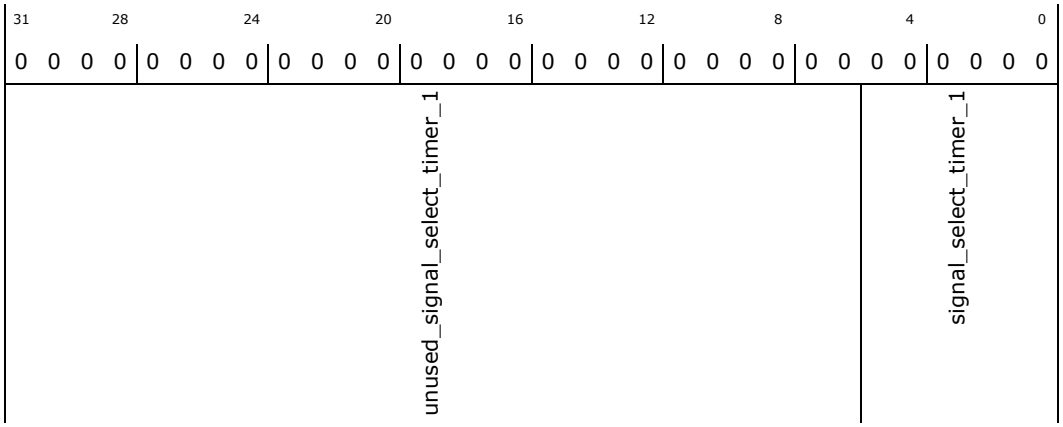
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 66Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_1):** Unused
5:0	0x0 RW	**signal_select_timer_1:** Selects which of the 55 input signals are counted by timer 1

5.2.76 signal_select_timer_2 (gpd_gptimer_signal_select_timer_2)—Offset 670h

Selects which of the 55 input signals are counted by timer 2

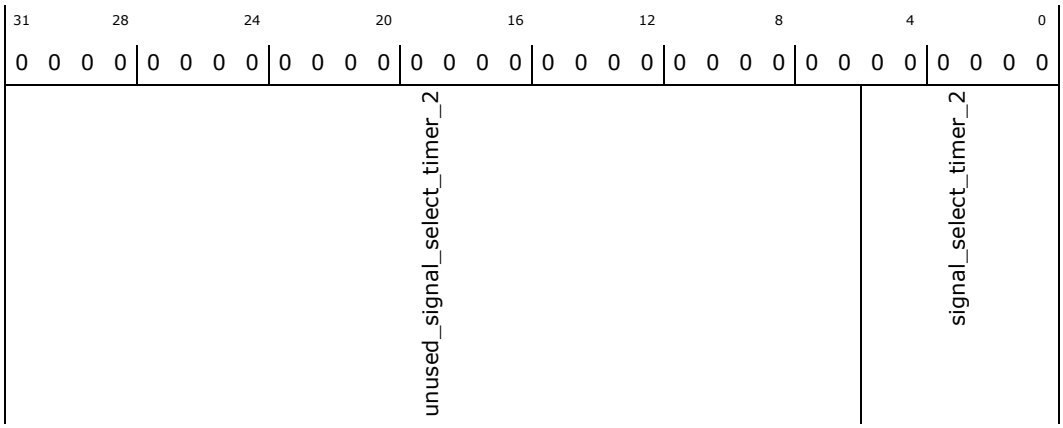
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 670h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_2):** Unused
5:0	0x0 RW	**signal_select_timer_2:** Selects which of the 55 input signals are counted by timer 2

5.2.77 signal_select_timer_3 (gpd_gptimer_signal_select_timer_3)—Offset 674h

Selects which of the 55 input signals are counted by timer 3

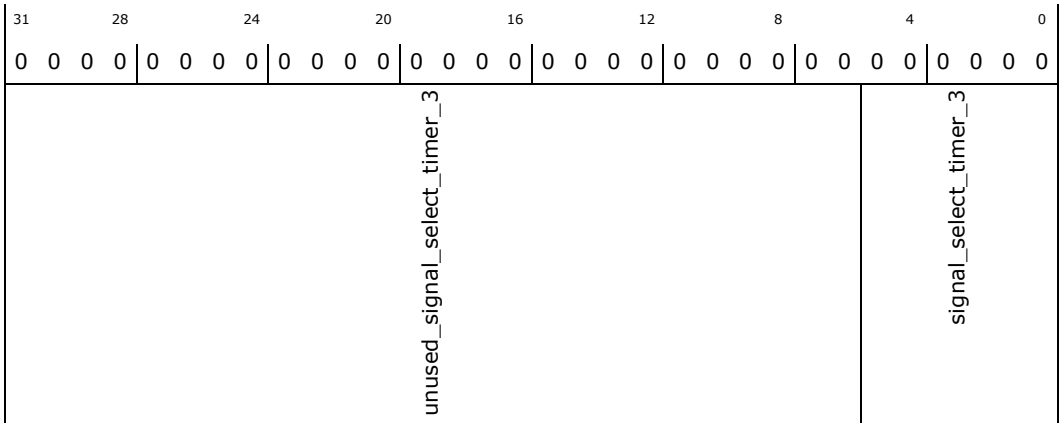
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 674h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_3):** Unused
5:0	0x0 RW	**signal_select_timer_3:** Selects which of the 55 input signals are counted by timer 3

5.2.78 signal_select_timer_4 (gpd_gptimer_signal_select_timer_4)—Offset 678h

Selects which of the 55 input signals are counted by timer 4

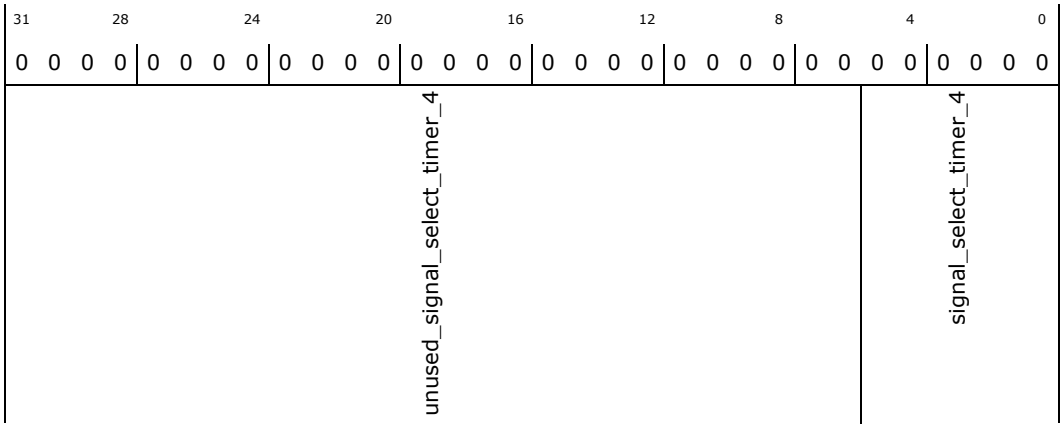
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 678h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_4):** Unused
5:0	0x0 RW	**signal_select_timer_4:** Selects which of the 55 input signals are counted by timer 4

5.2.79 signal_select_timer_5 (gpd_gptimer_signal_select_timer_5)—Offset 67Ch

Selects which of the 55 input signals are counted by timer 5

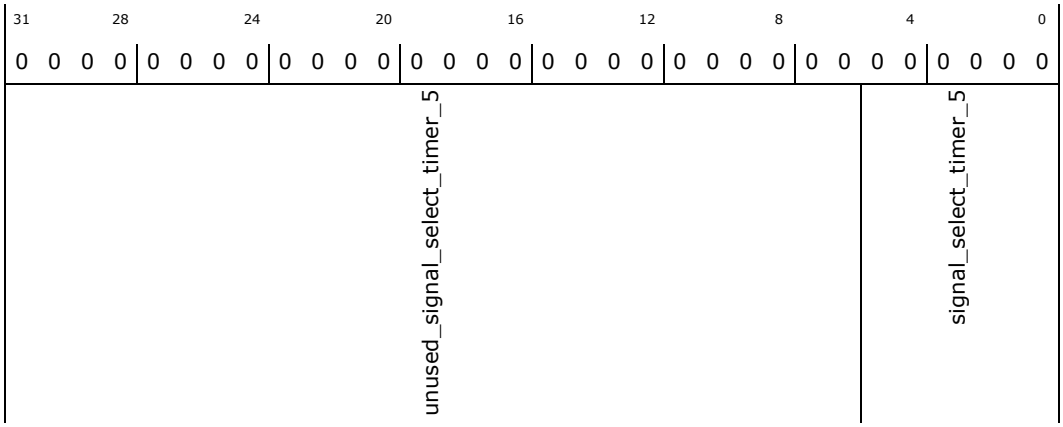
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 67Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_5):** Unused
5:0	0x0 RW	**signal_select_timer_5:** Selects which of the 55 input signals are counted by timer 5

5.2.80 signal_select_timer_6 (gpd_gptimer_signal_select_timer_6)—Offset 680h

Selects which of the 55 input signals are counted by timer 6

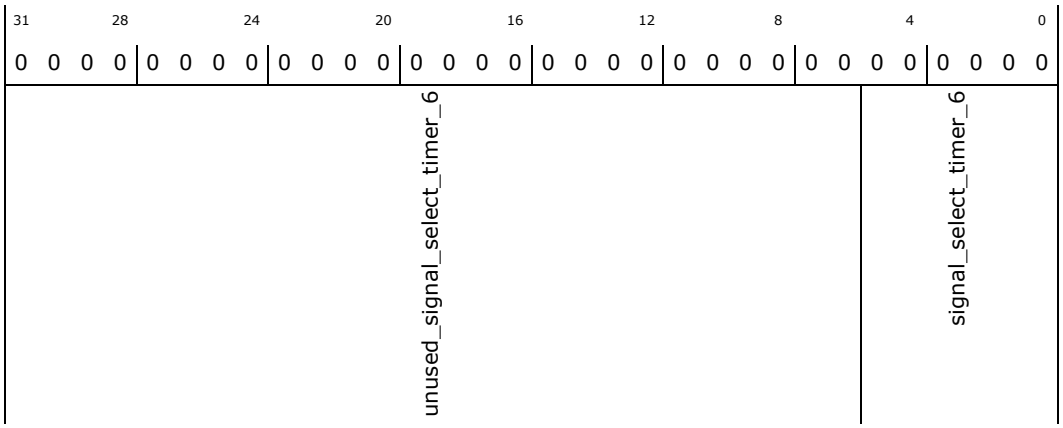
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 680h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_6):** Unused
5:0	0x0 RW	**signal_select_timer_6:** Selects which of the 55 input signals are counted by timer 6

5.2.81 signal_select_timer_7 (gpd_gptimer_signal_select_timer_7)—Offset 684h

Selects which of the 55 input signals are counted by timer 7

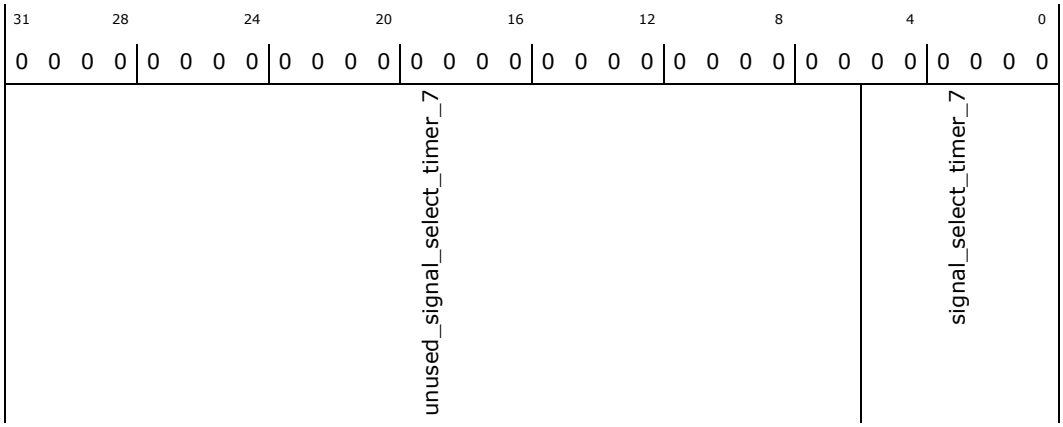
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 684h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_signal_select_timer_7):** Unused
5:0	0x0 RW	**signal_select_timer_7:** Selects which of the 55 input signals are counted by timer 7

5.2.82 irq_trigger_value_0 (gpd_gptimer_irq_trigger_value_0)—Offset 688h

IRQ trigger value for interrupt 0. If the timer selected by irq_timer_select_0 reaches this value, irq_0 will be enabled

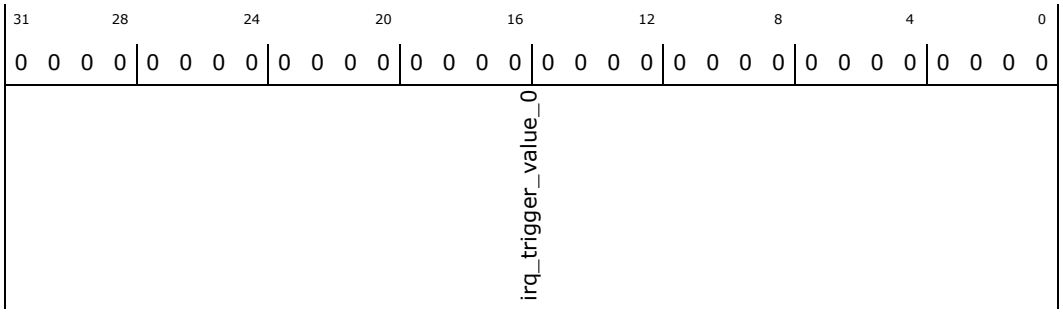
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 688h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**irq_trigger_value_0:** IRQ trigger value for interrupt 0. If the timer selected by irq_timer_select_0 reaches this value, irq_0 will be enabled

5.2.83 irq_trigger_value_1 (gpd_gptimer_irq_trigger_value_1)—Offset 68Ch

IRQ trigger value for interrupt 1. If the timer selected by irq_timer_select_1 reaches this value, irq_1 will be enabled

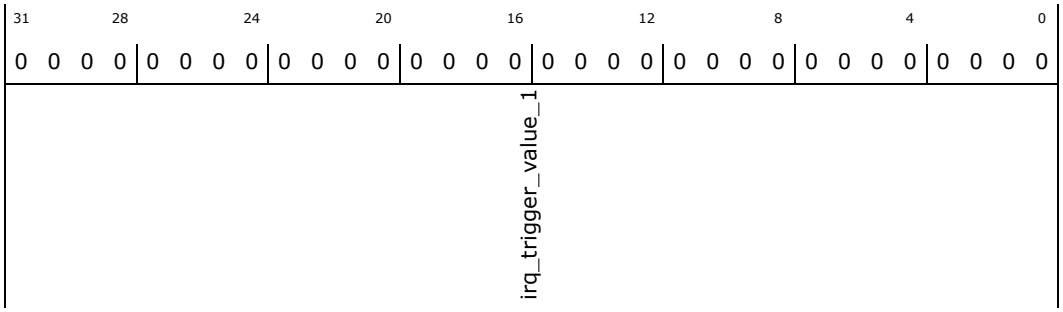
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 68Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**irq_trigger_value_1:** IRQ trigger value for interrupt 1. If the timer selected by irq_timer_select_1 reaches this value, irq_1 will be enabled

5.2.84 irq_timer_select_0 (gpd_gptimer_irq_timer_select_0)—Offset 690h

Indicates which of the 8 timers are used for irq_0 generation

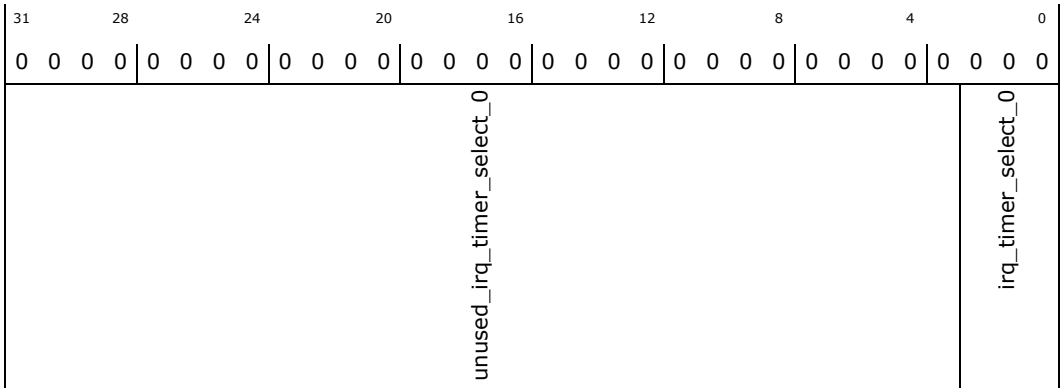
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 690h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_irq_timer_select_0):** Unused
2:0	0x0 RW	**irq_timer_select_0:** Indicates which of the 8 timers are used for irq_0 generation

5.2.85 irq_timer_select_1 (gpd_gptimer_irq_timer_select_1)—Offset 694h

Indicates which of the 8 timers are used for irq_1 generation

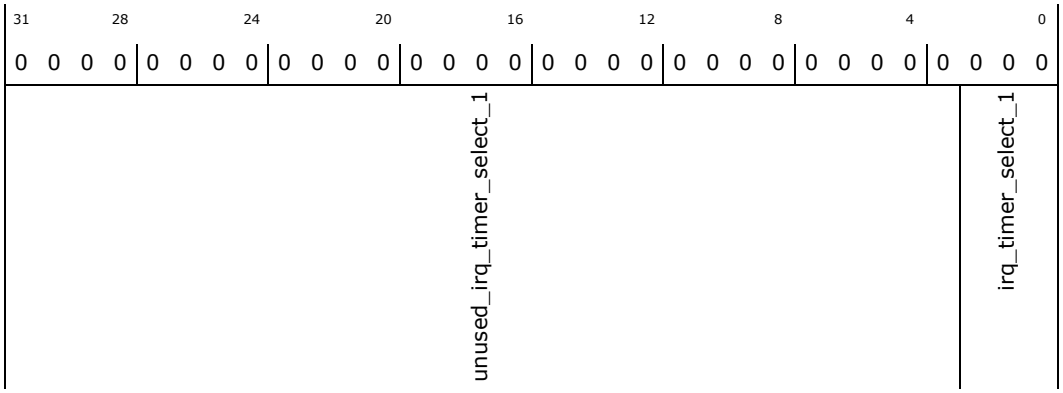
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 694h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_irq_timer_select_1):** Unused
2:0	0x0 RW	**irq_timer_select_1:** Indicates which of the 8 timers are used for irq_1 generation

5.2.86 irq_enable_0 (gpd_gptimer_irq_enable_0)—Offset 698h

Enable interrupt 0

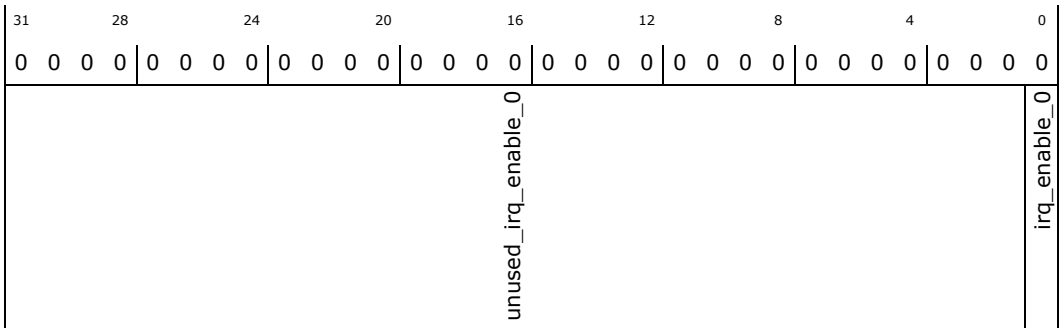
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 698h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_irq_enable_0):** Unused

Bit Range	Default and Access	Field Name (ID): Description
0	0x0 RW	**irq_enable_0:** Enable interrupt 0

5.2.87 irq_enable_1 (gpd_gptimer_irq_enable_1)—Offset 69Ch

Enable interrupt 1

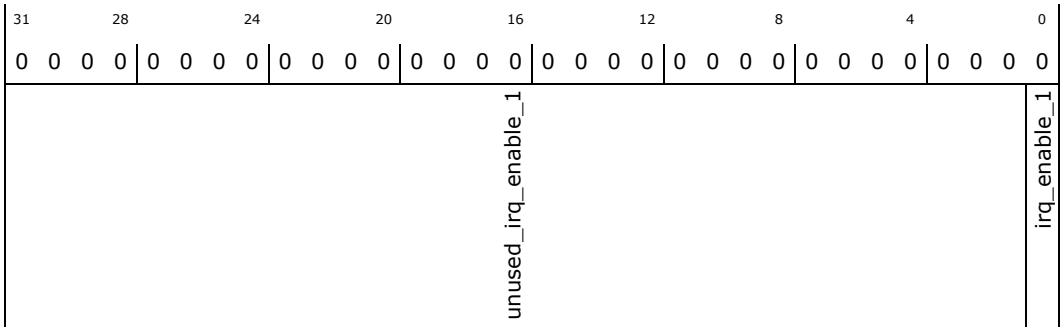
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 69Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_irq_enable_1):** Unused
0	0x0 RW	**irq_enable_1:** Enable interrupt 1

5.2.88 scalar_processor_2400_processor processor status and control register (scp_stat_and_ctrl)—Offset 10000h

Scalar_processor_2400_processor processor status and control register

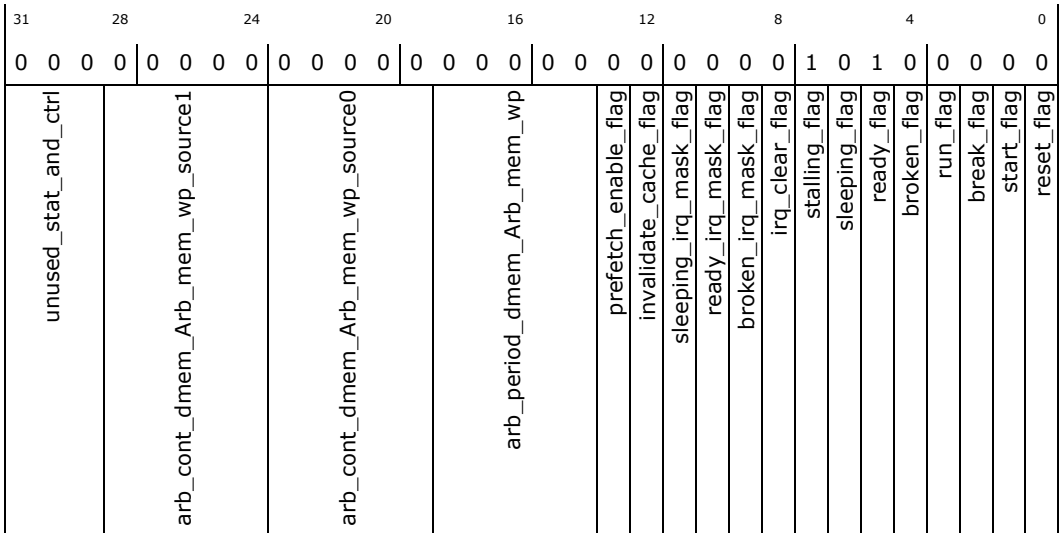
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 10000h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 000000A0h



Bit Range	Default and Access	Field Name (ID): Description
31:29	0x0 RO	**Reserved (unused_stat_and_ctrl):** Unused
28:24	0x0 RW	**scalar_processor_2400_processor processor arbiter contender group bandwidth for dmem_Arb_mem_wp_source1 (arb_cont_dmem_Arb_mem_wp_source1):** Arbiter contender group bandwidth for dmem_Arb_mem_wp_source1
23:19	0x0 RW	**scalar_processor_2400_processor processor arbiter contender group bandwidth for dmem_Arb_mem_wp_source0 (arb_cont_dmem_Arb_mem_wp_source0):** Arbiter contender group bandwidth for dmem_Arb_mem_wp_source0
18:14	0x0 RW	**scalar_processor_2400_processor processor arbiter period for dmem_Arb_mem_wp (arb_period_dmem_Arb_mem_wp):** Arbiter period for dmem_Arb_mem_wp
13	0x0 RW	**scalar_processor_2400_processor processor prefetch enable flag (prefetch_enable_flag):** Prefetch enable flag for config_ilm_conf_ilm_icache
12	0x0 RW	**scalar_processor_2400_processor processor invalidate cache flag (invalidate_cache_flag):** Invalidate cache flag for config_ilm_conf_ilm_icache
11	0x0 RW	**scalar_processor_2400_processor processor sleeping interrupt mask (sleeping_irq_mask_flag):** Sleeping IRQ mask flag. Enables (high) or disables (low) IRQ generation when the cell enters the SLEEP state.
10	0x0 RW	**scalar_processor_2400_processor processor ready interrupt mask (ready_irq_mask_flag):** Ready IRQ mask flag. Enables (high) or disables (low) IRQ generation when the cell enters the IDLE state.
9	0x0 RW	**scalar_processor_2400_processor processor broken interrupt mask (broken_irq_mask_flag):** Broken IRQ mask flag. Enables (high) or disables (low) IRQ generation when the cell enters the BROKEN state.

Bit Range	Default and Access	Field Name (ID): Description
8	0x0 RW	**scalar_processor_2400_processor processor clear interrupt flag (irq_clear_flag):** IRQ clear flag. Clears an interrupt request sent by the cell. The cell can generate a level-shaped IRQ when it gets to the BROKEN, IDLE or SLEEP state. Interrupt generation is controlled by mask.
7	0x1 RO	**scalar_processor_2400_processor processor stalling flag (stalling_flag):** Stalling flag. Set to '1' when not executing an instruction. Happens when the run control signal has been set to low, or when an LSU or the CoreIO cannot access data (for example, cache miss, arbitration conflict or FIFO full).
6	0x0 RO	**scalar_processor_2400_processor processor sleeping flag (sleeping_flag):** Sleeping flag. The cell is in sleep mode, that is, when the 'std_sleep' operation has been issued. To resume execution, the start control flag must be set to high.
5	0x1 RO	**scalar_processor_2400_processor processor ready flag (ready_flag):** Ready flag. Set to '1' when not executing a program. This state is entered after a (soft) reset or when the 'std_idle' operation has been issued. To (re)start execution from the start address (in the following register), the start control flag must be set to high.
4	0x0 RO	**scalar_processor_2400_processor processor broken flag (broken_flag):** Broken flag. Unused (obsolete) flag.
3	0x0 RW	**scalar_processor_2400_processor processor run flag (run_flag):** Run flag. Enables program execution (high) or stall the cell, disabling it from continuing program execution (low).
2	0x0 RW	**scalar_processor_2400_processor processor break flag (break_flag):** Break flag. Unused (obsolete) flag.
1	0x0 WO	**scalar_processor_2400_processor processor start flag (start_flag):** Start flag. Starts or continues program execution. The cell automatically resets the bit to '0' after one clock cycle.
0	0x0 WO	**scalar_processor_2400_processor processor reset flag (reset_flag):** Reset flag. Initiates a soft reset for the VLIW core of a processor, the CoreIO part is not reset. This flag must be explicitly cleared by the user to deactivate the soft reset.

5.2.89 scalar_processor_2400_processor processor base address register (scp_base_address)—Offset 10004h

Start address. Specifies the address in the program memory from which the program execution starts when a start signal is issued to the core being in IDLE state.

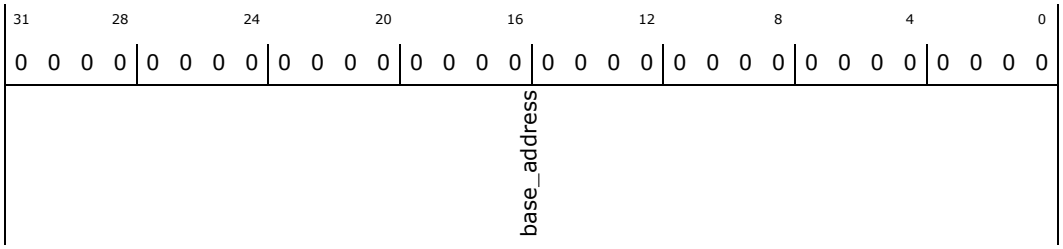
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 10004h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**scalar_processor_2400_processor processor base address register (base_address):** Start address. Specifies the address in the program memory from which the program execution starts when a start signal is issued to the core being in IDLE state.

5.2.90 Reserved (scp_unused_2)—Offset 10008h

Unused

Access Method

5.2.98 scalar_processor_2400_processor processor program memory slave access (scp_pmem_slave_access)—Offset 10030h

Pmem slave access flag. By default, the local program memory of the core can only be accessed by a slave interface when the core is idling. While running a program, by default the core has exclusive read access to its local program. Whenever, the slave interface tries to access PMEM in this default mode, it will stall. When setting this flag to '1', this default behavior can be overruled by switching exclusive access to PMEM to the slave interface. Whenever the core tries to access PMEM in this 'PMEM slave access' mode, it will be stalled. The benefit of this feature is that it allows uploading new code to PMEM while the core is running a program, for instance from its instruction cache.

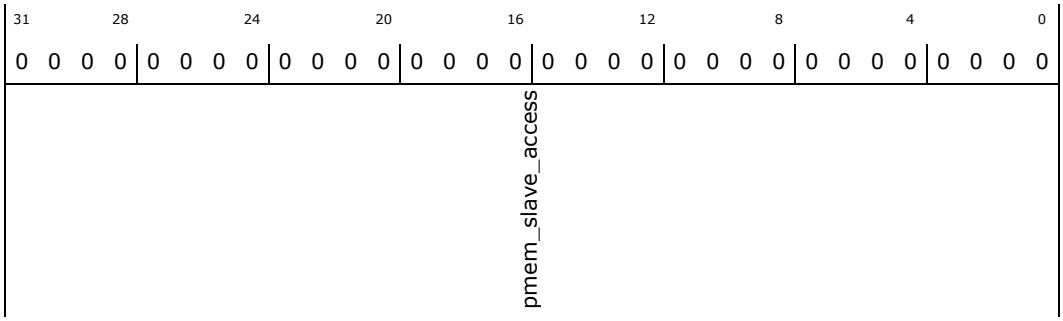
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 10030h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**scalar_processor_2400_processor processor program memory slave access (pmem_slave_access):** Pmem slave access flag. By default, the local program memory of the core can only be accessed by a slave interface when the core is idling. While running a program, by default the core has exclusive read access to its local program. Whenever, the slave interface tries to access PMEM in this default mode, it will stall. When setting this flag to '1', this default behavior can be overruled by switching exclusive access to PMEM to the slave interface. Whenever the core tries to access PMEM in this 'PMEM slave access' mode, it will be stalled. The benefit of this feature is that it allows uploading new code to PMEM while the core is running a program, for instance from its instruction cache.

5.2.99 isp2401_mamoiada_processor processor status and control register (isp_stat_and_ctrl)—Offset 20000h

isp2401_mamoiada_processor processor status and control register

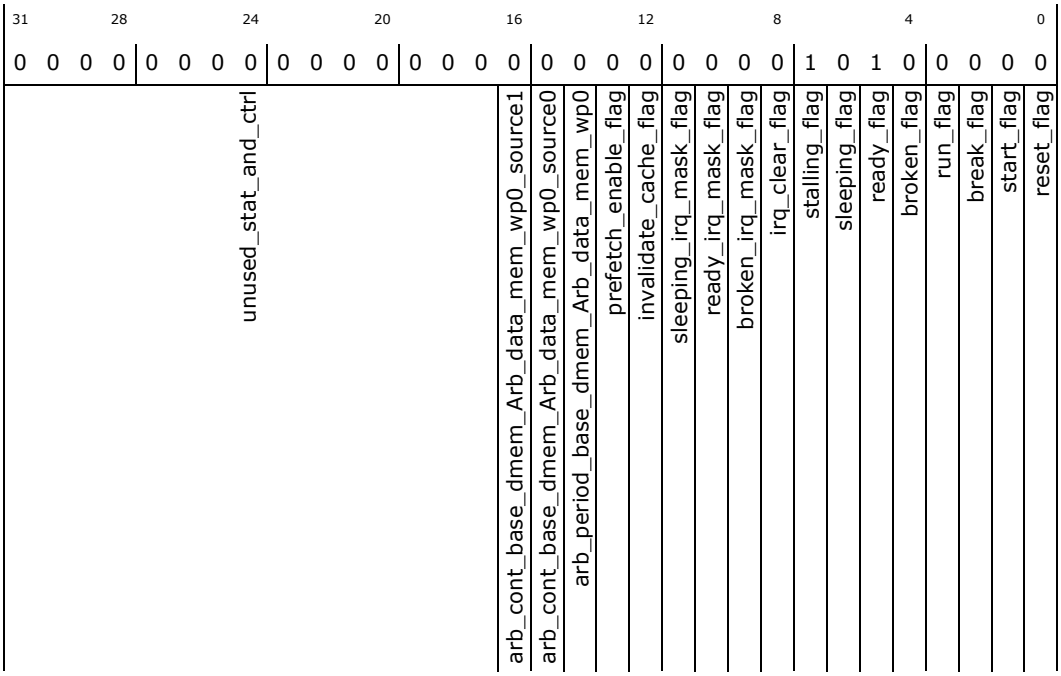
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 20000h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 000000A0h



Bit Range	Default and Access	Field Name (ID): Description
31:17	0x0 RO	**Reserved (unused_stat_and_ctrl):** Unused
16	0x0 RW	**isp2401_mamoiada_processor processor arbiter contender group bandwidth for base_dmem_Arb_data_mem_wp0_source1 (arb_cont_base_dmem_Arb_data_mem_wp0_source1):** Arbiter contender group bandwidth for base_dmem_Arb_data_mem_wp0_source1

5.2.106 Reserved (isp_unused_9)—Offset 20024h

Unused

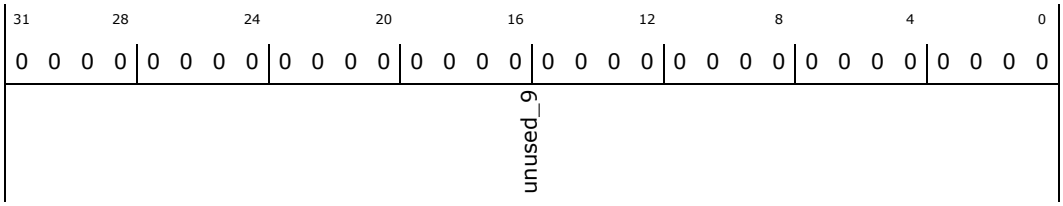
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 20024h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**Reserved (unused_9):** Unused

5.2.107 isp2401_mamoiada_processor processor program memory slave access (isp_pmem_slave_access)—Offset 20028h

Pmem slave access flag. By default, the local program memory of the core can only be accessed by a slave interface when the core is idling. While running a program, by default the core has exclusive read access to its local program. Whenever, the slave interface tries to access PMEM in this default mode, it will stall. When setting this flag to '1', this default behavior can be overruled by switching exclusive access to PMEM to the slave interface. Whenever the core tries to access PMEM in this 'PMEM slave access' mode, it will be stalled. The benefit of this feature is that it allows uploading new code to PMEM while the core is running a program, for instance from its instruction cache.

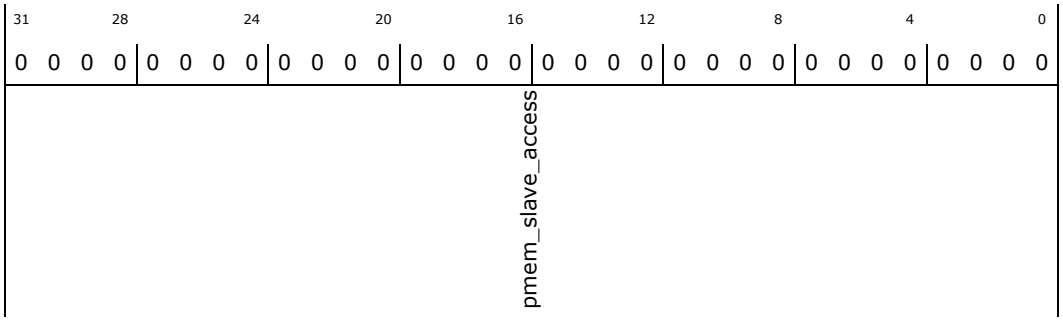
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 20028h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RW	**isp2401_mamoiada_processor processor program memory slave access (pmem_slave_access):** Pmem slave access flag. By default, the local program memory of the core can only be accessed by a slave interface when the core is idling. While running a program, by default the core has exclusive read access to its local program. Whenever, the slave interface tries to access PMEM in this default mode, it will stall. When setting this flag to '1', this default behavior can be overruled by switching exclusive access to PMEM to the slave interface. Whenever the core tries to access PMEM in this 'PMEM slave access' mode, it will be stalled. The benefit of this feature is that it allows uploading new code to PMEM while the core is running a program, for instance from its instruction cache.

5.2.108 IF_sw_rst (is_2400_ifmt_ift_prim_IF_sw_rst)—Offset 30000h

Software Reset

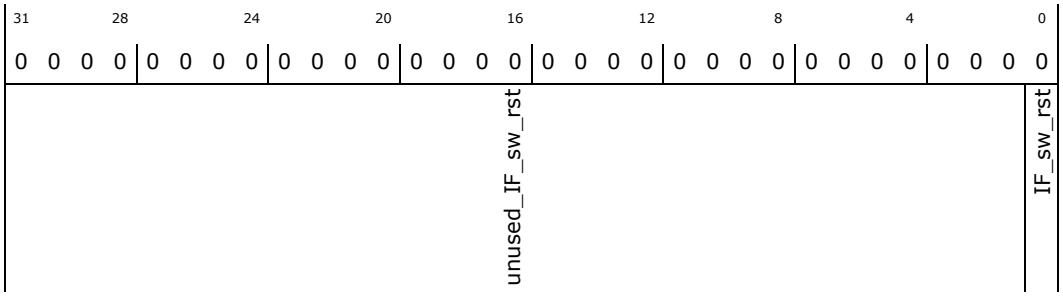
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30000h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_sw_rst):** Unused
0	0x0 RW	**IF_sw_rst:** Software Reset

5.2.109 IF_start_line (is_2400_ifmt_ift_prim_IF_start_line)—Offset 30004h

Start line: number of line to skip before passing the 1st line

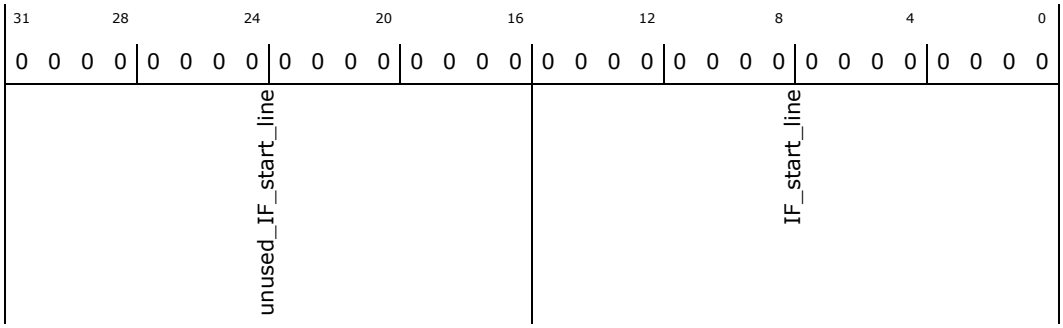
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30004h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_start_line):** Unused
15:0	0x0 RW	**IF_start_line:** Start line: number of line to skip before passing the 1st line

5.2.110 IF_start_column (is_2400_ifmt_ift_prim_IF_start_column)—Offset 30008h

Start column: number pixel component to skip before passing the 1st of a line

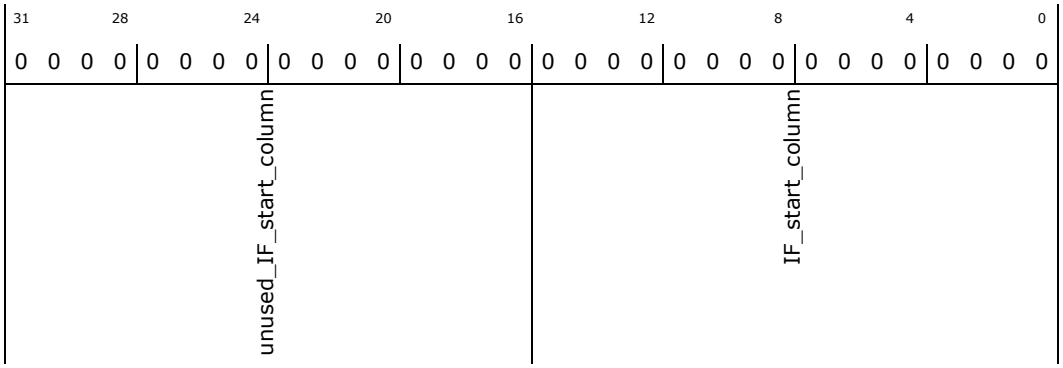
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30008h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_start_column):** Unused
15:0	0x0 RW	**IF_start_column:** Start column: number pixel component to skip before passing the 1st of a line

5.2.111 IF_Cropped_height (is_2400_ifmt_ift_prim_IF_Cropped_height)—Offset 3000Ch

Cropped height: number of lines of the cropped image

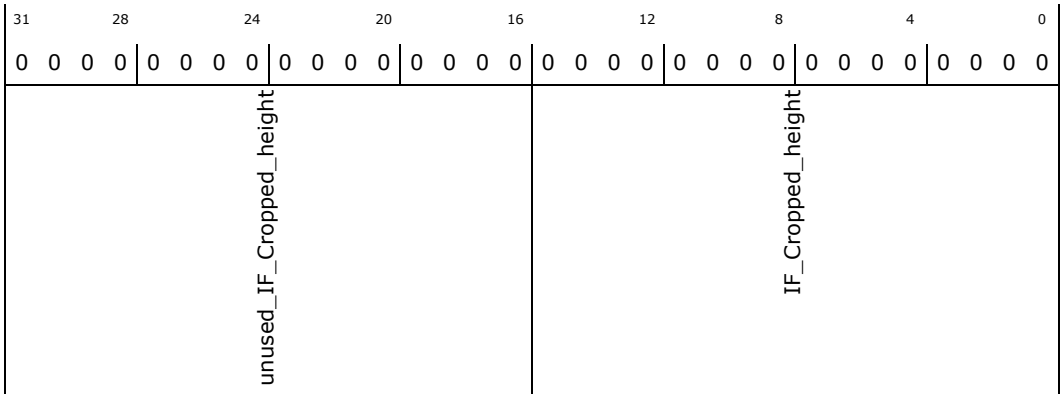
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3000Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_Cropped_height):** Unused
15:0	0x0 RW	**IF_Cropped_height:** Cropped height: number of lines of the cropped image

5.2.112 IF_Cropped_width (is_2400_ifmt_ift_prim_IF_Cropped_width)—Offset 30010h

Cropped width: number of pixel component of the cropped image

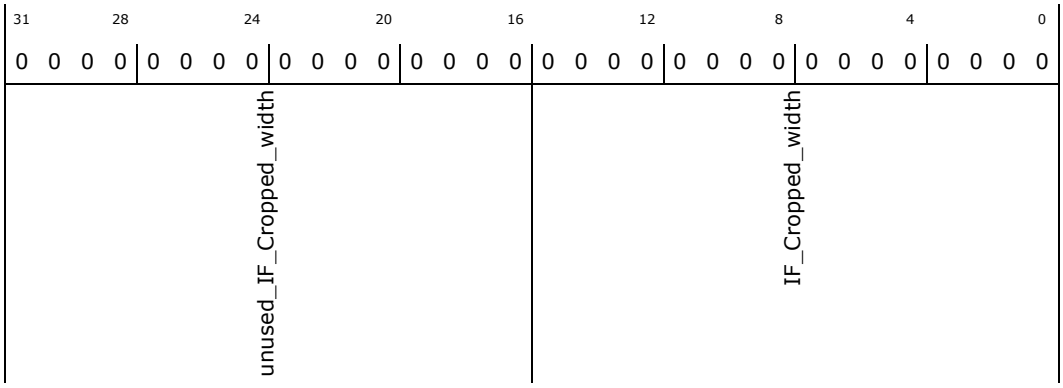
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30010h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_Cropped_width):** Unused
15:0	0x0 RW	**IF_Cropped_width:** Cropped width: number of pixel component of the cropped image

5.2.113 IF_Vert_Decim (is_2400_ifmt_ift_prim_IF_Vert_Decim)—Offset 30014h

Vertical Decimation Factor

Vertical decimation factor of N means that only 1 every N lines is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive lines avery 2N lines.

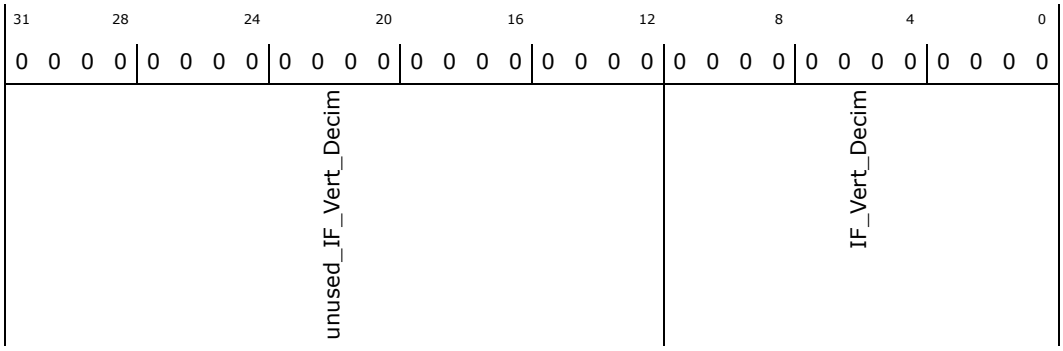
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30014h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_IF_Vert_Decim):** Unused
11:0	0x0 RW	**IF_Vert_Decim:** Vertical decimation factor. Vertical decimation factor of N means that only 1 every N lines is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive lines avery 2N lines.

5.2.114 IF_Horiz_Decim (is_2400_ifmt_ift_prim_IF_Horiz_Decim)—Offset 30018h

Horizontal decimation factor. Horizontal decimation factor of N means that only 1 every N pixel components is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive pixel components avery 2N pixel components.

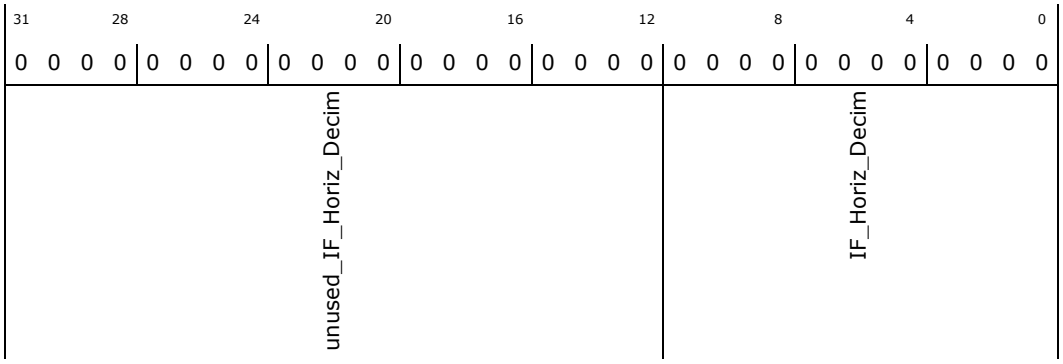
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30018h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_IF_Horiz_Decim):** Unused
11:0	0x0 RW	**IF_Horiz_Decim:** Horizontal decimation factor. Horizontal decimation factor of N means that only 1 every N pixel components is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive pixel components avery 2N pixel components.

5.2.115 IF_Horiz_Deinter (is_2400_ifmt_ift_prim_IF_Horiz_Deinter)—Offset 3001Ch

Horizontal de-interleaving factor

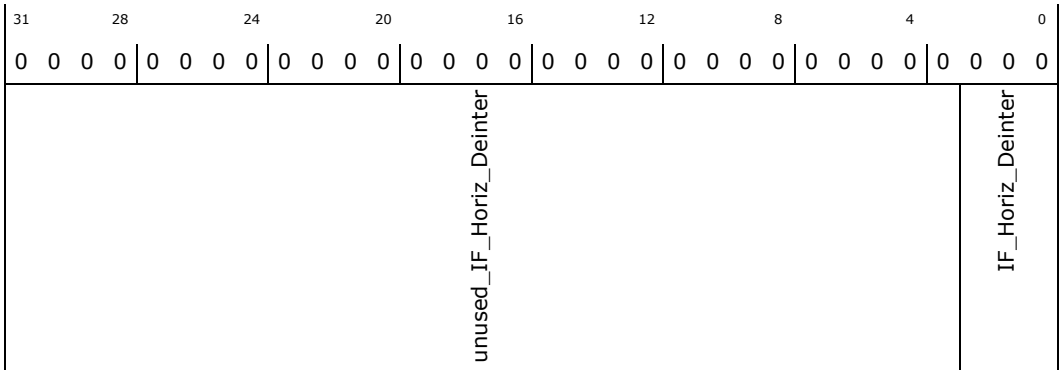
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3001Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_Horiz_Deinter):** Unused
2:0	0x0 RW	**IF_Horiz_Deinter:** Horizontal de-interleaving factor

5.2.116 IF_Left_Pad (is_2400_ifmt_ift_prim_IF_Left_Pad)—Offset 30020h

Left padding: pixel component to be padded at the beginning of each line

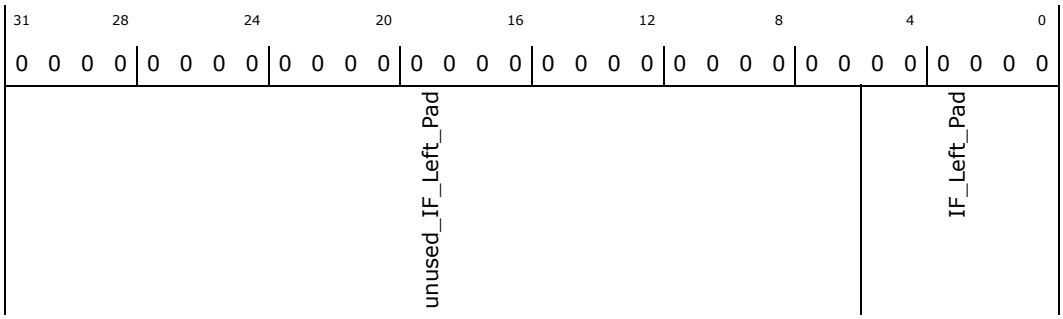
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30020h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_IF_Left_Pad):** Unused
5:0	0x0 RW	**IF_Left_Pad:** Left padding: pixel component to be padded at the beginning of each line

5.2.117 IF_EOF_Offset (is_2400_ifmt_ift_prim_IF_EOF_Offset)—Offset 30024h

End of line offset in bytes: number of bytes to add at the address at the end of a line

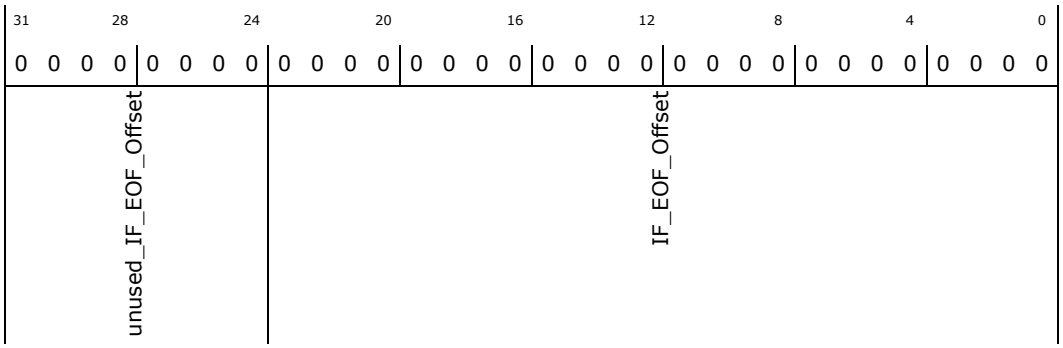
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30024h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_EOF_Offset):** Unused
23:0	0x0 RW	**IF_EOF_Offset:** End of line offset in bytes: number of bytes to add at the address at the end of a line

5.2.118 IF_Start_addr (is_2400_ifmt_ift_prim_IF_Start_addr)—Offset 30028h

Local memory buffer start address (byte aligned)

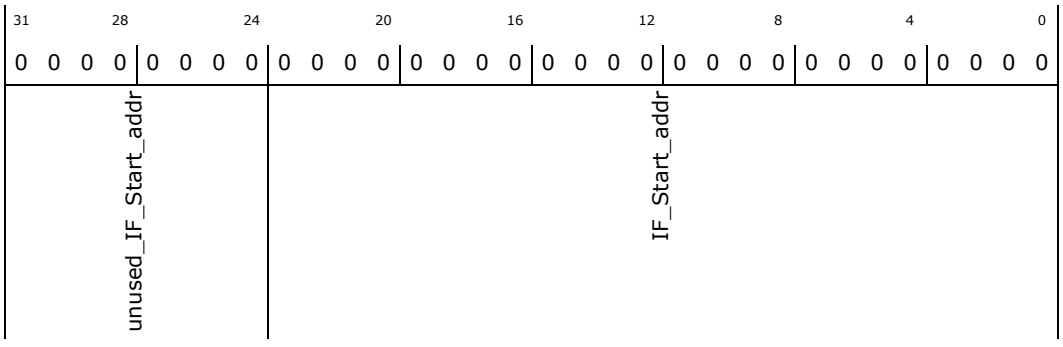
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30028h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_Start_addr):** Unused

Bit Range	Default and Access	Field Name (ID): Description
23:0	0x0 RW	**IF_Start_addr:** Local memory buffer start address (byte aligned)

5.2.119 IF_End_addr (is_2400_ifmt_ift_prim_IF_End_addr)—Offset 3002Ch

Local memory buffer end address (byte aligned)

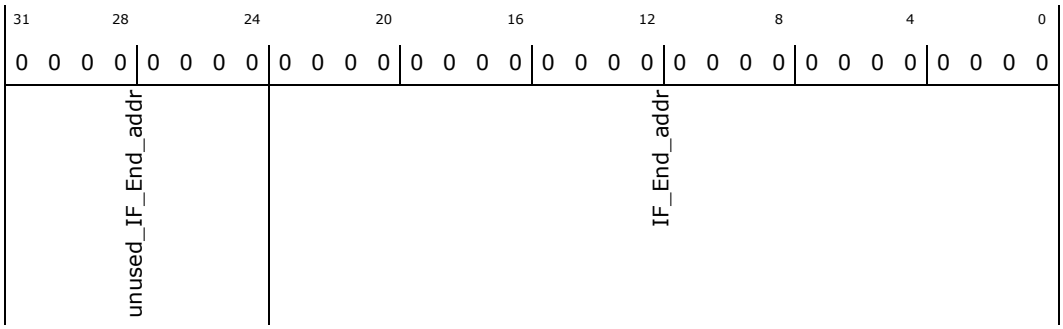
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3002Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_End_addr):** Unused
23:0	0x0 RW	**IF_End_addr:** Local memory buffer end address (byte aligned)

5.2.120 IF_incr (is_2400_ifmt_ift_prim_IF_incr)—Offset 30030h

Address word increment (word aligned). After every write the address is updated by adding this value times the word alignment.

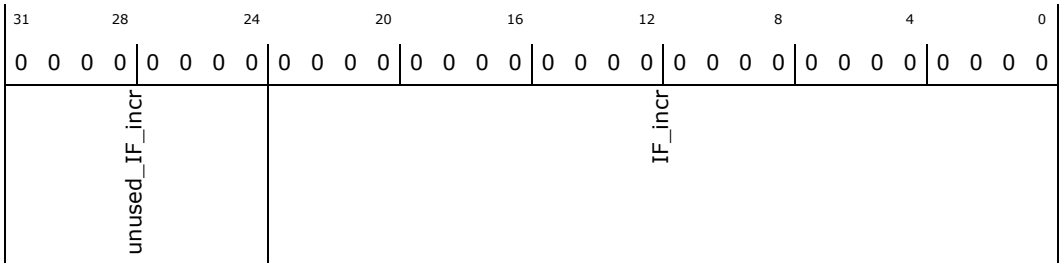
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30030h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_incr):** Unused
23:0	0x0 RW	**IF_incr:** Address word increment (word aligned). After every write the address is updated by adding this value times the word alignment.

5.2.121 IF_YUV_420_format (is_2400_ifmt_ift_prim_IF_YUV_420_format)—Offset 30034h

YUV 420 format: set to work on legacy format YUV420

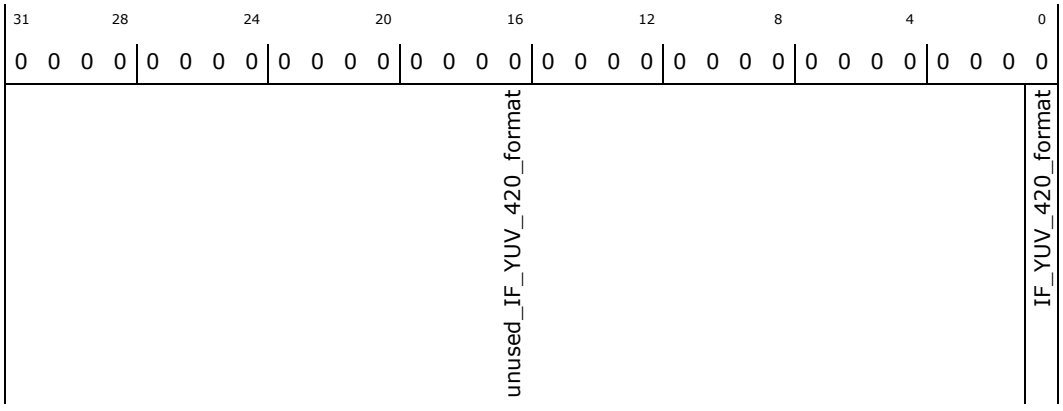
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30034h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_YUV_420_format):** Unused

Bit Range	Default and Access	Field Name (ID): Description
0	0x0 RW	**IF_YUV_420_format:** YUV 420 format: set to work on legacy format YUV420

5.2.122 IF_Vsynch_active_low (is_2400_ifmt_ift_prim_IF_Vsynch_active_low)—Offset 30038h

Vertical synch active low: set to 1 if Vsynch and EndOfFrame are active low

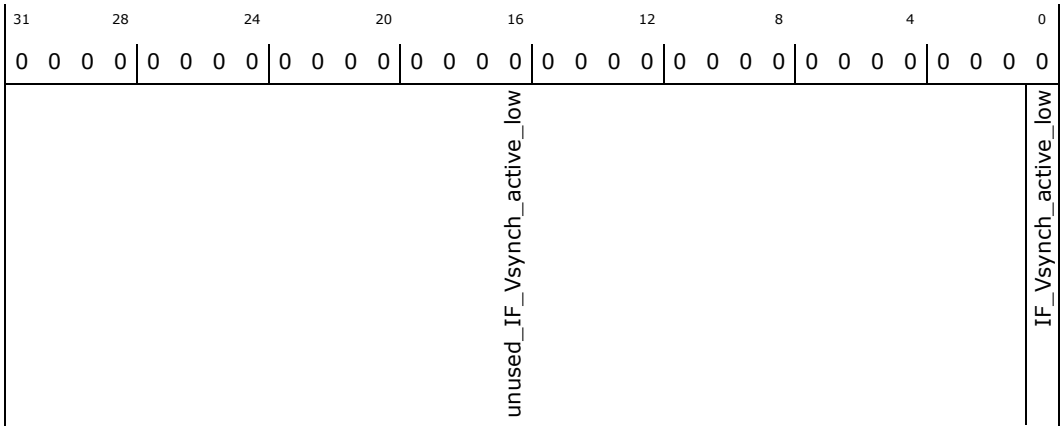
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30038h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_Vsynch_active_low):** Unused
0	0x0 RW	**IF_Vsynch_active_low:** Vertical synch active low: set to 1 if Vsynch and EndOfFrame are active low

5.2.123 IF_Hsynch_active_low (is_2400_ifmt_ift_prim_IF_Hsynch_active_low)—Offset 3003Ch

Horizontal synch active low: set to 1 if Hsynch and EndOfLine are active low

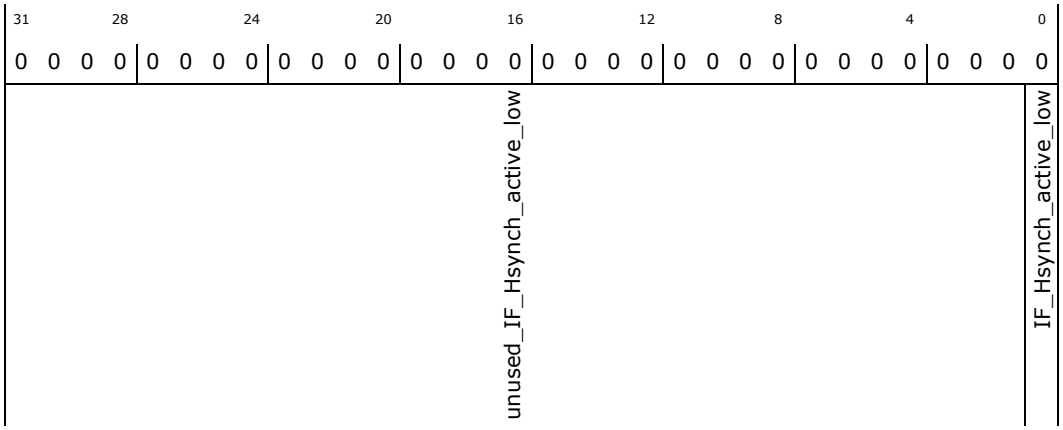
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3003Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_Hsynch_active_low):** Unused
0	0x0 RW	**IF_Hsynch_active_low:** Horizontal synch active low: set to 1 if Hsynch and EndOfLine are active low

5.2.124 IF_ReEnable (is_2400_ifmt_ift_prim_IF_ReEnable)—Offset 30040h

Re-enable status registers. When one of the FSM goes into error state, the status registers keep their value for post-debugging. Setting to 1 will re-enable status register.

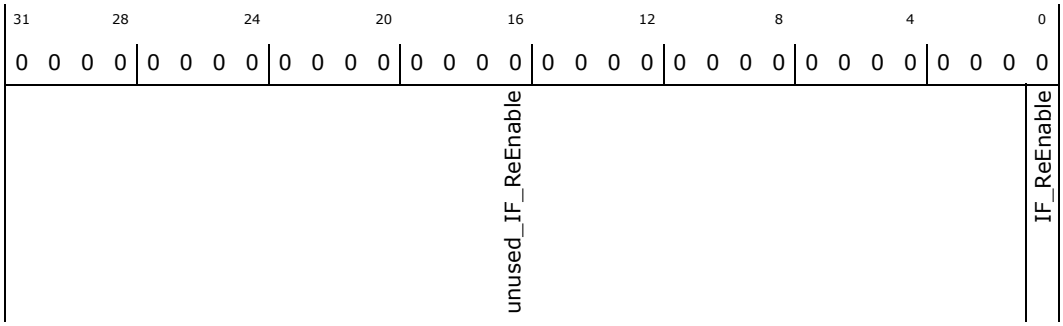
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30040h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_ReEnable):** Unused
0	0x0 RW	**IF_ReEnable:** Re-enable status registers. When one of the FSM goes into error state, the status registers keep their value for post-debugging. Setting to 1 will re-enable status register.

5.2.125 IF_block_input (is_2400_ifmt_ift_prim_IF_block_input)—Offset 30044h

Block input when no req: set to 1 to block data streaming input when no request is received

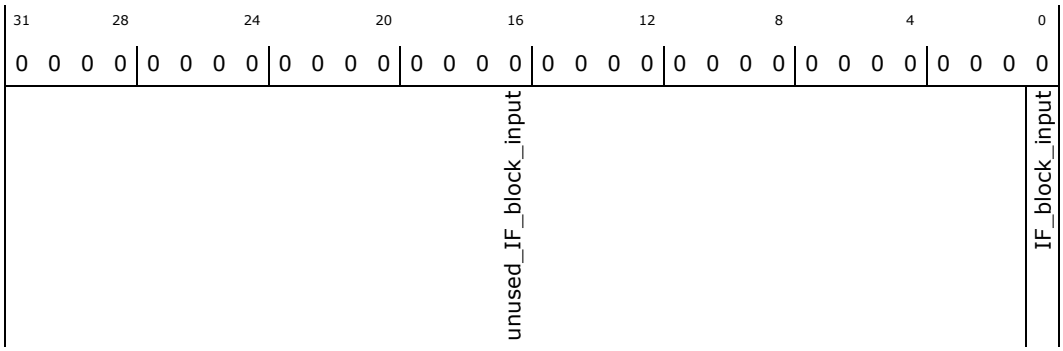
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30044h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_block_input):** Unused
0	0x0 RW	**IF_block_input:** Block input when no req: set to 1 to block data streaming input when no request is received

5.2.126 IF_Vert_Deinter (is_2400_ifmt_ift_prim_IF_Vert_Deinter)—Offset 30048h

Vertical de-interleaving factor

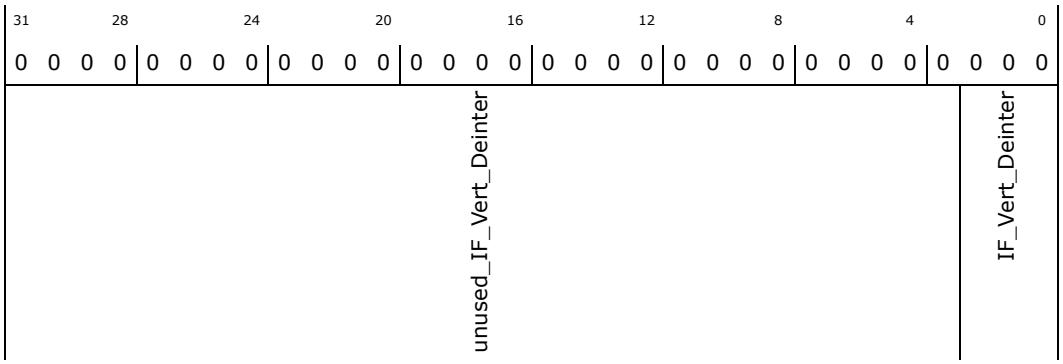
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30048h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_Vert_Deinter):** Unused
2:0	0x0 RW	**IF_Vert_Deinter:** Vertical de-interleaving factor

5.2.127 IF_FSM_Sync_status (is_2400_ifmt_ift_prim_IF_FSM_Sync_status)—Offset 30100h

FSM Sync status

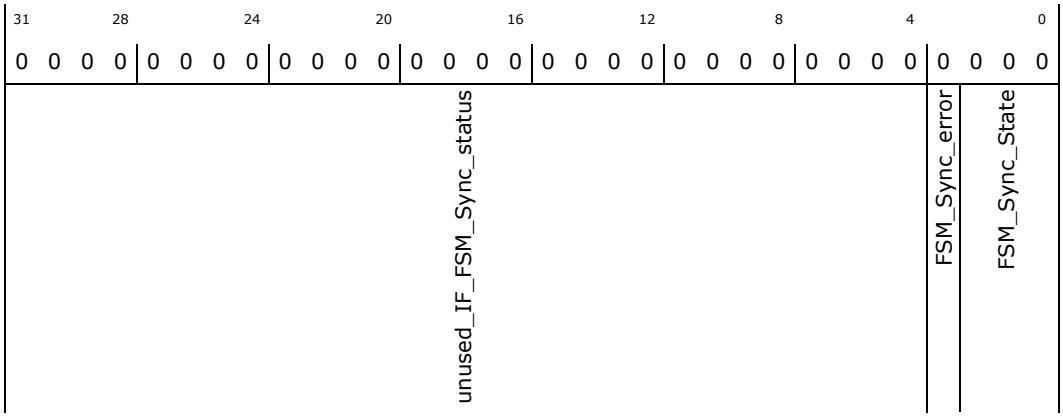
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30100h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_FSM_Sync_status):** Unused
3	0x0 RO	**FSM_Sync_error:** Error flag: when set in combination with: Idle state an unknown command has been received; Req. Lines state an unexpected vsynch or eof has been received; Req. Vectors state an unexpected vsynch or eof has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Sync_State:** FSM State: State: 0)Idle -- 1)Req Frame -- 2)Req. Lines -- 3)Req. Vectors -- 4)Send Acknowledge

5.2.128 FSM_Sync_counter (is_2400_ifmt_ift_prim_FSM_Sync_counter)—Offset 30104h

FSM Sync counter: counts the processed items. For Request Frame counts the number of frames processed. For Request lines command counts the number of lines processed. For Request vectors command counts the number of vectors processed. The counter begins at value 1.

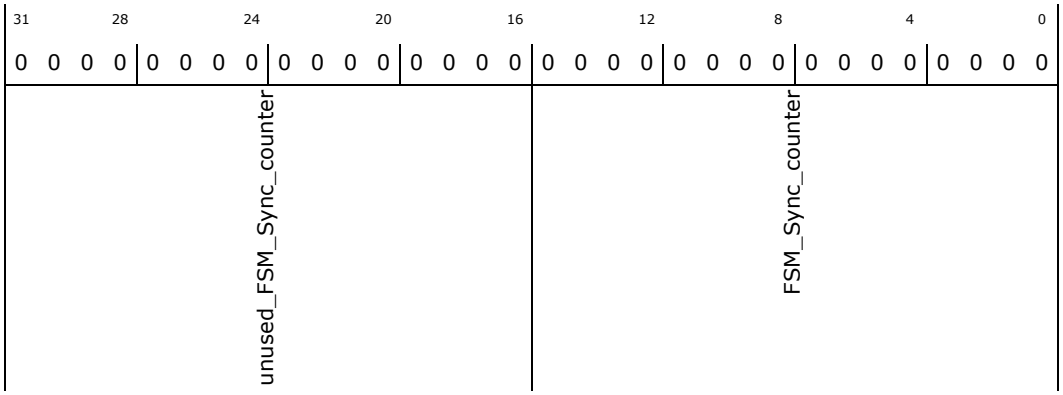
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30104h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_FSM_Sync_counter):** Unused
15:0	0x0 RO	**FSM_Sync_counter:** FSM Sync counter: counts the processed items. For Request Frame counts the number of frames processed. For Request lines command counts the number of lines processed. For Request vectors command counts the number of vectors processed. The counter begins at value 1.

5.2.129 FSM_Crop_status (is_2400_ifmt_ift_prim_FSM_Crop_status)—Offset 30108h

FSM Crop Status

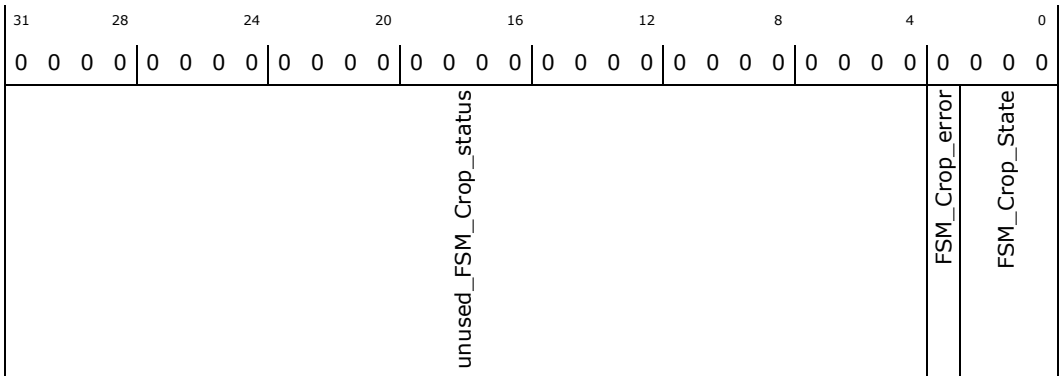
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30108h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_FSM_Crop_status):** Unused
3	0x0 RO	**FSM_Crop_error:** Error flag: when set in combination with: Crop Line state unexpected vsynch or eof has been received; Req. Lines state unexpected vsynch or eof has been received; Req. Vectors state unexpected vsynch or eof has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Crop_State:** FSM State: State: 0)Idle -- 1)Wait Line -- 2)Crop Line -- 3)Crop Pixel -- 4)Pass pixel -- 5) Pass Line

5.2.130 FSM_Crop_line_counter (is_2400_ifmt_ift_prim_FSM_Crop_line_counter)—Offset 3010Ch

FSM Crop line counter

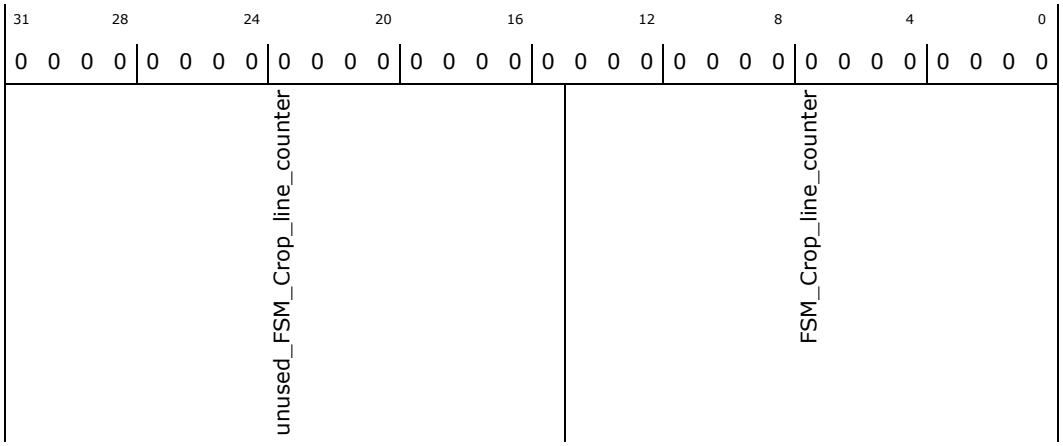
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3010Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:15	0x0 RW	**Reserved (unused_FSM_Crop_line_counter):** Unused
14:0	0x0 RO	**FSM_Crop_line_counter:** FSM Crop line counter

5.2.131 FSM_Crop_pixel_counter (is_2400_ifmt_ift_prim_FSM_Crop_pixel_counter)—Offset 30110h

FSM Crop pixel component counter

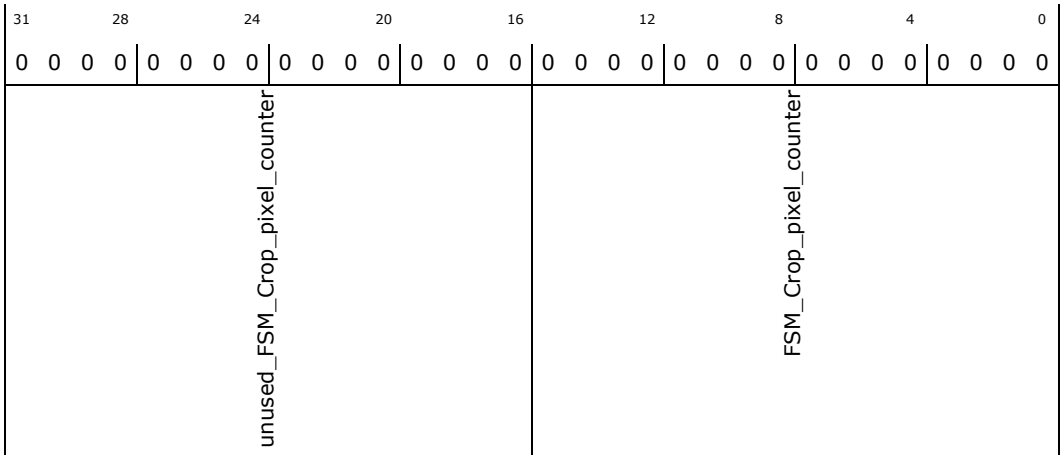
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30110h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_FSM_Crop_pixel_counter):** Unused
15:0	0x0 RO	**FSM_Crop_pixel_counter:** FSM Crop pixel component counter

5.2.132 FSM_Deinterl_idx_buffer (is_2400_ifmt_ift_prim_FSM_Deinterl_idx_buffer)—Offset 30114h

FSM De-interleaving idx Buffer

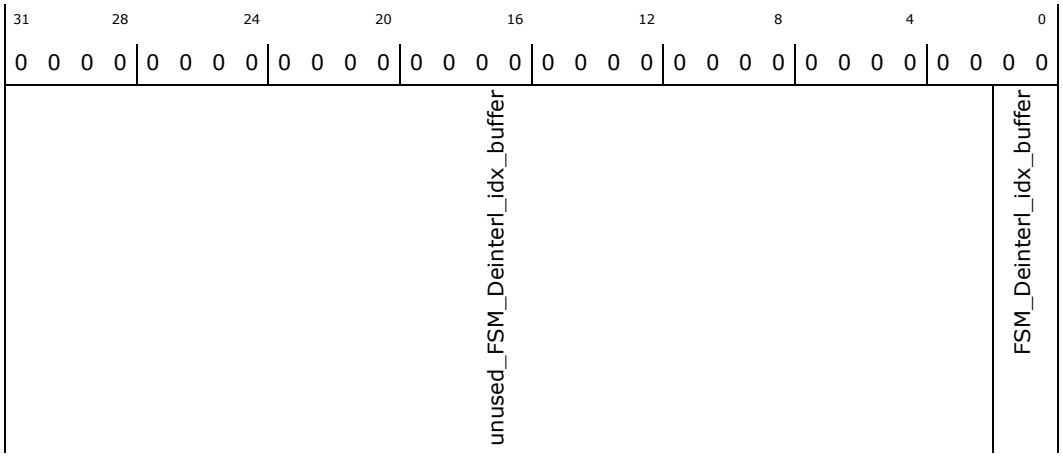
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30114h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_FSM_Deinterl_idx_buffer):** Unused
1:0	0x0 RO	**FSM_Deinterl_idx_buffer:** FSM de-interleaving idx buffer

5.2.133 FSM_Horiz_Decim_cnt (is_2400_ifmt_ift_prim_FSM_Horiz_Decim_cnt)—Offset 30118h

FSM Horizontal Decimation Counter

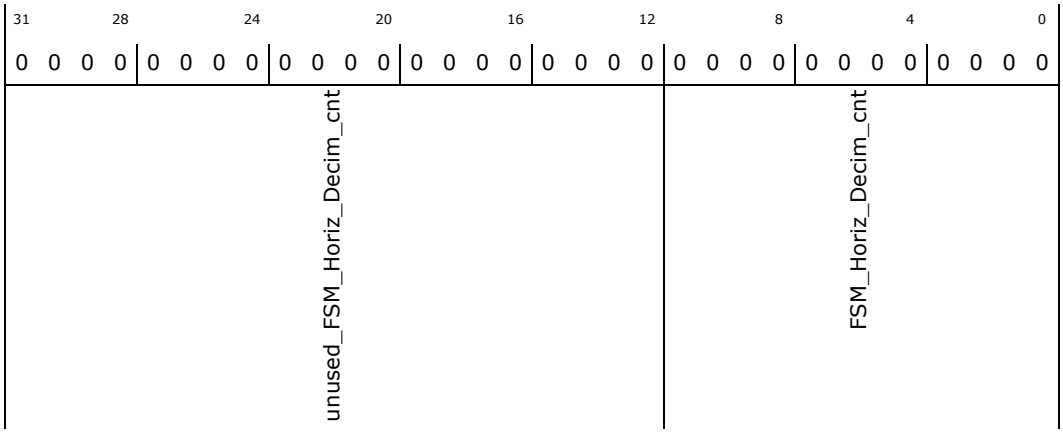
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30118h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_FSM_Horiz_Decim_cnt):** Unused
11:0	0x0 RO	**FSM_Horiz_Decim_cnt:** FSM Horizontal Decimation counter

5.2.134 FSM_Vertic_Decim_cnt (is_2400_ifmt_ift_prim_FSM_Vertic_Decim_cnt)—Offset 3011Ch

FSM Vertical Decimation Counter

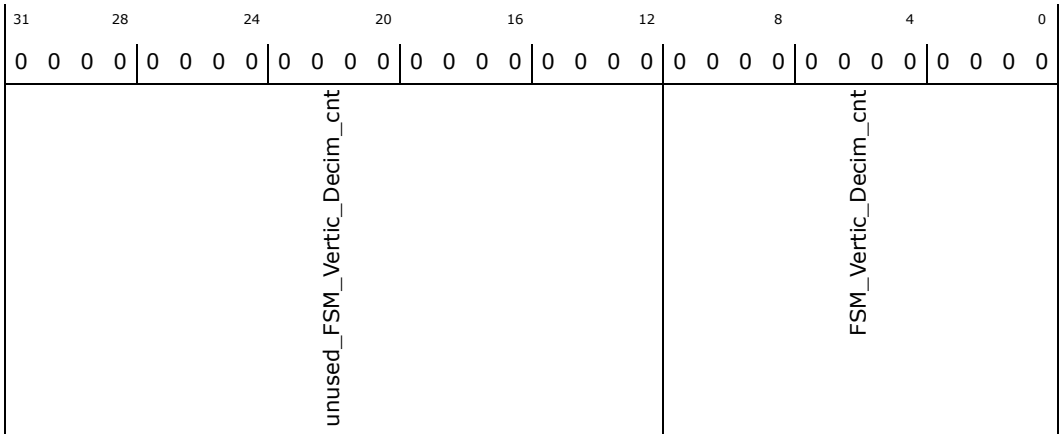
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3011Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_FSM_Vertic_Decim_cnt):** Unused
11:0	0x0 RO	**FSM_Vertic_Decim_cnt:** FSM Vertical decimation counter

5.2.135 FSM_Vertic_Block_Decim_cnt (is_2400_ifmt_ift_prim_FSM_Vertic_Block_Decim_cnt)—Offset 30120h

FSM Vertical Block Decimation Counter

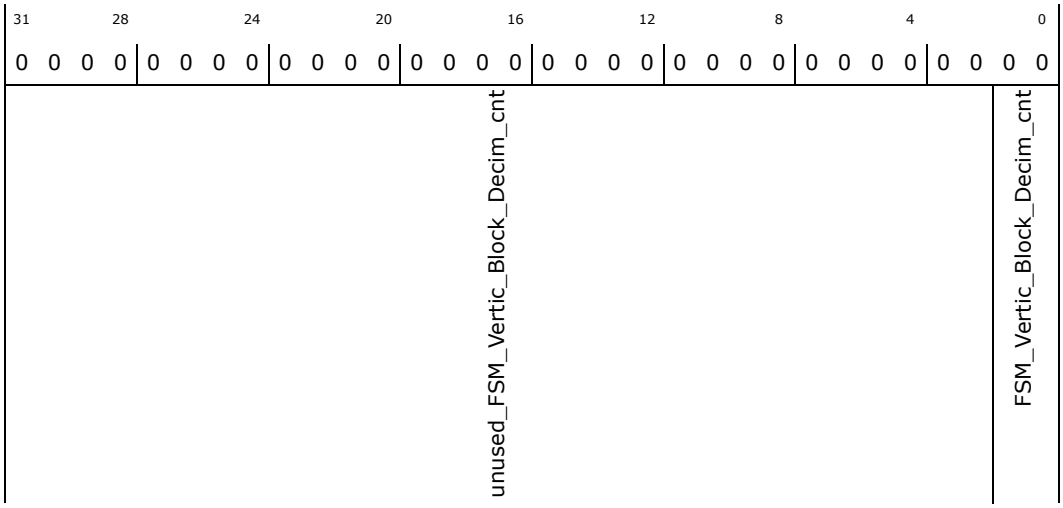
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30120h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_FSM_Vertic_Block_Decim_cnt):** Unused
1:0	0x0 RO	**FSM_Vertic_Block_Decim_cnt:** FSM Vertical block decimation counter

5.2.136 IF_FSM_Padding_status (is_2400_ifmt_ift_prim_IF_FSM_Padding_status)—Offset 30124h

FSM Padding Status

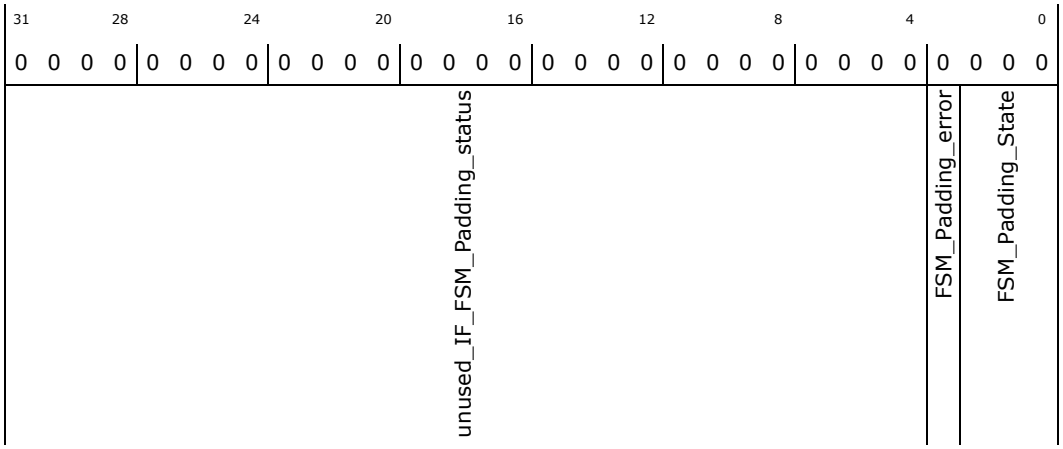
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30124h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_FSM_Padding_status):** Unused
3	0x0 RO	**FSM_Padding_error:** Error flag: when set in combination with: Left Padding state an unexpected vsynch or hsync has been received; Write state an unexpected vsynch or hsync has been received; Right padding state unexpected vsynch has been received; Send EOL state an unexpected vsynch has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Padding_State:** FSM State: State: 0)Idle -- 1)Left Padding -- 2)Write -- 3)Right padding -- 4)Sending EOL

5.2.137 IF_FSM_Padding_elem_idx (is_2400_ifmt_ift_prim_IF_FSM_Padding_elem_idx)—Offset 30128h

FSM Padding Element Index Counter

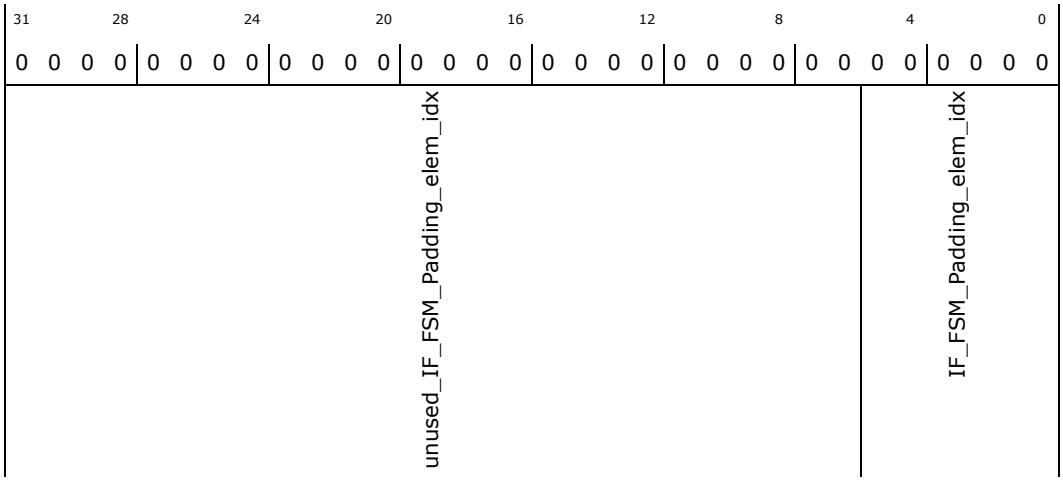
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30128h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_IF_FSM_Padding_elem_idx):** Unused
5:0	0x0 RO	**IF_FSM_Padding_elem_idx:** FSM Padding element index counter

5.2.138 IF_FSM_Vec_Sup (is_2400_ifmt_ift_prim_IF_FSM_Vec_Sup)—Offset 3012Ch

FSM Vector Support Error State: if set the FSM Vector support is in error state

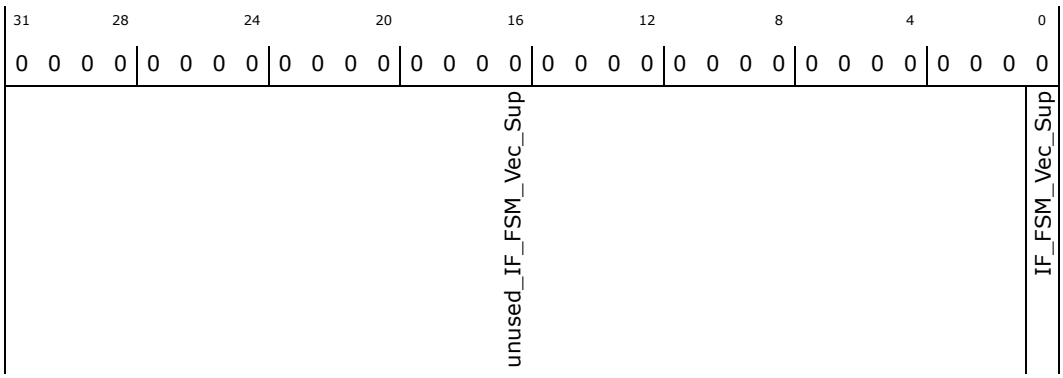
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3012Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup):** Unused
0	0x0 RO	**IF_FSM_Vec_Sup:** FSM Vector support error state: if set the FSM Vector support is in error state

5.2.139 IF_FSM_Vec_Sup_Buf_full (is_2400_ifmt_ift_prim_IF_FSM_Vec_Sup_Buf_full)—Offset 30130h

FSM Vector Support Buffer Full: one-hot encoding flag signaling that the correspondent buffer is full

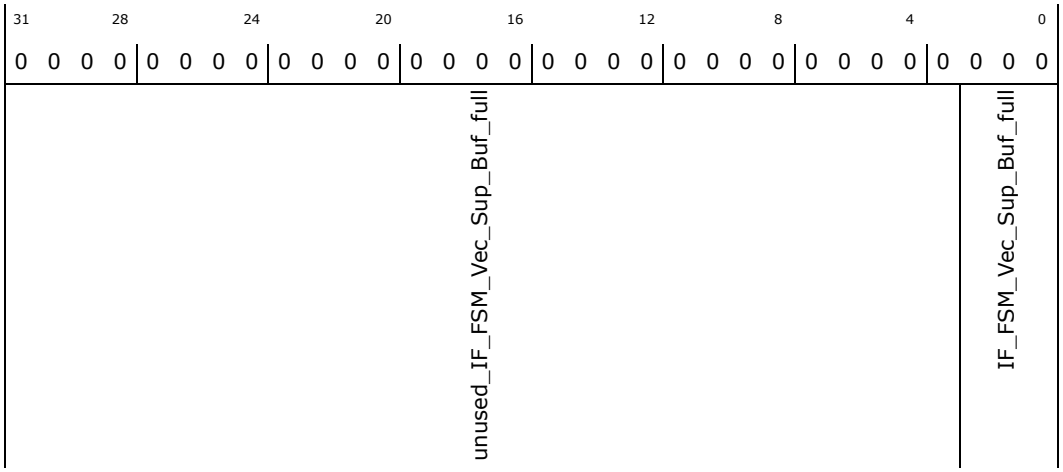
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30130h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup_Buf_full):** Unused
2:0	0x0 RO	**IF_FSM_Vec_Sup_Buf_full:** FSM Vector support buf full: one-hot encoding flag signaling that the correspondent buffer is full

5.2.140 IF_FSM_Vec_Sup_rd_accept (is_2400_ifmt_ift_prim_IF_FSM_Vec_Sup_rd_accept)—Offset 30134h

FSM Vector Support FIFO rd accept flag

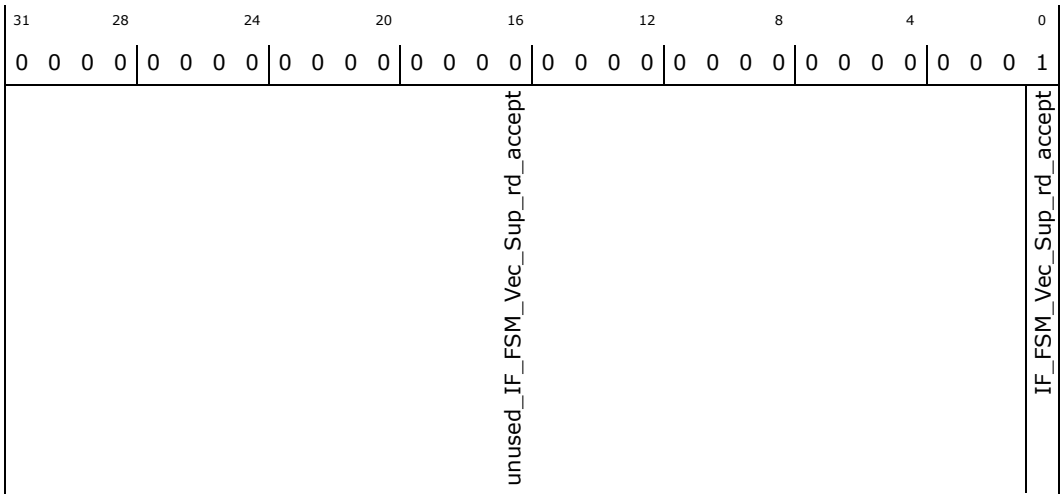
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30134h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup_rd_accept):** Unused
0	0x1 RO	**IF_FSM_Vec_Sup_rd_accept:** FSM Vector Support FIFO rd accept flag

5.2.141 IF_Pixel_Fifo_status (is_2400_ifmt_ift_prim_IF_Pixel_Fifo_status)—Offset 30138h

Pixel FIFO Status

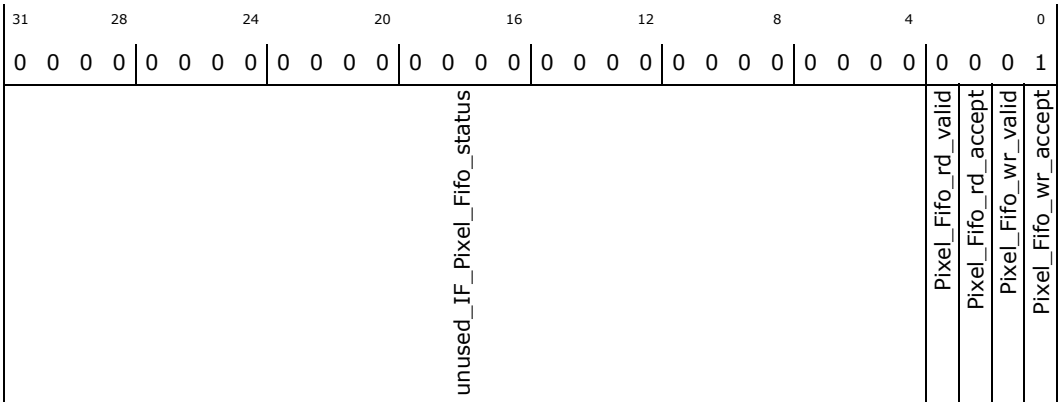
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30138h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_Pixel_Fifo_status):** Unused
3	0x0 RO	**Pixel_Fifo_rd_valid:** Fifo has an element to be read
2	0x0 RO	**Pixel_Fifo_rd_accept:** IF accepts Pixel(s)
1	0x0 RO	**Pixel_Fifo_wr_valid:** There is an element to write into the FIFO
0	0x1 RO	**Pixel_Fifo_wr_accept:** FIFO is not full(1), FIFO is Full(0)

5.2.142 IF_sw_rst (is_2400_ifmt_ift_prim_b_IF_sw_rst)—Offset 30200h

Software Reset

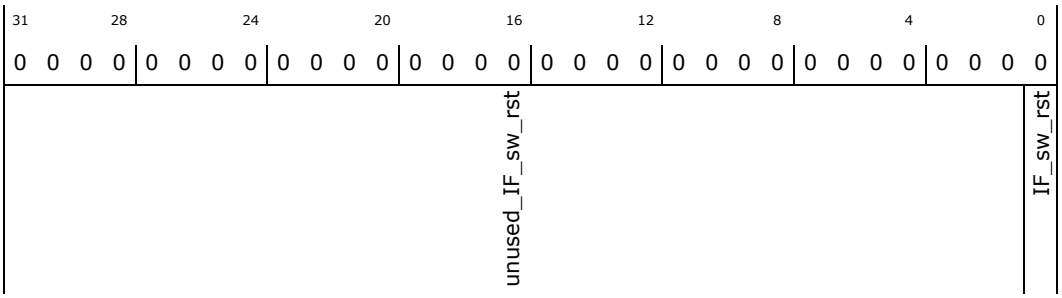
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30200h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_sw_rst):** Unused
0	0x0 RW	**IF_sw_rst:** Software Reset

5.2.143 IF_start_line (is_2400_ifmt_ift_prim_b_IF_start_line)—Offset 30204h

Start line: Number of lines to skip before passing the 1st line

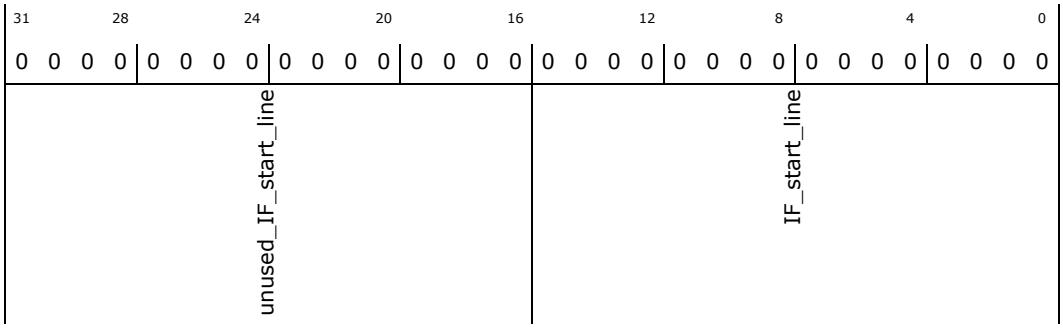
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30204h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_start_line):** Unused
15:0	0x0 RW	**IF_start_line:** Start line: number of line to skip before passing the 1st line

5.2.144 IF_start_column (is_2400_ifmt_ift_prim_b_IF_start_column)—Offset 30208h

Start column: Number pixel component to skip before passing the 1st of a line

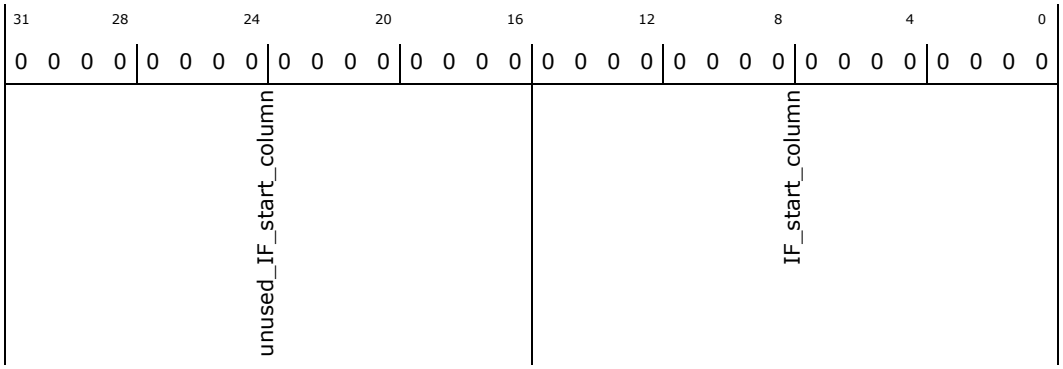
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30208h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_start_column):** Unused
15:0	0x0 RW	**IF_start_column:** Start column: number pixel component to skip before passing the 1st of a line

5.2.145 IF_Cropped_height (is_2400_ifmt_ift_prim_b_IF_Cropped_height)—Offset 3020Ch

Cropped height: number of lines of the cropped image

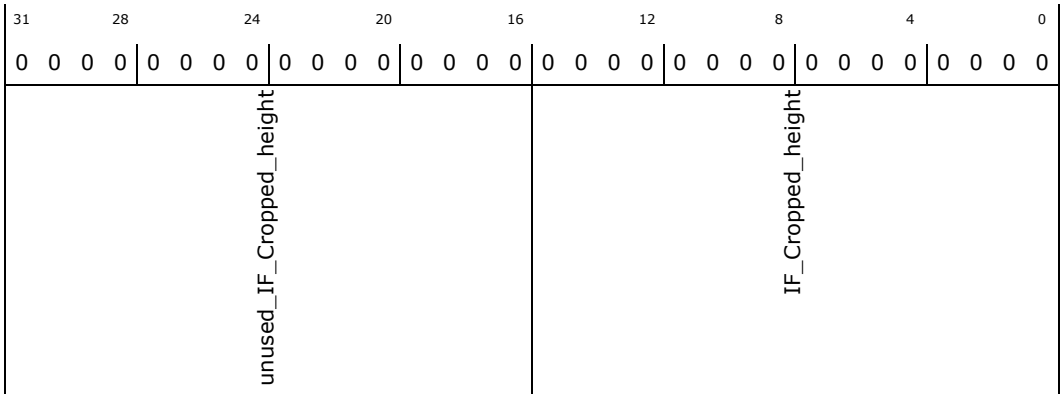
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3020Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_Cropped_height):** Unused
15:0	0x0 RW	**IF_Cropped_height:** Cropped height: number of lines of the cropped image

5.2.146 IF_Cropped_width (is_2400_ifmt_ift_prim_b_IF_Cropped_width)—Offset 30210h

Cropped width: number of pixel component of the cropped image

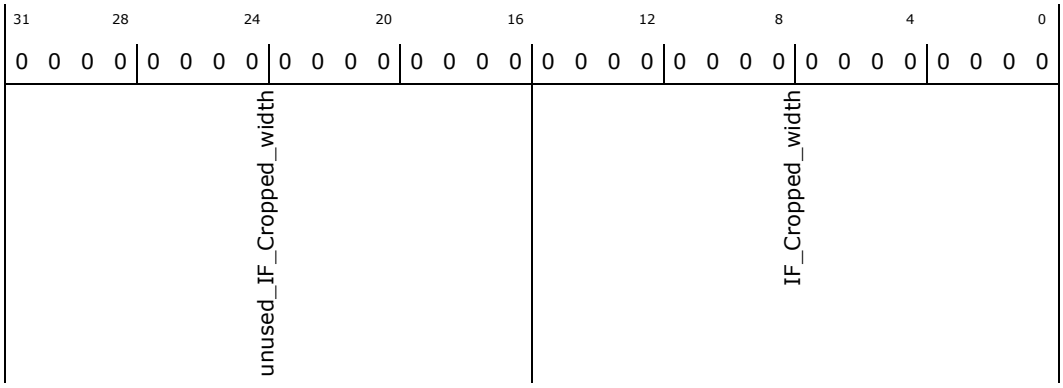
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30210h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_Cropped_width):** Unused
15:0	0x0 RW	**IF_Cropped_width:** Cropped width: number of pixel component of the cropped image

5.2.147 IF_Vert_Decim (is_2400_ifmt_ift_prim_b_IF_Vert_Decim)—Offset 30214h

Vertical Decimation Factor

Vertical decimation factor of N means that only 1 every N lines is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive lines avery 2N lines.

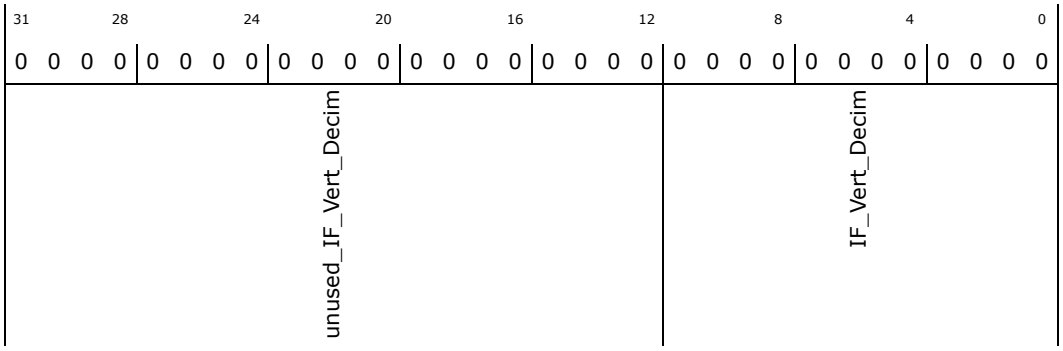
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30214h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_IF_Vert_Decim):** Unused
11:0	0x0 RW	**IF_Vert_Decim:** Vertical decimation factor. Vertical decimation factor of N means that only 1 every N lines is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive lines avery 2N lines.

5.2.148 IF_Horiz_Decim (is_2400_ifmt_ift_prim_b_IF_Horiz_Decim)—Offset 30218h

Horizontal decimation factor. Horizontal decimation factor of N means that only 1 every N pixel components is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive pixel components avery 2N pixel components.

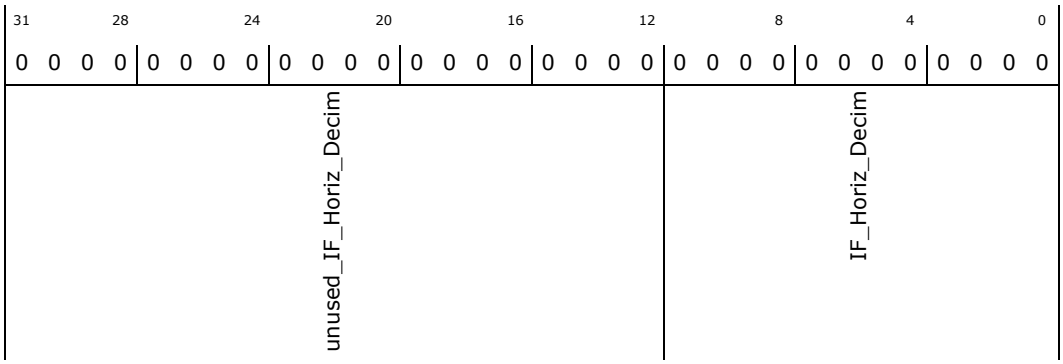
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30218h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_IF_Horiz_Decim):** Unused
11:0	0x0 RW	**IF_Horiz_Decim:** Horizontal decimation factor. Horizontal decimation factor of N means that only 1 every N pixel components is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive pixel components avery 2N pixel components.

5.2.149 IF_Horiz_Deinter (is_2400_ifmt_ift_prim_b_IF_Horiz_Deinter)—Offset 3021Ch

Horizontal De-interleaving Factor

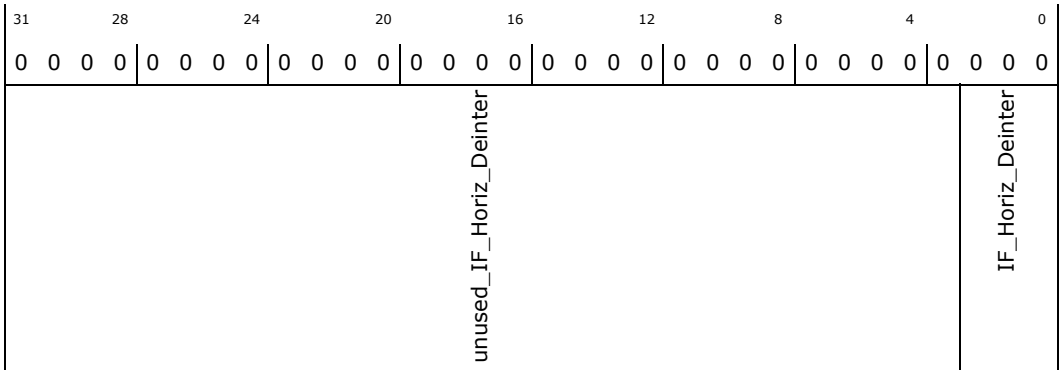
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3021Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_Horiz_Deinter):** Unused
2:0	0x0 RW	**IF_Horiz_Deinter:** Horizontal de-interleaving factor

5.2.150 IF_Left_Pad (is_2400_ifmt_ift_prim_b_IF_Left_Pad)—Offset 30220h

Left padding: Pixel component to be padded at the beginning of each line

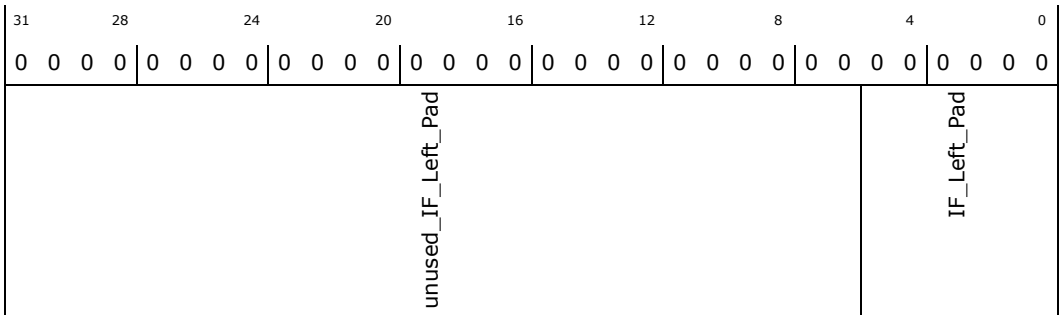
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30220h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_IF_Left_Pad):** Unused

Bit Range	Default and Access	Field Name (ID): Description
5:0	0x0 RW	**IF_Left_Pad:** Left padding: pixel component to be padded at the beginning of each line

5.2.151 IF_EOF_Offset (is_2400_ifmt_ift_prim_b_IF_EOF_Offset)—Offset 30224h

End of line offset in bytes: number of bytes to add at the address at the end of a line

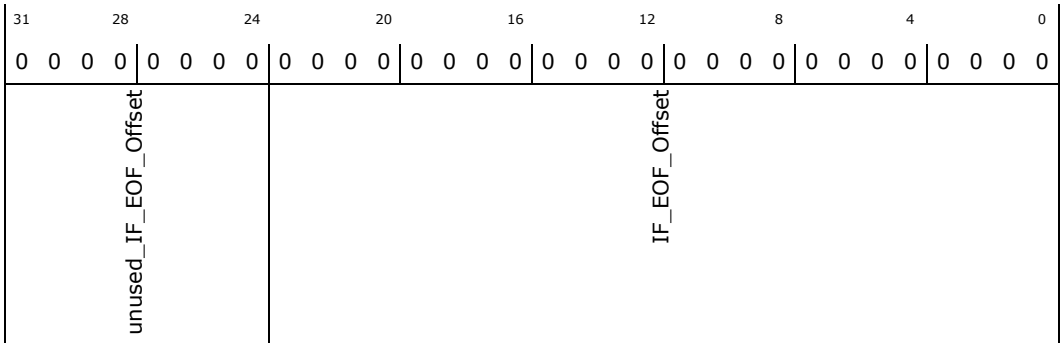
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30224h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_EOF_Offset):** Unused
23:0	0x0 RW	**IF_EOF_Offset:** End of line offset in bytes: number of bytes to add at the address at the end of a line

5.2.152 IF_Start_addr (is_2400_ifmt_ift_prim_b_IF_Start_addr)—Offset 30228h

Local Memory Buffer Start Address (byte aligned)

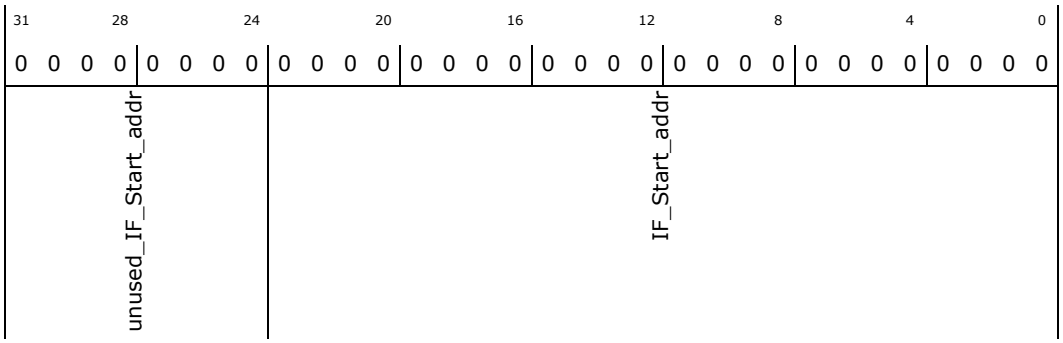
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30228h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_Start_addr):** Unused
23:0	0x0 RW	**IF_Start_addr:** Local memory buffer start address (byte aligned)

5.2.153 IF_End_addr (is_2400_ifmt_ift_prim_b_IF_End_addr)—Offset 3022Ch

Local Memory Buffer End Address (byte aligned)

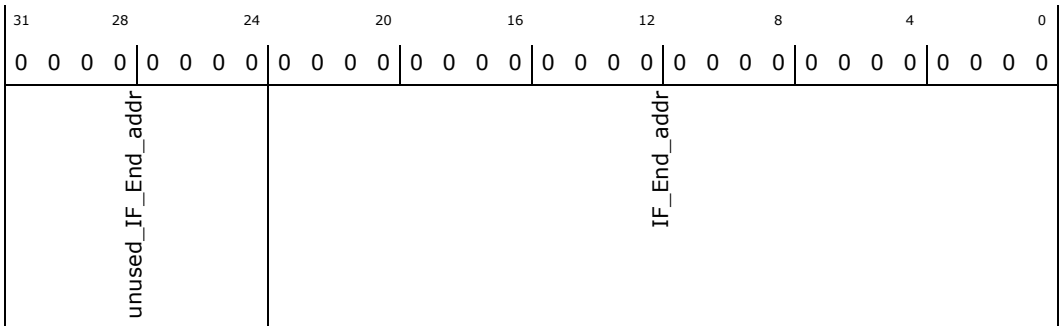
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3022Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_End_addr):** Unused

Bit Range	Default and Access	Field Name (ID): Description
23:0	0x0 RW	**IF_End_addr:** Local memory buffer end address (byte aligned)

5.2.154 IF_incr (is_2400_ifmt_ift_prim_b_IF_incr)—Offset 30230h

Address word increment (word aligned). After every write the address is updated by adding this value times the word alignment.

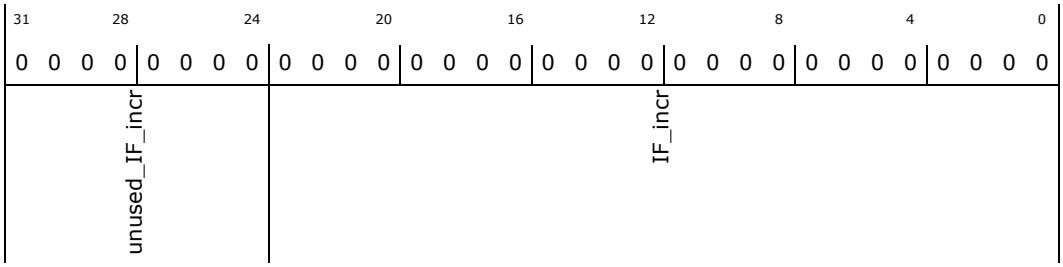
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30230h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_incr):** Unused
23:0	0x0 RW	**IF_incr:** Address word increment (word aligned). After every write the address is updated by adding this value times the word alignment.

5.2.155 IF_YUV_420_format (is_2400_ifmt_ift_prim_b_IF_YUV_420_format)—Offset 30234h

YUV 420 format: set to work on legacy format YUV420

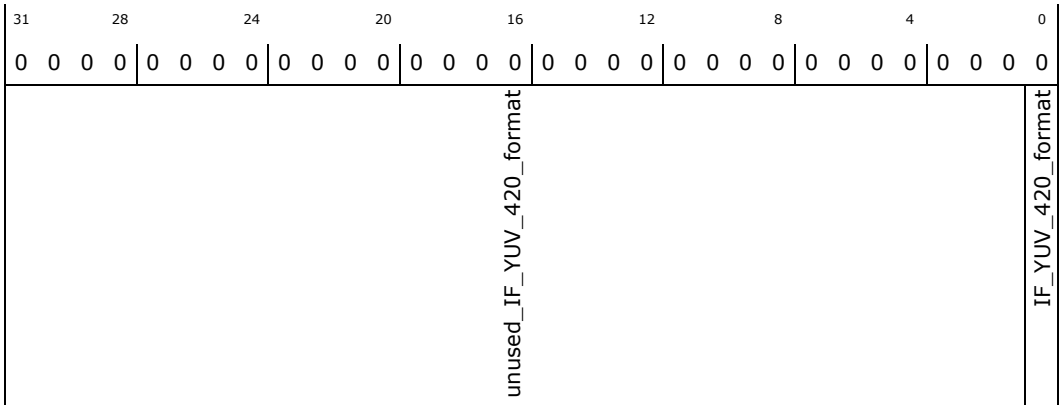
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30234h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_YUV_420_format):** Unused
0	0x0 RW	**IF_YUV_420_format:** YUV 420 format: set to work on legacy format YUV420

5.2.156 IF_Vsynch_active_low (is_2400_ifmt_ift_prim_b_IF_Vsynch_active_low)—Offset 30238h

Vertical Synch Active Low: Set to 1 if Vsynch and EndOfFrame are active low

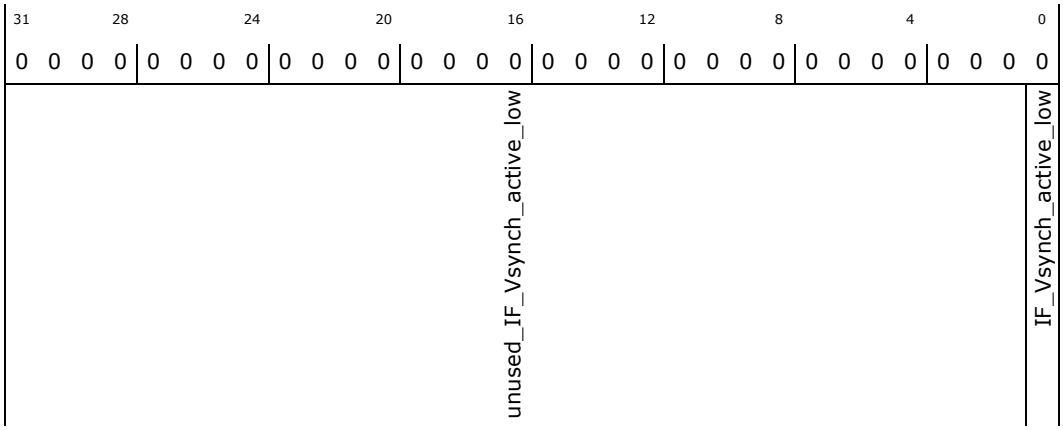
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30238h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_Vsynch_active_low):** Unused
0	0x0 RW	**IF_Vsynch_active_low:** Vertical synch active low: set to 1 if Vsynch and EndOfFrame are active low

5.2.157 IF_Hsynch_active_low (is_2400_ifmt_ift_prim_b_IF_Hsynch_active_low)—Offset 3023Ch

Horizontal Synch Active Low: set to 1 if Hsynch and EndOfLine are active low

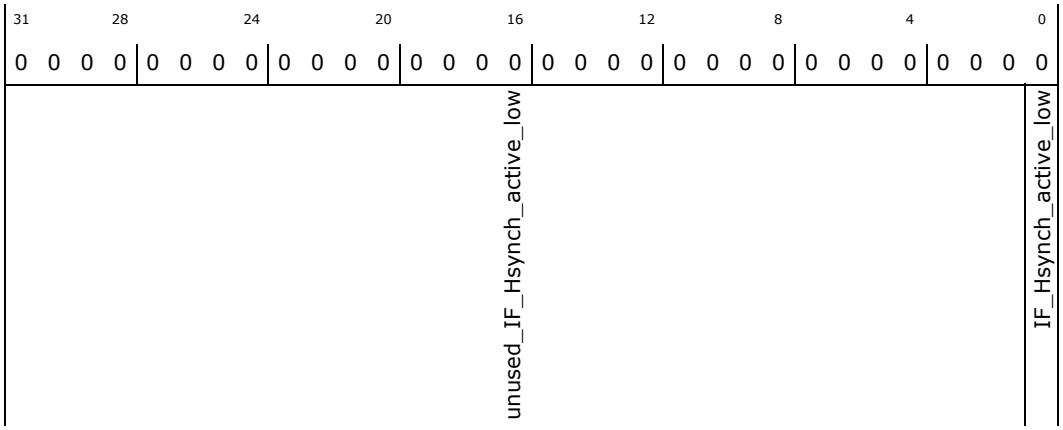
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3023Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_Hsynch_active_low):** Unused
0	0x0 RW	**IF_Hsynch_active_low:** Horizontal synch active low: set to 1 if Hsynch and EndOfLine are active low

5.2.158 IF_ReEnable (is_2400_ifmt_ift_prim_b_IF_ReEnable)—Offset 30240h

Re-enable status registers. When one of the FSM goes into error state, the status registers keep their value for post-debugging. Setting to 1 will re-enable status register.

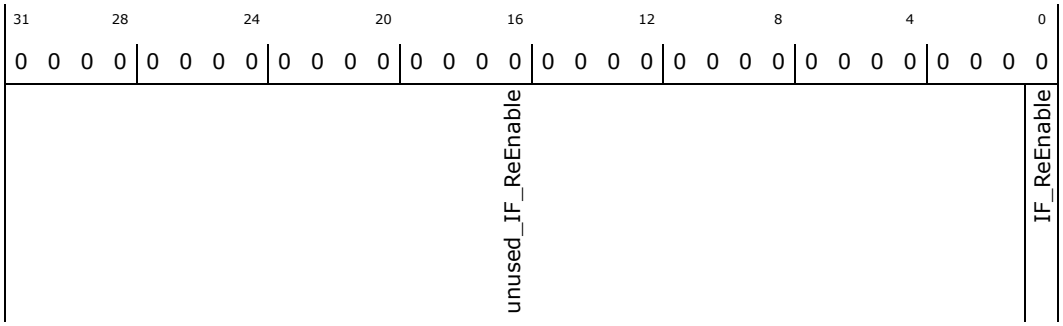
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30240h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_ReEnable):** Unused
0	0x0 RW	**IF_ReEnable:** Re-enable status registers. When one of the FSM goes into error state, the status registers keep their value for post-debugging. Setting to 1 will re-enable status register.

5.2.159 IF_block_input (is_2400_ifmt_ift_prim_b_IF_block_input)—Offset 30244h

Block input when no req: set to 1 to block data streaming input when no request is received

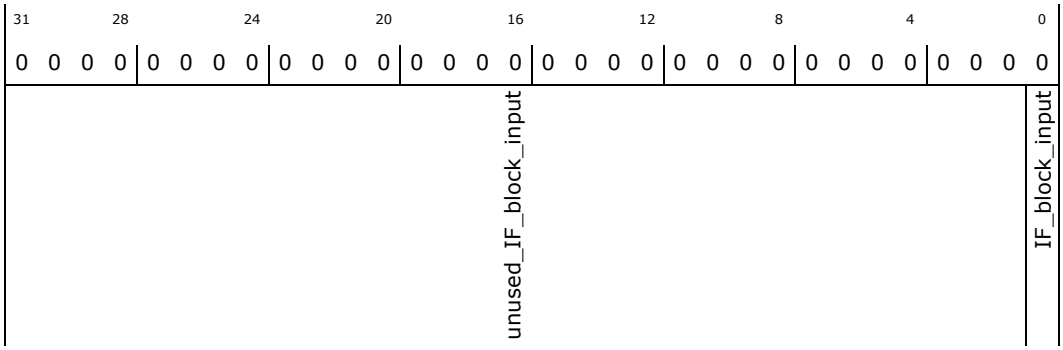
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30244h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_block_input):** Unused
0	0x0 RW	**IF_block_input:** Block input when no req: set to 1 to block data streaming input when no request is received

5.2.160 IF_Vert_Deinter (is_2400_ifmt_ift_prim_b_IF_Vert_Deinter)—Offset 30248h

Vertical De-interleaving Factor

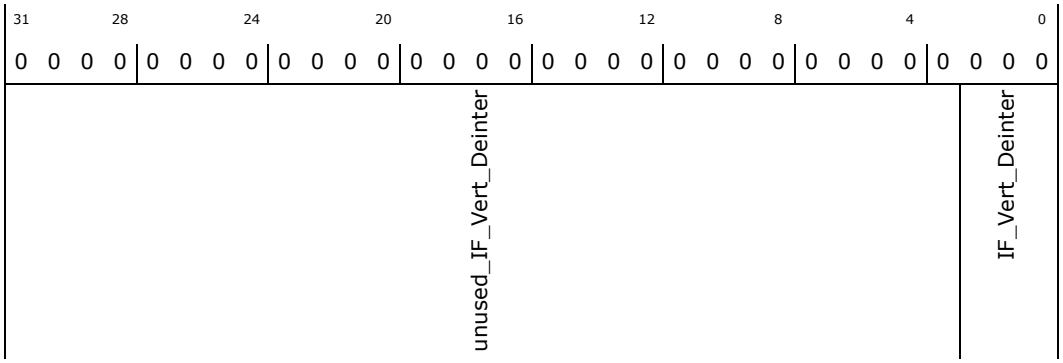
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30248h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_Vert_Deinter):** Unused
2:0	0x0 RW	**IF_Vert_Deinter:** Vertical de-interleaving factor

5.2.161 IF_FSM_Sync_status (is_2400_ifmt_ift_prim_b_IF_FSM_Sync_status)—Offset 30300h

FSM Sync Status

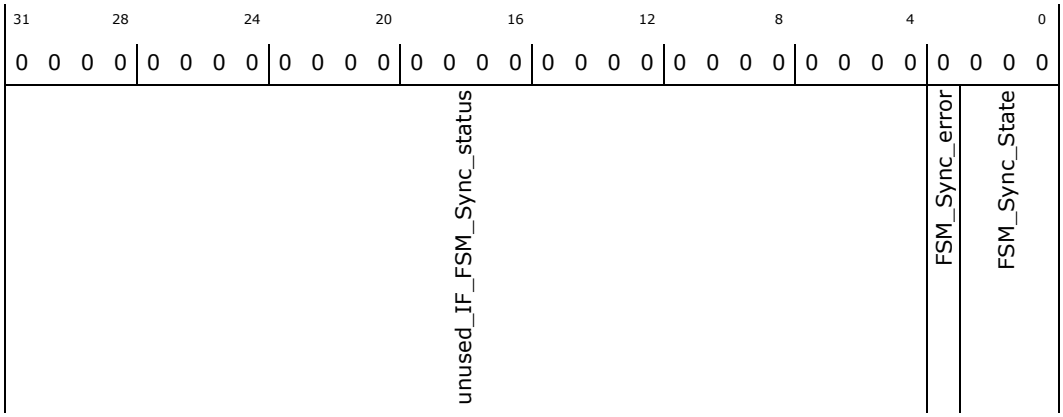
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30300h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_FSM_Sync_status):** Unused
3	0x0 RO	**FSM_Sync_error:** Error flag: when set in combination with: Idle state an unknown command has been received; Req. Lines state an unexpected vsynch or eof has been received; Req. Vectors state an unexpected vsynch or eof has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Sync_State:** FSM State: State: 0)Idle -- 1)Req Frame -- 2)Req. Lines -- 3)Req. Vectors -- 4)Send Acknowledge

5.2.162 FSM_Sync_counter (is_2400_ifmt_ift_prim_b_FSM_Sync_counter)—Offset 30304h

FSM Sync Counter:

Counts the processed items. For Request Frame counts the number of frames processed. For Request lines command counts the number of lines processed. For Request vectors command counts the number of vectors processed. The counter begins at value 1.

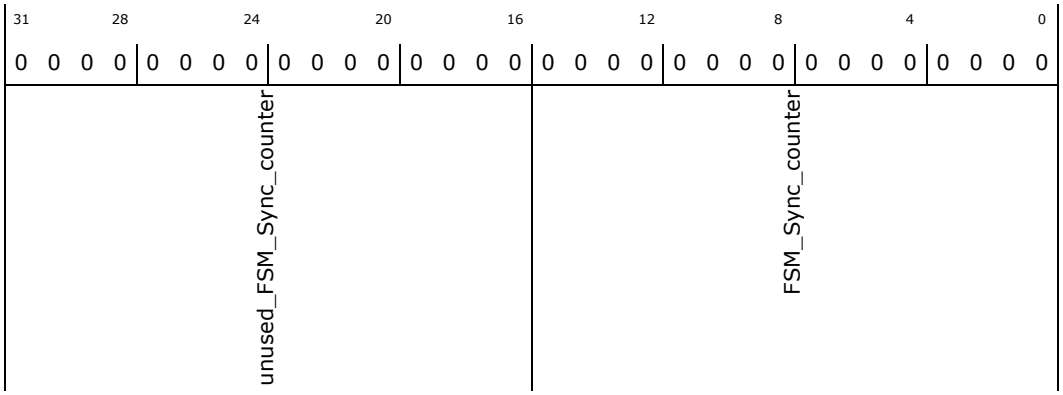
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30304h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_FSM_Sync_counter):** Unused
15:0	0x0 RO	**FSM_Sync_counter:** FSM Sync counter: counts the processed items. For Request Frame counts the number of frames processed. For Request lines command counts the number of lines processed. For Request vectors command counts the number of vectors processed. The counter begins at value 1.

5.2.163 FSM_Crop_status (is_2400_ifmt_ift_prim_b_FSM_Crop_status)—Offset 30308h

FSM Crop Status

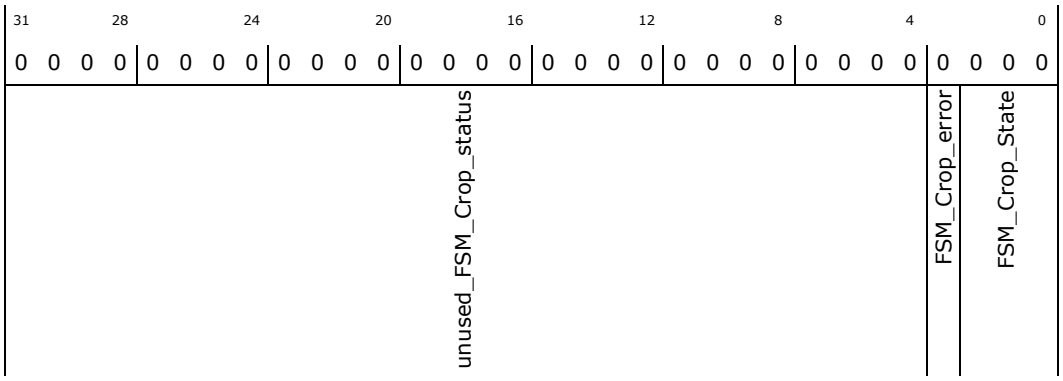
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30308h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_FSM_Crop_status):** Unused
3	0x0 RO	**FSM_Crop_error:** Error flag: when set in combination with: Crop Line state unexpected synch or eof has been received; Req. Lines state unexpected vsynch or eof has been received; Req. Vectors state unexpected vsynch or eof has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Crop_State:** FSM State: State: 0)Idle -- 1)Wait Line -- 2)Crop Line -- 3)Crop Pixel -- 4)Pass pixel -- 5) Pass Line

5.2.164 FSM_Crop_line_counter (is_2400_ifmt_ift_prim_b_FSM_Crop_line_counter)—Offset 3030Ch

FSM Crop Line Counter

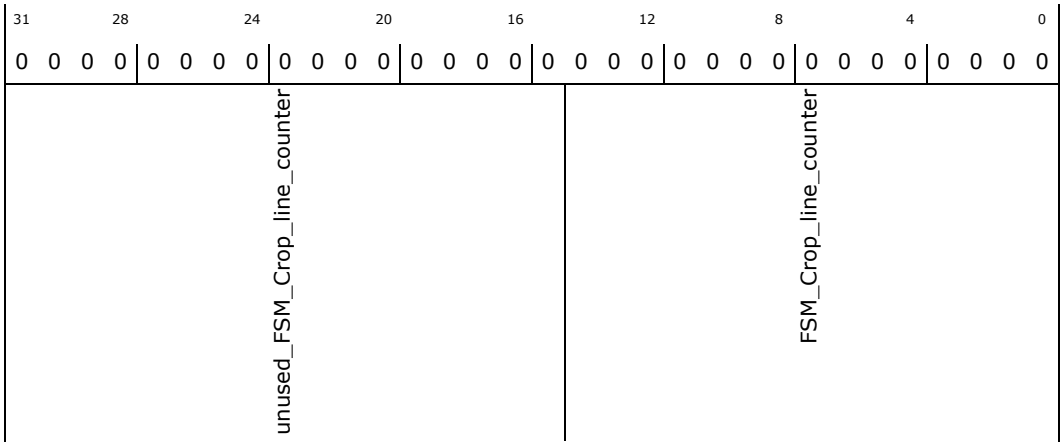
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3030Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:15	0x0 RW	**Reserved (unused_FSM_Crop_line_counter):** Unused
14:0	0x0 RO	**FSM_Crop_line_counter:** FSM Crop line counter

5.2.165 FSM_Crop_pixel_counter (is_2400_ifmt_ift_prim_b_FSM_Crop_pixel_counter)—Offset 30310h

FSM Crop Pixel Component Counter

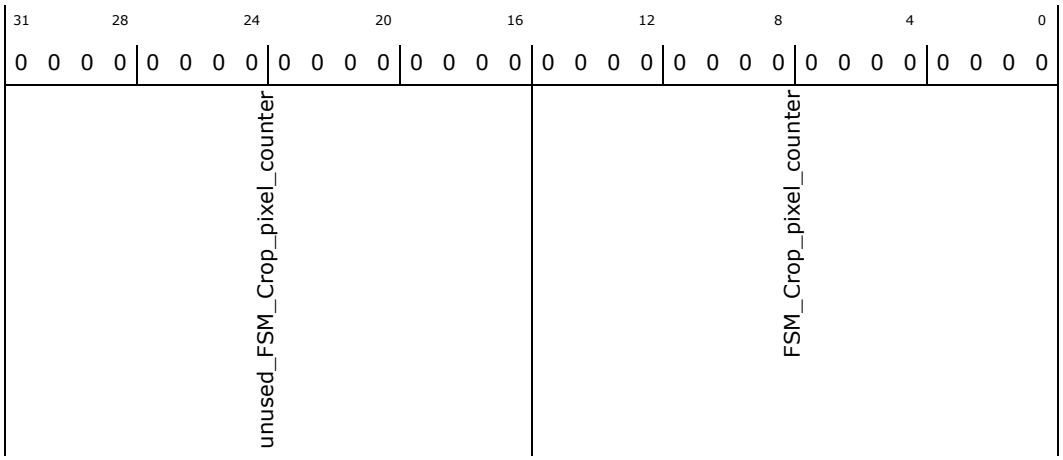
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30310h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_FSM_Crop_pixel_counter):** Unused
15:0	0x0 RO	**FSM_Crop_pixel_counter:** FSM Crop pixel component counter

5.2.166 FSM_Deinterl_idx_buffer (is_2400_ifmt_ift_prim_b_FSM_Deinterl_idx_buffer)—Offset 30314h

FSM De-interleaving idx Buffer

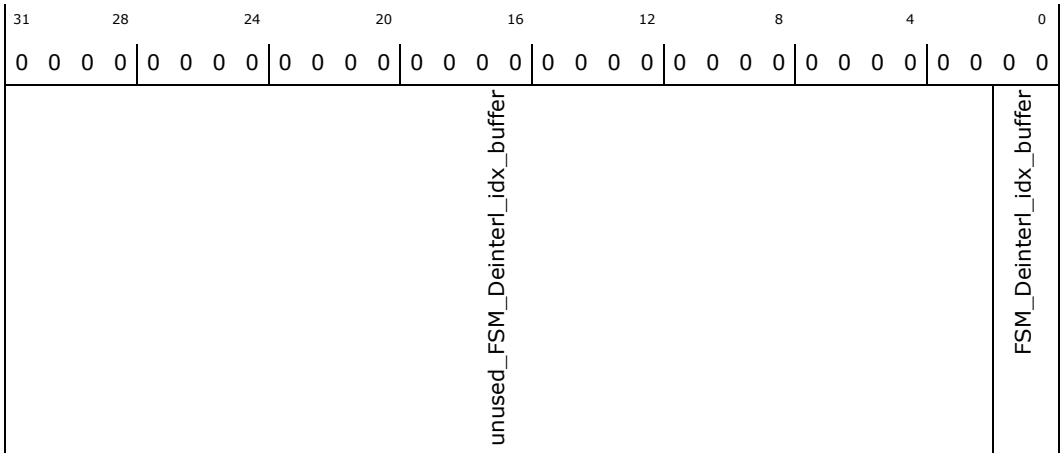
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30314h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_FSM_Deinterl_idx_buffer):** Unused
1:0	0x0 RO	**FSM_Deinterl_idx_buffer:** FSM De-interleaving idx buffer

5.2.167 FSM_Horiz_Decim_cnt (is_2400_ifmt_ift_prim_b_FSM_Horiz_Decim_cnt)—Offset 30318h

FSM Horizontal Decimation Counter

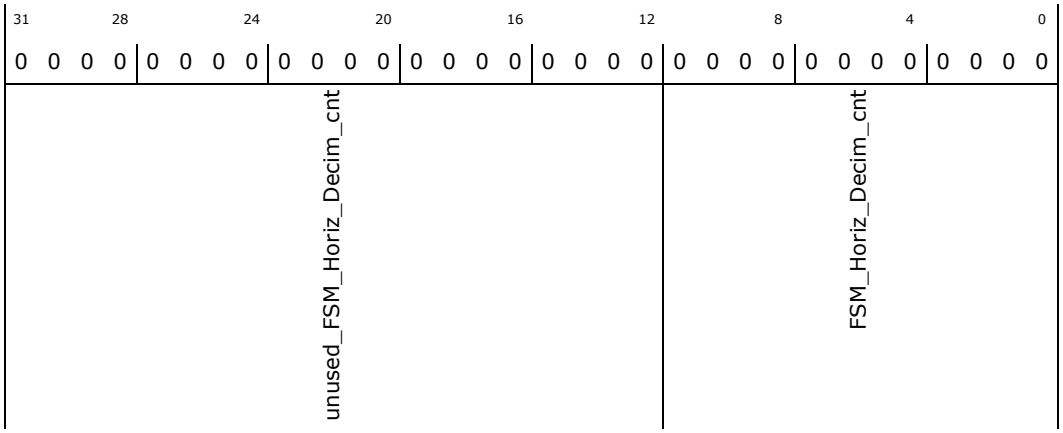
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30318h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_FSM_Horiz_Decim_cnt):** Unused
11:0	0x0 RO	**FSM_Horiz_Decim_cnt:** FSM Horizontal Decimation counter

5.2.168 FSM_Vertic_Decim_cnt (is_2400_ifmt_ift_prim_b_FSM_Vertic_Decim_cnt)—Offset 3031Ch

FSM Vertical Decimation Counter

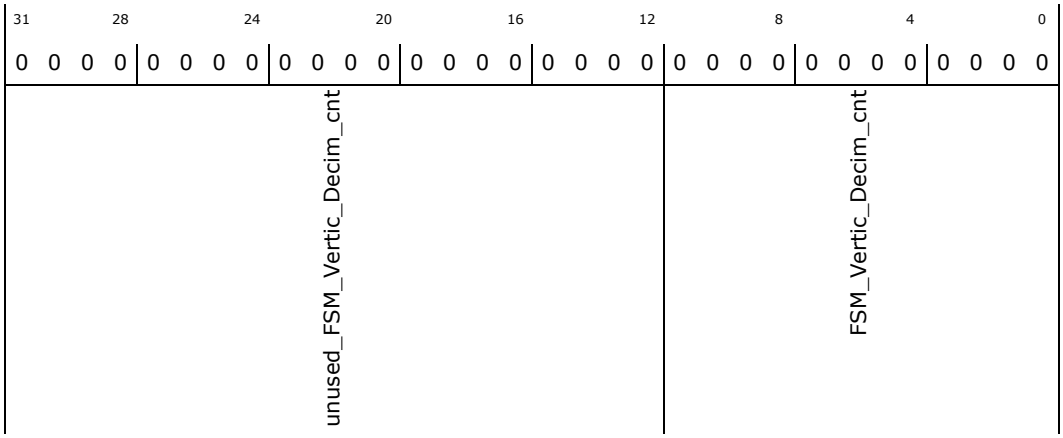
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3031Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_FSM_Vertic_Decim_cnt):** Unused
11:0	0x0 RO	**FSM_Vertic_Decim_cnt:** FSM Vertical decimation counter

5.2.169 FSM_Vertic_Block_Decim_cnt (is_2400_ifmt_ift_prim_b_FSM_Vertic_Block_Decim_cnt) —Offset 30320h

FSM Vertical Block Decimation Counter

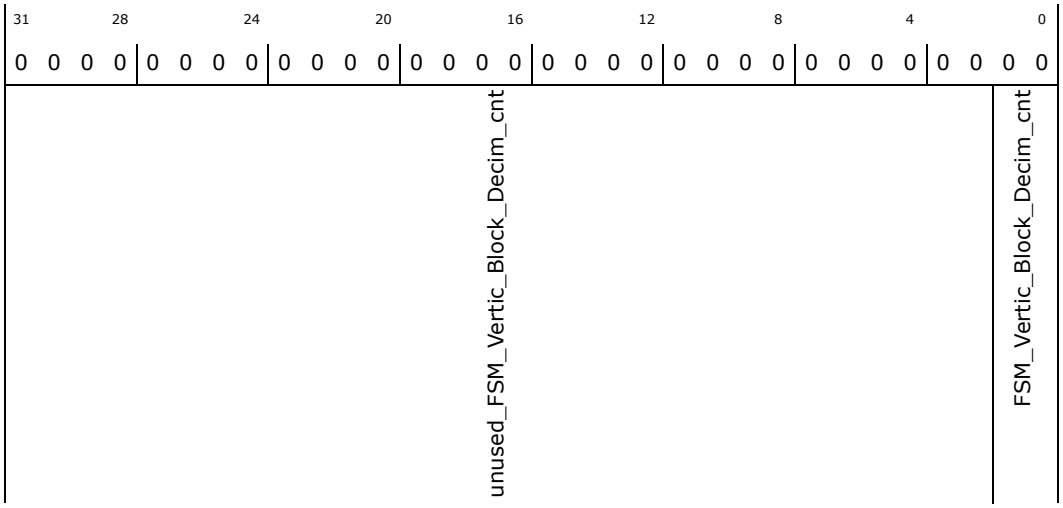
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30320h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_FSM_Vertic_Block_Decim_cnt):** Unused
1:0	0x0 RO	**FSM_Vertic_Block_Decim_cnt:** FSM Vertical block decimation counter

5.2.170 IF_FSM_Padding_status (is_2400_ifmt_ift_prim_b_IF_FSM_Padding_status)—Offset 30324h

FSM Padding Status

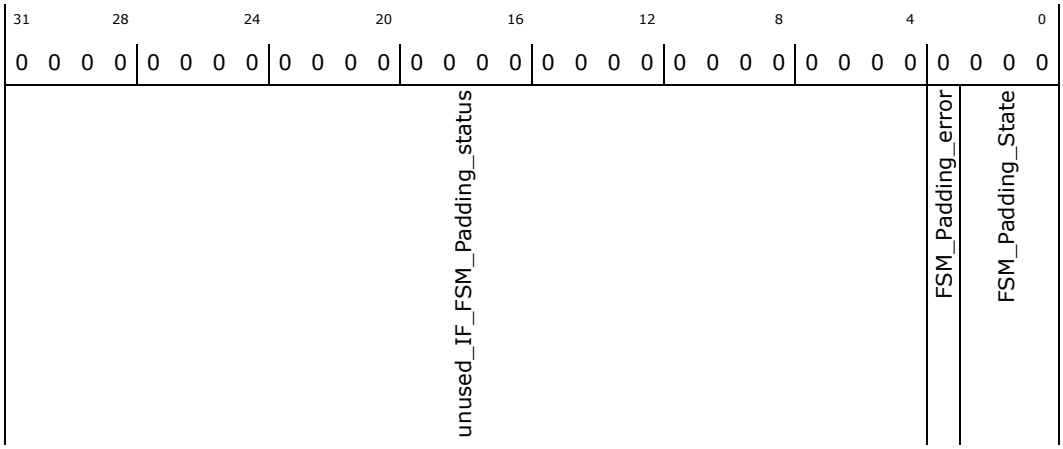
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30324h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_FSM_Padding_status):** Unused
3	0x0 RO	**FSM_Padding_error:** Error flag: when set in combination with: Left Padding state an unexpected vsynch or hsync has been received; Write state an unexpected vsynch or hsync has been received; Right padding state unexpected vsynch has been received; Send EOL state an unexpected vsynch has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Padding_State:** FSM State: State: 0)Idle -- 1)Left Padding -- 2)Write -- 3)Right padding -- 4)Sending EOL

5.2.171 IF_FSM_Padding_elem_idx (is_2400_ifmt_ift_prim_b_IF_FSM_Padding_elem_idx)—Offset 30328h

FSM Padding Element Index Counter

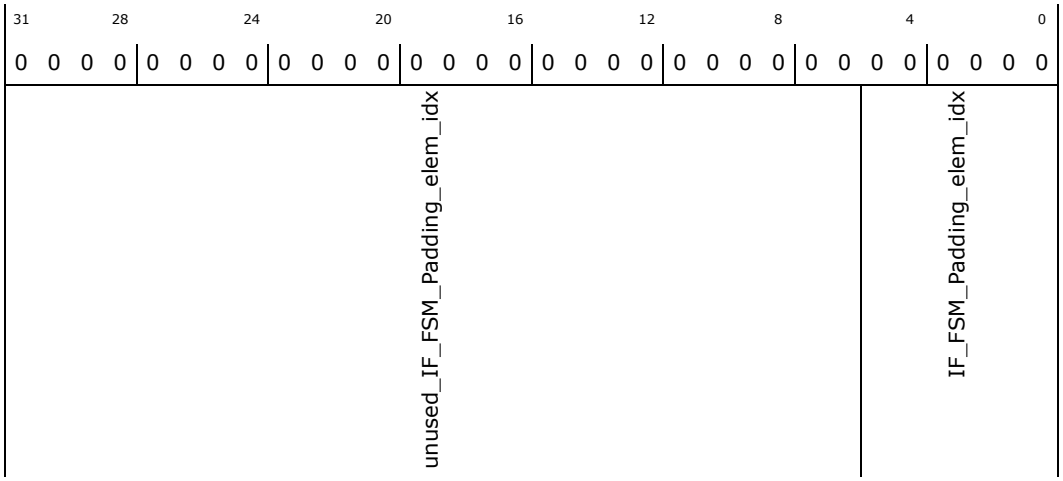
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30328h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_IF_FSM_Padding_elem_idx):** Unused
5:0	0x0 RO	**IF_FSM_Padding_elem_idx:** FSM Padding element index counter

5.2.172 IF_FSM_Vec_Sup (is_2400_ifmt_ift_prim_b_IF_FSM_Vec_Sup)—Offset 3032Ch

FSM Vector Support Error State: if set the FSM Vector support is in error state

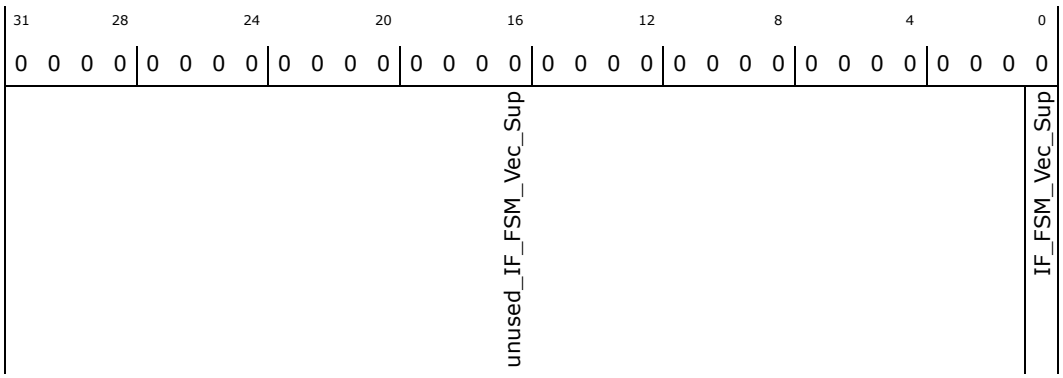
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3032Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup):** Unused
0	0x0 RO	**IF_FSM_Vec_Sup:** FSM Vector support error state: if set the FSM Vector support is in error state

5.2.173 IF_FSM_Vec_Sup_Buf_full (is_2400_ifmt_ift_prim_b_IF_FSM_Vec_Sup_Buf_full)—Offset 30330h

FSM Vector Support Buf Full: one-hot encoding flag signaling that the correspondent buffer is full

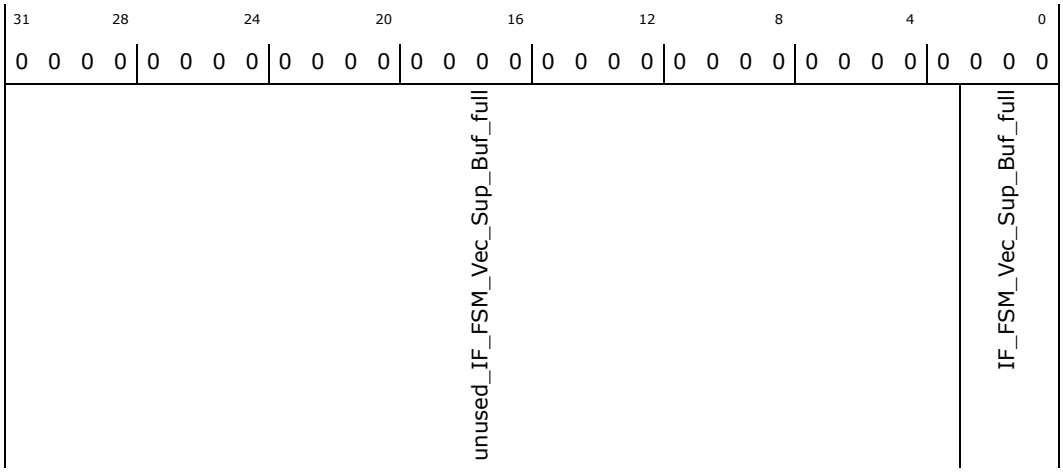
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30330h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup_Buf_full):** Unused
2:0	0x0 RO	**IF_FSM_Vec_Sup_Buf_full:** FSM Vector support buf full: one-hot encoding flag signaling that the correspondent buffer is full

5.2.174 IF_FSM_Vec_Sup_rd_accept (is_2400_ifmt_ift_prim_b_IF_FSM_Vec_Sup_rd_accept)—Offset 30334h

FSM Vector Support FIFO rd accept flag

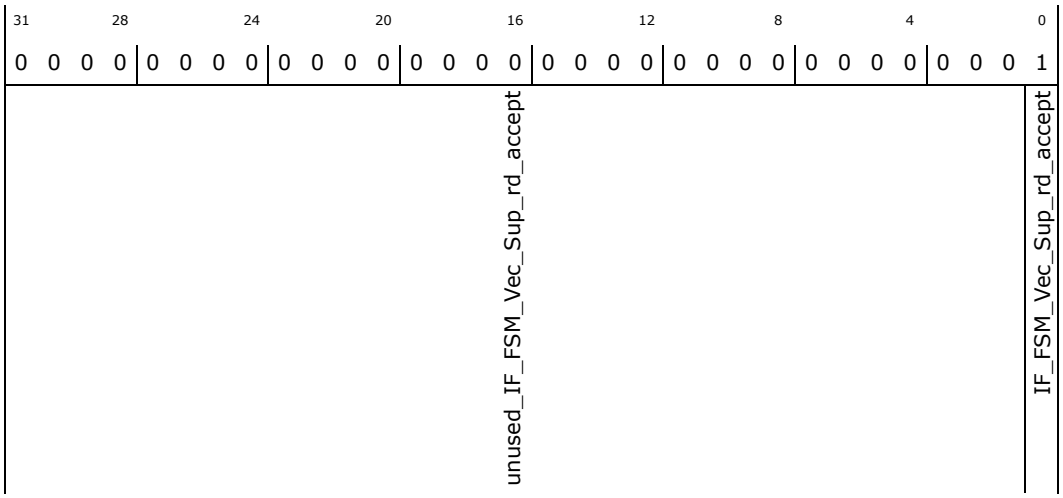
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30334h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup_rd_accept):** Unused
0	0x1 RO	**IF_FSM_Vec_Sup_rd_accept:** FSM Vector Support FIFO rd accept flag

5.2.175 IF_Pixel_Fifo_status (is_2400_ifmt_ift_prim_b_IF_Pixel_Fifo_status)—Offset 30338h

Pixel FIFO status

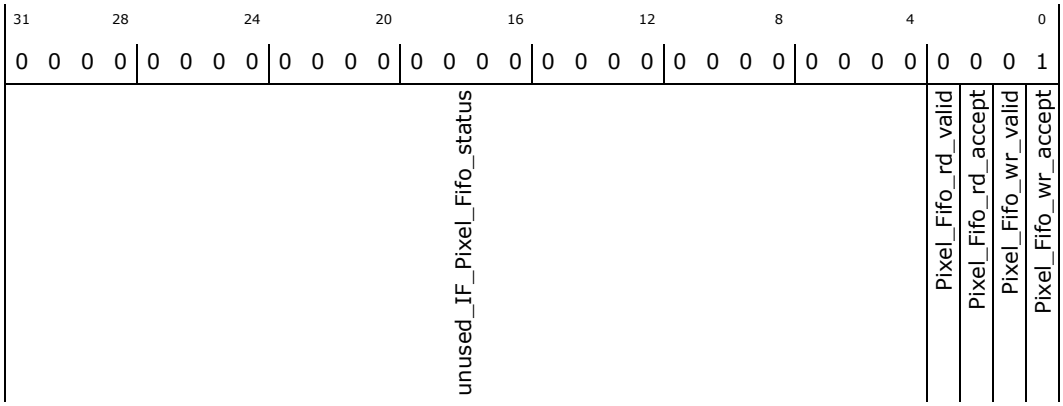
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30338h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_Pixel_Fifo_status):** Unused
3	0x0 RO	**Pixel_Fifo_rd_valid:** Fifo has an element to be read
2	0x0 RO	**Pixel_Fifo_rd_accept:** IF accepts Pixel(s)
1	0x0 RO	**Pixel_Fifo_wr_valid:** There is an element to write into the Fifo
0	0x1 RO	**Pixel_Fifo_wr_accept:** FIFO is not full(1), FIFO is Full(0)

5.2.176 IF_sw_rst (is_2400_ifmt_ift_sec_IF_sw_rst)—Offset 30400h

Software Reset

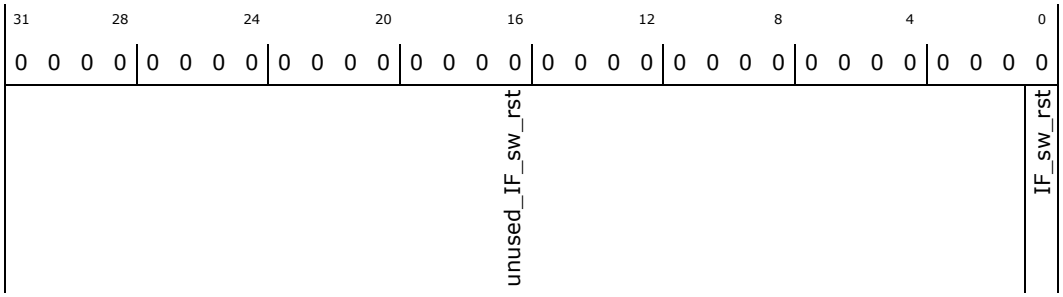
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30400h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_sw_rst):** Unused
0	0x0 RW	**IF_sw_rst:** Software Reset

5.2.177 IF_start_line (is_2400_ifmt_ift_sec_IF_start_line)—Offset 30404h

Start line: number of line to skip before passing the 1st line

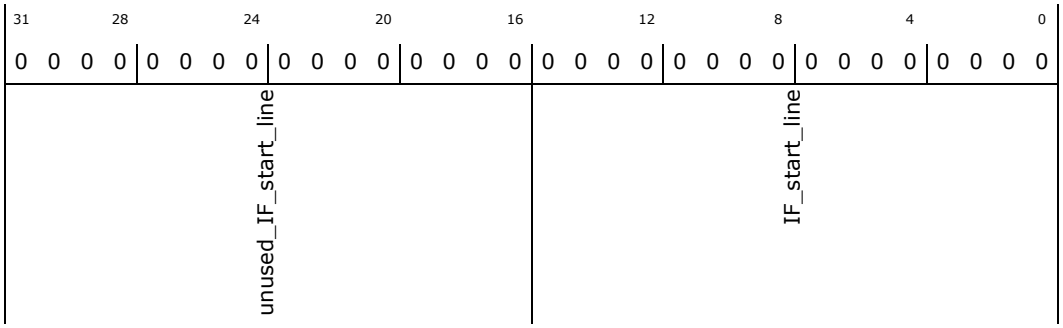
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30404h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_start_line):** Unused
15:0	0x0 RW	**IF_start_line:** Start line: number of line to skip before passing the 1st line

5.2.178 IF_start_column (is_2400_ifmt_ift_sec_IF_start_column)—Offset 30408h

Start column: Number of pixel components to skip before passing the 1st of a line

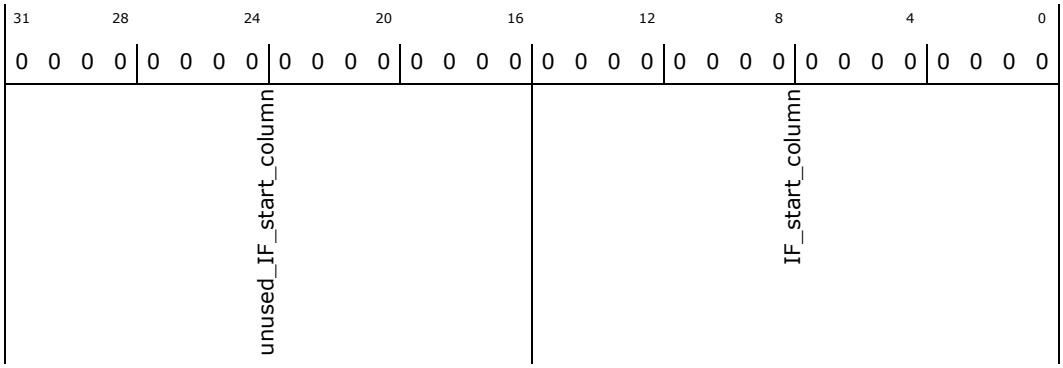
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30408h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_start_column):** Unused
15:0	0x0 RW	**IF_start_column:** Start column: number pixel component to skip before passing the 1st of a line

5.2.179 IF_Cropped_height (is_2400_ifmt_ift_sec_IF_Cropped_height)—Offset 3040Ch

Cropped height: Number of lines of the cropped image

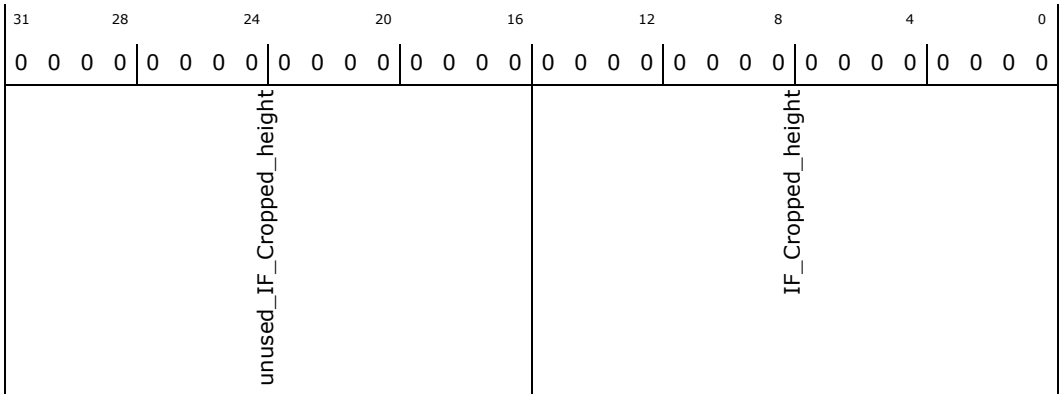
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3040Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_Cropped_height):** Unused
15:0	0x0 RW	**IF_Cropped_height:** Cropped height: number of lines of the cropped image

5.2.180 IF_Cropped_width (is_2400_ifmt_ift_sec_IF_Cropped_width)—Offset 30410h

Cropped width: number of pixel component of the cropped image

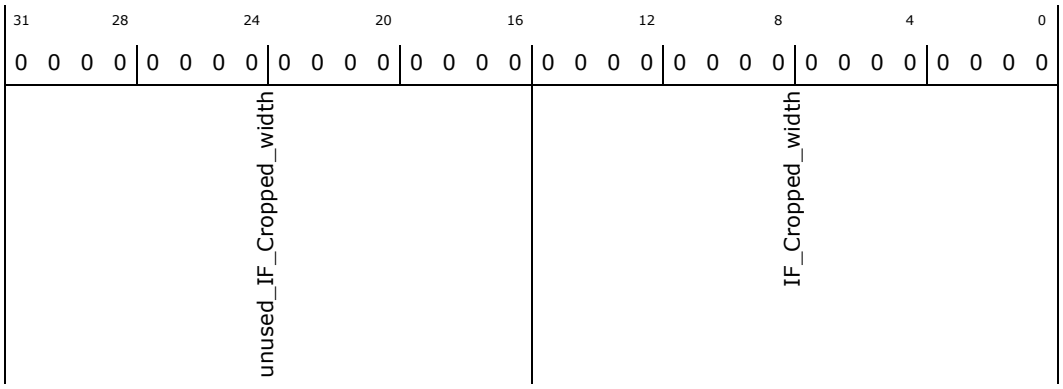
Access Method

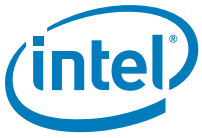
Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30410h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h





Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_IF_Cropped_width):** Unused
15:0	0x0 RW	**IF_Cropped_width:** Cropped width: number of pixel component of the cropped image

5.2.181 IF_Vert_Decim (is_2400_ifmt_ift_sec_IF_Vert_Decim)—Offset 30414h

Vertical decimation factor. Vertical decimation factor of N means that only 1 every N lines is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive lines avery 2N lines.

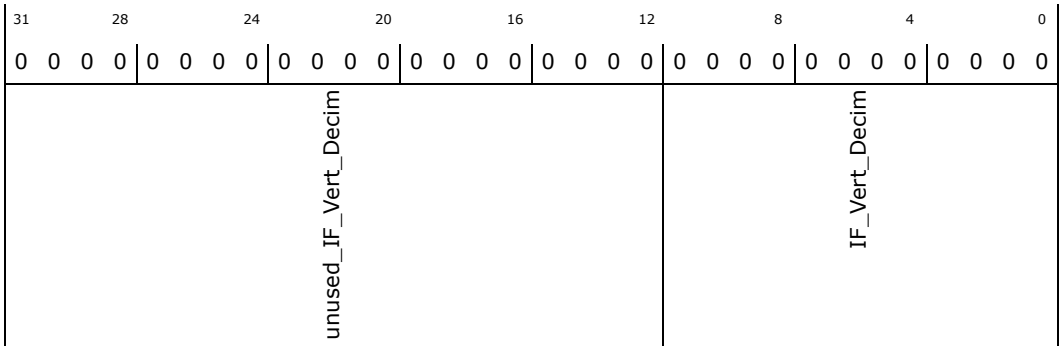
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30414h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_IF_Vert_Decim):** Unused
11:0	0x0 RW	**IF_Vert_Decim:** Vertical decimation factor. Vertical decimation factor of N means that only 1 every N lines is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive lines avery 2N lines.

5.2.182 IF_Horiz_Decim (is_2400_ifmt_ift_sec_IF_Horiz_Decim)—Offset 30418h

Horizontal Decimation Factor

Horizontal decimation factor of N means that only 1 every N pixel components is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive pixel components avery 2N pixel components.

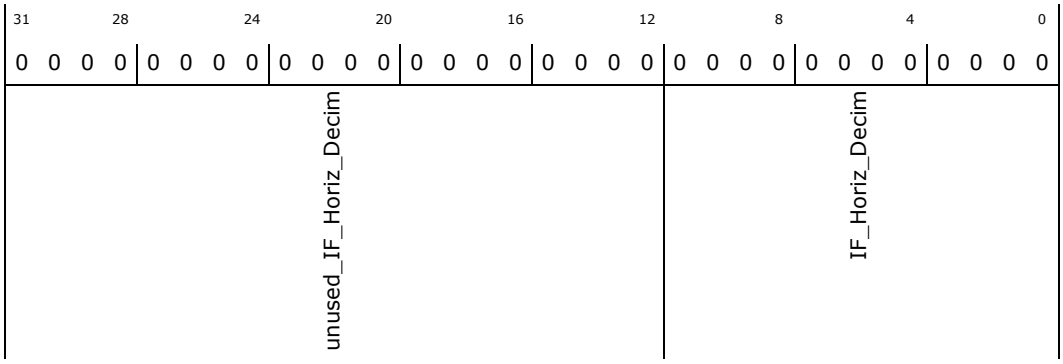
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30418h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_IF_Horiz_Decim):** Unused
11:0	0x0 RW	**IF_Horiz_Decim:** Horizontal decimation factor. Horizontal decimation factor of N means that only 1 every N pixel components is processed. When the de-interleaving factor is set to 2 (that is, Bayer), the IF will process 2 consecutive pixel components avery 2N pixel components.

5.2.183 IF_Horiz_Deinter (is_2400_ifmt_ift_sec_IF_Horiz_Deinter)—Offset 3041Ch

Horizontal De-interleaving Factor

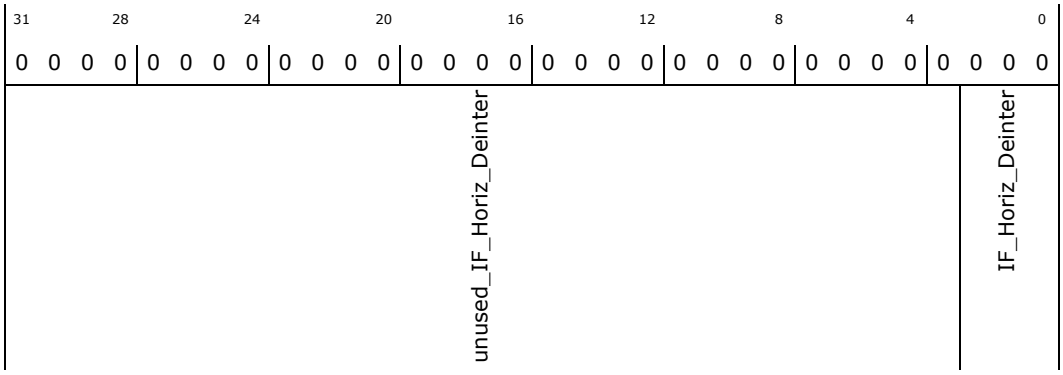
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3041Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_Horiz_Deinter):** Unused
2:0	0x0 RW	**IF_Horiz_Deinter:** Horizontal de-interleaving factor

5.2.184 IF_Left_Pad (is_2400_ifmt_ift_sec_IF_Left_Pad)—Offset 30420h

Left padding: pixel component to be padded at the beginning of each line

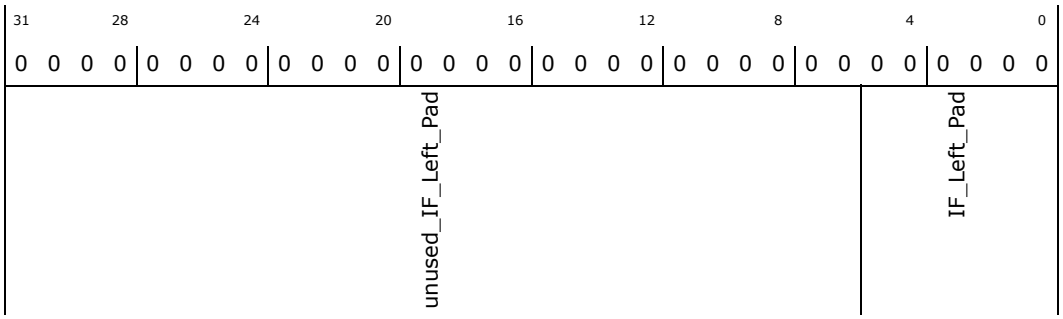
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30420h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_IF_Left_Pad):** Unused
5:0	0x0 RW	**IF_Left_Pad:** Left padding: pixel component to be padded at the beginning of each line

5.2.185 IF_EOF_Offset (is_2400_ifmt_ift_sec_IF_EOF_Offset)—Offset 30424h

End of line offset in bytes: number of bytes to add at the address at the end of a line

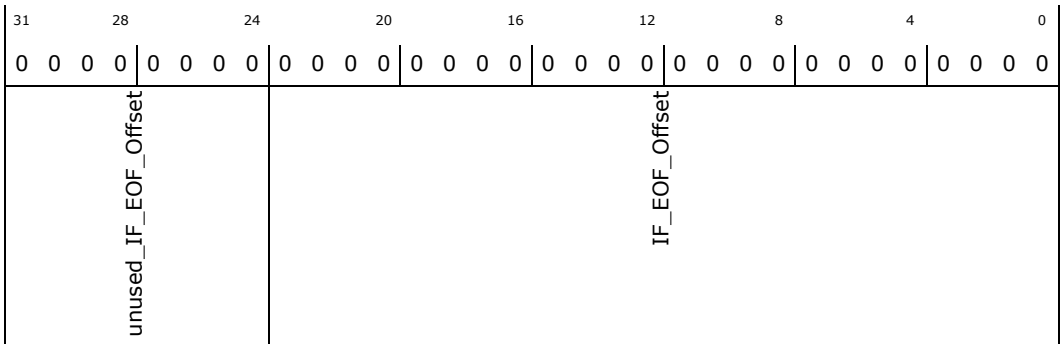
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30424h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_EOF_Offset):** Unused
23:0	0x0 RW	**IF_EOF_Offset:** End of line offset in bytes: number of bytes to add at the address at the end of a line

5.2.186 IF_Start_addr (is_2400_ifmt_ift_sec_IF_Start_addr)—Offset 30428h

Local Memory Buffer Start Address (byte aligned)

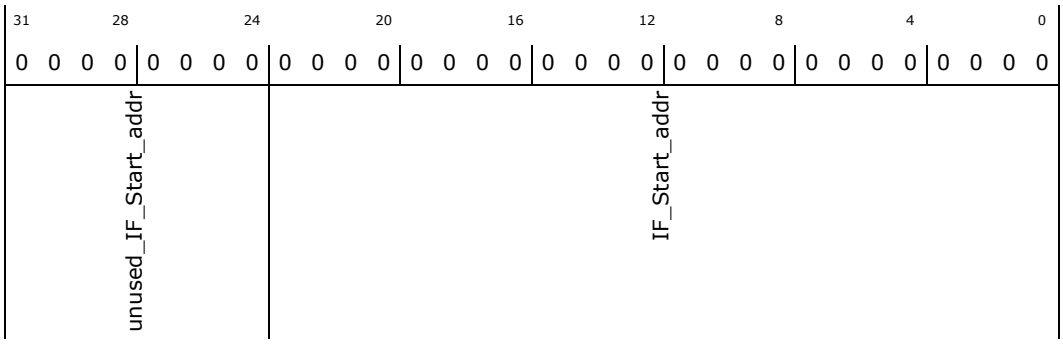
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30428h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_Start_addr):** Unused

Bit Range	Default and Access	Field Name (ID): Description
23:0	0x0 RW	**IF_Start_addr:** Local memory buffer start address (byte aligned)

5.2.187 IF_End_addr (is_2400_ifmt_ift_sec_IF_End_addr)—Offset 3042Ch

Local memory buffer end address (byte aligned)

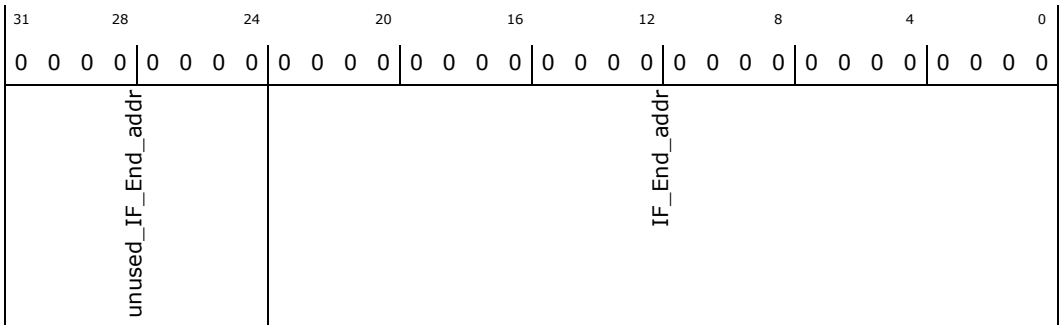
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3042Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_End_addr):** Unused
23:0	0x0 RW	**IF_End_addr:** Local memory buffer end address (byte aligned)

5.2.188 IF_incr (is_2400_ifmt_ift_sec_IF_incr)—Offset 30430h

Address word increment (word aligned). After every write the address is updated by adding this value times the word alignment.

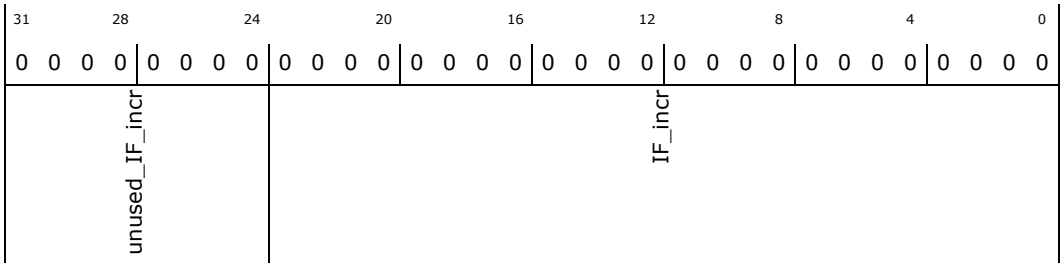
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30430h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:24	0x0 RW	**Reserved (unused_IF_incr):** Unused
23:0	0x0 RW	**IF_incr:** Address word increment (word aligned). After every write the address is updated by adding this value times the word alignment.

5.2.189 IF_YUV_420_format (is_2400_ifmt_ift_sec_IF_YUV_420_format)—Offset 30434h

YUV 420 format: set to work on legacy format YUV420

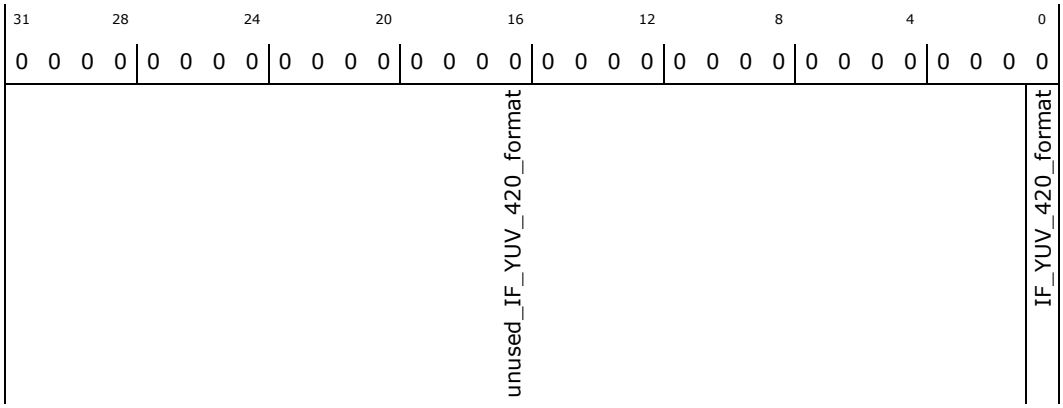
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30434h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_YUV_420_format):** Unused

Bit Range	Default and Access	Field Name (ID): Description
0	0x0 RW	**IF_YUV_420_format:** YUV 420 format: set to work on legacy format YUV420

5.2.190 IF_Vsynch_active_low (is_2400_ifmt_ift_sec_IF_Vsynch_active_low)—Offset 30438h

Vertical synch active low: set to 1 if Vsynch and EndOfFrame are active low

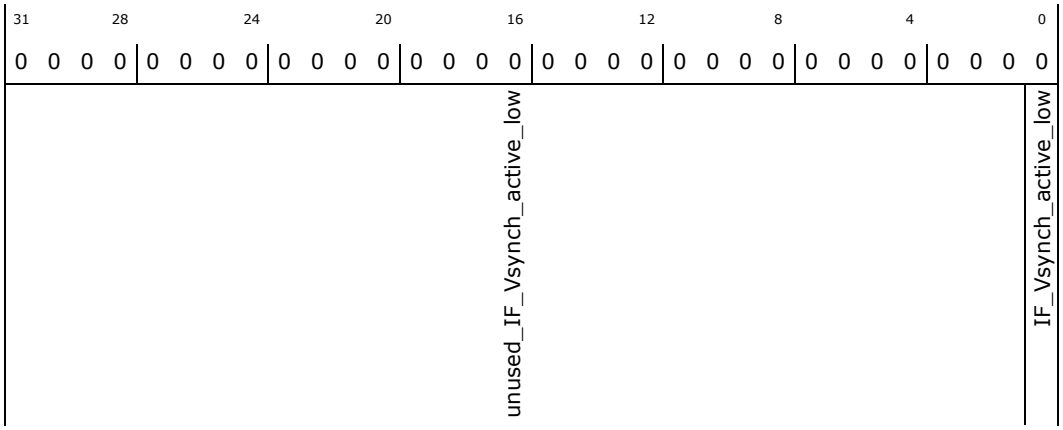
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30438h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_Vsynch_active_low):** Unused
0	0x0 RW	**IF_Vsynch_active_low:** Vertical synch active low: set to 1 if Vsynch and EndOfFrame are active low

5.2.191 IF_Hsynch_active_low (is_2400_ifmt_ift_sec_IF_Hsynch_active_low)—Offset 3043Ch

Horizontal synch active low: set to 1 if Hsynch and EndOfLine are active low

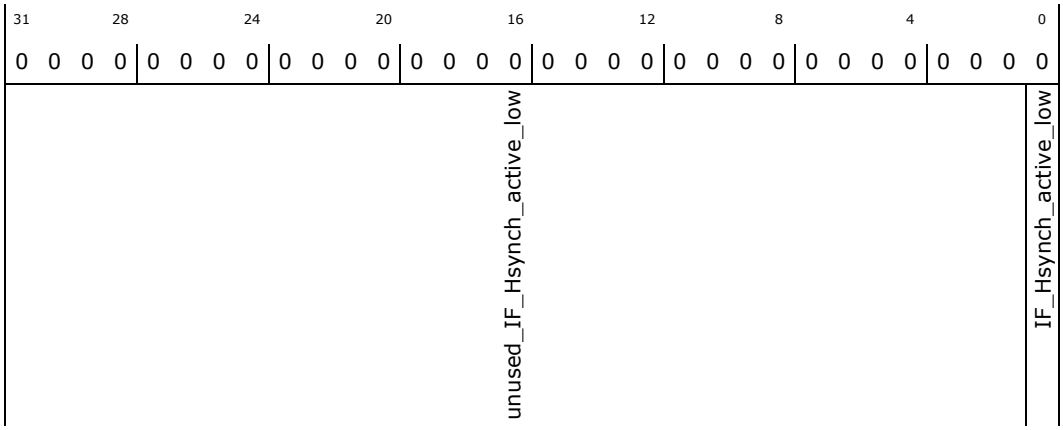
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3043Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_Hsynch_active_low):** Unused
0	0x0 RW	**IF_Hsynch_active_low:** Horizontal synch active low: set to 1 if Hsynch and EndOfLine are active low

5.2.192 IF_ReEnable (is_2400_ifmt_ift_sec_IF_ReEnable)—Offset 30440h

Re-enable status registers. When one of the FSM goes into error state, the status registers keep their value for post-debugging. Setting to 1 will re-enable status register.

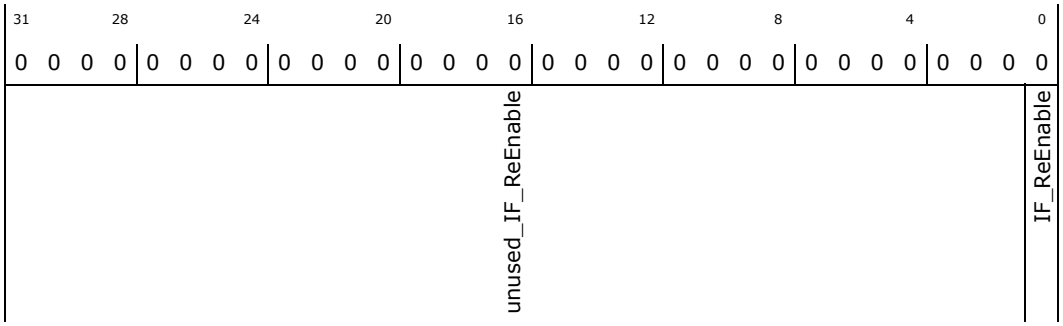
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30440h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_ReEnable):** Unused
0	0x0 RW	**IF_ReEnable:** Re-enable status registers. When one of the FSM goes into error state, the status registers keep their value for post-debugging. Setting to 1 will re-enable status register.

5.2.193 IF_block_input (is_2400_ifmt_ift_sec_IF_block_input)—Offset 30444h

Block input when no req: set to 1 to block data streaming input when no request is received

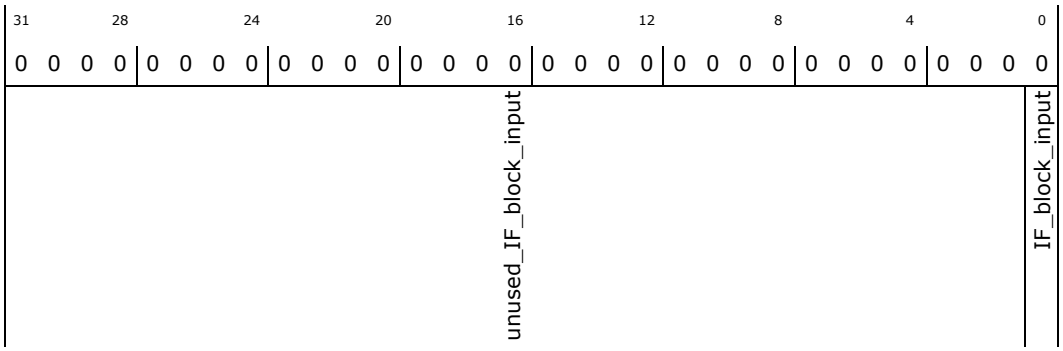
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30444h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_block_input):** Unused
0	0x0 RW	**IF_block_input:** Block input when no req: set to 1 to block data streaming input when no request is received

5.2.194 IF_Vert_Deinter (is_2400_ifmt_ift_sec_IF_Vert_Deinter)—Offset 30448h

Vertical de-interleaving factor

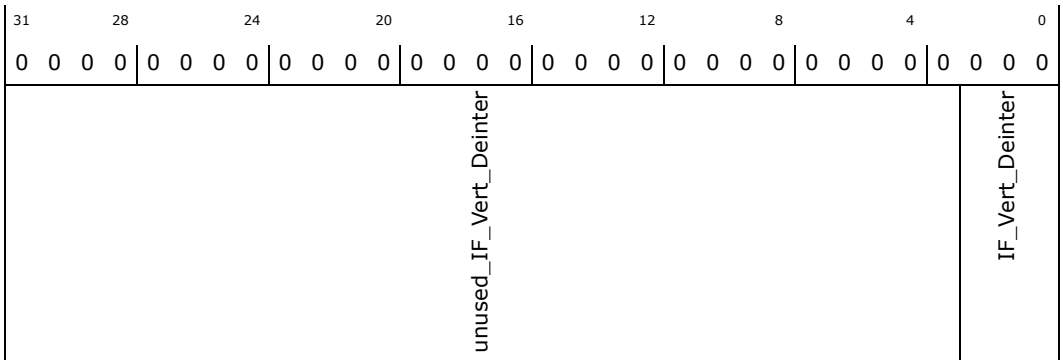
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30448h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_Vert_Deinter):** Unused
2:0	0x0 RW	**IF_Vert_Deinter:** Vertical de-interleaving factor

5.2.195 IF_FSM_Sync_status (is_2400_ifmt_ift_sec_IF_FSM_Sync_status)—Offset 30500h

FSM Sync status

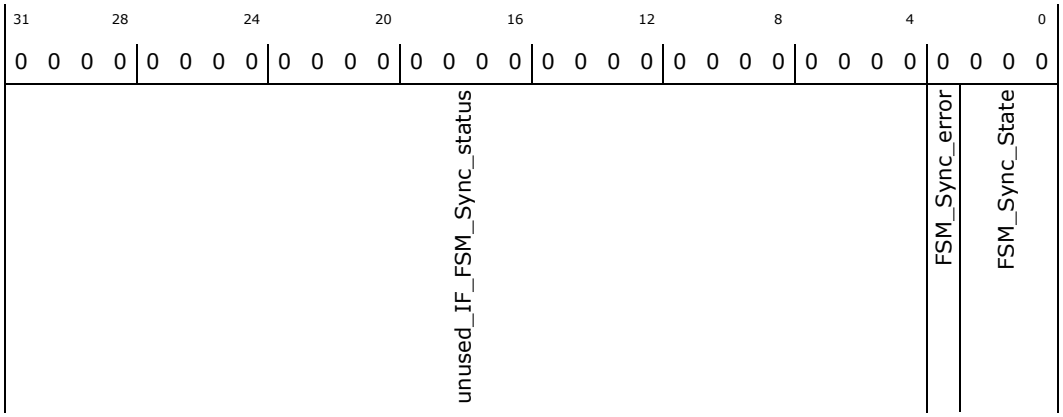
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30500h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_FSM_Sync_status):** Unused
3	0x0 RO	**FSM_Sync_error:** Error flag: when set in combination with: Idle state an unknown command has been received; Req. Lines state an unexpected vsynch or eof has been received; Req. Vectors state an unexpected vsynch or eof has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Sync_State:** FSM State: State: 0)Idle -- 1)Req Frame -- 2)Req. Lines -- 3)Req. Vectors -- 4)Send Acknowledge

5.2.196 FSM_Sync_counter (is_2400_ifmt_ift_sec_FSM_Sync_counter)—Offset 30504h

FSM Sync counter: counts the processed items. For Request Frame counts the number of frames processed. For Request lines command counts the number of lines processed. For Request vectors command counts the number of vectors processed. The counter begins at value 1.

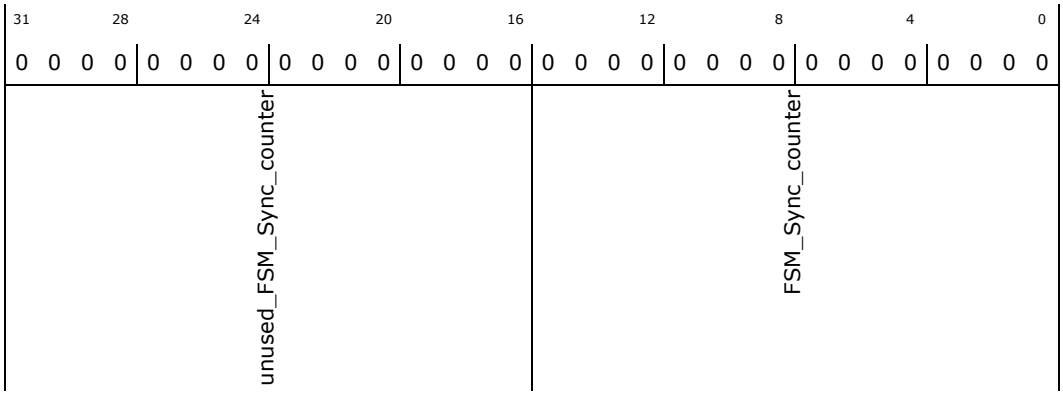
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30504h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_FSM_Sync_counter):** Unused
15:0	0x0 RO	**FSM_Sync_counter:** FSM Sync counter: counts the processed items. For Request Frame counts the number of frames processed. For Request lines command counts the number of lines processed. For Request vectors command counts the number of vectors processed. The counter begins at value 1.

5.2.197 FSM_Crop_status (is_2400_ifmt_ift_sec_FSM_Crop_status)—Offset 30508h

FSM Crop status

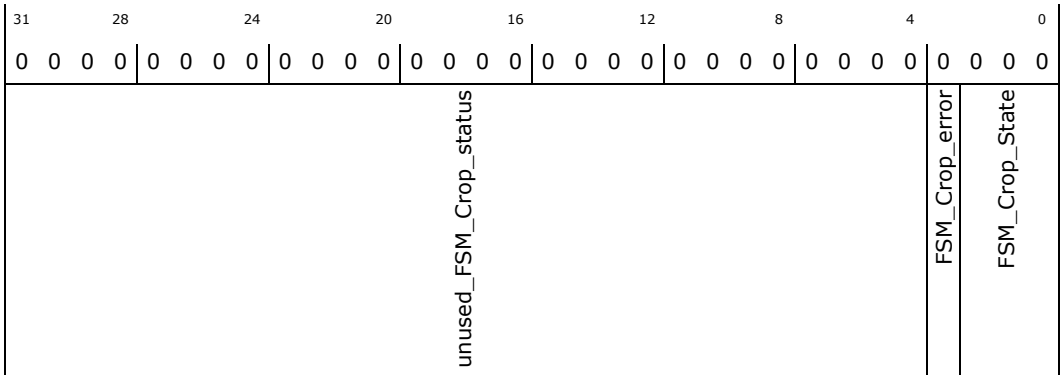
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30508h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_FSM_Crop_status):** Unused
3	0x0 RO	**FSM_Crop_error:** Error flag: when set in combination with: Crop Line state unexpected vsynch or eof has been received; Req. Lines state unexpected vsynch or eof has been received; Req. Vectors state unexpected vsynch or eof has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Crop_State:** FSM State: State: 0)Idle -- 1)Wait Line -- 2)Crop Line -- 3)Crop Pixel -- 4)Pass pixel -- 5) Pass Line

5.2.198 FSM_Crop_line_counter (is_2400_ifmt_ift_sec_FSM_Crop_line_counter)—Offset 3050Ch

FSM Crop line counter

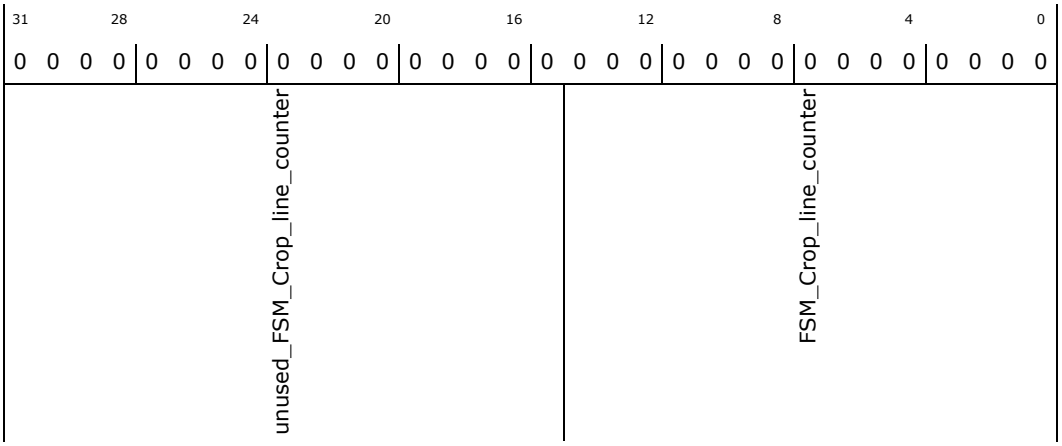
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3050Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:15	0x0 RW	**Reserved (unused_FSM_Crop_line_counter):** Unused
14:0	0x0 RO	**FSM_Crop_line_counter:** FSM Crop line counter

5.2.199 FSM_Crop_pixel_counter (is_2400_ifmt_ift_sec_FSM_Crop_pixel_counter)—Offset 30510h

FSM Crop pixel component counter

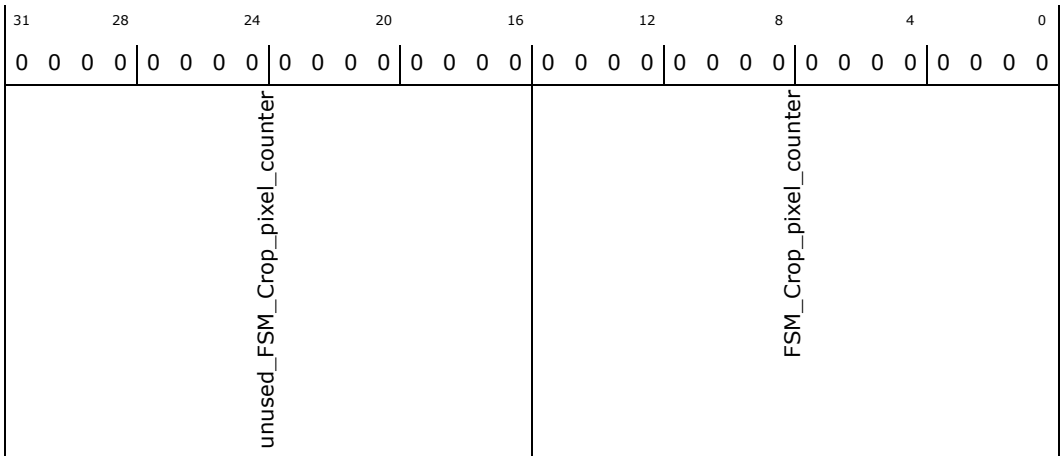
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30510h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_FSM_Crop_pixel_counter):** Unused
15:0	0x0 RO	**FSM_Crop_pixel_counter:** FSM Crop pixel component counter

5.2.200 FSM_Deinterl_idx_buffer (is_2400_ifmt_ift_sec_FSM_Deinterl_idx_buffer)—Offset 30514h

FSM de-interleaving idx buffer

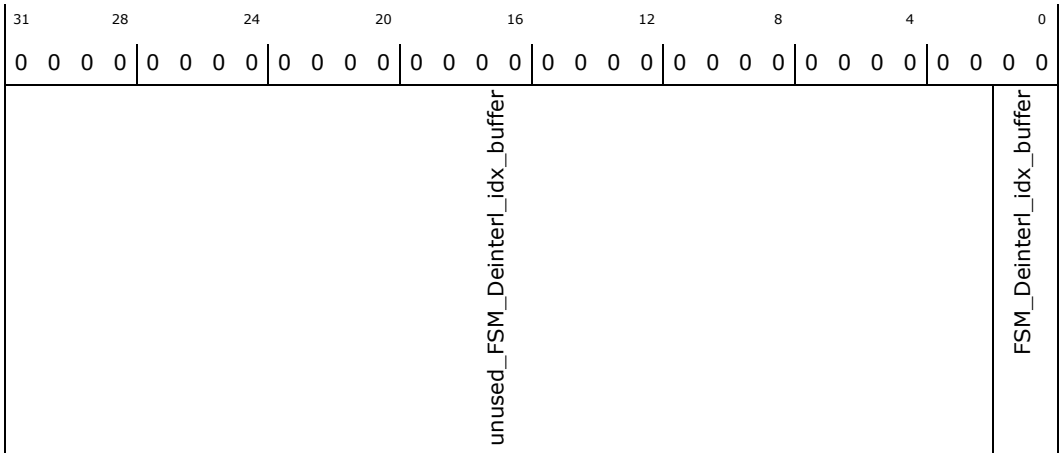
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30514h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_FSM_Deinterl_idx_buffer):** Unused
1:0	0x0 RO	**FSM_Deinterl_idx_buffer:** FSM de-interleaving idx buffer

5.2.201 FSM_Horiz_Decim_cnt (is_2400_ifmt_ift_sec_FSM_Horiz_Decim_cnt)—Offset 30518h

FSM Horizontal Decimation counter

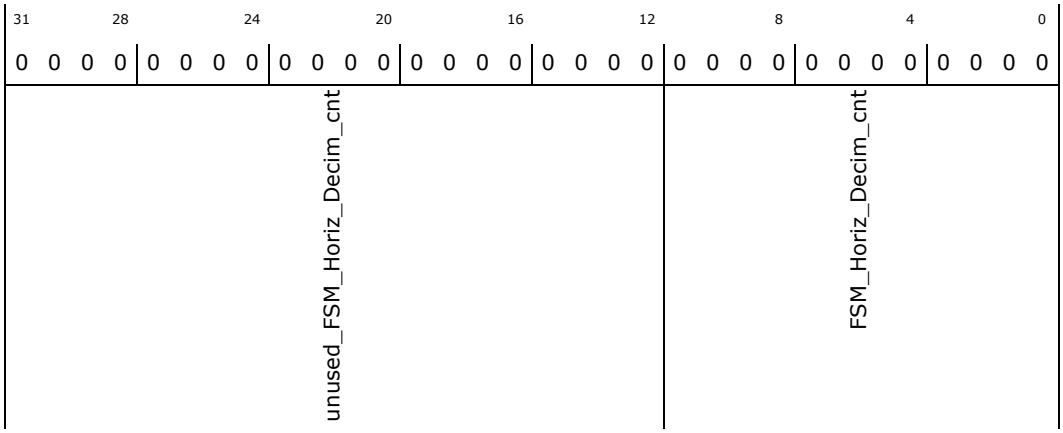
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30518h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_FSM_Horiz_Decim_cnt):** Unused
11:0	0x0 RO	**FSM_Horiz_Decim_cnt:** FSM Horizontal Decimation counter

5.2.202 FSM_Vertic_Decim_cnt (is_2400_ifmt_ift_sec_FSM_Vertic_Decim_cnt)—Offset 3051Ch

FSM Vertical decimation counter

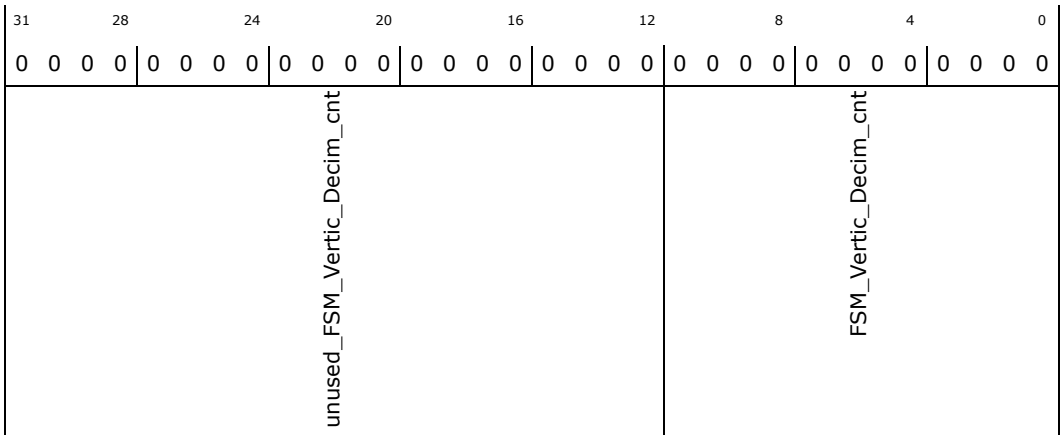
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3051Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RW	**Reserved (unused_FSM_Vertic_Decim_cnt):** Unused
11:0	0x0 RO	**FSM_Vertic_Decim_cnt:** FSM Vertical decimation counter

5.2.203 FSM_Vertic_Block_Decim_cnt (is_2400_ifmt_ift_sec_FSM_Vertic_Block_Decim_cnt)—Offset 30520h

FSM Vertical block decimation counter

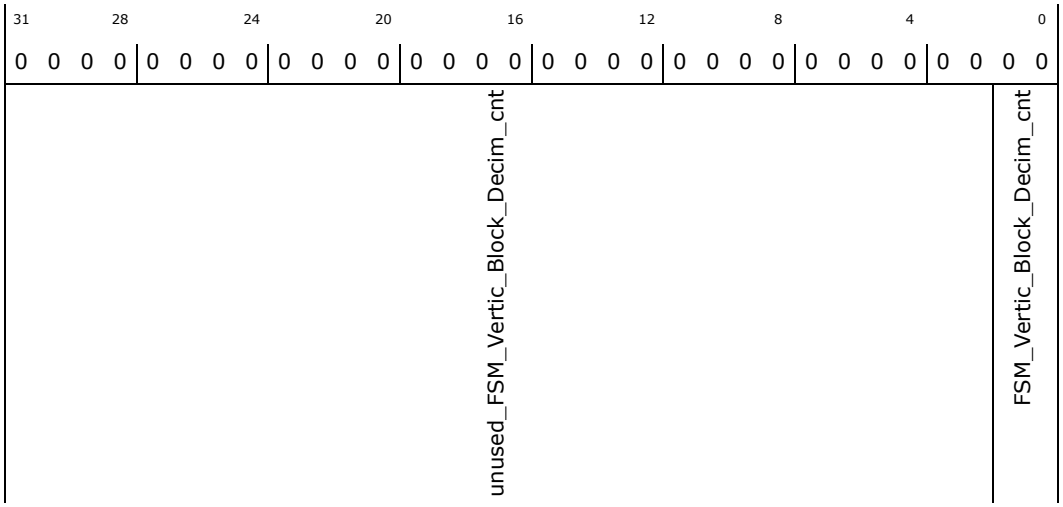
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30520h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_FSM_Vertic_Block_Decim_cnt):** Unused
1:0	0x0 RO	**FSM_Vertic_Block_Decim_cnt:** FSM Vertical block decimation counter

5.2.204 IF_FSM_Padding_status (is_2400_ifmt_ift_sec_IF_FSM_Padding_status)—Offset 30524h

FSM Padding status

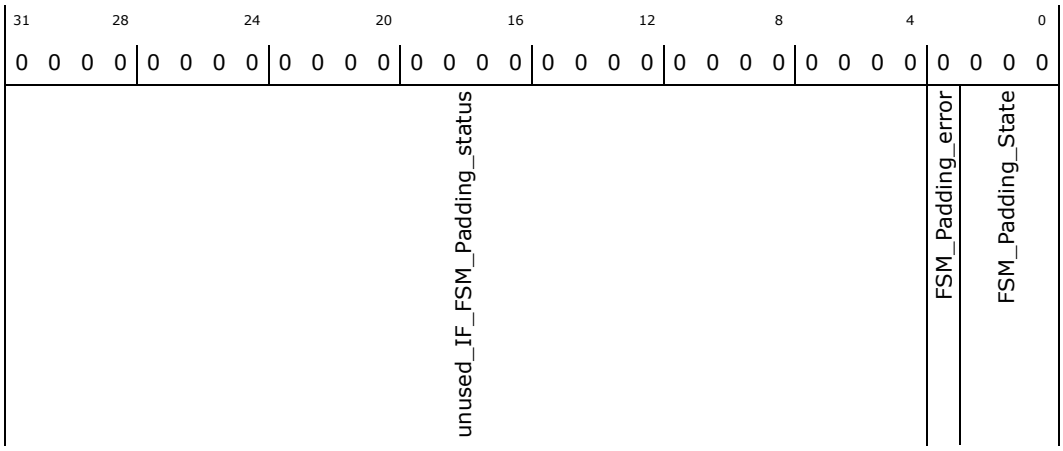
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30524h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_FSM_Padding_status):** Unused
3	0x0 RO	**FSM_Padding_error:** Error flag: when set in combination with: Left Padding state an unexpected vsynch or hsync has been received; Write state an unexpected vsynch or hsync has been received; Right padding state unexpected vsynch has been received; Send EOL state an unexpected vsynch has been received; another state an illegal state transition has occurred.
2:0	0x0 RO	**FSM_Padding_State:** FSM State: State: 0)Idle -- 1)Left Padding -- 2)Write -- 3)Right padding -- 4)Sending EOL

5.2.205 IF_FSM_Padding_elem_idx (is_2400_ifmt_ift_sec_IF_FSM_Padding_elem_idx)—Offset 30528h

FSM Padding element index counter

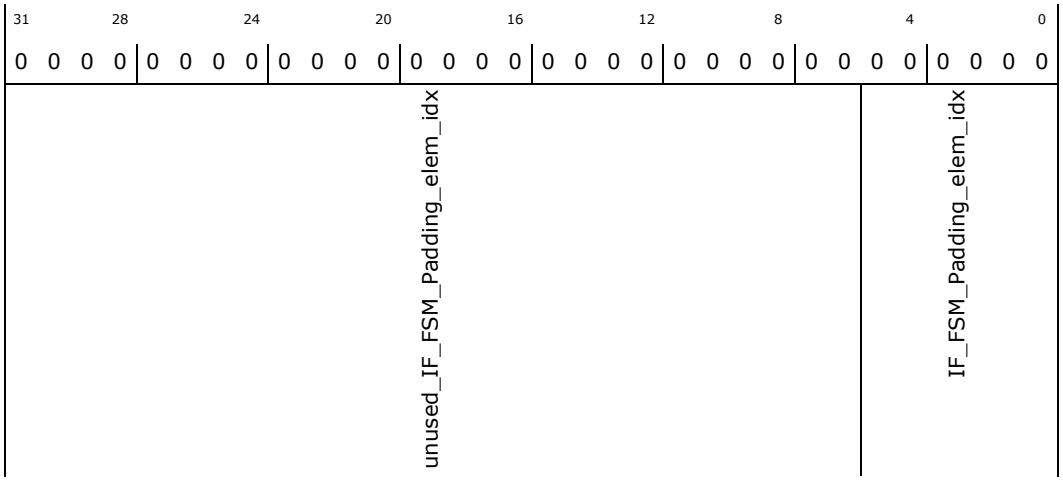
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30528h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:6	0x0 RW	**Reserved (unused_IF_FSM_Padding_elem_idx):** Unused
5:0	0x0 RO	**IF_FSM_Padding_elem_idx:** FSM Padding element index counter

5.2.206 IF_FSM_Vec_Sup (is_2400_ifmt_ift_sec_IF_FSM_Vec_Sup)—Offset 3052Ch

FSM Vector support error state: if set the FSM Vector support is in error state

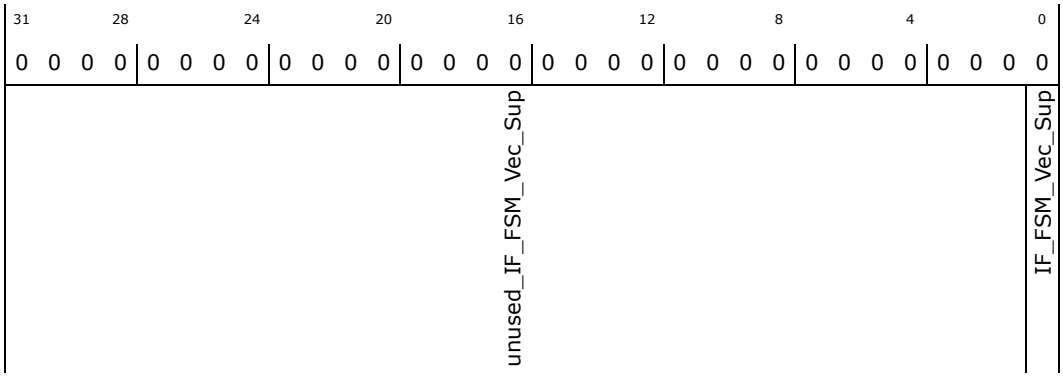
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3052Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup):** Unused
0	0x0 RO	**IF_FSM_Vec_Sup:** FSM Vector support error state: if set the FSM Vector support is in error state

5.2.207 IF_FSM_Vec_Sup_Buf_full (is_2400_ifmt_ift_sec_IF_FSM_Vec_Sup_Buf_full)—Offset 30530h

FSM Vector support buf full: one-hot encoding flag signaling that the correspondent buffer is full

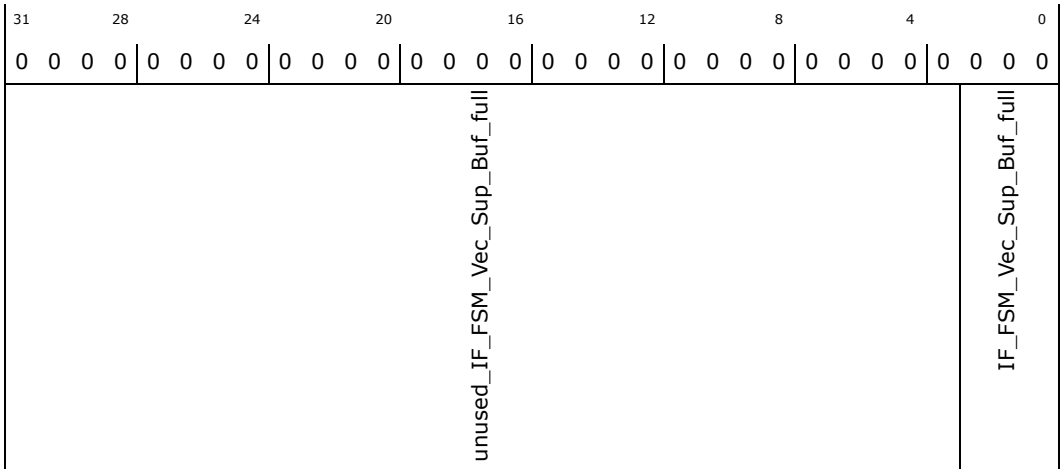
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30530h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup_Buf_full):** Unused
2:0	0x0 RO	**IF_FSM_Vec_Sup_Buf_full:** FSM Vector support buf full: one-hot encoding flag signaling that the correspondent buffer is full

5.2.208 IF_FSM_Vec_Sup_rd_accept (is_2400_ifmt_ift_sec_IF_FSM_Vec_Sup_rd_accept)—Offset 30534h

FSM Vector Support FIFO rd accept flag

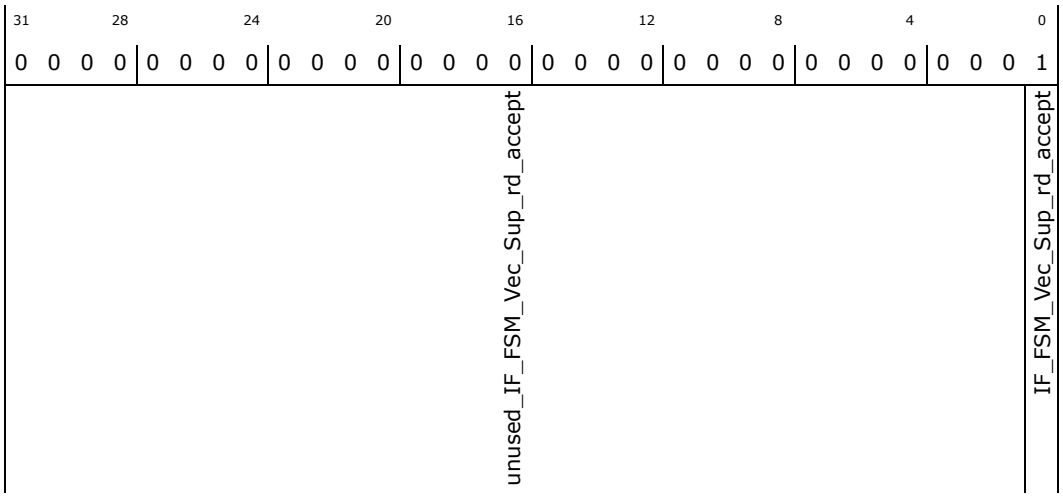
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30534h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_IF_FSM_Vec_Sup_rd_accept):** Unused
0	0x1 RO	**IF_FSM_Vec_Sup_rd_accept:** FSM Vector Support FIFO rd accept flag

5.2.209 IF_Pixel_Fifo_status (is_2400_ifmt_ift_sec_IF_Pixel_Fifo_status)—Offset 30538h

Pixel FIFO status

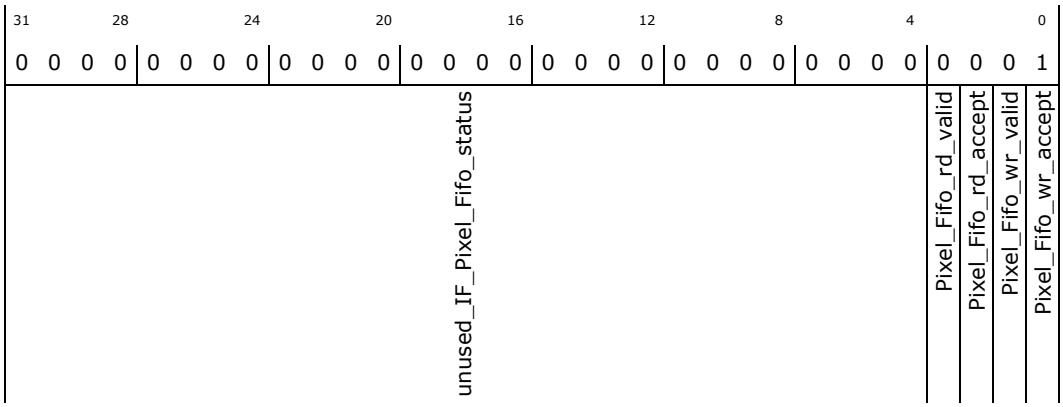
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30538h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IF_Pixel_Fifo_status):** Unused
3	0x0 RO	**Pixel_Fifo_rd_valid:** FIFO has an element to be read
2	0x0 RO	**Pixel_Fifo_rd_accept:** IF accepts Pixel(s)
1	0x0 RO	**Pixel_Fifo_wr_valid:** There is an element to write into the FIFO
0	0x1 RO	**Pixel_Fifo_wr_accept:** FIFO is not full(1), FIFO is Full(0)

5.2.210 MemCopy_sw_rst (is_2400_ifmt_mem_cpy_MemCopy_sw_rst)—Offset 30600h

Software Reset

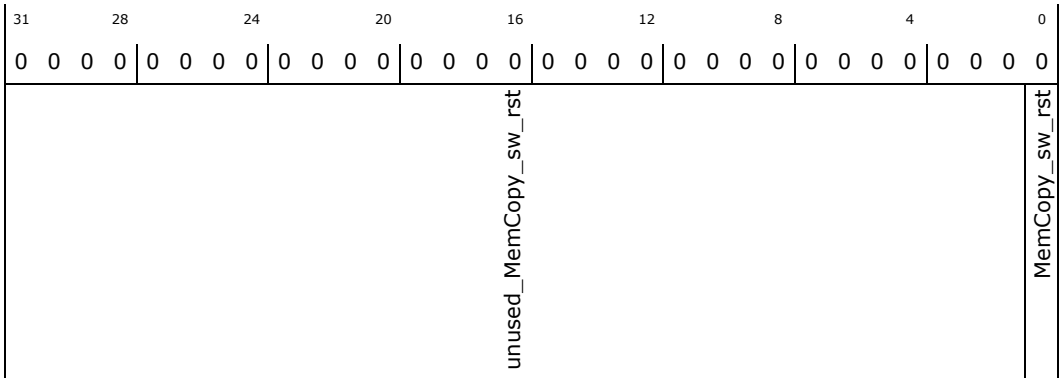
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30600h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_sw_rst):** Unused
0	0x0 RW	**MemCopy_sw_rst:** Software Reset

5.2.211 MemCopy_in_endian (is_2400_ifmt_mem_cpy_MemCopy_in_endian)—Offset 30604h

Input endian set to 1 if input is big endian

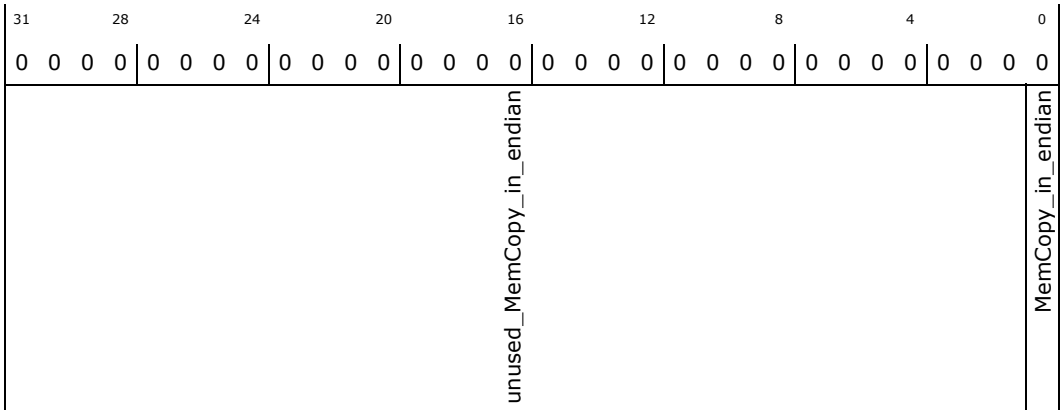
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30604h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_in_endian):** Unused
0	0x0 RW	**MemCopy_in_endian:** Input endian: set to 1 if input is big endian

5.2.212 MemCopy_out_endian (is_2400_ifmt_mem_cpy_MemCopy_out_endian)—Offset 30608h

Output endian: set to 1 to deliver output input in big endian

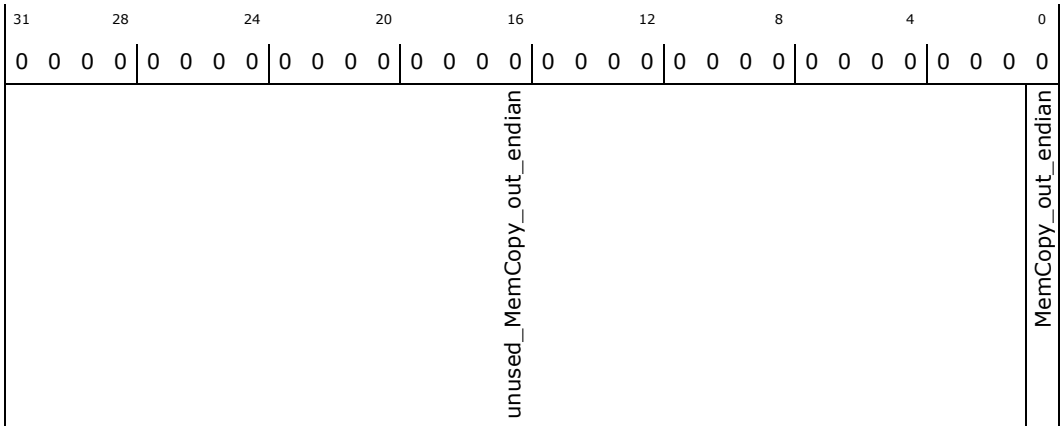
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30608h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_out_endian):** Unused
0	0x0 RW	**MemCopy_out_endian:** Output endian: set to 1 to deliver output input in big endian

5.2.213 MemCopy_bit_swap (is_2400_ifmt_mem_cpy_MemCopy_bit_swap)—Offset 3060Ch

Bit swapping: set to 1 to swap the bit of the incoming byte

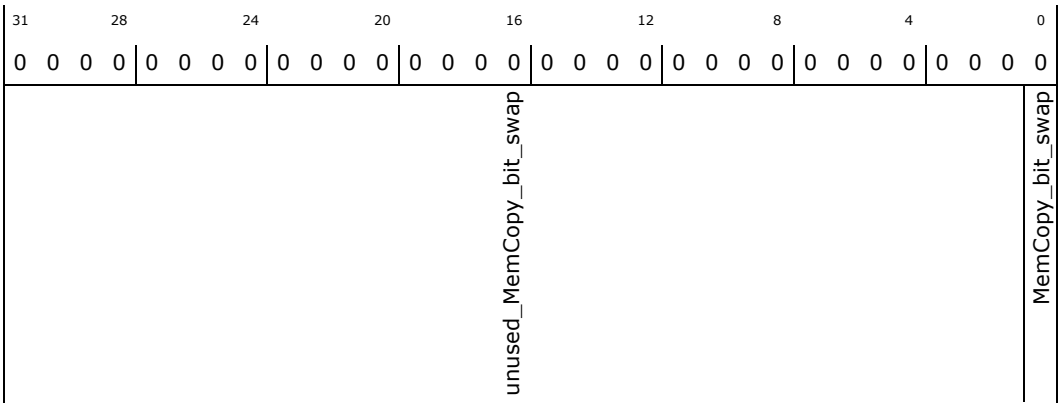
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3060Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_bit_swap):** Unused
0	0x0 RW	**MemCopy_bit_swap:** Bit swapping: set to 1 to swap the bit of the incoming byte

5.2.214 MemCopy_block_synch (is_2400_ifmt_mem_cpy_MemCopy_block_synch)—Offset 30610h

Block synchronization pulse active low: set to 1 if start of block and end of block are active low

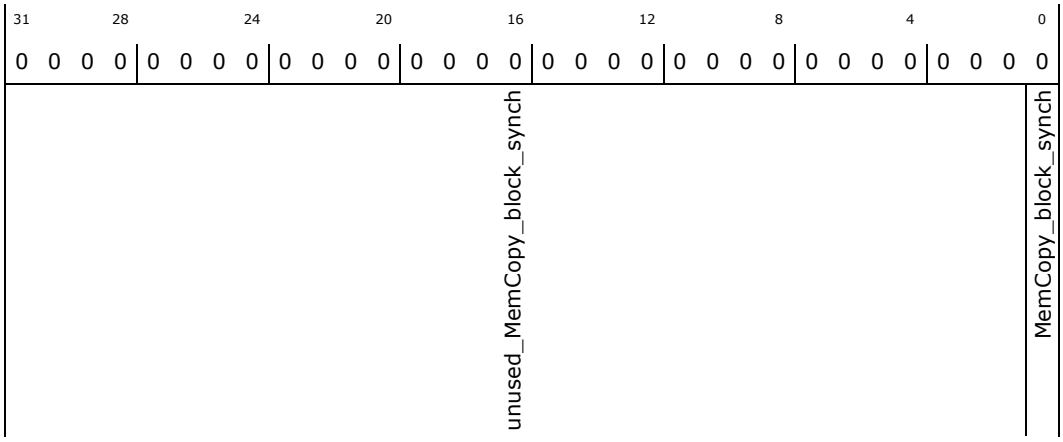
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30610h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_block_synch):** Unused
0	0x0 RW	**MemCopy_block_synch:** Block synchronization pulse active low: set to 1 if start of block and end of block are active low

5.2.215 MemCopy_packet_synch (is_2400_ifmt_mem_cpy_MemCopy_packet_synch)—Offset 30614h

Packet synchronization pulse active low: set to 1 if start of packet and end of packet are active low

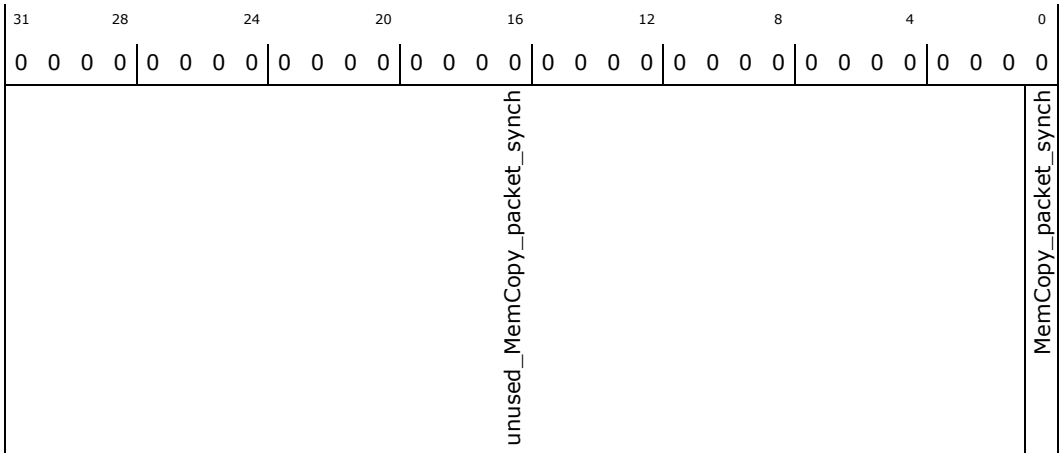
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30614h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_packet_synch):** Unused
0	0x0 RW	**MemCopy_packet_synch:** Packet synchronization pulse active low: set to 1 if start of packet and end of packet are active low

5.2.216 MemCopy_rd_post_wr_sync (is_2400_ifmt_mem_cpy_MemCopy_rd_post_wr_sync)—Offset 30618h

Enable read post write synchronization: set to 1 to enable read post write check before sending acknowledge

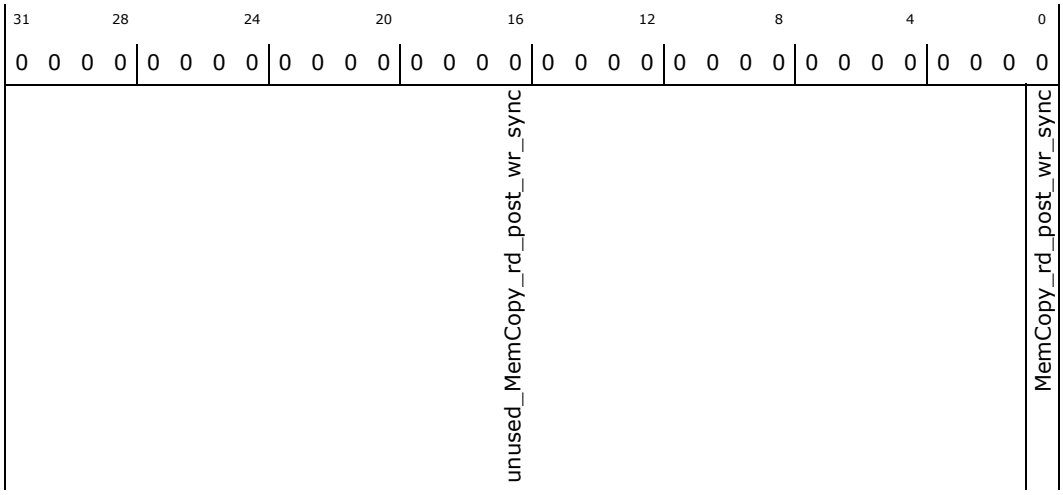
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30618h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_rd_post_wr_sync):** Unused
0	0x0 RW	**MemCopy_rd_post_wr_sync:** Enable read post write synchronization: set to 1 to enable read post write check before sending acknowledge

5.2.217 MemCopy_dual_input (is_2400_ifmt_mem_cpy_MemCopy_dual_input)—Offset 3061Ch

Enable dual byte inputs: set to 1 to enable dual byte input

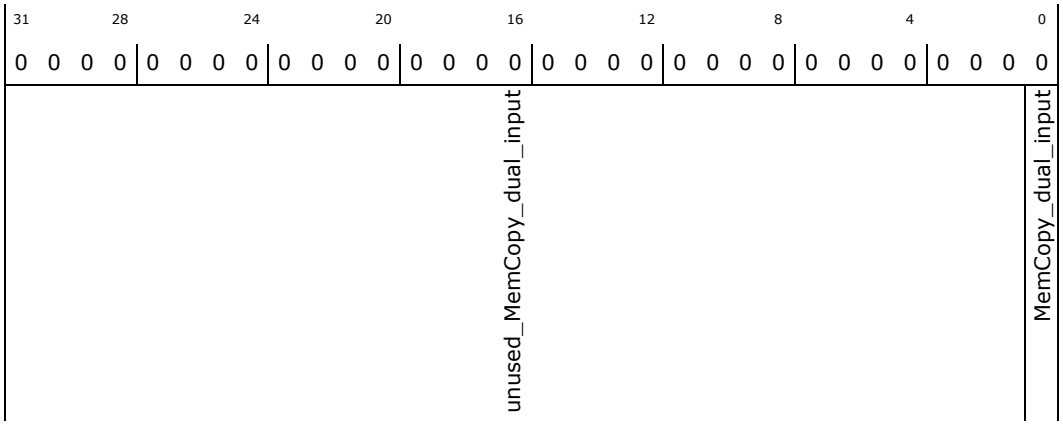
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3061Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_dual_input):** Unused
0	0x0 RW	**MemCopy_dual_input:** Enable dual byte inputs: set to 1 to enable dual byte input

5.2.218 MemCopy_ReEnable (is_2400_ifmt_mem_cpy_MemCopy_ReEnable)—Offset 30620h

Re-enable status update: set to 1 to re-enable status update after an error situation

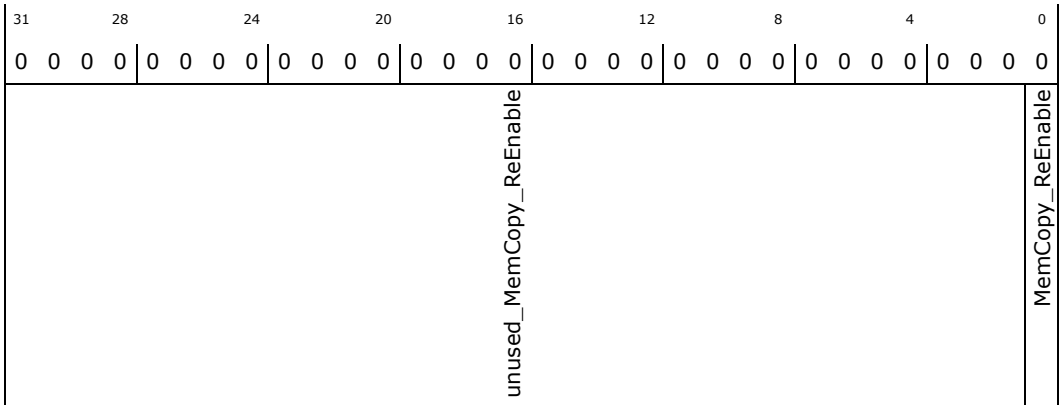
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30620h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_ReEnable):** Unused
0	0x0 RW	**MemCopy_ReEnable:** Re-enable status update: set to 1 to re-enable status update after an error situation

5.2.219 MemCopy_token_data (is_2400_ifmt_mem_cpy_MemCopy_token_data)—Offset 30700h

Token data on command port

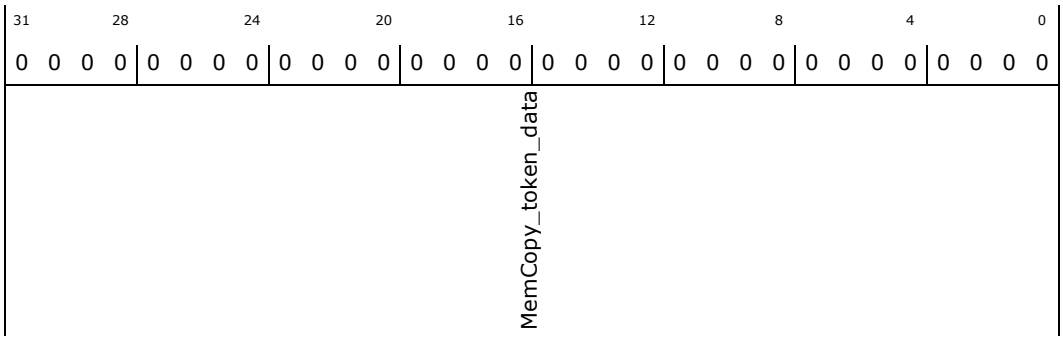
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30700h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**MemCopy_token_data:** Token data on command port

5.2.220 MemCopy_FSM_Sync_status (is_2400_ifmt_mem_cpy_MemCopy_FSM_Sync_status)—Offset 30704h

FSM Synchronization Status: 0)Idle -- 1)Request Blocks -- 2)Request Packets -- 3)Request Bytes -- 4)Send Acknowledge

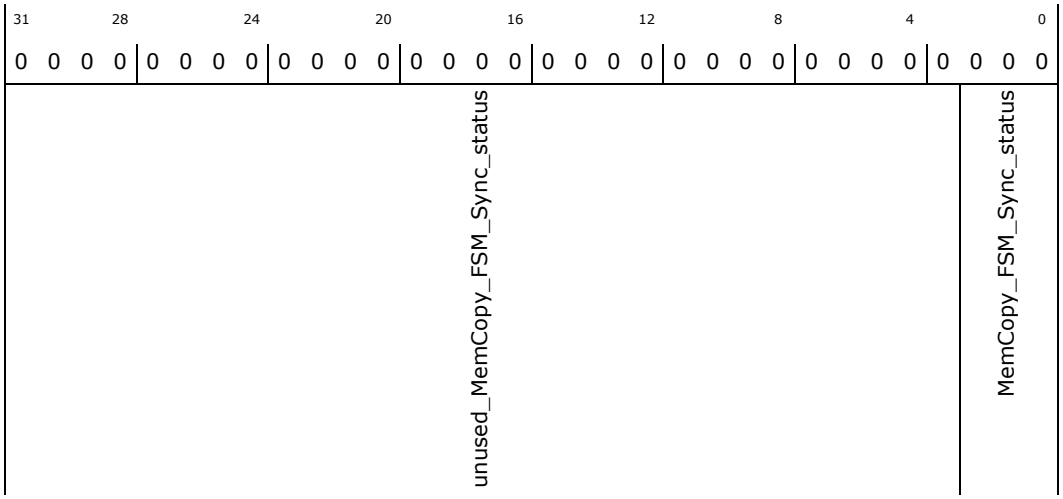
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30704h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RW	**Reserved (unused_MemCopy_FSM_Sync_status):** Unused
2:0	0x0 RO	**MemCopy_FSM_Sync_status:** FSM Synchronization Status: 0)Idle -- 1)Request Blocks -- 2)Request Packets -- 3)Request Bytes -- 4)Send Acknowledge

5.2.221 MemCopy_FSM_Sync_bytes_cnt (is_2400_ifmt_mem_cpy_MemCopy_FSM_Sync_bytes_cnt)—Offset 30708h

FSM Synchronization bytes counter: counts the number of bytes received and packed

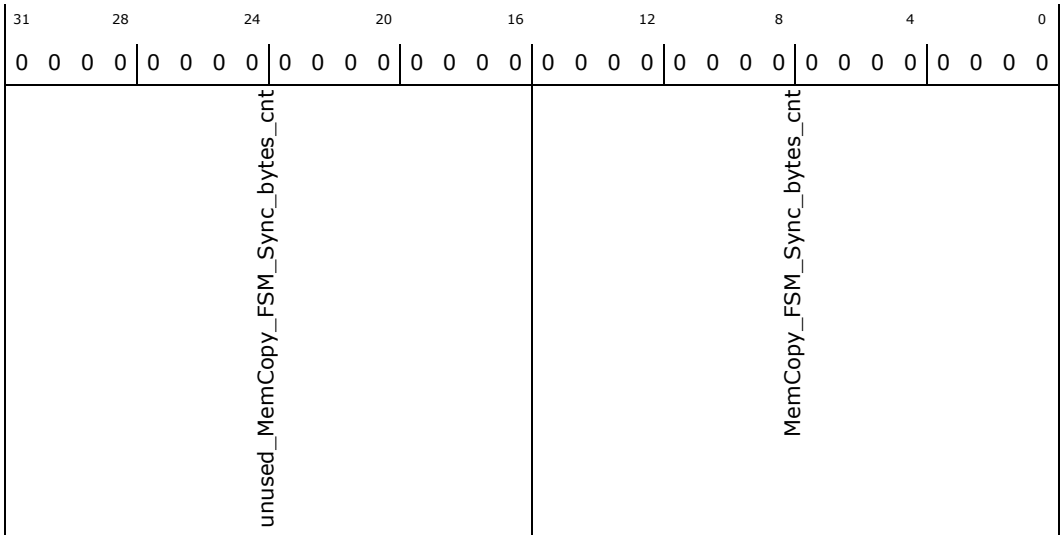
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30708h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_MemCopy_FSM_Sync_bytes_cnt):** Unused
15:0	0x0 RO	**MemCopy_FSM_Sync_bytes_cnt:** FSM Synchronization bytes counter: counts the number of bytes received and packed

5.2.222 MemCopy_FSM_Sync_token_cnt (is_2400_ifmt_mem_cpy_MemCopy_FSM_Sync_token_cnt)—Offset 3070Ch

FSM Synchronization token amount: counts the number of token processed

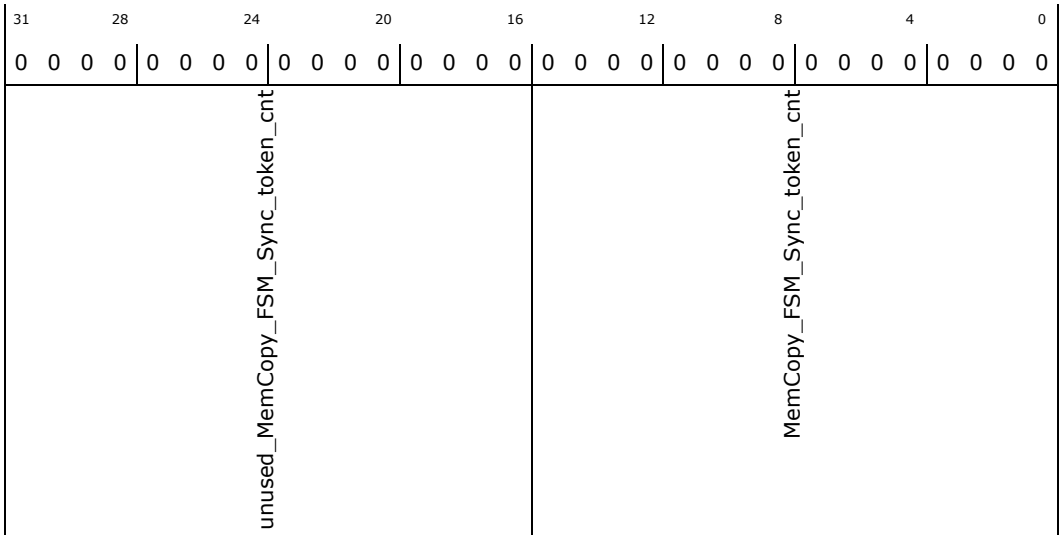
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3070Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_MemCopy_FSM_Sync_token_cnt):** Unused
15:0	0x0 RO	**MemCopy_FSM_Sync_token_cnt:** FSM Synchronization token amount: counts the number of token processed

5.2.223 MemCopy_FSM_Pack_idx_cnt (is_2400_ifmt_mem_cpy_MemCopy_FSM_Pack_idx_cnt) —Offset 30710h

FSM Pack idx counter: element index

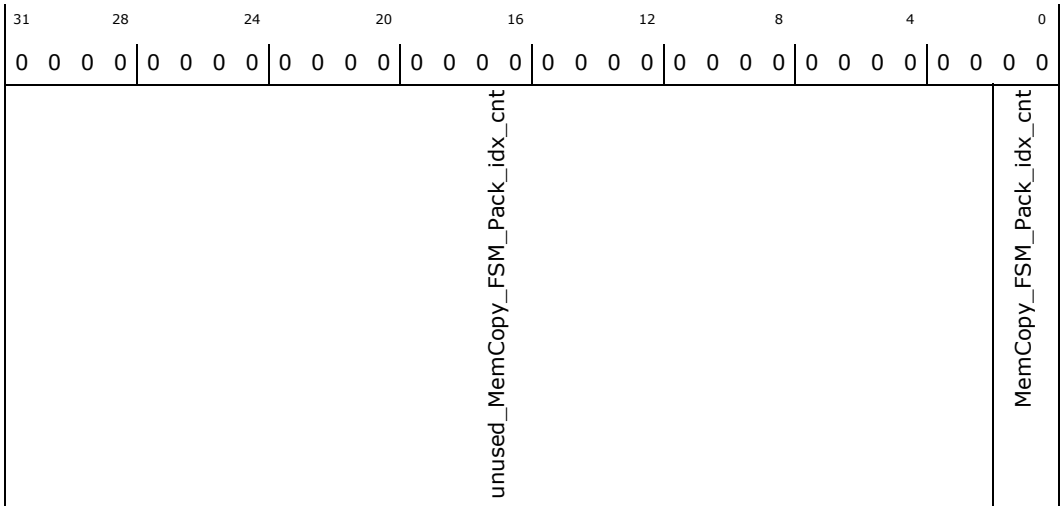
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30710h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:2	0x0 RW	**Reserved (unused_MemCopy_FSM_Pack_idx_cnt):** Unused
1:0	0x0 RO	**MemCopy_FSM_Pack_idx_cnt:** FSM Pack idx counter: element index

5.2.224 MemCopy_FSM_Buf_Sup_status (is_2400_ifmt_mem_cpy_MemCopy_FSM_Buf_Sup_status)—Offset 30714h

Buffer Full and mask

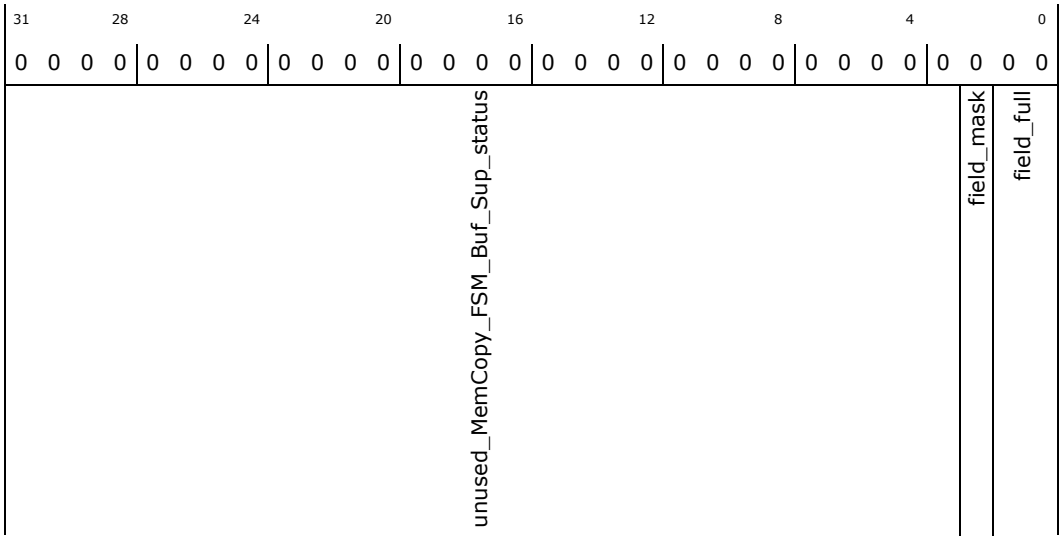
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30714h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:3	0x0 RO	**Reserved (unused_MemCopy_FSM_Buf_Sup_status):** Unused
2	0x0 RO	**field_mask:** FSM Buffer support mask buffers full to the FSM CioWr
1:0	0x0 RO	**field_full:** FSM Buffer support one-hot encoding flagging when the buffer are full

5.2.225 MemCopy_FSM_Buf_Sup_cnt (is_2400_ifmt_mem_cpy_MemCopy_FSM_Buf_Sup_cnt)—Offset 30718h

FSM Buffer support: counter for buffer index

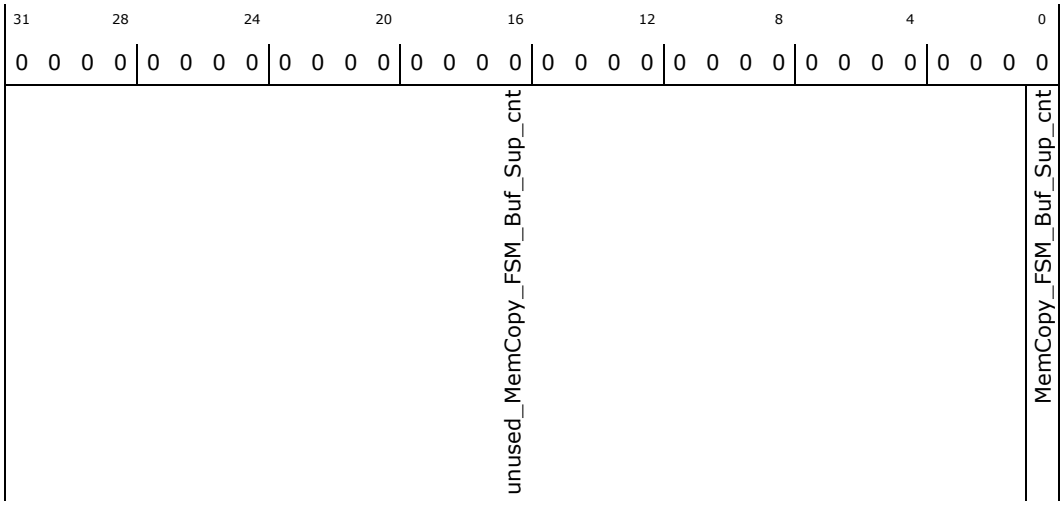
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30718h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:1	0x0 RW	**Reserved (unused_MemCopy_FSM_Buf_Sup_cnt):** Unused
0	0x0 RO	**MemCopy_FSM_Buf_Sup_cnt:** FSM Buffer support: counter for buffer index

5.2.226 MemCopy_FSM_CioWr_status (is_2400_ifmt_mem_cpy_MemCopy_FSM_CioWr_status) —Offset 3071Ch

FSM CioWr Status

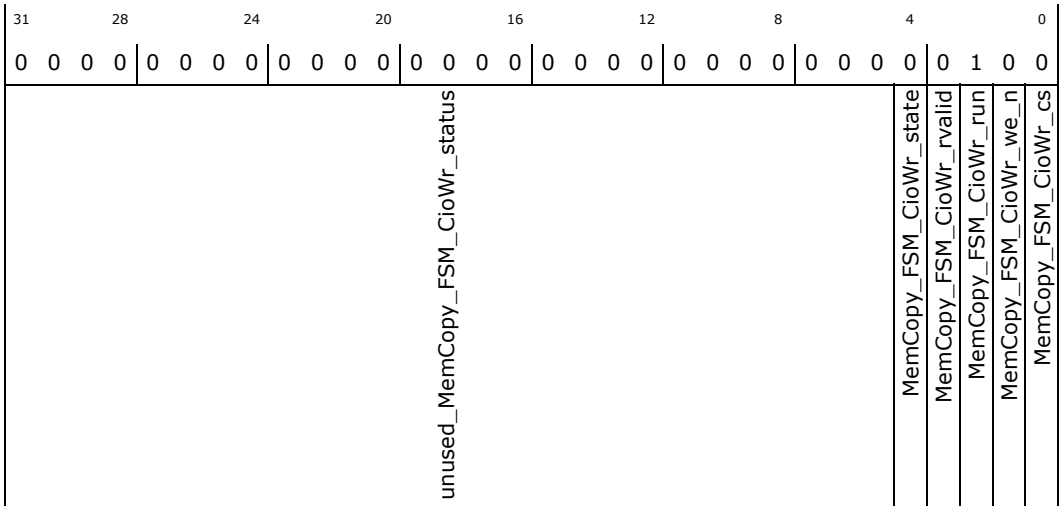
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3071Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000004h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_MemCopy_FSM_CioWr_status):** Unused
4	0x0 RO	**MemCopy_FSM_CioWr_state:** 0)Idle - 1)Writing
3	0x0 RO	**MemCopy_FSM_CioWr_rvalid:** Read valid flag
2	0x1 RO	**MemCopy_FSM_CioWr_run:** Run flag
1	0x0 RO	**MemCopy_FSM_CioWr_we_n:** Write enable flag, active low
0	0x0 RO	**MemCopy_FSM_CioWr_cs:** CS flag

5.2.227 MemCopy_FSM_CioWr_addr (is_2400_ifmt_mem_cpy_MemCopy_FSM_CioWr_addr)—Offset 30720h

FSM CioWr: write address in byte

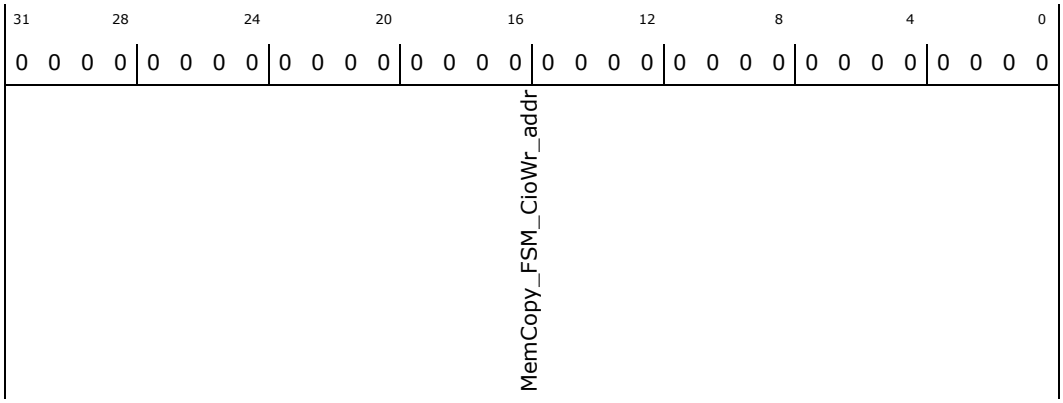
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30720h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**MemCopy_FSM_CioWr_addr:** FSM CioWr: write address in byte

5.2.228 IFMT_input_switch__reg0 (is_2400_ifmt_gp_reg_IFMT_input_switch__reg0)—Offset 30800h

GP reg input switch data and hsync look-up table Register 0

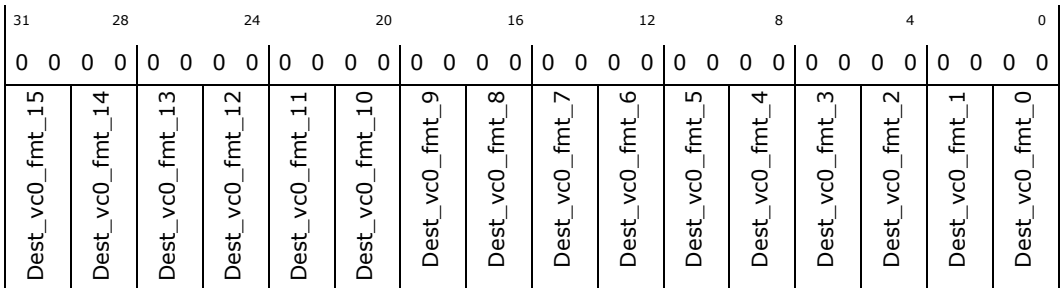
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30800h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:30	0x0 RW	**Dest_vc0_fmt_15:** Selects destination of data and hsync for vc=0 fmt=15. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.

Bit Range	Default and Access	Field Name (ID): Description
29:28	0x0 RW	**Dest_vc0_fmt_14:** Selects destination of data and hsync for vc=0 fmt=14. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
27:26	0x0 RW	**Dest_vc0_fmt_13:** Selects destination of data and hsync for vc=0 fmt=13. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
25:24	0x0 RW	**Dest_vc0_fmt_12:** Selects destination of data and hsync for vc=0 fmt=12. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
23:22	0x0 RW	**Dest_vc0_fmt_11:** Selects destination of data and hsync for vc=0 fmt=11. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
21:20	0x0 RW	**Dest_vc0_fmt_10:** Selects destination of data and hsync for vc=0 fmt=10. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
19:18	0x0 RW	**Dest_vc0_fmt_9:** Selects destination of data and hsync for vc=0 fmt=9. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.

31:30	0x0 RW	**Dest_vc3_fmt_15:** Selects destination of data and hsync for vc=3 fmt=15. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
29:28	0x0 RW	**Dest_vc3_fmt_14:** Selects destination of data and hsync for vc=3 fmt=14. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.

Bit Range	Default and Access	Field Name (ID): Description
27:26	0x0 RW	**Dest_vc3_fmt_13:** Selects destination of data and hsync for vc=3 fmt=13. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
25:24	0x0 RW	**Dest_vc3_fmt_12:** Selects destination of data and hsync for vc=3 fmt=12. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
23:22	0x0 RW	**Dest_vc3_fmt_11:** Selects destination of data and hsync for vc=3 fmt=11. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
21:20	0x0 RW	**Dest_vc3_fmt_10:** Selects destination of data and hsync for vc=3 fmt=10. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
19:18	0x0 RW	**Dest_vc3_fmt_9:** Selects destination of data and hsync for vc=3 fmt=9. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
17:16	0x0 RW	**Dest_vc3_fmt_8:** Selects destination of data and hsync for vc=3 fmt=8. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
15:14	0x0 RW	**Dest_vc3_fmt_7:** Selects destination of data and hsync for vc=3 fmt=7. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
13:12	0x0 RW	**Dest_vc3_fmt_6:** Selects destination of data and hsync for vc=3 fmt=6. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
11:10	0x0 RW	**Dest_vc3_fmt_5:** Selects destination of data and hsync for vc=3 fmt=5. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
9:8	0x0 RW	**Dest_vc3_fmt_4:** Selects destination of data and hsync for vc=3 fmt=4. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
7:6	0x0 RW	**Dest_vc3_fmt_3:** Selects destination of data and hsync for vc=3 fmt=3. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
5:4	0x0 RW	**Dest_vc3_fmt_2:** Selects destination of data and hsync for vc=3 fmt=2. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
3:2	0x0 RW	**Dest_vc3_fmt_1:** Selects destination of data and hsync for vc=3 fmt=1. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
1:0	0x0 RW	**Dest_vc3_fmt_0:** Selects destination of data and hsync for vc=3 fmt=0. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.

5.2.235 IFMT_input_switch__reg7 (is_2400_ifmt_gp_reg_IFMT_input_switch__reg7)— Offset 3081Ch

GP reg input switch data and hsync look-up table Register 7

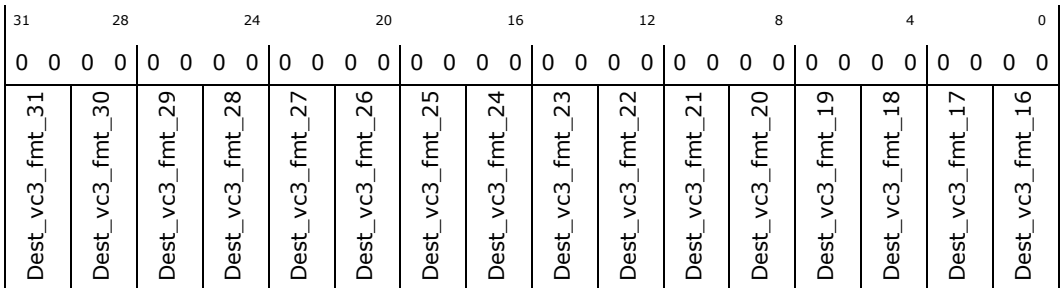
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3081Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:30	0x0 RW	**Dest_vc3_fmt_31:** Selects destination of data and hsync for vc=3 fmt=31. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
29:28	0x0 RW	**Dest_vc3_fmt_30:** Selects destination of data and hsync for vc=3 fmt=30. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
27:26	0x0 RW	**Dest_vc3_fmt_29:** Selects destination of data and hsync for vc=3 fmt=29. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
25:24	0x0 RW	**Dest_vc3_fmt_28:** Selects destination of data and hsync for vc=3 fmt=28. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
23:22	0x0 RW	**Dest_vc3_fmt_27:** Selects destination of data and hsync for vc=3 fmt=27. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
21:20	0x0 RW	**Dest_vc3_fmt_26:** Selects destination of data and hsync for vc=3 fmt=26. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
19:18	0x0 RW	**Dest_vc3_fmt_25:** Selects destination of data and hsync for vc=3 fmt=25. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
17:16	0x0 RW	**Dest_vc3_fmt_24:** Selects destination of data and hsync for vc=3 fmt=24. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.

Bit Range	Default and Access	Field Name (ID): Description
15:14	0x0 RW	**Dest_vc3_fmt_23:** Selects destination of data and hsync for vc=3 fmt=23. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
13:12	0x0 RW	**Dest_vc3_fmt_22:** Selects destination of data and hsync for vc=3 fmt=22. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
11:10	0x0 RW	**Dest_vc3_fmt_21:** Selects destination of data and hsync for vc=3 fmt=21. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
9:8	0x0 RW	**Dest_vc3_fmt_20:** Selects destination of data and hsync for vc=3 fmt=20. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
7:6	0x0 RW	**Dest_vc3_fmt_19:** Selects destination of data and hsync for vc=3 fmt=19. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
5:4	0x0 RW	**Dest_vc3_fmt_18:** Selects destination of data and hsync for vc=3 fmt=18. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
3:2	0x0 RW	**Dest_vc3_fmt_17:** Selects destination of data and hsync for vc=3 fmt=17. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.
1:0	0x0 RW	**Dest_vc3_fmt_16:** Selects destination of data and hsync for vc=3 fmt=16. 00-data is discarded, 01-primary input formatter, 10-secondary input formatter, 11-stream2mem.

5.2.236 IFMT_input_switch_fsync_ (is_2400_ifmt_gp_reg_IFMT_input_switch_fsync_)—Offset 30820h

GP reg input switch frame synchronization signal look-up table register

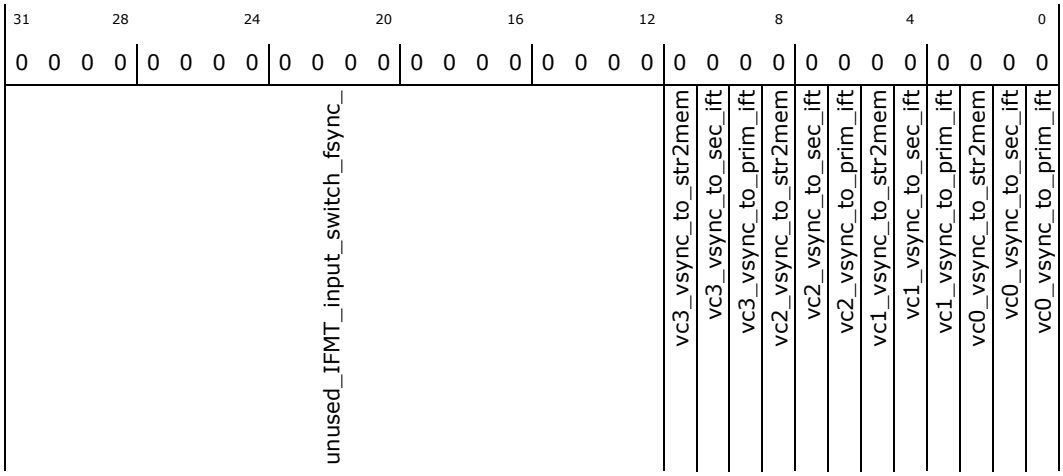
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30820h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:12	0x0 RO	**Reserved (unused_IFMT_input_switch_fsync_):** Unused
11	0x0 RW	**vc3_vsync_to_str2mem:** If '1', sof and eof on vc3 will be lead to the stream2mem
10	0x0 RW	**vc3_vsync_to_sec_ift:** If '1', sof and eof on vc3 will be lead to the secondary input formatter
9	0x0 RW	**vc3_vsync_to_prim_ift:** If '1', sof and eof on vc3 will be lead to the primary input formatters
8	0x0 RW	**vc2_vsync_to_str2mem:** If '1', sof and eof on vc2 will be lead to the stream2mem
7	0x0 RW	**vc2_vsync_to_sec_ift:** If '1', sof and eof on vc2 will be lead to the secondary input formatter
6	0x0 RW	**vc2_vsync_to_prim_ift:** If '1', sof and eof on vc2 will be lead to the primary input formatters
5	0x0 RW	**vc1_vsync_to_str2mem:** If '1', sof and eof on vc1 will be lead to the stream2mem
4	0x0 RW	**vc1_vsync_to_sec_ift:** If '1', sof and eof on vc1 will be lead to the secondary input formatter
3	0x0 RW	**vc1_vsync_to_prim_ift:** If '1', sof and eof on vc1 will be lead to the primary input formatters
2	0x0 RW	**vc0_vsync_to_str2mem:** If '1', sof and eof on vc0 will be lead to the stream2mem
1	0x0 RW	**vc0_vsync_to_sec_ift:** If '1', sof and eof on vc0 will be lead to the secondary input formatter
0	0x0 RW	**vc0_vsync_to_prim_ift:** If '1', sof and eof on vc0 will be lead to the primary input formatters

5.2.237 IFMT_srst (is_2400_ifmt_gp_reg_IFMT_srst)—Offset 30824h

GP reg soft reset

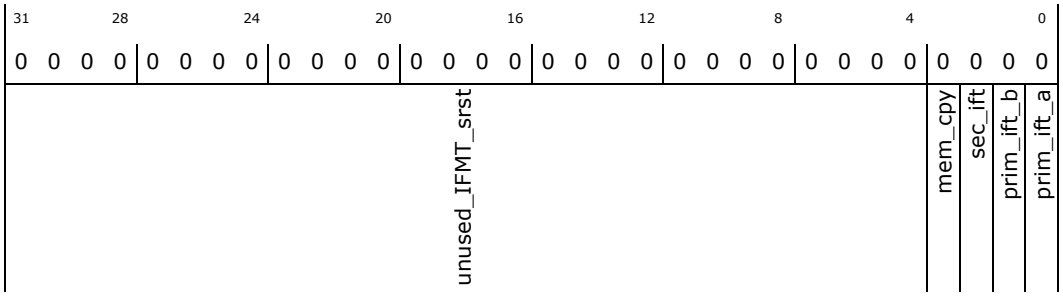
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30824h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IFMT_srst):** Unused
3	0x0 RW	**mem_cpy:** Soft resets mem copy
2	0x0 RW	**sec_ift:** Soft resets secondary input formatter
1	0x0 RW	**prim_ift_b:** Soft resets primary input formatter B
0	0x0 RW	**prim_ift_a:** Soft resets primary input formatter A

5.2.238 IFMT_slv_reg_srst (is_2400_ifmt_gp_reg_IFMT_slv_reg_srst)—Offset 30828h

GP reg slave register soft reset

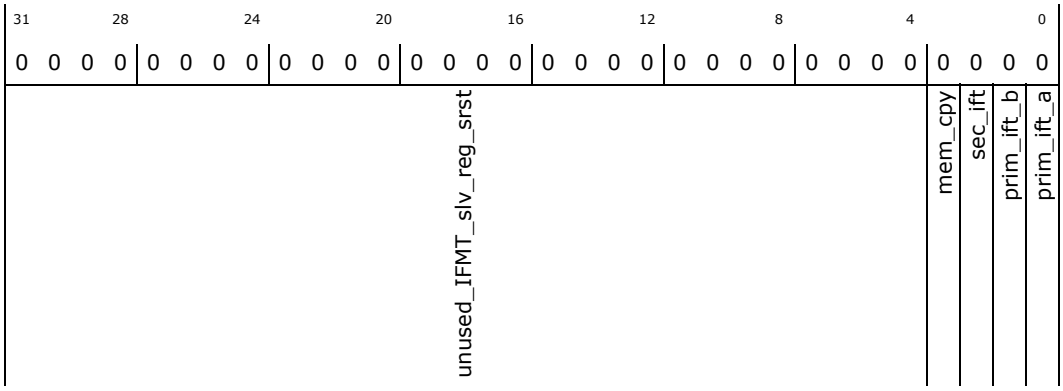
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30828h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:4	0x0 RO	**Reserved (unused_IFMT_slv_reg_srst):** Unused
3	0x0 RW	**mem_cpy:** Soft resets slave registers of mem copy
2	0x0 RW	**sec_ift:** Soft resets slave registers of secondary input formatter
1	0x0 RW	**prim_ift_b:** Soft resets slave registers of primary input formatter B
0	0x0 RW	**prim_ift_a:** Soft resets slave registers of primary input formatter A

5.2.239 IFMT_input_switch_ch_id_fmt_type (is_2400_ifmt_gp_reg_IFMT_input_switch_ch_id_fmt_type)—Offset 3082Ch

GP reg input switch status register

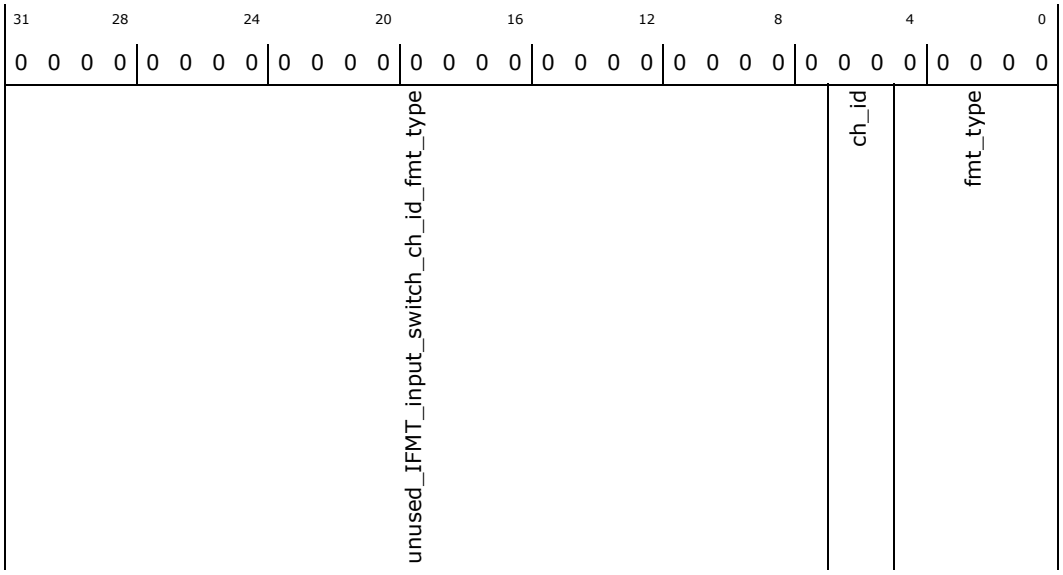
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 3082Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:7	0x0 RO	**Reserved (unused_IFMT_input_switch_ch_id_fmt_type):** Unused
6:5	0x0 RO	**ch_id:** Returns the channel id as it arrives at the input of the input switch
4:0	0x0 RO	**fmt_type:** Returns the format type as it arrives at the input of the input switch

5.2.240 IFMT_IRQ_ctrl_edge (is_2400_ifmt_irq_ctrl_IFMT_IRQ_ctrl_edge)—Offset 30A00h

indicates for each IRQ bit whether an interrupt request should be generated on a falling edge (value='0') or a rising edge (value='1').

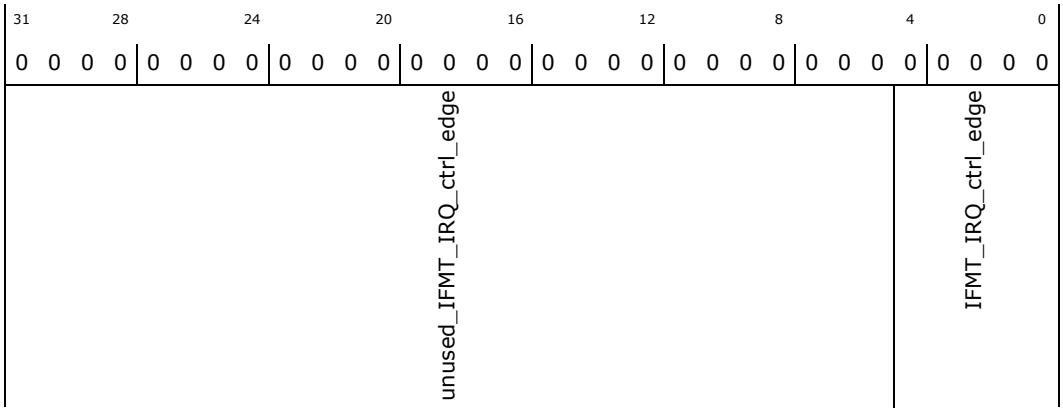
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30A00h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RW	**Reserved (unused_IFMT_IRQ_ctrl_edge):** Unused
4:0	0x0 RW	**IFMT_IRQ_ctrl_edge:** indicates for each IRQ bit whether an interrupt request should be generated on a falling edge (value='0') or a rising edge (value='1').

5.2.241 IFMT_IRQ_ctrl_mask (is_2400_ifmt_irq_ctrl_IFMT_IRQ_ctrl_mask)—Offset 30A04h

indicates for each IRQ bit whether it can generate an interrupt request (value='1') or not (value='0'). Setting will affect reg_irq_value as well as IRQ output pin

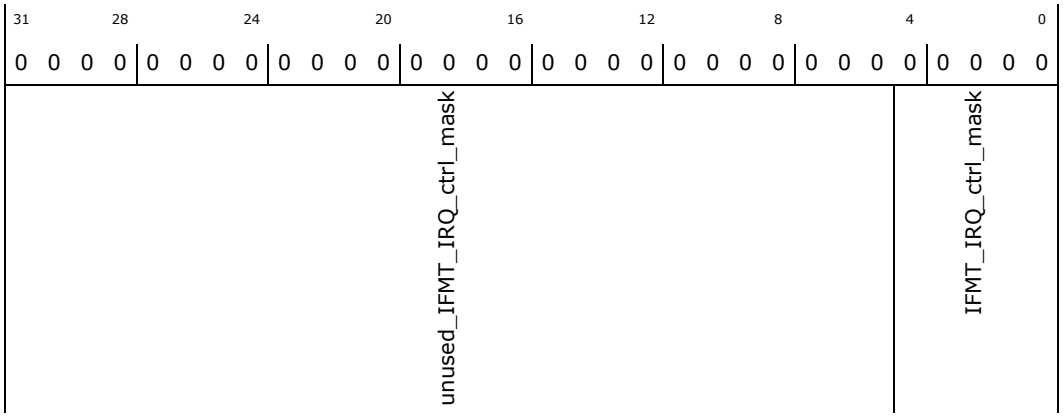
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30A04h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RW	**Reserved (unused_IFMT_IRQ_ctrl_mask):** Unused
4:0	0x0 RW	**IFMT_IRQ_ctrl_mask:** indicates for each IRQ bit whether it can generate an interrupt request (value='1') or not (value='0'). Setting will affect reg_irq_value as well as IRQ output pin

5.2.242 IFMT_IRQ_ctrl_status (is_2400_ifmt_irq_ctrl_IFMT_IRQ_ctrl_status)—Offset 30A08h

IRQ controller STATUS

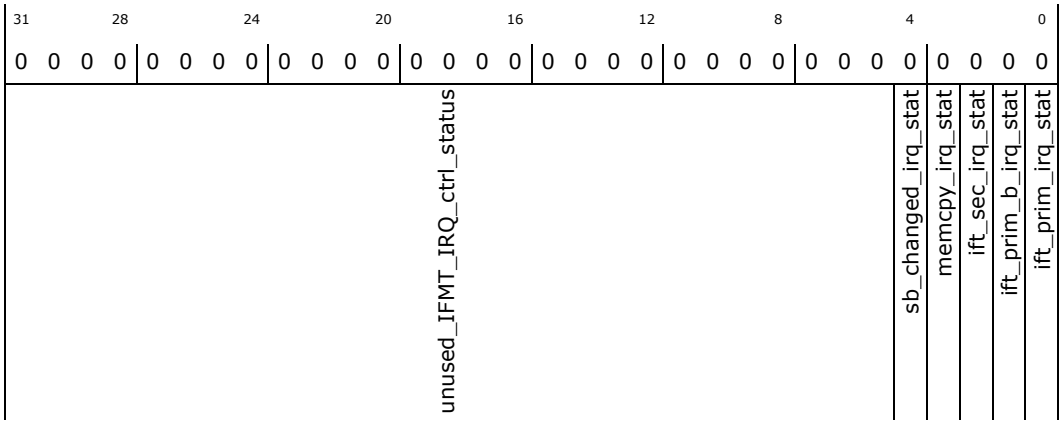
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30A08h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_IFMT_IRQ_ctrl_status):** Unused
4	0x0 RO	**sb_changed_irq_stat:** Returns the status of the IRQ signal indicating a change in either the channel id or the format type
3	0x0 RO	**memcpy_irq_stat:** Returns the status of the IRQ generated by the stream to memory device
2	0x0 RO	**ift_sec_irq_stat:** Returns the status of the IRQ generated by the secondary input formatter
1	0x0 RO	**ift_prim_b_irq_stat:** Returns the status of the IRQ generated by the primary input formatter b
0	0x0 RO	**ift_prim_irq_stat:** Returns the status of the IRQ generated by the primary input formatter

5.2.243 IFMT_IRQ_ctrl_clear (is_2400_ifmt_irq_ctrl_IFMT_IRQ_ctrl_clear)—Offset 30A0Ch

Clears (set to '0') bits in IFMT_IRQ_ctrl_status. When writing a '1' into a bit of this register, the corresponding bit in the IFMT_IRQ_ctrl_status is cleared. When writing a '0' into a bit of this register, the corresponding bit in the IFMT_IRQ_ctrl_status is not affected.

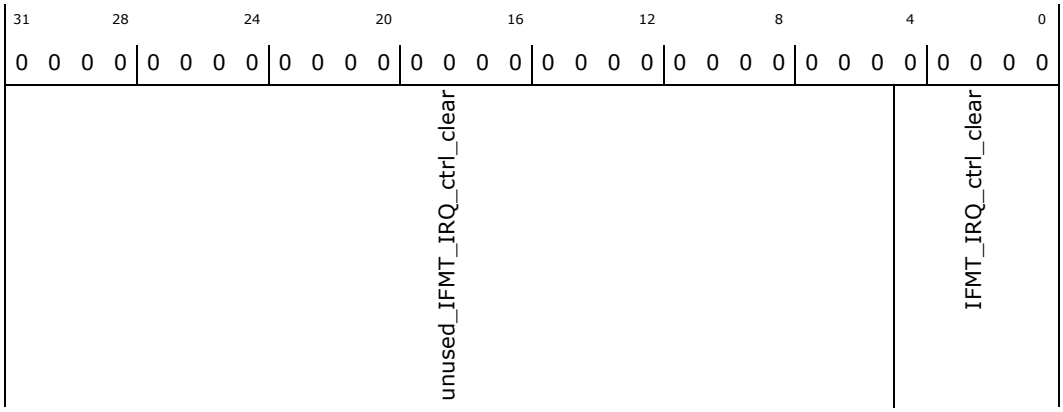
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30A0Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RW	**Reserved (unused_IFMT_IRQ_ctrl_clear):** Unused
4:0	0x0 WO	**IFMT_IRQ_ctrl_clear:** Clears (set to '0') bits in IFMT_IRQ_ctrl_status. When writing a '1' into a bit of this register, the corresponding bit in the IFMT_IRQ_ctrl_status is cleared. When writing a '0' into a bit of this register, the corresponding bit in the IFMT_IRQ_ctrl_status is not affected.

5.2.244 IFMT_IRQ_ctrl_enable (is_2400_ifmt_irq_ctrl_IFMT_IRQ_ctrl_enable)—Offset 30A10h

Indicates for each bit whether an interrupt cause as monitored by the IFMT_IRQ_ctrl_status register also affects the IRQ pin (value='1') or not (value='0')

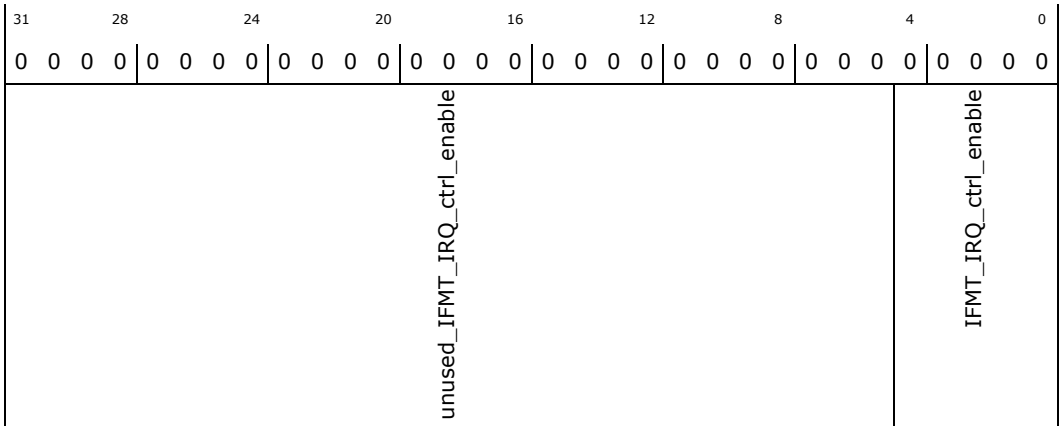
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30A10h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RW	**Reserved (unused_IFMT_IRQ_ctrl_enable):** Unused
4:0	0x0 RW	**IFMT_IRQ_ctrl_enable:** Indicates for each bit whether an interrupt cause as monitored by the IFMT_IRQ_ctrl_status register also affects the IRQ pin (value='1') or not (value='0')

5.2.245 IFMT_IRQ_ctrl_edge_pulse (is_2400_ifmt_irq_ctrl_IFMT_IRQ_ctrl_edge_pulse)—Offset 30A14h

Indicates for each bit whether an interrupt cause is translated into a pulse (value='0') or into a constant level '1' (value='1') on the IRQ pin

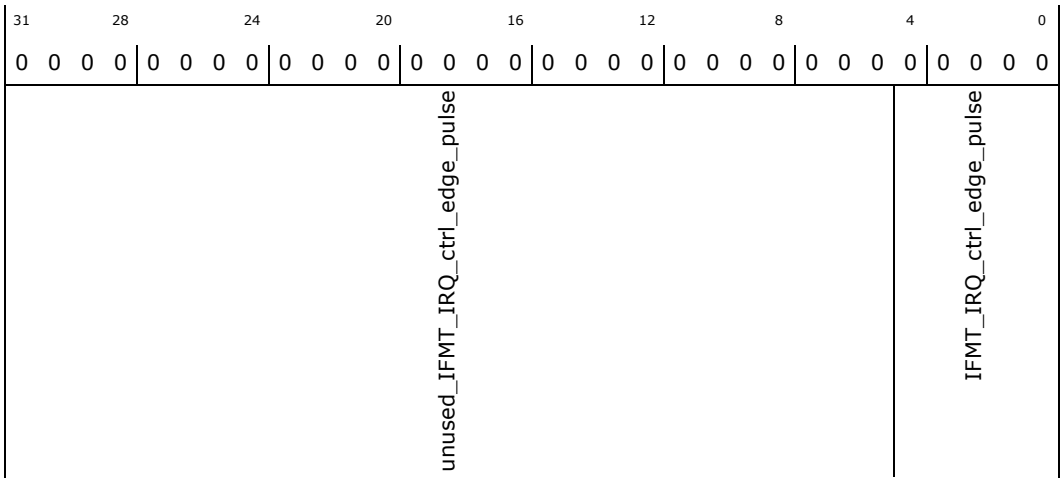
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 30A14h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RW	**Reserved (unused_IFMT_IRQ_ctrl_edge_pulse):** Unused
4:0	0x0 RW	**IFMT_IRQ_ctrl_edge_pulse:** Indicates for each bit whether an interrupt cause is translated into a pulse (value='0') or into a constant level '1' (value='1') on the IRQ pin

5.2.246 DMA_FSM_Command (isp_dma_DMA_FSM_Command)—Offset 40000h

FSM Command: Last command and State

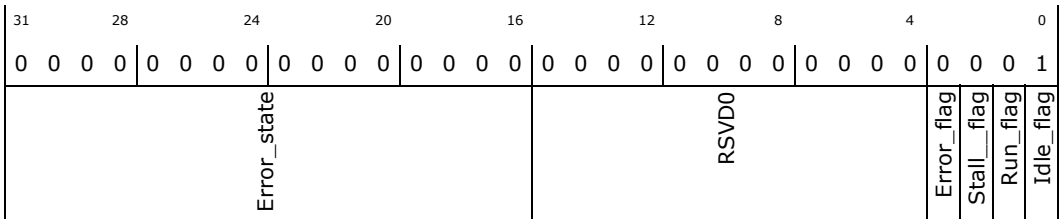
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 40000h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000001h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RO	**Error_state:** Lower 16 bits of the last command received and processed
15:4	0x0 RO	**RSVD0:** Reserved
3	0x0 RO	**Error_flag:** Error flag
2	0x0 RO	**Stall__flag:** Stall flag
1	0x0 RO	**Run_flag:** Run flag
0	0x1 RO	**Idle_flag:** Idle flag

5.2.247 DMA_CH0_ConnectionID_sgnzext (isp_dma_DMA_CH0_ConnectionID_sgnzext)—Offset 41000h

DMA CH 0 PARAM 0: Connection ID and Zero/Sign extension settings

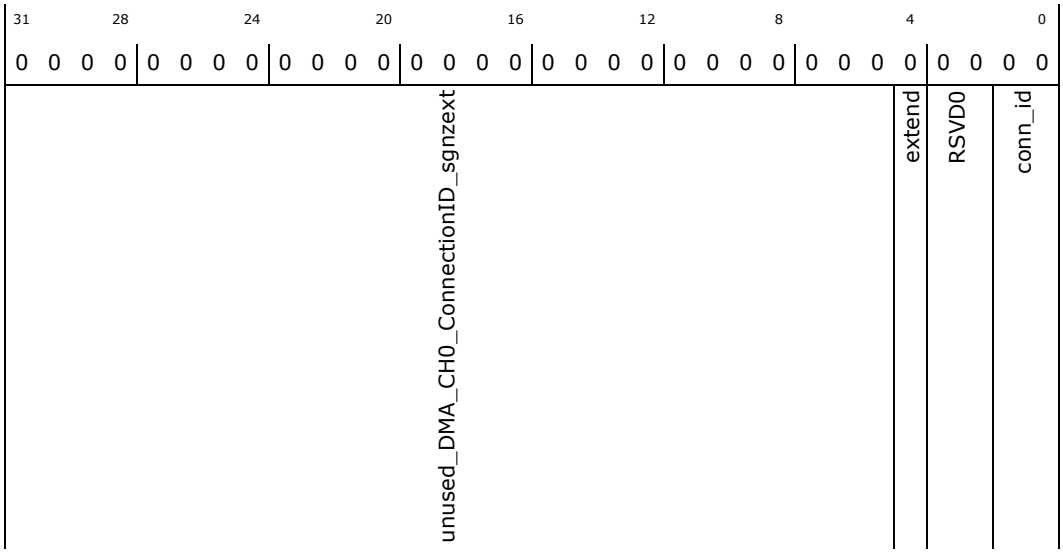
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41000h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH0_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.248 DMA_CH1_ConnectionID_sgnzext (isp_dma_DMA_CH1_ConnectionID_sgnzext)—Offset 41004h

DMA CH 1 PARAM 0: Connection ID and Zero/Sign extension settings

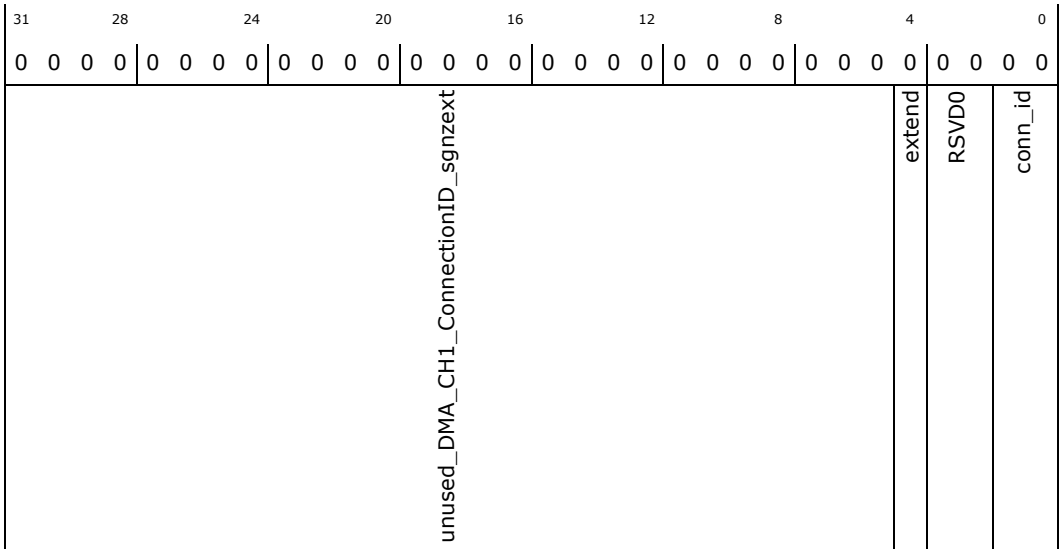
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41004h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH1_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.249 DMA_CH2_ConnectionID_sgnzext (isp_dma_DMA_CH2_ConnectionID_sgnzext)—Offset 41008h

DMA CH 2 PARAM 0: Connection ID and Zero/Sign extension settings

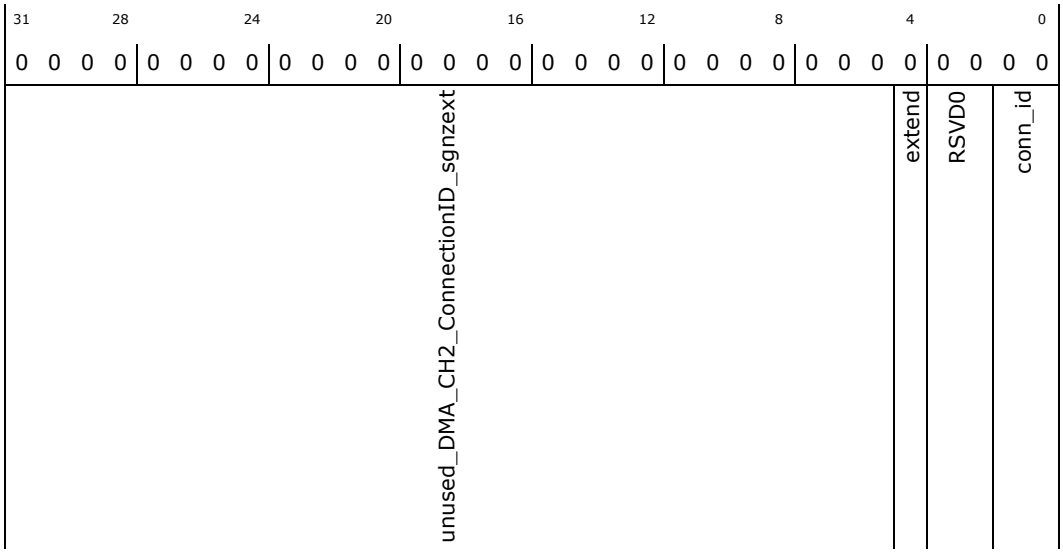
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41008h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH2_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.250 DMA_CH3_ConnectionID_sgnzext (isp_dma_DMA_CH3_ConnectionID_sgnzext)—Offset 4100Ch

DMA CH 3 PARAM 0: Connection ID and Zero/Sign extension settings

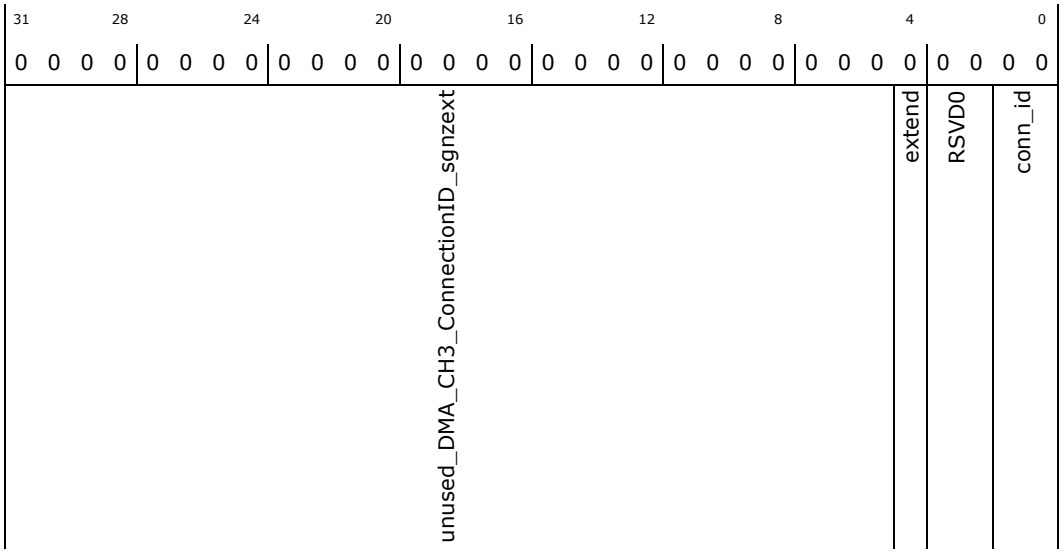
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4100Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH3_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.251 DMA_CH4_ConnectionID_sgnzext (isp_dma_DMA_CH4_ConnectionID_sgnzext)—Offset 41010h

DMA CH 4 PARAM 0: Connection ID and Zero/Sign extension settings

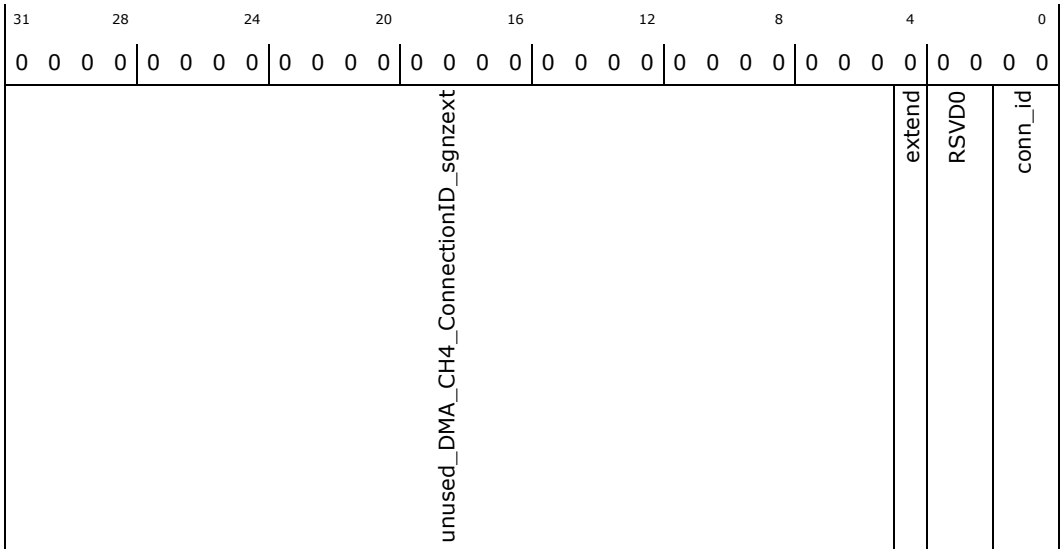
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41010h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH4_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.252 DMA_CH5_ConnectionID_sgnzext (isp_dma_DMA_CH5_ConnectionID_sgnzext)—Offset 41014h

DMA CH 5 PARAM 0: Connection ID and Zero/Sign extension settings

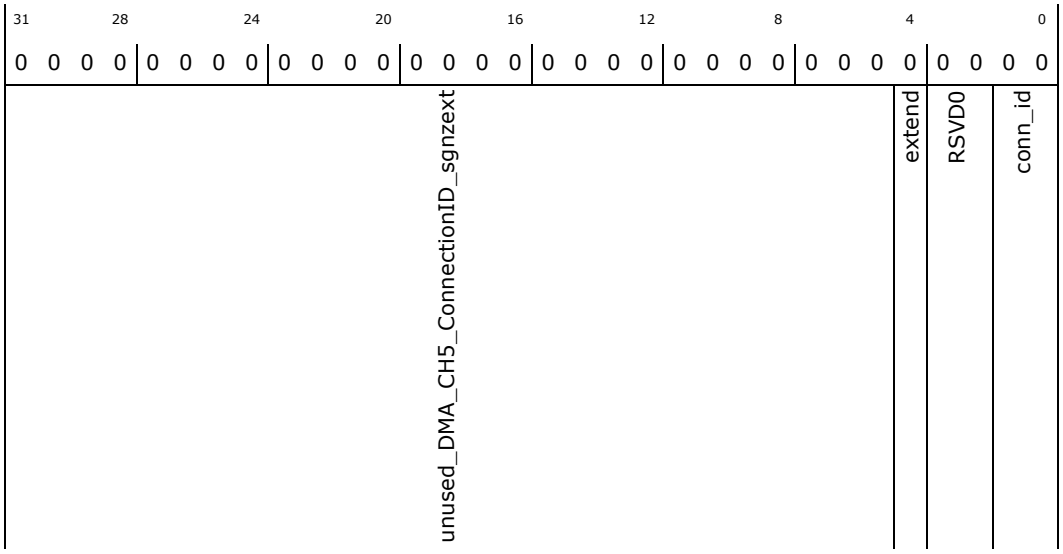
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41014h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH5_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.253 DMA_CH6_ConnectionID_sgnzext (isp_dma_DMA_CH6_ConnectionID_sgnzext)—Offset 41018h

DMA CH 6 PARAM 0: Connection ID and Zero/Sign extension settings

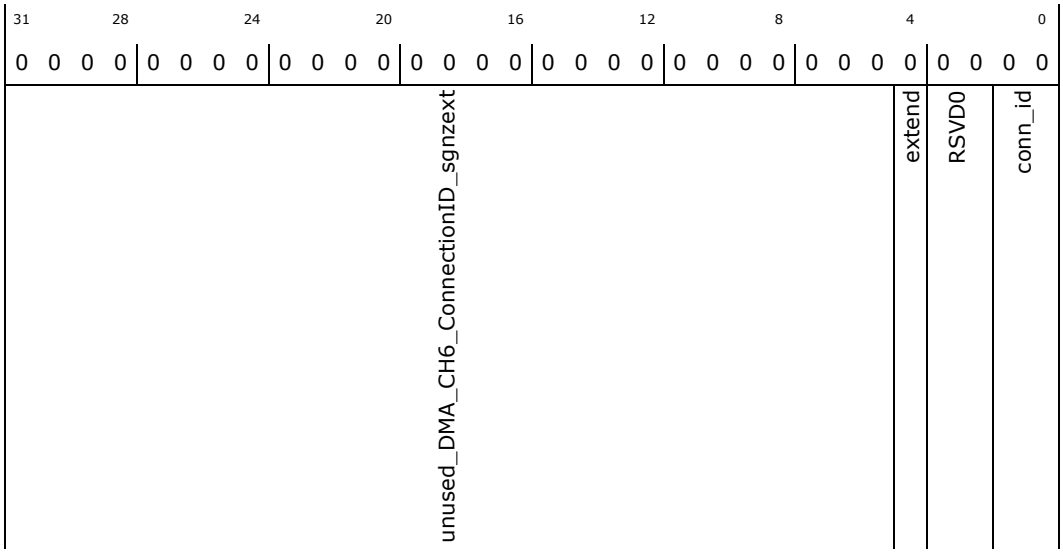
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41018h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH6_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.254 DMA_CH7_ConnectionID_sgnzext (isp_dma_DMA_CH7_ConnectionID_sgnzext)—Offset 4101Ch

DMA CH 7 PARAM 0: Connection ID and Zero/Sign extension settings

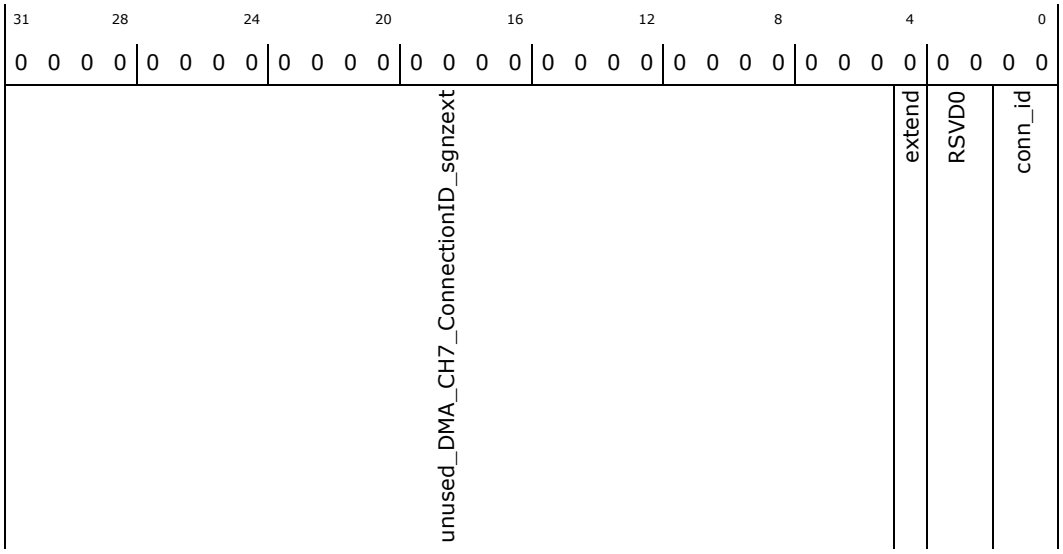
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4101Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH7_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension

5.2.278 DMA_CH31_ConnectionID_sgnzext (isp_dma_DMA_CH31_ConnectionID_sgnzext)—Offset 4107Ch

DMA CH 31 PARAM 0: Connection ID and Zero/Sign extension settings

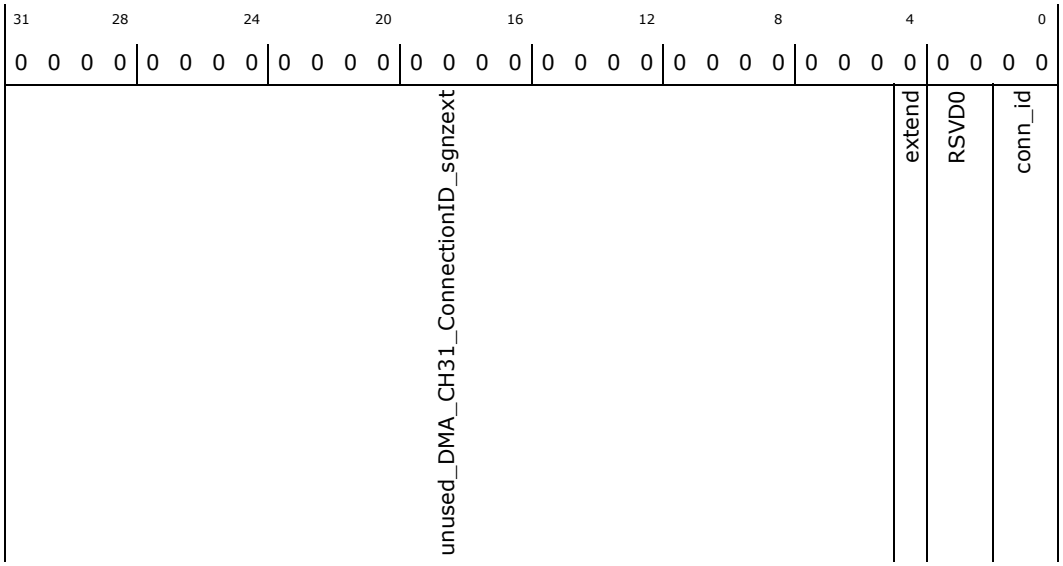
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4107Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:5	0x0 RO	**Reserved (unused_DMA_CH31_ConnectionID_sgnzext):** Unused
4	0x0 RO	**extend:** Zero(0)/Sign(1) extension
3:2	0x0 RO	**RSVD0:** Reserved
1:0	0x0 RO	**conn_id:** Connection ID

5.2.279 DMA_CH0_Stride_Addr_Space_A (isp_dma_DMA_CH0_Stride_Addr_Space_A)—Offset 41100h

DMA CH 0 PARAM 1: Line Stride for Device A side of the connection.

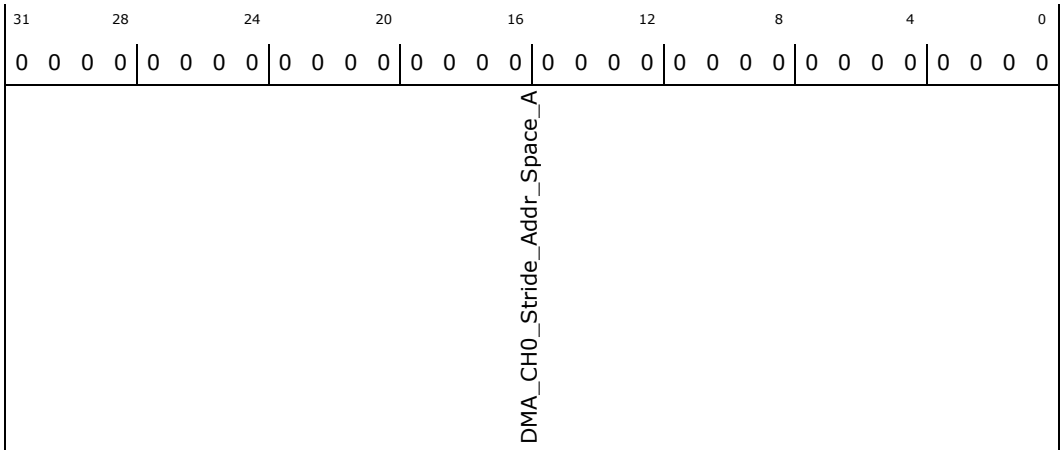
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41100h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH0_Stride_Addr_Space_A:** DMA CH 0 PARAM 1: Line Stride for Device A side of the connection.

5.2.280 DMA_CH1_Stride_Addr_Space_A (isp_dma_DMA_CH1_Stride_Addr_Space_A)—Offset 41104h

DMA CH 1 PARAM 1: Line Stride for Device A side of the connection.

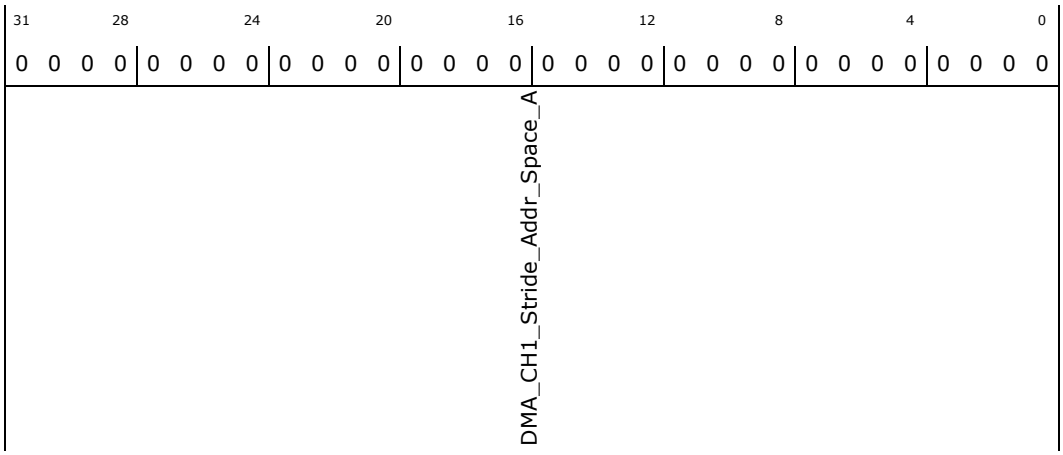
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41104h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH1_Stride_Addr_Space_A:** DMA CH 1 PARAM 1: Line Stride for Device A side of the connection.

5.2.281 DMA_CH2_Stride_Addr_Space_A (isp_dma_DMA_CH2_Stride_Addr_Space_A)—Offset 41108h

DMA CH 2 PARAM 1: Line Stride for Device A side of the connection.

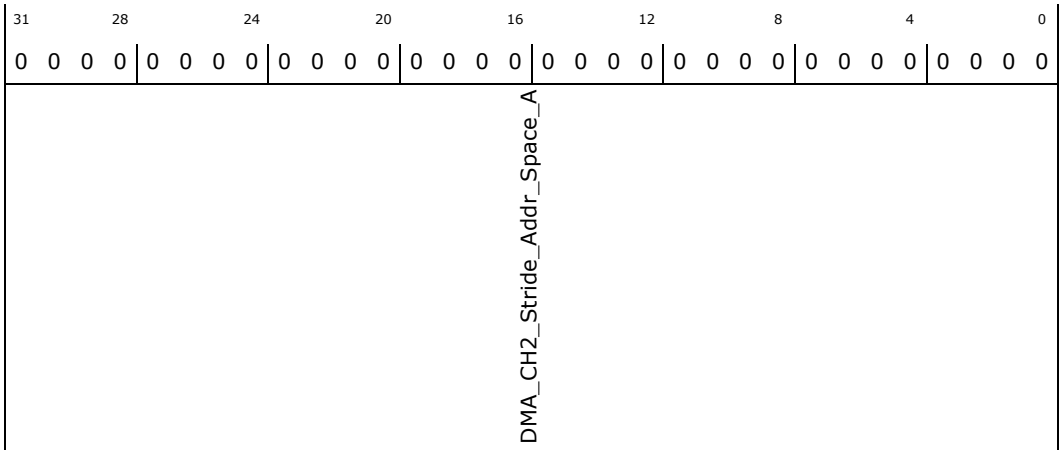
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41108h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH2_Stride_Addr_Space_A:** DMA CH 2 PARAM 1: Line Stride for Device A side of the connection.

5.2.282 DMA_CH3_Stride_Addr_Space_A (isp_dma_DMA_CH3_Stride_Addr_Space_A)—Offset 4110Ch

DMA CH 3 PARAM 1: Line Stride for Device A side of the connection.

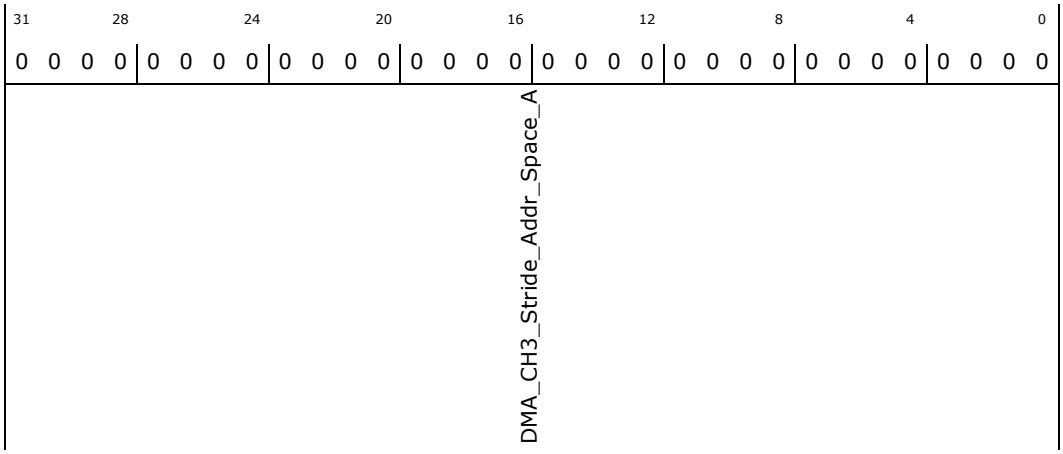
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4110Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH3_Stride_Addr_Space_A:** DMA CH 3 PARAM 1: Line Stride for Device A side of the connection.

5.2.283 DMA_CH4_Stride_Addr_Space_A (isp_dma_DMA_CH4_Stride_Addr_Space_A)—Offset 41110h

DMA CH 4 PARAM 1: Line Stride for Device A side of the connection.

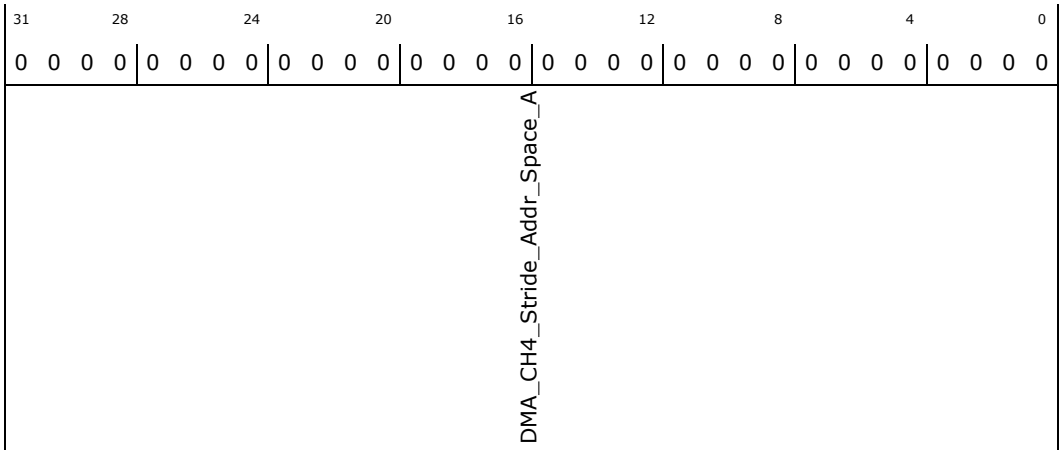
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41110h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH4_Stride_Addr_Space_A:** DMA CH 4 PARAM 1: Line Stride for Device A side of the connection.

5.2.284 DMA_CH5_Stride_Addr_Space_A (isp_dma_DMA_CH5_Stride_Addr_Space_A)—Offset 41114h

DMA CH 5 PARAM 1: Line Stride for Device A side of the connection.

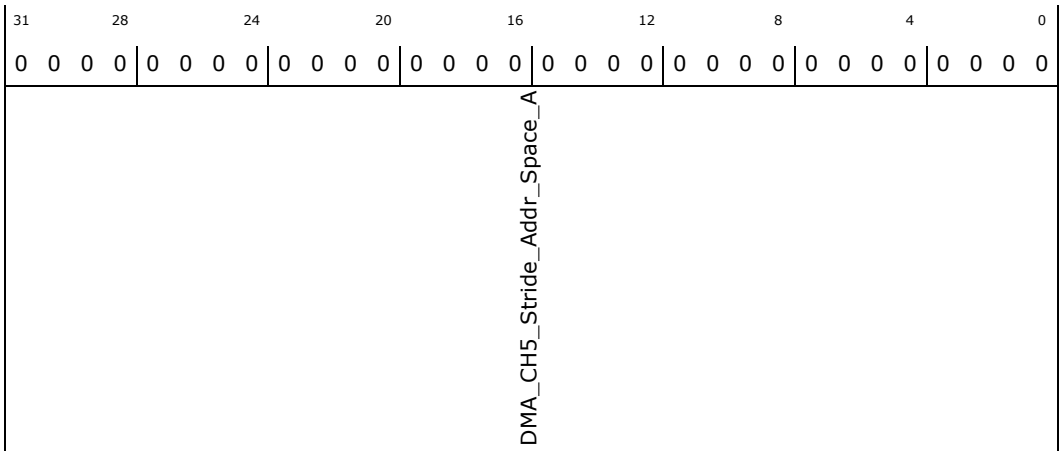
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41114h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH5_Stride_Addr_Space_A:** DMA CH 5 PARAM 1: Line Stride for Device A side of the connection.

5.2.285 DMA_CH6_Stride_Addr_Space_A (isp_dma_DMA_CH6_Stride_Addr_Space_A)—Offset 41118h

DMA CH 6 PARAM 1: Line Stride for Device A side of the connection.

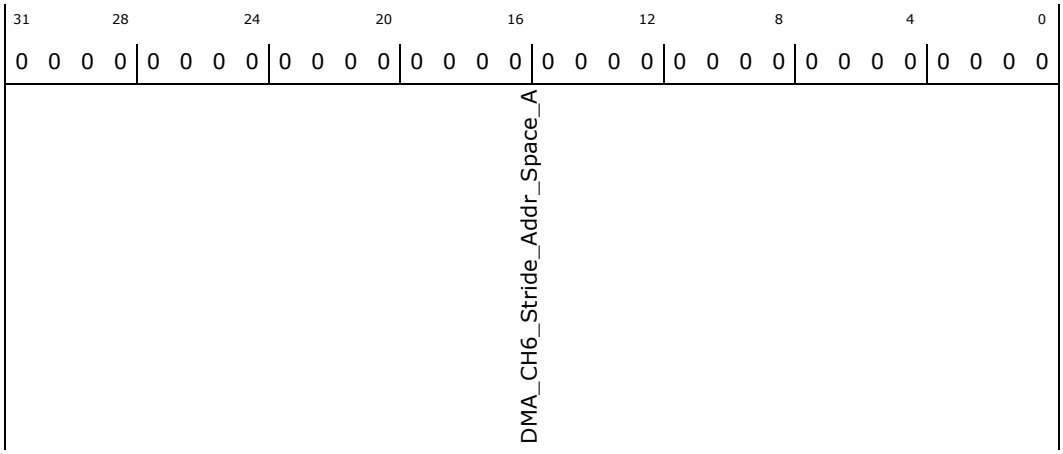
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41118h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH6_Stride_Addr_Space_A:** DMA CH 6 PARAM 1: Line Stride for Device A side of the connection.

5.2.286 DMA_CH7_Stride_Addr_Space_A (isp_dma_DMA_CH7_Stride_Addr_Space_A)—Offset 4111Ch

DMA CH 7 PARAM 1: Line Stride for Device A side of the connection.

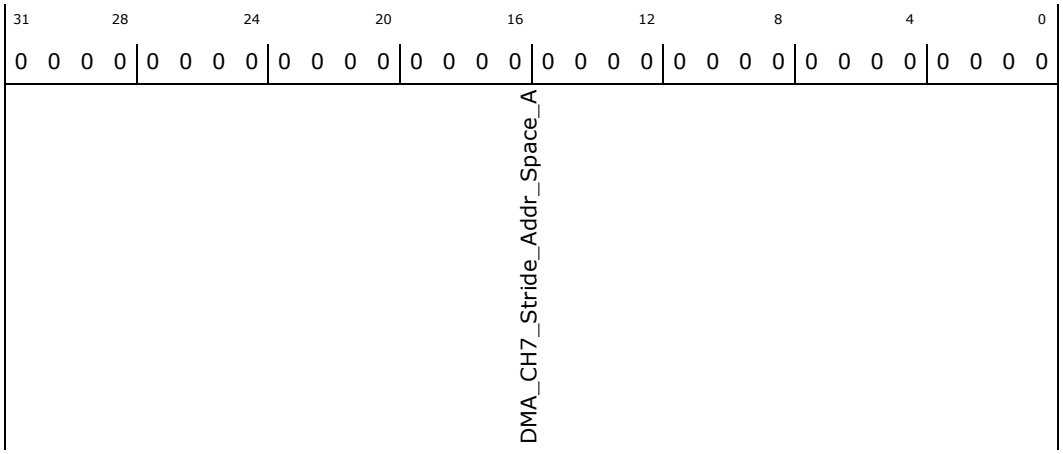
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4111Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH7_Stride_Addr_Space_A:** DMA CH 7 PARAM 1: Line Stride for Device A side of the connection.

5.2.287 DMA_CH8_Stride_Addr_Space_A (isp_dma_DMA_CH8_Stride_Addr_Space_A)—Offset 41120h

DMA CH 8 PARAM 1: Line Stride for Device A side of the connection.

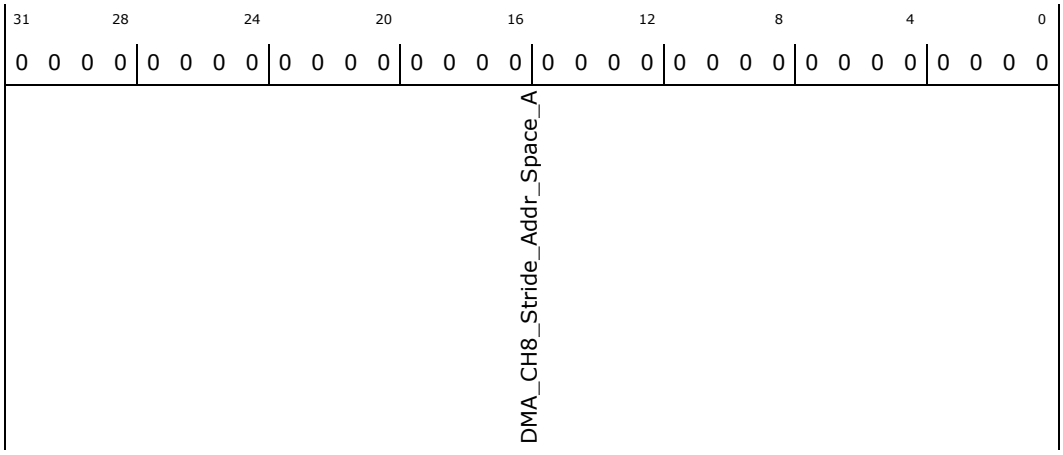
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41120h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH8_Stride_Addr_Space_A:** DMA CH 8 PARAM 1: Line Stride for Device A side of the connection.

5.2.288 DMA_CH9_Stride_Addr_Space_A (isp_dma_DMA_CH9_Stride_Addr_Space_A)—Offset 41124h

DMA CH 9 PARAM 1: Line Stride for Device A side of the connection.

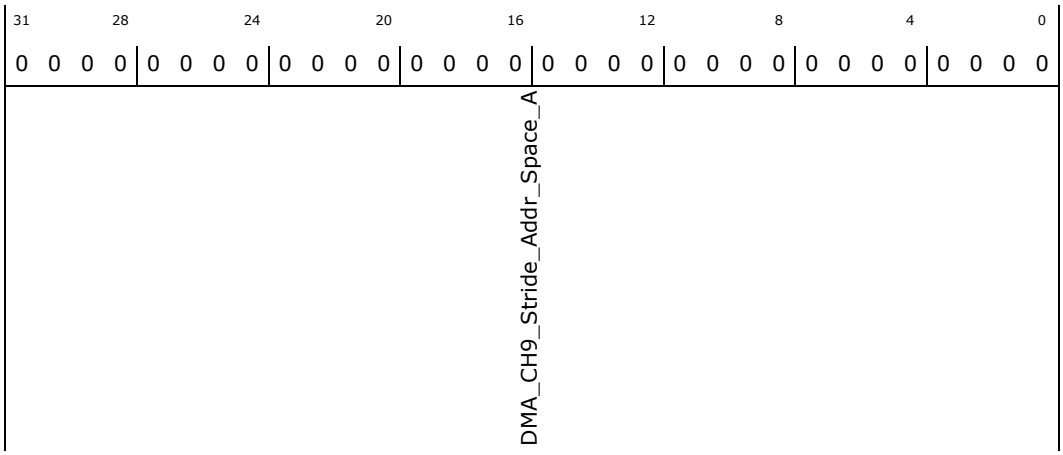
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41124h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH9_Stride_Addr_Space_A:** DMA CH 9 PARAM 1: Line Stride for Device A side of the connection.

5.2.289 DMA_CH10_Stride_Addr_Space_A (isp_dma_DMA_CH10_Stride_Addr_Space_A)—Offset 41128h

DMA CH 10 PARAM 1: Line Stride for Device A side of the connection.

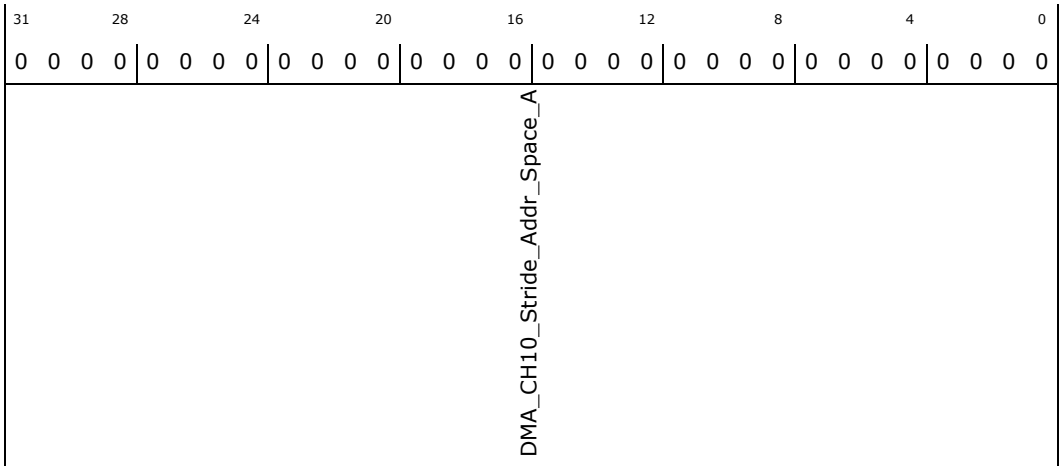
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41128h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH10_Stride_Addr_Space_A:** DMA CH 10 PARAM 1: Line Stride for Device A side of the connection.

5.2.290 DMA_CH11_Stride_Addr_Space_A (isp_dma_DMA_CH11_Stride_Addr_Space_A)—Offset 4112Ch

DMA CH 11 PARAM 1: Line Stride for Device A side of the connection.

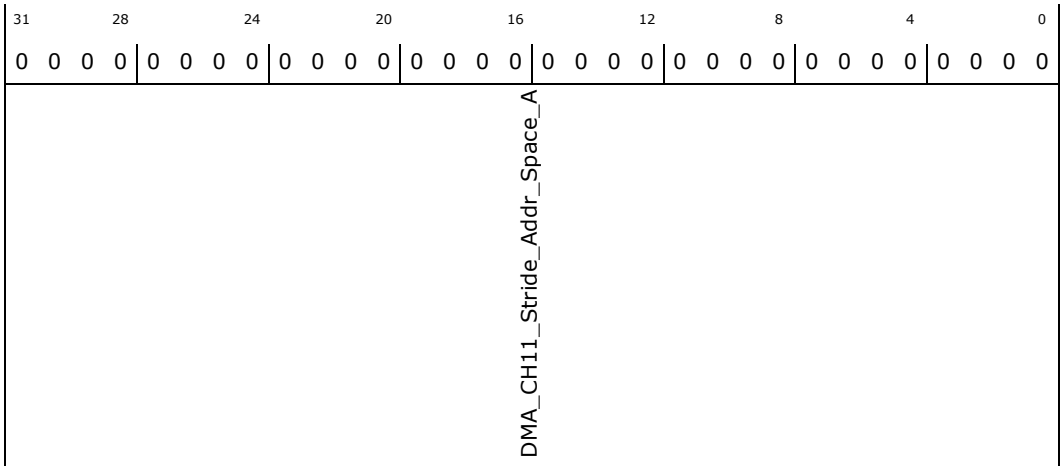
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4112Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH11_Stride_Addr_Space_A:** DMA CH 11 PARAM 1: Line Stride for Device A side of the connection.

5.2.291 DMA_CH12_Stride_Addr_Space_A (isp_dma_DMA_CH12_Stride_Addr_Space_A)—Offset 41130h

DMA CH 12 PARAM 1: Line Stride for Device A side of the connection.

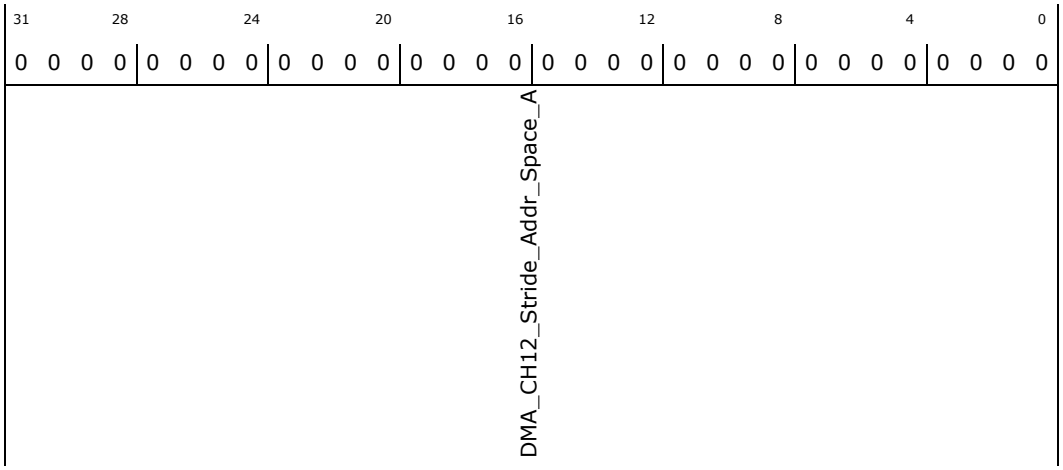
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41130h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH12_Stride_Addr_Space_A:** DMA CH 12 PARAM 1: Line Stride for Device A side of the connection.

5.2.292 DMA_CH13_Stride_Addr_Space_A (isp_dma_DMA_CH13_Stride_Addr_Space_A)—Offset 41134h

DMA CH 13 PARAM 1: Line Stride for Device A side of the connection.

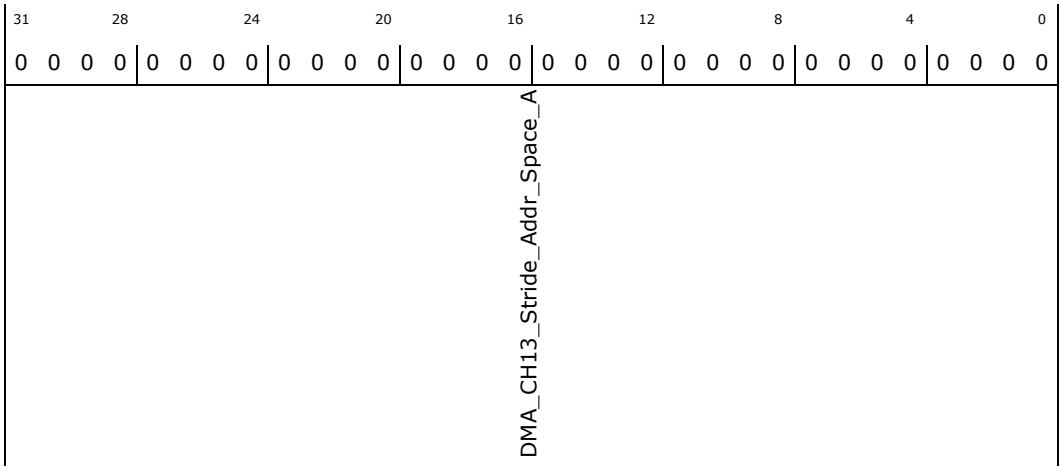
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41134h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH13_Stride_Addr_Space_A:** DMA CH 13 PARAM 1: Line Stride for Device A side of the connection.

5.2.293 DMA_CH14_Stride_Addr_Space_A (isp_dma_DMA_CH14_Stride_Addr_Space_A)—Offset 41138h

DMA CH 14 PARAM 1: Line Stride for Device A side of the connection.

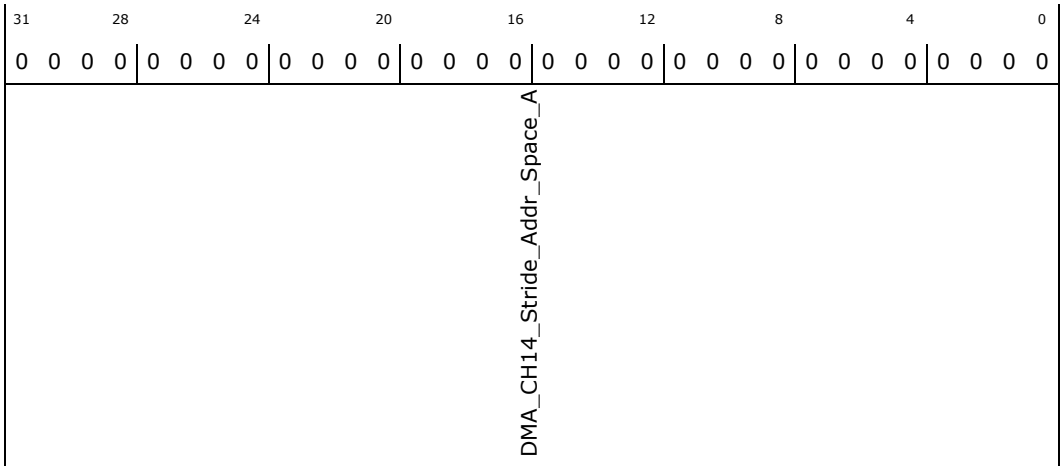
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41138h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH14_Stride_Addr_Space_A:** DMA CH 14 PARAM 1: Line Stride for Device A side of the connection.

5.2.294 DMA_CH15_Stride_Addr_Space_A (isp_dma_DMA_CH15_Stride_Addr_Space_A)—Offset 4113Ch

DMA CH 15 PARAM 1: Line Stride for Device A side of the connection.

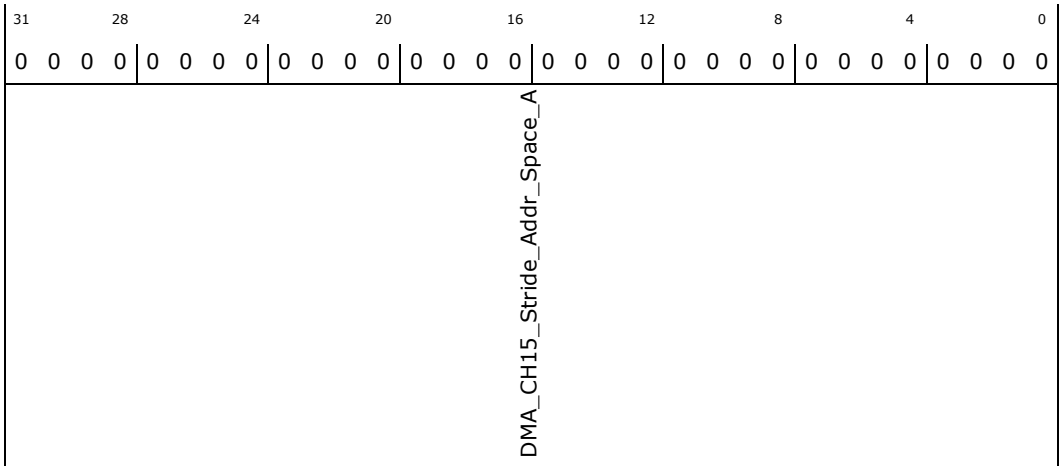
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4113Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH15_Stride_Addr_Space_A:** DMA CH 15 PARAM 1: Line Stride for Device A side of the connection.

5.2.295 DMA_CH16_Stride_Addr_Space_A (isp_dma_DMA_CH16_Stride_Addr_Space_A)—Offset 41140h

DMA CH 16 PARAM 1: Line Stride for Device A side of the connection.

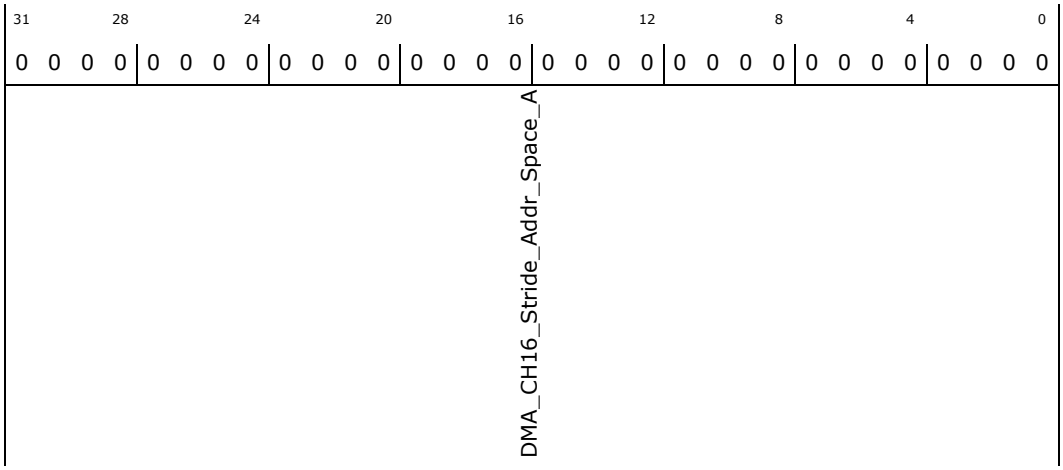
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41140h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH16_Stride_Addr_Space_A:** DMA CH 16 PARAM 1: Line Stride for Device A side of the connection.

5.2.296 DMA_CH17_Stride_Addr_Space_A (isp_dma_DMA_CH17_Stride_Addr_Space_A)—Offset 41144h

DMA CH 17 PARAM 1: Line Stride for Device A side of the connection.

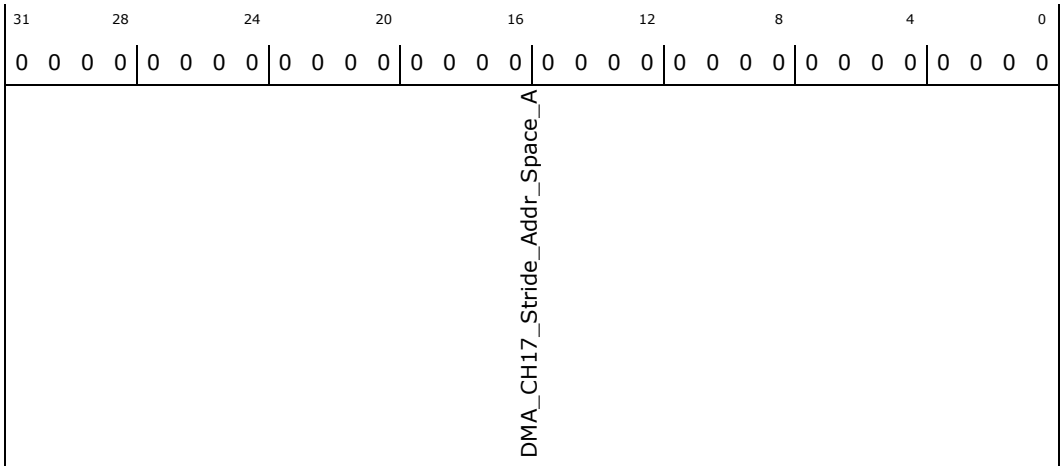
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41144h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH17_Stride_Addr_Space_A:** DMA CH 17 PARAM 1: Line Stride for Device A side of the connection.

5.2.297 DMA_CH18_Stride_Addr_Space_A (isp_dma_DMA_CH18_Stride_Addr_Space_A)—Offset 41148h

DMA CH 18 PARAM 1: Line Stride for Device A side of the connection.

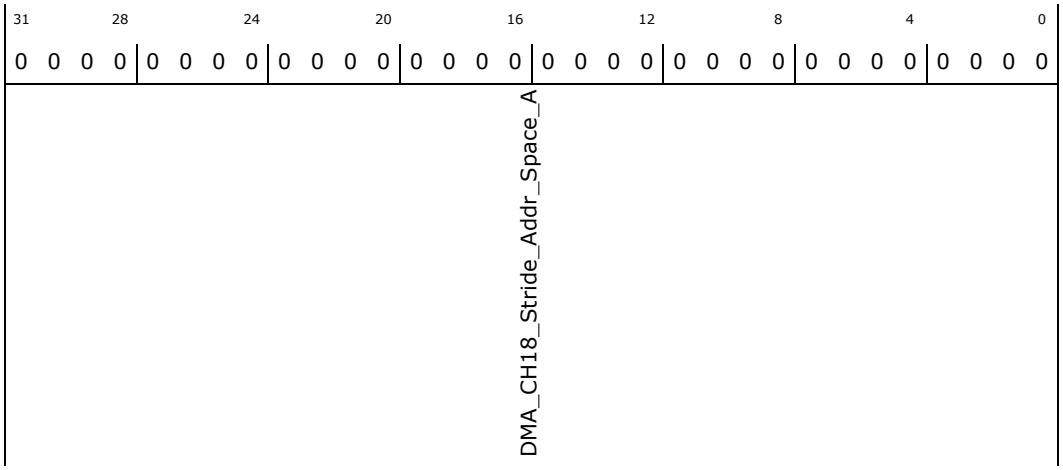
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41148h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH18_Stride_Addr_Space_A:** DMA CH 18 PARAM 1: Line Stride for Device A side of the connection.

5.2.298 DMA_CH19_Stride_Addr_Space_A (isp_dma_DMA_CH19_Stride_Addr_Space_A)—Offset 4114Ch

DMA CH 19 PARAM 1: Line Stride for Device A side of the connection.

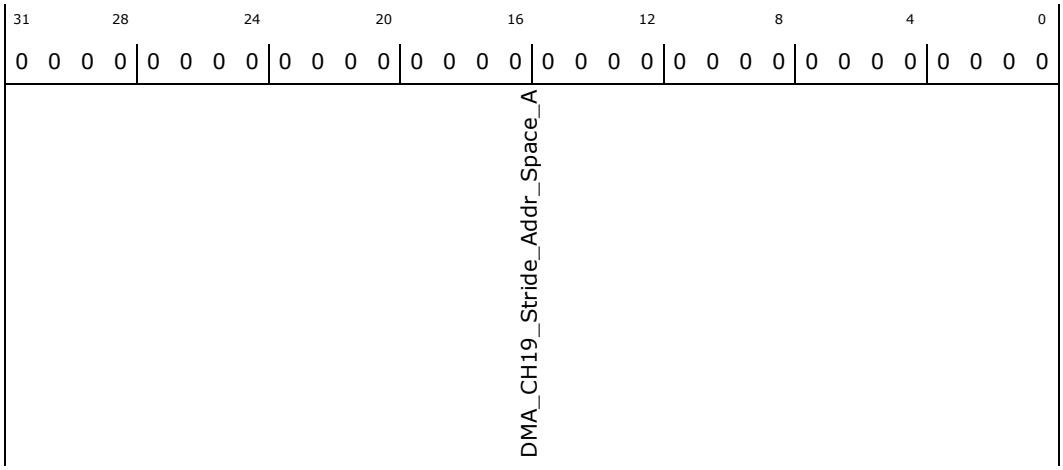
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4114Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH19_Stride_Addr_Space_A:** DMA CH 19 PARAM 1: Line Stride for Device A side of the connection.

5.2.299 DMA_CH20_Stride_Addr_Space_A (isp_dma_DMA_CH20_Stride_Addr_Space_A)—Offset 41150h

DMA CH 20 PARAM 1: Line Stride for Device A side of the connection.

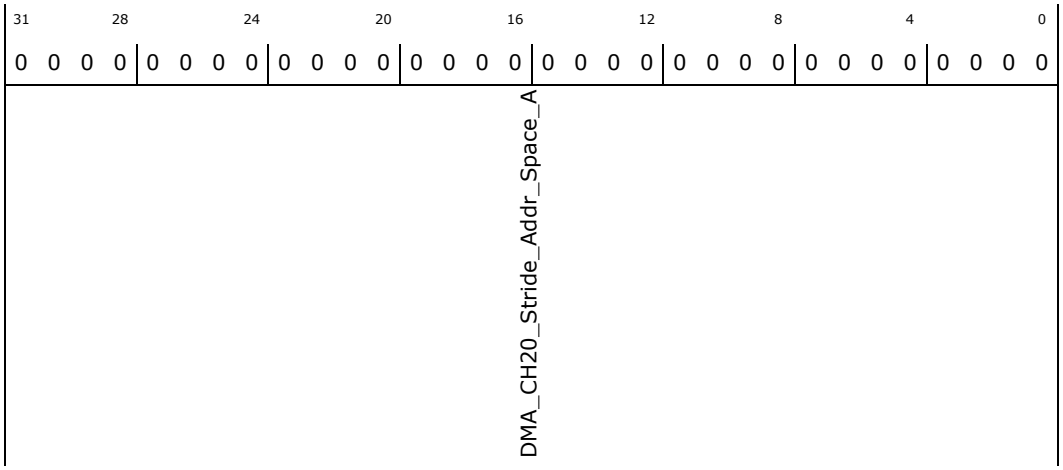
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41150h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH20_Stride_Addr_Space_A:** DMA CH 20 PARAM 1: Line Stride for Device A side of the connection.

5.2.300 DMA_CH21_Stride_Addr_Space_A (isp_dma_DMA_CH21_Stride_Addr_Space_A)—Offset 41154h

DMA CH 21 PARAM 1: Line Stride for Device A side of the connection.

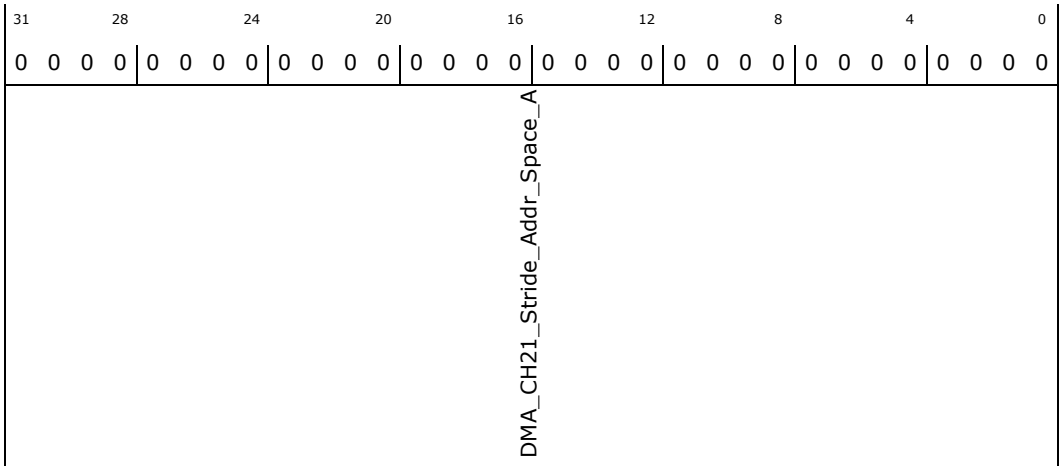
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41154h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:0	0x0 RO	**DMA_CH21_Stride_Addr_Space_A:** DMA CH 21 PARAM 1: Line Stride for Device A side of the connection.

5.2.301 DMA_CH0_Left_Crop_and_Elem_Addr_Space_A (isp_dma_DMA_CH0_Left_Crop_and_Elem_Addr_Space_A)—Offset 41200h

DMA CH 0 PARAM 2: Setting value of cropped pixels for each line and number of elements in a word for Device A side of the connection.

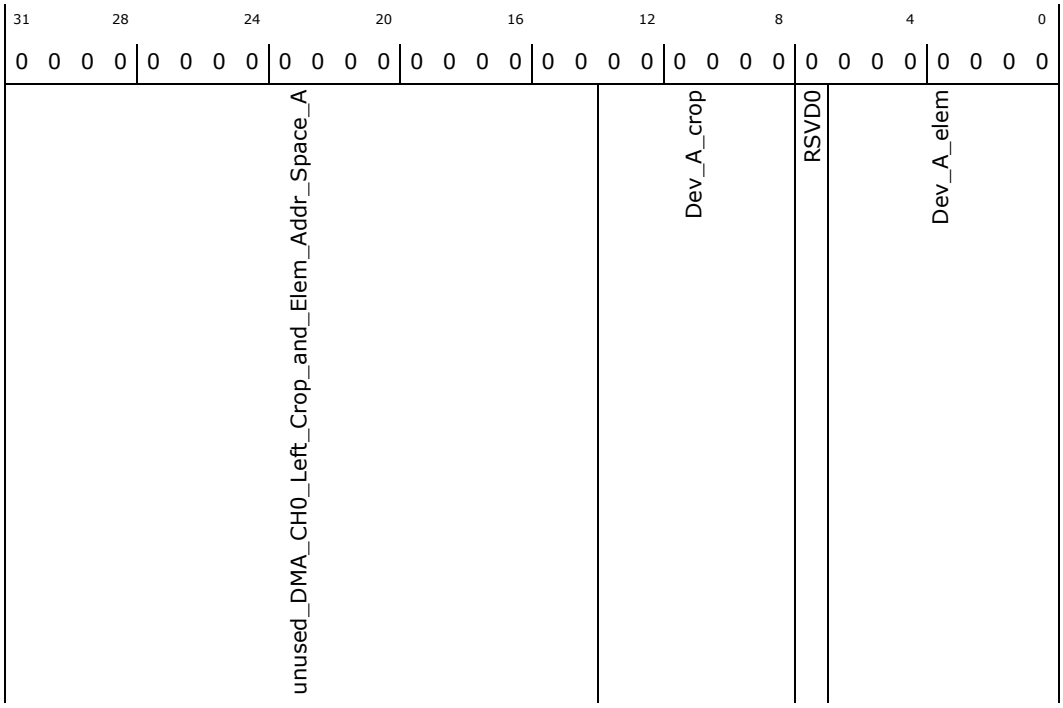
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41200h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:14	0x0 RO	**Reserved (unused_DMA_CH0_Left_Crop_and_Elem_Addr_Space_A):** Unused

Bit Range	Default and Access	Field Name (ID): Description
13:8	0x0 RO	**Dev_A_crop:** Device A left element cropping
7	0x0 RO	**RSVD0:** Reserved
6:0	0x0 RO	**Dev_A_elem:** Device A element per word

5.2.302 DMA_CH1_Left_Crop_and_Elem_Addr_Space_A (isp_dma_DMA_CH1_Left_Crop_and_Elem_Addr_Space_A)—Offset 41204h

DMA CH 1 PARAM 2: Setting value of cropped pixels for each line and number of elements in a word for Device A side of the connection.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41204h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h

DMA CH 0 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

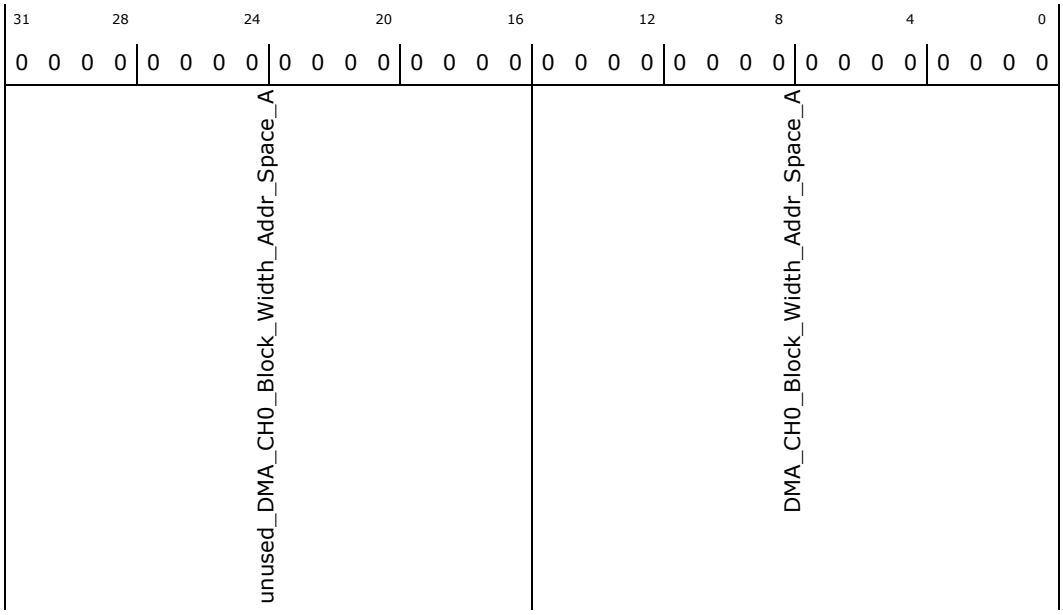
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41300h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH0_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH0_Block_Width_Addr_Space_A:** DMA CH 0 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.344 DMA_CH1_Block_Width_Addr_Space_A (isp_dma_DMA_CH1_Block_Width_Addr_Space_A)—Offset 41304h

DMA CH 1 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

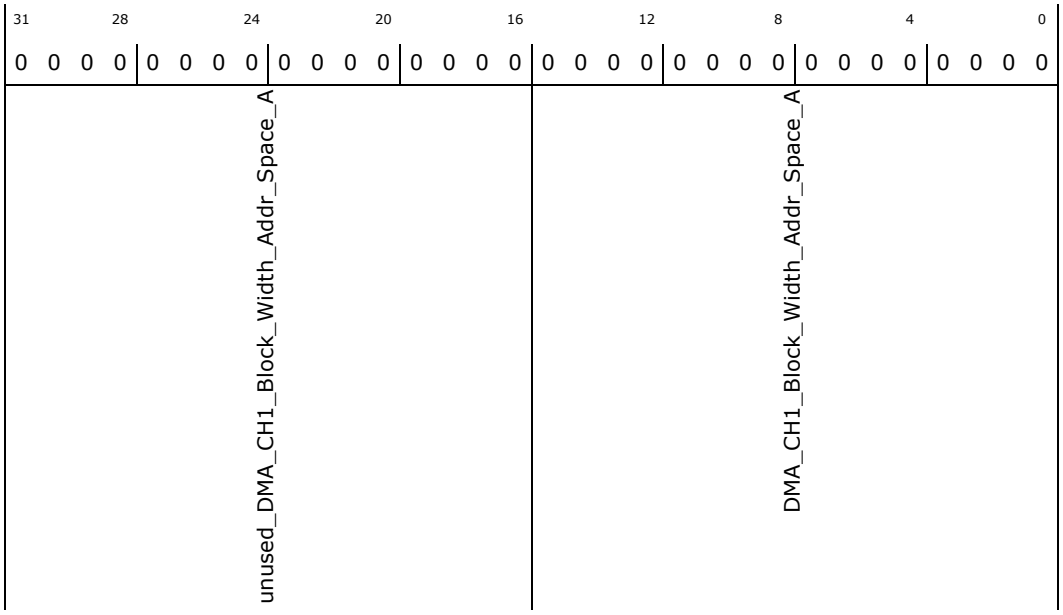
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41304h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH1_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH1_Block_Width_Addr_Space_A:** DMA CH 1 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.345 DMA_CH2_Block_Width_Addr_Space_A (isp_dma_DMA_CH2_Block_Width_Addr_Space_A)—Offset 41308h

DMA CH 2 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

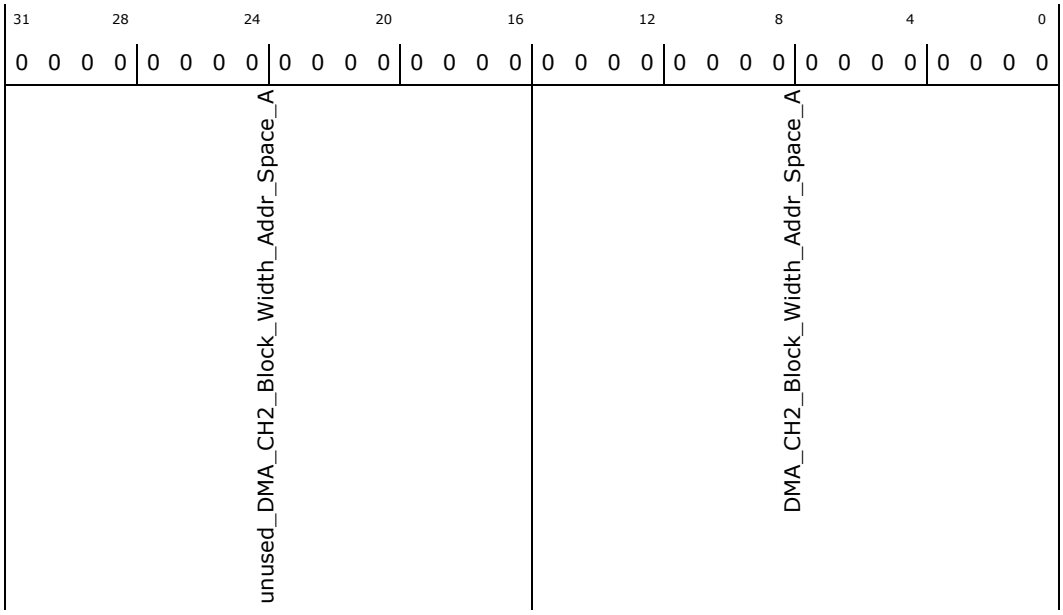
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41308h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH2_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH2_Block_Width_Addr_Space_A:** DMA CH 2 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.346 DMA_CH3_Block_Width_Addr_Space_A (isp_dma_DMA_CH3_Block_Width_Addr_Space_A)—Offset 4130Ch

DMA CH 3 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

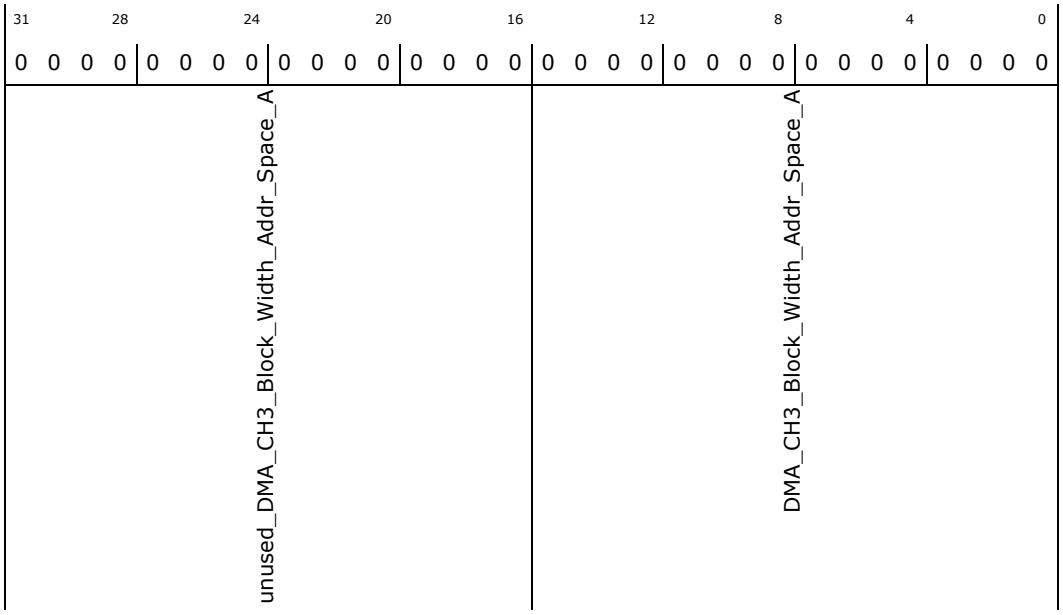
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4130Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH3_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH3_Block_Width_Addr_Space_A:** DMA CH 3 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.347 DMA_CH4_Block_Width_Addr_Space_A (isp_dma_DMA_CH4_Block_Width_Addr_Space_A)—Offset 41310h

DMA CH 4 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

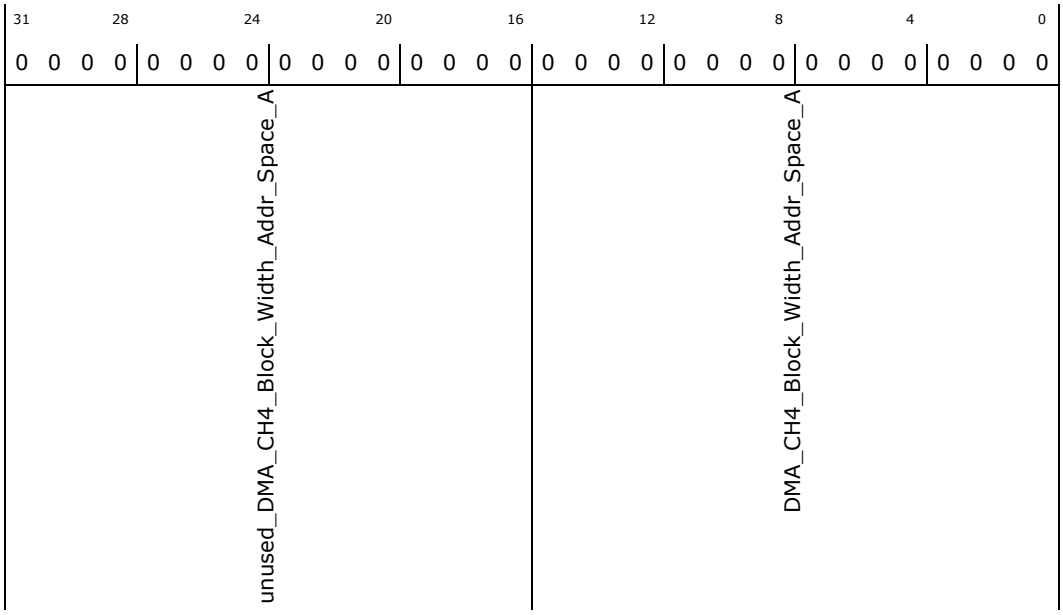
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41310h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH4_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH4_Block_Width_Addr_Space_A:** DMA CH 4 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.348 DMA_CH5_Block_Width_Addr_Space_A (isp_dma_DMA_CH5_Block_Width_Addr_Space_A)—Offset 41314h

DMA CH 5 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

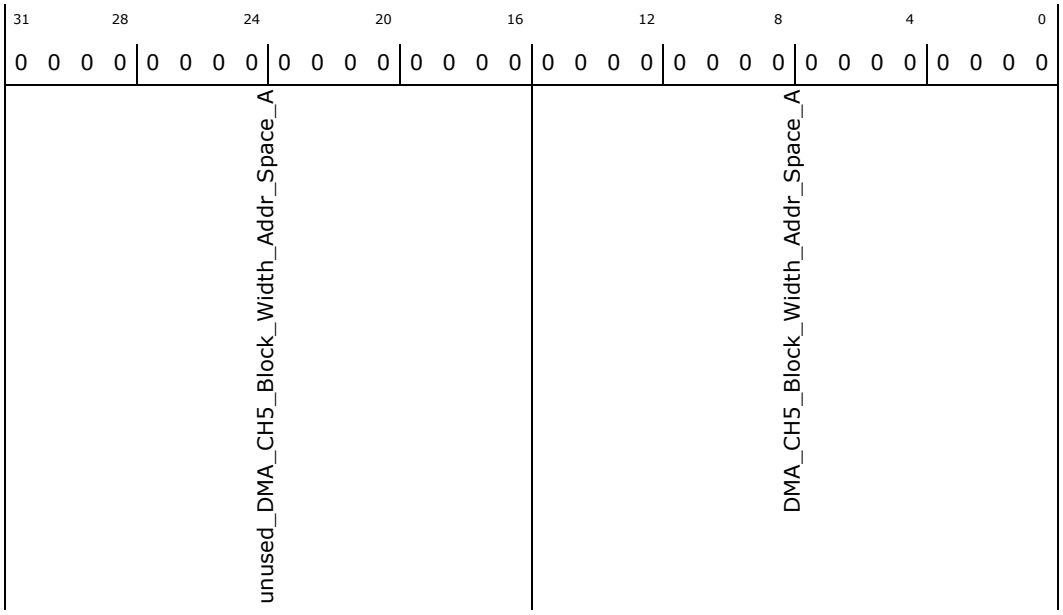
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41314h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH5_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH5_Block_Width_Addr_Space_A:** DMA CH 5 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.349 DMA_CH6_Block_Width_Addr_Space_A (isp_dma_DMA_CH6_Block_Width_Addr_Space_A)—Offset 41318h

DMA CH 6 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

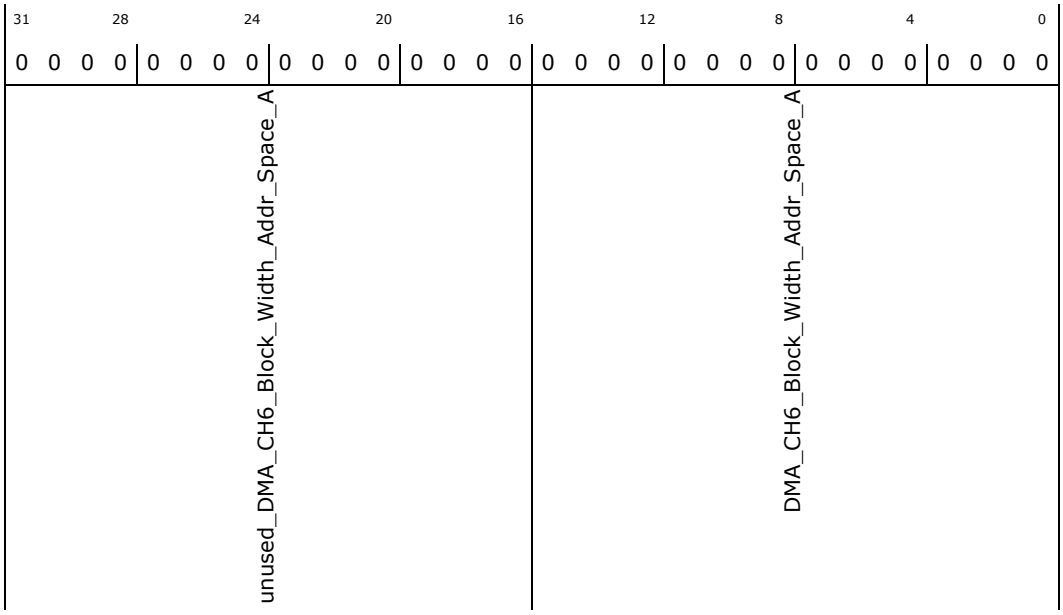
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41318h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH6_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH6_Block_Width_Addr_Space_A:** DMA CH 6 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.350 DMA_CH7_Block_Width_Addr_Space_A (isp_dma_DMA_CH7_Block_Width_Addr_Space_A)—Offset 4131Ch

DMA CH 7 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

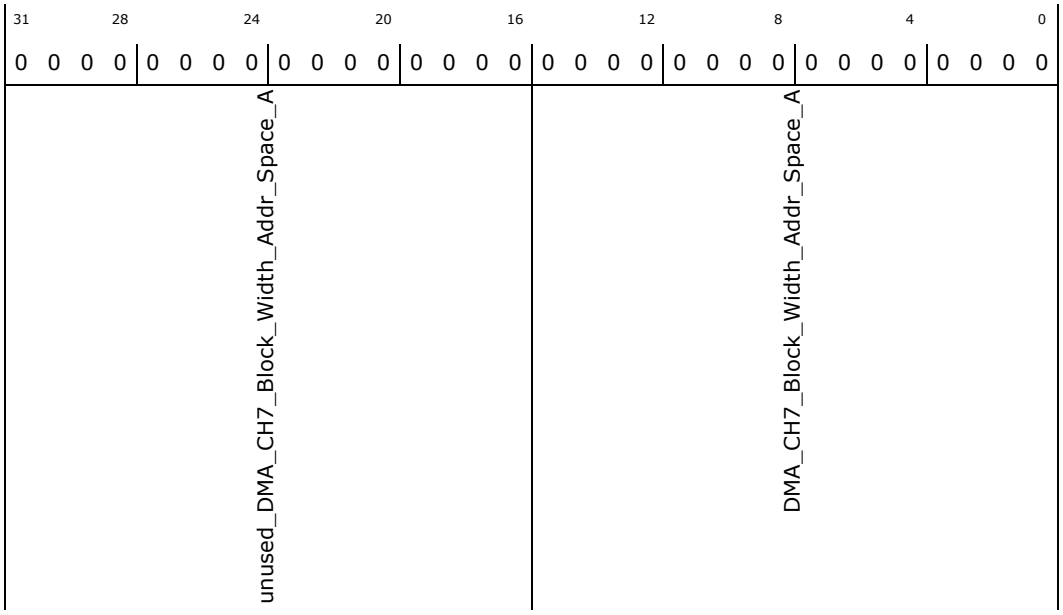
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4131Ch

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH7_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH7_Block_Width_Addr_Space_A:** DMA CH 7 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.351 DMA_CH8_Block_Width_Addr_Space_A (isp_dma_DMA_CH8_Block_Width_Addr_Space_A)—Offset 41320h

DMA CH 8 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

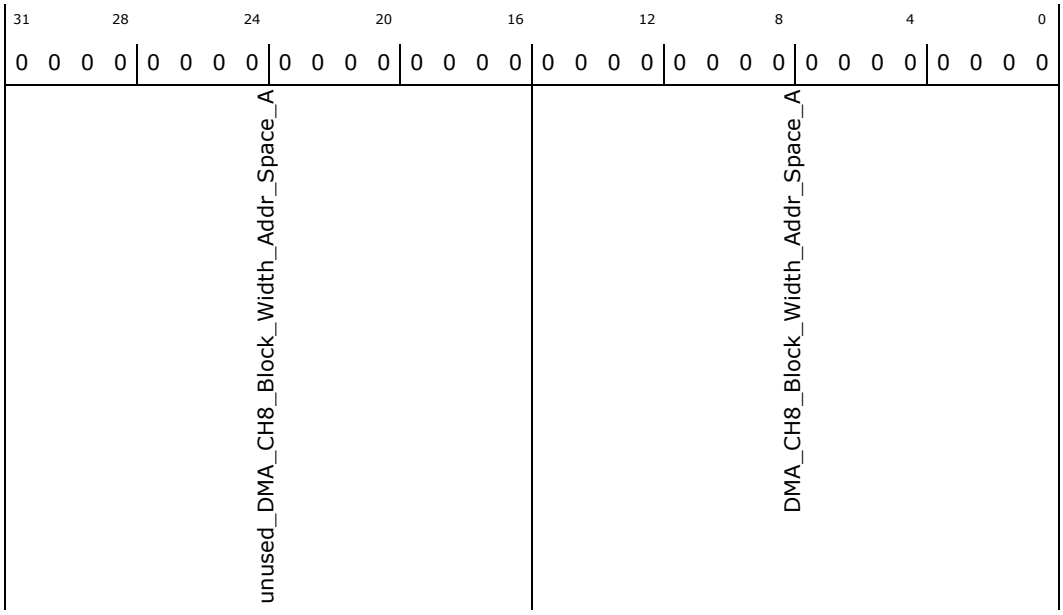
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41320h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH8_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH8_Block_Width_Addr_Space_A:** DMA CH 8 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.352 DMA_CH9_Block_Width_Addr_Space_A (isp_dma_DMA_CH9_Block_Width_Addr_Space_A)—Offset 41324h

DMA CH 9 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

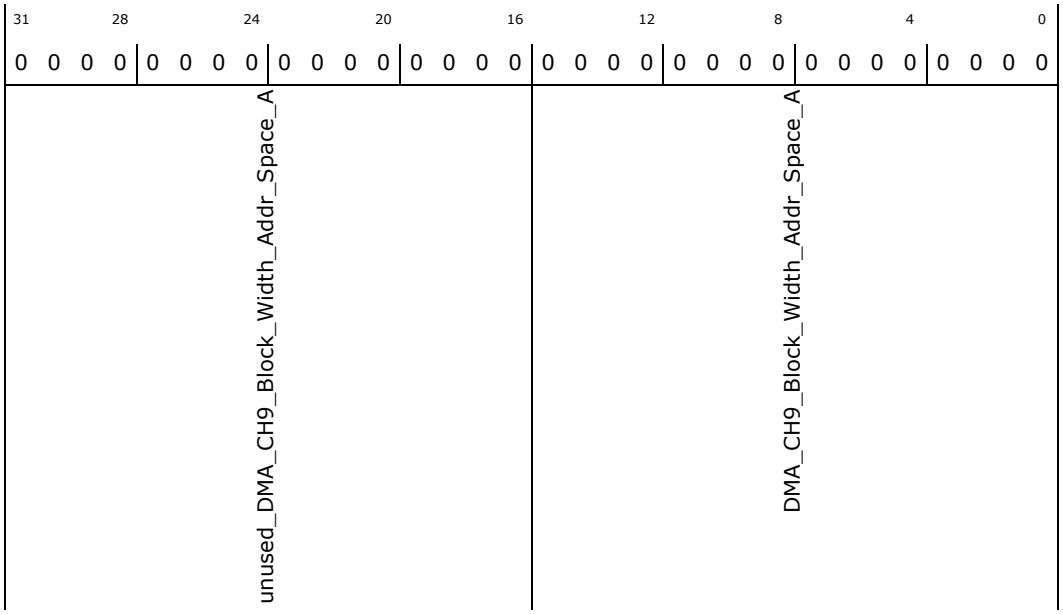
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41324h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH9_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH9_Block_Width_Addr_Space_A:** DMA CH 9 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.353 DMA_CH10_Block_Width_Addr_Space_A (isp_dma_DMA_CH10_Block_Width_Addr_Space_A)—Offset 41328h

DMA CH 10 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

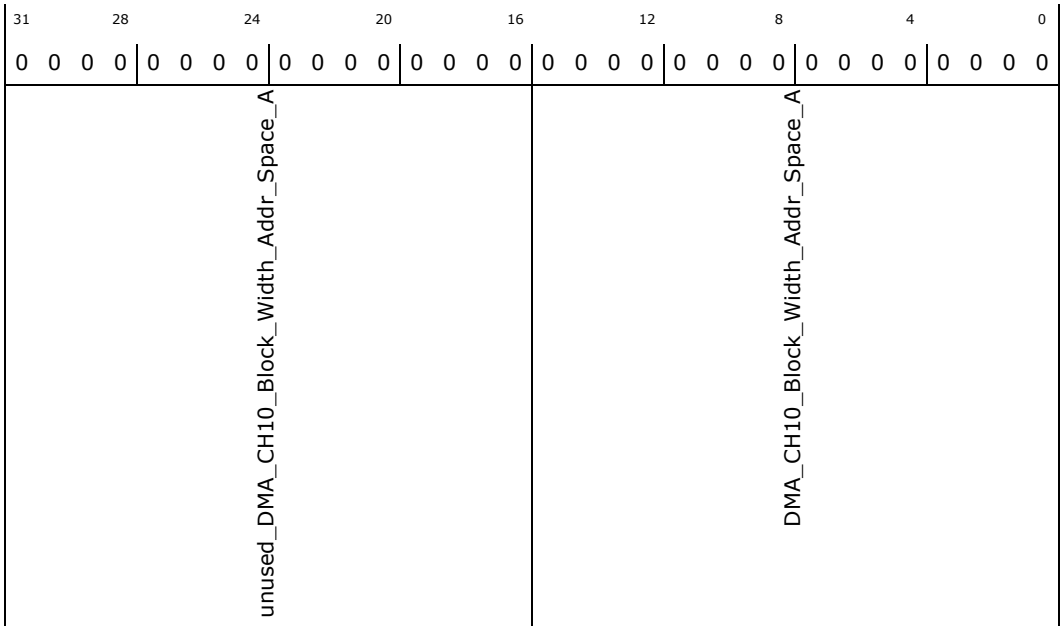
Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 41328h

ISPMMADR Type: PCI Configuration Register (Size: 32 bits)
ISPMMADR Reference: [B:0, D:3, F:0] + 10h

Default: 00000000h



Bit Range	Default and Access	Field Name (ID): Description
31:16	0x0 RW	**Reserved (unused_DMA_CH10_Block_Width_Addr_Space_A):** Unused
15:0	0x0 RO	**DMA_CH10_Block_Width_Addr_Space_A:** DMA CH 10 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

5.2.354 DMA_CH11_Block_Width_Addr_Space_A (isp_dma_DMA_CH11_Block_Width_Addr_Space_A)—Offset 4132Ch

DMA CH 11 PARAM 3: Block Width (Xb) for Device A side of the connection in terms of Device A words.

Access Method

Type: Memory Mapped I/O Register (Size: 32 bits)

Offset: [ISPMMADR] + 4132Ch
